Van Sickle noted that the distance between the Fannie Lou Federal No. 1 well and the Stebbins Federal Deep No. 1 well is 1 mile, and the distance between the Stebbins Federal Deep No. 1 well and the Yates Federal No. 2 well is 2 miles (Tr. 21).³ Nevertheless, he stated that it was possible in this case to correlate potential reservoirs between these three wells, despite the distance involved (Tr. 23).

He also testified that records provided by the operator of the Stebbins Federal Deep No. 1 well, the closest well to the subject land, indicated "a substantial amount of gas" (Tr. 82). Although subsequently shut-in, the well was recompleted for production Mar. 26, 1971, and at that time the well was tested at an "absolute open flow of 1,400,000 cubic feet of gas a day" (Tr. 82). The well was, therefore, considered "capable of producing" (Tr. 68).

Finally, he stated that Survey's KGS determination did not indicate that any one particular productive interval of the Morrow formation would be situated under each area but that one or more "will be located under all of this acreage" (Tr. 42-43).

Appellant presented the testimony of Jack Grynberg, a petroleum and geophysical engineer with extensive experience in oil and gas

³ The Stebbins Federal Deep No. 1 well is located approximately one-half mile from the lots in question (Tr. 82).

development. Grynberg testified that Survey's "cross-section" of the area did "not correctly show what is happening with the Morrow reservoirs in the direction that we are most interested," because it was not run perpendicular to the dip in the Morrow formation (Tr. 110). He believed that it did not indicate to what extent potential reservoirs continued along the course of the dip or "pinched out" (Tr. 111). Furthermore, he stated that because of the lenticular nature of the Morrow sands, "over a two-mile distance, it has been my experience in southeastern New Mexico, that you simply cannot correlate that far a distance" (Tr. 119).

Grynberg also testified that the three potentially productive intervals identified by Survey as continuing along the line of its "cross-section" were not perforated and tested in the Stebbins Federal Deep No. 1 well (Tr. 122). He felt that those intervals would be "water productive," being below the producing interval which he had identified on Exhibit B (Tr. 123).

Grynberg indicated that the Yates Federal No. 2 well, used by Survey as the northern point of its "cross-section," was "a completely different reservoir" and could not be used to determine potential reservoirs for the lots in question (Tr. 124). Grynberg characterized Survey's cross section as a "qualitative, visual comparison" rather than a quantitative study, taking into account calculated porosity and

hydrocarbon saturation (Tr. 120, 123).

Grynberg stated that he had undertaken a "cross-section" of the area perpendicular to the dip, running in an updip northwest direction from the Pennzoil Federal No. 1 well, situated in sec. 32, T. 20 S., R. 29 E., New Mexico principal meridian, Eddy County, New Mexico, to the Stebbins Federal Deep No. 1 well. The lots in question were further updip from the Stebbins Federal Deep No. 1 well, along the line of the cross section (Tr. 110-112; Exh. B). Vertical logs were taken in each of the two drilling holes and placed side by side (Exh. B). Grynberg concluded that only one potentially productive interval in the Morrow formation continued between the two wells; however, due to the rate of disappearance of that interval it pinches out northwest of the Stebbins Federal Deep No. 1 well and does not reach the lots in question (Tr. 111-114). Grynberg stated that part of Survey's error was due to its failure to determine this rate of disappearance (Tr. 141).

Based on a set of "control wells," Grynberg established a line indicating the "up-dip pinchout" of the Morrow formation, running in a northeast direction through the area (Tr. 96; Exh. A). The Fannie Lou Federal No. 1 well and the Stebbins "GQ" community well, situated in sec. 20, T. 20 S., R. 29 E. (both producing), were located southeast of the pinchout line (Tr.

113). The "Monsanto" well, situated in sec. 26, T. 20 S., R. 28 E., considered a "dry hole" well, was placed northwest of the pinchout line, and according to Grynberg, confirmed the location of the pinchout line (Tr. 117-118).⁴

Grynberg also challenged Survey's classification of the Stebbins Federal Deep No. 1 well. He contended that it was a "dry hole" well, having been shut in for 10 years despite the rise in the price of gas and the availability of pipeline hookups (Tr. 98-101, 103-104, 110). Furthermore, he contended that the calculation of "absolute open flow" in that well could be off substantially because "the word 'absolute' means calculated, that's what it is in reservoir engineering—it is nearly a total extrapolation with an error factor of several thousand per cent to try and predict what a potential well might flow as an open flow" Tr. 103).

On appeal appellant argues that the recommended decision contains a number of errors. Specifically, he states:

⁴ The "Monsanto" well was one of the seven included by Survey within a 2-mile radius of the lots in question. Concerning the significance of the 2-mile radius, Van Sickle testified:

"It is just an arbitrary distance to encompass a number of wells and to illustrate that of the seven wells that were drilled through the Pennsylvanian system in this area all were productive in the Pennsylvanian except one, a well in Section 26 of 20 south 28 east. It only had gas shows in the Morrow and the well was not completed. It was plugged and abandoned. However, when gas shows, it shows there is Morrow reservoir there, not commercial, but it had gas shows and therefore there was reservoir present. So that of all wells that have tested the Morrow in this area and within a two-mile radius of these lands tested some gas." (Tr. 25).

1. The burdens of proof and of production in the case were improperly allocated and create error as a matter of law.

2. The allocation of burdens deprives appellant of due process of law.

3. The Decision does not address a fundamental issue of the case: Whether a KGS determination is valid if the U.S.G.S. fails to follow its own internal guidelines and procedures for determining a KGS.

4. The Decision is not supported by substantial evidence on the record as a whole.

(Exceptions to Recommended Decision at 2).

Appellant's claim that the burden of proof and burden of production were improperly allocated is unfounded. At the hearing there was a discussion of the burdens and Judge Mesch made it clear that he felt that Survey should have the burden of going forward in order to narrow the issues concerning the basis for the KGS determination (Tr. 8). Appellant correctly understood that he had the ultimate burden of showing that there was clear and definite error in the Survey determination (Tr. 7). Following the discussion, Survey presented its evidence. Therefore, appellant's claim that the Judge incorrectly found that Survey had no initial burden to produce its reasons for the KGS determination is inapplicable in this case.

Survey satisfied its burden of going forward to establish a prima facie case by presenting evidence at the hearing. Contrary to appellant's assertion, we do not believe that the basis for Survey's KGS

determination is uncertain. Admittedly, the basis is not set forth with specificity; however, Survey's evidence, as a whole, did establish a basis for the determination and also served to provide appellant with evidence which it could, and did, attack. Under the facts of this case it can hardly be claimed that appellant was denied due process of law.

Appellant also charges that Survey erroneously failed to consider "all controlling factors" in making its determination. It states that Geological Survey Circular 419 at page 1 (Exh. 6) requires such consideration. Even assuming the circular was more than a guideline for Survey, further examination of that exhibit indicates that Survey did all that was necessary for determination of an undefined KGS. The following appears at page 5 of Exhibit 6:

Undefined known geologic structures are of two types, namely:

1. An area where discovery necessitates the defining of a new productive area, and revisions thereof.
2. An area where development around a previously established defined structure warrants an extension of the established known geologic structure.

In connection with undefined geologic structures, available information, generally consisting of data relating to a single well or a few wells, together with available geologic information, is reviewed by geologists; and a memorandum is sent to the manager of the appropriate land office making a determination that certain lands are as of a certain date "on structure" or within an undefined addition to a previously defined structure.

Appellant claims that the recommended decision was not supported by the evidence of record. We disagree. Despite the unpredictable nature of natural gas reservoirs in the area of the lots in question, Survey presented evidence to establish that the subject lands "were presumptively productive."

Such a determination does not guarantee the productive quality of the land but, rather, indicates the "existence of a continuous entrapping structure on some part of which there is production." *James Muslow, Sr.*, 51 IBLA 19, 23 (1980). We note, in this regard, that the Morrow formation underlies the lots in question and that all wells drilled in this formation, within a 2-mile radius, have had production or, at least, shows of gas.

The fact that the Stebbins Federal Deep No. 1 well was shut in does not constitute a clear and definite showing of error in Survey's conclusion that the well was capable of production. Records provided by the owner indicated a substantial amount of gas. Furthermore, cessation of production or abandonment of wells in a given field are not conclusive evidence that the land is not productive. *James Muslow, Sr., supra*.

Appellant further contends that the lots in question were beyond the edge of potentially productive reservoirs in the Morrow formation; however, we agree with Judge Mesch when he stated:

The [only potentially productive] reservoir [extending between the Pennzoil

Federal No. 1 and the Stebbins Federal Deep No. 1 wells] thinned 5 feet over a distance of some 5900 feet or approximately 1 foot every 1200 feet.[⁵] At the rate of thinning, it would seem that the reservoir would still be in existence and approximately 4 feet thick in the neighborhood of the land in question. The appellant's witness, however, concluded that the reservoir thinned from 7 feet to 0 feet over a distance of some 500 feet and abruptly pinched out immediately west of the Stebbins well. He arrived at this conclusion, not by considering the thinning rate of the one remaining reservoir but, by adding up the thicknesses of 8 separate reservoirs or bodies of sand found in the Pennzoil well, for a total thickness of about 50 feet, and then found a decrease in the total thickness of the 8 separate reservoirs from 50 feet to the 7 feet representing the one remaining reservoir. This gives a thinning rate of about one foot every 140 feet for the 7 minor and 1 major beds of sand as opposed to 1 foot every 1200 feet for the one major bed. I am not willing, without some justification, which is not apparent in the record, to accept the proposition that the thinning rate of the one major bed should be determined, not on the basis of the thinning rate of that bed but, by reference to other minor beds that were found in the Pennzoil well, but not in the Stebbins well.

Furthermore, I cannot reconcile the appellant's evidence and conclusion that there are no producing Morrow reservoirs, or no geologic likelihood of such reservoirs, within lots 1 and 2 with the evidence presented by the GS relating to the establishment of the KGS. The Area Geologist stated that the reservoirs or sand bodies are very unpredictable. He said, "[y]ou can have sand there 20 feet thick in one well and you might drill a well 200 feet from it and * * * not even

find that sand" (Tr. 42). He testified that because of the unpredictable nature of the lenticular beds of sand "we have to assume that even though any one of these individual sands may not be situated under each one of the areas we included in the known geologic structure, we have to assume that one or more sands containing gas will be located under all of this acreage" (Tr. 42, 43). He explained that the assumption was made because "the overwhelming evidence * * * shows that all the wells in the area * * * were completed in the Morrow or tested gas from some sand interval or some productive interval in the Morrow [with the exception of one dry hole in the southeast quarter of section 32]" (Tr. 43). He further stated that they "looked at all of the wells in this area * * * to see if we could correlate potential reservoirs or reservoirs where the wells were perforated" (Tr. 37). One of the wells they relied on was a producing gas well in the northwest quarter of section 18, the Yates Federal No. 2. This well is over two miles north and west of the Stebbins well and about two miles due north of lots 1 and 2. The appellant's witness recognized that this well was producing from the Morrow formation and that if his cross section was continued in a straight line to the north and west it would encounter this well and the producing Morrow reservoirs in the well. He did not feel, however, that the well had any bearing on his conclusion that the producing Morrow reservoirs pinched out immediately to the north and west of the Stebbins well because, in his opinion, the well some two miles further north and west was producing from a different zone in the Morrow formation.

(Recommended Decision at 10-13).

Appellant did not present specific evidence to establish that it was improper for Survey to presume that the producing reservoirs in the Yates Federal No. 2 extended under the lots in question, nor did appel-

⁵ Grynberg testified that the reservoir thinned from 12 feet to 7 feet between the Pennzoil Federal No. 1 and the Stebbins Federal Deep No. 1 wells.

May 20, 1981

lant adequately explain why those same reservoirs should not be considered in establishing the KGS merely because they were allegedly in a different zone in the Morrow formation.

We cannot conclude that appellant has made a clear and definite showing of error in either Survey's methods or its conclusions regarding its KGS determination.

Therefore, pursuant to the authority delegated to the Board of Land Appeals by the Secretary of the Interior, 43 CFR 4.1, the decision appealed from is affirmed.

INSPIRATION DEVELOPMENT CO.

54 IBLA 390

Decided May 20, 1981

Appeal from decision of Alaska State Office, Bureau of Land Management, declaring lode and placer mining claims abandoned and void in full and in part. F-57497, et al.

Vacated and remanded.

1. Federal Land Policy and Management Act of 1976: Recordation of Mining Claims and Abandonment—Mining

Claims: Abandonment—Mining Claims: Recordation

Under sec. 314 of the Federal Land Policy and Management Act of 1976, 43 U.S.C. § 1744 (1976), and 43 CFR 3833.1-2(a), the owner of an unpatented mining claim located before Oct. 21, 1976, must file on or before Oct. 22, 1979, in the proper BLM office, a copy of the notice of location or the claim will be conclusively deemed to have been abandoned and declared void.

Where an unpatented mining claim is located in Alaska near the dividing line separating the Anchorage and Fairbanks districts, indicated on the map in 43 CFR 1821.2-1, such that it is virtually impossible from the map to determine with substantial accuracy in which district the mining claim lies, the timely filing of the location notice by the owner of the claim in either the Alaska State Office or the Fairbanks District Office will be considered as satisfying the requirement of 43 CFR 3833.1-2(a) of filing in the proper BLM office.

APPEARANCES: Stephen M. Ellis, Esq., Anchorage, Alaska, for appellant.

OPINION BY
ADMINISTRATIVE JUDGE
HARRIS

INTERIOR BOARD OF LAND
APPEALS

Inspiration Development Co.¹ has appealed from a decision of the Alaska State Office, Bureau of Land Management (BLM), dated

¹ On Oct. 10, 1980, BLM was notified pursuant to 43 CFR 3833.3 that appellant had conveyed its interest in various lode mining claims, involved herein, situated in T. 5 N., R. 14 E., Copper River meridian, Alaska, to Pacific Coast Mines, Inc. This conveyance, however, does not affect the result in this case.

Mar. 26, 1980, declaring certain lode and placer mining claims abandoned and void for failure to file copies of notices of location in the proper BLM office pursuant to sec. 314 of the Federal Land Policy and Management Act of 1976 (FLPMA), 43 U.S.C. § 1744 (1976), and its implementing regulations, 43 CFR 3833.

All of appellant's mining claims were located between May 4, 1970, and June 17, 1972, and copies of the notices of location were filed for recordation with the Fairbanks District Office on Aug. 30, 1979.

The record indicates that some or all of the copies of the notices of location were forwarded to the Alaska State Office, Anchorage, but were received after the filing deadline. The claims listed in Appendix A* were located within Ts. 5 and 6 N., R. 14 E., Copper River meridian, Alaska, and the claims listed in Appendix B* were located partially within T. 5 N., R. 14 E., Copper River meridian, Alaska, and partially within T. 5 N., R. 15 E., Copper River meridian, Alaska.

Relying on 43 CFR 1821.2-1(d), which states that claims located in "Southern Alaska" should be filed for recordation with the Alaska State Office in Anchorage, Alaska, and providing a map indicating the boundary line between "Southern Alaska" and "Northern Alaska," BLM concluded that appellant should have filed in the Alaska

State Office.² BLM noted that "[b]oth T. 5 N., R. 14 E., and T. 6 N., R. 14 E., Copper River Meridian lie within the Anchorage district of BLM." Accordingly, (153) claims located entirely within those townships were deemed abandoned and declared void in full. *See* Appendix A. However, (11) claims located partially within T. 5 N., R. 14 E., Copper River meridian, and partially within T. 5 N., R. 15 E., Copper River meridian, were "deemed abandoned and declared void *in part*, to the extent that they lie within T. 5 N., R. 14 E., Copper River Meridian (Anchorage District)." (*Italics in original*). *See* Appendix B.

[1] The applicable regulation, 43 CFR 3833.1-2(a) provides in relevant part:

The owner of an unpatented mining claim, mill site or tunnel site located on or before October 21, 1976, on Federal lands * * * shall file (file shall mean being received and date stamped by the proper BLM Office) on or before October 22, 1979, *in the proper BLM Office*, a copy of the official record of the notice or certificate of location of the claim or site filed under state law. [*Italics added.*]

43 CFR 3833.4(a) specifies the penalty for failure to satisfy the filing requirements of 3833.1-2(a): "The failure to file an instrument required by §§ 3833.1-2(a), (b), and 3833.2-1 of this title within the time periods prescribed therein, shall be deemed conclusively to constitute an aban-

² Reference to 43 CFR 1821.2-1(d) reveals that Alaska is unique in that it is the only State in which more than one BLM office has jurisdiction to receive mining claim recordation filings.

* Appendices A and B may be found at 54 IBLA 398, 402.

May 20, 1981

donment of the mining claim, mill or tunnel site and it shall be void."

In its statement of reasons for appeal, appellant contends that it was fully aware of the filing requirement and of the distinction between "Northern Alaska" and "Southern Alaska" for purposes of filing copies of notices of location, but that, "it was impossible to ascertain that fact [*i.e.*, that the dividing line between 'Northern Alaska' and 'Southern Alaska' bisects the subject claims between T. 5 N., R. 14 E., and T. 5 N., R. 15 E.] from the map set forth in 43 CFR § 1821.2-1 * * *. Indeed, the dividing line depicted on the map carves out a path approximately 20 miles wide." Accordingly, appellant sent a representative to Alaska with instructions to file in the appropriate BLM office. This representative traveled to both the Anchorage and Fairbanks offices, filing the subject claims (known as the Bond Creek Project) with the Fairbanks office "53 days prior to the October 22, 1979 deadline" and filing other claims (not relevant here) with the Anchorage office. In an affidavit submitted by appellant, dated May 15, 1980, its representative indicates the nature of the filing in the Fairbanks office: "I submitted all of the Certificates of Location for the Bond Creek Claims to BLM personnel in Fairbanks for their review. * * * Fairbanks BLM personnel then personally inspected each such Certificate of Location as well as the maps which were filed

therewith. * * * All of the documents were accepted as filed."

Appellant makes three principal arguments, namely: (1) It is entitled to equitable adjudication pursuant to 43 CFR 1871.1-1 because it has satisfied all of the prerequisites therefor; (2) BLM is estopped to deny that appellant filed in the proper BLM office because it has satisfied all of the prerequisites therefor; and (3) 43 CFR 1821.2-1 (d), as it pertains to Alaska, is ambiguous and unreasonable and, therefore, void or, in the alternative, timely filing in the Fairbanks office must be deemed to have been full compliance with the filing requirements of FLPMA and its implementing regulations.³

Under the circumstances of this case, appellant's filing in the Fairbanks District Office is deemed to constitute timely compliance with the filing requirement of 43 CFR 3833.1-2(a) for notices of location. *See Richard E. Forsgren*, 54 IBLA 362 (1981) (Judge Burski concurring). The regulation, 43 CFR 1821.2-1(d), which appellant relied on is inherently ambiguous in certain respects. The map indicating the dividing line between "Northern Alaska" and "Southern Alaska" for purposes of filing in either the Fairbanks or Anchorage offices is approximately 4 inches by 5 inches with only the barest minimum of

³ Appellant indicates that the subject land was withdrawn in part from the location of mining claims pursuant to Public Land Order No. 5654 (Nov. 17, 1978), 43 FR 59756 (Dec. 21, 1978).

reference points and with no indication of scale.⁴ It results in a gross division of Alaska into two districts. Appellant's problem of determining in which district its claims lay was compounded by the fact that some of its claims straddle the dividing line. There is no possibility that a mining claimant with claims near this line could determine with substantial accuracy, from the map published in 43 CFR, in which district filing should be made.

The Administrative Procedure Act (APA), 5 U.S.C. § 552(a) (1976), provides that "[e]xcept to the extent that a person has actual and timely notice of the terms thereof, a person may not in any manner * * * be adversely affected by, a matter required to be published in the Federal Register and not so published." Matters required to be published include "descriptions of * * * the established places at which * * * the public may * * * make submittals." 5 U.S.C. § 552(a) (1) (A) (1976).

⁴ The map was changed to its present form by publication in the *Federal Register*, 39 FR 5633 (Feb. 14, 1974), effective Mar. 4, 1974. The purpose of the change was stated to be:

"[T]o make the boundaries of the Bureau of Land Management Land districts in Alaska correspond with the Bureau of Land Management's administrative districts. The administrative boundaries conform to natural topographic features which influence the travel and trade patterns of Alaskans. The Administrative boundary will facilitate filing of selection applications pursuant to the Alaska Native Claims Settlement Act. The change will therefore better serve the convenience of the Alaskan public as well as promote administrative efficiency."

This requirement of publication has not been adequately satisfied with regard to mining claimants whose claims are near the dividing line between "Northern" and "Southern" Alaska, such that it is virtually impossible to determine with substantial accuracy in which district to file location notices. Accordingly, pursuant to the APA, *supra*, appellant cannot be adversely affected by BLM's failure to publish a map of sufficient detail to allow such a claimant to determine the correct office in which to file. This inherent ambiguity of the regulation must be construed in appellant's favor. *See generally Wallace S. Bingham*, 21 IBLA 266, 282, 82 I.D. 377, 384 (1975); *A. M. Shaffer*, 73 I.D. 293 (1966).⁵

It could be argued that appellant, in order to protect its interests, should have filed in both offices. We do not agree. Appellant made a good faith effort to comply with the filing requirements in this instance. Moreover, the Fairbanks District Office received appellant's notices of location well before the filing deadline (53 days). Arguably that office should have either returned the notices of location to appellant for filing in the proper BLM office or forwarded them to the Alaska State Office before the filing deadline. *See Richard L. Rosenthal*, 45 IBLA 146

⁵ The fact that appellant cannot be adversely affected does not absolve it completely from complying with the filing requirements of FLPMA and its implementing regulations. If appellant had not bothered to file timely in the Fairbanks office, its claims would properly have been deemed abandoned and declared void.

(1980). However, we do not so hold because of our discussion, *supra*.

Therefore, pursuant to the authority delegated to the Board of Land Appeals by the Secretary of the Interior, 43 CFR 4.1, the decision appealed from is vacated and the case remanded to BLM for further action not inconsistent herewith.

Administrative Judge

ESTATE OF JOSEPH WILLESSI

8 IBIA 295

Decided May 28, 1981

Appeal from order by Administrative Law Judge Robert C. Snashall approving will and ordering distribution.

Reversed.

1. Indian Probate: Indian Reorganization Act of June 18, 1934: Construction of Section 4—Indian Probate: Wills: Construction of

Jurisdiction of Indian tribe over Quinault Reservation where estate trust property was located being material to a decision concerning the eligibility of a devisee to take property under an Indian will, it was error to hold that the General Allotment Act conferred jurisdiction over the reservation upon the tribes of persons allotted on the reservation without re-

gard to the historical development of the reservation and the actual implementation of the treaty rights of the tribes concerned. The record demonstrates that since acceptance of the Indian Reorganization Act of 1934 (IRA) the Quinault Tribe exercised exclusive jurisdiction over the Quinault Reservation, and that the Quileute Tribe (one of the tribes whose hereditary members accepted Quinault allotments) had earlier elected to forego any treaty rights it may have claimed in the Quinault Reservation in order to retain its ancestral village at LaPush. The record establishes jurisdiction over the Quinault Reservation to be in the Quinault Tribe, an IRA tribe.

2. Indian Probate: Indian Reorganization Act of June 18, 1934: Construction of Section 4—Indian Probate: Wills: Construction of

Sec. 4 of the Indian Reorganization Act of 1934 prior to amendment in 1980 did not permit devises of trust property found on reservations subject to the Act to persons who were neither heirs of the decedent allottee nor members of the tribe having jurisdiction over the reservation where the trust land is located. Thus, since appellee was neither a member of the Quinault tribe nor an heir of decedent, he was barred from taking trust property on the Quinault Reservation under the decedent's will.

APPEARANCES: Frederick L. Noland, Esq., for appellants Esther Elvrum, Irene Soeneke, Phillip C. Hanson, Philip S. Talbot, Alice Manes, Pearl Cousens, Dorothy Murray, Ira Talbot, Jacqueline Jauhola, Dorothy Nelson, Edward Verney, Patrick Verney, Bertha Bousley, Audrey Beaston, Delmar Gagnon, Ruby McCovey, Gwendolyn Sanchez, Donna Grosz, Marlene Thweatt, Clarence Colby, Robin Halstead, Charles Talbot, Charles Williams, Estate of Patrick Wilkie, Jr.,

*OPINION BY
ADMINISTRATIVE
JUDGE ARNESS*

*INTERIOR BOARD OF
INDIAN APPEALS*

On Sept. 21, 1970, decedent Joseph Willessi died testate at Forks, Washington, at the age of 77 years. At his death decedent was a member of the Quileute Indian Tribe holding allotment No. 1432 of trust lands on the Quinault Reservation; was beneficial owner of a village lot on the Quileute Reservation at LaPush; and also held a partial interest in trust lands located on the Makah Reservation. Decedent's will, signed on Jan. 12, 1968, devised his trust property on the Quinault and Makah Reservations to appellee Leo Williams, also a member of the Quileute Tribe. Decedent's will devised the LaPush property to Nellie W. Richards, decedent's cousin, who is Leo Williams' mother. The value of the estate in 1970 when probate was commenced was estimated at \$151,750. During the course of probate, however, it became apparent that the true value of the trust property, of which the Quinault allotment

comprises the most valuable part, is in excess of \$1,100,000.

*Procedural and Factual
Background*

On Feb. 10, 1972, decedent's 1968 will was approved and distribution of the trust estate ordered in conformity to the terms of the will to the two named devisees, Nellie W. Richards and appellee, Leo Williams, both members of the Quileute Tribe. As a result of this order, Mrs. Richards took the property on the Quileute Reservation, while appellee received the Quinault and Makah trust lands. An appeal was taken from the February 10 order by eight of decedent's heirs at law who appeared in the initial proceeding. On Aug. 8, 1974, this Board ordered a rehearing of the matter. *Estate of Joseph Willessi*, 3 IBIA 24 (1974).

On Jan. 6, 1977, following an evidentiary hearing on contest of the 1968 will, where evidence which exclusively concerned decedent's competence to execute a will was offered, another order issued, approving decedent's will and decreeing distribution as before to appellee and his mother. On Apr. 5, 1978, however, the agency superintendent charged with administration of the probate orders petitioned to reopen decedent's estate alleging discovery of a mistake of law.¹ According to the petition to reopen, both the Quinault and Makah Reservations were organized under the Act of June 18,

¹ The Apr. 5 petition to reopen also notes, for the first recorded time, that the value of the estate exceeds \$1,100,000.

1934, 48 Stat. 984, 25 U.S.C. §§ 461-79 (1976) (hereafter the Indian Reorganization Act of 1934, or IRA). The petition alleges appellee is neither a member of the Quinault or Makah Tribes nor an heir of decedent (since appellee's mother, through whom he traces his relationship to decedent, survived decedent), and concludes appellee is therefore barred from receiving an interest in trust lands on either reservation by sec. 4, IRA (25 U.S.C. § 464 (1976)).²

On July 19, 1978, appellants, 26 heirs at law of decedent, in response to a notice from the Indian Probate Administrative Law Judge dated Apr. 13, 1978, denominated "Notice to Show Cause" also petitioned to reopen alleging the same mistake of law as had the superintendent. On Nov. 6, 1978, an order issued reopening the estate and ordering distribution to the heirs, citing *Estate of Dewey Cleveland*, 5 IBIA 72, 83 I.D. 170 (1976), as authority for the action taken reversing the previous orders of distribution. On Nov. 14, 1968, appellants

petitioned to modify the November 6 order to correct a claimed mistaken classification of heirs. On Nov. 17, 1968, appellee, Leo Williams, appealed to this Board from the order of Nov. 6, 1978, seeking reversal of the November 6 order and reinstatement of the prior orders which had approved the will and ordered distribution of the Quinault property to appellee.

On Apr. 3, 1979 (following an amendatory order entered Feb. 8, 1979), the Administrative Law Judge notified the parties that based upon "documents" which had come to his attention, he proposed to seek return of the probate of decedent's estate from this Board where appellee's appeal from the November 6 order was pending, to reverse the order decreeing distribution to the heirs.

On Nov. 16, 1979, the Administrative Law Judge again reversed himself. Finding the Quinault Tribe lacked exclusive jurisdiction over the Quinault Reservation, he held the Quinault Reservation is a "joint jurisdictional area" where tribal jurisdiction resides "in all tribes who have been allotted on the reservation and all 'fish-eating Indians' of the Northwest." The order directs distribution of the Quinault property according to the terms of the 1968 will to appellee, commenting as follows that the IRA is not relevant to the determination so made:

I do not find it necessary to reach the question of the applicability of the In-

² The statute provides, in pertinent part, a restriction on devises limiting them so that: "[R]estricted Indian lands * * * [may] be * * * devised * * * to the Indian tribe in which the lands * * * are located * * * and, in all instances such lands * * * shall descend or be devised * * * to any member of such tribe * * * or any heirs of such member." (Sec. 4 of the IRA was amended by the Act of Sept. 26, 1980, P.L. 96-363, 94 Stat. 1207, which relaxed the restricting classification to permit devises to "lineal descendants" or "any other Indian person for whom the Secretary of the Interior determines that the United States may hold land in trust," a change not material to this decision.)

dian Reorganization Act of 1934 (25 USC 464), assuming its adoption by and compliance with by the Quinault Tribe since there is no indication in the inventory of this estate allotments originally allotted to Quinaults are involved. However, in passing, I merely note as dicta that since there is joint jurisdiction over the total reservation by the various and sundry tribes included within the provision "fish-eating Indians of the Pacific Northwest", any adoption of the Indian Reorganization Act by the Quinaults would appear to only affect their interest as it appears on the reservation and could not affect in toto the total allotments.

(Order dated Nov. 16, 1979, p. 2).

Appellants, 26 heirs of decedent, now seek review of the order decreeing distribution of the Quinault property to appellee.³ On Aug. 28, 1980, the Quinault Indian Nation was permitted to intervene to brief the finding below that tribal sovereignty over the reservation was not exclusively vested in the Quinault Tribe. At the invitation of the Board, the Solicitor of the Department filed a brief on behalf of the Department of the Interior addressing the jurisdictional issues raised by the Nov. 16, 1979, order of distribution.⁴ Appellee has objected that the matter is properly before the Board for decision for the

reason Departmental regulations bar reopening under the circumstances of this case. The contention that the reopening was irregular is found to be without merit; the matter is properly before this Board for final decision.⁵

Oral Argument Denied

Appellee has requested oral argument before the Board. Appellants,

⁵ The regulation in effect at the time reopening was sought and ordered, 43 CFR 4.242, permits petition for reopening within 3 years from date of a final decision or after a longer period of time upon showing that "manifest injustice" will result as a consequence of claimed error. Reopening was sought well within that time. Appellee also argues that principles of estoppel and res judicata bar this appeal, and that due process considerations of constitutional magnitude would be involved in an order setting aside the devise in this case. With respect to estoppel, appellee contends that since the agency drew decedent's will, it was improper to permit the superintendent to complain about the effect of agency action. This argument has been rejected in past Indian probates; the Government is not bound by acts of its agents which are contrary to law. *Estate of Lucinda Shelton Joe*, 5 IBIA 20 (1976). Similarly, res judicata is not a bar here, for the parties and the issues on reopening are not the same as they were at the outset of this proceeding. In the initial hearing and at the 1976 rehearing, the competence of decedent was challenged by eight of his heirs at law: on reopening, the eligibility of appellee to take as a devisee under the will is disputed by 26 heirs (the original eight are, it is true, included as parties). Appellee also urges that section 4 of the IRA (prior to amendment) was unconstitutional if construed so as to defeat his claim. Although such an argument cannot be effectively addressed by the Board (*Estate of William Konoa Jackson*, 6 IBIA 52 (1977)), it is noted that statutes more restrictive of individual claims than is (or was) section 4 of IRA have withstood attacks upon constitutional theories of infirmity similar to those here offered by appellee, *Simmons v. Eagle Seelatsee*, 244 F. Supp. 808 (E.D. Wash. 1965), *aff'd*, 384 U.S. 209 (1966).

³ The Nov. 16, 1979, order correctly found appellee to be ineligible to inherit property on the Makah Reservation, since, presumably, he is ineligible as a non-Makah to inherit, not being an heir of decedent, on a reservation which is organized under IRA. The only issue on appeal concerns the finding below that Quinault property could pass to appellee.

⁴ See 43 CFR 4.3(c) (1980); 46 FR 7334, 7336 (Jan. 23, 1981).

the Quinault Tribe, and the Solicitor's Office oppose the request for the stated reason the expense of an oral presentation is not justified by the circumstances of the case on appeal, which they contend is fully and adequately presented by written briefs filed by all the appearing parties. The record on appeal indicates the matter has been fully and ably presented by the parties' briefs and does not require further argument. The record sufficiently presents the matter so as to permit decision. Accordingly, oral argument is denied.

Preliminary Findings

Though much of the record on appeal is a transcript of evidence gathered at the 1976 rehearing concerning decedent's competence to make a will in 1968, his competence as a testator is no longer an issue. The relevant facts on appeal are confined to matters concerning the tribal affiliation of appellee and the status of the reservations where the trust property held by decedent is located. It is undisputed that decedent, a Quileute, was allotted land on the Quinault Reservation, and that he devised trust property on the Quinault Reservation to appellee, who is not a member of the Quinault Tribe. Also, since appellee's mother survived decedent, appellee is not, under the law of the State of Washington, an heir at law of decedent since he could not in-

herit from decedent under the State scheme for intestate succession while his mother lived. The Quinault Tribe voted to organize pursuant to provisions of the IRA on Apr. 13, 1935, as did the Makah and Quileute Tribes.⁶ The Quileute Tribe adopted a constitution which was approved by the Secretary on Nov. 11, 1936, providing that Quileute tribal jurisdiction is limited to the tribal reservation.⁷

Historical Background

The history of the Quinault Reservation is set out by a recent Board decision construing secs. 5 and 19 of the IRA:⁸

By the Treaty of Olympia, the Quinault and Quileute Tribes ceded to the United States almost all of the lands they claimed. A provision of that treaty allowed the United States to later remove these tribes from their original reservation or reservations and consolidate them with "other friendly tribes or bands." In 1873 President Grant signed an Executive order setting the boundaries of the present Quinault Reservation for the benefit of the Quinault, Quileute, Hoh, Quilt, and "other tribes of fish-eating Indians on the Pacific coast."

⁶ Appellee suggests these political acts by the tribes may not have been sufficiently proved by appellants. However, the status of the various tribes is a matter of which the Department takes official notice, 44 FR 7235 (Feb. 6, 1979). See Pamphlet, Haas, *Ten Years of Tribal Government Under I.R.A.* (U.S. Indian Service 1947).

⁷ Article I, Constitution and Bylaws of the Quileute Tribe of the Quileute Reservation (1936), as amended.

⁸ *Brown v. Commissioner of Indian Affairs*, 8 IBIA 183, 193-94, 87 I.D. 507, 512-13 (1980).

Following passage of the General Allotment Act, allotments were made to individual Indians on the Quinault Reservation. In 1911 Congress directed the Secretary of the Interior to make allotments on the Quinault Reservation to "all members of the Hoh, Quileute, Ozette, and other tribes of Indians in Washington who are affiliated with the Quinaielt [a.k.a. Quinault] and Quileute Tribes * * * and who may elect to take allotments on the Quinaielt Reservation rather than on the reservations set aside for these tribes." Act of Mar. 4, 1911, 36 Stat. 1345.

Following the 1911 Allotment Act, several court decisions were rendered interpreting the law. In *United States v. Paync*, 264 U.S. 446 (1924), the Court disapproved of the refusal by the Bureau of Indian Affairs to make allotments of timberland, after the available grazing and agriculture land on the reservation had been allotted. In 1931 the Supreme Court held as too restrictive the Secretary's interpretation concerning which Indians were entitled to an allotment under the 1911 Act. *Halbert v. United States*, 283 U.S. 753 (1931). The Court there found that the Chehalis, Chinook, and Cowlitz Tribes were among those referred to by Congress in the Act as affiliated with the Quinault and Quileute Tribes. Further, the Court held that personal residence on the Quinault Reservation was not required to obtain an allotment.

After the *Halbert* decision the Department resumed the allotment process on the Quinault Reservation. With passage of the Indian Reorganization Act in 1934 the allotment of Indian reservation land in severalty to any Indian was ended. [Citations and footnotes omitted.]

In 1922 the Quinault tribe adopted bylaws which provided that membership in the tribe should be

limited to Quinault or Queets persons of at least one-quarter blood. Hereditary members of other tribes, including the Quileute, could become "affiliated members" if they resided on the reservation. This limitation upon tribal membership was later liberalized to permit "affiliated" members to enroll as members of the tribe.⁹

It is apparent that official and legislative references to the "affiliation" of the Quileute and Quinault Tribes describe the affiliation of those tribes contemplated by the 1855 treaty. The history of the two tribes demonstrates, however, that their "affiliation" failed to occur in fact. It appears the Quileute Tribe refused to remove to the territory designated by the 1873 Executive Order establishing the Quinault Reservation and insisted upon retaining the traditional Quileute tribal village and fishing area at Lapush. The position of the Quileute Tribe is described in the court's opinion in *United States v. Moore*, 62 F. Supp. 660, 668-669 (W.D. Wash. 1945), *aff'd*, 157 F.2d 760 (9th Cir. 1946):

An abortive effort was made to establish [the Quileute Tribe] on the Quinaielt Reservation, which was created by presidential proclamation by president U.S.

⁹ Article II of the Constitution of the Quinault Indian Nation (1975) permits persons of Queets, Quileute, Hoh, Chinook, Chehalis, or Cowlitz descent to be admitted to tribal membership. Although the Quinault Tribe did not adopt a formal constitution immediately upon acceptance of the IRA in 1935, nothing in the Act requires such action. See 25 U.S.C. § 476 (1976) (sec. 16, IRA).

Grant. They declined to accept this as a reservation, even though some of them did take allotments on the Quinalt Reservation. Their reason for not accepting the government's offer to go upon the Quinalt Reservation was that the Quinalts and Quillehutes for hundreds of years had been enemies, and the Quinalts did not welcome them. An effort was then made to remove them from their village at the mouth of the Quillehute River to the Makah Indian Reservation, some forty miles to the north, and this again they refused, for the reason that their interpretation of the treaty was that they were to be given a reservation where they had always lived at the mouth of the Quillehute River.

* * * * *

* * * We must presume that President Cleveland, in promulgating the order creating the [Quilleute] reservation, did so with an intent to carry out the provisions of the [1855] treaty [of Olympia]. This is more conclusively established when we note that the proclamation itself was drafted by the Indian Service, who, for thirty-five years, had been endeavoring to secure for this tribe of Indians a reservation "sufficient for their wants," and who, as evidenced by the numerous documents in this record, repeatedly called to the attention of the Commissioner of Indian Affairs and the Secretary of the Interior that these Indians were "fish eating Indians" and their sole means of subsistence depended upon a continued use of the waters from which they caught their fish.

Discussion and Decision

[1] The Administrative Law Judge's November 16 order assumes as the legal basis for his decision that the allotment on the Quinalt Reservation to individual Indians conferred jurisdiction over the res-

ervation upon the tribes in which the allottees were members or to which they had hereditary affiliations. This thesis of allotment as a jurisdictional act, buttressed by an old probate opinion, *Estate of Mary Sailto*, Probate 41969-39,¹⁰ becomes the legal foundation for his later approval of the devise of Quinalt trust property to an individual who is neither an heir of the decedent allottee nor a member of the Quinalt Tribe. While the approach taken permits avoidance of consideration of sec. 4 of the IRA, it is not permissible, under the circumstances of this case, to avoid analysis of the effect of sec. 4 upon the will in probate.

The General Allotment Act, the Act of Feb. 8, 1887, 24 Stat. 388, was envisioned as a means to assimilate the Indian into the general American society. Contrary to the assumption in the order under review, the allotment to individuals was done in derogation of tribal sovereignty, and was intended to dismantle tribal government rather than to extend it. *Hopkins v. United States*, 414 F.2d 464, 467 (9th Cir. 1969). The antithesis to the Allotment Acts is the Indian Reorganization Act of 1934 which ends the allotment process and seeks to revitalize and strengthen tribal self-

¹⁰ Two other decisions are cited: *Estate of Tommy Brown*, Probate 8859-35 and *Estate of Mary Wheeler*, Probate 6679-35. Neither of these cases, however, has any applicability to this matter since they involve the probate of estates not affected by the IRA.

government.¹¹ The allotment of the Quinault Reservation which began in 1887 and continued under the 1911 Allotment Act, was ended in 1935 when allotments to individuals were prohibited by sec. 1 of the IRA. The jurisdictional basis for the exercise of tribal sovereignty over the reservation is properly traced, thus, not to the allotment acts, but rather through the treaty rights conferred by the 1855 treaty and the executive orders establishing the Quinault and Quileute Reservations to the action taken by the Quinault Tribe to organize under the IRA.

In *Halbert v. United States*, 283 U.S. 753 (1931), the Court determined that allotment on the Quinault Reservation could, under the 1855 treaty, properly be made to tribes affiliated with the Quinault and Quileute Tribes without regard to individual residence. It was not suggested by the Court, however, that allotment might confer jurisdiction over the Quinault Reservation upon the tribes of allotted individuals. That argument was expressly rejected by the Court of Appeals in *Moore v. United States*, *supra* at 157 F.2d 764.

Appellants contend that because in 1910, over 20 years after the reservation was made, certain members of the Quillayute Tribe received allotments of land in another reservation, the Quinalt, we must assume that the President in 1889

did not intend to reserve the tide lands and river waters in the 500 acres occupied by the two hundred persons of the Quillayute Tribe. The Quinalt reservation was made to include the Quillayute Indians, but it was created in 1873. The 1855 treaty with the Quillayutes provided that tribe "agree to remove to and settle upon the same within one year after the ratification of this treaty, or sooner if the means are furnished them." At this later date, 18 years after the time for removal, the Quillayutes declined to move away from their ancestral home and immemorably established maritime industries on the Quillayute River. The government acquiesced and they remained in La Push. We are unable to see any relevance of the 1910 allotments in determining the intent of the President in the reservation of 1889. [Footnote omitted.]

The Administrative Law Judge compounded his error when he relied upon an obscure 1939 Departmental opinion, the *Estate of Mary Sailto*, Probate 41969-39, which he quotes in his order of November 16 to find: "No single or particular tribe or band of Indians can be said to have exclusive jurisdiction over the Quinault Reservation. Such jurisdiction as does exist appears to be a concurrent one vested in the tribes or bands of Indians whose members have been allotted on said reservation." Both quoted conclusions stated are incorrect. Immediately after the creation of the Quinault Reservation, while the Quileute Tribe might have sought to relocate with the Quinalts, a joint jurisdiction over the reservation may have been possible. In fact it never occurred. The second suggestion that

¹¹ *Fisher v. District Court*, 424 U.S. 382, 387 (1976); and see Cohen, *Handbook of Federal Indian Law* (1941), pp. 84-87.

tribal organization is limited by hereditary affiliations is simply wrong.

Under the circumstances of this case, the *Sailto* decision, relied upon by the Administrative Law Judge does not support his conclusion. First, it is clear that the Quileute Tribe has not asserted jurisdiction over the Quinault Reservation, but elected to keep the tribal land at LaPush instead of accepting an affiliated status with the Quinault Tribe. *Sailto* notes this fact. Second, it is also historically clear that the Quinault Tribe has, since adoption of the IRA, continuously exerted claim to exclusive jurisdiction over the Quinault Reservation.¹² *Sailto* considers the historical record of the tribal organizations involved, finds the Quileute Tribe is limited to its own reservation at LaPush, but misconstrues *Solicitor's Opinion*, M-27796 (Nov. 7, 1934) to permit a finding that the Quileute devisee may take Quinault property, based in part upon a determination that the Quinault Tribe is not a single

tribe having political powers but a mere collection of hereditary groups. The opinion is internally inconsistent, fragmentary, and poorly reasoned. It fails to recognize that the Quinault Tribe is a unitary political body although it is composed of members who have hereditary connections with other tribes. *Sailto* represents an anomaly in Departmental decisionmaking in this area, and has not been followed. It has no value as precedent.¹³ Analysis of sec. 4 of the IRA is required in order to decide this appeal.

[2] Sec. 4 of the IRA, prior to its amendment in 1980, restricted the alienation of Indian trust lands to three classes of devisees: The tribe upon whose reservation the lands are located; members of the tribe; and legal heirs of the testator. The restriction does not apply to reservations which did not adopt the IRA, nor does it apply to lands outside Indian reservations. Trust lands unrestricted by the IRA may be devised to anyone named by the testator, subject only to Departmental approval. Under sec. 4 of the Act, a devisee of trust property who is not a member of the tribe on whose reservation the land is located may take by devise from an Indian will only if the devisee is a

¹² Congress recognized the Quinault Tribe to be the proper party plaintiff to represent all Indian claims arising in the Quinault Reservation by the Act of July 24, 1947, 61 Stat. 416. See also Act of Aug. 25, 1959, 73 Stat. 427. The Secretary of the Interior, by communication to Congress dated May 22, 1947, described the status and composition of the tribe as "[c]ollectively the Indians having an interest in that reservation, including those of the blood of other tribes consolidated with the Quinaielts pursuant to the treaty, Executive order, and act of Congress [who] may be regarded as one tribe," a position consistent with prior Departmental statements concerning the issue (see Op. Sol. M-27796 cited in n.13).

¹³ *Solicitor's Opinion*, M-27796 (Nov. 7, 1934), 1 Op. Sol. on Indian Affairs 478 (1979), was apparently the basis for the "concurrent" jurisdiction language appearing in *Sailto*. The conclusion stated is, however, an erroneous application of the Solicitor's opinion.

legal heir of the testator who would inherit according to the inheritance scheme of the applicable state probate code.¹⁴ Since this restriction on the class of devisee is well established, the only possible avoidance of the limitation upon a nonmember devisee is through a finding that the trust land is not located on an IRA reservation or, as was done below in this case, through a finding that the devisee's tribe has jurisdiction over the reservation where the trust land is located.¹⁵

The record establishes that appellee, neither a member of the Quinault Tribe nor an heir of decedent, is ineligible under sec. 4 of the IRA, to take trust property devised to him which is located on the Quinault Reservation, since that reservation is under the jurisdiction of the Quinault Tribe which adopted IRA organization in 1935. The

order appealed from must be reversed.

Accordingly, pursuant to the authority delegated to the Board of Indian Appeals by the Secretary of the Interior, 43 CFR 4.1, the order dated Nov. 16, 1979, approving the devise of trust property to appellee of Quinault trust lands is set aside. The Administrative Law Judge is directed to prepare an order of distribution of the Quinault trust property to decedent's heirs at law.

This decision is final for the Department.

FRANKLIN D. ARNESS

Administrative Judge

I CONCUR:

WM. PHILIP HORTON

Chief Administrative Judge

THE WEST VIRGINIA HIGHLANDS CONSERVANCY

3 IBSMA 154

Decided *May 28, 1981*

Appeal by The West Virginia Highlands Conservancy from the decision of the Acting Director of the Office of Surface Mining Reclamation and Enforcement that Mower Lumber Co. had valid existing rights to conduct underground mining operations in certain areas of the Upper Shavers Fork Sub-Unit of the Monongahela National Forest in Randolph County, West Virginia.

Dismissed.

¹⁴ Since *Solicitor's Opinion*, M-27776, 54 I.D. 584 (Aug. 17, 1934), the Department has consistently followed the stated principles in construing sec. 4 of the IRA. *Estate of Cleveland Iron Shooter*, 7 IBIA 212 (1979), on appeal as *Ramirez v. Andrus*, CA 79-L-79 (D.C. Neb.); *Estate of Dewey Cleveland*, 7 IBIA 72, 83 I.D. 170 (1976); *Estate of Rose LaRose*, 2 IBIA 60, 80 I.D. 620 (1973); *Estate of Emma Blowsnake Goodbear Mike*, IA-916 (Oct. 26, 1960). Contrary to the assertions of appellee, the meaning of the word "heirs" as used in sec. 4 is not ambiguous. As the Aug. 1934 Solicitor's opinion observes (54 I.D. 586-587), "It requires no strained construction of language to interpret the phrase 'or any heirs of such member' * * *. * * * the phrase * * * should properly be construed to mean 'heirs of the testator.'"

¹⁵ *Solicitor's Opinion*, M-27796, n.12, *supra*, discusses several possible jurisdictional situations. The Quinault Tribe's situation is described at I Op. Sol. 479: "(c) A group of Indians residing on a single reservation, who may be recognized as a 'tribe' for purposes of the Wheeler-Howard Act regardless of former affiliations."

1. Surface Mining Control and Reclamation Act of 1977: Appeals: Generally

Once a right to appeal a decision of an OSM official has been granted, that right cannot be revoked without some express statement of and explanation for the revocation.

2. Surface Mining Control and Reclamation Act of 1977: Appeals: Generally

Under 48 CFR 4.1282(b), an appeal of a decision of an OSM official must be filed within 30 days of the date of the decision, if the person filing the appeal did not receive a copy of the decision.

APPEARANCES: Patrick C. McGinley, Esq., Robert Manetta, Esq., Morgantown, West Virginia, and Robert J. Shostak, Esq., Pittsburgh, Pennsylvania, for The West Virginia Highlands Conservancy; Billy Jack Gregg, Esq., Office of the Field Solicitor, Charleston, West Virginia, Marianne D. O'Brien, Esq., and Marcus P. McGraw, Esq., Assistant Solicitor for Enforcement, Washington, D.C., for the Office of Surface Mining Reclamation and Enforcement; Richard A. Flye, Esq., and Christian Volz, Esq., Sellers, Conner & Cuneo, Washington, D.C., for Mower Lumber Co.

OPINION BY THE INTERIOR BOARD OF SURFACE MINING AND RECLAMATION APPEALS

The West Virginia Highlands Conservancy (Conservancy) has sought review of a decision of the Acting Director of the Office of

Surface Mining Reclamation and Enforcement (OSM). That decision held that Mower Lumber Co. (Mower) had valid existing rights to conduct underground coal mining operations in the Upper Shavers Fork Sub-Unit of the Monongahela National Forest in Randolph County, West Virginia. The decision was made under sec. 522(e) of the Surface Mining Control and Reclamation Act of 1977¹ and regulations in 30 CFR Part 761, as modified by subsequent court rulings. For the reasons set forth below we dismiss the appeal.

Background

On Mar. 14, 1980, Mower filed a petition with OSM seeking a determination under sec. 522(e) of the Act that it had valid existing rights to conduct underground coal mining operations in a portion of the Monongahela National Forest. Although not required to do so, OSM chose to publish its preliminary finding in the *Federal Register*. That decision, dated July 31, 1980, and published in the Aug. 7, 1980, *Federal Register*, found that Mower did have valid existing rights. 45 FR 52467 (Aug. 7, 1980). The decision stated: "Following the close of the comment period, a final decision will be issued * * *. The Director's final decision will be administratively reviewable under 30 CFR 787.11." 45 FR at 52469.

¹ Act of Aug. 3, 1977, 91 Stat. 445, 30 U.S.C. § 1272(e) (Supp. II 1978).

In a letter dated Sept. 5, 1980, OSM made its final decision granting Mower's petition. The letter was published in the Sept. 17, 1980, *Federal Register*. 45 FR 61799 (Sept. 17, 1980). Neither the letter nor the *Federal Register* publication mentioned appeal rights.

The Conservancy filed a notice of appeal of that decision on Oct. 14, 1980, and sought to have the decision stayed pending appeal as provided under 43 CFR 4.21(a). Mower filed a motion to intervene and to dismiss the appeal on Oct 17, 1980. OSM responded to the notice of appeal and moved for an expedited order on Oct. 22, 1980. On Oct. 23, 1980, the Board granted Mower's motion to intervene and ordered that the Acting Director's decision be given immediate full force and effect.

Following further briefing by all parties, the Conservancy filed a petition for reconsideration of the Board's Oct. 23, 1980, order on Nov. 3, 1980. On Nov. 5, 1980, the Board granted reconsideration and ordered oral argument. A footnote to that order stated: "The granting of the petition does not affect the status of the October 23 order; it remains in effect unless otherwise specifically ordered by the Board." Oral argument was held on Nov. 12, 1980.

Discussion and Conclusions

[1] The first issue before the Board is whether there is a right to

appeal the Acting Director's decision. Such a decision may be appealed when "the decision specifically grants such right of appeal." 43 CFR 4.1281. Although the proposed decision stated that the final decision would "be administratively reviewable under 30 CFR 787.11," 45 FR 52469 (Aug. 7, 1980), this language was omitted from the final decision without comment or explanation. The Board does not decide if and under what circumstances a right of appeal may be revoked once it has been granted. It does hold, however, that once a right of appeal has been granted, it cannot be revoked without some express statement of and explanation for the revocation. Therefore, the absence of any statement relating to a right of appeal in the final decision does not revoke the right expressly granted in the *Federal Register* publication of the proposed decision.

Having concluded that there was a right to appeal this decision, the next issue is whether the Conservancy's appeal was timely taken. The appeal was filed on Oct. 14, 1980. Under 43 CFR 4.1282(b), the Conservancy had 30 days from the date of the decision in which to file its notice of appeal.² The question,

² 43 CFR 4.1282(b) reads:

"The notice of appeal shall be filed within 20 days from the date of receipt of the decision. If the person appealing has not been served with a copy of the decision, such appeal must be filed within 30 days of the date of the decision."

May 28, 1981

therefore, is what was the date of the decision.

Mower argues that the date of the decision was Sept. 5, 1980, the date on which the Acting Director signed the letter that was later published in the *Federal Register*. OSM asserts that the date of the decision was Sept. 16, 1980, the date on which the letter and accompanying explanatory material were filed with the Office of the Federal Register for publication and thereby made available to the public. The Conservancy urges that the crucial date was Sept. 17, 1980, the date the decision was actually published in the *Federal Register*.

A decision of the Director of OSM on the existence of valid existing rights to conduct coal mining operations is not required by the Act, regulations, or 44 U.S.C. § 1505 (a) (1976) to be published in the *Federal Register*. In fact, there is no requirement to notify anyone other than the applicant for a determination and any other party to the proceeding that a determination has been made. Publication in the *Federal Register* is thus a superfluous act, which neither creates nor enlarges rights.

[2] Were this controversy solely between OSM and the Conservancy, we might be inclined to hold that the publication would prevent OSM from arguing that the Conservancy had filed its appeal late. See *Daniel Brothers Coal Co.*, 2 IBSMA 45, 87 I.D. 138 (1980). Here, however,

Mower is also involved. Mower received a decision that was rendered on Sept. 5, 1980. By reading 43 CFR 4.1282(b) and 4.22(e), Mower could determine that any appeal of that decision by an outside person would have to be filed by Oct. 6, 1980. When no appeal was filed by that date, Mower could legitimately conclude that the decision was final.³ Consequently, because the Conservancy's notice of appeal was not filed within 30 days of the date of the decision, it was untimely.

This does not preclude the Conservancy or any other similarly situated person from filing a timely notice of appeal. It does, however, require that a person concerned with a particular matter pending before OSM monitor its status. Such vigilance was anticipated under 43 CFR 4.1282(b).⁴

In this case, the *Federal Register* publication of the final decision showed the date of the letter setting out the final decision to have been Sept. 5, 1980. If the Conservancy had been watching the *Federal Register* for notice of the final deci-

³ There is no evidence in this case that Mower agreed to the *Federal Register* publication, or in any other way acted to suggest that it consented to a date other than the date of the decision being used to determine the appeal period for other persons. Were there such evidence, Mower might also be prevented from arguing lateness of filing.

⁴ The requirement is not unreasonable in view of the fact that a notice of appeal, as evidenced by 43 CFR 4.1282(c) and (d), is merely a statement of intent to appeal; a brief or statement of reasons for the appeal need not be filed for an additional 20 days.

sion, it would have had 19 days from that publication in which to file its appeal. In addition, it still had 7 days to file from the date it alleges that it received actual knowledge of the decision.⁵

⁵ According to an affidavit signed by Robert Manetta, the Conservancy received actual knowledge of the final decision on Sept. 29, 1980, when it received a letter dated Sept. 26, 1980, from OSM to interested parties informing them of the Sept. 17 publication of the determination in the *Federal Register*.

Because the notice of appeal was filed 39 days after the decision, this case is dismissed as untimely filed.

**CORINNE MAE HOWELL AND HER
MINOR CHILDREN, GARY AR-
NOLD HOWELL, RICHARD DE-
WAYNE HOWELL, AND DARCY
LYNN HOWELL v. UNITED
STATES**

*OPINION BY
ADMINISTRATIVE JUDGE
ARNESS*

*INTERIOR BOARD OF
INDIAN APPEALS*

9 IBIA 3

*Procedural and Factual
Background*

Decided June 11, 1981

Appeal from order by Administrative Judge John R. Rampton in Alaska Native Disenrollment contest requiring the Bureau of Indian Affairs to disenroll appellants from the roll of beneficiaries of the Alaska Native Claims Settlement Act, 43 U.S.C. §§ 1601-1628 (1976 and Supp. I 1977).

Affirmed.

**1. Indian Tribes: Alaskan Groups—
Alaska Native Claims Settlement Act:
Disenrollment: Metlakatla Natives**

The provisions of the Alaska Native Claims Settlement Act specifically exclude members of the Metlakatla Tribe of the Annette Islands Reserve from benefits under the Act. Where appellant and her children periodically resided at Metlakatla, accepted benefits from the Metlakatla Tribe as tribal members, were enrolled members since 1968, and did not initiate efforts to terminate tribal membership until 1974, appellants were enrolled members of Metlakatla within the meaning of the Alaska Native Claims Settlement Act and were properly excluded from enrollment under the Act.

APPEARANCES: Robert Blasco, Esq., for appellants Corinne Mae Howell, Gary Arnold Howell, Richard Dewayne Howell, and Darcy Lynn Howell; Bruce Schultheis, Esq., Anchorage Solicitor's Office, for appellee.

On May 1, 1980, appellants sought relief from a determination by an Administrative Law Judge in a disenrollment contest in which it was held they should be disenrolled as Alaska Natives under the Alaska Native Claims Settlement Act of Dec. 18, 1971, 85 Stat. 688 (hereafter ANCSA), 43 U.S.C. §§ 1601-1628 (1976 and Supp. I 1977) (further references to U.S.C. are to 1976 and 1977 editions).

In 1942 appellant Corinne Mae Howell was born in Metlakatla, Alaska. In 1956 she moved to Sitka, Alaska, where she attended school, while at the same time, her parents moved to Oakland, California. In 1961 appellant joined her parents in California where she subsequently married. In 1963 following the birth of appellant Richard Dewayne Howell, appellant Corinne Mae Howell and her husband and son moved to Windsor, Missouri. In 1964 appellant Darcy Lynn Howell was born in Missouri. In 1966 the Howell family returned to Oakland where appellant Gary Arnold Howell was born in 1967. In September 1968 the family moved to Metlakatla, where they remained until December 1970, when they returned to Windsor, Missouri. In

1973 they again returned to Metlakatla where they remained until 1977. Thereafter, the family returned to Windsor, Missouri, where they now reside.

In 1968 while living at Metlakatla, appellant Corinne Mae Howell executed an instrument entitled "Application for Membership in Annette Islands Reserve," which recites in pertinent part:

Metlakatla, Alaska, Oct. 28, 1968
COUNCIL OF ANNETTE ISLANDS
RESERVE

Metlakatla, Alaska 99926
Gentlemen:

I am submitting herewith my application to become a member of Annette Islands Reserve and do subscribe to the following principles of good citizenship.

1.—To be faithful and loyal to the Government of the United States of America.

2.—To be loyal to the local government of our community, to obey its ordinances and regulations, and to obey the laws of the Territory of Alaska and the laws of the United States.

3.—To co-operate earnestly in all endeavors for the education of our children, for the advancement of the community, and in the suppression of all forms of vice.

Permit Granted 11/1/68

Rejected

Respectfully,
/s/ Corinne M. Howell

At a hearing held on Sept. 25, 1979, on the contest initiated by the Bureau of Indian Affairs (BIA) to disenroll appellants, appellant Corinne Mae Howell explained the execution of the Oct. 28, 1968, application:

[T]hey told me I had to sign my name here [the application for membership] to

get a card so I could have my rights on the Island.

* * * * *

Q. Do you know what they meant by your rights on the Island?

A. Just to go to the clinic and stuff like that, you know, where you don't have to pay for any medication.

(Tr. 34).

Appellant testified that she was "surprised" when her membership in the Metlakatla Indian Community was announced at a public dance and banquet which she attended in November 1968 in the community. However, she took no affirmative action to disavow membership in the community until 1974, when, having been enrolled for benefits under the ANCSA, she learned that her eligibility for benefits was in doubt. In a letter to the BIA dated Dec. 2, 1974, she wrote:

I hereby affirm that I am, and have been off and on a member of the Metlakatla Indian Community. I will show you later.

Upon inquiring [of] Frida Damus on Nov. 5, 1974, I did not sign the affirmation of membership and *DID NOT VOTE*. That I gave up my voting rights, and membership, since I signed up with the Alaska Lands Claims Settlement.

So with this information in hand I hereby make intentions known in writing I intend to abandon my Community Membership in the Community of Metlakatla, Alaska and hereby request that my name be included on the Alaska Land Claims Settlement.

Appellant Corinne Mae Howell's application for enrollment under ANCSA shows her to be one-fourth Alaska Indian and five-eighths Tsimshian. Her children, appellants Gary Arnold, Richard De-

June 11, 1981

wayne, and Darcy Lynn Howell are shown on their application for benefits to be one-eighth Alaska Indian and three-eighths Tsimshian. Mrs. Howell testified that she intended to take the Missouri residence of her husband from the time of her marriage, which took place in California, and considers Missouri to be her place of domicile.

The Administrative Law Judge below rejected appellant's contentions concerning community membership holding:

Mrs. Howell did apply for membership in the Metlakatla Community. Whether or not she knew she was applying for membership, but thought she was only applying for health benefits, is immaterial because she was present on November 1, 1968, when her name was read as an approved member of the community, and by her silence, she ratified this action. Further, in her letter dated December 2, 1974, to the Enrollment Coordinating Office (Ex. 9), she stated, "I hereby affirm that I am, and have been off and on a member of the Metlakatla Indian Community." It was not until November 5, 1974, that she did not affirm her membership, did not vote, and gave up her voting rights and membership in the community in order to qualify for enrollment under the Act.

Thus, Mrs. Howell was a member of the community as of April 1, 1970, and that date has been defined as the critical date to be enrolled in Metlakatla so as to be ineligible for enrollment under the Act. (25 CFR 43h.11)

(Decision at 5-6, dated Apr. 17, 1980).

Discussion and Decision

The Metlakatla community is described by Cohen in the *Handbook*

of *Federal Indian Law*, at 415 (1941):

Unique among native communities is that of the Metlakatla Indians. Encouraged by federal officials about 800 of these Indians migrated in 1887 to the Annette Islands in southeast Alaska from their homes in Metlakatla, British Columbia. A ruling of the Attorney General held that the President of the United States lacked authority to establish a reservation for these Indians on the public domain without congressional sanction, because they were aliens, born outside of the boundaries of the United States proper. By the Act of March 3, 1891, Congress created a reservation for the use of these immigrants and such other Alaskan natives as might join them, to be used in common under rules and regulations prescribed by the Secretary of the Interior. By the Act of March 4, 1907, Congress permitted these Indians to be licensed as masters, pilots, and engineers of steamboats and as operators of motor boats, as if citizens of the United States. Congress granted collective naturalization by the Act of May 7, 1934, to the Metlakatlans and the Indians who emigrated from British Columbia not later than January 1, 1900, and resided continuously in Annette Island.

* * * * *

The privilege of joining the Metlakatlan community and occupying any part of the Island is subject to vote of the Metlakatlan council. To obtain membership, except by birth, requires the approval of three-fourths of the members of the town council. The land and resources of the reservation are held in common; individuals occupy land by permits from the council. Local self-government is recognized in rules and regulations of the Secretary of the Interior. [Footnotes omitted.]

[1] The unique character of the Metlakatla community continues

today. The Metlakatla Indian community retains the 1891 reserve in lieu of benefits under ANCSA. Accordingly, benefits under ANCSA are denied by sec. 19 of the Act, 43 U.S.C. § 1618(a), which recognizes an exception in the case of Metlakatla and provides:

§ 1618. Reservations; revocation; excepted reserve; aquisition of title to surface and subsurface estates in reserve; election of Village Corporations

(a) Notwithstanding any other provision of law, and except where inconsistent with the provisions of this chapter, the various reserves set aside by legislation or by Executive or Secretarial Order for Native use or for administration of Native affairs, including those created under section 497 of title 25, are hereby revoked subject to any valid existing rights of non-Natives. This section shall not apply to the Annette Island Reserve established by section 495 of title 25 and no person enrolled in the Metlakatla Indian community of the Annette Island Reserve shall be eligible for benefits under this chapter.

The declared purpose of ANCSA is to extinguish "all claims by Natives and Native groups of Alaska, based on aboriginal land claims" (43 U.S.C. § 1601(a)). The term "Native" may include persons who are Tsimshian Indians (Metlakatlans), but only if those persons are not enrolled in the Metlakatla Indian community (43 U.S.C. § 1602(b)). The declared intent of Congress is to prevent duplication of benefits under ANCSA and other statutes providing benefits to Indians either by way of allotment (43 U.S.C. § 1617) or reservation (43 U.S.C. § 1618). Thus the Administrative Law Judge correctly

rule that Congress planned "to prevent an Alaskan Native from receiving double benefits" (Decision at 5, dated Apr. 17, 1980). It is clear on the face of the ANCSA that membership in the Metlakatla community precludes the receipt of benefits under ANCSA. Departmental regulations, which we are without authority to declare invalid, also make it clear, as the Administrative Law Judge noted, that any person enrolled in the Metlakatla community as of Apr. 1, 1970, is ineligible for enrollment under ANCSA. See 25 CFR 43h.11. The issues on appeal are, therefore, reduced to whether appellant's renunciation of Metlakatla membership on Dec. 2, 1974, as evidenced by her letter on that date, was effective to entitle her and her children to claim benefits under ANCSA.¹

¹ Appellants specify 25 exceptions to the Administrative Law Judge's ruling. Thus, they contend his ruling denied them due process, and the equal protection of the law guaranteed by the Fifth Amendment to the United States Constitution, and that he erred by failing to follow binding Departmental precedent established by the disenrollment contest entitled *United States v. Anderson*, Docket No. AL 77-57D, decided Nov. 30, 1977. They contend that application of the legal doctrines of res judicata and collateral estoppel prevent their disenrollment and that the provisions of secs. 3, 5, and 19 of ANCSA and 25 CFR Part 43h were misapplied by the finder of fact below. Finally, they contend that the Administrative Law Judge committed numerous errors in fact finding which affected the conclusions announced and resulted in an erroneous decision on the merits. However, the primary thrust of the arguments advanced by appellants as shown by the brief on appeal concerns whether the Administrative Law Judge correctly found that appellants' renunciation of Metlakatla community membership was effective to entitle them to benefits under ANCSA. The other specified errors are without merit.

June 11, 1981

To reach a determination of appellants' eligibility to be enrolled for ANCSA benefits, the Administrative Law Judge applied 25 CFR 43h.11 to establish Apr. 1, 1970, as the date eligibility criteria should be applied to determine individual entitlement to benefits.² Appellants point out that ANCSA did not become law until Dec. 18, 1971, and that the 1970 date used by the Departmental regulation appears to be merely the date of the 1970 census and bears no relation to the Act or a reasonable administration of the Congressional intentions to settle aboriginal claims.³ The regulation, 25 CFR 43h.11, provides: "No person who was enrolled in the Metlakatla Indian Community of the Annette Islands Reserve as of April 1, 1970, shall be eligible for enrollment under this Part [41 FR 32423, Aug. 3, 1976]."

² Even were the effective date of the Act used to determine eligibility, the result here would remain the same. In this connection, see *United States v. Bowen*, 8 IBIA 218, 88 I.D. 261 (1981).

³ The clear intent of the Act is to exclude the Metlakatla community from benefits. This intent is also indicated by the legislative history of the Act. Thus, the report of the Secretary to the House concerning the House bill subsequently enacted states the following concerning the Metlakatla community:

"Section 16 provides that the existing reserves that have been set aside by any means for natives use or administration of their affairs are revoked when such revocation is not inconsistent with the provisions of this Act. This provision does not revoke the Annette Islands Reserve because the revoking of such reservation would be inconsistent with the provisions of this Act since the Tsimshian Indians are not included in the settlement made by this bill."

(H.R. Rep. No. 92-523, 92d Cong., 1st Sess. 2, reprinted in [1971] U.S. Code Cong. & Ad. News 2219.)

Prior to the 1976 revision of the regulation, 25 CFR 43h.11 read: "Applications from Native Alaska members of the Metlakatla Indian Community will be conditionally accepted subject to a determination of their eligibility for inclusion on the Alaska Native roll and entitlement to benefits under the Act." Before adoption, the current rule was published by the Department on June 4, 1976, with the comment (41 FR 22566), "A revision of § 43h.11 is proposed to more definitively reflect the status of persons enrolled in the Metlakatla Indian Community," indicating that the agency sought to implement the statutory directive that Tsimshian Indians benefiting from the Annette Islands Reserve be excluded from benefits under ANCSA.

Appellant Corinne Mae Howell contends she was neither a domiciliary or resident of the reserve on the effective date of the ANCSA, Dec. 18, 1971, which date she urges should be used to determine eligibility in her case, rather than the Apr. 1, 1970, date selected by the Departmental regulation. The record on appeal indicates appellant was born at Metlakatla and lived there until she left to attend school. Although not clearly stated in the record, it appears that she did not leave Alaska to join her family in California until some time after her completion of high school in 1961. From 1968 until 1970 she and her family lived in Metlakatla. In 1968 appellant made formal application for membership and was admitted

to the Metlakatla community. Her family was with her again in Metlakatla from 1973 until 1977. During that time her husband held a job in the community and appellant cared for her grandparents who lived in Metlakatla. On Mar. 27, 1973, meanwhile, while still at Metlakatla, she applied for benefits under ANCSA. The BIA, administering the Act under the pre-1976 regulation, accepted the application from appellant and her children. It was not until her application was questioned because of her membership in Metlakatla that appellant took action to disassociate herself from the Tsimshian community.⁴

Under the circumstances, it is apparent that appellant accepted benefits under the 1891 statute creating the Annette Islands Reserve.⁵ She applied for, and was admitted to membership in the community after spending much of her life in residence in the community. Assuming for the purposes of decision that the

1976 revision of 25 CFR 43h.11 does not apply in her case, since her application and rejection predate the revision of the regulation, appellant is nonetheless made ineligible for benefits under ANCSA by reason of her membership in, and acceptance of benefits from, the Metlakatla community.⁶

aboriginal occupancy. Metlakatla, a colony of Indians from British Columbia established in the late 19th century, is expressly excluded from the benefits provided by the Act. Membership in the colony excludes a share under ANCSA. Discussion of questions of residence or domicile is more confusing than beneficial to an understanding of individual claims by persons of Tsimshian ancestry for ANCSA benefits. (Resolution 74 denounces the receipt by Metlakatla members of ANCSA benefits and recommends the Secretary of the Interior disenroll Metlakatla members from the ANCSA rolls unless a member "abandon his membership in the Metlakatla Indian Community.") (Resolution 74, Metlakatla Indian community, June 24, 1974. The resolution makes no mention of residence requirements or domiciliary considerations.)

⁴ 43 U.S.C. § 1618(a). Appellant contends that the Department is precluded from reaching this decision by the decision in *United States v. Anderson*, Docket No. AL 77-57D (1979), and that legal doctrines of stare decisis, res judicata and collateral estoppel should operate to prevent the result reached here. In *Anderson* an Administrative Law Judge in a disenrollment contest permitted enrollment of Tsimshian Indians who had at least one-quarter Indian ancestry other than Tsimshian without regard to their membership in the Metlakatla community. Such a position is, of course, a clear violation of 43 U.S.C. § 1618(a) and ignores the statutory definition of "Native" which excluded such persons from receiving dual benefits (43 U.S.C. § 1602(b)). Assuming, in the light most favorable to appellant, that the facts and issues in the *Anderson* case are identical to the matter before the Board, the situation on appeal is simply that of two conflicting administrative actions which require resolution by the agency following complete agency review. 43 CFR 4.1010. In no event could this Department, following a construction of Departmental regulations which violates a statutory bar to enrollment, permit a prior erroneous decision to frustrate the intent of Congress to bar members of Metlakatla from receipt of ANCSA benefits. Both the Act and

⁴ Appellant points out several errors of fact in the findings of the Administrative Law Judge below. Thus, she correctly contends there is no showing that appellant voted in the election held in Metlakatla on Nov. 3, 1970. The decision below also incorrectly finds that all three minor children were born in California, a finding contradicted by a written submission by appellant indicating otherwise. The errors noted are not, however, substantial. Appellant's argument that the decision improperly characterized her Dec. 2, 1974, letter is incorrect. The minor factual discrepancies noted in the decision do not affect the correctness of the conclusions or the ultimate holding.

⁵ Citing Resolution 74 adopted by the Metlakatla Indian community in 1974, appellant argues that considerations of residence or domicile are determinative of this appeal. This approach, while ingenious, ignores the statute which is the basis for the benefits sought. ANCSA is intended to settle claims based upon

Mrs. Howell's children born in 1963, 1964, and 1967 are presumed to be members of the Metlakatla community during their minority pursuant to the provisions of Article II, Section 3, Constitution and Bylaws of the Metlakatla Indian community. There is no showing in the record that any of the three children has been emancipated, nor does it appear that any of the three has disavowed membership in the community. Their eligibility to share in benefits under ANCSA was made to depend upon their mother's claims for, and participation in, the community. All three children were present with appellant in Metlakatla from 1968 until 1970 and again from 1973 until 1977 and shared in the benefits derived from the 1891 reserve. They have taken no independent action to renounce membership in the community, and to do so would have been difficult, given their family circumstances. The Administrative Law Judge correctly concluded that the appellant's minor children also are precluded from receipt of benefits under ANCSA.

Pursuant to the authority delegated to the Board of Indian Appeals by the Secretary of the Interior, 43 CFR 4.1, the decision appealed from is affirmed. Appellants are barred from enrollment

the implementing regulations are clearly intended to insure that multiplication of benefits does not occur. (To the extent that *Anderson* held Tsimshian ancestry is not a disqualifying bar to enrollment for otherwise qualified applicants, it is correct: such a finding is not inconsistent with the result here.)

for benefits under the Act.⁷ Agency officials of the BIA charged with enforcement of Departmental regulations respecting enrollment are directed to take appropriate action to disenroll appellants consistent with this opinion, which is final for the Department.

FRANKLIN D. ARNESS

Administrative Judge

I CONCUR:

WM. PHILIP HORTON

Chief Administrative Judge

ISLAND CREEK COAL CO.

3 IB SMA 165

Decided June 15, 1981

Cross-appeals by Island Creek Coal Co. and the Office of Surface Mining Reclamation and Enforcement from the Mar. 21, 1980 decision of Administrative Law Judge Tom M. Allen in Docket No. CH 0-13-P. That decision converted Cessation Order No. 79-I-9-5 into a notice of violation, upheld the notice for discharging blackwater

⁷ Appellants rely upon a strained construction of 25 CFR 43h.15 to argue that a person may not be disenrolled for membership in Metlakatla once enrolled, since the regulation specifically enumerates only sec. 5, ANCSA, as a basis for disenrollment. Sec. 43h.15 does not permit such a strained construction. Membership in Metlakatla is clearly defined by the regulation as one of the disqualifying factors which require disenrollment. This argument (also traceable to the *Anderson* decision) is rejected. The language of the Act concerning residence is directed primarily to area assignment of beneficiaries and does not involve considerations of basic eligibility for benefits.

into a creek, and assessed a \$2,200 civil penalty.

Affirmed in part, reversed in part.

1. Surface Mining Control and Reclamation Act of 1977: Cessation Orders: Generally—Surface Mining Control and Reclamation Act of 1977: Environmental Harm: Generally

OSM has established a *prima facie* case that a cessation order was properly issued when it shows a violation, practice, or condition that is casually connected to significant, imminent environmental harm or a reasonable expectation of such harm.

2. Surface Mining Control and Reclamation Act of 1977: Cessation Orders: Generally

Cessation orders are extreme sanctions and should not be issued indiscriminately, but where the prerequisites for a cessation order are found, there need be no hesitation in closing the operation or its relevant portion.

3. Surface Mining Control and Reclamation Act of 1977: Cessation Orders: Generally

Under the circumstances of this case, a cessation order requiring that all underground pumping of slurry be stopped was not overly broad.

APPEARANCES: George S. Brooks II, Esq., Lexington, Kentucky, for Island Creek Coal Co.; William Larkin, Esq., Office of the Field Solicitor, Charleston, West Virginia, Mark Squillace, Esq., and Marcus P. McGraw, Esq., Assistant Solicitor for Enforcement, Office of the Solicitor, Washington, D.C., for the Office of Surface Mining Reclamation and Enforcement.

**OPINION BY THE INTERIOR
BOARD OF SURFACE
MINING AND
RECLAMATION APPEALS**

Both Island Creek Coal Co. (Island Creek) and the Office of Surface Mining Reclamation and Enforcement (OSM) have sought review of the Mar. 21, 1980, decision of Administrative Law Judge Tom M. Allen that converted Cessation Order No. 79-I-9-5 into a notice of violation, upheld the notice, and assessed a \$2,200 civil penalty. This decision was issued under the provisions of the Surface Mining Control and Reclamation Act of 1977 (Act).¹ For the reasons set forth below, we affirm that decision in part and reverse it in part.

Background

On Apr. 10, 1979, an OSM inspector noticed that Trace Fork Creek in Logan County, West Virginia, was carrying a heavy sediment load. He followed the discolored water upstream to an embankment in the area of Island Creek's Holden #29 preparation plant (Tr. 27). After taking a sample of the discharge, he spoke with the plant superintendent. In the process of washing coal, the plant produced about 200,000 gallons of slurry per day with a sediment load of approximately 300,000 mg/l (Tr. 33). This slurry was pumped into abandoned underground mine workings located beneath the plant (Tr. 186). On the day of the inspection, some of this

¹ Act of Aug. 3, 1977. 91 Stat. 445, 30 U.S.C. §§ 1201-1328 (Supp. II 1978).

June 15, 1981

slurry was entering Trace Fork Creek. The cause of this discharge appeared to be that the borehole into which Island Creek was pumping slurry clogged up, the slurry overflowed into a small catch basin, and eventually found its way into the creek, perhaps through fissures in the bottom of the basin.

Although pumping of slurry into the apparently clogged borehole probably stopped before the inspector arrived, pumping continued into an air shaft (Tr. 139-140). When the superintendent was not able to provide the inspector with maps of the underground workings or any other evidence of elevation or interconnection of tunnels, the inspector issued a cessation order requiring Island Creek immediately to cease the discharge into the creek and the pumping of slurry into the mine workings. This order had the effect of closing the plant because it could not operate without creating slurry, and there was no place to dispose of that slurry except in the workings.

After issuing the order, the inspector took additional water samples. Analysis of all the samples taken showed elevated suspended solids as set out below:

- a. 75 feet above culvert above plant
18.00 mg/l
- b. at point of discharge (2 samples)
1,733.33 mg/l
1,900.00 mg/l
- c. 85 feet downstream (2 samples)
1,075.00 mg/l
461.50 mg/l

- d. 100 feet downstream 588.00 mg/l
- e. 1/4 mile downstream 647.60 mg/l
- f. 1.75 miles downstream

286.00 mg/l²

The cessation order was terminated the next day, Apr. 11, 1979, because the discharge had stopped.

After an assessment conference on the proposed civil penalty for the cessation order, Island Creek petitioned for review before the Hearings Division. A hearing was held on Feb. 22, 1980, and a decision was issued on Mar. 21, 1980. In that decision, the Administrative Law Judge found that a violation had occurred, but that a cessation order should not have been issued for the violation. He therefore converted the cessation order into a notice of violation and sustained the notice. He assessed a total of 42 points, or \$2,200, for the violation.

Both Island Creek and OSM sought review of this decision and filed briefs on appeal. In its brief to the Board, Island Creek raised for the first time OSM's authority to regulate the plant. On Sept. 23, 1980, the Board remanded the case to the Hearings Division for recommended findings of fact and conclusions of law on the question of whether the plant was subject to regulation. Before a hearing was held, the parties filed a joint motion for consent decision on Apr. 16, 1981, stipulating that the plant was subject to regulation. On Apr. 17,

² Tr. 37-44; Exhs. C-1 through C-7. Under 30 CFR 715.17(a), it is a violation to discharge water from a permit area with total suspended solids in excess of 70 mg/l.

1981, the Administrative Law Judge issued a decision recommending that the plant was subject to regulation and returning the case to the Board. The case is now ready for a decision on the merits.

Discussion and Conclusions

[1] Because Island Creek does not dispute that slurry from its preparation plant entered Trace Fork Creek, the major question before the Board is whether a cessation order was properly issued because of this occurrence. In *Claypool Construction Co., Inc.*, 2 IBSMA 81, 84-85, 87 I.D. 168, 170 (1980), we discussed the propriety of the issuance of cessation orders:

A cessation order is properly issued when an OSM inspector observes a condition, practice, or violation of the Act or regulations which is determined to be causing or can reasonably be expected to cause significant, imminent environmental harm. When review is sought of a cessation order issued under such circumstances, OSM must be prepared to supply prima facie proof: (1) of the violation, practice, or condition identified in the order; (2) of significant, imminent environmental harm or a reasonable expectation thereof; and (3) of a causal link between such reasonably expected or existing harm and the proven violation, practice, or condition. [Footnotes omitted.]

In this case OSM cited Island Creek for allowing "blackwater" to enter Trace Fork Creek.³ OSM's

evidence showed that blackwater was entering the creek. Analysis of water samples taken from the creek showed a low level of suspended solids above the plant and very high levels below the discharge point. These high levels of suspended solids exceeded the effluent limitations of 30 CFR 715.17(a). Island Creek does not dispute that blackwater entered the creek or that the effluent limitations were exceeded.

OSM also showed that significant environmental harm had occurred and could reasonably be expected to continue. Water pollution is itself an environmental harm, whether or not that pollution is shown to have had an impact on aquatic plant and animal life. An elevated level of suspended solids is one form of water pollution. The high levels of suspended solids here represent significant water pollution that was both observable and measurable. *Claypool Construction Co., Inc.*, *supra* 2 IBSMA at 86, 87 I.D. at 171. That pollution was also imminent because it was then occurring.

Finally, OSM showed a causal link between the violation and the environmental harm. Island Creek does not dispute that the discharge resulted from the pumping of slurry at the preparation plant. That slurry contained a sediment load of coal fines far in excess of the effluent limitations set out in the regulations. When that slurry entered the creek, it caused the creek water to be observably and measurably polluted. In addition to this present environmental harm, there

³ The order listed a violation of sec. 521(a) (2) of the Act, 30 U.S.C. § 1271(a) (2) (Supp. II 1978). Although this citation is arguably nonspecific, any inadequacies are removed by the narrative description of the violation *Island Creek Coal Co.*, 2 IBSMA 125, 87 I.D. 304 (1980).

June 15, 1981

was a reasonable expectation that slurry would continue to enter the creek and would cause further environmental harm. Therefore, OSM established a prima facie case that a cessation order was properly issued.

[2] Island Creek did not rebut OSM's prima facie case. Instead, it sought to show that in other cases cessation orders had not been issued for this kind of violation and that, even if a cessation order were proper, it was overly broad in requiring the plant to shut down. The fact that notices of violation may have been issued for apparently similar violations in other cases is not evidence that a cessation order was inappropriate here. An inspector must deal with the situation found at each site. Because conditions will probably never be identical at different sites, the inspector must have some latitude in addressing the conditions discovered during each inspection. Cessation orders are extreme sanctions and should not be issued indiscriminately, but where the prerequisites for a cessation order are found, there need be no hesitation in closing the operation or its relevant portion.⁴

[3] In this case the inspector found an active discharge that was causing significant, imminent environmental harm to water resources by polluting Trace Fork Creek. Sec. 521(a)(2) of the Act, 30 U.S.C. § 1271(a)(2) (Supp. II 1978), requires the issuance of a cessation

order under these conditions. Furthermore, there was a potential discharge of 200,000 gallons of slurry per day with a sediment load of 300,000 mg/l. Because Island Creek officials could not show the inspector maps, elevation levels, or other data on the underground workings into which the slurry was being pumped, he could only speculate about the exact cause of the discharge. The inspector found an active discharge and was entitled, under these circumstances, to assume that the discharge would be affected by continued underground disposal. Therefore, the inspector properly issued a cessation order and required that all underground pumping be stopped.⁵ Cessation Order No. 79-I-9-5 is, therefore, reinstated and upheld.⁶

Island Creek also argues that too many civil penalty points were assigned for extent of damage. From the evidence and arguments presented, we see no reason to alter the assignment of points and calculation of the civil penalty.

Therefore, that part of the Mar. 21, 1980, decision below that converted Cessation Order No. 79-I-9-5 into a notice of violation is reversed and the Cessation Order is reinstated and sustained, and the

⁵ Because Island Creek presented no evidence as to when the discharge stopped, there is no basis for a finding that the cessation order remained in effect too long before it was terminated.

⁶ Because of this conclusion, we do not reach the question of an Administrative Law Judge's authority to convert a cessation order into a notice of violation when the cessation order was properly found to be unwarranted.

⁴ An inspector's decision to issue a cessation order remains subject to administrative review.

part assessing a civil penalty of \$2,200, based on 42 points, is affirmed. All motions not previously ruled upon, are denied.

APPLICATION OF EAGLE PROTECTION AND MIGRATORY BIRD TREATY ACTS TO RESERVED INDIAN HUNTING RIGHTS

M-36936

June 15, 1981

Indian Tribes: Hunting and Fishing: Generally

The prohibitions of the Bald and Golden Eagle Protection Act and Migratory Bird Treaty Act are nondiscriminatory, reasonable and necessary conservation measures to which reserved Indian hunting rights are subject.

Imposition of North Dakota State Fish and Game Laws on Indian Claiming Treaty and Other Rights to Hunt and Fish, M-36410 (Feb. 11, 1957), Migratory Bird Treaty Act, M-27690 (June 15, 1934), and other opinions of the Solicitor's Office dealing with the application of Federal migratory bird laws to Indians are overruled to the extent that they conflict with this opinion.

*OPINION BY OFFICE
OF THE SOLICITOR*

TO: ASSISTANT SECRETARY, FISH AND WILDLIFE AND PARKS; ASSISTANT SECRETARY, INDIAN AFFAIRS; DIRECTOR, FISH AND WILDLIFE SERVICE

FROM: SOLICITOR

SUBJECT: APPLICATION OF EAGLE PROTECTION AND MIGRATORY BIRD TREATY ACTS TO RESERVED INDIAN HUNTING RIGHTS

This opinion addresses the question of whether the prohibitions of the Bald and Golden Eagle Protection Act, 16 U.S.C. § 668 *et seq.*, and Migratory Bird Treaty Act, 16 U.S.C. § 703 *et seq.*, apply to the reserved hunting rights of Indians. Indian reserved hunting and fishing rights are of two kinds. First, Indians have reserved hunting and fishing rights on their reservations, regardless of whether the treaty, statute, or executive order creating the reservation expressly mentions such rights. *Menominee Tribe v. United States*, 391 U.S. 404 (1968). Second, many tribes have off-reservation hunting and fishing rights; these rights are based upon specific treaty language. *Washington v. Fishing Vessel Ass'n*, 443 U.S. 658 (1979). For the reasons which follow, I conclude that the prohibitions of the Eagle Protection and Migratory Bird Treaty Acts are nondiscriminatory, reasonable and necessary conservation measures which apply to reserved Indian hunting rights.

In pertinent part, the Eagle Protection Act provides that:

Whoever, within the United States or any place subject to the jurisdiction

BIRD TREATY ACTS TO RESERVED INDIAN

HUNTING RIGHTS

June 15, 1981

thereof, without being permitted to do so as provided [elsewhere in the Act], shall knowingly, or with wanton disregard for the consequences of his act take, possess, sell, purchase, barter, offer to sell, purchase or barter, transport, export or import, at any time or in any manner, any bald eagle commonly known as the American eagle, or any golden eagle, alive or dead, or any part, nest, or egg thereof of the foregoing eagles . . . shall be fined . . . imprisoned . . . [or] assessed a civil penalty¹ . . . 16 U.S.C. § 668(a)-(b).

Similarly, the Migratory Bird Treaty Act provides that:

Unless and except as permitted by regulations made as . . . provided [elsewhere in the Act], it shall be unlawful at any time, by any means or in any manner, to pursue, hunt, take, capture, kill, attempt to take, capture, or kill, possess, offer for sale, sell, offer to barter, barter, offer to purchase, purchase, deliver for shipment, ship, export, import, cause to be shipped, exported, or imported, deliver for transportation, transport or cause to be transported, carry or cause to be carried, or receive for shipment, transportation, carriage, or export, any migratory bird, any part, nest, or egg of any such bird, or any product, whether or not manufactured, which consists, or is composed in whole or part, of any such bird or any part, nest, or egg thereof . . . 16 U.S.C. § 703.

A number of court decisions have assumed a conflict between the provisions of the Eagle Protection Act or Migratory Bird Treaty Act on the one hand and reserved Indian hunting rights on the other hand

and have viewed the issue in terms of whether the statutes "abrogated" Indian hunting rights. It is not surprising that the courts framing the issue in these terms have reached inconsistent results.

In *United States v. Fryberg*, 622 F.2d 1010 (9th Cir. 1980), *cert. denied*, — U.S. — (1980), the Ninth Circuit held that the Eagle Protection Act abrogated or modified Indian treaty rights by prohibiting the taking of bald eagles by Indians in the absence of a permit under the Act. *See also*, *United States v. Al-lard*, 397 F. Supp. 429 (D. Mont., 1975). In *United States v. White*, 508 F.2d 453 (8th Cir. 1974), however, the Eighth Circuit applied the maxim that abrogations of Indian reserved rights were not lightly to be imputed to Congress, and held that the Eagle Act did not abrogate Indian hunting rights. The court proceeded to conclude that the Eagle Act had no application to Indians in the exercise of reserved hunting rights. *See also*, *United States v. Cutler*, 37 F. Supp. 724 (D. Idaho, 1947).

In my opinion, however, it is neither necessary nor appropriate to view the applicability of the Eagle Protection and Migratory Bird Treaty Acts to reserved Indian hunting rights in terms of "abrogation," because Indian rights and the acts can be construed as being in harmony with each other. *See Payne v. United States*, 264 U.S. 446, 448 (1924); *Coggins*,

¹ To assess a civil penalty, the government does not have to prove knowledge or wanton disregard for the consequences. 16 U.S.C. § 668(b).

Native American Indians and Federal Wildlife Law, 31 Stan. L. Rev. 375 (1979). Construing the acts and treaties as being in harmony with each other is especially appropriate for the Federal Government, since it is responsible both for administration of Indian affairs, including the protection of Indian rights, and for conservation of eagles and migratory birds.

The application to Indians of nondiscriminatory laws and regulations which are reasonable and necessary for conservation does not impinge upon reserved hunting and fishing rights because these rights do not include the right to take wildlife or fish if the taking would be contrary to the conservation of the species. *Puyallup Tribe v. Washington Game Dept.*, 391 U.S. 392 (1968) (*Puyallup I*); *Tulee v. State of Washington*, 315 U.S. 681 (1942); *Kennedy v. Becker*, 241 U.S. 556 (1916); *United States v. Winans*, 198 U.S. 371 (1905). As the Court observed with respect to Indian fishing rights in *Puyallup I*, *supra* at 398:

... the manner of fishing, the size of the take, the restriction of commercial fishing, and the like may be regulated by the State in the interest of conservation, provided the regulation meets appropriate standards and does not discriminate against the Indians.

Indian hunting and fishing rights are subject to a complete ban if the ban is applied in a nondiscriminatory manner and is necessary to assure the survival of a species. *Washington Game Dept. v. Puyallup Tribe*, 414 U.S. 44, 49 (1973) (*Puyallup II*); *see also, Puyallup*

Tribe v. Washington Game Dept., 433 U.S. 165, 175-177 (1977) (*Puyallup III*); *Washington v. Fishing Vessel Ass'n., supra* at 683-684. As Justice Douglas stated for a unanimous Court in *Puyallup II*, *supra* at 49:

We do not imply that these [Indian] fishing rights persist down to the very last steelhead in the river. Rights can be controlled by the need to conserve a species; and *the time may come when the life of a steelhead is so precarious in a particular stream that all fishing should be banned until the species regains assurance of survival*. The police power of the State is adequate to prevent the steelhead from following the fate of the passenger pigeon, and the Treaty does not give the Indians a federal right to pursue the last living steelhead until it enters their nets. (*Italics added.*)

Thus, Indian hunting and fishing rights are subject to such nondiscriminatory restrictions as Congress may determine to be reasonable and necessary for conservation. Congress has broad power to legislate over Indian affairs. *Delaware Tribal Business Comm'n v. Weeks*, 430 U.S. 73, 84-85 (1977). Congress also has the power to legislate in order to conserve wildlife. *Kleppe v. New Mexico*, 426 U.S. 529 (1976); *Missouri v. Holland*, 252 U.S. 416 (1920); *United States v. Helsley*, 615 F. 2d 784 (9th Cir. 1979).

Neither the Eagle Protection Act nor the Migratory Bird Treaty Act raises any issue of discriminatory treatment against Indians. The sole question is whether the Acts reflect the judgment of Congress that the prohibitions are reasonable and necessary for conservation.

BIRD TREATY ACTS TO RESERVED INDIAN

HUNTING RIGHTS

June 15, 1981

When the Eagle Protection Act was originally enacted in 1940, Congress specifically found that "... the bald eagle is now threatened with extinction . . ." Act of June 8, 1940, 54 Stat. 250. In explaining the protective purpose of the legislation, the legislative history states that "... if the destruction of the eagle and its eggs continues as in the past this bird will wholly disappear from much the larger part of its former range and eventually will become extinct." H.R. Rep. No. 2104, 76th Cong., 3d Sess. 1 (1940). When the Act was later amended to protect the golden eagle as well as the bald eagle, Congress found that "... the population of the golden eagle has declined at such an alarming rate that it is now threatened with extinction . . ." Pub. L. No. 87-884, 76 Stat. 1246 (1962). The legislative history notes specifically that:

Certain feathers of the golden eagle are important in religious ceremonies of some Indian tribes and a large number of the birds are killed to obtain these feathers, as well as to provide souvenirs for tourists in the Indian country. In addition, they are actively hunted by bounty hunters in Texas and some other States. As a result of these activities, if steps are not taken as contemplated in this legislation, there is grave danger that the golden eagle will completely disappear. H.R. Rep. No. 1450, 87th Cong., 2d Sess. 2 (1962).

In light of such findings and legislative history, it is not surprising that the Supreme Court has held that the Act is a "conservation stat-

ute" and has explained that its prohibitions were "... designed to prevent the destruction of certain species of birds." *Andrus v. Allard*, 444 U.S. 51, 52-53 and n. 1 (1979).

The purpose of the Migratory Bird Treaty Act is to implement four treaties concerning migratory birds which the United States has signed with Canada, Mexico, Japan, and the Soviet Union. 16 U.S.C. §§ 703, 704, 712; S. Rep. No. 27, 65th Cong., 1st Sess. 1-2 (1917); S. Rep. No. 2001, 74th Cong., 2d Sess. 1-2 (1936); S. Rep. No. 93-851, 93d Cong., 2d Sess. 1, 4 (1974); S. Rep. No. 95-1175, 95th Cong., 2d Sess. 6 (1978); *Missouri v. Holland*, *supra*. The treaty with Canada speaks of the need for measures to save migratory birds "... from indiscriminate slaughter and of insuring the[ir] preservation . . ." Convention for the Protection of Migratory Birds, Aug. 16, 1916, United States-Great Britain (on behalf of Canada), 39 Stat. 1702, T.S. No. 628. The treaty with Mexico states that "... it is right and proper to protect the said migratory birds . . . in order that the species may not be exterminated . . ." Convention for the Protection of Migratory Birds and Game Mammals. Feb. 7, 1936, United States-Mexico, 50 Stat. 1311, T.S. No. 912. The treaties with Japan and the Soviet Union speak of "... taking measures for the management, protection, and prevention of the extinction of certain birds . . .," Convention for the Protection of

Migratory Birds and Birds in Danger of Extinction, and their Environment, Mar. 4, 1972, United States-Japan, 25 U.S.T. 3329, T.I.A.S. No. 7990, and of "... implementing measures for the conservation of migratory birds and their environment..." Convention Concerning the Conservation of Migratory Birds and their Environment, Nov. 19, 1976, United States-Soviet Union, — U.S.T. —, T.I.A.S. No. 9073. Thus, the purpose of the treaties implemented by the Migratory Bird Treaty Act is to preserve and protect various species of birds. As the Supreme Court held with reference to the Act's prohibitions, "... the Migratory Bird Treaty Act [is a] conservation statute... designed to prevent the destruction of certain species of birds." *Andrus v. Allard*, *supra* at 52-53 and n.1; *see also*, *Missouri v. Holland*, *supra* at 435 (where the Court stated that "[b]ut for the treaty and statute there soon might be no birds...").

In view of the above, I conclude that the prohibitions of the Eagle Protection and Migratory Bird Treaty Acts are nondiscriminatory, reasonable and necessary conservation measures to which Indian treaty hunting rights are subject. In reaching this conclusion, I am fully aware of the previous opinions of this Office that deal with the application of Federal migratory bird law to Indians: *Imposition of North Dakota State Fish and Game Laws on Indian Claiming Treaty and Other Rights to Hunt and Fish*, M-36410 (Feb. 11, 1957); *Migra-*

tory Bird Treaty Act, M-27690 (Jun. 15, 1934); *Conflict Between Migratory Bird Treaty with Great Britain and Treaty with the Yakimas re Hunting Rights on Reservation*, Memorandum for Comm'r of Indian Affairs (Feb. 10, 1942); *Migratory Bird Treaty Act and Bald Eagle Act—Indian Hunting Rights*, Memorandum to Director, Bureau of Sport Fisheries and Wildlife (Apr. 26, 1962); and other opinion memoranda. Such opinions were issued before the Supreme Court's decisions in *Puyallup I*, *Puyallup II*, and *Andrus v. Allard*, *supra*, and were not based on the analysis set forth herein. Accordingly, to the extent that such opinions conflict with this opinion, they are hereby overruled.

This opinion was prepared by the Division of Conservation and Wildlife of the Office of the Solicitor, Associate Solicitor, J. Roy Spradley, Jr., after consultation with the Division of Indian Affairs, Acting Associate Solicitor, Hans Walker. The principal authors were Ronald E. Swan and Robin A. Friedman.

WILLIAM H. COLDIRON
Solicitor

APPEAL OF SCONA, INC.

IBCA-1094-1-76

Decided June 16, 1981

Contract No. H5014208649, Bureau of Indian Affairs.

Appellant awarded \$10,500; appeal otherwise denied.

**Contracts: Disputes and Remedies:
Burden of Proof—Evidence: Credibility—Evidence: Weight**

Where the testimony of appellant's only witness testifying with respect to contract performance was found unworthy of belief and not credible, the Board holds that it has the discretion to reject all the testimony of such witness except that which has been corroborated; and the Board concludes, that except for one of the claims for an equitable adjustment conceded by the Government, there was no corroboration of the discredited testimony, and, therefore, the remaining claims of appellant must be denied for failure to sustain the burden of proof.

APPEARANCES: Mr. Alva Harris, Attorney at Law, Shelley, Idaho, for Appellant; Mr. Fritz Goreham, Department Counsel, Phoenix, Arizona, for the Government.

*OPINION BY
ADMINISTRATIVE JUDGE
DOANE*

*INTERIOR BOARD OF
CONTRACT APPEALS*

Background

A contract was awarded appellant on Sept. 21, 1973, in the amount of \$117,396 to install 764 lineal feet of concrete lining for a canal west of the Truckee River, construct a 45-inch siphon of precast concrete pipe under the river for 296 lineal feet, one check structure, and one bridge at the Pyramid Lake Irrigation Project, Pyramid Lake Indian Reservation, Washoe County, Nevada. Although the contract was awarded by the Bureau of Indian Affairs, it was administered by the

Bureau of Reclamation. The work was to be completed within 75 calendar days from receipt of the notice to proceed resulting in a scheduled completion date of Dec. 29, 1973. On Apr. 23, 1974, because of appellant's failure to make progress, the contract was terminated for default. The contract work was subsequently completed by appellant's two individual sureties on June 10, 1974.

The appellant had encountered considerable difficulty in attempting to perform the contract contending the two principal causes to be: (1) The failure of the Government to have a powerline within the construction right-of-way timely relocated and energized, and (2) defective specifications pertaining to the diversion of the water in the river to permit the siphon construction. The contracting officer in his final decision conceded that appellant was entitled to an extension of 102 calendar days and an equitable adjustment of \$77,437.08.

In its complaint on appeal, appellant claimed immediate payment due of \$79,249.71. This figure was accepted by Government counsel, less \$3,050 for liquidated damages claimed by the Government, and, pursuant to agreement of both parties, the Board, on Apr. 6, 1976, ordered immediate payment of \$76,199.71 to the Bank of Idaho, assignee of appellant. The complaint also requested an extension of time of 183 days and prayed for an equitable adjustment of \$464,264.18 plus "several hundred thousand dollars" additional when appellant had com-

pleted its own audit. The total amount sought by the complaint was approximately \$664,000.

A 3-day hearing was held in Carson City, Nevada, July 13-15, 1976, and by agreement of the parties the hearing was confined to the issue of entitlement only. The appellant was represented by the president of Scona, Inc., who was not a lawyer and was appellant's only witness. At the close of appellant's case, the Government moved to dismiss the appeal for failure of appellant to present any evidence to support any further entitlement in addition to what the contracting officer had already awarded. The presiding member of the Board took the motion under advisement and put the Government to its proof. At the close of the hearing, the president of Scona, Inc., was recalled and allowed to offer any further evidence he might have inadvertently overlooked when presenting appellant's case.

*The Board's Decision of
May 6, 1977*

In its decision of May 6, 1977, 77-1 BCA par. 12,518, the Board found, among other things, that: The prior experience of the president of the contractor had been limited to grass seeding; he intended to subcontract at least 70 percent of the work, even though the contract permitted subcontracting only 66⅔ percent; neither the president of the contractor company nor his superintendent had an engineering background; his employees and subcontractors left the

project when disputes arose over lack of timely payment; because he lacked suitable equipment, he was forced to rent it at premium rates; and his lack of expertise resulted in delays, defective work, and other disruptions to the project. The Board held that these findings justified the default termination of the contract.

The Board also found, however, that the Government had unreasonably delayed the relocation of a powerline for nearly a month which contributed to the delay of the project and ruled, therefore, that the liquidated damage assessment in the amount of \$3,050 should not be sustained. Whereupon, the appeal was denied except as to the improperly assessed liquidated damages.

*The Second Board Decision of
Dec. 28, 1977, On Motion for
Reconsideration and Rehearing*

Following the Board's decision of May 6, 1977, appellant moved by three separate documents for reconsideration and for a new or further trial. In a 3 to 2 decision, the majority granted the motions, vacated the previous decision, ordered the transcript to be stricken but allowed it to be treated as tantamount to discovery depositions, and ordered the previous pleadings stricken allowing the parties to file a new complaint and a new answer. The parties were granted a new hearing as if the first hearing had never occurred. *Appeal of Scona, Inc.*, IBCA-1094-1-76 (Dec. 28, 1977), 84 I.D. 1019, 78-1 BCA par. 12,934.

The rationale of the majority opinion for granting the motions was substantially that: (1) The delay and liquidated damages issues blurred the distinction between entitlement and quantum, and a waiver of the quantum issue could not be found absent clear and convincing evidence that such a waiver was intended; (2) no hearing on quantum had been accorded appellant and the complex questions of concurrent fault and damages could be properly resolved only on a record encompassing both entitlement and quantum; and (3) appellant was not represented by counsel and asserted that several witnesses for various reasons were unavailable at the first hearing but would be available upon rehearing.

In strong dissenting opinions, the two dissenting members of the Board argued in substance that: (1) Appellant did not present, nor did the record contain, adequate legal bases for granting the motions; (2) appellant was afforded due process; and (3) that any new evidence appellant sought to offer at a new hearing was readily available at the time of, or in connection with, the first hearing.

The Second Hearing

A second hearing was held for 6 days at Carson City, Nevada, Sept. 11-19, 1978. This time appellant was represented by counsel, Mr. A. Wayne Lalle, Jr., of the firm of Lewis, Mitchell & Moore, Seattle, Washington, and Mr. Alva A. Har-

ris of Shelley, Idaho. The principal witness for appellant was again the president of Scona, Inc. He testified that his occupation was contractor and president of Scona, Inc., during the period mid-1973 until 1976. Only two other witnesses testified for appellant. They were Mr. Paul Eller, an engineer expert witness not personally involved in the project and not an employee of Scona, Inc., and Mr. Daniel J. Nelsons, C.P.A., an accountant for Scona, Inc.

In his opening statement, Mr. Lalle stated that the original claim as submitted by the appellant, and subsequently revised, totaled some \$533,000 and that he was orally amending the complaint to incorporate the request for a total of \$250,767.97.

The transcript was received by the Board Dec. 4, 1978, and the final posthearing brief on the merits, Apr. 4, 1979.

Letter Admitting Falsification of Testimony

On May 5, 1979, this Board received a personal, handwritten letter from the former president of Scona, Inc., set forth herein in haec verba:

May 5, 1979

Department of Interior
Board of Contract Appeals
Washington, D.C.

Re: Scona, Inc.
Pyramid Lake

Gentlemen:

At several times in a person's life the events of time make for review. Such is

the reason for this letter—a review of the part * * * [I] played in the construction of the sphion [*sic*] on project and the presentation of the facts in the hearings before the BCA. It is the testimony before the Board's member that I am concerned about.

Enclosed is the decision and conclusions by Judge Young on my personal bankruptcy; of which the details are important i.e. Judge Young concludes, as he correctly does, that Harris and Co. had complete control over my actions through the purse string (page 9) and ever constant threat to take my house and cause damage to my wife.

Since my wife is an invalid my concern was always to attempt cooperation and save the house for her better being. No sooner had I testified at Carson City than the bondsmen tried eviction from the house, took over Scona, Inc. in a power grab and did show me that their continual concern for me and especially my wife was none other than a facade to get my testimony [*sic*]; for they not only would get the house, business, etc but also the claim money.

Deep within my heart I have known that I lied upon the witness stand. This was because of the constant threat to take my home and hurt my wife. This threat no longer exists and lift the burden of error I must. Scona, Inc was incompetent—the job was mismanaged, it was not the sole fault of the government for the added expenses. Your inquiry into the Steamboat Job Scona, Inc had with the Bureau of Reclamation, Denver, Contract 70-C0019 will confirm the same mismanagement as at Pyramid Lake.

Responsibility for this gross mismanagement can not be held solely against me, for after careful reading of the decision enclosed of Judge Young, who heard a lot of testimony, you'll find the ever present hand of the bondsmen and Alva A. Harris.

What can I say—Scona, Inc was not the white hatted clean bunch of guys as my testimony would indicate but more real as the government portrayed [*sic*]

us—into a job without proper equipment, unskilled help, and nearly complete failure at management.

Sincerely

/s/

Following receipt of the foregoing letter the Board, on May 17, 1979, issued an order dismissing appeal without prejudice to reinstatement upon written application of appellant filed with the Board within 90 days after receipt of notification from the Board that the questions presented had been resolved. The order recited receipt of the May 5 letter and that since a violation of secs. 287 and 1001 of Title 18 of the *United States Code*, pertaining to making false claims against the Government, could be involved, the information was being forwarded through appropriate channels for investigation by the Department of Justice.

On the same day, the Chief Administrative Judge of the Board transmitted to the Solicitor's Office of the Department the following documents: (1) The May 5 letter received from Darrell M. Anderson; (2) a copy of a letter dated Feb. 1, 1979, from Alva A. Harris addressed to the Contracting Officer for the Bureau of Indian Affairs, stating that on *January 29, 1979*, an election of officers and directors took place whereby Darrell M. Anderson was removed as a director and as an officer and "no longer exercises any authority, agency or relationship with Scona, Inc.," and that Darrell L. Cook, Kent E. Carlson, and Alva H. Harris were elected directors and

Alva A. Harris and Gaye Forest elected president and secretary, respectively; and (3) a copy of the Board's order of dismissal without prejudice dated May 17, 1979. The transmittal letter mentioned the possible violation of the United States Criminal Code sections and states, "we are forwarding this information to your office for submission to the Department of Justice for investigation."

For reasons unknown to the Board, the foregoing information was not submitted to the Department of Justice, but instead to the Office of the Inspector General of the Department of the Interior. That office conducted the investigation of a possible criminal violation.¹

Upon learning of this referral, the Chief Administrative Judge, on May 25, 1979, wrote a memorandum to the Inspector General correcting a reference, in the May 17 transmittal memorandum, to sec. "289" of Title 18, U.S.C. to read, sec. "287."

The Investigation

On July 27, 1979, a special agent of the Inspector General's Office requested and received from the recorder of this Board the following additional documents relating to this appeal: (1) Findings of fact and decision by the contracting of-

ficer, dated Dec. 8, 1975; (2) The original transcript of the second hearing; (3) Copy of appellant's complaint dated Jan. 31, 1978; and (4) Copy of Government's answer dated Mar. 2, 1978. On Aug. 15, 1979, these four items were returned to the Board.

On Nov. 20, 1979, the Board received from the Acting Assistant Inspector General for Investigations copy No. 1 of the completed investigation with the admonition that the report was on loan to the Board and should be returned. The report itself was marked, "The reproduction of this report or any part thereof by any method whatever is prohibited by Interior Department regulation." The last sentence of the transmittal letter stated: "In accordance with 357 DM 1 requests for access to the report made under the Freedom of Information or Privacy Acts of 1974 shall be referred to the Inspector General for decision."

The investigation report was in the form of a memorandum from Special Agent, Mark Sucher, to the Acting Assistant Inspector General for Investigations. It consisted of two summary statements by Special Agent Sucher and a statement from the former president of Scona, Inc., in the form of an affidavit, indicating that it had been subscribed and sworn to before Special Agent, Harry T. McClain, at Greer, Arizona, on July 31, 1979. The summary statements were as follows:

The investigation revealed that * * * [subject] felt that the [sic] had perjured

¹ The Board has not been cited to any legal authority, and we know of none, under which the Office of the Inspector General has jurisdiction to investigate possible criminal violations by private citizens not employees of the Department.

himself because he testified that he was the President and Controlling Officer of Scona Inc., when in fact he was not.

[subject] was interviewed in Greer, Arizona, by Special Agent Harry T. McClain. * * * [Subject] stated that he had "lied" in his testimony before the Claims Board by claiming that he was President and Controlling Officer of Scona Inc., when he was not. * * * [He] attested that all the facts he gave in his testimony were truthful. He did admit that the only reason he stated that he "lied" on the witness stand was to attract attention.

The affidavit was generally self-serving. It related the history of Scona, Inc., and affiant's business relationships with Alva A. Harris and his bondsmen and how, through his indebtedness to them, they actually had controlled Scona, Inc. The only statements in the affidavit that seem to have any bearing on his testimony, which was the subject of the investigation, were as follows:

I testified at this hearing with the impression that I was the President of Scona Corporation and, as such, in control of the Corporation, but I subsequently found that I did not control the Corporation at all. After several days of testimony, a Federal Bankruptcy Judge found that after March 1, 1975, Alva Harris controlled with Darrel Cook and Thomas Christensen owners. Because I had testified as President and controlling officer of the Scona Corporation, I wrote a letter to the Board of Contract Appeals, U.S. Department of the Interior, Washington, D.C. and stated that I had lied upon the witness stand in the hearings concerning Pyramid Lake and the cost overruns on that job. The material facts in the testimony are true, but since I testified as the controlling officer of Scona Corporation, this was a lie. I testified concerning this claim because Mr. Alva Harris, Attorney-at-law and Secretary/Treasurer of Scona Corporation, told me

that I was President of the Corporation at the time the testimony was taken. * * *

The only reason that I testified at the Pyramid Lake hearings was to clear up my debts, but if I had known that I would be forced into bankruptcy by these people and that they would also get the fruits of my testimony, I would not have testified.

The investigation report does little to enlighten the Board with respect to the truth or falsity of the testimony. It does not show that he was ever directly confronted with the statements made in his May 5 letter, such as, "Scona, Inc was incompetent—the job was mismanaged, it was not the sole fault of the government for the added expenses," or with the text of the last paragraph of that letter which read: "What can I say—Scona, Inc was not the white hatted clean bunch of guys as my testimony would indicate but more real as the government portrayed [*sic*] us—into a job without proper equipment, unskilled help, and nearly complete failure at management."

On Feb. 4, 1980, the Board issued an order permitting application for reinstatement pursuant to previous order. In this order, the Board recited, among other things, that the report of investigation had been reviewed and returned to the Inspector General as requested, and that the necessary findings of the credibility of the testimony of the subject witness would be made and based upon the entire record on file in this case. The order than allowed appellant 90 days from date of receipt within which time to

apply for reinstatement of the appeal. Reinstatement was applied for by Alva A. Harris, one of the attorneys for appellant, on Apr. 18, 1980.

Upon reinstatement, the Chief Administrative Judge of the Board, realizing that the credibility issue was facing the Board as well as the attorneys for the parties, discussed by telephone, with one of the special agents of the Inspector General's Office, the matter of the restrictions placed upon the use of the investigative report. He pointed out that the restrictions destroyed any value that the report might otherwise have. Subsequently, on Apr. 25, 1980, the Inspector General of the Department enclosed with a memorandum to the Board a copy of the subject investigative report "for inclusion as a part of your hearings record," stating that "the matter is considered closed in this office," and advised that the Freedom of Information Act requests by Lewis, Mitchell & Moore, and Alva A. Harris for copies of the report were being honored.

Reinstatement of the appeal occurred on May 7, 1980, but a few days prior thereto, the Board was advised by telephone that the firm of Lewis, Mitchell & Moore of Seattle had withdrawn from the case and no longer represented appellant. The reinstatement order allowed counsel for both parties about 30 days to file briefs on the question of the credibility of the testimony. To assure equal access to the record, along with the order,

the Board enclosed a copy of the investigative report for Department counsel and copies of the May 5 letter for counsel of both parties.

Briefs, Discussion, and Findings

In the appellant's brief on the credibility issue, submitted pursuant to the reinstatement order, counsel, among other things, stated:

It is Scona's position that [the] letter of May 5, 1979, is one of vindictiveness, and a last attempt to reckon revenge upon his creditors and their attorney, Alva A. Harris. Knowing he had lost and must pay, he takes one last swing at them. He will obtain a cancellation of the claim and thus wipe out any possibility of the Bondsmen regaining some of the money used to finish the Pyramid Lake Contract. * * *

What we have here is a liar trying to harm and wreck vengeance upon others, but whose factual performance indicates good skill and management. * * * [He] is a liar. We don't deny that. Our position is that he didn't lie about the facts and workmanship of this contract. His lie was designed to destroy the fruits of this claim going to repay the losses of the Bondsmen. His personal vendetta against Mr. Cook, Mr. Christensen and Mr. Harris should not be allowed to ruin Scona, Inc.'s rightful claim in this matter.

In the Government's brief, submitted pursuant to the reinstatement order, Department counsel contended that the posthearing statements, of the witness, the May 5, 1979, handwritten statement, and the July 31, 1979, typewritten statement given to the agent of the Inspector General, should be made part of the record. The basis for

this contention were that the statements were an admission against interest; that the May 5, 1979, statement was an admission from the "heart" to the Board that he had lied under oath at the two hearings; that although the contract was with Scona, Inc., it was a one man small construction firm that incorporated to increase its bonding capacity and broaden its operations; and that the former president was the real party in interest throughout the contract performance. Department counsel advanced the further view that at the time of submitting the May 5, 1979, statement, the witness was not aware of the possible criminal or penalty repercussions thereof, and by his subsequent statement, when aware of the situation he had placed himself into, attempted to mitigate the gravity of the situation by limiting his perjury to his officership in the company. The final paragraph of the Government's brief on the credibility issue reads as follows:

So, while it would be ideal for the government to have the matter end with the May 5 admission, which the writer personally feels are [*sic*] correct, however, the crux of the situation is that all the testimony and statements deals with the credibility or lack thereof of * * * [the witness]. It is urged that the bottom line is that * * * [the witness] *has no credibility*. Absent his testimony, any hope the claimant has of succeeding is left in shambles. There is not one shred of credible evidence left on the part of the claimant relating to the performance of the contract. The parade of witnesses promised for the second hearing never materialized. No small wonder considering the

involvement of * * * [the witness]. The record is replete as to the incompetence of * * * [the witness] in the performance of the contract. He did not have a clue as to how to complete the project. Should the American taxpayer have to pay for such incompetency? Hopefully not. The contractor was compensated for additional work occasioned by the delay in moving the power poles. Scona is not entitled to any further compensation and the appeal should be denied again.

We have no problem with making the two subject statements part of the record in this case. Government counsel has requested it. Appellant's counsel has not objected to it. The statements were voluntarily made by the key witness for appellant. The Board inferred in its last two procedural orders that the statements would be treated as part of the record. Therefore, since both parties had equal access to the documents before submitting their final briefs, the Board rules that the May 5, 1979, letter received from the witness and the investigative report received from the Office of the Inspector General are admitted into the record.

This panel must now deal with the credibility issue. Government counsel said that the witness "has no credibility" and at one point used the term "perjury." On the other hand, appellant's counsel categorically stated that his own principal witness, and the only witness for appellant with respect to contract performance, "is a liar," but asserted that "he didn't lie about the facts and workmanship of the contract." We reiterate that portion of

the May 5 unsolicited letter to the Board where he wrote:

Deep within my heart I have known that I lied upon the witness stand. This was because of the constant threat to take my home and hurt my wife. This threat no longer exists and lift the burden of error I must. Scona, Inc was incompetent—the job was mismanaged, it was not the sole fault of the government for the added expenses.

We agree with Government counsel that the witness apparently attempted to mitigate the effect of the letter by his affidavit of July 31, 1979, when he stated that the only lie in his testimony pertained to his presidency and being in control of the corporation. The record shows that, although he was not have been in control, he was, in fact, president at the time he testified at the hearings. He was not replaced as president of Scona, Inc., until Jan. 29, 1979, some 4 months after the second hearings. His recantation with respect to contract performance was in general terms only. He did not specifically disavow the May 5 statement that "it was not the sole fault of the government for the added expenses." What is the Board to believe—the statements made to "lift the burden of error" or the recantation statements?

The foregoing scenario leads us to the conclusion that the testimony of appellant's key witness is unworthy of belief. We, therefore, feel compelled to find, and do find, that the testimony of the subject witness adduced at the hearings in this case, is not credible.

In light of this credibility finding, Government counsel would urge the Board to deny all of appellant's claims on the ground that the former president of Scona, Inc., was the only witness for appellant who testified with respect to contract performance and "absent his testimony, any hope the claimant has of succeeding is left in shambles." This argument suggests the application of the legal maxim, *falsus in uno, falsus in omnibus*, which means literally, false in one thing, false in everything. But this maxim has seldom been applied strictly. The general rule, recognized by statute in some jurisdictions, is that while the fact that a witness has willfully testified falsely as to material matter lays him open to suspicion and justifies the triers of fact in rejecting all of his testimony, except that which is corroborated by other evidence, they are not required to do so, and may accept such part of the testimony as they deem proper, notwithstanding the false statements.²

Thus, as triers of fact in the exercise of our discretion, we choose, considering all the circumstances of this case, to reject the subject testimony, except with respect to that part which has been corroborated.³ There was no corroboration by ap-

² For a general discussion of the case law dealing with the application of the maxim, *falsus in uno, falsus in omnibus*, see 98 C.J.S. *Witnesses* § 469 (1957).

³ This is consistent with the position taken by the Board in *Meva Corp.*, IBCA-648-6-67 (Aug. 18, 1969), 76 I.D. 205, 225, 226, 69-2 BCA par. 7,838 at 36,430.

pellant's other witnesses, since he was the only one testifying on the entitlement issues pertaining to contract performance. However, we do find corroboration by the Government concerning the added costs claimed by appellant in having to destroy and rebuild the canal embankment. Government counsel may have forgotten the concession made in his brief on the merits pertaining to that claim. On pages 8 through 9 thereof, he stated:

I would agree with Judge Steele's remarks at the close of the hearing that the contractor is entitled to additional costs in regard to embankment costs for that area he had to destroy in order to cut his diversion channel. I have been unable to determine if that was included in the additional costs allowed the contractor. It would appear that it was not. The cost amount offered by the contractor is, of course, unaudited but the government will defer to the Board as to the reasonableness.

Again, in summary on page 11, he wrote:

The government's position is quite clear. That is, the contractor, except for possibly the reconstructed embankment, has been allowed his *actual* costs including overhaul [*sic*] and profit for additional work that may have been occasioned by the delay caused by the presence of the powerline.

In appellant's posthearing brief, authored and submitted by Lewis, Mitchell & Moore of Seattle, Washington, the following points were made on pages 39 and 40 thereof: That the Government's project engineer characterized the progress of the embankment work as "excel-

lent" (4 Tr. 668); the increased cost of the embankment performance was not attributable to fault on the part of the appellant; and the additional cost incurred for destroying and rebuilding a portion of the canal embankment to accommodate the second diversion channel was \$10,500 (6 Tr. 959; App. Exh. 16 at 1). That figure, to the best knowledge of the Board, was not refuted by the Government. We find, therefore, that the Government concession on this claim item constitutes corroboration of the discredited testimony and is sufficient to permit an award for an equitable adjustment in the stated amount.

We find further that appellant has failed to sustain its burden of proof with respect to establishing entitlement to the remainder of its claims involved in this appeal. The total dollar amount of those claims, set forth in appellant's final brief on the merits, is \$238,474.14.

Decision

Wherefore, the appeal is denied except for the embankment claim of \$10,500, which is hereby awarded to appellant.

55 IBLA 232

Decided *June 22, 1981*

Appeal from decisions of the Alaska State Office, Bureau of Land Management, rejecting various noncompetitive oil and gas lease offers.

Affirmed.

1. Alaska: Oil and Gas Leases—Alaska National Interest Lands Conservation Act: Generally—Oil and Gas Leases: Lands Subject to—Wildlife Refuges and Projects: Leases and Permits—Withdrawals and Reservations: Effect of

An offer to lease for oil and gas in the Arctic National Wildlife Refuge is properly rejected where the lands in the refuge have been withdrawn from the operation of the mineral leasing laws by either secs. 1002 or 1003 of the Alaska National Interest Lands Conservation Act. Standard offers to lease for oil and gas may not be construed as requests to undertake exploratory activities only. The only exploratory activities permitted in the Arctic National Wildlife Refuge are governed by sec. 1002 of the Act. Any requests to undertake exploratory activities are premature until the Secretary of the Interior has issued guidelines governing exploration in the refuge.

2. Alaska: Oil and Gas Leases—Words and Phrases

"Leasing." The word "leasing" in the phrase "no leasing * * * leading to production of oil and gas" in sec. 1003 of the Alaska National Interest Lands Conservation Act includes leasing for the purpose of exploratory activities.

APPEARANCES: Robert H. Covington, Alice L. Doyle, William T. Engwall, Margaret J. Engwall, Paula M. Benepe, John P. Culhane, Carl W. Lind, Gerald J. Culhane, Michael W. Morey, Thomas R. Culhane, Sherman G. Reynolds, Raymond E. Plummer, Jr., Duane R. Gorder, Lloyd Swenson, J. Michael Schachle, Stephen A. Schachle, Kevin R. Gorder, pro se; Robert R. Johnson, pro se, and for Paul N. Johnson and Edward J. Young; John Bradbury, Esq., Anchorage, Alaska, for Steve C. Holland.

OPINION BY
ADMINISTRATIVE JUDGE
HENRIQUES

INTERIOR BOARD OF
LAND APPEALS

Appeals have been taken from decisions of the Alaska State Office, Bureau of Land Management (BLM), rejecting oil and gas lease offers because the lands sought are within the Arctic National Wildlife Refuge (ANWR).¹ The decisions indicate that sec. 1003 of the Alaska National Interest Lands Conservation Act (ANILCA), P.L. 96-487 (Dec. 2, 1980), 94 Stat. 2371, 2452 (to be codified at 16 U.S.C. §§ 3101, 3143), prohibits the development of oil and gas in the refuge and thus, by mandate of the Congress, the Secretary of the Interior has no authority to issue oil and gas leases for lands within the refuge.

¹ For a list of appellants and lease offers, see Appendix A.

Because the identical situation is present in each appeal and because of the very great similarity in the statements of reasons submitted by the several appellants, we have, *sua sponte*, consolidated the appeals for consideration.

As a preliminary matter, we wish to comment on the appellants' contention that since the BLM decisions are based on the premise that the "Secretary has no authority to issue oil and gas leases within the Arctic National Wildlife Refuge," the decisions must be reviewed only on that basis and not on any other contentions which might have been made by BLM. It is well established that the Secretary of the Interior has broad plenary powers over disposition of public land and their resources, and that throughout the appeals process, so long as legal title to the land remains in the Government, there is continuing jurisdiction in the Department to consider all issues on land claims. *Schade v. Andrus*, 638 F.2d 122 (9th Cir. 1981); *Ideal Basic Industries, Inc. v. Morton*, 542 F.2d 1364, 1367 (9th Cir. 1976). See *Best v. Humboldt Placer Mining Co.*, 371 U.S. 334 (1963); *Cameron v. United States*, 252 U.S. 450 (1920). Upon assuming jurisdiction of an appeal, the Board of Land Appeals, as the authorized representative of the Secretary of the Interior, exercises his authority to consider the entire record in making a decision and the review is not limited to the theories of law upon which the parties have proceeded theretofore. *United*

States v. Gassaway, 43 IBLA 382 (1979). Appellants' reliance upon *SEC v. Chenery Corp.*, 318 U.S. 80 (1943), is misplaced. The BLM decisions are not "agency decisions" as that term is used in *Chenery, supra*. The decision of this Board will be the "agency decision."

In their statements of reasons, appellants argue that BLM has misinterpreted sec. 1003 of ANILCA and urged that it does not interdict all leasing within the Arctic National Wildlife Refuge but only prohibits leasing which will lead to production of oil or gas. They contend that the Secretary is empowered to issue leases limited to exploratory activities.

Appellants reason that if Congress had intended to prohibit all forms of leasing, sec. 1003 would have provided that "production of oil and gas from and leasing and development of the Arctic National Wildlife Refuge are prohibited." Alternatively, appellants suggest that if Congress intended such a result, it could have omitted sec. 1003 and leasing would then be governed by other provisions of ANILCA. Instead, appellants note that Congress added "a separate oil and gas leasing section which specifically and exclusively governs the ANWR and which contains a clause barring only those forms of leasing and development 'leading to production.'" Appellants further contend that had Congress intended an outright prohibition of all leasing it would have used the language of total withdrawal typically applied to bar

activity on public land.² They note as well that sec. 1002(h) (6) states that the Secretary is required to recommend to Congress what areas should be opened "to development and production" of oil and gas and urge that, since the provision "does not ask for recommendations on which lands should be opened to leasing," the omission must mean that the refuge is already open to leasing.

Appellants continue by noting that Title X of ANILCA establishes a system intended to encourage exploratory activities by private parties and to provide Congress with adequate information to make an informed decision on the ultimate development of oil and gas in the refuge including the coastal plain. Finally, appellants suggest that Title X favors private parties for exploratory activity but the costs incurred by those parties will be high. Thus private parties must be given some incentive to participate in the exploration of ANWR. Appellants conclude:

Unless the Secretary authorizes exploratory leases pursuant to Section 1003, there will be no significant incentive for private exploratory activity. Therefore, the Secretary should exercise his authority to issue exploratory leases, which grant the holder the exclusive right to explore the designated area and which guarantee the holder the first option to

develop those lands ultimately opened to development.

[1, 2] After a thorough review of the applicable provisions and legislative history of ANILCA, we conclude that appellants have selectively examined Title X and conveniently ignored pertinent provisions of the title and that, therefore, their assessment of sec. 1003 and of the management scheme set out by the Congress for the Arctic National Wildlife Refuge is incorrect.

Title III of ANILCA establishes or redesignates various significant wildlife resource areas, including the Arctic National Wildlife Refuge, as units of the National Wildlife Refuge System. Sec. 304, which provides for the administration of the refuges generally, states in part that all public lands in each refuge are "withdrawn, subject to valid existing rights, * * * from all forms of appropriation or disposal under the public land laws, including location, entry and patent under the mining laws *but not from operation of the mineral leasing laws*" (sec. 304(c)). (Italics added.) The section also directs that the Secretary of the Interior not permit any use, including oil and gas leasing, in the refuge "unless such use * * * is compatible with the purposes of the refuge" (sec. 304(b)).

Sec. 702 of Title VII of ANILCA designates portions of units of the National Wildlife Refuge System as wilderness in accordance with the Wilderness Act, 16 U.S.C. §§ 1131-1136 (1976). Wilderness areas are generally open to mineral leasing

² The language typically employed to effect a withdrawal of the public domain is "withdrawn from all forms of appropriation or disposal under the public land laws, including location, entry and patent under the mining laws and from operation of the mineral leasing laws," and variations thereof.

until Dec. 31, 1983. 16 U.S.C. § 1133 (d) (3) (1976).

Title X of ANILCA reflects the particular determination by the Congress that a decision as to oil and gas developments in the Arctic National Wildlife Refuge be made only with adequate information and the full participation of the Congress. Following hearings on Alaska lands legislation, Congress was acutely aware that available information was conflicting and uncertain as to the extent of oil and gas resources in the refuge and as to the effect that oil and gas development would have on the widely recognized wildlife and wilderness values of the refuge. S. Rep. No. 413, 96th Cong., 1st Sess. 240-41 (1979), *reprinted in* [1981] U.S. Code Cong. & Ad. News 9244-45.

Title X, as it pertains to the Arctic National Wildlife Refuge, requires a two-pronged evaluation of the resources of the refuge. Sec. 1001 directs the Secretary of the Interior to carry out a systematic interdisciplinary study of certain Federal lands in Alaska, including the Arctic National Wildlife Refuge.³ The study will assess potential

oil and gas resources, review wilderness characteristics, study wildlife resources, and make recommendations as to future use and management of oil and gas resources, wilderness designation of the lands, and protection of the wildlife resources. The study and findings are to be submitted to the President and Congress no later than 8 years after enactment of ANILCA.

Sec. 1002 directs the Secretary to undertake a comprehensive and continuing assessment of fish and wildlife resources in the coastal plain of the refuge and an analysis of the potential impacts of oil and gas exploration, development and production on those resources. Sec. 1002 further authorizes a closely regulated program of exploratory activities on the coastal plain with the aim of identifying, by means other than drilling, those areas having oil and gas production potential and of estimating the volume of oil and gas within the coastal plain. The coastal plain is all of the nonwilderness portion of the refuge. Since it appears that all of appellants' lease offers fall within the coastal plain area, a closer examination of the details of Congress plan for the coastal plain is necessary.

Sec. 1002 first directs the Secretary to conduct a continuing study of fish and wildlife and their habitats with an initial report to be published within 18 months after Dec. 2, 1980, the date of enactment of ANILCA (sec. 1002(c)). In addition, within 2 years after enactment, the Secretary shall establish, by regulation, initial guidelines

³ Sec. 1001(a) states:

"The Secretary shall initiate and carry out a study of all Federal lands (other than submerged lands on the Outer Continental Shelf) in Alaska north of 68 degrees north latitude and east of the western boundary of the National Petroleum Reserve—Alaska, other than lands included in the National Petroleum Reserve—Alaska and in conservation system units established by this Act."

Although all units of the National Wildlife Refuge System are by definition conservation system units (*see* sec. 102(4)), the intent of Congress is clear that the lands in the Arctic National Wildlife Refuge are to be included in this study. S. Rep. No. 413, 96th Cong., 1st Sess. 239-40 (1979), *reprinted in* [1981] U.S. Code Cong. & Ad. News 9243-44.

governing exploratory activities on the coastal plain (sec. 1002(d)). After the initial guidelines are promulgated, any interested person and the Geological Survey may submit exploration plans to the Secretary for approval (sec. 1002(e)). Sec. 1002 prescribes specifically the procedures for plan approval, including publication of notice of any application and the text of the plan in the *Federal Register* and in newspapers of general circulation in Alaska. No exploration plan may be approved during the 2 years following Dec. 2, 1980 (see sec. 1002(e), (f), and (g)). A report to Congress must be submitted after 5 years (sec. 1002(h)). Finally, and significantly, subsection (i) states: "Until otherwise provided for in law enacted after [Dec. 2, 1980], all public lands within the coastal plain are *withdrawn from all forms of entry or appropriation under the mining laws, and from operation of the mineral leasing laws, of the United States.*" (Italics added.) We are not aware of any law enacted by the Congress since Dec. 2, 1980, which provides for any abatement of the withdrawal effected by sec. 1002(i).

Sec. 1003, on which appellants rely almost exclusively to support their arguments that leasing for exploration purposes in the Arctic National Wildlife Refuge is not prohibited, reads as follows: "Production of oil and gas from the Arctic National Wildlife Refuge is prohibited and no leasing or other development leading to production of oil and gas from the range shall

be undertaken until authorized by an Act of Congress."

We find first that activities in the coastal plain of the refuge are governed by the more specific provisions of sec. 1002, which withdraws those lands from the operation of the mineral leasing laws except for the limited program of exploratory activities set out therein.

Second, we find appellants' interpretation of the language of sec. 1003 unconvincing. The phrase "leasing * * * leading to production," in the context of the Department's mineral leasing program pursuant to the mineral leasing laws, must be given a broader interpretation. The ultimate goal in the leasing program is production. Leasing activities authorized upon the issuance of an oil and gas lease, not involving a known geologic structure of a producing oil and gas field, necessarily include prospecting or exploring activities (see sec. 4 of the lease terms, Offer to Lease and Lease for Oil and Gas, Form 3110-1). Thus we conclude that the term "leasing" generally includes exploration activities. Contrary to appellants' assertion, we believe that if Congress had meant to prohibit only physical development and production, it would not have specifically used the term "leasing."⁴ This interpretation is the

⁴ Examination of the derivation of sec. 1003 supports our interpretation. The enacted language is a modified version substituted by the Senate for the original provision as found in House bill, H.R. 39, 96th Cong., 1st Sess., as reported by the House Committee on Interior and Insular Affairs, H.R. Rep. No. 96-97(I) (1979). The House bill left only nonwilderness lands in wildlife refuges subject to the

only one which is consistent with the studies authorized by Congress to assess the wildlife resources and potential oil and gas resources of the refuge and the concern of the Congress that it be fully informed of the potential ramifications of oil and gas activities in the refuge.

Each of the rejected oil and gas lease offers was filed on BLM Form 3110-1, styled "Offer to Lease and Lease for Oil and Gas (Sec. 17 Noncompetitive Public Domain Lease)." The lease terms set forth

operation of the mineral leasing laws. It designated a substantial portion but not all of the Arctic National Wildlife Refuge as wilderness. As part of a North Slope lands study, the Secretary of the Interior was directed to conduct an oil and gas exploration program on the nonwilderness portion of the refuge and then report to Congress. The original House version of sec. 1003 was a logical extension of the House scheme for the refuge. It read: "Production of oil and gas from the Arctic National Wildlife Refuge is prohibited and no development leading to production of oil and gas from the range shall be undertaken until authorized by an Act of Congress." Thus, for those nonwilderness lands in the refuge technically open to mineral leasing under the general provision of the bill, exploration was specifically authorized whereas development and production was prohibited.

The Senate substitute bill left all lands in wildlife refuges open to mineral leasing. Sec. 1002 of the Senate bill directed a study and exploration program for only the coastal plain of the refuge and otherwise withdrew the coastal plain from the operation of the mineral leasing laws pursuant to sec. 1002(1). The Senate then modified the House version of sec. 1003 to include a prohibition against "leasing" as well as "development leading to production of oil and gas." *Unlike the House provision*, sec. 1003 of the Senate bill, which was later enacted, applies to those lands not specifically covered by sec. 1002. We conclude therefore that the Senate amended the House language so that the remaining lands in the refuge would be fully protected from oil and gas activities until Congress could make an informed decision as to whether to allow oil and gas activities in the refuge.

on the form recite these rights of the lessee:

Section 1. Rights of lessee.—The lessee is granted the exclusive right and privilege to drill for, mine, extract, remove, and dispose of all the oil and gas deposits, except helium gas, in the lands leased, together with the right to construct and maintain thereupon, all works, buildings, plants, waterways, roads, telegraph or telephone lines, pipelines, reservoirs, tanks, pumping stations or other structures necessary to the full enjoyment thereof, for a period of 10 years, and so long thereafter as oil or gas is produced in paying quantities; subject to any unit agreement heretofore or hereafter approved by the Secretary of the Interior, the provisions of said agreement to govern the lands subject thereto where inconsistent with the terms of this lease.

A lease issued on this form expressly conveys the right to produce oil or gas. Appellants' use of this form does not comport with their present arguments that they seek only a lease limited to exploratory activity, but with concomitant priority to a lease authorizing production of oil or gas if and when such activity may be authorized. If, at the time appellants submitted their offers, they were not seeking the right to produce oil and gas pursuant to sec. 17 of the Mineral Leasing Act, 30 U.S.C. § 226 (1976), they should not have used BLM Form 3110-1, a lease which provides such right.

Furthermore, under sec. 1002 of ANILCA, the Secretary has no authority to issue mineral leases, including oil and gas leases, within the coastal plain of the Arctic National Wildlife Refuge at this time and no authority to approve explo-

ration plans for the area until 2 years after Dec. 2, 1980. Sec. 1002 (e) requires that any exploration plan submitted to the Secretary conform to guidelines established by the Secretary pursuant to this section. A necessary corollary, supported by the introductory language of subsection (e),⁵ is that no exploration plan may be submitted to the Secretary until after the Secretary has prescribed the regulatory guidelines for such exploratory activities.

We conclude that appellants' offers were properly rejected because the Secretary has no present authority to lease for oil and gas in either the coastal plain or the wilderness area of the Arctic National Wildlife Refuge. We reject appellants' assertion that their offers can be construed as offers to lease for exploratory activities. The statutory scheme is clear as to the steps which must occur before exploratory activities in the coastal plain may be undertaken. Submissions seeking the right to explore the coastal plain are premature at this time.

In addition, we are not aware of any statute or regulation which would allow appellants' lease offers to remain pending until such time as it is determined that oil and gas

leasing should be permitted on the subject lands. The longstanding rule of the Department is that applications may not be suspended to await possible availability of the land sought. *Harold L. Anderson*, 10 IBLA 293 (1973); *William J. Colman*, 3 IBLA 322 (1971). 43 CFR 2091.1.

Three appellants have suggested that BLM violated the terms of sec. 1009 of ANILCA by failing to include a statement as to the reasons that oil and gas leasing on the lands they sought would be incompatible with the purposes of the Arctic National Wildlife Refuge. We disagree. Sec. 1009 may not be read in isolation from the other provisions of ANILCA. The section presumes that the Secretary has the authority under the Mineral Leasing Act of 1920, *supra*, to lease and requires that in exercising the discretion to lease or not to lease in a wildlife refuge, which is not also a wilderness area, the Secretary states the specific reasons for any decision, including a statement on the compatibility of leasing with the purposes of the refuge. This is not the situation before us because here the Secretary does not have the authority to issue a lease.

Finally, several appellants requested that a hearing be held on the issues raised by these appeals. These issues do not involve disputes as to facts but rather involve questions of law: the interpretation of provisions of ANILCA and their applicability to appellants' offers.

⁵ Sec. 1002(e) begins:

"*Exploration Plans.*—(1) After the initial guidelines are prescribed under subsection (d), any person including the United States Geological Survey may submit one or more plans for exploratory activity * * * to the Secretary for approval. An exploration plan must set forth such information as the Secretary may require in order to determine whether the plan is consistent with the guidelines."

Appellants have had ample opportunity to present appropriate legal argument in support of their appeals to this Board in their statements of reasons. The requests for a hearing are denied. 43 CFR 4.415. See *John J. Schnabel*, 50 IBLA 201 (1980); *Dorothy Smith*, 44 IBLA 25 (1979), and cases cited therein.

Therefore, pursuant to the authority delegated to the Board of Land Appeals by the Secretary of

the Interior, 43 CFR 4.1, the decisions of the Alaska State Office are affirmed.

**EARTH POWER CORP.
THERMAL RESOURCES, INC.**

55 IBLA 249

Decided June 22, 1981

Appeals from decisions of the Utah State Office, Bureau of Land Management, requiring the acceptance of certain stipulations as a condition for issuance of various geothermal resource leases. U 25336, U 37159, and U 37161.

Set aside and remanded.

1. Geothermal Leases: Discretion to Lease—Geothermal Leases: Stipulations

Decisions by BLM to require acceptance of special stipulations prior to leasing certain lands for geothermal resources will be upheld when the record shows that the decisions reflect a reasoned analysis of the factors involved based upon considerations of public interest,

and no sufficient reason to disturb the decisions is shown. Where Geological Survey has reported that lands sought are valuable for geothermal resources and Congress recently passed legislation in support of the development of geothermal resources, decisions requiring no surface occupancy stipulations will be set aside and the cases remanded for consideration of the feasibility of the leases issuing with less onerous stipulations.

APPEARANCES: P. Thomas Thornbrugh, Esq., for appellants.

*OPINION BY
ADMINISTRATIVE JUDGE
HENRIQUES*

*INTERIOR BOARD OF
LAND APPEALS*

Earth Power Corp. (Earth Power) appeals from the decision of the Utah State Office, Bureau of Land Management (BLM), dated Mar. 29, 1977, which required ap-

pellant to accept a special stipulation providing for no surface occupancy on certain lands as a condition precedent to issuance of geothermal resources lease U 25336, and to indicate willingness to accept a similar stipulation for other lands in the application, the absence of which would result in final rejection of the application as to such lands.¹

Thermal Resources, Inc., appeals from a similar Utah State Office decision dated Aug. 16, 1977, rejecting, in part, geothermal resources lease applications U 37159 and U 37161, as to a portion of the lands identified therein unless appellant indicated a willingness to accept special stipulations providing for no surface occupancy on those lands.²

¹ BLM's decision required the acceptance of a stipulation stating:

"No occupancy or other activity on the surface of lots 1-4, S $\frac{1}{2}$ NW $\frac{1}{4}$ Sec. 4; lots 5, 6, W $\frac{1}{2}$ NE $\frac{1}{4}$, SE $\frac{1}{4}$ Sec. 10; and the W $\frac{1}{2}$ NE $\frac{1}{4}$, E $\frac{1}{2}$ NW $\frac{1}{4}$, N $\frac{1}{2}$ SW $\frac{1}{4}$, SW $\frac{1}{4}$ SW $\frac{1}{4}$ Sec. 15, T. 22 S., R. 6 W., SLM, Utah, is allowed under this lease."

In addition, it requested that Earth Power indicate whether it would accept a lease with a no surface occupancy stipulation for the S $\frac{1}{2}$ NE $\frac{1}{4}$, S $\frac{1}{2}$ sec. 4; sec. 9; W $\frac{1}{2}$ sec. 10; and the W $\frac{1}{2}$ NW $\frac{1}{4}$ sec. 15, T. 22 S., R. 6 W., Salt Lake meridian, Utah.

Lease application U 25336 also covered the E $\frac{1}{2}$ NE $\frac{1}{4}$, SE $\frac{1}{4}$ SW $\frac{1}{4}$, and SE $\frac{1}{4}$ sec. 15, T. 22 S., R. 6 W., Salt Lake meridian, Utah. The decision indicated that action to process the application as to these lands would be taken after Earth Power responded to the stipulation requirement.

² Lease application U 37159 covered secs. 5, 6, 8, 17, T. 22 S., R. 6 W., Salt Lake meridian, Utah. Lease application U 37161 covered secs. 7 and 30, lots 1 through 4, E $\frac{1}{2}$ W $\frac{1}{2}$, NE $\frac{1}{4}$ sec. 18, and lots 1 through 4, E $\frac{1}{2}$ W $\frac{1}{2}$, SE $\frac{1}{4}$, SW $\frac{1}{4}$ NE $\frac{1}{4}$ sec. 19, T. 22 S., R. 6 W., Salt Lake meridian, Utah.

The BLM decision held for rejection secs. 5, 8, and 17, T. 22 S., R. 6 W., Salt Lake meridian, from lease application U 37159 and the E $\frac{1}{2}$ sec. 7 and N $\frac{1}{2}$ NE $\frac{1}{4}$, SE $\frac{1}{4}$ NE

The appeals have been consolidated by the Board because identical statements of reasons have been filed by each appellant, and the issues at bar are identical.

The BLM decision directed to appellant Thermal Resources, Inc., stated:

The National Environmental Policy Act of 1969 declared a national policy to encourage productive and enjoyable harmony between man and his environment and required all agencies of the Federal Government to include in every recommendation or report on proposals for legislation and other major federal actions significantly affecting the quality of the human environment, a detailed statement by the responsible official. Therefore, and under the regulations in 43 CFR 3200.0-6(a), the Sevier Lake geothermal environmental analysis has been prepared by the Richfield District Office, Bureau of Land Management.

The environmental analysis identifies * * * [part of the] lands [in the application] as having outstanding resource values incompatible with geothermal resources leasing: * * *.

These lands are within the Tabernacle Hill geological area. Tabernacle Hill consists of a volcanic crater, numerous lava tubes, a large cinder cone resembling the Mormon Tabernacle in Salt Lake City, and the surrounding lava flow. The cinder cone area consists of thirteen recent volcanic cones and craters plus the surrounding lava flows. The area is a favorite of school groups in all educational levels. A recreation area designation, a protective withdrawal, and facility development are proposed for the area.

A public meeting was held in Fillmore, Utah on March 9, 1977 to discuss a proposed withdrawal from the public land and mining laws. Approximately eighty

$\frac{1}{4}$ sec. 18, T. 22 S., R. 6 W., Salt Lake meridian from lease application U 37161, unless Thermal Resources, Inc., agreed to a no surface occupancy stipulation as to those lands.

June 22, 1981

percent of the forty people attending the meeting favored the withdrawal.

Geothermal exploration, development and operation on or near this recreation site could reduce or destroy the recreational value of the site. Geothermal activity in close proximity would be out of harmony with and would detract from the interpretive and scenic values of this geologic site. Mainly, as with general recreation use, geothermal activity will draw new people into the area and recreational demands will increase at specific recreation sites. Littering, human waste problems and general deterioration of this site could occur. Also, geothermal production facilities could block access points and interfere with the physical use of this recreation area. Adjacent production noise could make the visiting of adjacent recreational sites unenjoyable. Producing steam adjacent to popular recreation areas could be dangerous. If a well should become uncapped, recreational visitors could be injured and the recreation site would have to be closed.

It has been determined that the public interest would best be served by invoking the discretionary authority of the Secretary of the Interior and holding the applications for rejection as [to] the * * * described lands. The only alternative to rejection of these lands is issuance of a lease which would prohibit occupancy and might *never* afford any beneficial use. *Chevron Oil Company*, 24 IBLA 159 (1976).

In addition to the above, the BLM decision sent to Earth Power also stated:

The regulations in 43 CFR 3200.0-6(b) state that special terms and conditions shall be developed to be included in leases as required to protect the environment, to permit use of the land for other purposes, and to protect other natural resources. Accordingly, it has been determined that a lease should not be issued for * * * [a portion of the lands identified in the lease application]

authorizing disturbance of the surface. A lease may be issued upon acceptance of the enclosed stipulation.

In each case, appellant was given 30 days to act to accept the restrictions outlined or suffer rejection of its application as to those lands.

In their statement of reasons, appellants contend that the requirement for a no surface occupancy stipulation constitutes improper use of discretion under 43 CFR 3200.0-6(b),³ without an affirmative showing that the criteria in that regulation have been considered. It is argued that the need for energy mineral deposits was not considered by BLM, contrary to the

³ The cited regulation 43 CFR 3200.0-6(b) reads as follows:

"(b) Prior to the final selection of tracts for leasing, the Director, or the head of the agency charged with the administration of the surface, if that officer so elects, shall, when appropriate, evaluate fully the potential effect of the geothermal resources operations pursuant to a leasing program on the total environment, fish and other aquatic resources, wildlife habitat and populations, aesthetics, recreation, and other resources in the entire area during exploratory, developmental, and operational phases. This evaluation will consider the potential impact of the possible development and utilization of the geothermal resources including the construction of power generating plants and transmission facilities on lands which may or may not be included in a geothermal lease. To aid him in his evaluation and selection of tracts the Director shall request and consider the views and recommendations of appropriate Federal agencies, may hold public hearings after appropriate notice, and shall, as appropriate, consult with State agencies, organizations, industries, and lease applicants, and shall consider all other potential factors, such as use of the land and its natural resources, the need for the energy mineral deposits, and socio-economic conditions consistent with multiple-use management principles. If a decision is made to lease, the Director shall develop special terms and conditions to be included in leases as required to protect the environment, to permit use of the land for other purposes, and to protect other natural resources."

mandate of the Congress as expressed in the legislative history of the Geothermal Steam Act of 1970.⁴ Further, they state that the required stipulations do not consider the principles of multiple use management set out in the Act.⁵ Finally, appellants contend that it has not been shown by BLM that the no surface occupancy stipulation is required to protect the environment, to permit use of the land for other purposes, or to protect the natural resources present. To the contrary, they state that the decisions holding that the area is a favorite of school groups in all educational levels and that a proposed protective withdrawal and facility development for recreation have not been shown to be incompatible with surface development of the geothermal resources. They contend the decisions are merely speculative as to possible harm to recreational visitors from the anticipated geothermal development.

In conclusion appellants' state that the dangers complained of will be minimized by the fact that all operations under geothermal resources leases must adhere strictly to and comply with the Geothermal Resources Operational Or-

ders promulgated by Geological Survey.

BLM has filed an application, U 40395, to withdraw from settlement, sale, location, and entry under the general land laws, including the mining laws, some 4,097 acres in T. 22 S., R. 6 W., Salt Lake meridian, including most of the land included in the three geothermal resources lease applications on appeal. The proposed withdrawal will not preclude mineral leasing. *See* 45 FR 40241 (June 13, 1980). In its request for permission to file the withdrawal application, BLM stated that the Geological Survey had reported that all the lands involved are valuable for geothermal resources.

In the Geothermal Energy Act of 1980, P.L. 96-294, §§ 602-644, 94 Stat. 763-77 (1980) (to be codified at 30 U.S.C. §§ 1501-1542), the Congress found specifically that domestic geothermal resources can be developed into regionally significant energy sources promoting the economic health and national security of the Nation. The Act authorized the Secretary of Energy to make project loans for geothermal reservoir exploration; to study and establish a reservoir insurance program; and to provide assistance for studies of the feasibility of accelerating development of certain geothermal resources.

[1] Generally, a decision by BLM to refrain from leasing certain lands for geothermal resources will be upheld when the record shows the decision to be a reasoned analysis of the factors involved based upon considerations of public inter-

⁴ 30 U.S.C. §§ 1001-1025 (1976).

⁵ Appellants cite to section 17 of the Geothermal Steam Act of 1970, 30 U.S.C. § 1016 (1976), which states in part:

"Administration of this chapter shall be under the principles of multiple use of lands and resources, and geothermal leases shall, insofar as feasible, allow for coexistence of other leases of the same lands for deposits of minerals under the laws applicable to them, for the location and production of claims under the mining laws, and for other uses of the areas covered by them."

June 26, 1981

est and when no sufficient reason to disturb the decision is demonstrated. *California Geothermal, Inc.*, 37 IBLA 172 (1978). A decision to require acceptance of restrictive stipulations, rather than to refuse to lease, will be upheld on a similar basis. *Western Oil Shale Corp.*, 41 IBLA 105 (1979). Here, however, in light of the recently expressed policy of the Congress in support of the multiple use of land and of the development of geothermal resources, and in light of the report of the Geological Survey that the lands sought are indeed valuable for geothermal resources, we will remand the cases to BLM for further study to determine if geothermal resources leases can reasonably be issued with less onerous stipulations than the no surface occupancy stipulations originally proposed, without destroying the scenic and recreation values of the site.

Accordingly, pursuant to the authority delegated to the Board of Land Appeals by the Secretary of the Interior, 43 CFR 4.1, the decisions appealed from are set aside and the cases remanded to the BLM State Director for Utah for further action consistent with this decision.

GRAFTON COAL CO., INC.

3 IBSMA 175

Decided June 26, 1981

Appeal by the Office of Surface Mining Reclamation and Enforcement (OSM) from the July 24, 1980, decision by Administrative Law Judge Tom M. Allen in Docket No. CH 0-175-R vacating Notice of Violation No. 80-I-37-7 issued under the authority of the Surface Mining Control and Reclamation Act of 1977 by OSM to Grafton Coal Co., Inc., for an alleged failure to eliminate a highwall in violation of 30 CFR 715.14.

Reversed.

1. Surface Mining Control and Reclamation Act of 1977: Backfilling and Grading Requirements: Highwall Elimination

Even where approval has been granted to construct a cut-and-fill terrace, 30 CFR 715.14(b) (2) (iii) requires that no highwalls may be left.

2. Surface Mining Control and Reclamation Act of 1977: Inspections: Generally

Prior presentation of credentials by an OSM inspector is not required when no employee of the operator is present on the minesite.

3. Surface Mining Control and Reclamation Act of 1977: Applicability: Generally—Surface Mining Control and Reclamation Act of 1977: Bonds: Release of

Release of a portion of a permittee's performance bond by a state does not reduce OSM's authority to regulate that permittee.

APPEARANCES: Harold Chambers, Esq., Office of the Field Solicitor, Knoxville, Tennessee, Mark Squillace, Esq., Glenda Hudson, Esq., and Marcus P. McGraw, Esq., Assistant Solicitor for Enforcement, Office of the Solicitor, Washington, D.C., for the Office of Surface Mining Reclamation and Enforcement; James Rodney Christie, Esq., Clarksburg, West Virginia, for Grafton Coal Co., Inc.

*OPINION BY THE INTERIOR
BOARD OF SURFACE
MINING AND RECLAMATION
APPEALS*

The Office of Surface Mining Reclamation and Enforcement (OSM) has appealed a decision dated July 24, 1980, by Administrative Law Judge Tom M. Allen vacating Notice of Violation (NOV) No. 80-I-37-7. OSM had issued the notice of violation to Grafton Coal Co., Inc. (Grafton), under the authority of the Surface Mining Control and Reclamation Act of 1977 (Act)¹ for Grafton's alleged failure to eliminate a highwall at its minesite near Weston, West Virginia, in violation of 30 CFR 715.14.

*Factual and Procedural
Background*

Grafton had finished coal extraction activities in late 1978 and had undertaken reclamation efforts. West Virginia authorities had conducted their last inspection in Feb-

ruary 1979. Thus, on the occasion of the OSM inspection that gave rise to the notice of violation on Feb. 6, 1980, Grafton was no longer on the site as an active operator. An OSM inspector had met with Grafton personnel a week or more before the inspection, had reviewed maps and documents with them, and told them he intended to inspect the site soon. During the inspection he discovered what appeared to be a violation of the approximate original contour reclamation requirements, namely a failure to reclaim highwall along an approximately 525-foot portion of the site's 4,000-foot cropline. He issued the notice of violation accordingly.

Grafton applied for review of the notice of violation on Mar. 7, 1980, and the Administrative Law Judge held a hearing on May 30, 1980. At the hearing, two items of evidence were presented which had a bearing on the decision under review. First, a State inspector testified that he had given oral approval for a permit modification allowing Grafton to construct a cut-and-fill terrace along the portion of the cropline involved. Indeed, he testified that he "could almost say for certain that [he] instructed the foreman to construct this terrace" (Tr. 48). Second, Grafton submitted its request for approval of its grading work to the State in March 1979, and the State granted the approval in March 1980, simultaneously returning 82 percent of Grafton's performance bond.

¹ Act of Aug. 3, 1977, 91 Stat. 445, 30 U.S.C. §§ 1201-1328 (Supp. II 1978).

Discussion

The Administrative Law Judge identified five issues in the case, one of which has been decided in a previous case involving Grafton and one of which we need not reach because of our answer to the question whether a violation of 30 CFR 715.14 can be sustained.² We reverse the Administrative Law Judge on the remaining three issues, as discussed below.

[1] The first issue is whether Grafton violated 30 CFR 715.14 by failing to eliminate all highwalls. This issue was related to the question whether Grafton had been granted approval for a cut-and-fill terrace in accordance with 30 CFR 715.14(b)(2). Even assuming it had been granted such approval, Grafton would have to eliminate all highwalls: 30 CFR 715.14(b)(2)(iii) provides that in "no case may highwalls be left as part of terraces."³ OSM's evidence consisted of testimony of two inspectors and two sets of photographs (Tr. 9-13, 27-30; Exhs. 4-9, 10-12). These photographs clearly show from 3-12 feet of vertical rock faces with unconsolidated material at the bottom (defined as talus at the hearing). Such faces fall within the definition

of highwall at 30 CFR 710.5 when they are created during mining. *Cf. Grafton Coal Co., Inc.*, 2 IBSMA 316, 87 I.D. 521 (1980).

Grafton's testimony in response was that these areas were the back-slope of the terrace, although it conceded they would be hard to distinguish from highwall (Tr. 41-42). The testimony of the State inspector who was present for most of the reclamation was that he did order the construction of the terrace but that the 525-foot area was probably highwall that had been created during mining and not been eliminated (Tr. 48, 54).

The Administrative Law Judge held that Grafton successfully carried its ultimate burden of persuasion. We do not agree. OSM's evidence constituted a prima facie case of failure to eliminate all highwalls. Grafton's response was insufficient to refute OSM's evidence.

[2] At the hearing Grafton moved to vacate the NOV on the grounds that the OSM inspectors did not present credentials to an employee of Grafton before entering onto its property. The Administrative Law Judge denied the motion at the hearing but reconsidered in his opinion and held that it should have been granted because no extraordinary circumstances existed to excuse entry without presenting credentials (Decision at 8-9). *See Consolidation Coal Co.*, 1 IBSMA 273, 86 I.D. 523 (1979); after remand, *Consolidation Coal Co.*, 2 IBSMA 21, 87 I.D. 59 (1980).

² Those issues were whether a permit must be modified in writing before a cut-and-fill terrace may be constructed in accordance with 30 CFR 715.14(b)(2) and whether the approval under that regulation had been properly granted. In *Grafton Coal Co., Inc.*, 2 IBSMA 316, 87 I.D. 521 (1980), we held the answer to the first question was "no."

³ See also *Tollage Creek Elkhorn Mining Co.*, 2 IBSMA 341, 87 I.D. 570 (1980).

Although we agree that there are no extraordinary circumstances in this case, as there were in *Consolidation*, the question is "whether, objectively, entry without prior presentation of credentials was justified." *Consolidation Coal Co.*, *supra*, 2 IBSMA at 24, 87 I.D. at 61 (1980). In this case no Grafton employee was on the site on either of two occasions when an inspector arrived. Under these circumstances entry without presentation of credentials is justified. As the Administrative Law Judge noted in his opinion, "as a practical matter, [prior presentation of credentials] would only have delayed the inevitable reinspection of the notice of violation for the same offense" (Decision at 9). Our decisions in *Consolidation* were not intended to prevent or delay inspections when no employee of an operation is present.⁴

[3] The Administrative Law Judge phrased the last issue as "when a percentage of a bond is released, what effect does that have on the jurisdiction of OSM?" (Decision at 7). His answer was that OSM retains jurisdiction only to enforce regulations in the initial program that were not the subject of the state's release of the performance bond.

Again, we cannot agree. We note initially that OSM issued the notice of violation involved in this case before West Virginia approved the release of part of Grafton's performance bond. The

State's later action does not affect OSM's earlier enforcement action. Further, the State's approval was not only partial but conditional. Finally, as we have previously held, the fact that a permittee is subject to state regulation involving any of the requirements of the initial program authorizes OSM to exercise its dual regulatory jurisdiction with respect to all of those requirements. *James Moore*, 1 IBSMA 216, 221, 86 I.D. 369, 372 (1979).⁵ The fact that a state releases part of a permittee's bond does not of itself reduce OSM's authority to regulate that permittee.

The July 24, 1980, decision vacating Notice of Violation No. 80-I-37-7 is reversed.

of Administrative Law Judge Tom M. Allen, Docket No. CH 0-92-P, vacating Notice of Violation No. 79-I-38-58 for failure to show authority to regulate respondent's operation during the initial regulatory program.

Reversed and remanded.

1. Surface Mining Control and Reclamation Act of 1977: Words and Phrases

"Surface Coal Mining Operations." Extraction of coal from a coal refuse pile is an activity which falls within the definition of "surface coal mining operations," as contained in revised Part 700, and OSM has authority to regulate such an operation during the initial regulatory program.

APPEARANCES: John B. Woodrum, Esq., Office of the Field Solicitor, Charleston, West Virginia, Mark Squillace, Esq., and Marcus P. McGraw, Esq., Assistant Solicitor for Enforcement, Office of the Solicitor, Washington, D.C., for the Office of Surface Mining Reclamation and Enforcement; Cecil W. Taylor, Esq., Martin, Taylor, Fralin, Freeman & Perrow, Lynchburg, Virginia, for Farmington Coal Co.

OPINION BY THE INTERIOR BOARD OF SURFACE MINING AND RECLAMATION APPEALS

The Office of Surface Mining Reclamation and Enforcement (OSM) has sought review of the Aug. 25, 1980, decision of Administrative Law Judge Tom M. Allen in Docket No. CH 0-92-P. That decision vacated Notice of Violation No. 79-I-38-58 on the grounds that

OSM had no authority to regulate respondent's operation during the initial regulatory program. For the reasons set forth below, we reverse that decision.

Factual and Procedural Background

The parties stipulated before the Administrative Law Judge as follows: Farmington Coal Co. (Farmington), the respondent, is a registered limited partnership and owns an 18-acre tract of land in Marion County, West Virginia, upon which is located a "gob" or coal refuse pile; the gob pile was recovered from the earth prior to Aug. 3, 1977, and contains mined coal unsuitable for marketing in its present condition; the coal refuse pile is owned by Marion Pallet Co., a West Virginia corporation; Farmington constructed, owns, and operates on the property a coal preparation facility at which the gob is processed by being crushed, screened, washed, cleaned, and tipped, recovering 40 percent coal from the refuse material, the remainder of which is disposed of in another area off the site; 30 tons of clean coal per hour pass through the preparation facility for which Farmington pays a royalty to the Marion Pallet Co. on each ton that enters interstate commerce; the only permit Farmington has is a water pollution control permit No. P-5942-77 issued Dec. 5, 1977; and except for the above-described operation, Farmington has no other coal mine interest and is not legally or physi-

cally associated with any other coal mining operation, nor does it process any material through its preparation facility except the coal refuse physically located on the property.

On Dec. 5, 1979, OSM inspected Farmington's operation and issued Notice of Violation No. 79-I-38-58, citing two violations of the Surface Mining Control and Reclamation Act of 1977 (Act).¹ Violation 1 was issued for failure to cause all surface drainage from the disturbed area to pass through a sedimentation pond or a series of sedimentation ponds before leaving the disturbed area in violation of 30 CFR 715.17(a). Violation 2 was issued for failure to post mine identification signs as required by 30 CFR 715.12(b). A proposed civil penalty assessment in the amount of \$1,780 was issued to Farmington for these violations by the OSM Assessment Office. On Feb. 19, 1980, Farmington paid the proposed civil penalty into escrow and filed a petition for review of OSM's enforcement actions pursuant to 43 CFR 4.1150.

The parties stipulated the relevant facts and moved to submit the issue of OSM's authority to regulate Farmington's operations to the Administrative Law Judge, who on May 28, 1980, granted the parties' motion and set a briefing schedule. On Aug. 25, 1980, after consideration of the parties' briefs, the Administrative Law Judge issued a decision vacating Notice of Violation No. 79-I-38-58, finding that

OSM had no authority to regulate Farmington's operation during the initial regulatory program because it did not fall within the definition of a "surface coal mining operation" in 30 CFR 700.5.

On Sept. 24, 1980, OSM filed a petition for discretionary review of the decision which the Board granted on Oct. 7, 1980. Thereafter, both parties filed timely briefs.

Discussion and Conclusions

The Administrative Law Judge held:

[W]here the notices of violation issued while the State of West Virginia was under permanent regulations, there is no question but what the issue would be resolved in favor of the respondent [OSM] * * *.

It would appear that since the Secretary did not see fit to include gob or refuse piles within the interim regulations, while specifically including them in the permanent regulations, no expansion of the definition of surface mining operations was intended at this time to include operations such as Farmington. [2]

[1] Although he may have been misled by the parties' brief,³ the Administrative Law Judge's conclusion is incorrect. The definition of "surface coal mining operations" was amended on Mar. 13, 1979, by adding the language "and *Provided further*, that excavation for the purpose of obtaining coal includes extraction of coal from coal refuse

² Aug. 25, 1980, decision in Docket No. CH 0-92-P at 4.

³ Both parties apparently relied on the definition of surface coal mining operations as it appeared at 42 FR 62676 (Dec. 13, 1977), before it was amended early in 1979. See OSM Brief at 2; Farmington Brief at 2.

¹ Act of Aug. 3, 1977, 91 Stat. 445, 30 U.S.C. §§ 1201-1328 (Supp. II 1978).

June 29, 1981

piles."⁴ (30 CFR 700.5; 44 FR 15315 (Mar. 13, 1979).) This definition was made applicable during the initial regulatory program effective Apr. 12, 1979.⁵ (44 FR 14902 (Mar. 13, 1979); 44 FR 15485 (Mar. 14, 1979).) Therefore, Farmington was subject to OSM's regu-

lation when it was inspected on Dec. 5, 1979.

The Administrative Law Judge's decision of Aug. 25, 1980, is reversed, and the case is remanded for determination of the proper civil penalty assessment.

⁴ The addition of this proviso was intentional, as is indicated by the following comment from the preamble to the Mar. 13, 1979, regulations:

"Surface coal mining operations. The definition of surface coal mining operations follows the statutory definition, except that it includes in a proviso clause reference to extraction of coal from coal refuse piles as falling within the definition. The proposed regulation also included extraction of coal from refuse piles, but placed the relevant language in the main text of the definition.

"1. A number of comments received by OSM recommended deletion of 'extraction of coal from coal refuse piles.' Although this change would make the definition conform to the definition in Section 701(28) of the Act, it would reintroduce the uncertainties about the regulatory coverage of mining of refuse piles. Mining of refuse piles can be as environmentally harmful as any other mining; but, like the remaining of previously mined areas, if mining and reclamation are done correctly there can be a substantial improvement. Analysis of the statute and legislative history has convinced the Office that such extraction is an operation intended to be regulated under the Act. Congress specifically exempted certain mining activities in 701(28) and 528 of the Act. Rather than including remaining of refuse piles among the exemptions, Congress wrote a comprehensive definition of surface coal mining operations. Therefore, OSM has decided not to change the definition." 44 FR 14914 (Mar. 13, 1979).

⁵ The definition of surface coal mining operations previously applicable to the initial regulatory program was contained in 30 CFR Chapter VII Part 700 as one of the "General" regulations. (42 FR 62676 (Dec. 13, 1977).) The Mar. 13, 1979, amendment of 30 CFR Chapter VII recodified and revised Part 700. (44 FR 15312 (Mar. 13, 1979).) The revised definition appears in 30 CFR 700.5 as part of Subchapter A—General regulations. Subchapter A is "intended to serve as a guide to the rest of the Chapter and to the regulatory requirements and definitions generally applicable to the programs and persons covered by the Act." (Italics added.) 30 CFR 700.1(a).

GERTRUDE E. SHERMAN v. ACTING AREA DIRECTOR, PORTLAND AREA OFFICE, BUREAU OF INDIAN AFFAIRS

9 IBIA 25

Decided June 29, 1981

Appeal from decision by Acting Area Director declaring mother of deceased Klamath Indian to be decedent's sole heir entitled to decedent's share of judgment funds awarded the Klamath Tribe.

Reversed.

1. Bureau of Indian Affairs: Administrative Appeals: Generally—Indian Probate: Klamath Tribe—Indian Tribes: Judgment Funds

While it is true that the Klamath Termination Act, Aug. 13, 1954, 68 Stat. 718, 25 U.S.C. §§ 564-564x (1976), rendered inapplicable to Klamath tribal members the Secretary's usual jurisdiction over Indian heirship determinations as set

forth in 25 U.S.C. §§ 372-373 (1976) (*see* 25 U.S.C. § 564h), Congress, by the more recent Act of Oct. 1, 1965, 79 Stat. 897, 25 U.S.C. §§ 565-565g (1976), specifically empowered the Secretary of the Interior to determine the rightful heirs of deceased Klamath enrollees entitled to a share of judgment funds payable from the United States for the limited purpose of seeing that such funds are distributed to the heir or heirs so determined.

2. Bureau of Indian Affairs: Administrative Appeals: Generally—Indian Probate: Klamath Tribe

The Secretary has no statutory authority to pay creditors' claims against estates of deceased Klamath Indians out of judgment funds distributable by the Secretary under the Act of Oct. 1, 1965, 79 Stat. 897.

APPEARANCES: Edwin D. Harris, Esq., for appellant Gertrude E. Harrington Sherman; Kurt Engelstad, Esq., for appellee Anna S. Nickels, (at hearing); Anna S. Nickels, pro se, after hearing; Vernon Peterson, Jr., Esq., Office of the Regional Solicitor, Portland, Oregon, for the Department.

OPINION BY CHIEF ADMINISTRATIVE JUDGE HORTON

INTERIOR BOARD OF INDIAN APPEALS

This appeal arises from a decision rendered May 22, 1979, by the Acting Area Director, Portland Area Office, Bureau of Indian Affairs, determining the heirship of Herman Gene Sherman, deceased Klamath enrollee No. 1782. The Acting Area Director's heirship determination was rendered under delegated authority from the Secretary, who, pursuant to the Act of

Oct. 1, 1965, 25 U.S.C. § 565a(b) (1976), is required to determine the heirs of any deceased Klamath enrollee entitled to a share of certain judgment funds awarded the Klamath Tribe. The heirs so found by the Secretary are thereupon considered legal successors to the decedent's distributive share of the fund.

In this case, the Acting Area Director held Anna S. Nickels, surviving mother of Herman G. Sherman, to be decedent's sole heir. In reaching this conclusion, the Acting Area Director rejected the claim of Gertrude E. Harrington Sherman, appellant herein, that she was the decedent's surviving spouse. Specifically, the Acting Area Director held that appellant could not have been married to Herman Sherman because there was no evidence that she had obtained a divorce from a prior husband identified as John Jordan.

The Acting Area Director's decision was appealed by Gertrude E. Sherman to the Commissioner of Indian Affairs pursuant to provisions of 25 CFR Part 2. By memorandum dated Oct. 22, 1979, Acting Deputy Commissioner of Indian Affairs, Sidney Mills, referred the appeal to the Board of Indian Appeals for resolution pursuant to 25 CFR 2.19(a) (2).

Upon receipt of the administrative record, it was apparent to the Board that the Acting Area Director's decision was reached without the benefit of any evidentiary hearing. In light of the factual controversies involved, it was deemed

June 29, 1981

appropriate by the Board to refer this case to the Hearings Division of the Office of Hearings and Appeals for a fact-finding hearing and issuance of a recommended decision by an Administrative Law Judge. Such referral was ordered by the Board on Oct. 29, 1979, pursuant to the authority of 43 CFR 4.361(a) (1979), *as amended*, Jan. 23, 1981, 46 FR 7334, 7337 (§ 4.337) (1981).

An evidentiary hearing was held by Administrative Law Judge Robert C. Snashall on Apr. 16, 1980, in Portland, Oregon. Gertrude E. Sherman, appellant, and Anna S. Nickels, appellee, were represented by counsel at this hearing. On Sept. 9, 1980, Judge Snashall issued his findings and recommended decision. Therein, he concluded that the Office of Hearings and Appeals, including the Board of Indian Appeals, has no jurisdiction to enter an heirship determination in this case; assuming such authority does exist, Judge Snashall recommended that the Board reverse the Acting Area Director's heirship determination and hold for the appellant. All interested parties were allowed to file exceptions to the recommended decision. By memorandum dated Sept. 26, 1980, counsel for the Office of the Regional Solicitor, United States Department of the Interior, Portland, Oregon, filed a statement disagreeing with Judge Snashall's jurisdictional ruling. By letter dated Oct. 14, 1980, counsel who represented appellee Anna Nickels at the evidentiary hearing informed the Board that any further appearances by appellee in this matter

would be accomplished by her, *pro se*. The Board received exceptions to the recommended decision from Anna Nickels, *pro se*, on Oct. 10, 1980. No exceptions have been filed by appellant.

Jurisdiction

For the proposition that the Office of Hearings and Appeals lacks jurisdiction to enter a final heirship determination in this case, including thereby a declaration of succession to decedent's share of judgment funds awarded the Klamath Tribe, Judge Snashall stated as follows:

It should be noted at the outset, however, the Klamath Termination Act of August 13, 1954, 68 Stat. 718, withdrew Klamath probate matters from application of the general Indian probate and other applicable laws. 25 U.S.C. 564(h). This general withdrawal of Federal jurisdiction over members of the Klamath Tribe was further buttressed by the Act of August 15, 1953 (commonly known as Public Law 280), 667 [sic] Stat. 588, 28 U.S.C. 1360 (1970), which is essence, *inter alia*, gave civil and criminal jurisdiction over all Indian country within the state of Oregon to the said state with the exception of the Warm Springs Indian Reservation. The Act of October 1, 1965, *supra*, which by section 565a(b) provides for distribution of judgment funds to members of the Klamath Tribe, mandates that "a share payable to a deceased enrollee shall be paid to his heirs or legatees upon the filing of proof of death and inheritance satisfactory to the Secretary of the Interior, who's [sic] findings and determinations upon such proof shall be final and conclusive." The Secretary's authority to make these determinations was delegated to the Area Director, Portland Area Office, Bureau of Indian Affairs. See 30 F.R. 14335 (November 16, 1965);

10 BIAM 2.3A. The undistributed judgment funds are not to be paid to a deceased Indian's estate, but rather the Act provides that such funds are to paid directly to the heirs or legatees of the decedent as determined by the Secretary. Such funds do not therefore become a part of the decedent's trust estate, nor do they take on the character of Indian trust monies, and are by virtue of the above statutes distributable through state court probate proceedings. In fact, it appears the Office of Hearings and Appeals has no jurisdiction whatsoever in these proceedings and that the Area Director should deposit the share of judgment funds applicable to decedent, and others similarly situated, with the appropriate state court for its determination of heirs or devisees. (cf: Act of September 21, 1968, (Public Law 90-507), 82 Stat. 860, (California Judgment Funds); the Act of May 21, 1970 (Public Law 91-259), 84 Stat. 253 (Umatilla Judgment Funds). Clearly, Congress did not intend as to distribution of Klamath judgment funds the applicability of 43 CFR Part 4 nor departmental decisions in accordance therewith. (cf: Act of July 1, 1973, 87 Stat. 99 as affected by the Act of October 19, 1973 (Public Law 93-134), 87 Stat. 466.) However, inasmuch as the undersigned cannot determine jurisdiction the hearing was held as directed by the Board.

[1] The Board is unable to follow the logic of the above recommended findings and conclusions. While it is true that the Klamath Termination Act, 25 U.S.C. §§ 564-564x (1976), rendered inapplicable to Klamath tribal members the Secretary's usual jurisdiction over Indian heirship determinations as set forth in 25 U.S.C. §§ 372-373 (1976) (*see* 25 U.S.C. § 564h), Congress, by the more recent Act of Oct. 1, 1965, 79 Stat. 897, specifically empowered the Secretary of the Interior to determine the rightful

heirs of deceased Klamath enrollees entitled to a share of certain judgment funds payable from the United States for the limited purpose of seeing that such funds are distributed to the heirs so determined by the Secretary. The relevant provisions of the Act of Oct. 1, 1965, as codified in 25 U.S.C., state:

§ 565

The Secretary of the Interior is authorized and directed to distribute in accordance with the provisions of this subchapter the funds appropriated in satisfaction of a judgment obtained by the Klamath and Modoc Tribes and Yahooskin Band of Snake Indians, hereinafter called the Klamath Tribe for the purposes of the administration of this subchapter, from the Indian Claims Commission against the United States in docket numbered 100 * * *.

§ 565a

* * * * *

(b) a share payable to a deceased enrollee shall be paid to his heirs or legatees upon the filing of proof of death and inheritance satisfactory to the Secretary of the Interior, whose findings and determinations upon such proof shall be final and conclusive * * *.

§ 565g

The Secretary is authorized to prescribe rules and regulations to carry out the provisions of this subchapter.

There is nothing ambiguous in the foregoing statutory provisions concerning the authority of the Secretary to determine heirs of deceased Klamath enrollees for the purpose of distributing judgment fund shares to those entitled thereto. Sec. 565a(b) clearly contemplates that the Secretary make "findings and determinations" re-

garding inheritance. Had Congress intended for the Secretary to merely defer to state court inheritance rulings, it could easily have done so. Of course, state probate determinations with respect to property of deceased Klamath Indians may be considered by the Secretary, along with other kinds of proof, in reaching an heirship decision under 25 U.S.C. § 565a(b).

In accordance with the statutory authority to promulgate appropriate rules to implement the Act of Oct. 1, 1965, the Office of the Secretary delegated to the Area Director, Portland Area Office, Bureau of Indian Affairs, the authority to perform the functions vested in the Secretary by the 1965 Act. *See* 30 FR 14335 (Nov. 16, 1965); 10 BIAM 2.13A. Because administrative actions of area directors are appealable under Department regulations to the head of the Bureau of Indian Affairs and to the Board of Indian Appeals, it was not only appropriate but required by law that the Area Director's decision at issue in this case be considered an appealable action. *See* 25 CFR 2.19.

While this probate controversy is the first of its kind to reach the Board of Indian Appeals, the Board is no stranger to probate disputes. It is a regular function of the Board to review inheritance decisions made by Indian probate administrative law judges who probate the estates of Indians who die possessed of trust or restricted property. Pursuant to 25 U.S.C. § 348 (1976), the Department is required to apply state laws of descent

and distribution in ascertaining the heirs of Indians who, as in the case at bar, die intestate. The hearing held in this case was conducted by the Indian probate judge most familiar with Oregon State law. All things considered, therefore, the procedural steps taken by the Department in this matter have followed a logical course, within the bounds of Departmental rules, to secure a fair and just result.¹

In accordance with the above discussion, Judge Snashall's opinion that the Board of Indian Appeals lacks jurisdiction in this appeal is rejected.

Findings and Conclusions Regarding Heirship

The Board has examined the complete record in this case, including the Acting Area Director's initial decision, the transcript of hearing held by the Administrative Law Judge, all exhibits of record, the recommended decision issued Sept. 9, 1980, and comments of the parties subsequent thereto. Based on this review, we accept the recom-

¹ it would be preferable, in the Board's opinion, if special rules existed allowing for inheritance determinations in Klamath judgment fund cases which correspond to the Department's general Indian probate procedure codified at 43 CFR Part 4, Subpart D. Specifically, it would seem more desirable to have an evidentiary hearing in the first instance presided over by an Administrative Law Judge, not an area director, with a right of appeal to this Board from such heirship determination. However, the due process rights of the parties to this proceeding have not been violated where, as here, an area director's heirship ruling was appealed, an evidentiary hearing held, and a final decision entered following an opportunity for the submission of briefs by all concerned.

mended findings and conclusions of Judge Snashall to the effect that Gertrude E. Sherman, not Anna Nickels, is the lawful sole heir of Herman G. Sherman.

It was proven by Gertrude Sherman that she married the decedent on Mar. 13, 1973, at a ceremony held in Vancouver, Washington (Exh. A-5, Tr. of Hearing). Based on evidence supplied by Anna Nickels, the Acting Area Director held that this marriage was invalid because of a showing that Gertrude Sherman was married to John R. Jordan at the time of her alleged marriage to the decedent. The foregoing holding was entered without any opportunity for appellant to refute the evidence submitted by appellee and relied upon by the Acting Area Director in reaching his decision. It was established at the hearing of Apr. 16, 1980, that Anna Nickels had altered a certificate showing the marriage of one Gertrude L. Sherman to John R. Jordan on Mar. 17, 1970, by changing the "L" to an "E." Anna Nickels admitted that she made the alteration of this significant piece of evidence (Tr. 94). But for the resourcefulness of appellant who tracked down Gertrude L. Sherman in California and brought her to the hearing, this incredible action of Anna Nickels might never have come to light.²

² Anna Nickels attempted to justify her fraudulent action on grounds that she had not been able to obtain satisfaction on this probate dispute for over 6 years and that she had been told that Gertrude E. Sherman had, in fact, been married to John R. Jordan (Tr. 94). The record also reflects a bitter relationship between Anna Nickels and appellant which was no doubt aggravated when appellant was arrested for the shooting of Herman Sher-

The Board hereby adopts as its own findings and conclusions all other recommended findings and conclusions of Administrative Law Judge Snashall regarding appellant's marital relationship with decedent.

[2] The Board specifically rejects the recommended findings and conclusions of Judge Snashall that costs incurred by appellee for the burial of her son may be reimbursed by the Bureau of Indian Affairs from the judgment fund share to be paid appellant. There is no basis for the payment of such claims in a proceeding of this type.³

The Area Director, Portland Area Office, Bureau of Indian Affairs, is directed to take whatever actions are necessary to effectuate the holdings of this opinion. Pursuant to the provisions of 43 CFR 4.1, this decision is final for the Department.

FRANKLIN D. ARNESS
Administrative Judge

man on Dec. 25, 1974. Following a preliminary examination on Mar. 13, 1975, in *State of Montana v. Gertrude Harrington Sherman*, Ravalli County, Montana, appellant was released without charge concerning this incident.

³ This "probate" case stems from the narrow duty of the Secretary to see that certain judgment funds awarded members of the Klamath Tribe go to such members or their lawful heirs as determined by the Secretary. 25 U.S.C. §§ 372-373, which the Department has construed as allowing the payment of claims against the estates of deceased Indians (see *Estate of John Joseph Kipp*, 8 IBIA 30, 87 I.D. 98 (1980)) have no applicability to the probate of estates of Klamath Indians "who died 6 months or more after August 13, 1954." 25 U.S.C. § 564h.

*June 29, 1981***CHARLES J. RYDZEWSKI****55 IBLA 373***Decided June 29, 1981*

Appeal from decision of the Montana State Office, Bureau of Land Management, dismissing protest of rejection of simultaneous oil and gas lease applications (MTA-Sims-003).

Reversed and remanded.

1. Accounts: Payments—Oil and Gas Leases: Applications: Drawings—Oil and Gas Leases: Applications: Filing—Regulations: Interpretation

A regulation should be sufficiently clear that there is no reasonable basis for an oil and gas lease applicant's noncompliance with the regulation before it is interpreted to deprive an applicant of a preference right to a lease. A regulation specifying a bank money order as an acceptable form of remittance requires the acceptance of a personal money order issued by a bank.

APPEARANCES: Charles J. Rydzewski, *pro se*.

**OPINION BY
ADMINISTRATIVE JUDGE
GRANT**

**INTERIOR BOARD OF LAND
APPEALS**

Charles J. Rydzewski appeals the decision of the Montana State Office, Bureau of Land Management (BLM), dated Sept. 12, 1980, dismissing his protest of BLM's rejection of his tendered remittance and drawing entry cards for the July 1980 simultaneous oil and gas drawing.

Appellant filed drawing entry cards for several parcels¹ available in the July 1980 drawing, but his tendered filing fee was rejected by BLM because, as the BLM decision dismissing the protest states, his remittance, designated on its face as a personal money order, did not meet the requirements of 43 CFR 3112.2-2. 45 FR 35164 (May 23, 1980). The regulation states "The filing fee shall be paid in U.S. currency, Post Office or bank money order, bank cashier's check or bank certified check, made payable to the Bureau of Land Management."

Reference to copies of the rejected instruments in the case file discloses that they are both identified as a "Personal Money Order," and that they bear the name of Union Bank and Trust Co., N. A. (Union Bank), with an address of Grand Rapids, Michigan. The instruments further contain the inscription "Pay To The Order Of" followed by a blank line to be filled in with the name of the payee; the specification of a certain amount of money to be paid, together with the name of the bank, which has been imprinted by machine; and blank lines for the date, signature, and address of the drawer. The instruments have been signed by appellant, Charles J. Rydzewski, as drawer, and the blanks for the name of the payee, the date, and the address of the drawer have been completed in the handwriting of ap-

¹ The parcels to which this appeal applies are: 7 through 11, 14, 15, 17 through 19, 23, 32, 37, 38, 40 through 42, 44, 48 through 50, 89, 91, 94, and 104 through 111.

pellant. The instruments have not been signed by an official of the bank; but the bank's name appears in the lower left hand corner, and the bank's serial number for the money order appears in the upper right hand corner.

In his statement of reasons for appeal, appellant asserts that the personal money orders he tendered are "responsible, acceptable, [and] negotiable across the nation." Appellant states that "[a]ll banks in the Midwest States area issue the same kind of money orders, [and] there is no other type of bank money order [available]."

A letter from the Vice President and Assistant Cashier of Union Bank, James E. McGookey, submitted in support of the appeal, states:

Gentlemen:

Our customer, Charles R. Rydzewski, has asked us to write this letter regarding his appeal under the above docket number.

We wish to verify to you that the personal money orders which Mr. Rydzewski purchased from us and submitted to you are valid instruments issued by our bank and which would be honored upon proper presentation. We consider the personal money orders to represent bank funds and as such we classify them as official checks similar to cashier's checks and certified checks. We do not issue an instrument with the designation bank money order but instead use the personal money order.

We hope that this will help to clarify the nature of the instrument which Mr. Rydzewski submitted to you.

The pertinent regulations governing the simultaneous oil and gas

filing procedures provide that only certain forms of remittance are acceptable in payment of the filing fees, including "bank money order, bank cashier's check or bank certified check." 45 FR 35164 (May 23, 1980) (to be codified in 43 CFR 3112.2-2(a)). Further, the regulations provide that applications filed shall be examined prior to selection and that any application which is "[a]ccompanied by an unacceptable remittance" shall be returned to the applicant together with the filing fee. 45 FR 35165 (May 23, 1980) (to be codified in 43 CFR 3112.5(a)). Therefore, the issue raised by this appeal is whether a simultaneously filed oil and gas lease application accompanied by a filing fee in the form of a personal money order issued by a bank is properly rejected pursuant to a regulation providing that a bank money order is an acceptable form of remittance.

[1] A bank money order has been defined as "an instrument issued by an authorized officer of a bank and directed to another, evidencing the fact that the payee may demand and receive upon indorsement and presentation to the bank the amount stated on the face of the instrument; such an instrument is paid from the bank's funds and liability for payment rests solely on the issuing bank." 2 Anderson, *Uniform Commercial Code*, § 3-104:20 (2d ed. 1971). A personal money order issued by a bank for a consideration accepted as adequate by the bank is a purchase of the credit of the bank

and constitutes a means of establishing or transmitting that credit so that once issued to the purchaser it is no longer revocable by the bank. 10 Am. Jur. 2d, *Banks* § 545 (Supp. 1980). Thus, it would appear that the payee of a money order issued by a bank may be assured that funds to cover the instrument have been transferred to the bank. The money orders submitted by appellant are consistent with this definition of a bank money order.

However, a bank money order that does not require the signature of the issuer has been held subject to a stop payment order. 10 Am. Jur. 2d, *Banks* § 643 (Supp. 1980). An instrument denominated a "Personal Money Order" which at the time of purchase by the bank's customer had an amount of money written on it, and on the face of which the bank's name and address were printed, but which was blank as to date, payee, and name and address of drawer, these items being subsequently completed by purchaser, falls within the "check or other draft" provisions of sec. 3-409 of the *Uniform Commercial Code* (UCC) on which drawee is not liable until acceptance of the instrument and, accordingly, is subject to a stop payment order prior to such acceptance. *Krom v. Chemical Bank New York Trust Co.*, 38 App. Div. 2d 871, 329 N.Y.S. 2d 91 (1972). This Board has recognized that a personal money order issued by a bank is similar to a personal check to the extent that payment

may be stopped any time prior to acceptance by the drawee bank. *Ross L. Kinnaman*, 48 IBLA 239 (1980).

Thus, a bank personal money order may be distinguished from a customary bank money order signed by an authorized bank official, which, like a cashier's check, entails an instrument drawn on a bank, issued by the drawee bank, and signed by an authorized bank employee, so that it cannot ordinarily be countermanded. See *Frank H. Gower, Jr.*, 53 IBLA 146 (1981); *Oxy Petroleum, Inc.*, 52 IBLA 239 (1981). Subsequent to issuance of the regulation identifying "bank money orders" as an acceptable form of remittance, BLM attempted by internal memorandum to make this distinction in specifying what type of bank money order is acceptable. Instruction Memorandum No. 80-635, change 2, dated Nov. 3, 1980, asserts that the characteristics of bank money orders are similar to cashier's checks in that they are: drawn on a bank, issued by the drawee bank, and signed by an authorized bank employee. The instruction memorandum further states that personal money orders, even if issued by a bank, are not acceptable. Unfortunately, the governing regulation was not amended to reflect this clarification.

A regulation should be sufficiently clear that there is no reasonable basis for an oil and gas applicant's noncompliance with the regulation before it is interpreted to deprive an applicant of a pref-

erence right to a lease. *Bill J. Maddox*, 34 IBLA 278 (1978); *A. M. Shaffer*, 73 I.D. 293 (1966). The regulation simply does not specify what types of money order issued by banks are acceptable. Therefore, personal money orders issued by a bank should be accepted and rejection of appellant's remittance and drawing entry cards was improper.

Accordingly, pursuant to the authority delegated to the Board of Land Appeals by the Secretary of

the Interior, 43 CFR 4.1, the decision appealed from is reversed and the case is remanded.

5 ANCAB 307

Decided June 26, 1981

Appeal from the Decision of the Alaska State Office, Bureau of Land Management F-14866-A, F-14866-A2 and AA-9368.

Affirmed in part; modified in part.

1. Rights-of-way: Revised Statutes Sec. 2477—Rights-of-way: Nature of Interest Granted

A right-of-way granted by Revised Statutes Sec. 2477 is a less-than-fee interest in the nature of an easement. Following the acceptance of a Revised Statutes Sec. 2477 grant of right-of-way, the Federal Government retains its fee interest in the land, subject to the right-of-way, and may dispose of it pursuant to law.

2. Alaska Native Claims Settlement Act: Conveyances: Valid Existing Rights: Third-Party Interests—Alaska Native Claims Settlement Act: Conveyances: Easements—Alaska Native Claims Settlement Act: Easements: Public Easements

The existence of a Revised Statutes Sec. 2477 right-of-way precludes neither the reservation of an overlapping § 17(b) public easement nor the conveyance of the underlying fee. Such reservation or conveyance does not affect the previously existing right-of-way.

3. Alaska Native Claims Settlement Act: Conveyances: Valid Existing Rights: Third-Party Interests—

*Not in chronological order.

Alaska Native Claims Settlement Act: Conveyances: Easements—Alaska Native Claims Settlement Act: Easements: Public Easements

The continued existence of a Revised Statutes Sec. 2477 right-of-way following conveyance of the underlying fee interest is entirely independent of any reservation, pursuant to § 17(b), of a public easement.

4. Alaska Native Claims Settlement Act: Administrative Procedure: Decision to Issue Conveyance—Alaska Native Claims Settlement Act: Administrative Procedure: Conveyances—Alaska Native Claims Settlement Act: Conveyances: Valid Existing Rights: Third-Party Interests

Rights-of-way granted by Revised Statutes Sec. 2477 shall be identified in the decision to issue conveyance and in the conveyance document in the same manner as other third-party interests which the Bureau of Land Management need not adjudicate.

APPEARANCES: Susan Urig, Esq., on behalf of the State of Alaska, Dept. of Transportation and Public Facilities; M. Francis Neville, Esq., Office of the Regional Solicitor, on behalf of the Bureau of Land Management.

**OPINION BY ALASKA
NATIVE CLAIMS APPEAL
BOARD**

Summary of Appeal

This appeal involves the question of whether the Bureau of Land Management erred in deciding to convey land pursuant to the Alaska

Native Claims Settlement Act (ANCSA) without expressly declaring the conveyance to be subject to an alleged R.S. 2477 right-of-way located thereon. The issues raised are whether the land subject to an R.S. 2477 right-of-way can be conveyed, and whether the Bureau of Land Management may reserve, pursuant to § 17(b) of ANCSA, a public easement along the entire length of the right-of-way.

The Board holds that the existence of an alleged R.S. 2477 right-of-way neither precludes conveyance of the subject land nor the reservation of a coincident public easement, but that where the Bureau of Land Management is informed of the existence of the right-of-way, the decision to issue conveyance and the subsequent conveyance document must expressly declare that the conveyance and the public easement are each subject to the right-of-way.

Jurisdiction

The Alaska Native Claims Appeal Board, pursuant to delegation of authority to administer the Alaska Native Claims Settlement Act, 85 Stat. 688, *as amended*, 43 U.S.C. §§ 1601-1628 (1976 and Supp. I 1977), and the implementing regulations in 43 CFR Part 2650 and 43 CFR Part 4, Subpart J, hereby makes the following findings, conclusions and decision.

Procedural Background

In 1959 and 1960, the State of Alaska constructed, on public lands,

a road from the south end of the Hooper Bay Airport easterly to the village of Hooper Bay. In so doing, the State purported to accept the grant, pursuant to Revised Statutes Sec. 2477, 14 Stat. 253 (1866) (repealed 1976) (R.S. 2477), of a 100' right-of-way (r/w) along the entire length of the road.

On Sept. 30, 1980, the Bureau of Land Management (BLM) issued its decision numbered F-14866-A, F-14866-A2, and AA-9368. The decision approved for conveyance to Sea Lion Corp. (Sea Lion) lands surrounding the village of Hooper Bay, including the lands covered by the Hooper Bay Airport Road.

On Oct. 30, 1980, the State of Alaska, Dept. of Transportation and Public Facilities (hereinafter State), appealed the above-designated decision. The State alleged that R.S. 2477, prior to its repeal in Oct. 1976, was a standing offer of a free r/w, which r/w was created upon acceptance of the offer by the State. The State argued that acceptance was complete when the road was finished (in 1960), if not previously.

The State declared that all subsequent entries are subject to the State's r/w, thus BLM may reserve a public easement pursuant to § 17 (b) (3) of ANCSA only subject to the State's 100' r/w. In fact, the State argued, there is no r/w interest remaining for the BLM to reserve to itself. By the reservation of an easement to itself, BLM in effect seeks to repeal the State's r/w. The State asserted that the road itself is a preexisting (pre-ANCSA) 100'

r/w, and that the BLM's failure to object 20 years ago to the State's acceptance of a 100' r/w should now estop BLM from seeking to limit that r/w by almost half its present width.

The BLM filed its Answer on Jan. 9, 1981. BLM asserted that the State's alleged r/w "does not preclude the reservation of a § 17(b) easement for the road and the conveyance of the underlying fee to Sea Lion Corp. Neither the § 17(b) easement nor the conveyance to the village corporation will affect the State's interest, if any, under [R.S. 2477]."

The BLM pointed out that the State devoted a significant portion of its brief to arguments that it has a valid interest pursuant to R.S. 2477. BLM asserted that the Department is not the proper forum for such arguments, and that questions involving the validity of rights-of-way under R.S. 2477 should be resolved in State court. The BLM further asserted that, pursuant to the Nov. 20, 1979, amendment to Secretary's Order No. 3029, 43 FR 55287 (1978) (S.O. 3029), the BLM has neither the authority nor the obligation to adjudicate R.S. 2477 r/w interests, thus the existence of the State's claimed r/w cannot be a factor in deciding whether a § 17(b) easement should be reserved.

The BLM disagreed with the State's apparent assumption that the State's claimed r/w would somehow be diminished by the proposed

conveyance of lands and reservation of a § 17(b) easement for the airport road. The BLM declared that, as the appealed decision expressly states, all ANCSA conveyances are subject, pursuant to § 14(g) of ANCSA, to valid existing rights. The BLM further asserted that the appealed decision, in compliance with the Nov. 20, 1979, amendment to S.O. 3029, did not and could not recognize the State's claimed r/w.

The BLM argued further that an R.S. 2477 r/w is a less-than-fee interest in the nature of an easement. BLM declared that the Federal Government may dispose of its remaining fee interest in spite of an R.S. 2477 claim and regardless of the absence of a reservation or exception in the patent for the alleged r/w, and that conveyance is not inconsistent with an R.S. 2477 claim.

BLM also asserted that reservation of a § 17(b) easement is not inconsistent with a claimed R.S. 2477 r/w, and that the State's argument is based upon a mistaken view of the nature of an R.S. 2477 r/w interest.

The State, on Feb. 9, 1981, replied that the true effect of the BLM's reservation of a 60' wide § 17(b) easement is to dedicate 40 feet of the State's r/w to a third party while appropriating the remainder of the State's property interest for itself. The State declared that the only dispute before the Board concerns the effects rather than the validity of the State's r/w, and that this

Board is the proper forum before which the State may seek protection of its r/w interests.

The State declared that its acceptance of the R.S. 2477 grant severed the resulting r/w from the public domain, and thus there is nothing for BLM to adjudicate. The State argued that if the BLM has a duty to make certain that public rights-of-way are preserved, then § 17(b) of ANCSA requires only that BLM recognize the State's valid existing r/w at Hooper Bay, and that such recognition is merely an acknowledgment, and not an adjudication, of the r/w. The State also argued that should the BLM believe further action is necessary to fulfill its § 17(b) obligations, the BLM could reserve a 100' public r/w and expressly state that such r/w is subject to the State's R.S. 2477 r/w.

The State asserted that the BLM's failure to reserve to itself the full 100' width of the State's r/w causes the State to lose its r/w interest in the portion not reserved, and that the State's ability to exercise its property rights within the 60' reserved to the United States is greatly diminished. For an example of the latter concern, the State declared that if the BLM's reservation were recognized, the State would no longer be authorized to independently, without Federal approval, locate and relocate utilities within its r/w. Further, the Federal Government would become responsible along with the State for maintenance of the Hooper Bay Airport Road, resulting in considerable management problems.

The State argued that acceptance of the R.S. 2477 grant severed the *land* underlying the r/w from the public domain, and that BLM cannot now reserve an interest in property which it relinquished to the State.

Finally, the State asserted that there is no authority for the proposition that the State's r/w can exist concurrently with the public easement reserved to the United States. The State distinguished *Berger v. Ohlson*, 9 Alaska 389 (D.C. Alaska 1938), on the basis that the court ruled therein with regard to a specific intersection, and not a length-wise concurrence, of two rights-of-way.

Decision

The State has brought this appeal asking:

(1) cancellation of the proposed reservation of a public easement coincident with a portion of the State's R.S. 2477 r/w for the Hooper Bay Airport Road;

(2) alternatively to item 1, reservation of a 100' wide public easement entirely coincident with, and expressly subject to, the State's R. S. 2477 r/w;

(3) exclusion of the State's 100' R.S. 2477 r/w from conveyance to Sea Lion Corporation;

The State also, without explanation, asserts that BLM's reservation of only a 60' wide § 17(b) public easement causes the State to lose that 40' wide portion of its R.S. 2477 r/w not overlapped by the § 17(b) easement.

The BLM has responded that the State's alleged R.S. 2477 r/w pre-

cludes neither reservation of a § 17(b) public easement for the Hooper Bay Airport Road nor conveyance of the underlying fee to Sea Lion Corp. BLM asserted that it has neither the authority nor the obligation to adjudicate the validity of the asserted r/w, and that the existence of the alleged r/w cannot be a factor in deciding whether a § 17(b) easement should be reserved. The BLM also asserted without explanation, except by allusion to the Nov. 20, 1979, amendment to S.O. 3029, that it cannot recognize the r/w claimed by the State.

Sec. 14(g) of ANCSA provides in part:

All conveyances made pursuant to this Act shall be subject to valid existing rights. Where, prior to patent of any land or minerals under this Act, a lease, contract, permit, right-of-way, or easement * * * has been issued for the surface or minerals covered under such patent, the patent shall contain provisions making it subject to the lease, contract, permit, right-of-way, or easement, and the right of the lessee, contractee, permittee, or grantee to the complete enjoyment of all rights, privileges, and benefits thereby granted to him.

Departmental regulations found in 43 CFR 2650.3-1(a) provide further that:

Pursuant to sections 14(g) and 22(b) of [ANCSA], all conveyances issued under the act shall exclude any lawful entries or entries which have been perfected under, or are being maintained in compliance with, laws leading to acquisition of title, but shall include land subject to valid existing rights of a temporary or limited nature such as * * * rights-of-way * * *.

Accordingly, Native-selected

lands subject to rights-of-way are to be included in conveyances pursuant to ANCSA, but the conveyances are subject to the rights-of-way. Further, the Board has previously ruled that both the decision to convey lands and the subsequent conveyance document must specifically identify interests in the lands being conveyed which are protected under ANCSA as valid existing rights.¹ Since rights-of-way granted by the United States are, if valid, protected under § 14(g) of ANCSA as valid existing rights, they must be specifically identified in both the BLM's decision to convey lands and the subsequent conveyance document.

Prior to its repeal in 1976, R.S. 2477 provided simply: "The right-of-way for the construction of highways over public lands, not reserved for public uses, is hereby granted."

The State asserts that its acceptance of the R.S. 2477 r/w grant severed from the public domain the land underlying the r/w. Such assertion is incorrect.

"A right-of-way is most typically defined as the right of passage over another person's land." *Wilderness Society v. Morton*, 479 F. 2d 842, 853 (D.C. Cir. 1973). It would be unusual to apply the term to absolute ownership of the fee simple of lands to be used for a railway or

¹ *Appeals of the State of Alaska/Seldovia Native Association, Inc.*, 2 ANCA 1, 84 I.D. 349 (1977) [VLS 75-14/75-15]. Secretarial policy expressed in S.O. 3029 and not changed by the Nov. 20, 1979 amendment thereto essentially affirmed the Board's ruling on this matter.

any other kind of a way. *Williams v. Western Union Ry. Co.*, 5 N.W. 482, 484 (Wis. 1880); BLACK'S LAW DICTIONARY 1489 (4th ed. rev. 1968). Furthermore, "grants by the sovereign for which no compensation is made will be strictly construed against the grantee and pass nothing but what is conveyed in clear and explicit language." *Oregon Short Line R.R. Co. v. Murray City*, 277 P. 2d 798, 802 (Utah 1954). "[A]ny ambiguity in a grant is to be resolved favorably to a sovereign grantor—'nothing passes but what is conveyed in clear and explicit language' * * *." *Great Northern Ry. Co. v. United States*, 315 U.S. 262, 272, 62 S.Ct. 529, 533, 86 L.Ed. 836 (1942).

[1] Accordingly, a r/w granted by R.S. 2477 is a less-than-fee interest in the nature of an easement. *Berger v. Ohlson*, *supra* at 395; *Oregon Short Line R.R. Co. v. Murray City*, *supra* at 802. Following the acceptance of an R.S. 2477 grant of r/w, the Federal Government retains its fee interest in the land, subject to the r/w, and may dispose of it pursuant to law. *Alfred E. Koenig*, A-30139 (Nov. 25, 1964); *Herb Penrose*, A-29507 (July 26, 1963).

The Federal Government's retention and control of the fee interest in the land affected by an R.S. 2477 r/w, which control includes the Government's authority to issue additional rights-of-way affecting the same land, is manifest in Departmental regulations in 43 CFR 2822.2-2, which state:

A right-of-way granted pursuant to R.S. 2477 confers upon the grantee the

right to use the lands within the right-of-way for highway purposes only. Separate application must be made under pertinent statutes and regulations in order to obtain authorization to use the lands within such rights-of-way for other purposes. Additional rights-of-way will be subject to the highway right-of-way. Future relocation or change of the additional right-of-way made necessary by the highway use will be accomplished at the expense of the additional right-of-way grantee. Prior to the granting of an additional right-of-way the applicant therefor will submit to the Authorized Officer a written statement from the highway right-of-way grantee indicating any objections it may have thereto, and such stipulations as it considers desirable for the additional right-of-way. Grants under R.S. 2477 are made subject to the provisions of § 2801.1-5(b), (c), (d), (e), (i), and (k) of this chapter.

The decision of the District Court in *Berger v. Ohlson*, *supra*, is not contrary. The Court, in discussing an earlier Colorado case, specified that the grant of a r/w under R.S. 2477 "severs the land" from the public domain, and that following appropriation and proper designation, the "way" ceased to be a portion of the public domain. 9 Alaska at 395. But the Court immediately went on to find that the right granted under R.S. 2477 was in the nature of an easement which could exist concurrently with a r/w subsequently granted to the Alaska Railroad. 9 Alaska at 395. The Court manifestly was not declaring that the grantee of an R.S. 2477 r/w received fee simple title to the affected ground. The specification that such a grant severs the "land" seems to be an unfortunate choice of words rendered in a context in which the emphasis was on the sev-

June 26, 1981

erance, and the point being made was that an R.S. 2477 r/w is not a right obtained merely by prescription.

[2, 3] Thus, the existence of an R.S. 2477 r/w for the Hooper Bay Airport Road precludes neither the reservation of an overlapping § 17(b) public easement nor the conveyance of the underlying fee. In either case, the owner of the R.S. 2477 r/w retains the r/w interest, and the reservation and/or conveyance is subject to that r/w interest.² Such reservation and/or conveyance does not affect the previously existing r/w.³ Accordingly, the continued existence of the R.S. 2477 r/w following conveyance of the underlying fee interest is entirely independent of any reservation, pursuant to § 17(b), of a public easement coincident with that r/w interest.

Overlapping § 17(b) public easement and R.S. 2477 r/w interests may cause some administrative concern regarding future maintenance and other responsibility within the affected area. Such concerns, however, do not preclude the existence of both interests concurrently.

[4] The BLM has asserted that it has neither the authority nor the obligation to adjudicate the validity of the State's asserted r/w. In deed, the Secretary's Nov. 20,

1979, amendment to S.O. 3029 declared that BLM should not adjudicate rights-of-way claimed under R.S. 2477. Nonetheless, said amendment does not preclude identification of claimed R.S. 2477 rights-of-way. Such rights-of-way shall be identified in the decision to issue conveyance and the conveyance document in the same manner as other third-party interests which the BLM need not adjudicate. Such identification does not recognize or declare the validity of the alleged interest.

Order

The above-designated decision of the Bureau of Land Management is hereby amended so as to conform to this decision of the Board. Publication of an amended decision to issue conveyance is not required. The conveyance document issued pursuant to the above-designated decision of the Bureau of Land Management shall expressly state that the conveyance of land and the reservation of a public easement for the Hooper Bay Airport Road are each subject to the State's R.S. 2477 right-of-way, if valid, for the Hooper Bay Airport Road.

This represents a unanimous decision of the Board.

**DOYON, LIMITED &
STATE OF ALASKA***

5 ANCAB 324

Decided June 26, 1981

Appeal from the Decisions of the Alaska State Office, Bureau of Land Management F-19155-16, F-14882-A and F-14882-B.

Partial decision affirming BLM.

1. Alaska Native Claims Settlement Act: Definitions: Public Lands: Generally—Submerged Lands

The Department of the Interior under provisions of ANCSA and regulations in 43 CFR has both the authority and responsibility to determine which lands, including submerged lands, are "public lands" within the definition of § 3(e) of ANCSA and are therefore available for selection by a Native corporation.

2. Alaska Native Claims Settlement Act: Conveyances: Generally—Alaska Native Claims Settlement Act: Navigable Waters

The Bureau of Land Management is not bound to make its navigability determinations in conformity with information provided by the State of Alaska pursuant to 43 CFR 2650.1(b) as to navigability of water bodies within lands selected under ANCSA, or to accept the State's conclusions as to navigability.

3. Alaska Native Claims Settlement Act: Conveyances: Generally—Alaska Native Claims Settlement Act: Navigable Waters

When the State of Alaska's claim of ownership of submerged lands is based solely upon its own conclusions as to the navigability of water bodies within lands

selected under ANCSA, and not upon a final adjudication of navigability, the mere assertion of the State's ownership does not constitute a claim of title in the submerged lands which requires the Bureau of Land Management to exclude such lands from the Decision to Issue Conveyance.

APPEARANCES: Elizabeth S. Ingraham, Esq., for Doyon, Limited; G. Kevin Jones, Esq., Elizabeth J. Barry, Esq., Bruce E. Schultheis, Esq., Office of the Regional Solicitor, for the Bureau of Land Management; William H. Timme, Esq., Wilkinson, Cragun & Barker, for Gana-a' Yoo, Limited; Shelley J. Higgins, Esq., Assistant Attorney General, for the State of Alaska.

*OPINION BY ALASKA
NATIVE CLAIMS APPEAL
BOARD*

Summary of Appeal

The sole issue raised by Doyon, Limited is "whether BLM erred in approving for conveyance to and charging against the acreage entitlement of Doyon, Limited [under ANCSA] submerged lands to which the State of Alaska claims title." As to this issue, the decision of the Bureau of Land Management is affirmed without affecting the issues of navigability as raised by the State of Alaska.

The Board concluded that the Bureau of Land Management acted within its authority and responsibility to determine what lands are "public lands" under § 3(e) of ANCSA and therefore available for selection by a Native corpora-

*Not in chronological order.

June 26, 1981

tion when it made a determination of the nonnavigability of water bodies.

The Board further found that since the State of Alaska's claim of ownership of the submerged lands relied solely upon its own information on navigability of the water bodies, that the Bureau of Land Management was neither bound to accept the State of Alaska's contrary result nor to recognize its claim as an interest leading to a fee title which required excluding of land under ANCSA.

Jurisdiction

The Alaska Native Claims Appeal Board, pursuant to delegation of authority to administer the Alaska Native Claims Settlement Act, 85 Stat. 688, *as amended*, 43 U.S.C. §§ 1601-1628 (1976 and Supp. I 1977), and the implementing regulations in 43 CFR Part 2650 and 43 CFR Part 4, Subpart J, hereby makes the following findings, conclusions and decision.

Procedural Background

On Jan. 23, 1974 and Dec. 9, 1974, selection applications F-14882-A and F-14882-B, were filed for the Native Village of Koyukuk which subsequently, along with other Native villages, merged into the single corporation of Gana-a' Yoo, Limited. The selection applications excluded certain water bodies, asserting that ownership of the submerged lands was claimed by the State of Alaska.

On Apr. 15, 1980, a Decision to Issue Conveyance (DIC) was issued by the Bureau of Land Management (BLM) which found these same water bodies to be non-navigable, stating:

Because these water bodies have been determined to be nonnavigable, they are considered to be public lands withdrawn under Sec. 11(a)(1) and available for selection by the village pursuant to Sec. 12(a) of the Alaska Native Claims Settlement Act.

Section 12(a) and 43 CFR 2651.4(b) and (c) provide that the village corporation shall select all available lands within the township or townships within which the village is located, and that additional lands selected shall be compact and in whole sections. The regulations also provide that the area selected will not be considered to be reasonably compact if it excludes other lands available for selection within its exterior boundaries.

For these reasons, the water bodies which were improperly excluded in Mine-elghaadza'. Limited's application are considered selected.

DIC at 3.

On May 19, 1980, Appellant, Doyon, Limited (Doyon), filed a Notice of Appeal (ANCAB VLS 80-21) and on June 12, 1980, filed its statement of reasons.

On May 21, 1980, Appellant, State of Alaska (State), in a separate appeal, filed an Amended Notice of Appeal (ANCAB VLS 80-20) and its statement of reasons on June 10, 1980, stating the issue appealed was the navigability determinations made by BLM.

On Apr. 2, 1975, regional selection application F-19155-16 was filed by Doyon under § 12(c) of

ANCSA. This selection application also excluded water bodies asserting that ownership of the submerged lands was claimed by the State.

On Apr. 1, 1980, BLM issued a DIC on Doyon's selection F-19155-16 and found, *inter alia*, that the excluded water bodies were non-navigable and therefore must be selected.

On Apr. 30, 1980, Doyon filed a Notice of Appeal and statement of reasons (ANCAB RLS 80-10) asserting that because the State claimed title to the appealed submerged lands, they should be excluded from lands approved for conveyance in the DIC.

The State was joined as a necessary party to this appeal (ANCAB RLS 80-10) by order of May 5, 1980. The State, in brief filed on June 10, 1980, alleges that BLM erred as a matter of fact and law in determining certain water bodies to be nonnavigable by including the submerged lands in the DIC.

By request of the parties, the Board on July 10, 1980, ordered that the three appeals, ANCAB VLS 80-20, ANCAB VLS 80-21, and ANCAB RLS 80-10, be consolidated (ANCAB VLS 80-21 (C)).

Thus, the *Appeal of Doyon, Limited and the State of Alaska*, ANCAB VLS 80-21 (Consolidated), is the result of consolidation of appeals by Doyon and the State from two separate decisions published by the BLM in the *Federal Register*. Doyon and the State each filed separate appeals from the

Decisions of the BLM F-14882-A and F-14882-B. Doyon appealed the Decision of the BLM F-19155-16; the State was joined as a necessary party.

A conference of the parties to the consolidated appeal was held in the Board offices on Aug. 11, 1980, to establish briefing schedules and hearings. At the request of Doyon, the Board agreed that prior to scheduling briefing or hearings on the navigability issue raised by the State, the Board would accept briefings and rule on the sole issue raised by Doyon in both ANCAB VLS 80-21 and ANCAB RLS 80-10.

Decision

Doyon asserts that BLM erred in failing to exclude the submerged lands to which the State claims ownership from lands approved for conveyance in the above-referenced DICs and thereby charging such acreage against their entitlement under ANCSA.

After the above selection applications were filed and lands had been approved for conveyance, the State periodically delineated additional water bodies within the selected lands as being navigable. Doyon contends that these later claimed submerged lands must also be excluded from conveyance by BLM.

The Board does not here address the issue raised by the State as to whether the BLM erred, as a matter of fact and law, in determining that certain water bodies in this appeal are nonnavigable and therefore are "public lands" selectable by a

June 26, 1981

Native corporation pursuant to ANCSA.

It is noted that when Doyon refers to the State's "claim of title" to the disputed submerged lands, it is relying only upon the conclusions of navigability made by the State and not upon findings in an administrative appeal of a determination made by BLM. The State depicted certain water bodies as being navigable on the State Water Delineation Maps. Notice of ownership of such water bodies was mailed to BLM and Doyon. Doyon seeks exclusion from their conveyance of all such water bodies and to have the Board rule as a matter of law that receipt of the above documents by BLM prevents conveyance of the submerged lands claimed in exactly the same manner as would an appeal to this Board or to the courts.

Doyon advances several theories in support of its contention that under provisions of ANCSA, what is referred to as a claim of title to submerged lands by the State required BLM to exclude such land from conveyance in the DIC even before a final determination of the issue of navigability has been made.

Doyon asserts that since the statutory entitlement under ANCSA is for a specified acreage, BLM has the duty to convey to each Native corporation its full acreage entitlement of land having a "marketable title." For title to be marketable Doyon states that it must be free from a "reasonable objection of a reasonable purchaser" and that when BLM includes submerged

lands to which the State claims title in a conveyance, it is virtually certain that Doyon will be forced into later litigation.

The duty of determining which lands are public lands raises the issue of navigability, because lands under navigable water bodies belong to the State pursuant to the Alaska Statehood Act, P.L. 85-508, 72 Stat. 339, *as amended*, (1958), and the Submerged Lands Act of May 22, 1953, P.L. 83-31, 67 Stat. 29, *as amended*, and are not public lands to be conveyed under ANCSA. In order to convey Doyon's full acreage entitlement, BLM must determine which submerged lands are Federal public lands, *i.e.*, nonnavigable.

However, Doyon argues that while BLM has the duty to convey the submerged lands of nonnavigable bodies of water as public lands, it has no jurisdiction to convey lands underlying navigable waters. The exclusive jurisdiction to make a final determination of the question of navigability of water bodies for purposes of title rests with the Federal courts and not with the Department of the Interior.

BLM responds that § 14(e) of ANCSA does not require conveyance of a "marketable title" in the sense of providing absolute assurance that there is no possibility of any future litigation resulting from a claim of interest. BLM asserts that §§ 17(b)(2), 11(a), 14(g), 16(a) and 19(a) of ANCSA, protect third-party interests, without expressly or by implication, requiring

the Secretary to initiate litigation to determine the existence or validity of such rights, yet such third-party claims clearly present the possibility of litigation. Secretary's Order No. 3029, 43 CFR 55287 (1978) (S.O. 3029), notes that ultimate validity of all such interests may require court litigation.¹

While acknowledging that the Department of the Interior does not have authority to conclusively adjudicate title to the submerged lands which binds the State's claim of navigability, BLM argues that it is authorized and required pursuant to § 3(e) of ANCSA and the provisions of 43 CFR 2650.0-5(g) and 2650.5-1(b) to make an administrative determination identifying "public lands" which is appealable to this Board. BLM adds that the Department of the Interior does not have a trust or fiduciary relationship with Native corporations under ANCSA which necessitates a quiet title proceeding to be initiated before conveyance can be made.

The Board first examines whether BLM had authority to determine that the submerged lands were or were not public lands within terms of § 3(e) of ANCSA.

Decisions of the Department have consistently held that it has both the responsibility and the authority to make the determination

which lands, including submerged lands, are public lands and therefore within the jurisdiction of the Department. In the case of *State of Oregon*, A-24715, 60 I.D. 314, 315 (1949), it is stated that: "The Secretary of the Interior is authorized, and is under a duty, to consider and determine what lands are public lands, what public lands have been or should be surveyed, and what public lands have been or remain to be disposed of by the United States." See also *Burt A. Wackerli*, A-30576, 73 I.D. 280, 286 (1966).

In the case of *State of Montana*, 11 IBLA 3, 80 I.D. 312 (1973), an appeal was taken from a BLM decision which held that Indian Lake was nonnavigable and that title to the lands covered by the lake was in the United States. The State of Montana contended that the lake was navigable at the time of statehood and therefore title was in the State. The State asserted further that it was contrary to due process for the BLM to decide title to the disputed land. The Interior Board of Land Appeals (IBLA) affirmed BLM's decision on the lake's non-navigability and found no violation of due process in such a finding being made by the Department which could be appealed for review. IBLA held that:

The Secretary of the Interior has the authority and the duty to determine what lands are public lands of the United States, including the authority to determine navigability of a lake to ascertain whether title to the land underlying the lake remains in the United States or whether title passed to a State upon its admission into the Union.

¹S.O. 3029 at 55291, under heading of *Adjudication of Third Party Valid Existing Rights*, states in part: "Clearly the administrative act of listing an interest as a valid existing right or of failing to list it does not create or extinguish the right. Because of this the ultimate validity of all interests may require court litigation."

June 26, 1981

11 IBLA at 4, 80 I.D. at 313.

Thus the Secretary of the Interior is not precluded from finding that the submerged bed of a water body is public land and that title did not pass to the State upon statehood.

In response to a jurisdictional challenge by the State to the Board's authority to determine public land status of submerged lands, the Board stated in *Appeal of Doyon, Limited*, 4 ANCAB 50, 57, 86 I.D. 692, 695 (1979) [RLS 76-2], that:

As defined in Section 3(e) of ANCSA, "Public Lands" means all Federal lands and interests therein located in Alaska except (not pertinent)' and further by regulations in 43 C.F.R. § 2650.0-5(g) adopted pursuant thereto as '(including the beds of all nonnavigable bodies of water), except: (not pertinent).' Therefore, the issue of navigability must be determined to enable a finding to be made whether lands selected are within available 'public lands' and further, to determine the effect on total acreage entitlement as provided in 43 C.F.R. § 2650.5-1(b).

The Board therefore, concludes that it is not only authorized, but necessarily must decide issues of navigability of bodies of water located within lands selected by Native Regional Corporations.

Thus, the Board's previous holding concluded that before BLM can convey Doyon's statutory entitlement under ANCSA, in exercise of its authority an initial determination must be made that the selected lands are "public lands" within the meaning of § 3(e) of ANCSA.

The Board's review of the Act and the above-referenced regula-

tions discloses no ambiguity in terms. The language in each is clear on its face as to what is required of BLM.²

[1] The Board finds that BLM has both the authority and the responsibility, under ANCSA and regulations in 43 CFR, to determine which lands, including submerged lands, are public lands within the definition of § 3(e) of ANCSA and are therefore available for selection by a Native corporation.

The Board has found that BLM is within its authority under provisions of ANCSA to find that water bodies are nonnavigable and therefore that submerged lands are Federal "public lands." Aside from the merits of such a determination by BLM which is not here an appealed issue, the remaining issue is whether Doyon's assertion of the State's claim of ownership, outside the context of an appeal, is sufficient to require BLM to exclude such submerged lands from conveyance.

The State's claim of ownership of the disputed submerged lands rests upon a navigability determination of water bodies made by the State. From its own navigability information the State compiles Water Delineation Maps depicting the navigable water bodies and providing

² The Board also notes that BLM's authority to determine navigability is contained in provisions of the Alaska National Interest Lands Conservation Act, P.L. 96-487, 94 Stat. 2371, 2431 (1980), Sec. 901(b), which states in part: "No agency or board of the Department of the Interior other than the Bureau of Land Management shall have authority to determine the navigability of water covering a parcel of submerged land selected by a Native Corporation or Native Group pursuant to the Alaska Native Claims Settlement Act."

notification to BLM of the State's position.

Under provisions of 43 CFR 2650.5-1(b), for the computation of acreage entitlement, BLM is directed to take into account the navigability or nonnavigability of bodies of water within areas withdrawn for selection by a Native corporation:

Surveys shall take into account the navigability or unnavigability of bodies of water. The beds of all bodies of water determined by the Secretary to be navigable shall be excluded from the gross area of the surveys and shall not be charged to total acreage entitlements under the act. Prior to making his determination as to the navigability of a body of water, the Secretary shall afford the affected regional corporation the opportunity to review the data submitted by the State of Alaska on the question of navigability and to submit its views on the question of navigability. Upon request of a regional corporation or the State of Alaska, the Secretary shall provide in writing the basis upon which his final determination of navigability is made. The beds of all bodies of water not determined to be navigable shall be included in the surveys as public lands, shall be included in the gross area of the surveys, and shall be charged to total acreage entitlements under the act.

The above regulation gives the State an opportunity to provide information to the BLM as to the navigability water bodies within the selected lands. However, it is clear that it is the Secretary, not the State, who possesses authority to make the navigability determination for the Department, and further, that the information provided by the State is advisory, rather than binding. The receipt of such information by BLM does not constitute

a claim of ownership under ANCSA which requires BLM to exclude the submerged lands from conveyance.

[2] The Board finds that BLM is not bound to make its navigability determinations in conformity with information provided by the State of Alaska pursuant to 43 CFR 2650.1(b) as to the navigability of water bodies within lands selected under ANCSA, or to accept the State's conclusions as to navigability.

Doyon argues that it is essential to its contention that these submerged lands should be excluded from conveyance for BLM to recognize that a claim of navigability by the State creates in the State a third-party valid existing right leading to fee title, which is protected under ANCSA from conveyance to a Native corporation. Doyon further contends that whether the State's claim of ownership to the submerged lands is considered either a factual title or one which upon final determination of navigability may lead to title, the basis for excluding the lands in analogous to the basis for excluding other interests leading to title under ANCSA.

The Board disagrees.

The Board has previously held that although BLM determined that lands are "public lands" within the meaning of § 3(e) of ANCSA and therefore available for selection by a Native corporation, that under provisions of ANCSA and regulations BLM is required to exclude lands from conveyance when a

July 15, 1981

party claims an interest under laws which lead to acquisition of title. See *Appeal of Eklutna, Inc.*, 1 ANCAB 190, 83 I.D. 619 (1976) [VLS 75-10] and *Appeal of State of Alaska/Seldovia Native Association*, 2 ANCAB 1, 84 I.D. 349 (1977) [VLS 75-14/75-15].

In this case, the State's claim of ownership to the submerged lands is not based upon any entry made or interest acquired under any Federal or State law which could lead after adjudication, to title. Although the navigability of water bodies is determined under Federal law, the determination is based solely upon an evaluation of factual navigation at the time of statehood and can be made only by a court. *Appeal of Doyon, Limited, supra*. The State's claim of ownership is based merely on its own factual finding which in this case, is contrary to BLM's own determination of nonnavigability. BLM may have been erroneous in evaluating the factual information upon which it determined that the submerged lands are public lands. However, until it has been determined that BLM erred in finding that the water bodies are nonnavigable, any contrary assertions are merely that and do not create an interest leading to acquisition of title to the disputed submerged lands.

[3] When the State's claim of ownership of submerged lands is based solely upon its own conclusions as to the navigability of water bodies within lands selected under ANCSA, and not upon a final ad-

judication of navigability, the mere assertion of the State's ownership does not constitute a claim of title in the submerged lands which requires BLM to exclude such lands from the DIC.

Therefore, the Board finds that the single issue on appeal, as stated by Doyon, is without merit, and is hereby dismissed.

While the issue here decided is a partial decision of ANCAB VLS 80-21 (Consolidated), it was the sole issue raised by Doyon in the above-referenced appeal ANCAB VLS 80-21 and as one of the issues in appeal ANCAB RLS 80-10. Therefore, the effect of this decision will be to terminate the appeal of Doyon (ANCAB VLS 80-21) and to remove it from the file record of ANCAB VLS 80-21 (Consolidated).

This represents a unanimous decision of the Board.

**FELDSLITE CORPORATION
OF AMERICA**

56 IBLA 78

Decided July 15, 1981

Appeal from decision of the Oregon State Office, Bureau of Land Management, declaring a quartz millsite loca-

tion abandoned and void. OR MC 3408 (Wash).

Reversed and remanded.

1. Federal Land Policy and Management Act of 1976: Assessment Work—Mining Claims: Millsites

The failure of a holder of a millsite claim which has been properly recorded under 43 U.S.C. § 1744(b) (1976) to file an annual notice of intention to hold the millsite is a curable defect and the millsite may not be deemed to have been abandoned absent a failure to comply with a notice of deficiency.

APPEARANCES: W. R. Matthews, President of Feldslite Corporation of America, for appellant.

*OPINION BY
ADMINISTRATIVE
JUDGE BURSKE*

*INTERIOR BOARD OF
LAND APPEALS*

Feldslite Corporation of America appeals from the decision of the Oregon State Office, Bureau of Land Management (BLM), dated Apr. 4, 1979, declaring the Feldslite Quartz Millsite Location, OR MC 3408 (Wash), which had been recorded with BLM on Nov. 8, 1977, to have been abandoned because of a failure to file an annual assessment statement or notice of intention to hold the claim prior to Dec. 31, 1978, as required by the Federal Land Policy and Management Act of 1976 (FLPMA), 43 U.S.C. §§ 1701-1782 (1976), and 43 CFR 3833.2-1.¹

¹ Subpart 3833 was revised effective Mar. 16, 1979, at 44 FR 9720 (Feb. 14, 1979). In this

[1] At the outset, we must note that the State Office consistently referred to appellant's millsite claim as a mining claim. While millsite claims are initiated under sec. 15 of the General Mining Law of 1872, 17 Stat. 91, 96, *as amended*, 30 U.S.C. § 42 (1976), the question of whether a millsite is a "mining claim" or "mining location" has received varying answers through the years.² Thus, millsites have been denominated "creature[s] of the mining laws," *United States v. Werry*, 14 IBLA 242, 250, 81 I.D. 44, 48 (1974), or, alternatively, "a part of the general mining laws." *United States v. Cuneo*, 15 IBLA 304, 322, 81 I.D. 262, 270 (1974). It has also been established that a millsite is a "claim" within the provisions of 30 U.S.C. § 38 (1976), which obviates the need to prove a formal location where a claim has been held and worked for a period equal to the statute of limitations of the State in which the land is located. *See Dalton v. Clark*, 18 P. 2d 752, 754 (Cal. App. 1933); *Cleary v. Skiffich*, 65 P. 59 (Colo. 1901).

On the other hand, it is equally clear that a millsite is not a mining claim within the meaning of 30

opinion, references to regulations are to the revised version. However, we note that the revisions to cited regulations were generally editorial and did not change the substantive requirements in effect in 1978.

² Compare the syllabus from *Hales and Symons*, 51 L.D. 123 (1925), "A mill site is not a mining claim or location within the meaning of the United States Mining laws" with *Eagle Peak Copper Mining Co.*, 54 I.D. 251 (1933), "A mill site appurtenant to a lode is a 'location' under the mining laws of the United States."

U.S.C. § 28 (1976), which requires the performance of assessment work, *Dalton v. Clark*, *supra*, and thus is not subject to the provisions of 30 U.S.C. § 28b (1976) which prescribes procedures for the deferment of performance of assessment work. *Andrew L. Freese*, 50 IBLA 26, 87 I.D. 395 (1980). This conflicting treatment of millsites has, for the most part, been occasioned by an analysis of the relationship of a millsite claim to the specific provision of the mining laws involved. It is the context and purpose of the words "mining claims" in any statute that must determine whether or not millsites are intended to be included within its ambit.

Analysis of sec. 314 (a) and (b) of FLPMA, 43 U.S.C. § 1744 (a) and (b) (1976), clearly discloses an intent *not* to include millsite within the term "mining claim" as used in that section. In the first place, sec. 314(a), relating to proof of assessment work and notices of intention to hold, is directed to "the owner of an unpatented lode or placer mining claim." Millsites, while they may in certain contexts be considered mining claims or mining locations, are neither lode nor placer in form, being limited by statute to no more than 5 acres. Then, too, in sec. 314(b), which relates to notices of location, Congress has clearly evinced a desire to differentiate among mining claims, millsites, and tunnel sites. Thus, the opening line of the provision makes specific reference to "an unpatented lode or

placer mining claim *or* mill or tunnel site."

With reference to millsites and tunnel sites, therefore, we feel that the statute must be read as only requiring the filing of notices of location. But it is also clear that Departmental regulations require the filing of notices of intention to hold, *see* 43 CFR 3833.2-1(d), and it is undisputed that no such filing was made in the instant case in calendar year 1978.³ The question before us concerns the effect of such a failure to file, where the necessity for filing is determined by the regulations and not the statute.

We have noted in the past that there is a difference between the consequences which attend a failure to comply with a statutory recordation requirement and one which is purely regulatory. Thus, we have recognized that a failure to comply timely and scrupulously with the express statutory requirements cannot be waived by the Department. *Lynn Keith*, 53 IBLA 192, 88 I.D. 369 (1981). On the other hand, failure to comply promptly with those requirements based on purely regulatory language is subject to curative action. *See Robert W. Hansen*, 46 IBLA 93 (1980).

³ That there was no statutory requirement for the filing of notices of intention to hold millsites was recognized in the adoption of the regulation requiring such filings. Thus, Assistant Secretary Martin noted:

"One comment pointed out that the statute did not require the annual filing of a notice of intent to hold a mill or tunnel site and the requirement should be deleted. However, the section is needed so the Bureau can keep informed as to the status of sites and has been retained."

44 FR 9721 (Feb. 14, 1979).

This approach has received judicial approbation in a recent decision by the Tenth Circuit Court of Appeals in *Topaz Beryllium Co. v. United States*, No. 79-2255 (filed May 21, 1981). Therein, the court reviewed the various provisions of both the statute and the regulations, and noted:

We conclude that the Secretary has not ignored § 1744(c) which assumes that even defective filings put the Secretary on notice of a claim, and we hold that once on notice, the Secretary cannot deem a claim abandoned merely because the supplemental filings required only by § 3833—and not by the statute—are not made. This is also the Secretary's view: failure to file the supplemental information is treated by the Secretary as a curable defect. A claimant who fails to file the supplemental information is notified and given thirty days in which to cure the defect. If the defect is not cured, "the filing will be rejected by an appealable decision." [Footnote omitted.]

Admittedly, the language of the court was primarily directed toward filings of notices of location, but we think the logic has equal applicability to the instant question. Accordingly, we hold that upon the failure of a millsite claimant to file an annual notice of intention to hold, BLM should notify the claimant of this deficiency and afford the claimant a period of time in which to comply with the regulatory requirement. Should compliance not then occur, the millsite will properly be declared abandoned and void. We note that such a procedure both advances the Department's desire to be kept informed as to the status of claims on the public domain, and provides a mechanism for millsite

owners to cure filing inadvertencies which might otherwise have proved fatal.

Therefore, pursuant to the authority delegated to the Board of Land Appeals by the Secretary of the Interior, 43 CFR 4.1, the decision appealed from is reversed and the case file remanded for further action not inconsistent herewith.

LEROY PEDERSEN

56 IBLA 86

Decided July 15, 1981

Appeal from decision of the California State Office, Bureau of Land Management (BLM), denying the request for suspension of hardrock prospecting permit CA 1698.

Set aside and remanded.

1. Mineral Lands: Prospecting Permits

Where, pursuant to 43 CFR Part 3510, BLM grants a 2-year permit for hardrock mineral prospecting on certain acquired national forest lands with the concurrence of the Forest Service and Geological Survey, and thereafter fails to approve the permittee's operating plan during the term of the permit and a 2-year extension, the permit will be considered to have been suspended during that period and the permittee granted a 2-year term

for prospecting with the right to apply for an extension as provided by the regulations.

APPEARANCES: Leroy Pedersen, pro se.

*OPINION BY
ADMINISTRATIVE JUDGE
FRAZIER*

*INTERIOR BOARD OF
LAND APPEALS*

Leroy Pedersen has appealed from the Feb. 2, 1979, decision of the California State Office, Bureau of Land Management (BLM), denying his request for suspension of his acquired lands hardrock prospecting permit CA 1698. The permit was issued for prospecting gold and tungsten for a 2-year term beginning Aug. 1, 1975, and was extended through July 31, 1979.

Pedersen's permit covers acquired lands in the Tahoe and Plumas National Forests along a ridge which is the common boundary between the two forests. The area lies on the northeastern boundary of the East Yuba RARE II area. The Pacific Crest Trail presently runs generally along the ridge between the two forests.

Pedersen applied for the permit at issue on Mar. 6, 1974. BLM then requested review and recommendations as to approval of the permit from the Forest Service (FS) and Geological Survey (Survey). FS prepared an environmental analysis report (EAR) and a title report which it submitted to BLM on Dec. 18, 1974. It recommended that

the permit be issued but specified certain management requirements and constraints to be included in the permit conditions and Pedersen's operating plan. Survey recommended that the permit be allowed subject to certain stipulations. Pedersen agreed to the conditions and submitted a revised operating plan on July 1, 1975. BLM issued the prospecting permit on Aug. 1, 1975, subject to the further condition that prospecting operations could not begin until the operating plan was approved.¹

In February 1977 Survey informed Pedersen that completion of the environmental analysis of his plan had been delayed pending receipt of archeological and historical data from FS.² Based on this information, Pedersen requested a 2-year extension of his permit through July 31, 1979, which BLM approved in Jan. 1978. In a separate request, Pedersen asked that

¹ In 1976 Pedersen also located 30 lode mining claims, known as the Pinnacle 1 through 4 and Alpine 1 through 26 claims, on national forest lands which are adjacent to the permit lands and were open to mineral location. After doing preliminary prospecting, he filed a prospecting plan for these claims with FS. In March 1979 FS issued a final environmental analysis report recommending approval of the plan without need for an environmental impact statement. California State Senator John H. Nejedly, who has objected to these claims as well as permit CA 1698, appealed this determination and requested a stay of operations. The Department of Agriculture granted the stay as of May 29, 1979. We are unaware as to whether Pedersen has yet been allowed to prospect these claims.

² According to an FS situation summary dated Mar. 20, 1978, FS sent a report on the archeological survey of the lands encompassed by Pedersen's permit to Survey on Feb. 15, 1977. This report does not appear in the permit case file now before the Board.

the rental he paid for the first 2 years of the permit be refunded because he had not been allowed to do any exploration. In March 1978 BLM denied this request. Pedersen then appealed to this Board on this issue. He also appealed a statement by a FS officer indicating that FS would not approve a mineral lease for the land in CA 1698 in the future and would request that BLM cancel Pedersen's permit.³ By order dated Dec. 27, 1978, the Board dismissed the appeal from the FS actions as the Board lacks jurisdiction to entertain an appeal from a decision of a FS official. We set aside the BLM decision denying a refund and remanded the matter. We held that it was

premature to decide whether a refund can be authorized until it is determined if the permittee has or will have any right of enjoyment from the permit or that the permit was erroneously issued because of a mistake of fact or law. * * * [A] refund may not be authorized while appellant seeks rights under the permit.

Survey apparently issued a draft EAR on Pedersen's operating plan for comment in December 1978, and the final EAR on Apr. 23, 1979. On May 2, 1979, the Survey Conservation Manager for the Western Region determined that the plan could be approved without preparing an environmental impact statement (EIS). BLM then approved

the plan on May 23, 1979, approximately 2 months before Pedersen's permit was to expire.⁴

On Jan. 10, 1979, Pedersen requested "a four (4) year suspension of the payment and prospecting period terms of my Prospecting Permit CA 1698, to be effective between the effective date (Aug. 31, 1975) of [the permit] and the date on which the Area Mining Supervisor [Survey], approves my Prospecting Plan submitted July 1, 1975." BLM issued the decision now on appeal on Feb. 2, 1979, denying the suspension on the ground that the regulations do not provide for suspension.

On Feb. 26, 1979, appellant wrote Survey, enclosing data to substantiate the existence of commercial quantities of ore in the permit area, and requesting a preference right lease. He acknowledged that "due to circumstances beyond his control" he had been unable to comply with all the requirements of the permit, and sought a determination from Survey on whether or not he qualified for a lease. Survey replied on June 25, 1979, that the data submitted would not "indicate conclusively that valuable deposits of gold, tungsten, or other heavy minerals have been discovered in the permit area."

This appeal involves only the

³ FS requested that BLM cancel the prospecting permit because it conflicted with the National Forest Multiple Use Management Plan for the area and FS had concluded that it should not have consented to the permit in the first place. BLM determined that it did not have the authority to rescind or cancel the permit for this reason.

⁴ Neither the draft nor final EAR appear in the permit case file. References to their issuance are found in correspondence from Pedersen to BLM dated Jan. 10, 1979, and to Survey dated Aug. 1, 1979. Record of the Survey and BLM determinations also does not appear in the file, though reference to them is found in other correspondence.

question whether or not denial of the request for suspension of the permit was proper. In his statement of reasons, appellant charges *inter alia*, that failure to approve the prospecting plan in time to complete the prospecting work outlined therein would be a breach of contract if the permit is not retroactively suspended to allow 4 years of prospecting. He emphasizes that he is not seeking a refund of the rental payments, but rather continues to seek his rights under the permit. He also asserts that due to weather conditions, his claim is accessible only 3 months of each year, giving him only 12 months of prospecting time in a 4-year period. He argues that this is discriminatory and inequitable vis-a-vis permittees in more temperate climates. He further argues that his permit, issued in 1975 predated the FS RARE II Wilderness Review begun in June 1978 and completed in January 1979, with the lands being designated for "further planning," thereby giving appellant "grandfather rights" unavailable under a new permit. He asserts that the Department was negligent in not approving the prospecting plan.

[1] Prospecting permits are issued pursuant to Departmental regulations at 43 CFR Part 3510. Issuance of a permit grants to "the permittee the exclusive right to prospect on and explore the lands involved to determine the existence of, or workability of, and commercial value of the mineral deposits therein." 43 CFR 3510.1-2. This

right, however, may be limited by the conditions imposed by other regulations or as set forth in the permit itself.

The regulations at Part 3510 impose only one condition on activities pursuant to a prospecting permit. Thus, 43 CFR 3510.1-2 states that when the permittee prospects or explores "[o]nly such material may be removed from the lands as is necessary for experimental work or the demonstration of the existence of [mineral] deposits in commercial quantities." The permit issued by BLM, by its terms, however, imposes additional conditions and responsibilities with which the permittee agrees to comply.

For the purpose of this appeal we must examine those conditions which appellant, the permittee, agreed to meet before prospecting operations could begin even though BLM had issued the prospecting permits. First, the standard permit form requires that appellant comply with Survey operating regulations found at 30 CFR Parts 211 and 231.⁵ In addition, appellant's permit also required compliance with BLM regulations, 43 CFR Part 23. These sets of regulations are similar, each governing prospecting, exploration, and other mining activities on public lands.

The focus of this appeal, more particularly, is on the requirements of 30 CFR 231.10 and 43 CFR 23.7. Both provisions specify that the Survey mining supervisor after

⁵ 30 CFR 211 deals with coal mining and is therefore inapplicable to appellant.

consultation with other involved agencies, or the BLM district manager under 43 CFR 23.7, must approve a permittee's operating plan before prospecting may begin on the permit lands. Both the Survey and the BLM regulations also state specifically that no operations shall be performed except under an approved plan. 30 CFR 231.10(a); 43 CFR 23.7(e) and 23.8(g).

In addition to these Departmental approvals, sec. 2(c) of appellant's permit specifies that appellant "shall not prospect lands under the administrative jurisdiction of the Forest Service without prior notice to and consent of that Service to a plan for prospecting." As the lands involved in this case were acquired by FS for purposes of the national forests, the FS approval must be viewed in the context of 16 U.S.C. § 520 (1976), which governs prospecting and development on acquired forest lands, and sec. 402 of the Reorganization Plan No. 3 which transferred the functions of the Secretary of Agriculture under that section to the Secretary of the Interior. Sec. 402 further provided that mineral development on such acquired lands shall be authorized only when the Secretary of Agriculture advises the Secretary of the Interior that development will not interfere with the purposes for which the land was acquired and only in accordance with conditions specified by the Secretary of Agriculture to protect those purposes.

Appellant does not challenge the appropriateness or validity of these

conditions. The identified Departmental regulations are designed to promote the Departmental policy of encouraging development of mineral resources in a manner which protects the environment and the public health and safety. 43 CFR 23.1; 30 CFR 231.1(b). Appellant, in effect, asserts that BLM may not impose such conditions in a manner which deprives a permittee of the rights granted to him under the permit. In this case the lengthy process involved in approving appellant's operating plan has, in effect, nullified appellant's permit.

The issue is one of reasonable timeliness by the Governmental agencies in taking the necessary action. On July 1, 1975, appellant submitted his operating plan revised to conform to the requirements identified by FS and Survey prior to permit issuance. An EAR recommending approval of the plan was not issued by Survey apparently until April 1979. There is little in the case record to indicate the reason that the Survey review took almost 4 years, though it appears that some delay was caused by FS not submitting its report in a prompt manner. No other problems are addressed.

Both sets of operating regulations envision prompt approval of prospecting plans. The BLM regulations provide that "[t]he mining supervisor or the district manager shall *promptly* review the exploration plan submitted to him by the operator and shall indicate to the operator any changes, additions, or amendments necessary to meet the

requirements formulated pursuant to * * * [these regulations and the permit]." 43 CFR 23.7(d) (*italics added*). Survey regulations specify that "[t]he mining supervisor shall consult with the other agencies involved, and shall *promptly* approve the plans or indicate what modifications of the plans are necessary * * *." 30 CFR 231.10(a) (*italics added*). Where, by regulation, *prompt* review and approval is required, we find it unreasonable for approval of an operating plan under a 2-year permit, upon which all rights granted by the permit are conditioned, to take almost 4 years.

Environmental review is an important and necessary condition to approval of activities on Federal lands. The regulations at 43 CFR Part 3510 specifically governing prospecting permits, however do not address such environmental review and, more significant in this case, they do not provide any procedural means by which to remedy the problem caused by the time involved in reviewing the environmental impact of appellant's operating plan. The 2-year permit term was first promulgated at 43 CFR 200.35 in 1958 (*see* 23 FR 3775 (May 30, 1958)), long before passage of the National Environmental Policy Act of 1969, 42 U.S.C. §§ 4321-4361 (1976), or the promulgation of the regulations in 43 CFR Part 23 in 1969 (*see* 34 FR 852 (Jan. 18, 1969)), and 30 CFR Part 231 in 1972 (*see* 37 FR 11041 (June 1, 1972)). It is obvious, at least in this case, that the time in-

involved in obtaining approval of the operating plan during the permit term does not serve the particular purpose of the permit system which is to regulate prospecting on public land, or the general purpose of encouraging development of public minerals resources. The time taken for environmental review in this case has rendered the permit useless.⁶ It would have been better to have required all approvals before issuance of the permit to avoid the problems that have arisen in this case.

BLM's issuance of prospecting permit CA 1698 in the first place evidences an intent, with Survey and FS concurrences, that appellant be allowed to prospect the lands covered by the permit. To date appellant has not been allowed to prospect or explore during the term of the permit. The issuance of a permit under such circumstances is a meaningless action from which appellant clearly has derived no benefit. It appears that appellant has done everything required of him in good faith. In the interest of fairness, we hold that when all ap-

⁶ As we have indicated the case file does not specifically reflect the reasons for the length of time involved in reviewing appellant's operating plan. It is clear that appellant believes that the delay has in large part been the result of alleged interference by California State Senator Nejedly. We wish to point out that the requirement for the consideration of the environmental impact of particular Federal actions is in part designed such that the views and interests of concerned citizens become part of the Governmental decisionmaking process. However, we are also concerned that, in a case such as the one now before us, the input from such concerned citizens does not become a tool for obstructing the rights of others.

provals are finalized, appellant shall be allowed to prospect for a 2-year period under permit CA 1698 with the rights to request a 2-year extension under the regulations if warranted at the end of the first term. The 2-year period shall run either from the date of service of this decision or the date when approval of appellant's operating plan is finalized, whichever is later.⁷

Therefore, pursuant to the authority delegated to the Board of Land Appeals by the Secretary of the Interior, 43 CFR 4.1, the decision appealed from is set aside and the case remanded for action consistent with this decision.

OPINION BY THE INTERIOR BOARD OF SURFACE MINING AND RECLAMATION APPEALS

On Mar. 2, 1981, Wayne Yarnell (Yarnell) filed a notice of appeal from a Feb. 12, 1981, decision of Chief Administrative Law Judge L. K. Luoma. That decision was issued pursuant to the Board's order of Sept. 5, 1980, referring the case to the Hearings Division for an evidentiary hearing on the questions raised in Yarnell's appeal of a decision made by Office of Surface Mining Reclamation and Enforcement (OSM) Regional Director Raymond L. Lowrie. The decision below upheld OSM's determination not to take enforcement action against

Peabody Coal Company's (Peabody) Ozark, Arkansas, surface mine, permit 113. For the reasons set forth below, we are constrained to affirm that decision as modified in this opinion.

Background

On or about May 10, 1978, Yarnell began operating a dragline at Peabody's Ozark mine. In February of 1979, Yarnell asked the State to inspect the mine for possible violations of the Surface Mining Control and Reclamation Act of 1977 (Act).¹ Specifically, Yarnell complained that a highwall had not been reclaimed before being covered by a permanent water impoundment and that the maps that depicted where mining had been completed before May 3, 1978, were inaccurate. Although Yarnell spoke with a state inspector on two occasions, he was not permitted to accompany the inspector on an inspection. On Mar. 13, 1979, Yarnell was laid off.

Sometime in early 1980, Yarnell was on the minesite in reference to a union grievance. He alleges that at that time a Peabody foreman told him that the State had informed Peabody that it would take no action in regard to the complaint. Therefore, on Apr. 4, 1980, Yarnell requested an OSM inspection. On Apr. 14, 1980, an OSM inspector, without entering the permit area or speaking with any company representatives, viewed the highwall area

¹ Act of Aug. 3, 1977, 91 Stat. 445, 30 U.S.C. §§ 1201-1328 (Supp. II 1978).

from a public road. His inspection report stated:

My investigation reveals that since the area in question has been reclaimed and an impoundment established to the land owners [sic] satisfaction, as indicated by written document dated March 28, 1979, there appears to be no environmental danger at present. I feel that any disturbance at this late date would not be warranted and could only be counter productive to the intent of Public Law 95-87.

I find no reason to dispute any claim that Mr. Yarnell has made. However, since so much time has elapsed and the area reclaimed I can see no benefit to be gained by pursuing the matter further.

On May 5, 1980, Yarnell requested the OSM Regional Director to review this determination, and on May 21, 1980, he accompanied OSM on a second inspection. During this inspection OSM talked with company officials about what was done to the highwall and observed the slope above the waterline in the impoundment. On June 4, 1980, the Regional Director affirmed OSM's determination not to take enforcement action, stating:

On the basis of [OSM's] investigation, I find that the available evidence does not support your allegation that Peabody Coal Company failed to backfill the highwall at the Ozark Mine. Because the area in question is now covered with water, I have relied on the observations and professional opinion of OSM staff who visited the site and on the statements of Marshall Mothersbaugh regarding the methods Peabody used to eliminate the highwall.

Yarnell appealed this determination to the Board on June 27, 1980. The Board referred the case to the Hearings Division pursuant to 43

CFR 4.1286(b) on Sept. 5, 1980. The referral order stated:

The Hearings Division shall hold a hearing and issue a decision on the following questions and any others that become apparent as a result of that hearing:

1. Was there a violation or violations of the Act and regulations, including but not limited to section 502 of the Act, 30 CFR 715.17(k) and 30 CFR 715.14, such as were alleged by Mr. Yarnell at Peabody Coal Company's Ozark Mine; and

2. If there was a violation or violations, should any enforcement action have been taken by OSM against the company.

A hearing was held on Oct. 15, 1980, and a decision was issued on Feb. 12, 1981. Because that decision upheld the Regional Director, Yarnell again appealed to the Board on Mar. 2, 1981. Both Yarnell and OSM filed briefs.

Discussion and Conclusions

[1] OSM's position throughout this proceeding has been that, even assuming everything Yarnell says is true, there is not enough evidence upon which to base any enforcement action. According to OSM the primary reason that there is not enough evidence is that too much time elapsed before it became involved in the complaint. The Board does not accept the proposition that elapsed time is in general a reason for failure to cite a violation of the Act and regulations that is discovered during an inspection. Although elapsed time may indicate that certain kinds of remedial action to correct a violation would be counterproductive or otherwise undesirable, OSM still has the obligation

to take appropriate enforcement action. The fact that a permittee manages to complete an illegal action between inspections does not of itself protect it against a citation for the violation.

[2] Elapsed time is also not an excuse for failure to conduct as thorough an inspection as is possible. The delay in this case may well have been, as Yarnell asserts, directly attributable to the State's failure to inform him that no action would be taken on his complaint. As the Board has consistently held, during the initial regulatory program, OSM has a responsibility to ensure that the states properly interpret and carry out the intent of the Act and regulations. *See, e.g., Little Byrd Coal Co., Inc.*, 3 IBSMA 136, 88 I.D. 503 (1981); *Ronald W. Johnson*, 3 IBSMA 118, 88 I.D. 495 (1981); *Cedar Coal Co.*, 1 IBSMA 145, 86 I.D. 250 (1979).² This responsibility includes enforcement of the Act's citizen complaint provisions. OSM has a duty to investigate thoroughly a citizen's accusation that a state has failed to meet its obligations.

However, OSM's ability to discover and to prove some violations may diminish over time. When confronted with an action that was completed before the inspection, OSM must frequently rely upon the statements of company officials or circumstantial evidence in deter-

mining whether that action was taken in accordance with the Act and the regulations.

Here, OSM was told that the vertical highwall created during mining was dynamited to tip material into the impoundment and so create lesser slopes. Dynamiting may have occurred after water was being collected in the impoundment. Yarnell suggested at the hearing that spoil from other areas of the mine was dumped into the impoundment.³ Whatever techniques were used, and whenever they were done, by the time that a sonargram and soundings of the floor were taken, the slopes were approximately 45 degrees.⁴

[3] Yarnell first argues that before an impoundment is filled with water, the area must be returned to approximate original contour. Although the Act does, in general, require return to approximate original contour, *see Tollage Creek Elkhorn Mining Co.*, 2 IBSMA 341, 87 I.D. 570 (1980), some exceptions are made for certain approved post-

³ Considering the fact that spoil may contain toxic or acid-forming materials, it is at least interesting to note that an OSM inspector testified at the hearing that "[a]ll toxic materials would have been covered" (Tr. 33) by Peabody's reclamation technique.

⁴ The sounding and sonargram were taken only after Yarnell had appealed to the Board, more than a year and a half after the original complaint to the State, and almost 5 months after OSM's initial involvement. Because of this delay and because of the lack of evidence as to what, if anything, was done to the impoundment since the complaint, we hold that the soundings and sonargram may be used as evidence only of the configuration of the impoundment floor at the time they were taken. We note, also, that only the western half of the impoundment was surveyed.

² OSM's independent regulatory role during the initial program has been upheld by the U.S. Supreme Court. *Hodel v. Virginia Surface Mining & Reclamation Ass'n, Inc.*, 49 U.S.L.W. 4654, 4655 (U.S. June 15, 1981).

mining land use changes.⁵ Specifically, 30 CFR 715.14(e) provides that land be returned to an "appropriate" contour when a permanent water impoundment is to be the postmining land use. We do not here decide what constitutes an "appropriate" contour for a water impoundment in all cases;⁶ we do, however, hold that it is not synonymous with "approximate original" contour. Under the facts of this case, therefore, there was not a violation merely because the floor of the impoundment was not returned to approximate original contour.

[4] Yarnell also argues that the contours of the floor of an impoundment should be achieved before it is filled with water so that they can be inspected. In general, we would tend to agree; not only would this

permit an inspection of the contours of the impoundment, it would also allow a factual determination as to whether all toxic and acid-forming materials were covered sufficiently to prevent their contacting the water.⁷ On the evidence available in this case, however, we decline to hold that Peabody's methods, although perhaps not the best, were prohibited by the Act or regulations.⁸

[5] Yarnell's second area of complaint was that the maps submitted to OSM by Peabody to show the extent of mining that had occurred before May 3, 1978, were inaccurate.⁹ OSM stated at the hearing that it was forced to accept such maps as accurate in the absence of some evidence that they were incorrect because it did not have enough staff to check each map (Tr. 72). It would appear that an apparently honest eyewitness statement would constitute sufficient evidence of inaccuracy so as to obligate OSM to investigate a particular map. The record does not disclose how thorough an investigation of the map OSM conducted. We note, however, that apparently Yarnell's complaint, received in Apr. of 1980, was the first suggestion OSM had re-

⁵ See, e.g., 30 CFR 715.14(d), (e), and (g).

The Board originally questioned when this land use change had been approved by the State. The first OSM inspection report mentioned written documentation of the landowner's satisfaction dated Mar. 28, 1979, but no record of State approval appeared in the file sent to the Board by the Regional Director. From a later submission by Yarnell, however, it appears that the State approved the change on Apr. 30, 1979. We have previously held that OSM is justified in relying on official state records, even though inaccuracies in those records may later show that an enforcement action should be vacated. See *Marco, Inc.*, 3 IBAMA 128, 88 I.D. 500 (1981); *Grafton Coal Co., Inc.*, 2 IBSHA 316, 87 I.D. 521 (1980). In the same way, inaccurate or incomplete OSM records may result in an administrative decision against OSM. When state actions are a significant factor in a case OSM should at least note the occurrence of those actions in its files.

⁶ We are aware, however, that many factors enter into such a decision, including both the intended and unintended, but expectable, uses of the impoundment. The safety of members of the public who might gain access to the area, even if through a trespass, must be considered as well as the stability of the impoundment.

⁷ When the impoundment has been filled first, it is only possible to determine whether such materials have been adequately covered by continued monitoring of the water quality.

⁸ We do not here decide whether pushing or dumping material into an impoundment filling with water and having an outlet would violate the requirement of 30 CFR 715.17 to conduct surface coal mining and reclamation operations in a way that minimizes the potential for water pollution.

⁹ These maps are required by 30 CFR 715.11(c).

July 16, 1981

ceived that the map was inaccurate. Although that elapsed time in no way vitiates OSM's right or duty to challenge the map, it does make providing its inaccuracy much more difficult. OSM was entitled to conclude that it could no longer prove a violation, even if one had occurred.

Therefore, the Feb. 12, 1981, decision of the Hearings Division is affirmed as modified in this opinion. All motions not previously ruled upon are denied.

UNIVERSAL COAL CO.

3 IBSMA 200

Decided *July 16, 1981*

Petition for discretionary review by Universal Coal Co. of a Sept. 8, 1980, decision by Chief Administrative Law Judge L. K. Luoma in Docket Nos. KC 9-6-R and KC 0-6-P finding that the initial program regulations became effective at the company's mine #051 in Randolph County, Missouri, on Feb. 3, 1978, and that the company violated 30 CFR 716.7(e) and 716.7(g) (1), relating to prime farmlands.

Affirmed.

1. Surface Mining Control and Reclamation Act of 1977: Applicability: Initial Regulatory Program

The initial program regulations are applicable to a surface coal mining operation immediately when a state permit for the operation is issued on or after Feb. 3, 1978.

2. Surface Mining Control and Reclamation Act of 1977: Prime Farmlands: Negative Determination

When a state does not issue a negative determination on the existence of prime farmlands at the time the permit is issued and OSM alleges a violation of the prime farmland regulations, the permittee must demonstrate that prime farmlands do not exist on the site.

3. Surface Mining Control and Reclamation Act of 1977: Evidence: Generally—Surface Mining Control and Reclamation Act of 1977: Prime Farmlands: Negative Determination

A negative determination on the existence of prime farmlands issued by a state after the permittee has been cited by OSM for violating the prime farmlands regulations may be submitted as evidence of whether or not prime farmlands exist on the site, but it is not necessarily entitled to retroactive effect.

APPEARANCES: N. William Phillips, Esq., Phillips & Spencer, Milan, Missouri, for Universal Coal Co.; Gerald A. Thornton, Esq., Office of the Field Solicitor, Kansas City, Missouri, Walton D. Morris, Jr., Esq., Mark Squillace, Esq., and Marcus P. McGraw, Esq., Assistant Solicitor for Enforcement, Office of the Solicitor, Washington, D.C., for the Office of Surface Mining Reclamation and Enforcement.

*OPINION BY THE INTERIOR
BOARD OF SURFACE MINING
AND RECLAMATION
APPEALS*

Universal Coal Co. (Universal) has sought review of a Sept. 8, 1980, decision of Chief Administrative Law Judge L. K. Luoma in Docket Nos. KC 9-6-R and KC 0-6-P. That decision upheld enforcement actions taken against Universal by the Office of Surface Mining Reclamation and Enforcement (OSM) pursuant to the Surface Mining Control and Reclamation Act of 1977 (Act).¹ We affirm that decision.

Background

On July 11-12, 1979, OSM inspected Universal's pit #051 in Randolph County, Missouri. This mine was operated under a Missouri permit issued on Feb. 3, 1978, with an effective date of Jan. 1, 1978. As a result of the inspection, OSM issued Notice of Violation No. 79-IV-7-9 to Universal, alleging seven violations of the Act and its implementing regulations. Four of those violations remain at issue.² Universal sought administrative review of the notice of violation and of the

civil penalty that was subsequently imposed on the basis of the notice.

A hearing was held on Mar. 18-19, 1980. A decision upholding OSM's enforcement action, but reducing the civil penalty, was issued on Sept. 8, 1980. Universal appealed from the conclusion that it had violated the regulations, but did not seek review of the amount of the civil penalty if the fact of violation were upheld on appeal. Both parties filed briefs.

Discussion and Conclusions

Universal's first argument on appeal is that it was not required to comply with the initial regulatory program requirements until May 3, 1978. Therefore, Universal asserts that all work completed before that date, which includes everything challenged by OSM, may not be the subject of OSM enforcement actions. This argument is based on secs. 502(b) and (c) of the Act, 30 U.S.C. § 1252(b) and (c). Sec. 502(b) reads in pertinent part: "All surface coal mining operations * * * which commence operations pursuant to a permit issued on or after six months [Feb. 3, 1978] from the date of enactment of this Act [Aug. 3, 1977] shall comply, and such permits shall contain terms requiring compliance with, the provisions set out in subsection (c) of this section." Sec. 502(c) states in pertinent part that "[o]n and after nine months [May 3, 1978] from the date of enactment of this Act [Aug. 3, 1977], all surface coal mining oper-

¹ Act of Aug. 3, 1977, 91 Stat. 445, 30 U.S.C. §§ 1201-1328 (Supp. II 1978). All citations to the Act are to Supplement II, 1978.

² Violation 3 alleged unauthorized construction of a stream channel diversion in violation of 30 CFR 715.17(d). Violation 5 was issued for mining off the permitted area which is prohibited by 30 CFR 710.11(a)(2). Violations 6 and 7 charged, respectively, that Universal had failed to provide the mining and restoration map for prime farmlands required by 30 CFR 716.7(e) and had failed to remove prime farmland soil horizons as required by 30 CFR 716.7(g)(1).

ations * * * shall comply with the provisions of [the listed] subsections." See also 30 CFR 710.11(a) (3) (i) and (ii).

These sections mean that the Act and regulations applied immediately to all surface coal mining operations that were issued new permits on or after Feb. 3, 1978. Operations that received their permits prior to Feb. 3, 1978, had an additional three months, *i.e.*, until May 3, 1978, to comply.

[1] Universal argues that although its permit was issued on Feb. 3, 1978, the effective date of the permit was Jan. 1, 1978. This fact, according to Universal, means that its permit was really issued on Jan. 1, 1978. The Administrative Law Judge correctly rejected this argument. Sec. 502(b) of the Act, 30 U.S.C. § 1252(b), makes the date of issuance controlling.³ Because the permit was issued on Feb. 3, 1978, Universal was required to comply immediately with all of the initial program regulations.⁴ Therefore,

³ This conclusion is strengthened by the testimony of the chief of the coal inspection and enforcement division of the Missouri Land Reclamation Commission. When questioned about the relationship between these two dates at the hearing, he testified that it had previously been normal practice in Missouri to issue permits on a calendar year basis and therefore "[t]he permit period was from January 1 until December 31. The permit was not actually valid until it was actually approved and issued upon receipt of bond by the company" (Tr. 278, 279).

It is further strengthened by the fact that the permit bore the statement regarding compliance with Federal regulations required by sec. 502(b) of the Act, 30 U.S.C. § 1252(b).

⁴ Under sec. 510(d) of the Act, 30 U.S.C. § 1260(d), and 30 CFR 716.7(a) (2) the prime farmland provisions apply to any permit issued on or after the date of enactment of the Act, *i.e.*, Aug. 3, 1977.

the decision below finding that all activities at this mine could be regulated is affirmed.

Universal's second argument is that violations 6 and 7 should be vacated because the State determined that prime farmlands were not involved at this site. Although the negative determination given to Universal was issued on Feb. 27, 1980, 2 years after the permit was issued and 7½ months after the notice of violation was written, Universal argues that a state's negative determination on prime farmlands is binding upon OSM regardless of when that determination is made.

[2, 3] 30 CFR 716.7 anticipates that prime farmlands will be identified during the permitting process for the operation so that proper measures can be taken to ensure that this valuable resource is protected and conserved. If a negative determination is not made at that time, the permittee is subject to an enforcement action for failure to comply with the prime farmland regulations.⁵ When OSM alleges a violation of 30 CFR 716.7, the permittee must demonstrate that prime farmlands do not exist on the site.⁶

⁵ Absent a showing of fraud or similar abuse in the granting of a negative determination, the Board will not lightly overturn a determination made during the permitting process and not challenged at that time.

⁶ In *Ronald W. Johnson*, 3 IBMSA 118, 88 I.D. 495 (1981), we remanded a citizen's complaint to OSM for a decision on whether a state regulatory authority had properly determined that a coal company had valid existing rights to mine certain areas within 300 feet of occupied dwellings. Similarly, in *Alabama By-Products Corp.*, 1 IBMSA 239, 86 I.D. 446 (1979), we remanded a case to the Hearings Division for a determination of whether an

CARBON FUEL CO.

3 IBSMA 207

Decided July 17, 1981

Although a negative determination made by the State after a citation is issued may be submitted as evidence of the existence of prime farmlands, it is not necessarily entitled to retroactive effect.⁷ We have reviewed the record in this case and see no reason to disturb the Administrative Law Judge's findings that this site contains prime farmlands and that Universal violated the cited prime farmland regulations.

Therefore, the Sept. 8, 1980, decision of the Hearings Division is affirmed.

Petition for discretionary review by the Office of Surface Mining Reclamation and Enforcement from the Jan. 8, 1981, decision of Administrative Law Judge Tom M. Allen in Docket No. CH O-172-P. That decision vacated Cessation Order No. 80-I-91-1 issued to Carbon Fuel Co. for allegedly violating 30 CFR 710.11(a)(2)(ii) by engaging in operations that resulted in a condition creating an imminent danger to the safety of the public.

Reversed.

1. Surface Mining Control and Reclamation Act of 1977: Public Health and Safety: Imminent Danger

30 CFR 710.11(a)(2)(ii) prohibits operations that "result in" imminent danger to the public.

2. Surface Mining Control and Reclamation Act of 1977: Public Health and Safety: Imminent Danger—Surface Mining Control and Reclamation Act of 1977: Words and Phrases

"Imminent danger." A condition constitutes an imminent danger to the health or safety of the public when it creates the possibility of substantial injury that a rational person, cognizant of the danger involved, would choose to avoid.

3. Surface Mining Control and Reclamation Act of 1977: Abatement: Remedial Actions

The Board declines to hold that the permit boundary, as identified in a state permit, protects a permittee in all cases from being required to abate the off-site detrimental consequences of its operations.

other state decision was timely. In these cases the Board recognized that the Act and regulations commit some decisions to state regulatory authorities during the initial program. In both of these cases, however, as distinct from the present case, the regulatory authority had attempted to carry out its responsibility at the time contemplated in the Act and Federal regulations. As the Board noted in *Johnson, supra*, and as the Supreme Court stated in *Hodel v. Virginia Surface Mining & Reclamation Ass'n, Inc.*, 49 U.S.L.W. 4654, 4655 (U.S. June 15, 1981), the Federal Government retains an independent regulatory role during the initial program. That role requires the Department to ensure compliance with the Act and regulations when a state fails to enforce those requirements or fails to take an action otherwise committed to it.

⁷ We do not here decide what weight should be given to negative determinations made after the permit is issued, but before a possible prime farmland area is disturbed, or when made after the disturbance of such an area but before a citation is issued. See *Hardly Able Coal Co.*, 2 IBSMA 270, 87 I.D. 434 (1980); *Carbon Fuel Co.*, 1 IBSMA 253, 86 I.D. 483 (1979); *Alabama By-Products Corp.*, *supra*.

July 17, 1981

APPEARANCES: William F. Larkin, Esq., Office of the Field Solicitor, Charleston, West Virginia, James M. McElfish, Esq., and Marcus P. McGraw, Esq., Assistant Solicitor for Litigation and Enforcement, Office of the Solicitor, Washington, D.C., for the Office of Surface Mining Reclamation and Enforcement; Gregory R. Gorrell, Esq., and Mark C. Russell, Esq., Jackson, Kelly, Holt & O'Farrell, Charleston, West Virginia, for Carbon Fuel Co.

*OPINION BY THE INTERIOR
BOARD OF SURFACE MINING
AND RECLAMATION
APPEALS*

The Office of Surface Mining Reclamation and Enforcement (OSM) has petitioned for review of the Jan. 8, 1981, decision of Administrative Law Judge Tom M. Allen in Docket No. CH 0-172-P. That decision vacated Cessation Order No. 80-I-91-1 issued to Carbon Fuel Co. (Carbon Fuel) for an alleged violation of 30 CFR 710.11(a)(2)(ii). For the reasons set forth below we reverse that decision.

Background

On Feb. 20, 1980, an OSM inspector was conducting aerial surveillance of surface coal mining operations in Kanawha County, West Virginia, pursuant to the Surface Mining Control and Reclamation Act of 1977 (Act).¹ Because he observed what he thought was a problem at Carbon Fuel's permit H-145,

he inspected the area on the ground the next day. At the junction of the haulroad from Carbon Fuel's coal stockpile area with a public road, the inspector found that haulroad material had been tracked out onto the public road. While at the site, the inspector saw numerous vehicles, including a school bus, move into the opposite lane in order to avoid traveling through the mud, coal, and stones that had been deposited on the road. Because of this problem, he issued Cessation Order No. 80-I-91-1 to Carbon Fuel, alleging a violation of 30 CFR 710.11(a)(2)(ii) and requiring Carbon Fuel to clean the material off the public road and to take measures to prevent haulroad material from being tracked onto the public road in the future. The order was terminated the next day after a crew worked all night to clear the road.

Carbon Fuel sought review of this order and the case was submitted to the Administrative Law Judge on stipulated facts on Dec. 19, 1980. The decision vacating the cessation order was issued on Jan. 8, 1981. OSM petitioned for review of that decision and both parties filed briefs.

Discussion and Conclusions

Carbon Fuel was charged with a violation of 30 CFR 710.11(a)(2)(ii), which reads: "A person conducting coal mining operations shall not engage in any operations which result in a condition or constitute a practice that creates an im-

¹ Act of Aug. 3, 1977, 91 Stat. 445, 30 U.S.C. §§ 1201-1328 (Supp. II 1978). All citations to the Act are to Supplement II, 1978.

minent danger to the health or safety of the public." The Administrative Law Judge apparently concluded that, in order to constitute a prohibited "operation," the activity cited must, in and of itself, constitute a "surface coal mining operation" within the meaning of sec. 701(28)(A) and (B) of the Act, 30 U.S.C. § 1291(28)(A) and (B). Because he could not construe the unintentional depositing of mud from the tires of coal trucks and other vehicles on a public road as a "surface coal mining operation," he concluded that the activity was not covered by the Act.

The Administrative Law Judge further found that there was no imminent danger to public safety. This conclusion was based on his reading of sec. 701(8) of the Act, 30 U.S.C. § 1291(8). He stated that this section requires that "the imminent danger must be of such a magnitude that it cannot be abated prior to causing substantial physical harms to persons outside of the permit area." Decision at 4 (*italics omitted*). The rational person test to be applied in these cases was equated with the "reasonable man" standard. Using the stipulated facts, the Administrative Law Judge concluded that the danger in this case "existed only in the mind of the inspector and absolutely nothing cried out for the issuance of a cessation order to protect the public health or safety." Decision at 5.

[1] These conclusions are not supported by the Act, regulations, or stipulated facts. 30 CFR 710.11(a)

(2)(ii) prohibits operations that "result in" imminent danger to the public. The hauling of coal was part of Carbon Fuel's surface coal mining operation. That hauling resulted in material being deposited on the public road, a condition that is prohibited if the deposits constitute an imminent danger.

[2] Contrary to the Administrative Law Judge's statement, sec. 701(8) of the Act, 30 U.S.C. § 1291(8), does not require that an imminent danger be so great that it *cannot* be abated prior to causing substantial harm. The statutory requirement is that the condition "could reasonably be expected to cause" substantial harm before being abated. That requirement is to be determined according to a rational person standard. Although we agree that the actions of ordinary citizens may suggest what a rational person might do under similar circumstances, we disagree with both the analysis of the stipulated facts set out in the decision below and the conclusion reached. The stipulated facts show that people using the public road avoided the deposited material unless faced with oncoming traffic. It is not necessary that traffic cease or that actual injury occur before a condition constitutes an imminent danger to the safety of the public. It is only necessary that the condition create the possibility of substantial injury that a rational person, cognizant of the danger involved, would choose to avoid. Under the circumstances of this case, the deposits on the public road

constituted an imminent danger to the public safety for which a cessation order was properly issued.

[3] Carbon Fuel argues, however, that the abatement action required here was improper because it involved doing work off its permit area. It is clear that the Act contemplates that the consequences of violations of its requirements may extend off the permit area. *See, e.g.*, sec. 515(b)(10), (21), (24), 30 U.S.C. § 1265(b)(10), (21), (24). Many of these potential off-site problems can be abated by actions taken on the permit area, such as treatment of acid drainage. Others can be prevented from recurring in the future by such orders as the one involved in this case to take measures to prevent haulroad material from being continually tracked onto the public road. Some violations, however, result in dangerous or environmentally undesirable conditions off the permit area. We decline to hold that the permit boundary, as identified in a state permit, protects a permittee in all cases from being required to abate the detrimental consequences of its operations. Under the circumstances of this case, in which the causal connection between the surface coal mining operation and the imminently dangerous condition was clear and uncontroverted, the condition occurred on immediately adjacent public property, and there was no evidence that a third party with legal control over that adjacent property objected to the work required, we hold that the remedial

work required was within OSM's enforcement authority.

Therefore, the Jan. 8, 1981, decision of the Hearings Division is reversed and Cessation Order No. 80-I-91-1 is reinstated and upheld.

AGNES S. SAMUELSON

56 IBLA 242

Decided July 22, 1981

Appeal from decision of the Alaska State Office, Bureau of Land Management, rejecting a Native allotment application. AA 8051.

Set aside and remanded.

1. Alaska: Native Allotments

In sec. 905(a)(1) of the Alaska National Interest Lands Conservation Act, P.L. 96-487, 94 Stat. 2371, 2435 (1980), Congress provided that all Native allotment applications which were pending before the Department on Dec. 18, 1971, which describe either land that was unreserved on Dec. 13, 1968, or land within the National Petroleum Reserve—Alaska, are approved on the 180th day following the effective date of that Act subject to valid existing rights, unless otherwise provided by other paragraphs or subsections of that section. Although only nonmineral land may be allotted, Congress has defined that term as used in the Native Allotment Act to include land valuable for deposits of sand and gravel.

2. Alaska: Native Allotments—State Selections

Applications for Alaska Native allotments in "core" townships of Native villages are subject to the statutory approval contained in sec. 905(a)(1) of the Alaska National Interest Lands Conservation Act, notwithstanding a State selection or tentative approval thereof for the same lands prior to Dec. 18, 1971.

APPEARANCES: Keith A. Christenson, Esq., Anchorage, Alaska, for appellant.

OPINION BY ADMINISTRATIVE JUDGE LEWIS

INTERIOR BOARD OF LAND APPEALS

Agnes S. Samuelson has appealed from a Nov. 9, 1977, decision of the Alaska State Office, Bureau of Land Management (BLM), rejecting her Native allotment application AA 8051, dated Dec. 10, 1970, because BLM determined that the land is mineral in character due to the presence of sand and gravel and that the land therefore is unavailable for allotment. The Alaska Native Allotment Act, 43 U.S.C. §§ 270-1 through 270-3 (1970), *repealed*, 43 U.S.C. § 1617 (1976), authorizes only allotment of "non-mineral" land.

[1] Appellant raises several arguments against BLM's determination that the land is mineral in character because of the value of the sand and gravel deposits. It appears, however, that this controversy has been resolved by newly enacted legislation. In sec. 905(a)(1)

of the Alaska National Interest Lands Conservation Act, P.L. 96-487, 94 Stat. 2371, 2435 (1980), Congress provided that all Native allotment applications pending before the Department on Dec. 18, 1971, which describe either land that was unreserved on Dec. 13, 1968, or land within the National Petroleum Reserve—Alaska, are approved on the 180th day following the effective date of that Act subject to valid existing rights, unless otherwise provided by other paragraphs or subsections of that section. *Jack Gosuk (On Reconsideration)*, 54 IBLA 306 (1981). Although sec. 905(a)(3) provides that an allotment application is not approved if the land described therein is valuable for minerals, it further provides that the term "nonmineral," as used in the Native Allotment Act, "is defined to include land valuable for deposits of sand or gravel." Thus, presence of valuable deposits of sand or gravel does not preclude approval of a Native allotment application.

[2] We note that the Native allotment application conflicts with a state's selection application. Sec. 905(a)(4) of the Alaska National Interest Lands Conservation Act, *supra*, provides that an Alaska Native allotment application is not approved under sec. 905(a)(1) if the land is included in a State selection application but is not within a core township of a Native village. *Roselyn Isaac (On Reconsideration)*, 53 IBLA 306 (1981). However, a BLM status map for the State of Alaska issued in March

1974 indicates that appellant's land is within the core township of the Native village of Dillingham. Thus, it appears that the conflicting State selection application does not bar automatic approval of appellant's application.¹

The record shows no reason why appellant's allotment application is not now subject to approval under subsec. 905(a)(1), provided that her application was pending before the Department on Dec. 18, 1971.² The record discloses no valid existing rights in conflict with the application, and the land was not reserved on Dec. 13, 1968. Where a

¹ The Senate report explains:

"Applications for allotments in 'core' townships of villages certified as eligible for land selections under Section 11(b) of the Alaska Native Claims Settlement Act are, however, subject to the statutory approval contained in subsection (a)(1) notwithstanding a State selection or tentative approval of such core township lands prior to December 18, 1971." S. Rep. No. 96-413, 96th Cong., 2d Sess. 285, reprinted in [1981] U.S. Code Cong. & Ad. News 9130, 9289.

² The requirement that an application be pending before the Department on Dec. 18, 1971, must be met regardless of whether the application is approved under sec. 905(a)(1) of the Alaska National Interest Lands Conservation Act or the Alaska Native Allotment Act, because the Native Allotment Act was repealed on that date and no application could be approved thereunder unless it was pending before the Department of the Interior on Dec. 18, 1971. 43 U.S.C. § 1617(a) (1976). Although appellant's application was dated Dec. 10, 1970, it was not filed with the Bureau of Land Management until June 9, 1972, when the Bureau of Indian Affairs (BIA) filed it on appellant's behalf. It appears that many Native allotment applicants had filed their applications or evidence with the BIA prior to Dec. 18, 1971, but that BIA held them past the time when they were required to be filed with the Bureau of Land Management. Such applications are deemed to be pending on Dec. 18, 1971. See, e.g., *Julius F. Pleasant*, 5 IBLA 171 (1972). On remand appellant should be required to establish that her application was filed with BIA prior to Dec. 18, 1971.

Native allotment applicant meets the requirements of subsec. 905(a)(1), failure to provide adequate evidence of use and occupancy does not bar approval of the allotment application. *Jack Gosuk (On Reconsideration)*, *supra*. The State Office, therefore, should consider appellant's application for approval, subject to any protest which may have been filed before the end of the 180-day period which would preclude approval under subsec. 905(a)(1) and require adjudication pursuant to the provisions of the Native Allotment Act.

Therefore, pursuant to the authority delegated to the Board of Land Appeals by the Secretary of the Interior, 43 CFR 4.1, the decision appealed from is set aside and the case remanded for further action consistent with this opinion.

56 IBLA 258

Decided July 24, 1981

Appeal from decision of Administrative Law Judge Robert W. Mesch, vacating in part District Manager's decisions temporarily suspending por-

tions of maximum allowable active grazing preferences in the Rock Springs District, Wyoming. W 4-79-1.

Reversed.

1. Grazing Permits and Licenses: Cancellation or Reduction

BLM may temporarily suspend portions of maximum allowable active grazing preferences under 43 CFR 4110.3-2(a) authorizing suspensions in cases of "drought, fire, or other natural causes," in order to provide forage for excess wild horses.

APPEARANCES: Marla E. Mansfield, Esq., Office of the Solicitor, Denver, Colorado, for appellant; Calvin E. Ragsdale, Esq., Green River, Wyoming, for appellees.

OPINION BY ADMINISTRATIVE JUDGE HARRIS

INTERIOR BOARD OF LAND APPEALS

The Bureau of Land Management (BLM) has appealed from a decision of Administrative Law Judge Robert W. Mesch dated Feb. 13, 1980, vacating in part decisions of the District Manager for the Rock Springs District, Wyoming, dated Mar. 30, 1979. The relevant portions of those decisions temporarily suspended portions of maximum allowable active grazing preferences for livestock and allocated the suspended grazing preferences to excess wild horses.¹ The decisions

involved 11 holders of grazing preferences (appellees herein)² and 5 grazing allotments.³

The District Manager placed the decisions in full force and effect as of Apr. 1, 1979, pursuant to 43 CFR 4160.3(c), in order to ensure the "orderly administration of the range."

The stated rationale for the temporary suspension was "for resource protection in accordance with 43 CFR 4110.3-2(a)(c) [43 CFR 4110.3-2(a) and (c)]." The applicable regulation, 43 CFR 4110.3-2(a), provides in pertinent part: "When authorized grazing use exceeds the amount of forage available for livestock grazing within an allotment on a temporary basis: (1) Due to drought, fire, or other natural causes * * * grazing permits or leases may be suspended in whole or in part."⁴

A hearing on the matter was held before the Administrative Law Judge on Sept. 5, 1979, in Green River, Wyoming. At the hearing,

² The appellees are Bar X Sheep Co., Leonard Hay, Frank Mayo, White Acorn Sheep Co., Erramouspe Brothers, Magagna Brothers, Vernan Mrak, Blair and Hay Land and Livestock Co., Chilton Land and Livestock Co., Dearth Jamieson Sheep Co., and Burton H. and Ralph E. DeLambert.

³ The allotments are Bush Rim, Continental Peak, Red Desert, Sands, and Steamboat Mountain.

⁴ This provision may in part be derived from sec. 3 of the Taylor Grazing Act, as amended, 43 U.S.C. § 315b (1976), which provides in relevant part:

"During periods of range depletion due to severe drought or other natural causes, or in case of a general epidemic of disease, during the life of the permit, the Secretary of the Interior is authorized, in his discretion to remit, reduce, refund in whole or in part, or authorize postponement of payment of grazing fees for such depletion period so long as the emergency exists."

¹ The decisions also canceled portions of maximum allowable active grazing preferences, pursuant to 43 CFR 4110.3-2(b) (1979). That regulation was amended on July 11, 1980, 45 FR 47105; however, 43 CFR 4110.3-2(a) was not changed.

the District Manager and the Assistant District Manager expanded on the rationale for the decisions, as summarized by the Administrative Law Judge:

[T]hey determined there were excess wild horses within the allotments on the basis of inventory information within their office and information contained in an environmental impact statement; they do not as yet [almost eight years after the Secretary of the Interior was directed to manage wild horses] have any wild horse management plans within the district; it is anticipated that such plans should be developed within a couple of years; the plans will provide for removal of excess wild horses; the actual removal of the horses will not start, however, until funds and manpower are available; it is not known when the funds and manpower will be available—it could be three years or thirty years; the wild horses increase as much as 15 or 20 percent a year on a geometric basis * * *.

* * * * *

* * * [T]hey had not secured adequate funds to remove the excess wild horses from the allotments and in order to avoid an over obligation of the forage resources, they felt they had no alternative other than to make a temporary allocation of forage for the excess wild horses pending their removal from the range; they thought it best, since the condition appeared to be only temporary, and in order to insure that the livestock operators would not permanently lose their grazing privileges, to temporarily suspend the privileges under subsection (a) rather than cancel the privileges under subsection (b) of 43 CFR 4110.3-2; he construes the phrase "or other natural causes" in the regulation authorizing temporary suspensions of livestock grazing because of a decrease in the amount of available forage as including anything that might be termed an Act of God; he believes wild horses and any increases in their population are natural and if they

cause a decrease in the amount of available forage for livestock grazing this would be an Act of God or a natural cause.

(Decision at 5-6).

In his Feb. 13, 1980, decision the Administrative Law Judge made the following findings:

I agree with the appellants that 43 CFR 4110.3-2(a) does not grant the District Manager the authority to temporarily suspend livestock grazing use under the circumstances present in this case. The authorized grazing use exceeds the amount of forage available for livestock grazing, not because of drought, fire, or other natural causes but, because of the BLM's failure to manage the wild horses and remove the excess wild horses as authorized by the 1971 Act [Act of December 15, 1971, *as amended*, 16 U.S.C. § 1331 (1976)] and its failure to take any action to immediately remove the excess animals as mandated by the 1978 Act [Public Rangelands Improvement Act of 1978, P.L. 95-514, 92 Stat. 1803, 1808, 16 U.S.C. § 1333 (Supp. II 1978)]. While the wild horses may be the result of natural causes, the presence of excess numbers in the allotments and the decrease in the amount of available forage created by the excess animals are solely the result of, or due to, the BLM's failure to respond to the mandates of the 1971 and the 1978 Acts. This failure, for whatever reason, is not an Act of God or a natural cause creating a decrease in the amount of available forage.

(Decision at 6).

[1] The principal question in this case is whether 43 CFR 4110.3-2(a) allows the temporary suspension of livestock grazing preferences where there has been a decrease in available forage due to an increase in a competing population of wild horses.

In order to answer that question

we must analyze the phrase "or other natural causes." Appellant argues that the increase in the wild horse population was due to natural procreation. Appellees, on the other hand, assert that but for the failure of BLM to comply with its statutory mandates the population would not have increased. Appellees also urge the invocation of the doctrine of ejusdem generis. That rule, as stated by the court in *Gooch v. United States*, 297 U.S. 124, 128 (1936), "[o]rdinarily * * * limits general terms which follow specific ones to matters similar to those specified; but it may not be used to defeat the obvious purpose of legislation." See also 2A Sands, *Sutherland Statutes and Statutory Construction* 118 (1973).

Further investigation reveals that "other natural causes," as used in the regulation, should not be read as restrictively as appellees assert. The precursor of 43 CFR 4110.3-2(a) was 43 CFR 4125.1-1(i)(8) (1977). It read in pertinent part: "If necessary to rehabilitate the vegetative resources on the public land, the Authorized Officer may temporarily close the leased land to grazing or reduce livestock use whenever vegetal cover is depleted due to drought, epidemic, fire or any other cause, or for rehabilitation of the area."

In 1976 the Department proposed changes to the grazing regulations in an attempt to modernize them. 43 CFR 4110.3-2 (*Decrease in forage*) was proposed to read as follows:

When authorized grazing use exceeds the livestock forage available within a

grazing area or where reduced grazing use is necessary to facilitate multiple-use management objectives or protection of the environment, authorized grazing use and grazing preferences may be adjusted accordingly. Such adjustments will be equitably apportioned by the authorized officer or as agreed to among authorized users and the authorized officer.

41 FR 31506 (July 28, 1976). During the comment period, the Federal Land Policy and Management Act of Oct. 21, 1976, 43 U.S.C. §§ 1701-1782 (1976), was signed into law. Therefore, on July 8, 1977, grazing regulations were repropoed. In the reproposal 43 CFR 4110.3-2 was changed to require mandatory cancellation, stating in pertinent part: "When authorized grazing use exceeds the amount of forage available for livestock grazing within an allotment or where reduced grazing use is necessary to facilitate achieving the objectives in the land use plans, grazing permits or grazing leases and grazing preferences shall be cancelled in whole or in part." 42 FR 35338 (July 8, 1977).

On July 5, 1978, final grazing regulations were published in the *Federal Register*. 43 CFR 4110.3-2 was separated into three subsections. Most importantly for the purposes of this case, 43 CFR 4110.3-2 (a) was changed to provide for discretionary suspension "[w]hen authorized grazing use exceeds the amount of forage available for livestock grazing within an allotment on a temporary basis: (1) due to drought, fire, or other natural causes." 43 FR 29069 (July 5, 1978).

As explained in the preamble to

the regulations, this change was made in response to a comment:

The proposed regulations provided for cancellation of grazing permits or grazing leases and grazing preferences in whole or in part under § 4110.3-2 when the authorized grazing use exceeds the amount of forage available for livestock grazing within an allotment. It was suggested that this should not apply when the amount of forage available is reduced on a temporary basis in the case of drought, fire, or other short term situation. In response to these suggestions, the regulations have been changed to provide for suspension of grazing permits or leases, instead of cancellation, when the authorized grazing use exceeds the amount of forage available for livestock grazing within an allotment on a temporary basis.

43 FR 29058 (July 5, 1978).

The regulatory history of the language of 43 CFR 4110.3-2(a) indicates that the Department intended to provide flexibility in the management of the range when "*in the case of drought, fire, or other short term situation*" the authorized grazing use exceeded the amount of available forage on a temporary basis. (Italics added). The emphasis of the regulation is on the discretionary ability of BLM to act when necessary to protect the range from possible deterioration. 43 CFR 4110.3-2(a) provides for suspensions, rather than cancellations, when the threat to the range is a temporary one.

In addition, 43 CFR 4110.3-2(a) takes its authority in part from the Federal Land Policy and Management Act of 1976 (FLPMA), *supra*, which provides for land management "under principles of multiple

use." 43 CFR 4100.0-3(b); *see also* 43 CFR 4100.0-2. The concept of multiple use was interpreted by the court in *American Horse Protection Association, Inc. v. Frizzell*, 403 F. Supp. 1206, 1221 (D. Nev. 1975), involving a conflict between the grazing rights of wild horses and cattle, to mean "that neither wild horses nor cattle possess any higher status than the other on the public lands."⁵ The court concluded that "[u]nder the multiple use * * * concept, then, the BLM had various alternatives available to them to alleviate the overgrazing on Stone Cabin Valley"; it could either act pursuant to the Act of Dec. 15, 1971, *as amended, supra*, to remove wild horses or act pursuant to the Taylor Grazing Act, *as amended, supra*, to restrict livestock grazing on overgrazed land. In the latter regard, the court cites the predecessor of 43 CFR 4110.3-2(a), *i.e.*, 43 CFR 4125.1-1(i)(8) (1977). The applicable regulation, 43 CFR 4110.3-2(a), also takes its authority from the Taylor Grazing Act, *as amended, supra*.

Appellees argue that once BLM determines that there is "an excess population [of wild horses] and a need for removal, the [Public Rangelands Improvement Act of 1978, *supra*] only gives [the District Manager] one course of action, to immediately remove the excess

⁵ While *American Horse Protection Association, Inc. v. Frizzell, supra*, applied the multiple use provisions of the Act of Sept. 19, 1964, 43 U.S.C. § 1411 (1970), the concept of multiple use was carried over into FLPMA, *supra*. See 43 U.S.C. §§ 1701(a)(7) and 1702(c) (1976).

horses in the priority and order stated" (Appellees' Answer at 15).⁶ Appellees argue not that the District Manager abused his discretion in taking the suspension action, but that "under the command of Congress in circumstances such as this, where he has made certain determi-

⁶ Sec. 14(b)(2) of the Public Rangelands Improvement Act of 1978, 16 U.S.C. § 1333(b)(2) (Supp. II 1978), provides:

"(2) Where the Secretary determines on the basis of (i) the current inventory of lands within his jurisdiction; (ii) information contained in any land use planning completed pursuant to section 1712 of title 43; (iii) information contained in court ordered environmental impact statements as defined in section 1902 of title 43; and (iv) such additional information as becomes available to him from time to time, including that information developed in the research study mandated by this section, or in the absence of the information contained in (i-iv) above on the basis of all information currently available to him, that an overpopulation exists on a given area of the public lands and that action is necessary to remove excess animals, he shall immediately remove excess animals from the range so as to achieve appropriate management levels. Such action shall be taken, in the following order and priority, until all excess animals have been removed so as to restore a thriving natural ecological balance to the range, and protect the range from the deterioration associated with overpopulation:

"(A) The Secretary shall order old, sick, or lame animals to be destroyed in the most humane manner possible;

"(B) The Secretary shall cause such number of additional excess wild free-roaming horses and burros to be humanely captured and removed for private maintenance and care for which he determines an adoption demand exists by qualified individuals, and for which he determines he can assure humane treatment and care (including proper transportation, feeding, and handling): *Provided*, That, not more than four animals may be adopted per year by any individual unless the Secretary determines in writing that such individual is capable of humanely caring for more than four animals, including the transportation of such animals by the adopting party; and

"(C) The Secretary shall cause additional excess wild free-roaming horses and burros for which an adoption demand by qualified individuals does not exist to be destroyed in the most humane and cost efficient manner possible."

nations, he is without discretion" (Appellees' answer at 18).

We cannot agree with appellees. While sec. 14(b)(2) of the Public Rangelands Improvement Act of 1978, *supra*, dictates the immediate removal of excess animals, there is no indication that removal is the exclusive remedy for an overpopulation of wild horses. In addition, despite the specific directions in that section, the Act is not self-executing. Surely, until implementation of provisions for removal, BLM is not foreclosed from taking actions to preserve the quality of the Federal range. We find that 43 CFR 4110.3-2(a) provided the District Manager with an alternative method of dealing with the overpopulation problem.

Appellees have also argued that (1) the District Manager's decision was arbitrary, capricious, and an abuse of discretion because no time limit was set on the temporary suspension; (2) an environmental impact statement (EIS) was not prepared pursuant to the National Environmental Policy Act of 1969 (NEPA), 42 U.S.C. § 4331 (1976), assessing the environmental impact of a temporary suspension of grazing preferences; and (3) the District Manager's decision with respect to holders of grazing preferences in the Continental Peak Allotment⁷ were arbitrary, capricious, and an abuse of discretion because no rationale was provided for plac-

⁷ In their notice of appeal, dated Apr. 30, 1979, appellants therein (appellees) indicated that Erramouspe Brothers and Magagna Brothers were pressing the appeal in this regard.

ing the decisions in full force and effect.

There appears to be no requirement in the law that a decision providing for a temporary suspension of grazing preferences specify a time limit for such suspensions. *See* 43 U.S.C. § 315b (1976); 43 CFR 4110.3-2(a). The suspension is by its nature dependent on causes whose duration is difficult to determine. The necessary implication of a suspension under 43 CFR 4110.3-2(a) must be that the suspension will be effective at least so long as the situation persists which gave rise to the action.

NEPA, *supra*, requires the preparation of an EIS with regard to "major Federal actions significantly affecting the quality of the human environment." 42 U.S.C. § 4332 (1976). The record discloses that an EIS, known as the Sandy Grazing EIS, was prepared with respect to the subject allotments, in part assessing the balance between livestock and wild horse grazing (Tr. 91-92). However, a basic assumption in the EIS was the maintenance of the wild horse population at "management levels" and no consideration was given to temporarily allocating forage to excess wild horses (Tr. 90). Nevertheless, we do not believe that *temporarily* suspending the grazing preferences involved in this case can be construed as "a major Federal action significantly affecting the quality of the human environment." Appellees have failed to provide any evidence to support their claim that an in-

dividual EIS is needed, especially in view of the EIS already prepared. *See Julie Adams*, 45 IBLA 252 (1980); *Headwaters*, 33 IBLA 91 (1977). We cannot find that BLM was required to prepare an EIS prior to its actions in this case.

Finally, the question is presented whether the District Manager properly placed the decisions affecting the Continental Peak Allotment in full force and effect. At the time the decisions were made, the District Manager had the authority pursuant to 43 CFR 4160.3(c) to place the decisions in full force and effect "pending decision on appeal therefrom. * * * only if required for the orderly administration of the range or for the protection of other resource values." The regulations do not require that the District Manager specifically detail the reasons for such a determination. In this case the reasoning of the District Manager is implicit in his decisions. We find no error in the District Manager's determination to place the decisions in full force and effect.

We have carefully reviewed the record and it discloses a rational basis for the decisions to suspend temporarily livestock grazing preferences and to place those decisions in full force and effect at that time. Therefore, they will not be disturbed. *See Bert N. Smith*, 48 IBLA 385 (1980), and cases cited therein. The burden is on the one challenging the decision to show by substantial evidence that the decision is unreasonable. *Id.* In the present case, appellees have failed to do

so. Accordingly, we hold that the District Manager properly issued decisions temporarily suspending appellees' grazing preferences.

Therefore, pursuant to the authority delegated to the Board of Land Appeals by the Secretary of the Interior, 43 CFR 4.1, the decision appealed from is reversed.

UNIVERSAL COAL CO.

3 IBSMA 218

Decided July 28, 1981

Appeals by Jerry Crutchfield, Universal Coal Co., and the Office of Surface Mining Reclamation and Enforcement from the Jan. 30, 1981, decision of Administrative Law Judge Frederick A. Miller in Docket No. KC 1-2-R granting temporary relief to the company from the abatement requirements in the fourth modification of Notice of Violation No. 80-4-4-6, which alleged a violation of the hydrologic balance protection requirements of 30 CFR 715.17.

Affirmed as modified.

1. Surface Mining Control and Reclamation Act of 1977: Temporary Relief: Applications

Because temporary relief is an extraordinary remedy that may be requested in a pending case, an application for temporary relief not preceded or accompanied by an application for review of a notice, order, or civil penalty should be dismissed.

2. Surface Mining Control and Reclamation Act of 1977: Notices of Violation: Generally

A modification of a notice of violation can change obligations in any way necessary to ensure compliance with the Act and regulations so long as the specificity requirements of sec. 521(a)(5) of the Act are met.

3. Surface Mining Control and Reclamation Act of 1977: Notices of Violation: Generally

OSM does not have authority to extend the abatement period in a notice of violation beyond 90 days.

APPEARANCES: Gary S. Dyer, Esq., and Stephen W. Jacobson, Esq., Lathrop, Koontz, Righter, Claggett & Norquist, Kansas City, Missouri, for Intervenor Jerry and Neta Crutchfield; N. William Phillips, Esq., Phillips & Spencer, Milan, Missouri, and George Anetakis, Esq., Frankovitch & Anetakis, Weirton, West Virginia, for Universal Coal Co.; and Bruce A. Cryder, Esq., Field Solicitor, Gerald A. Thornton, Esq., Office of the Field Solicitor, Kansas City, Missouri, Mark Squillace, Esq., and Marcus P. McGraw, Esq., Assistant Solicitor, Branch of Litigation and Enforcement, Office of the Solicitor, Washington, D.C., for the Office of Surface Mining Reclamation and Enforcement.

July 28, 1981

*OPINION BY THE INTERIOR
BOARD OF SURFACE MINING
AND RECLAMATION
APPEALS*

Review has been sought of a Jan. 30, 1981, decision of Administrative Law Judge Frederick A. Miller in Docket No. KC 1-2-R by all three parties below: Universal Coal Co. (Universal), the Office of Surface Mining Reclamation and Enforcement (OSM), and Intervenors Jerry and Neta Crutchfield (Crutchfield). The decision appealed from granted temporary relief to Universal from the abatement measures required in the fourth modification of Notice of Violation No. 80-4-4-6, issued to Universal by OSM pursuant to the Surface Mining Control and Reclamation Act of 1977 (Act)¹ and its implementing regulations. Although we affirm the result reached below, we do so solely on the basis of the discussion set forth in this opinion.

Background

On July 11-12, 1979, OSM inspected Universal's pit #051 in Randolph County, Missouri. As a result of that inspection, OSM issued Notice of Violation No. 79-IV-7-9, alleging seven violations of the Act and regulations. Violation 3 charged that Universal had failed to design, construct, and maintain a stream diversion channel as required by 30 CFR 715.17(d). Uni-

versal sought review of this notice of violation in Docket No. KC 9-6-R, and the Administrative Law Judge noted that violation 3 was terminated after Universal "completed remedial action sufficient to make the structure acceptable as a temporary diversion on the understanding that the entire area would be reclaimed within 1 year" (Decision in KC 9-6-R at 7). Because OSM's authority to regulate the diversion was upheld, Universal appealed that decision to the Board. The decision was affirmed on July 16, 1981. *Universal Coal Co.*, 3 IBSMA 200, 88 I.D. 657 (1981).

The same diversion continued to cause problems and OSM inspected it again on Apr. 15-16, 1980, after receiving a complaint from downstream landowner Crutchfield. OSM served Universal with Notice of Violation No. 80-4-4-6 by mail on Apr. 24, 1980. The notice alleged that Universal had "failed to minimize disturbance to the prevailing hydrologic balance" in violation of 30 CFR 715.17, and required Universal either to redesign and reconstruct the diversion channel or to return the stream to its original channel. In either case plans were to be submitted to and approved by the State no later than May 19, 1980, with construction to be completed within 21 days following State approval. Because of problems with the designs submitted, OSM modified the notice on Aug. 22, Aug. 29, and Sept. 18, 1980, to require specific designs and to give additional time for abatement.

¹ Act of Aug. 3, 1977, 91 Stat. 445, 30 U.S.C. §§ 1201-1328 (Supp. II 1978). All citations to the Act are to Supplement II 1978.

Universal did the work required under these modifications.

On Oct. 30, 1980, OSM modified the notice for a fourth time and required that Universal do abatement work within the stream channel off its permit area. Universal objected to this modification and filed an application for temporary relief with the Hearings Division. A hearing limited to temporary relief was held, and on Jan. 30, 1981, temporary relief was granted. All parties, including Intervenor Crutchfield, appealed from various parts of this decision and filed briefs.

Discussion and Conclusions

[1] In seeking review of this notice of violation, Universal filed one document entitled "Application for Temporary Relief." 43 CFR 4.1261 states that "[a]n application for temporary relief may be filed by any *party to a proceeding* at any time prior to decision by an administrative law judge." (Italics added.) This regulation is based on sec. 525(c) of the Act, 30 U.S.C. § 1275(c), which provides that:

*Pending completion of the [administrative] investigation and hearing required by * * * [sections 525(a) and (b)], the applicant may file with the Secretary a written request that the Secretary grant temporary relief from any notice or order issued under section 521 of this title * * * together with a detailed statement giving reasons for granting such relief. [Italics added.]*

Temporary relief is an extraordinary remedy that may be requested in a pending case. Therefore, a proper application for review of the

merits of a notice of violation, cessation order, or civil penalty must either precede or accompany an application for temporary relief. An application for temporary relief standing alone should be dismissed.

The Administrative Law Judge's acceptance of Universal's application for temporary relief can only be justified by construing pages 3 and 4 of the document as also being an application for review sufficient under 43 CFR 4.1164. Such applications, however, should conform to the requirements of the regulations; parties should not depend on our going to extra lengths to construe them as sufficient when they are not apparently so.

Universal has only sought review of modification 4 of the notice of violation. The Administrative Law Judge granted temporary relief from that modification on the grounds that Universal had shown that it was likely to succeed on the merits of its case.

[2] In reaching his conclusion, the Administrative Law Judge used the *Webster's* dictionary definition of "modification" to find that it can only decrease obligations, not increase or add new requirements. We do not agree. "Modification" under the Act and regulations encompasses any change, whether it increases or decreases obligations.²

² See, e.g., *American Telephone and Telegraph Co. v. FCC*, 503 F.2d 612, 613-14 (2d Cir. 1974):

"The petitioner urges that the FCC statutory power to 'modify' its requirements must be constructed to mean that the Commission has only the authority to shorten, but not to extend the public notice requirement. We are persuaded that the word 'modify' used in the

—Continued

The Secretary and his authorized representatives have the authority to issue notices of violation and cessation orders and to modify those notices and orders as experience and changing circumstances required.³ See sec. 521(a)(5) of the Act, 30 U.S.C. § 1271(a)(5). So long as a modification meets the specificity requirements of sec. 521(a)(5), it can change obligations in any way necessary to ensure compliance with the Act and regulations.⁴

[3] The Board notes, however, that modification 4 was written on Oct. 30, 1980, 189 days after service of the original notice of violation.⁵ The modification states that all remedial work previously required was completed, and then orders abatement work not previously specified. Sec. 521(a)(3) of the Act, 30 U.S.C. § 1271(a)(3), provides that "a reasonable time but not

more than ninety days" shall be fixed for abatement of a violation. However that section might have been construed, 30 CFR 722.12(d) clearly states that "[t]he total time for abatement *as originally fixed and subsequently extended* shall not exceed 90 days." (Italics added.) The preamble to the initial program regulations states that the Secretary interpreted the Act as providing no authority to extend an abatement period beyond 90 days:

13. Numerous comments were received regarding the prohibition contained in § 722.12(c) [now (d)] of the proposed regulations against extending beyond 90 days the time for abatement as originally fixed and subsequently extended. It was stated that the 90-day limit will create unnecessarily harsh results especially when considered with the provisions of § 722.16 [now 722.17] relating to inability to comply. * * * Several commenters urge that such a result [extending the period beyond 90 days] is authorized by § 521(a)(3) of the Act.

* * * * *

These comments were rejected because § 521(a)(3) is interpreted as prohibiting the setting of an abatement time, initially or as extended, beyond 90 days. * * * Additionally, the legislative history of the Act clearly states that while an inspector may extend the initial abatement period, the total abatement period cannot exceed 90 days.

42 FR 62667 (Dec. 13, 1977).

Therefore, we hold that modification 4 of Notice of Violation No. 80-4-4-6 was not effective, and Universal is not required to comply with it. Since abatement previously ordered had been completed in this

statute plainly gives the FCC the power to alter or change the notice period whether it results in an increase or decrease of time involved." See also the numerous cases collected under "modify" in *27 Words and Phrases* 662 (1961) and the 1981 cumulative pocket part, as well as the definitions for "modification" and "modify" in *Black's Law Dictionary*, 905 (5th ed. 1979).

³ If a person objects to any modification, review of that modification is possible without regard to the underlying notice or order under 43 CFR 4.1162.

⁴ The Administrative Law Judge also concluded that OSM was without authority to order a permittee to take abatement action off the permit area and that such an order would force the permittee to engage in an illegal activity, i.e., to conduct surface coal mining and reclamation operations without a permit. The fact that this opinion does not reach these issues does not mean that the Board agrees with the Administrative Law Judge's conclusions.

⁵ This fact was not raised by the parties or addressed by the Administrative Law Judge.

case, OSM might have issued a new notice of violation requiring the same abatement as modification 4.⁶ OSM did not have authority, however, to extend the abatement period in this notice of violation beyond 90 days.⁷ The Jan. 30, 1981, decision of the Hearings Division is affirmed as modified in this decision.⁸

NEWTON FRISHBERG

Administrative Judge

WILL A. IRWIN

Chief Administrative Judge

ADMINISTRATIVE JUDGE MIRKIN CONCURRING:

Although I fully concur, even had the 90-day limitation not expired I would find it difficult to hold that OSM had anything to modify at the time it attempted the fourth modification. At that time Universal had completed everything it was asked to do. Had it not, there might have been something to modify. As it was, the only thing OSM had to

⁶ We do not decide whether such a notice would be upheld substantively after administrative review.

⁷ We note that this could be a rather harsh conclusion, in this case for OSM, and in other cases for a permittee. We feel, however, that it is compelled by 30 CFR 722.12(d).

⁸ Because of this disposition we do not reach the Administrative Law Judge's failure to make a finding as to whether the granting of temporary relief would adversely affect the health or safety of the public or cause significant, imminent environmental harm to land, air, or water resources. Such a finding is required by sec. 525(c)(3) of the Act, 30 U.S.C. § 1275(c)(3), and *Mauersberg Coal Co.*, 2 IB SMA 63, 87 I.D. 176 (1980).

We also do not address the Administrative Law Judge's decision on the merits in a temporary relief proceeding. Such a decision was vacated in *Cravat Coal Co.*, 2 IB SMA 136, 87 I.D. 308 (1980).

do was to admit the abatement required by the notice of violation and its first three modifications had been satisfied. If something were then still amiss, it would seem to me that issuing a new notice of violation would be the proper procedure.

MELVIN J. MIRKIN

Administrative Judge

ESTATE OF MATTHEW COOK

9 IBIA 52

Decided July 29, 1981

Appeal from order determining heirs by Administrative Law Judge Robert C. Snashall.

Reversed.

1. Indian Probate: Divorce: Indian Custom

Where no evidence was received at probate hearing to show the customs of any Indian tribe concerning regulation of the domestic relations of members of the tribe, a ruling by an Indian probate Administrative Law Judge that he could officially notice the existence of divorce by Yakima tribal custom was error. Since no evidence was offered to show that decedent, who was of Nez Perce and Yakima ancestry, and appellee, of Alaskan Native descent, lived in tribal relations under the jurisdiction of the Yakima tribe, it was error to conclude they were nonetheless married in accordance with Yakima customary law.

2. Indian Probate: Marriage: Common Law and Indian Custom Distinguished

A holding that decedent and appellee were married by operation of tribal custom based upon a conclusion that the

July 29, 1981

birth of nine children to the couple required a finding they were married was erroneous where the record affirmatively showed decedent was married to another woman at the time of his cohabitation with appellee.

APPEARANCES: Tim Weaver, Esq., for appellant Mary Cook Jack; Kurt Engelstad, Esq., for appellee Sarah Peele Cook.

*OPINION BY
ADMINISTRATIVE JUDGE
ARNESS*

*INTERIOR BOARD OF
INDIAN APPEALS*

Following decision by this Board on May 5, 1978,¹ a rehearing in the probate of decedent Matthew Cook's estate was held on June 21, 1979, to receive evidence concerning the marital status of decedent at the time of his death in 1976. On Nov. 16, 1979, the Indian probate Administrative Law Judge affirmed his original order of June 27, 1977, declaring that appellee Sarah Peele Cook was married to decedent by operation of an Indian custom marriage established in 1946 and continuing until decedent's death.

Evidence taken at the rehearing, including testimony from appellee, establishes that appellee met decedent at Portland, Oregon, in 1945 (or possibly earlier) and they began to live together in Celilo Falls in 1945. From 1945 until 1953 they lived continuously together in Celilo Falls, and at Vancouver,

Washington; Gresham, Oregon; and Ketchikan, Alaska. Appellee bore decedent nine children. Appellee and decedent were separated intermittently for 4 years beginning in 1953, during which time appellee bore a child by another man. At the time of decedent's death appellee was living in Alaska and had been separated from decedent for about 3 years. Appellee testified that she was unfamiliar with the concept of marriage by tribal custom, but considered that she and decedent were married by operation of common law, since it was her belief that the State of Alaska recognized common law marriage.²

Decedent married Irene M. Bruno in a civil ceremony at The Dalles, Oregon, on Sept. 24, 1943. The marriage was terminated by divorce decreed by an Oregon circuit court on Jan. 7, 1957. (According to the decision below, it was in fact terminated prior to 1946 by way of an "Indian custom" divorce.)

The testimony at rehearing establishes that no Yakima Indian wedding ceremony was celebrated for decedent and appellee. However, the record is silent concerning specific customs of the Yakima tribe concerning domestic relations. There is no dispute that on Dec. 16, 1953, the Yakima governing body enacted a

² Tr. 32-33. The record does not establish the dates when decedent and appellee lived in Alaska. It appears they were there for 11 months sometimes after the birth of the child Elizabeth in 1952. Contrary to appellee's belief, the State of Alaska did not allow marriage by common law in the 1940's or 1950's, nor anytime thereafter. See Alaska Stat. § 25.05.011.

¹ *Estate of Matthew Cook*, 7 IBIA 62 (1978).

written law respecting domestic relations. Neither party relies upon the Dec. 16, 1953, tribal enactment, which, although not in the record, has been previously characterized by the Department as precluding marriage or divorce by Indian custom, and it appears that both parties take the position that whatever changes it made in the customary law are not relevant here.³

³ The authority of the tribe to regulate domestic affairs is recognized by the Department at 25 CFR 11.28, *Tribal custom marriage and divorce*. For an exposition of the principles involved in terms of congressional policy, see *United States v. Quiver*, 241 U.S. 602, 605-606 (1916). The trier of fact below, commenting upon the Board's prior decision upon remand, stated at the hearing (Tr. 3): "If, however, their language that they used means what it simply states, that you have to prove in each case what the law of the Yakima Tribe was at the time when somebody supposedly went through one of these [Indian custom marriage or divorce] that's absurd because we've gone through probably two hundred thousand of these cases where there are Indian custom divorces on the Yakima Reservation and they are all of them quite explicit as to what has to be done to satisfy it." The Board's decision did, in fact, mean exactly what it said. Since Indian probate proceedings are required to conform to the strictures of the Administrative Procedures Act, Act of Sept. 6, 1966, 80 Stat. 378, 387 (6 U.S.C. § 557) (1976), concerning the perfection of a record sufficient to support the decision of the employee conducting the initial hearing, any decision determining heirship which is based upon a finding that there was an Indian custom marriage or divorce must be supported by a record which contains proof of the custom relied upon. It is not sufficient that the factfinder be satisfied in his own mind that there is such a custom and that it was effectively relied upon by the parties in a particular instance.

If and when the Administrative Law Judge adjudicates a case in which proof of specific Yakima tribal customs regarding divorce or marriage is established, including the factor or factors commonly looked upon by the tribe and tribal members as necessary to consummate a custom marriage or divorce, reliance on such an adjudication in other cases, when properly noticed to the parties, would not be objectionable.

The record is also silent concerning actions indicating decedent's recognition of tribal jurisdiction over his domestic affairs or the degree of control exercised over him by the tribe. It appears decedent was born in Idaho, at some distance from the Yakima Reservation. Although decedent was an enrolled member of the Yakima tribe, agency records indicate he was "1/4 Yakima, 5/8 Nez Perce, 1/8 white." It is established that prior to 1945 he served in the U.S. Army and later worked for a railroad. His financial dealings were conducted with commercial banks in Vancouver, Washington, rather than with the Yakima tribe. He appeared in a child custody contest in a state court divorce action brought against him by Irene M. Bruno. The only evidence concerning decedent's conformity to tribal customs of the Yakima tribe was elicited from a witness who identified himself as a member of the "Shoshone-Bannock" tribe. He testified that tribal domestic custom was a "family affair" concerning which there was no consensus.

The Administrative Law Judge held that decedent had divorced Irene M. Bruno prior to 1953 according to customs of the Yakima tribe and had married appellee in 1946 by operation of tribal customary law and that this second marriage continued until decedent's death in 1976. Underlying the Administrative Law Judge's holding that appellee is decedent's widow is his opinion that "it would be absurd

to hold that 30 years of living together and nine children are not substantial evidence of an intended marital situation."⁴ This conclusion rests upon a previous finding that "no showing is necessary as to what constitutes an Indian custom divorce (or marriage) under said tribal law as this forum takes judicial notice of the myriad cases defining and explaining what constitutes such actions under said tribal law * * *." This premise and stated conclusion are error which require reversal of the order determining appellee to be an heir of decedent.⁵ This reversal is not surprising inasmuch as the Board's prior order of May 5, 1978, expressly remanded this case to the Administrative Law Judge for, *inter alia*, failure to adduce "with any specificity what factors were regarded as necessary

to effect an Indian custom divorce prior to December 16, 1953."

[1] While there are many cases, most of them old,⁶ which discuss the recognition which the Department must give to the customary laws of the various tribes, there are few cases which discuss the actual laws of the tribes themselves. The questions which arise in cases where it is asserted that there had been a marriage or divorce by tribal customary law are questions of conflict of laws, as Cohen points out in the *Handbook of Federal Indian Law* at page 120:

[T]he state has no power over the conduct of Indians within the Indian country, whether or not the conduct is of special concern to the Federal Government. Thus Indian marriage and divorce * * * are matters over which the state cannot

⁴ Order dated Nov. 16, 1979, page 2. The reported cases contain very little explanation or description of tribal customs. (Compare, in contrast, the unreported decision of Administrative Law Judge Patricia McDonald in the matter of the *Estate of San Juanito Toledo, or Fatty, or Ush You Holy Wot*, Indian Probate No. IPGA 21G 76 dated Aug. 10, 1979). One source for discovering tribal customs is found in anthropologic works such as *The World of the American Indian*, National Geographic Society (1974), where various marriage customs of different tribes are discussed (see pp. 90, 95, 104, 117, 124, 162, 169, 180, 227, 286, 291). The anthropologic studies reported indicate great variety in the marriage customs of the tribes. Tribal elders are also a source of such evidence.

⁵ The Nov. 16 order also recites that the evidence "on the question to be determined" was "at best equivocal and conflicting." Despite this finding, which requires a conclusion that there was a failure of proof, the order then finds that a continuing marriage was proved by a "preponderance of the evidence." Such a finding and conclusion are incorrect as a matter of law. (See Administrative Procedure Act, Act of Sept. 6, 1966, 80 Stat. 386, 5 U.S.C. § 556(d) (1976), *as amended*.)

⁶ For example, *Cohen's Handbook of Federal Indian Law* (1941), notes at page 138 and fn. 121 that:

"Recognition of the validity of marriages and divorces consummated in accordance with tribal law or custom is found in numerous cases:

Johnson v. Johnson, 30 Mo. 72 (1860); *Boyer v. Dively*, 58 Mo. 510 (1875); *Earl v. Godley*, 42 Minn. 361, 44 N. W. 254 (1890); *People ex rel. LaForte v. Rubin*, 98 N. Y. Supp. 787 (1905); *Ortley v. Ross*, 78 Nebr. 339, 110 N. W. 982 (1907); *Yakima Joe v. To-is-lap*, 191 Fed. 516 (C. C. Ore. 1910); *Oyr v. Walker*, 29 Okla. 281, 116 Pac. 931 (1911); *Buck v. exercise control, so long as the Indians concerned remain within the reservation. [Footnotes omitted.]

The discussion of tribal regulation of domestic relations appearing at page 137 of the *Handbook* considers the nature of Indian custom marriage and divorce, observing in a pertinent analysis that:

The Indian tribes have been accorded the widest possible latitude in regulating the domestic relations of their members. Indian custom marriage has been specifically recognized by federal statute, so far as such recognition is necessary for purposes of inheritance. [Act of Feb. 28, 1891, 26 Stat. 794, 795 (25 U.S.C. § 371 (1976))] Indian custom marriage and divorce has been generally recognized by state and federal courts for all other purposes. Where federal law or written laws of the tribe do not cover the subject, the customs and traditions of the tribe are accorded the force of law, but these customs and traditions may be changed by the statutes of the Indian tribes. In defining and punishing offenses against the marriage relationship, the Indian tribe has complete and exclusive authority in the absence of legislation by Congress upon the subject. No law of the state controls the domestic relations of Indians living in tribal relationship, even though the Indians concerned are citizens of the state. [Footnotes omitted.]

Prior decisions by the Department uniformly hold that the burden to prove a marriage or divorce by operation of Indian custom is on the proponent of the claimed marriage or divorce. To satisfy established evidentiary requirements there must be proof offered to show the customs of the tribe concerning the domestic relations of its members (especially so, where, as here, a party has requested an opportu-

nity to show evidence contradicting an agency decision which rests on official notice of Indian customs).⁷ It must also be shown that the marriage partners were "living in tribal relations," that is, a sufficient connection between the parties and a particular tribe must be shown to have existed in order to give the tribal government an interest in, and control over, the marriage and the parties to the marriage, much in the same way that a divorce action in a state court must be based upon an alleged and proved jurisdiction over the subject matter and the parties to a divorce proceeding.⁸ As was the Administrative Law Judge, appellee in this case and her counsel were on notice through the Board's remand order that any party intending to prevail as an heir of the decedent based on evidence of an Indian custom marriage or divorce should be prepared to establish the existence of the customs in question and compliance therewith. This the appellee failed to do.

Finally, decedent's known conduct of his affairs is inconsistent with a finding that he intended to live according to tribal custom. He married according to state law, and sought to obtain child custody benefits from a divorce action involving

⁷ See Act of Sept. 6, 1966, 80 Stat. 387, 5 U.S.C. § 556(e) (1976). The pertinent part of the statute provides: "When an agency decision rests on official notice of a material fact not appearing in the evidence in the record, a party is entitled, on timely request, to an opportunity to show the contrary." (The APA controls Indian probate proceedings. *Estate of Ireland*, 1 IBIA 67, 78 I.D. 66 (1971).)

⁸ *Estate of Humpy*, 7 IBIA 118, 86 I.D. 213 (1979).

his marriage to Irene M. Bruno by active intervention in a state divorce proceeding. Nothing in the record indicates that he gave similar credence to the customary domestic relations laws of the Yakima tribe, or that he knew what the tribal customs were.⁹

[2] The opinion below confuses Indian custom marriage with common law marriage. The Administrative Law Judge states the issue before him concerning the marital status of decedent to be (Tr. 9-10): "What we need to establish here is whether there was a common law or Indian custom marriage or an actually Anglicized-type marriage here." Common law marriage is a creature of state law, as is the civil marriage apparently referred to by the trier of fact. Indian custom marriage is a creature of tribal law: Thus, one cannot presume that a tribe recognized marriage based simply upon a projection of current American domestic relations law without proof of the mechanics of that recognition.¹⁰ There is an unstated reasoning by analogy to principles of American domestic relation law

present in the fact-finder's conclusion that a marriage should be presumed from the birth of nine children which is without foundation in fact in the record. Since decedent was still married to another at the time he fathered appellee's children, neither a presumption that there was a marriage based upon common law principles nor an inference that unknown Yakima custom would have reached a similar result can support the findings made by the Administrative Law Judge. Decedent was married in 1943 to another woman from whom he was not divorced until 1957. The record fails to show that decedent and appellee took any action to enter into a marriage after decedent's 1957 divorce. While it is conceivable that, in a given instance, a tribe's customs may result in recognition of marriage in situations identical to those which the common law of a state recognized to result in marriage, such a concordance needs to be proved.¹¹ It was not proved in this case. Nor can appellee be found to be the surviving spouse of decedent by virtue of a common law marriage. None of the states in which decedent and appellee cohabited (Oregon, Washington, and Alaska) allow marriage by common law.¹²

⁹ Implied in the decision below is an assumption that a general and uniform Indian custom marriage or divorce custom prevails throughout North America. Contrary to this assumption, each tribe that regulates domestic relations matters is exclusive to itself, in the same manner as the states of the United States exercise exclusive jurisdiction over domestic relations in their respective jurisdictions. Thus, the customs of a tribe said to control a particular marriage must be proved to support a finding of marriage (or divorce). *Estate of Humpy*, above n.6.

¹⁰ *Estate of Roubedeaux*, 7 IBIA 254 (1979); *Estate of Toobisgah*, 4 IBIA 189, 82 I.D. 541 (1975).

¹¹ *Estate of Senator*, 2 IBIA 102, 80 I.D. 731 (1973). In *Senator*, this Board reversed an order containing language almost identical to that used by the fact-finder below. The Board held there, as it does here, that a showing of "mere cohabitation" may not be equated to marriage.

¹² Alaska Stat. § 25.05.011; Or. Rev. Stat. § 106.041; Wash. Rev. Code § 26.04.120.

The facts of record suggest decedent was a contemporary member of American society who generally lived in the state community by which he was surrounded. He and appellee, while they had some contacts with the Yakima tribe, and were both of Indian descent, were not proved to be so immersed in the Yakima culture and society that they could be said to have been living in "tribal relations" as that term has been used to define persons controlled and affected by tribal customary law. No evidence tending to show either decedent's divorce from Mrs. Bruno prior to 1957 or marriage by Indian custom to appellee was offered at the probate hearing. It is concluded appellee was not married to decedent at the time of his death.

Pursuant to the authority delegated to the Board of Indian Appeals by the Secretary of the Interior, 43 CFR 4.1, the decision appealed from is reversed. The Administrative Law Judge is directed to amend the order determining heirs by deleting the name of appellee from the list of persons eligible to inherit.

This decision is final for the Department.

I CONCUR:

WM. PHILIP HORTON
Chief Administrative Judge

TED DILDAY

56 IBLA 337

Decided July 30, 1981

Appeal from decision of the Idaho State Office, Bureau of Land Management, declaring unpatented mining claims abandoned and void. I MC 42835 through I MC 42850.

Affirmed as modified.

1. Federal Land Policy and Management Act of 1976: Recordation of Affidavit of Assessment Work or Notice of Intention to Hold Mining Claim—Mining Claims: Abandonment

Deficiencies under the regulations in the content of an affidavit of assessment work or notice of intention to hold filed with the Bureau of Land Management with respect to an unpatented mining claim may be considered curable and do not result in a conclusive presumption of abandonment of the claim where the filing meets the requirements of sec. 314 of the Federal Land Policy and Management Act of 1976, 43 U.S.C. § 1744 (1976).

2. Federal Land Policy and Management Act of 1976: Recordation of Affidavit of Assessment Work or Notice of Intention to Hold Mining Claim—Mining Claims: Abandonment

With respect to the unpatented mining claims located after Oct. 21, 1976, the fact that the requirement for performing assessment work under the mining law has not yet accrued does not obviate the necessity of filing either notice of intention to hold the claim or evidence of assessment work with the local recording office where the notice of location is recorded and a copy thereof with the Bureau of Land Management prior to Dec. 31 of the year following the calendar

year in which the claim was located under sec. 314 of the Federal Land Policy and Management Act of 1976, 43 U.S.C. § 1744 (1976).

APPEARANCES: Ted Dilday, pro se.

*OPINION BY
JUDGE GRANT
INTERIOR BOARD OF
LAND APPEALS*

Ted Dilday appeals from a decision of the Idaho State Office, Bureau of Land Management (BLM), dated Jan. 16, 1981, as later modified by a decision dated Feb. 12, 1981, declaring the appellant's unpatented mining claims, I MC 42835 through I MC 42850, abandoned and void for failure to properly file evidence of assessment work or a notice of intention to hold the claims as required by sec. 314 of the Federal Land Policy and Management Act of 1976 (FLPMA), 43 U.S.C. § 1744 (1976), and regulations at 43 CFR 3833.2 and 43 CFR 3833.4(a).

Appellant's mining claims were located on Sept. 1, 1979, and recorded with BLM on Oct. 24, 1979. In its decision dated Jan. 16, 1981, BLM erroneously declared appellant's mining claims abandoned and void because he failed to file notice of intention to hold the subject claims or evidence of assessment work on or before Oct. 22, 1979. For unpatented mining claims located after Oct. 21, 1976, sec. 314 of FLPMA and the regulations adopted thereunder require filing with

BLM of a notice of intention to hold or proof of assessment work on or before December 30 of the year following the year in which the claim was located—Dec. 30, 1980, in this case. 43 U.S.C. § 1744(a) (1976); 43 CFR 3833.2-1(c). When the error in this decision was brought to the attention of BLM, an amended decision of Feb. 12, 1981, was issued modifying the earlier decision. The latter decision stated in part:

Your Notice of Intention to hold your unpatented mining claims was not filed properly. In order to have a valid Notice of Intention, you should have filed a copy of a letter signed by the owner and recorded in the county recorder's office. * * * Your Notice of Intention did not include the statements as set forth in [43 CFR 3833.2-3(a)(1) (iii), (iv), and (v)].

Reference to the case file discloses that the documents submitted by appellant as notices of intention to hold are copies of lists supplied to him by BLM which give the names and corresponding serial numbers assigned to each of his 16 Wooden Nickel claims. In the upper right-hand corner appellant's name and address appear in script. At the bottom of the same page someone, presumably appellant, has printed "INTEND TO HOLD." There is no indication on the documents themselves that they have been recorded in the county recorder's office.

Appellant asserts in his statement of reasons for appeal that no proof of labor was required to be

filed with the BLM for the subject claims for the assessment year from Sept. 1, 1979, to Sept. 1, 1980, because under the mining law assessment work is not required until the first assessment year commencing after location of the claims which would be the assessment year running from Sept. 1, 1980, to Sept. 1, 1981. Further, appellant alleges that notice of intent to hold was not applicable because no deferment of assessment work was involved. Appellant contends that the copies of the location notices recorded with the county recorder's office should be accepted in lieu of proof of labor or notice of intention to hold for the discovery year.

[1] Sec. 314(a) of FLPMA, 43 U.S.C. § 1744(a) (1976), provides in pertinent part, that:

The owner of an unpatented lode or placer mining claim located after October 21, 1976, shall, prior to December 31 of each year following the calendar year in which the said claim was located, file the instruments required by paragraphs (1) and (2) of this subsection:

(1) File for record in the office where the location notice or certificate is recorded either a notice of intention to hold the mining claim (including but not limited to such notices as are provided by law to be filed when there has been a suspension or deferment of annual assessment work), an affidavit of assessment work performed thereon, on [sic] a detailed report provided by section 28-1 of title 30, relating thereto.

(2) File in the office of the Bureau designated by the Secretary a copy of the official record of the instrument filed or recorded pursuant to paragraph (1) of this subsection, including a description of the location of the mining claim sufficient to locate the claimed lands on the ground.

Thus, claimant is required by statute to file with local recording office where the notice of location is recorded either a notice of intention to hold the claim or an affidavit of assessment work and, further, to file in the proper BLM office a copy of the instrument filed in the local recording office prior to December 31 of the year following the calendar year in which the claim was located. The notice of intention to hold filed with BLM must be an exact legible reproduction or duplicate of the instrument filed for record in the local jurisdiction of the state where the claim is located and recorded. 43 CFR 3833.2-3; *Pacific Coast Mines, Inc.*, 53 IBLA 200 (1981). Although the notice which appellant filed with BLM is defective for failure to include a statement that the claim is held and claimed for the valuable mineral contained therein, a statement that the owners intend to continue development of the claim, and the reason that the annual assessment work has not been performed, as called for by the regulation at 43 CFR 3833.2-3(a)(1)(iii) through (v), these requirements go beyond the requirements of the statute and the deficiency is in the nature of a curable defect which would not support a conclusive presumption of abandonment under sec. 314 of FLPMA. See *Topaz Beryllium Co. v. United States*, Civ. No. 79-2255, slip op. at 6 (10th Cir. May 21, 1981); *Feldslite Corporation of America*, 56 IBLA 78, 81-82, 88 I.D. 634 (1981). However, in cases such as this one

July 31, 1981

where it is clear the notice submitted was not a copy of a notice of intention to hold the claim filed in the local recording office as required by the terms of the statute, the statutory filing requirements have not been complied with and the claim is conclusively presumed abandoned under sec. 314 of FLPMA. *See Pacific Coast Mines, Inc., supra* at 202.

[2] It is true, as appellant alleges, that the mining law does not require performance of assessment work until the assessment year commencing on the first day of September succeeding the date of location of the claim. 30 U.S.C. § 28 (1976). Thus, appellant was not required to perform assessment work until sometime during the year running from Sept. 1, 1980, to Sept. 1, 1981. However, this does not obviate the necessity for compliance with sec. 314 of FLPMA requiring filing of either an affidavit of assessment work or notice of intention to hold with both the local recording office and BLM by December 30 of the year following the calendar year in which the claim was located. *See Silvertip Exploration & Mining*, 43 IBLA 250, 252 (1979); *Charlie Carnal*, 43 IBLA 10, 12 (1979). The filing with BLM of a copy of the location notice filed with the local recording office cannot suffice as a notice of intention to hold the claim. *Don Sagmoen*, 50 IBLA 84, 86 (1980).

Therefore, pursuant to the authority delegated to the Board of Land Appeals by the Secretary of

the Interior, 43 CFR 4.1, the decision appealed from is affirmed as modified.

C. RANDALL GRANT, Jr.

Administrative Judge

WE CONCUR:

DOUGLAS E. HENRIQUES

Administrative Judge

JAMES L. BURSKI

Administrative Judge

CONSOLIDATION COAL CO.

3 IBSMA 228

Decided July 31, 1981

Appeal by Consolidation Coal Co., from a Dec. 2, 1980, decision by Administrative Law Judge Tom M. Allen in Docket No. CH 0-301-R upholding Notice of Violation No. 80-I-28-33 issued to the company for an alleged violation of 30 CFR 717.17(h)(2), failure to monitor certain hydrological aspects of underground mining in a manner approved by the regulatory authority.

Reversed.

1. Surface Mining Control and Reclamation Act of 1977: Hydrologic System Protection: Generally—Surface Mining Control and Reclamation Act of 1977: Underground Operations: Generally—Surface Mining Control and Reclamation Act of 1977: Words and Phrases

"Underground operations." Because of the definition of "underground operations" in 30 CFR 717.11(a)(1), the ground water monitoring requirements

of sec. 717.17(h)(1) and (h)(2) of 30 CFR do not apply to an inactive mine where the only underground activity is the mechanical removal of accumulated water.

APPEARANCES: Thomas L. Hindes, Esq., Office of the Field Solicitor, Charleston, West Virginia, Mark Squillace, Esq., Alice Hearst, Esq., and Marcus P. McGraw, Assistant Solicitor, Office of the Solicitor, Washington, D.C., for Appellee, Office of Surface Mining Reclamation and Enforcement; Daniel E. Rogers, Esq., Pittsburgh, Pennsylvania, for Appellant Consolidation Coal Co.

*OPINION BY THE INTERIOR
BOARD OF SURFACE MINING
AND RECLAMATION
APPEALS*

The question presented for our review in this case is whether 30 CFR 717.17(h)(2) applies to an inactive underground mining operation. For the reasons set forth below, we hold that the regulation did not apply to this operation and we reverse.

*Factual and Procedural
Background*

The Administrative Law Judge decided this proceeding on the basis of a stipulation of facts and joint motion for judgment. The facts pertinent to our consideration are discussed below.

Consolidation Coal Co., (Consolidation) is the permittee of the Williams No. 98 underground coal mine near Wyatt, West Virginia. Consolidation ended active extraction

activities there in 1979, but left on the surface of the minesite a raw coal stockpile and a refuse disposal area that was subject to reclamation. On July 9, 1980, an inspector for the Office of Surface Mining Reclamation and Enforcement (OSM) issued Notice of Violation (NOV) No. 80-I-28-33 to Consolidation under the authority of the Surface Mining Control and Reclamation Act of 1977 (Act).¹ The NOV charged two violations of the Act and initial program regulations, only one of which is at issue in this appeal. The violation before us is an alleged failure to monitor ground water in accordance with 30 CFR 717.17(h)(2).

Consolidation had set up and was operating a system for removing accumulated water in the underground workings by piping it to an acid mine drainage treatment plant near Wyatt. Consolidation's purpose in doing so was to relieve water pressure buildup in the old workings because that presented a danger to Consolidation's operation of an adjacent active mine. The water in the mine came from two sources, ground water naturally accumulating underground and water drained from a sedimentation pond which was receiving drainage from the surface area of the mine. Consolidation was aware of some characteristics of the water involved, including rate and direction of flow, levels within the mine, and quantity and quality of the water leaving the

¹ Act of Aug. 3, 1977, 91 Stat. 445, 30 U.S.C. §§ 1201-1325 (Supp. II 1978).

July 31, 1981

mine and the treatment plant, but it was not monitoring ground water by using wells that could adequately reflect changes in ground water quantity and quality, as specified by the cited regulation. Nor had it submitted any monitoring plan to the regulatory authority.

The Administrative Law Judge vacated the NOV in a decision issued on Dec. 5, 1980. He reasoned that since the Secretary had, in his view, indicated that a similar ground water monitoring requirement did not apply to underground mines during the permanent regulatory program, then 30 CFR 717.17(h) would not apply during the initial regulatory program.² In addition, he stated that the "unattended mechanical removal of water from the mine by a pump * * * can hardly be classed as underground coal mining operations."³

On Dec. 12, 1980, however, the Administrative Law Judge issued an amended decision vacating his earlier decision and affirming the notice of violation. He did so after receiving the Nov. 20, 1980, *Federal Register* containing comments that the Secretary was deleting only one of several monitoring requirements applicable to underground operations during the permanent regulatory program.⁴

Regarding the second reason for his December 5 decision, the Administrative Law Judge stated in his amended decision:

The fact that the underground mine had been closed for 11 months would not necessarily relieve the applicant from monitoring ground water as required by 30 CFR 717.17(h) (2) even though the activities being conducted at that time (mechanical removal of water from the mine by a pump) cannot be classed as an underground coal mining operation by the undersigned. [5]

Thus, although he did not change his view that merely pumping water from the mine was not an underground operation, the Administrative Law Judge did come to a different conclusion concerning the applicability of 30 CFR 717.17(h) (2). He did so, apparently, because of his belief that since there was "no completion of reclamation on the underground mine, or abandonment of the site, the provisions of 30 CFR 717.17(h) (2) must be complied with until otherwise permitted by a proper authority."⁶

Consolidation appealed.

Discussion and Conclusions

It is true that "[a]ll underground coal mining and associated reclamation operations conducted on lands where any element of the operations is regulated by a State shall comply with the initial performance standards of [Part 717 of 30 CFR] according to the time schedule speci-

² The Administrative Law Judge had based his view on a statement in the opinion of the U.S. District Court in *In Re: Permanent Surface Mining Regulation Litigation*, No. 79-1144, slip op. at 16 (D.D.C. May 16, 1980).

³ Dec. 5, 1980, decision in Docket No. CH 0-301-R at 5.

⁴ 45 FR 76933 (Nov. 20, 1980).

⁵ Dec. 12, 1980, amended decision in Docket No. CH 0-301-R at 1.

⁶ *Id.*

fied in § 710.11.”⁷ The time schedule specified there for all surface coal mining operations, including the surface impacts incident to an underground mine, requires a person to comply with the obligations of the initial regulatory program “until he has received a permit to operate under a permanent State or Federal regulatory program.”⁸ Alternatively, if mining and reclamation operations have been terminated, the obligation to comply with the initial performance standards ends when an operation is no longer subject to regulation by a state with respect to any requirements of the initial program.⁹

But in order for the monitoring requirements set forth in 30 CFR 717.17(h)(2) to apply to Consolidation, its operations must fall within the definition of “underground operations” contained in Part 717. That is because 30 CFR 717.17(h)(1) provides: “(h) *Ground water systems.* (1) *Underground operations* shall be conducted to minimize adverse effects on ground water flow and quality, and to minimize offsite effects. The permittee will be responsible for performing monitoring according to paragraph (h)(2) of this section to ensure *operations* conform to this requirement.” [Italics supplied.]

“Underground operations,” in turn, is specially defined in 30 CFR 717.11(a)(1). That section reads as follows: “(1) For the purposes of this part, *underground coal mining and associated reclamation opera-*

tions mean a combination of *surface operations* and *underground operations*. * * * *Underground operations* include underground construction, operation, and reclamation of shafts, adits, underground support facilities, underground mining, hauling, storage, and blasting.” (Italics in original.)

Thus, the monitoring requirements of 30 CFR 717.17(h)(2) are made applicable to underground operations, as defined in 717.11(a)(1), by 717.17(h)(1).¹⁰ In this context the issue becomes whether pumping water out of an otherwise inactive underground mine is an “underground operation.” We believe it is not. That activity is not sufficiently related to those included in 717.11(a)(1) to fall within the scope of that definition.

We conclude that 30 CFR 717.17(h)(2) did not apply to Consolidation’s Williams No. 98 mine when the notice of violation was issued.¹¹ We therefore reverse the Adminis-

¹⁰ The phrase “underground coal mining operations” in 717.17(h)(2) is not separately defined. A nearly identical phrase—“underground coal mining and associated reclamation operations”—is contained in 717.11(a)(1) and is defined there in terms of “underground operations.” It is therefore reasonable to interpret the operations covered by 717.17(h)(2) as underground operations within the meaning of 717.11(a)(1).

¹¹ We note OSM’s argument that, since Consolidation was pumping water from the Williams No. 98 underground mine to relieve pressure that potentially threatened operations at the adjacent active surface mine, the underground mine should properly be regarded as part of the disturbed area of that adjacent mine. Whatever the merits of that suggestion might be under other circumstances, in this case the notice of violation was not addressed to the adjacent surface mine or obligations under 30 CFR 715.17(h)(3). See *Old Ben Coal Co.*, 2 IBSMA 38, 87 I.D. 119 (1980). Similarly, other possible violations suggested by the facts of this case, e.g., of 30 CFR 717.17(l), are not before us.

⁷ 30 CFR 717.11(a).

⁸ 30 CFR 710.11(a)(3) (iii).

APPEALS OF PHILLIPS CONSTRUCTION CO.

IBCA-1295-8-79 & 1296-8-79

Decided July 31, 1981

Contract No. YA-511-CT7-163, Bureau of Land Management.

Appeals sustained and remanded.

1. Contracts: Disputes and Remedies: Termination for Default: Generally— Contracts: Performance or Default: Excusable Delays

Where the contractor established that a critical diesel fuel shortage prevented timely completion of the contract, and that such shortage was unforeseeable, beyond the control, and without the fault or negligence of the contractor or its subcontractors or suppliers, the Board held that the contractor proved excusable cause for delay.

2. Contracts: Construction and Operation: Notices

Where the Board found that the contracting officer had actual notice of the claim for delay based on a diesel fuel shortage, but declined to make the investigation required by Clause 5(d)(2) of the General Provisions of the Standard Form 23A construction contract because of the erroneous belief that a fuel shortage was

not a sufficient legal ground to justify an extension, the Board further found that the Government was not prejudiced by alleged untimely notice of delay and refused to foreclose the contractor from asserting the defense of excusable cause for delay.

3. Contracts: Disputes and Remedies: Jurisdiction

The Board held that since its jurisdiction is appellate only, it may not consider claims presented to it without such claims first having been submitted to the contracting officer for consideration and decision.

APPEARANCES: Milton Datsopoulos, Esq., Datsopoulos, McDonald & Lind, Missoula, Montana, for Appellant; William A. Perry, Department Counsel, Denver, Colorado, for the Government.

OPINION BY ADMINISTRATIVE JUDGE DOANE

INTERIOR BOARD OF CONTRACT APPEALS

Background

The subject contract was awarded to J. W. Phillips Construction Co. (Phillips, contractor, or appellant) of Missoula, Montana, by the Bureau of Land Management (BLM), on Sept. 16, 1977. The work to be performed consisted of reconstructing approximately 5 miles of existing road and constructing approximately 3 miles of new road, together with related work and appurtenances, pertaining to the Chamberlain Creek road in Powell County, Montana. The contract price was originally for \$228,947.85.

The completion time on the contract was initially 240 days, but by

subsequent contract modifications, including hunting season and winter shutdowns, the completion time was extended to 303 calendar days from the date of the notice to proceed on Sept. 30, 1977. The contract provided for liquidated damages at the rate of \$250 per day for each calendar day of delay beyond the date fixed for completion of the contract. There was some confusion in the record regarding the correct completion date. The contracting officer (CO), Mr. Johnnie Bubany, calculated the date to be July 23, 1979 (Tr. 65). The owner of the appellant, Mr. James W. Phillips, thought it was Aug. 15, 1979 (Tr. 124). Although the CO's authorized representative (COAR) referred to the July 23 date in his testimony (Tr. 22), he notified appellant on June 26, 1979, in instruction No. N-7, that as of June 22, 1979, there were 44 days remaining to complete the job. This would make the completion date Aug. 5, 1979.

It is undisputed that the construction season for 1979 commenced on May 15 at about which time a diesel fuel shortage developed nationwide and became especially critical in the State of Montana; that prior to that time, the work of the contractor had progressed relatively according to schedule; that after that time, until June 25, appellant did not work on the contract at all; that from June 25 to July 11 appellant obtained enough fuel to work only 11 days; that on July 10, 1979, the contractor wrote a letter addressed to the COAR with a copy to the CO requesting a 60-day extension of time because of the fuel shortage;

that on July 20, 1979, the CO issued findings of fact and decision whereby the requested extension was denied; and that on Aug. 3, 1979, the CO sent a telegram to the appellant terminating the contract for default.

The project was completed by Richard's Construction Co. of Seeley Lake, Montana, the subcontractor for Fireman's Fund Insurance Co., the surety for the appellant. This completing subcontractor performed the remaining work in approximately 25 days after mobilization, the completion date being Oct. 5, 1979 (Tr. 25).

The contractor filed two appeals with the Board. The first appeal, Docket No. IBCA-1295-8-79, is from the termination for default by the CO on Aug. 3, 1979, and is based on a theory of excusable cause for delay resulting from the diesel fuel shortage. The second appeal, Docket No. IBCA-1296-8-79, relates to seven claims for equitable adjustment totaling \$133,275.08, which appellant concedes (Appellant Brief at 25-27) were not submitted to the CO for decision.

The Termination for Default Appeal

The two principal issues raised by this appeal are: (1) whether appellant has made out a case of excusable cause for delay because of the diesel fuel shortage, and (2) whether appellant has been foreclosed from asserting such defense because of failure to give timely notice as required by Clause 5 of the General Provisions of the contract.

July 31, 1981

The pertinent subparagraphs of Clause 5 are as follows:

(d) The Contractor's right to proceed shall not be so terminated nor the Contractor charged with resulting damage if:

"(1) The delay in the completion of the work arises from unforeseeable causes beyond the control and without the fault or negligence of the Contractor, including but not restricted to, acts of God, acts of the public enemy, acts of the Government in either its sovereign or contractual capacity, acts of another contractor in the performance of a contract with the Government, fires, floods, epidemics, quarantine restrictions, strikes, freight embargoes, unusually severe weather, or delays of subcontractors or suppliers arising from unforeseeable causes beyond the control and without the fault or negligence of both the Contractor and such subcontractors or suppliers; and

"(2) The Contractor, within 10 days from the beginning of any such delay (unless the Contracting Officer grants a further period of time before the date of final payment under the contract), notifies the Contracting Officer in writing of the causes of delay."

The Contracting Officer shall ascertain the facts and the extent of the delay and extend the time for completing the work when, in his judgment, the findings of fact justify such an extension, and his findings of fact shall be final and conclusive on the parties, subject only to appeal as provided in Clause 6 of these General Provisions.

(e) If, after notice of termination of the Contractor's right to proceed under the provisions of this clause, it is determined for any reason that the Contractor was not in default under the provisions of this clause, or that the delay was excusable under the provisions of this clause, the rights and obligations of the parties shall, if the contract contains a clause providing for termination for convenience of the Government, be the same as if the notice of termination had been issued pursuant to such clause. If, in the foregoing circumstances, this contract

does not contain a clause providing for termination for convenience of the Government, the contract shall be equitably adjusted to compensate for such termination and the contract modified accordingly; failure to agree to any such adjustment shall be a dispute concerning a question of fact within the meaning of the clause of this contract entitled "Disputes."

The subject contract does contain a clause providing for termination for the convenience of the Government. It is Clause 18 which provides as follows:

18. Termination for Convenience of the Government

If not physically incorporated elsewhere, the clause in Section 1-8.703 of the Federal Procurement Regulations, or paragraph 7-602.29(a) of the Armed Services Procurement Regulation, as applicable, in effect on the date of this contract is hereby incorporated by reference as fully as if set forth at length herein.

The burden of proof questions raised by this appeal are well settled by the case law. Generally, the Government must prove the contractor's default, while the contractor must undertake the task of showing that the failure to perform was excusable under the terms of the contract. *Woodside Screw Machine Co., Inc.*, ASBCA 6939, (Feb. 27, 1962) 1962 BCA par. 3,308; *Racon Electric Co., Inc.*, ASBCA 8020, (Oct. 3, 1962) 1962 BCA par. 3,528. The contractor must show that the alleged cause of delay actually existed. *Larsen-Meyer Construction Co.*, IBCA-85 (Nov. 24, 1958), 65 I.D. 463, 58-2 BCA par. 1,987. He must then go on to allege and prove that the failure to complete the contract work on time was due to causes that were

unforeseeable, beyond his control, and that neither he, his subcontractor, nor his supplier were at fault or negligent. *Industrial Service & Engineering Co.*, IBCA-235 (July 28, 1960), 67 I.D. 308, 60-2, BCA par. 2,701; *Eagle Construction Corp.*, IBCA-230 (July 18, 1960), 67 I.D. 290, 60-2 BCA par. 2,703.

Evidence of a severe fuel shortage, particularly critical in the State of Montana during the construction season of 1979, was presented in the record by Exhibit 11 of the appeal file, consisting of various newspaper clippings, a letter from Deano's Truck Shop, appellant's principal supplier, and a letter dated Aug. 2, 1979, from appellant. The existence of the fuel shortage was corroborated by the testimony of James W. Phillips, owner of appellant (Tr. 102-44) and various representatives of petroleum products suppliers as follows: Clint Baertsch, general manager of Western Montana Cop (Tr. 71-77); Robert E. Tremper, Secretary-Treasurer of Tremper, Inc., a Conoco distributor (Tr. 88-92); and Dean Clinkenbeard, owner of Deano's, Inc., a self-service truck stop (Tr. 93-100). The testimony of these witnesses further established that, from approximately May 13, 1979, through the first week in August 1979, because of the fuel shortage, the fuel suppliers were required by a Department of Energy regulation to give priority allocation to farmers, ranchers, home heating customers, and loggers, and since construction was at the bottom of the priority list (Tr. 74) they were, therefore, unable to supply

diesel fuel to appellant for the construction project. All of the suppliers testified that the shortage was unforeseeable, beyond their control and the control of Phillips, and that Phillips had requested fuel on several occasions but had to be denied because of a reduced fuel supply of from 40 to 60 percent.

The Government argues that the principal reason Phillips could not get fuel from Western Montana Cop was not because of the shortage, but rather, because Phillips was in arrears on its account and that according to a Mr. Davis, a substation manager for Western, Phillips would have been serviced on a cash basis (Govt. Brief at 7-8). However, the Government did not produce Mr. Davis as a witness. The source of the allegation was the testimony of Mr. James Norris, the contracting officer's representative (COR), who testified that the conversation with Mr. Davis took place by way of a telephone call on Sept. 13, 1979, and a personal conversation with him on Sept. 18, 1979, which was after the termination for default on Aug. 3, 1979. Mr. Norris also testified that he received written notice of the claim of excusable delay on June 10, 1979 (Tr. 23) and that he did not make, nor was he requested to make an investigation of the fuel shortage prior to July 20th (Tr. 34, 35).

Mr. Johnnie Bubany, the CO, testified under direct examination (Tr. 56-60) that he had made an investigation of the question whether Phillips was delayed by a fuel shortage; that the investigation consisted of a telephone call to Mr. Al Heinle

July 31, 1981

of Western Montana Co-op on Sept. 14, 1979; that the fuel shortage was discussed; that Phillips was supplied by Western Co-op; that Heinle said there was a shortage of fuel with supply limited but that they were taking care of their customers; and that Heinle said he would confirm this in writing. Under cross-examination, Mr. Bubany admitted that his findings of fact and decision of July 20, 1979, denying appellant's request for a time extension of 60 days, were not based upon an investigation of the alleged fuel shortage, but rather, "on the contract documents and the Inspector's Log and the records and in accordance with Clause 5 of the contract General Provisions" (Tr. 60). He further testified that, as far as he was concerned, a fuel shortage was not excusable cause of delay (Tr. 61); and that that was why he did not investigate it between July 10 and July 20. When asked why he then made the telephone call to Western Co-op on September 14 after the fact, he responded that it was on advice of his solicitor (Tr. 62).

The testimony of the CO and his authorized representative, including the statement attributed to Mr. Davis regarding the availability of fuel to Phillips on a cash basis, was offset by the testimony of both Mr. Baertsch and Mr. Heinle of Western Montana Co-op.

Mr. Baertsch, the general manager, explained that Jim Phillips and his construction business had a business relationship with Western for 14 years in that Phillips bought part of his fuel, gasoline and oil, on

an off and on basis; that he valued the business relationship but that Phillips was not a regular customer with respect to diesel fuel; that he told Jim Phillips, when he made an effort to obtain diesel fuel during the period of the shortage, that Western had fuel available only for its present customers if any was left over after taking care of the agricultural accounts; and that if Jim had come in with a bag full of cash at that time he could not have supplied him with diesel fuel. With regard to the Davis statement, Mr. Baertsch stated that he did not know where Davis came up with it because Davis was a substation manager who "answers directly to me," and was instructed to take care of present customers and agricultural accounts and not to take any new accounts (Tr. 73-76).

Mr. Al Heinle, credit manager for Western Co-op, recalled the telephone conversation with Mr. Bubany, the CO, on Sept. 14, 1979, and testified that Mr. Bubany had requested him to write a letter to say that there was a shortage and also to say that Phillips had credit problems and that is why he (Phillips) could not get fuel. Mr. Heinle further stated that he told Mr. Bubany that he could not do that because "Mr. Phillips' credit has always been good." Mr. Heinle also testified that he did prepare the requested letter for the signature of Mr. Baertsch on the same day of the telephone conversation, but did not comply with the request to state that Mr. Phillips had credit problems because it was not true (Tr. 81-82). Under examination by the hearing

officer, cross-examination by Government counsel, and redirect examination by counsel for appellant, Mr. Heinle's testimony remained intact (Tr. 82-87).

A copy of the letter referred to by Mr. Heinle, dated Sept. 14, 1979, and addressed to the BLM at Denver, Colorado, was admitted into evidence without objection, as appellant's Exhibit 2, and reads as follows:

Gentlemen:

During the period May through August 1979 diesel fuel was denied Jim Phillips Construction of Missoula due to scarcity of commodity. First priority at that time was for agricultural purposes.

Very truly yours,

CLINT BAERTSCH

Manager

cc: Jim Phillips

Mr. Bubany was not recalled to the stand to rebut any of the testimony of appellant's witnesses. In fact, at the end of the hearing on this appeal, the Government offered no rebuttal evidence after being given the opportunity to do so.

The testimony of the suppliers regarding the unavailability of diesel fuel to Phillips preventing timely completion of the project was supplemented by extensive testimony of James W. Phillips, owner of Phillips Construction Co. He pointed out that he had been in business as a contractor since 1971, and that his principal supplier had been Western Montana Co-op until the spring of 1976, at which time Deano's Truck Stop began business; that Deano's was located close to his home and business operation and, therefore, he converted a large portion of his fuel purchases from Western Co-op to Deano's; that he

first learned of the fuel shortage at Deano's around the middle of May 1979; that in addition to contacting the suppliers who testified in an effort to obtain fuel, he also contacted Chuck Hart, the Chevron distributor and others, but none had fuel available for him; and that all the suppliers figured that the shortage was nothing to get excited about and they all advised him that they thought he could probably get fuel momentarily (Tr. 102-09). Among other things, Mr. Phillips also testified that his bonding company, after the termination for default, took over the completion of the contract by contracting with Richard's Construction Co., which was for completion of the new road and about \$10,000 worth of minor clean up work and a little shaping on the lower 5 miles of the project, for the contract price of \$125,000; that the result was that the completing contractor performed the remaining work on the project for \$115,000 which Phillips had subcontracted with Evensen, Inc., to do for the contract price of \$23,500 (Appellant Exh. 3) (Tr. 128-31).

[1] Based upon the evidence above-recited, together with our review of the entire evidence of record in this proceeding, we hold that the preponderance favors appellant, and find specifically as follows:

1. That during the construction season of 1979, from May 15 through the first week in August, a critical diesel fuel shortage occurred in the State of Montana which prevented appellant from timely completing the contract work; and

2. That the fuel shortage was un-

July 31, 1981

foreseeable, beyond the control, and without the fault or negligence of the contractor or its subcontractors or suppliers.

In consideration of the foregoing findings of fact, we conclude that appellant sustained its burden of proving that the failure to perform timely was caused by an excusable delay under the terms of the contract.

The Notice of Delay

The Board must now deal with the second issue of this appeal. The Government argues that appellant did not give the notice of delay to the contracting officer as required by Clause 5(d)(2) of the General Provisions of the contract, and by his failure to do so, lost his right to pursue a claim for excusable delay based on the fuel shortage. It is contended that appellant knew of the fuel shortage in May of 1979, but did not notify the CO that he considered himself being delayed because of it until July 10, 1979; that appellant's excuse for not filing the required notice was that he believed he had plenty of time in which to complete to work (Tr. 113); that the contractor sat on his rights for 56 days (May 15 to July 10) before giving the required notice; and that by this late date there was not enough time left to complete timely the contract work.

Appellant argues in effect that the contractor must notify the CO of any event, which he is alleging as excusable delay, within 10 days of the time from which the event will cause a delay in the completion

of work under the contract; that here Phillips estimated that he needed about 3 weeks to complete the contract in 1979; that this estimate turned out to be fairly accurate, since the evidence of record shows that 25 days were used by the completing contractor to finish the work; that if he had obtained the necessary fuel, he would have been able to complete the contract on or about August 4, 25 days from the date of the notice on July 10, and that, therefore, under such interpretation of Clause 5(d)(2), appellant complied with the notice requirement, since he believed the completion date to be August 15.

We recognize that there was some confusion in the record regarding the completion date, and, as previously discussed, we calculated the completion date to be Aug. 5, 1979. However, appellant also argues that the notice was sufficient on another ground. The contractor had discussed the fuel shortage with the COAR on at least four different occasions during the period May 15 to July 10, 1979, and on June 13, 1979, told the COAR that he had "about enough fuel to move around the yard," which quote, the COAR inserted into his daily log (Tr. 39). Appellant contends that the COAR thus had actual notice of the delay long before July 10 which should be imputed to the CO.¹

¹ Clause 1(b) of the General Provisions of the subject contract defines the term, "Contracting Officer," as follows: "The term 'Contracting Officer' as used herein means the person executing the contract on behalf of the Government and includes a duly appointed successor or authorized representative." See also *Environment Consultants, Inc. IBCA-1192-5-78* (June 29, 1979), 86 I.D. 439, 357, —Continued

We find it unnecessary to reach the merits of appellant's first argument and although we see merit in the imputed notice argument, neither need we rely on it for our finding in view of the testimony of the CO himself. Mr. Bubany admitted that he noted in May, and again in June, in the COAR's documents, the allegation of a fuel shortage (Tr. 65). He also testified under cross-examination (Tr. 62-63) as follows:

Q. So, the fact of the matter is, there was no investigation and no effort to determine whether there was a fuel shortage when you made your decisions as you recited in your letter of July 20, 1979?

A. As I stated earlier, I based my decision on the records and on the Inspector's Log and in the Inspector's Log I saw notations where Jim had claimed fuel shortage, but I did not have a request from Jim for a time extension other than the day of July the 10th when I got his letter for request for time extension. Prior to that it was all hearsay as far as I was concerned.

At Tr. 61-62 his testimony was as follows:

Q. Yes, you became concerned that you couldn't justify that decision, didn't you, Mr. Bubany?

A. No, I based my decision on Clause 5 of the contract; fuel shortage, as far as I was concerned, was not excusable cause of delay. It was something that I couldn't justify giving a contractor, Mr. Phillips, a time extension based on.

Q. Let's take that line of thinking.

A. Okay.

Q. Let's presume, as a hypothetical, that there was no question that there was a fuel shortage and that Phillips could not get fuel to proceed. Let's presume and assume that that is a fact. Okay, and that was what you had concluded, be-

tween July 10th and July 20th, 1979. Then, you are telling us that you still would have rejected his request for an extension?

A. Yes, sir.

Q. So, it is your position that you made a legal decision based on your knowledge of the contract that no matter whether there was or was not a fuel shortage, and even if there was one, Phillips did not have a right to an extension?

A. Yes, sir.

Q. Okay, and for that reason, you really didn't care whether there was a fuel shortage or not. That is why you didn't investigate it between July 10th and July 20th?

A. That's right.

[2] It is apparent to the Board, and we so find, that the CO in this case had actual notice of the claim for delay based on a diesel fuel shortage, but declined to make the investigation required by Clause 5 (d) (2), because he had erroneously decided that a fuel shortage was not sufficient legal ground to justify an extension. It is equally apparent, since the CO had actual notice, and we so find, the Government was in no way prejudiced by the failure of appellant to give written notice of the claim of excusable delay sooner than July 10, 1979.

In *Allied Contractors, Inc.*, IBCA-265 (May 16, 1961), 68 I.D. 145, 61-1 BCA par. 3,047, where a CO had actual knowledge of the weather conditions constituting the cause of delay the Board would not dismiss an appeal for noncompliance with the technical 10-day notice requirement of Clause 5 of the General Provisions of the Standard Form 23A construction contract.²

² Cf. *J.A. LaPorte, Inc.*, IBCA-1014-12-73 (Sept. 29, 1975), 82 I.D. 459, 481, 75-2 BCA par. 11,486 at 54,779 and 54,780, where this Board found that the 20-day notice provision

79-2 BCA par. 13,937 at 68,396, where the Board imputed any knowledge of a potential claim for extra costs of the COAR to the CO.

July 31, 1981

Likewise, we will not here, and particularly in the circumstances of this case, foreclose appellant from asserting the defense of excusable cause for delay simply because of the alleged technical inadequacy of the written notice.

Therefore, we hold that the CO improperly denied appellant's request for an extension of time within which to complete the contract, that appellant was wrongfully terminated for default, and that it is entitled to have the termination for default converted to a termination for the convenience of the Government.

Decision

Accordingly, it is the decision of this Board that the delay of appellant caused by the fuel shortage was excusable under the provisions of Clause 5(d) of the subject contract and that the termination for default be, and hereby is, converted to a termination for the convenience of the Government. The CO, or his successor, is directed to equitably adjust the contract to compensate appellant for the wrongful termination for default in accordance with the provisions of the Termination for Convenience Clause and the applicable regulations.

Appeal for an Equitable Adjustment of Claims

This appeal, treated by the Board and the parties as Docket No.

of the changes clause should not preclude consideration of a claim on the merits where no one action could be pointed to as the identifiable event from which the contractor's delay in presenting the claim could be measured.

IBCA-1296-8-79, involves seven claims for equitable adjustment totaling \$133,275.08. Although conceding that these claims were never submitted to the CO for decision, appellant makes several arguments to the effect that the Board has jurisdiction to decide the claims and should do so without the benefit of their consideration by the CO.

These arguments are substantially as follows:

1. Based upon the actions of the Government's agents in persuading the appellant not to file his claims until completion of the job, and then terminating the contract prior to appellant's completion, the Government has waived the requirement that the claims be filed with the CO prior to being heard by the Board.

2. Even if the Government has not waived its right to have claims made to the CO rather than the Board, it should be equitably estopped from asserting that the technical requirements of the contract bar a recovery of the claims, since all of appellant's claims were the direct result of action or omission by the Government or its agents.

3. It is proper for the Board to rule on the claims by virtue of two of the Board's own rules which provide: (a) "[T]he Board may in its discretion hear, consider and decide all questions of law necessary for the complete adjudication of the issue" and (b) "the rules will be interpreted so as to secure a just and inexpensive determination of appeals without unnecessary delay."

4. There is a question as to whether the CO has the authority to rule on claims under a contract which has been terminated, and the likelihood of the claims resurfacing before the Board is great.

5. The claims for additional contract work are claims which appellant was not given an opportunity to settle due to the improper termination by the CO. By terminating the contract, the CO has constructively denied all of appellant's claims, thus giving jurisdiction to the Board to adjudicate them.

In the alternative, appellant requests that the claims be remanded to the BLM CO with instruction for each to be given due consideration and that the contract be equitably adjusted in accordance with his findings.

[3] Government counsel contends that none of the five above-listed arguments of appellant have merit. He asserts that this appeal involves not simply a procedural matter, but a jurisdictional one. He points out that the Board has consistently held that its jurisdiction is appellate only and that it may not consider claims presented for the first time in the notice of appeal or documents filed thereafter with the Board. *VTN Colorado, Inc.*, IBCA-1073-8-75 (Oct. 29, 1975), 82 I.D. 527, 75-2 BCA par. 11,542; *A. S. Wikstrom, Inc.*, IBCA-466-11-64 (Mar. 23, 1965), 65-1 BCA par. 4,725. He further contends that under Clause 3(e) of the General Provisions of the contract, the contractor knew that he must submit any claims to the CO within 30 days

after the change occurred, or in any event, prior to final payment, and that appellant is also charged with knowledge of the Disputes Clause which required claims to first be decided by the CO (Clause 6(a)).

Government counsel also states in his brief, contrary to the assumption of appellant, that the Government's position is *not* that the claims are barred by appellant's neglect to follow the proper procedure, but only that they should first be submitted for decision to the CO. He suggests that the proper course to follow to cure the jurisdictional problem, without necessitating a possible future hearing before the Board, is to remand the claims to the CO for his consideration. By way of a footnote, counsel points out that since the hearing, Mr. Burbany has left BLM and that the successor CO is Mr. Edward Fritch.

We agree with both the arguments and the suggested course of action set forth in Government counsel's brief.

Decision

Wherefore, the claims for equitable adjustment submitted by appellant in this appeal to the Board are hereby remanded to the CO for consideration and decision.

OIL AND GAS WELLS

November 24, 1980

**WHETHER THE U.S. GEOLOGICAL
SURVEY MAY MAKE PUBLIC
CERTAIN INFORMATION ABOUT
OFFSHORE OIL AND GAS
WELLS***

M-36925

November 24, 1980

**Outer Continental Shelf Lands Act:
Oil and Gas Information Program:
Generally**

30 CFR 250.3, requiring the U.S. Geological Survey to release a lessee's well logs two years after they are submitted, is a reasonable exercise of the Secretary's discretion. It does not apply to the Survey's findings of producibility under OCS Order No. 4; such findings may consequently be released immediately.

The history and text of the 1978 Amendments show that "privileged or proprietary information" is a term to be defined by the Secretary after balancing competing interests of disclosure and confidentiality.

Freedom of Information Act

FOIA's exemptions do not prevent USGS from publishing its finding that a well is producible or from releasing well logs.

USGS finding that a well is producible is a central event in the operation of the Outer Continental Shelf Lands Act, *as amended*. Therefore, FOIA requires USGS to release this finding to the public.

Well logs and findings of producibility are not "trade secrets" within the meaning of 18 U.S.C. § 1905 (1976).

Sec. 1905 allows disclosures authorized by law. 30 CFR 250.3, promulgated pursuant to 43 U.S.C. § 1352(c) (Supp. II

1978) and the Administrative Procedure Act, is adequate authority for disclosure of a lessee's well log after a two-year period of confidentiality.

**OPINION BY OFFICE
OF THE SOLICITOR**

To: SECRETARY

FROM: SOLICITOR

SUBJECT: WHETHER THE U.S. GEOLOGICAL SURVEY MAY MAKE PUBLIC CERTAIN INFORMATION ABOUT OFFSHORE OIL AND GAS WELLS

You have asked for my interpretation of several statutes invoked by Exxon Co., U.S.A., and Shell Oil Co., in their appeals to the Director, U.S. Geological Survey (USGS). Exxon says that the Survey must keep confidential the Survey's findings that several of Exxon's wells are "producing", that is, are capable of producing oil or gas in paying quantities. Shell says that the Survey may not let the public see certain of its "well logs", that is, geological data and information on the wells Shell has drilled offshore. The Survey has kept these logs confidential for 2 years (as required by regulation), but now wishes to release them to the public. All the wells in these appeals are in the Gulf of Mexico.

Background

I began with Exxon's appeal. Under recently revised OCS Order No. 4, effective Jan. 1, 1980, lessees must apply to the USGS District

*Not in chronological order.

Supervisor for a determination of each new well's capability of producing oil and gas in paying quantities. Like former OCS Order No. 4, the current Order permits two methods by which this determination may be made: the first is by a production test, usually witnessed by a USGS representative; the second is by other evidence that the well is capable of production—technical data that are gathered and submitted by the lessee. Also like the former version of the Order, the current version ends the lessee's duty to file these applications once any well on the leased area is determined to be "producing". On a given lease, one determination that a well is producing is enough. Unlike former OCS Order No. 4, however, the current Order requires that each application be filed within 60 days after the drilling rig has been moved from the well; formerly, lessees could wait until the primary term of the lease neared its date of expiration.

Once the USGS has determined that a well is producing, it places this finding in three documents available for public inspection. One is a computer printout listing the status of each lease. Specifically, the printout reveals the lease number and describes each lease merely as being "producing" or "producing," or lists the date on which the lease is due to expire. The second document is a Monthly Report which contains two additional details: the well numbers of producing or producing wells, and whether it is oil or gas that has been

found. The Survey has listed new producing wells in this report since December 1970. The third is a "Field Names List," which lists producing leases in oil and gas fields. The Survey has been making this list public since Aug. 30, 1972. None of the documents reveals any of the technical data from which USGS has determined that a well is producing. None reveals the method used to determine productivity.

On Feb. 29 and Apr. 3, 1980, Exxon Co., U.S.A., wrote to the USGS, submitting technical data showing that one of its wells in the Gulf of Mexico is producing. In the letter dated April 3, Exxon asked that USGS not publish its determination that the well is producing, asserting that USGS had no right to release this "trade secret" without Exxon's consent. The USGS disagreed. However, USGS agreed not to publish its finding while Exxon's appeal to the Director, USGS, was pending.

The facts in Shell's appeal differ slightly from those in Exxon's. Shell drilled three exploratory wells on its lease in 1978. It gathered data and information from these wells, some of them in the form of well logs. Shell submitted copies of these logs, as required by 30 CFR 250.95, in May and June of 1978. Two years later, the Survey's Conservation Manager for the Gulf of Mexico proposed to release these logs to the public. Shell appealed this decision and was granted a stay by the Chief of the Conservation Division.

OIL AND GAS WELLS

November 24, 1980

CONCLUSIONS

The Survey's finding of producibility is neither proprietary information nor a trade secret. Because the finding is central to the operation of the Act, FOIA requires the Survey to disclose it. Well logs are not trade secrets. Although they do not have to be disclosed under the Freedom of Information Act, 30 CFR 250.3 is not unreasonable in permitting their release to the public at the end of two years. The Geological Survey is authorized to release both types of information involved in these appeals.

ANALYSIS

A Federal agency may not release information to the public if the release is "not in accordance with law." *Chrysler Corp. v. Brown*, 441 U.S. 281 (1979) (interpreting Administrative Procedure Act, 5 U.S.C. § 706(2)(A)). Consequently, I must determine whether the release of well logs and findings of producibility is barred by the Outer Continental Shelf Lands Act, the Trade Secrets statute, or the Freedom of Information Act. If not, I then must determine whether the Freedom of Information Act requires the release of this information.

1. *The Outer Continental Shelf Lands Act, As Amended.*

A. Agency Regulation Under the Original Act.

The Department of the Interior

was given authority over mineral leasing on the Outer Continental Shelf in 1953. Within a year, the Department issued substantive rules regulating how lessees drilled for and produced oil and gas. These rules were issued under the Secretary's general rulemaking authority in sec. 5(a) of the OCS Lands Act. 43 U.S.C.A. § 1334(a)(1) (1964).

Several of the rules required lessees to file data, including geological and geophysical data,¹ with the Survey. But only one rule offered confidential treatment. 30 CFR 250.34 required lessees to file a drilling plan with the Survey before drilling on their leases. Lessees had to include in the plan their scientific opinion on how the rock strata beneath the seafloor were arranged. These opinions were called "structural interpretations" and were to be based on "available geological and geophysical data." See. 250.34 (c) offered to keep some of these interpretations secret:

In order to protect the interests of the lessee, geological and geophysical interpretations *required by this section*, shall, upon request of the lessee, be classified as not available for public inspection until such time as the supervisor determines the release of such information is required and necessary for the proper development of the field or area. (Italics added.)

¹ See former 30 CFR 250.34, .37, .38, .92, and .93, 19 Fed. Reg. 2655-61 (May 8, 1954). Since 1954, it has become the fashion among geologists and geophysicists to refer to "data and information," giving different meanings to each.

19 Fed. Reg. 2658 (May 8, 1954). The language of the 1954 rules implied that all geological and geophysical data were available to the public and that interpretations required by other sections of the rules were also available.

In 1969, the Department revised many of these rules, again based on its general authority in sec. 5(a) of the Act. The Department dropped the limited confidentiality provision in § 250.34(c) and added a broad new § 250.97:

Geological and geophysical interpretations, maps, and data required to be submitted *under this part* shall not be available for public inspection without the consent of the lessee so long as the lease remains in effect or until such time as the supervisor determines that release of such information is required and necessary for the proper development of the field or area. (*Italics added.*) 34 Fed. Reg. 13548 (Aug. 22, 1969.)

Until 1974, however, the rules on reporting and disclosing geological and geophysical data applied only to companies holding offshore leases. Permittees—companies with exploration permits under sec. 11 of the Act—did not have to show their data to the Survey. But on December 16 of that year, the Department announced that future permits under sec. 11 would require explorers to give the Survey the geological and geophysical data and processed geophysical information that they gathered. The Department agreed to keep this data and information confidential for 10 years. The Department, however, did not require permittee to submit

their interpretations. 39 Fed. Reg. 43562 (Dec. 16, 1974.)

In 1976, the Department again revised its rules on disclosing this data and information to the public. Sec. 250.97, applying only to lessees, was given a new twist. All geological and geophysical data, information, and interpretations would be released when the lease expired. If the lease remained in effect, however, then all interpretations and all geophysical data and information would be kept confidential for 10 years after they were submitted. Geological data and analyzed information would be kept confidential for 2 years only. As in the past, the Survey could release anything to the public if the release was necessary for the proper development of the field. 41 Fed. Reg. 25893 (June 23, 1976.)²

This is the point at which the regulations stood when the 1978 Amendments were enacted. Until 1978, the Department based its authority to gather, withhold, and disclose data and information on its general authority under § 5(a). The Department's position was upheld in *Geophysical Corp. of Alaska v. Andrus*, 453 F. Supp. 361 (D. Alaska 1978), the only published decision on this issue.

B. Sec. 26 of the 1978 Amendments

The 1978 Amendments added a new sec. 26 to the original Act. As I have explained in Opinion M-36924, sec. 26 gives the Secretary

² The new rule for permittees also had new wrinkles. See 30 CFR 251.14, 41 Fed. Reg. 25897 (June 23, 1976).

OIL AND GAS WELLS

November 24, 1980

the right to see all geological and geophysical data and information gathered on the Outer Continental Shelf. It also adds a notion that was not expressed in the original Act, that of "privileged or proprietary information:"

The Secretary shall prescribe regulations to (1) assure that the confidentiality of privileged or proprietary information received by the Secretary under this section will be maintained, and (2) set forth the time periods and conditions which shall be applicable to the release of such information.

§ 26(c); 43 U.S.C. § 1352(c). The Act, *as amended*, does not define what the phrase "privileged or proprietary" means. So I must turn to the legislative history for instruction.

Early in the legislative history of the 1978 Amendments, the Congress recognized that disclosure of confidential industry information was one of the "major policy issues concerning the Outer Continental Shelf." 120 Cong. Rec. 30980 (Sept. 12, 1974) (remarks of Sen. Jackson). The early floor debate over Senate Bill 3221 revealed mild differences of opinion over what matter should be considered "proprietary:" Senator Buckley believed it meant both raw data and industry interpretation of that data; Senator Johnston believed that it meant just the interpretation. 120 Cong. Rec. 30984 (Sept. 12, 1974). But however it was to be defined; the definition of privileged or proprie-

tary information was to be the result of balancing the harms and benefits of disclosure. This was Senator Jackson's position. He stated it early in the debate, and it prevailed. See 120 Cong. Rec. 30981 (Sept. 12, 1974) (remarks of Senator Jackson) and Sen. Rpt. No. 95-284 at 46 (June 21, 1977).

Furthermore, the history of the 1978 Amendments shows Congress's intent that it is the Secretary who is to do the balancing. We can see this in the Senate's explanation of sec. 26:

Private parties using public resources for private profit should be required to make information they obtain about the resources available to the representatives of the public. At the same time, the value of this information to the individual explorer or producer is recognized. The provisions of S. 9 are designed to balance the public's interest in obtaining information about its resources and the public's interest in maintaining an active and competitive oil and gas industry. Sen. Rep. No. 95-284 at 46 (June 21, 1977).

This history is supported by other sections of the 1978 Amendments, in which the Congress has plainly left it to the Secretary to say what will be withheld and what revealed. Sec. 25(a)(3) requires the Secretary to make development and production plans public, "except for any privileged or proprietary information (as such term is defined by the Secretary)." 43 U.S.C. § 1351(a)(3). Similarly, sec. 18(g) requires the Secretary to keep confidential all privileged or proprietary data, ob-

tained for use in the oil and gas leasing program, "for such period of time as is provided for in the Act, established by regulation, or agreed to by the parties." 43 U.S.C. § 1344 (g). By not defining the meaning of "privileged or proprietary information" in sec. 26, Congress gave the Secretary the authority to define the term himself.

The Department has issued two regulations, as required by sec. 26 (c). One applies solely to permittees. See 30 CFR § 251.14, 45 Fed. Reg. 6351 (Jan. 25, 1980). The other, § 250.3, is based on the earlier § 250.97; it applies solely to lessees. See 44 Fed. Reg. 61895 (Oct. 26, 1979). The appeals by Shell and Exxon both concern information which the companies submitted as lessees.

The scope of sec. 250.3 is limited. It deals solely with disclosure of the geological and geophysical data and information which lessees have to provide to the USGS. Under this rule, all data and information will ultimately be released to the public; it is simply a question of when. The rule divides the data and information into three categories. The first is that gathered by geological or geophysical methods. The second separates information that is merely "processed" or "analyzed" from information that is "interpreted"—terms that have a relatively precise meaning to scientists. (See definitions in 30 CFR 250.2). The third category isolates certain OCS leases on which data are collected by "high resolution

systems." Depending on the category into which the data or information falls, they may be released after the lease ends, or after the specified period elapses (10 years, 2 years, 60 days), whichever is sooner. However, the rule allows the Director to release any data or information, if he finds that the release is "necessary for the proper development of the field." The effect of this section is two-fold. It bars release of the data and information for the specified time. But, once that time is up, the section requires the Survey to release the data and information.

Shell filed well logs early in 1978. Well logs are a type of analyzed geological information. 30 CFR 250.2(d). According to § 250.3(b), this information must be kept confidential for 2 years.³ The 2 years have now passed. Sec. 250.3 requires the Survey to release these logs to the public. In light of (i) the Survey's practices relating to the retention or disclosure of data of these types through the years and (ii) the statutory mandate for the Secretary to balance public and private interests, a regulation requiring disclosure after two years of data obtained by a lessee in the development of public resources appears to be well within the bounds of Secretarial discretion.

Exxon's case, does not fit into sec. 250.3 at all. Sec. 250.3 applies solely to geological and geophysical interpretations made by lessees. It does

³ Sec. 250.3 and its predecessor, § 250.97, are identical on this point.

OIL AND GAS WELLS

November 24, 1980

not apply to findings made by the Government. Just because Exxon happens to agree with the Survey's finding does not turn this finding into a confidential interpretation by Exxon. This point deserves some elaboration. To comply with OCS Order No. 4, Exxon filed several items, mostly well logs, with the Survey. These are analyzed geological information and ordinarily will not be released for 2 years. The Survey is not trying to release them now. After receiving these logs, the Survey's scientists reviewed them and made their own decision on whether each well was productive. Indeed, the Survey must make this finding on its own, because the discovery of oil and gas in paying quantities is a crucial event in the operation of the Act. It is a main element in the definition of when "exploration" ends and "development" begins. Compare 43 U.S.C. § 1331(k) with 43 U.S.C. § 1331(l). It determines whether sec. 25 of the Act applies to leases issued before the effective date of the 1978 amendments. 43 U.S.C. § 1351(a) (1). It also determines whether a lessee owes the federal government a "rental" or "minimum royalty." See OCS Lease form, §§ 4 and 5. 43 Fed. Reg. 44894 (Sept. 29, 1978). Lastly, the determination that there is a producible well on a lease is frequently a factor in the director's decision to issue a suspension of operations which keeps a lease alive past the date on which its

primary term would otherwise expire. See 30 CFR 250.12(b)(3) (iii) and (c)(1).⁴

The Secretary has balanced the interests of disclosure and confidentiality. His decision, reflected in § 250.3, is a reasonable one. Shell argues that this rule hurts its competitive position by releasing its logs prior to a lease sale in the area of its lease. The rule has taken this harm into account and has balanced it with the benefits Shell receives from the disclosure of its competitors' logs. The rule also takes into account the public benefit from disclosure: "greater and better informed competitive interest by potential producers in the oil and gas resources of the Outer Continental Shelf." S. Rep. No. 98-1140, 93rd Cong., 2d Sess. 114 (1974). Congress wants the Secretary to consider the benefit of releasing information before holding future lease sales in the area.

⁴ Exxon also argues that, by publishing its finding, the Survey reveals the criteria used to determine producibility, and thus reveals some confidential information. True, publication does reveal that Exxon has run a production test or has found at least fifteen continuous feet of producible sand. See OCS Order No. 4, § 2. But the Survey does not reveal which criterion it uses, the extent to which Exxon's evidence exceeds the minimum set by the criteria, or the depth at which the producing stratum lies. Nor does the Survey reveal whether the stratum has a high degree of natural permeability, or whether the lessee had to "fracture" it (with high pressure sand and fluid) to improve its permeability. Most importantly, the Survey makes its own reading of the logs, computes the necessary ratios, and makes its own interpretation. The independence of this finding from Exxon's own interpretation removes it from sec. 250.3.

The OCS Lands Act and the Department's regulations do not, therefore, bar the Survey from releasing well logs after 2 years or publishing its own findings.⁵ To prevail, Shell and Exxon must rely on some other law forbidding disclosure.

2. *The Trade Secrets Statute, 18 U.S.C. § 1905*

18 U.S.C. § 1905 provides:

Whoever, being an officer or employee of the United States or of any department or agency thereof, publishes, divulges, discloses, or makes known in any manner or to any extent not authorized by law any information coming to him in the course of his employment or official duties or by reason of any examination or investigation made by, or return, report or record made to or filed with, such department or agency or officer or employee thereof, which information concerns or relates to the trade secrets, processes, operations, style of work, or apparatus, or to the identity, confidential statistical data, amount or source of any income, profits, losses, or expenditures of any person, firm, partnership, corporation, or association; or permits any income return or copy thereof or any book containing any abstract or particulars thereof to be seen or examined by any person except as provided by law; shall be fined not more than \$1,000, or imprisoned not more than one year, or both; and shall be removed from office or employment. (*Italics added.*)

This statute is written in a scat-

tergun style; only two of its pellets appear to strike the issues in these appeals. Sec. 1905 prevents disclosure (unless authorized by law) of information which "concerns or relates to the trade secrets [or] operations" of anyone. This part of the statute appears to prevent the Department from releasing three types of information: trade secrets, information about operations, and information concerning or relating to trade secrets or information about operations. The wording of this part is peculiar. The term "trade secrets" is undefined, the phrase "information [about] operations" is not limited to confidential information, and the phrase "concerns or relates to" is broad enough to prevent the Department from saying that it has received a trade secret from someone. Before trying to reconcile this statute with the OCS Lands Act, we need to know more about the legislative history of sec. 1905.

A. Legislative History.

The current version of § 1905 was enacted as a part of the 1948 recodification of the Criminal Code, Title 18, United States Code. According to the House Report accompanying the recodification bill, sec. 1905 simply revised and recodified three existing nondisclosure statutes: a revenue statute, then codified at 15 U.S.C. § 216; a Commerce Department statute, then codified at 15 U.S.C. § 176(a); and a Tariff Commission statute, at 19 U.S.C. § 1335. The Congress intended that the recodification was not to change the

⁵ I note that the Department's regulations do not contain a definition of "privileged or proprietary information." Apparently, this is because §§ 250.3 and 251.14 are themselves functional definitions. Thus, for lessees, proprietary information is that which is withheld from the public under § 250.3. Therefore, now that the 2 years have passed for Shell's well logs, they are no longer "privileged or proprietary" under sec. 26.

OIL AND GAS WELLS

November 24, 1980

substance of these existing criminal provisions:

The bill makes it easy to find the criminal statutes because of the arrangement, numbering, and classification. The original intent of Congress is preserved. S. Rep. No. 1620, 80th Cong., 2d Sess. 1 (1948).

Stated differently, a revision was not a substantive amendment:

Revision * * * meant the substitution of plain language for awkward terms, reconciliation of conflicting laws, omission of superseded sections, and consolidation of similar provisions. H.R. Rep. No. 304, 80th Cong., 1st Sess. 2 (1947).

The Commerce Department statute has no bearing on these appeals. The phrase barring disclosure of information about "operations" comes from an early revenue statute. See Revenue Act of 1864, ch. 173, § 38, 13 Stat. 238, reenacted in Tariff Act of 1894, ch. 349, § 34, 28 Stat. 509. As codified in 1940, this statute prevented the unauthorized disclosure of two types of information. One was information on a person's "income return." The other was information about "the operations, style of work, or apparatus of any manufacturer or producer visited by [a revenue collector] in the discharge of his official duties." 18 U.S.C. § 216 (1940). This 1940 version is much more limited than the current version. The 1940 version lacks the imprecise phrase "concerns or relates to," and it is limited to information gathered by Government agents as they

perform their duties to collect revenue.

The phrase barring disclosure of trade secrets comes from the Tariff Commission statute, enacted in 1916 and revised slightly in 1930. See Revenue Act of 1916, ch. 463, § 708, 39 Stat. 756, at 798; Tariff Act of 1930, ch. 497, § 335, 46 Stat. 590, at 701. As codified in 1940, this statute prevented any Federal employee from making an unauthorized disclosure of the "trade secrets or processes" of anyone "embraced in any examination or investigation conducted by the [Tariff] commission." 19 U.S.C. § 1335 (1940). Again, the 1940 version is much more limited than the current version. The 1940 version protects the trade secrets only of persons under investigation by the Tariff Commission (now the International Trade Commission).

B. Scope of § 1905.

Nothing in the legislative history of the 1948 recodification shows that Congress meant to expand the scope of these three predecessor statutes. For this reason, the Department of Justice has directed me to view § 1905 "as being no broader in scope than the combined scopes of the three predecessor statutes."⁶ The general rule of interpreting a recodified statute is that, whenever the language has been unintentionally changed, the

⁶ Memorandum of Assistant Attorney General Babcock, June 21, 1979, page 6.

courts should follow the intent of the original language. The Supreme Court has followed this rule of interpretation in several cases, some of them involving the 1948 recodification of the Criminal Code. For example, in *Muniz v. Hoffman*, 422 U.S. 454 (1975), the Court ignored the apparently clear language of 18 U.S.C. § 3692 and denied petitioner's claim to a jury trial in a criminal contempt proceeding. Loosely speaking, sec. 3692 provides the right to a jury trial to anyone held in violation of an injunction issued under § 10(1) of the Taft-Hartley Act; but the Court ruled it did not. The law prior to recodification, sec. 11 of the Norris-La Guardia Act, was that jury trials were not required for violations of 10(1) injunctions. "Not a word was said in connection with recodifying § 11 as § 3692 of the Criminal Code that would suggest any such important change in the settled intention of Congress * * * that there would be no jury trials in contempt proceedings arising out of labor Act injunctions." *Id.* at 467. The Court based this conclusion on its review of the Senate and House Reports accompanying the 1948 recodification bill. The court has reached similar conclusion in *Alyeska Pipeline Co. v. Wilderness Society*, 421 U.S. 240, 255-56 n. 29 (1975) ("well-established principle governing the interpretation of provisions altered in 1948 revision is that 'no change is to be presumed unless clearly expressed'"); *Cass v. United States*, 417 U.S. 72,

82 (1974) (1962 recodification of Title 10); *Tidewater Oil Co. v. United States*, 409 U.S. 151, 161-62 (1972) (1948 recodification of Judicial Code, Title 28); *City of Greenwood v. Peacock*, 384 U.S. 808, 815 (1966) (1948 revision of Judicial Code); *United States v. Cook*, 384 U.S. 257, 260 (1966) (1948 recodification of Criminal Code); and *Fourco Glass Co. v. Transmirra Products Corp.*, 353 U.S. 222, 227 (1957) (1948 recodification of Judicial Code).

Using this limited interpretation of sec. 1905, I find that well logs and producibility findings are not covered. This information is not information about operations gathered by federal employees enforcing the tax laws. Nor is it the trade secret of a firm under investigation by the International Trade Commission.

C. A Broader Interpretation of § 1905

The revision of § 1905 might be distinguishable from the statutes in the *Muniz* and *Cook* cases. The Reviser's Notes on the *Muniz* statute said nothing about the change in the right to a jury trial. See H.R. Rep. No. 304, 80th Cong., 1st Sess. A 176 (1947). The Notes for the statute in *Cook* spoke only of "changes * * * made in phraseology." *Id.* at A63. But the Notes for § 1905 are more explicit:

Words "or of any department or agency thereof" and words "such department or agency" were inserted so as to eliminate any possible ambiguity as to scope of section. (See definition of "department" and agency" in section 6 of this title.)

OIL AND GAS WELLS

November 24, 1980

Id. at A127-A128. One may argue that this statement is evidence of Congressional intent to broaden the scope of § 1905.

I think such an argument is wrong. Both houses of Congress said their work preserved the original intent of the Congress. If the Reviser's Note contradicts this, we must honor the statement of the Congress. Furthermore, I do not think the Reviser's Note does contradict the two Congressional reports on the bill. The Note says the change was to eliminate ambiguity; the Note does not say that the change was meant to expand the scope of the predecessor statutes. Eliminating ambiguity is one of the duties of the Reviser. Making a substantive change in the law is not.

In interpreting § 1905, however, I must be especially cautious. The Attorney General issued two opinions in the 1950's which assumed (without comment) that § 1905 applied generally. See 41 Op. Atty. Gen. 166 (1953). (Reconstruction Finance Corp. is authorized by law to disclose financial statements); 41 Op. Atty. Gen. 221 (1955) (FCC is authorized by law to disclose stations' financial statements to Congress). On the assumption that § 1905 applies to information gathered by all agencies, I reach four conclusions. First, the Survey's finding of producibility is not covered by § 1905 because the section is not meant to keep the Government's decisions secret. Second, assuming that off-

shore oil and gas operations are "operations" within the meaning of § 1905, that section is superseded by the OCS Lands Act. The Act is the more recent and more specific expression of the will of Congress. The release of well logs does not violate the Act, so it cannot violate § 1905. Third, neither producibility findings nor well logs are "trade secrets." We must look to the Tariff Act of 1916 for the meaning of this term. According to the most authoritative opinion on the issue,

The term "trade secrets," as ordinarily understood, means an unpatented, secret, commercially valuable plan, appliance, formula, or process, which is used for the making, preparing, compounding, treating, or processing of articles or materials which are trade commodities.

United States, ex. rel. Norwegian Nitrogen Products Co. Inc. v. United States Tariff Commission, 6 F.2d 491, 495 (Ct. App. D.C. 1925) (information on the cost of production is not a trade secret within the meaning of § 708 of the Tariff Act).⁷ Geological informa-

⁷ *Rev'd on other grounds*, 274 U.S. 106 (1927). See also *Consumers Union of the United States v. Veterans Administration*, 301 F. Supp. 796, 801 (S.D.N.Y. 1969), appeal dismissed as moot, 436 F.2d 1363 (2d Cir. 1971).

One Court has suggested that the Supreme Court has adopted as federal law the definition of trade secret in the Restatement of Torts, 1939 edition. See *Union Oil Company v. FPC*, 542 F.2d 1036, 1044 (9th Cir. 1976) ("the Supreme Court has defined 'trade secret' as it applies to the patent laws," citing *Kewanee Oil Co. v. Bicron Corp.*, 416 U.S. 470 (1974)). This suggestion is incorrect. The Court in *Kewanee* merely summarized Ohio

tion is not a plan or formula, and it is not used for making materials.

Fourth, even if I assume that my second and third conclusions are wrong, I conclude that § 1905 nevertheless permits release of well logs. Sec. 1905 itself permits disclosure of trade secrets and other privileged information. This section merely prevents disclosure "to any extent not authorized by law." Agency regulations are an appropriate form of law to authorize disclosure, provided they meet the three-part test announced in *Chrysler Corp. v. Brown*, 441 U.S. 281 (1979). The USGS regulation, 30 CFR 250.3 meets this test as follows:

(i) The agency rule must be "substantive," as opposed to "interpretive:" that is, the rule must affect individual rights and obligations. 441 U.S. at 302. OCS Order No. 4,

trade secret law before deciding whether it conflicted with federal patent law.

The Restatement definition favors Shell's position. It would protect any "compilation of information" which gives the person "an advantage over competitors who do not know or use it." Restatement § 757, comment b. But this definition is inappropriate under § 1905. In discussing the meaning of "trade secret" under the Tariff Act of 1929, the Senate seemed to agree with the definition in *Norwegian Nitrogen*. See 71 Cong. Rec. 4563-67 (1929) (costs of production are confidential, but apparently not trade secrets). More significantly, Congress treated trade secrets and geological information as separate categories of exemption under the Freedom of Information Act. 5 U.S.C. § 552(b)(4) and (9). Most recently, Congress cited *Norwegian Nitrogen* as its definition of trade secret in the Government in the Sunshine Act. H. Rep. No. 94-800, Pt. I, 94th Cong. 2d Sess. 10 (1976). This Act has an exemption from the open-meeting requirement that is identical to FOIA's fourth exemption. Several courts have found § 1905 and FOIA's fourth exemption to be coextensive. See Clement, 55 Tex. L. Rev. at 605.

and 30 CFR 250.3 and 250.30 are all substantive rules. Their provisions must be obeyed; violations of them are punishable by civil and criminal penalties; (ii) the agency rule must be issued in accordance with any procedural requirement imposed by Congress. 411 U.S. at 312. The USGS non-disclosure rule was issued in strict compliance with the informal rulemaking requirements of the APA; (iii) the agency rule must be based on a Congressional grant of authority permitting the agency to disclose trade secrets and other privileged information. Congress, of course, rarely gives such authority expressly. But the Court ruled that it was enough if the authority can be reasonably inferred from the language and history of the statute. 441 U.S. at 306. See also 41 Op. Atty. Gen. 221, 228 (1955). The text and history of the OCSLA Amendments of 1978 give ample evidence that Congress wants information about OCS resources to be disclosed publicly. Sec. 26(c) is an express basis for disclosing confidential information. Accord *St. Mary's Hospital, Inc. v. Harris*, 604 F.2d 407 (5th Cir. 1979) (statute that says no disclosure "except as the Secretary of HEW * * * may by regulations prescribe" is a clear grant of authority to require disclosure of the annual cost reports of Medicare provisions.)

Thus, in my judgment nothing in the Trade Secrets Act precludes the Geological Survey from releasing well logs and producibility findings to the public.

August 5, 1981

3. *Freedom of Information Act (FOIA)*

FOIA permits agencies to withhold nine categories of information from public disclosure. Two of these categories are relevant here. The fourth category allows an agency to withhold "trade secrets and commercial or financial information obtained from a person and privileged or confidential." 5 U.S.C. § 552(b) (4). The ninth category allows an agency to withhold "geological and geophysical information and data, including maps, concerning wells." 5 U.S.C. § 552(b) (9).

Assuming, for the moment, that the information that USGS wishes to publish falls into either category, FOIA clearly does not stop the Survey from publishing it. The FOIA is exclusively a disclosure statute; its nine exemptions reflect Congress's concern with the government's need or preference for confidentiality. The act protects the submitter's interest in confidentiality only to the extent that the government endorses that interest. "Congress did not design the FOIA exemptions to be mandatory bars to disclosure." *Chrysler Corp. v. Brown*, 441 U.S. 281, 293 (1979).

The issue on the other side of this coin is whether the Department has the discretion to withhold well logs and producibility findings from the public. This information is not a trade secret, as I explained in Part 2C; so only the ninth FOIA exemption applies. Well logs obviously are geological information concerning wells, so

the Survey can withhold this information if it is requested under FOIA. Producibility findings, however, are different. As I noted in Part 1B, these findings are made by the Survey, not by the lessees. The publication of this finding reveals nothing certain about the information which the lessee has submitted. The lessee's information remains valuable, because the Survey keeps it confidential under 30 CFR 250.3. Furthermore, as I explained in Part 1B, the finding of producibility is a central event in the operation of the OCS Lands Act. If the public is to be able to judge whether the Department is fulfilling its duties under the Act, it has to know at the least whether individual leases are producible. FOIA requires the Survey to disclose at least this much information about producibility. *Department of the Air Force v. Rose*, 425 U.S. 352, 361 (1976) (purpose of FOIA is to open agency action to the light of public scrutiny).

CLYDE MARTZ

Solicitor

NORTHWAY NATIVES, INC.

6 ANCAR 1

Decided August 5, 1981

Appeal from the Decision of the Alaska State Director, Bureau of Land Management F-14912-A and F-14912-B.

Partial Decision; Affirmed in Part; Modified in Part.

1. Alaska Native Claims Settlement Act: Navigable Waters—Alaska: Navigable Waters: Generally

Where the Bureau of Land Management has redetermined that water bodies which are the subject of an appeal are navigable, and where the Board finds that the facts in the record upon which the Bureau of Land Management made its redetermination meet the essential elements of navigability, and where the facts in the record are undisputed so that no issue of fact as to navigability remains before the Board, then the Board will find the water bodies to be navigable.

2. Alaska Native Claims Settlement Act: Administrative Procedure: Decision to Issue Conveyance—Alaska Native Claims Settlement Act: Administrative Procedure: Publication

Redetermination by the Bureau of Land Management of navigability of water bodies while jurisdiction over the subject water bodies is in the Alaska Native Claims Appeal Board is not a "decision" of the Bureau of Land Management, and notice thereof is not required to be published pursuant to 43 CFR 2650.7.

3. Alaska Native Claims Settlement Act: Alaska Native Claims Appeal Board: Appeals: Dismissal

Absent reasons justifying continuance of an appeal as to a particular issue, an appeal will be dismissed when the appellant before the Board withdraws its appeal of that issue.

APPEARANCES: Peter J. Aschenbrenner, Esq., Aschenbrenner and Savell, and David Wolf, Esq., Keane, Harper, Pearlman and Copeland, for appellant; Elizabeth S. Ingraham, Esq., for Doyon, Limited; M. Francis Neville, Esq., Office of the Regional Solicitor, for Bureau of Land Management; Shelley J. Higgins, Esq., and Martha T.

Mills, Esq., Department of Law, for State of Alaska.

**OPINION BY ALASKA
NATIVE CLAIMS
APPEAL BOARD**

Summary of Appeal

Appellant asserted as one of the issues appealed, the failure of the Bureau of Land Management to determine that various water bodies were navigable and to exclude the submerged lands of such respective water bodies from the Decision to Issue Conveyance.

The Board held that when the Bureau of Land Management's review of navigability shows a factual basis for redetermining the appealed water bodies to be navigable within established guidelines, the Board will decide that such water bodies are navigable.

The Board accepted appellant's withdrawal of appeal as to the remaining water bodies unaffected by Bureau of Land Management review and redetermination, and as there were not objections, dismissed the appeal as to the issues of navigability.

Jurisdiction

The Alaska Native Claims Appeal Board, pursuant to delegation of authority to administer the Alaska Native Claims Settlement Act, 85 Stat. 688 *as amended*, 43 U.S.C. §§ 1601-1628 (1976 and Supp. I 1977) (ANCSA), and the implementing regulations in 43 CFR Part 2650 and 43 CFR Part 4, Subpart J, hereby makes the fol-

lowing findings, conclusions and decision.

Procedural Background

Northway Natives, Inc. (Northway), filed village selection applications F-14912-A, *as amended*, on Oct. 22, 1974, and F-14912-B, *as amended*, on Dec. 12, 1974, for lands located near the Village of Northway. The applications were filed under the provisions of § 12(b) of the Alaska Native Claims Settlement Act (ANCSA), Dec. 18, 1971 (85 Stat. 688, 701; 43 U.S.C. §§ 1601, 1611(a) (Supp. V 1975)).

In response to these applications the Bureau of Land Management (BLM) published in 43 FR 28051 (June 28, 1978), its Decision to Issue Conveyance (DIC) of land to Northway. Northway appealed on July 28, 1978. One issue raised by Northway in Statement of Reasons was that the BLM erred in its June 26, 1978, decision requiring Northway to select the beds of certain water bodies and sua sponte approving said lands for conveyance to Northway.

On Feb. 27, 1980, BLM amended the DIC dated June 26, 1978, by its Decision entitled *Decision of June 26, 1978 Recinded [sic] in Part Additional Lands Proper for Village Selection Approved for Interim Conveyance*. In this amendment BLM published notice that the following additional water bodies were determined to be nonnavigable and therefore, the lands underlying these water bodies were public lands

available for selection pursuant to § 12(a) of ANCSA:

Fish Lake;

Unnamed lake in NW¼, Sec. 2, T. 13 N.,

R. 19 E., Copper River Meridian;

Open Creek and all lakes it flows through;

Charleskin Creek and all lakes it flows through.

A conference was held Jan. 21, 1980, to set a briefing schedule taking into account difficulties in segregation of numerous unnamed water bodies and possible impact of pending amendments to ANCSA regarding submerged lands. The Board ordered the following action and briefing schedule:

a. BLM, with assistance from Northway and Doyon shall segregate water bodies affected by RLS 77-1, RLS 78-1 and VLS 78-57 within thirty (30) days from the date of this Order.

b. BLM shall have up to sixty (60) days from the date of this Order to review RLS 77-1, RLS 78-1 and VLS 78-57 and to serve upon all parties the basis for determining the water bodies on appeal to be navigable or nonnavigable.

c. Appellants shall have sixty (60) days from the date of service of BLM's response to file on each appeal: (1) a request to suspend action on certain water bodies, as desired, pending passage of the Submerged Lands Amendment; (2) a statement of reasons pertaining to those water bodies remaining in active appeal status; and (3) any other briefs the parties may wish to file.

As directed the BLM filed its Review and Basis for Navigability Determination on Mar. 28, 1980. Upon review the following water

bodies were determined to be navigable:

Nabesna River

Mark Creek

Fish Lake

Unnamed lake in Sections 21 and 28, T. 14 N., R. 19 E., C.R.M.

Unnamed lake in Sections 14-15, 22-26, T. 14 N., R. 19 E., C.R.M.

Moose Creek to the unnamed lake in Sections 21 and 28, T. 14 N., R. 19 E., C.R.M.

Chisana River

Of the above-named water bodies, only Fish Lake had been found to be nonnavigable in BLM's amendment of Feb. 27, 1980, to the DIC. No other water bodies in the selection area were determined to be navigable.

The Board by order dated Aug. 21, 1980, approved a stipulation by the parties as follows:

On July 10, 1980, the Bureau of Land Management, State of Alaska and Northway Natives, Inc., filed a Stipulation to allow Northway Natives, Inc. to add to its appeal, concerning whether or not certain lands are under navigable waters, all lands designated by the State of Alaska on its water delineation maps of 1978 and June 25, 1979, which were not included in Northway Natives, Inc.'s original appeal in November of 1978.

The effect of the Board's order was to include in the appeal the status of those water bodies which were not included in the original appeal.

In its Response to ANCAB Order of Jan. 21, 1981, dated Apr. 8, 1981, Northway stated that it "desires to withdraw its appeal on the navigability issues." Northway provides the following basis and condition to the withdrawal.

Its withdrawal of its appeal, however, is based on the understanding that the BLM decisions concerning navigability as set forth in the decision of interim conveyance of June 26, 1978, and as modified by the BLM's decision attached to solicitor's pleading in this matter entitled Review and Basis for Navigability Determinations dated March 28, 1980, are the decisions on which Northway Natives, Inc. will receive its interim conveyance with respect to the navigability issues. Further, by dropping its appeal in this ANCAB proceeding, Northway Natives, Inc. does not waive any rights it has under Section 901 of Public Law 96-487. Northway Natives, Inc. therefore requests that ANCAB issue an order dismissing the navigability issues from this appeal based on the two foregoing understandings of Northway.

Northway's Response at 2-3.

Decision

The appeal record shows that documents upon which Interim Conveyance (IC) would be based consist of the DIC dated June 26, 1978, and the decision of the BLM entitled *Decision of June 26, 1978 Recinded [sic] in Part Additional Lands Proper for Village Selection Approved for Interim Conveyance*, dated Feb. 27, 1980. The Review & Basis for Navigability Determinations, filed Mar. 28, 1980, is not a decision of the BLM for purpose of IC. Therefore, the Board is not in a position to accept Northway's understanding regarding the effect of the review dated Mar. 28, 1980, without taking final action for the Department.

In Appeal of Bristol Bay Native Corporation, 4 ANCAB 355, 87 I.D.

341 (1980) [VLS 80-2], the Board held that:

Where the BLM has redetermined that water bodies which are the subject of an appeal pending before the Board are navigable, and where the Board finds that the facts in the record upon which BLM made its redetermination meet the essential elements of navigability enunciated in *Appeal of Doyon, Ltd.*, 4 ANCAB 50, 86 I.D. 692 (1979) [RLS 76-2], and where the facts in the record are undisputed so that no issue of fact as to navigability remains before the Board, then the Board will find the water bodies to be navigable.

87 I.D. at 346.

The Board also held that:

[F]or purposes of clarification, * * * redetermination by the BLM of navigability of water bodies while jurisdiction over such water bodies is in the Alaska Native Claims Appeal Board is not a "decision" of the BLM, and notice is not required to be published pursuant to 43 CFR 2650.7.

87 I.D. at 345.

Here, the BLM's review and resulting redetermination of navigability of certain water bodies listed herein was filed pursuant to the Board's order dated Jan. 22, 1980, while the Board retained jurisdiction over the issue of navigability and lands underlying water bodies affected by Northway's appeal with respect to the issue of navigability.

In this appeal, the Board finds that the record upon which BLM relies for its redetermination of Mar. 28, 1980, presents facts concerning use and susceptibility of use which meet the essential elements of navigability enunciated in *Appeal of Doyon, Limited*, 4 ANCAB 50, 86 I.D. 692 (1979)

[RLS 76-2]. The Board further finds that the record discloses no dispute to the facts alleged in support of a finding of navigability.

Accordingly, the Board finds Nabesna River, Mark Creek, Fish Lake, the unnamed lake in Secs. 21 and 28, T. 14 N., R. 19 E., C.R.M., the unnamed lake in Secs. 14-15, 22-26, T. 14 N., R. 19 E., C.R.M., Moose Creek to the unnamed lake in Secs. 21 and 28, T. 14 N., R. 19 E., C.R.M., and the Chisana River to be navigable. The BLM is hereby Ordered to exclude these water bodies from conveyance under ANCSA to Northway and Doyon. The Board has authority under 43 CFR 4.1(b)(5) to "consider and decide finally for the Department appeals to the head of the Department." Such finding by the Board is not a decision of the BLM, and notice thereof is not required to be published pursuant to 43 CFR 2650.7. However, the Board's finding does govern the interim conveyance to be issued to Northway.

[1] Where the BLM has redetermined that water bodies which are the subject of an appeal are navigable, and where the Board finds that the facts in the record upon which the BLM made its redetermination meet the essential elements of navigability, and where the facts in the record are undisputed so that no issue of fact as to navigability remains before the Board, then the Board will find the water bodies to be navigable.

[2] Redetermination by the BLM of navigability of water bodies

while jurisdiction over the subject water bodies is in ANCAB, is not a "decision" of the BLM, and notice thereof is not required to be published pursuant to 43 CFR 2650.7.

The Board's finding of the navigability of certain water bodies, based on BLM's determination, requires that the affected submerged lands of these water bodies will be excluded from the interim conveyance. The Board must now examine Northway's withdrawal of its appeal of navigability as to the remaining water bodies. The Board accepts Northway's above-referenced response filed on Apr. 10, 1981, as withdrawing from this appeal the issue of navigability of the remaining water bodies within the selected lands.

Acceptance of Northway's voluntary withdrawal of the remaining issues of navigability provides the basis for the Board to dismiss those issues from the appeal. (*See Appeal of Kenneth Arndt*, 3 ANCAB 127 (1979) [VLS 78-34]; *Appeal of Al L. Weathers*, 3 ANCAB 165 (1979) [VLS 79-1].)

The Board notes Northway's reference to provision of § 901(b) of the Alaska National Interest Lands Conservation Act, P.L. 96-487, 94 Stat. 2371 (1980) (ANILCA), which states:

No agency or board of the Department of the Interior other than the Bureau of Land Management shall have authority to determine the navigability of water covering a parcel of submerged land selected by a Native Corporation or Native Group pursuant to the Alaska Native Claims Settlement Act *unless a determi-*

nation by the Bureau of Land Management that the water covering a parcel of submerged land is not navigable was validly appealed to such agency or board prior to the date of enactment of this Act. The execution of an interim conveyance or patent (whichever is executed first) by the Bureau of Land Management conveying a parcel of submerged land to a Native corporation or Native Group shall be the final agency action with respect to a decision by the Secretary of the Interior that the water covering such parcel is not navigable, *unless such decision was validly appealed prior to the date of enactment of this Act to an agency or board of the Department of the Interior other than the Bureau of Land Management.* [Italics added.]

No question has been raised as to the Board's jurisdiction over the appealed navigability issues in this appeal, or as to the fact that, without a timely appeal by Northway, BLM's DIC would become final for the Department under 43 CFR 2650.8.

This appeal predates the passage of ANILCA. Therefore, the appeal is properly within the jurisdiction of the Alaska Native Claims Appeal Board.

There are no other appellants in this appeal and no parties of record before this Board have opposed the appellant's withdrawal of its appeal as to the issues of navigability. No reasons justifying further proceedings on the navigability issues are apparent from the record.

[3] Absent reasons justifying continuance of an appeal as to a particular issue, an appeal will be dismissed when the appellant before the Board withdraws its appeal of that issue.

August 5, 1981

Based upon the above findings and conclusions, Northway's request to withdraw the remaining issues of navigability from this appeal is granted. The Board hereby dismisses this appeal from BLM's determination of navigability of water bodies within lands selected under Northway's above-referenced applications in the DIC except as modified by the Board's decision herein.

The following water bodies within Northway's selection are found to be navigable based on the BLM's decision of June 26, 1978, and the Board's findings in this decision:

1. Tanana River and all its inter-connecting sloughs.
2. Chisana River and all its inter-connecting sloughs.
3. Nabesna River.
4. Mark Creek.
5. Fish Lake.
6. Unnamed lake in Secs. 21 and 28, T. 14 N., R. 19 E., C.R.M.
7. Unnamed lake in Secs. 14-15, 22-26, T. 14 N., R. 19 E., C.R.M.
8. Moose Creek to the unnamed lake in Secs. 21 and 28, T. 14 N., R. 19 E., C.R.M.

No other water bodies in the Northway selection area are found to be navigable.

This appeal record shows that all issues raised by the appellant, other than the four mentioned below, have been resolved by Board action, stipulation or withdrawal of appealed issues by the appellant. A review of the record shows that the following have been considered and were resolved:

(1) The Native allotment NAF-027296 Parcel A is resolved as part of the broader issue of U.S. Survey No. 2630 by the Board's decision of Feb. 26, 1981, which excluded the Native allotment.

(2) The easement issues in this appeal were considered to be mooted by the BLM's Modification of the Decision of June 26, 1978, to conform easements and *Appeal of Northway Natives, Inc.*, ANCAB EC 79-1.

(3) The issue of Rejection of Selections Bordering Tanana River was withdrawn by stipulation between the BLM and Northway, filed Apr. 2, 1979. Item 6 of the Stipulation and Report on Status of Negotiations reads:

The BLM and Northway agree that the DIC under appeal did not affect the Northway selections bordering the Tanana River appealed in Section VII of the Statement of Reasons. No adjudication of these selections has been made by the BLM. Northway therefore withdraws its appeal regarding these selections.

(4) On Aug. 1, 1979, Northway identified the issue of valid existing rights as one of eight outstanding issues and stated:

8. VALID EXISTING RIGHTS.

Northway has requested that ANCAB enter an order stating that the BLM has listed all valid existing rights known to it and to include in the order the list of valid existing rights. Also, Northway asked whether or not the State considered the road from the Alaska Highway to the airport at Northway and from the airport to the village site was a valid existing rights to the State of Alaska. The State of Alaska has come forward and said that it is and Northway requests

that AN CAB order that it be listed as a valid existing rights.

The roadway identified in this appeal has been acknowledged by a stipulation approved by the Board as a valid existing right.

It appears that all issues raised in this appeal have been resolved, and the appeal should be finally dismissed. However, in recognition of the number and complexity of issues raised by this appeal, the dismissal will not be effective until thirty (30) days from the date of this decision. During that period, the parties may advise the Board of any issues raised on appeal which they believe have not been decided.

ABIGAIL F. DUNNING,
Administrative Judge.

JOSEPH A. BALDWIN,
Administrative Judge.

CLARA GOODMAN

6 AN CAB 17

Decided *August 5, 1981*

Appeal from the Decision of the Alaska State Office, Bureau of Land Management F-14852-A and F-14852-B.

Dismissed with order to exclude certain lands from conveyance pending adjudication of alleged allotment application.

1. Alaska Native Claims Settlement Act: Alaska Native Claims Appeal Board: Appeals: Jurisdiction

The Board is without jurisdiction to adjudicate the validity of a Native allotment.

2. Alaska Native Claims Settlement Act: Conveyances: Valid Existing Rights: Third-Party Interests

The Board will order the exclusion of a disputed Native allotment from the conveyance of lands pursuant to the Alaska Native Claims Settlement Act pending adjudication of the disputed allotment.

APPEARANCES: Daniel L. Callahan, Esq., Alaska Legal Services Corp., for appellant; M. Francis Neville, Esq., Office of the Regional Solicitor, for the Bureau of Land Management.

OPINION BY ALASKA NATIVE CLAIMS APPEAL BOARD

Summary of Appeal

The appellant requests the Board to recognize, as a valid property interest, a Native allotment which has not been adjudicated and for which the Department does not have record of an application. The appellant also requests the Board to segregate the allotment from a Native conveyance pending adjudication of the allotment. The appellant is currently attempting to establish, through the Bureau of Indian Affairs, that she timely filed an allotment application.

The portion of the appeal asking the Board to recognize a valid property interest of the appellant in the disputed lands is dismissed as untimely and not within the jurisdiction of the Board. The Board orders that the disputed lands be excluded from conveyance pending resolution of the allotment dispute, and dismisses the portion of the appeal requesting segregation.

Jurisdiction

The Alaska Native Claims Appeal Board, pursuant to delegation of authority in the Alaska Native Claims Settlement Act, 85 Stat. 688, *as amended*, 43 U.S.C. §§ 1601-1628 (1976 and Supp. I 1977), and the implementing regulations in 43 CFR Part 2650 and 43 CFR Part 4, Subpart J, hereby makes the following findings, conclusions and decision dismissing the appeal of Clara Goodman from the above-designated decision of the Bureau of Land Management.

Procedural Background

On Dec. 28, 1979, the Alaska State Office of the Bureau of Land Management (BLM) issued its above-designated decision approving the conveyance, pursuant to the Alaska Native Claims Settlement Act (ANCSA), of lands in the vicinity of Dot Lake.

On Feb. 4, 1980, appellant appealed the above-designated decision of the BLM on the grounds that it failed to exclude lands subject to a Native allotment for which appellant had allegedly applied prior to Dec. 18, 1971.

On Mar. 7, 1980, in response to the Board's request, appellant identified the lands in dispute in this appeal as "SW $\frac{1}{4}$ of Sec. 18. NW $\frac{1}{4}$ of Sec. 19, T23N, R5E, CRM." No allotment number was indicated and no legal description more definite than that specified above was provided. Also on Mar. 7, 1980, the appellant moved for an extension of time in which to file a statement of reasons, because the "Bureau of Land Management apparently has no available allotment file for Appellant Goodman and it will be necessary to establish before the Bureau of Land Management that a proper application was made."

On Apr. 9, 1980, responding to the Board's order requesting that BLM furnish a description of the disputed land, the BLM reported that it had no record of an allotment application filed by the appellant, and was thus unable to furnish any description of the disputed lands. Stating that the appellant cannot claim a property interest in land based upon an application for a Native allotment, BLM moved that the Board dismiss the appeal for lack of standing pursuant to 43 CFR 4.903.

On Apr. 10, 1980, the Board received appellant's Statement of Jurisdiction, Interest Affected and Reasons. Appellant therein declared that "the issue is whether appellant's interest in the allotment land applied for is protected under the Native Claims Act," and asked the Board "only to recognize the valid property interest of appellant to the land in dispute in this appeal and to segregate it pending adjudication of the allotments * * *."

Statement of Jurisdiction, Interest Affected and Reasons, p. 1. The appellant further specified, on pages 5 and 6, that she "made application for her allotment with the BIA representative Bill Mattise," and that

"if the Board wishes a more specific documentary showing of the fact of [her] allotment interest such a showing can be made within a reasonable period."

On Apr. 18, 1980, in accordance with appellant's description of lands in dispute in this appeal, the Board segregated the SW $\frac{1}{4}$ of Sec. 18 and NW $\frac{1}{4}$ of Sec. 19, T. 23 N., R. 5 E., C.R.M., from the remainder of the lands approved for conveyance in the above-designated decision of the BLM.

From May 22, through Oct. 27, 1980, the appeal was suspended while the appellant attempted, with the assistance of the Bureau of Indian Affairs (BIA), to establish that she timely filed an allotment application as alleged.

On Apr. 6, 1981, the Board ordered the appellant to submit an exact legal description of the lands affected by her alleged allotment application, or to notify the Board of the reasons why no more exact description than that previously submitted is possible. The Board declared its intention, following receipt of appellant's response, to order BLM to exclude the disputed lands from conveyance until appellant's allotment application dispute is settled.

The appellant responded on Apr. 16, 1981, with a more specific, though not exact, description of the unsurveyed lands affected by her alleged allotment application. Subsequently, on June 10, 1981, the Board segregated the N $\frac{1}{2}$ SW $\frac{1}{4}$ and N $\frac{1}{2}$ S $\frac{1}{2}$ SW $\frac{1}{4}$ of Sec. 18, T. 23

N., R. 5 E., C.R.M., from the remainder of the lands approved for conveyance to Dot Lake Native Corp. by the above-designated decision of the BLM.

Decision

Appellant has appealed the above-designated decision of the BLM to convey lands to Dot Lake Native Corp. (Dot Lake) in order to protect her rights in her alleged allotment application. Appellant asked the Board "only to recognize the valid property interest of appellant to the land in dispute in this appeal and to segregate it pending adjudication of the allotments * * *." Statement of Jurisdiction, Interest Affected and Reasons, p. 1.

The jurisdiction of this Board is set forth in 43 CFR 4.1(b)(5):

Alaska Native Claims Appeal Board. The Board considers and decides finally for the Department appeals to the head of the Department from findings of fact or decisions rendered by Departmental officials in matters relating to land selection arising under the Alaska Native Claims Settlement Act.

The Board notes that there has been no Department decision regarding the validity of appellant's alleged allotment. Rather, the Department asserts that no such application for allotment, which could be the subject of adjudication, can be found on file.

Furthermore, § 18(a) of ANCSA provides:

No Native covered by the provisions of this Act, and no descendant of his, may hereafter avail himself of an allotment

under the provisions of the Act of February 8, 1887 (24 Stat. 389), as amended and supplemented, or the Act of June 25, 1910 (36 Stat. 363). Further, the Act of May 17, 1906 (34 Stat. 197), as amended, is hereby repealed. Notwithstanding the foregoing provisions of this section, any application for an allotment that is pending before the Department of the Interior on the date of enactment of this Act may, at the option of the Native applicant, be approved and a patent issued in accordance with said 1887, 1910, or 1906 Act, as the case may be, in which event the Native shall not be eligible for a patent under subsection 14(h)(5) of this Act.

[1] Native allotments are issued pursuant to statutes other than ANCSA. While the option of the allotment applicant to proceed to patent is preserved by § 18(a) of ANCSA, decision approving or denying applications for Native allotments are not "matters relating to land selection arising under" ANCSA. Thus, even had there been a Departmental decision as to the validity of appellant's alleged allotment, the Board would not have jurisdiction to review it. This Board is without jurisdiction to adjudicate the validity of an allotment, and cannot determine the existence of a valid property interest in land based upon a disputed allotment application. If the appellant is successful in establishing before the BIA that she timely filed an allotment application, then BLM will determine whether appellant has a valid property interest in the affected land. Any appeal from that determination would be to the Interior Board of Land Appeals, and not to this Board.

The appellant requested the Board to "segregate" the disputed land pending adjudication of her allotment application.

It is the policy of the Board to segregate lands affected by an appeal from the remainder of the lands proposed for conveyance in the decision appealed, so that conveyance of the unaffected lands is not delayed pending decision of the appeal. The segregated lands remain within the jurisdiction of the Board until the appeal before the Board is dismissed.

In the instant appeal, the appellant is attempting to establish the existence of a valid property interest in the disputed lands and to protect her interest by staying their conveyance under ANCSA pending adjudication of her alleged application. The Board can stay the conveyance pending resolution of the allotment dispute but, as shown above, cannot adjudicate the validity of the appellant's allotment, and is without jurisdiction to review a Departmental adjudication of the allotment. In these circumstances, there is no need for this Board to retain jurisdiction over lands which have been segregated from lands unaffected by the appeal.

[2] An order of this Board requiring the exclusion of the alleged allotment from the conveyance pursuant to ANCSA pending adjudication of the allotment will protect the appellant's interests vis-à-vis Dot Lake regardless of the continuation of this appeal. Moreover, following issuance of the order, this

Board would be a mere intermediary not further concerned with the appellant's rights. Therefore, the Board will order exclusion of the disputed Native allotment from the conveyance of lands pursuant to ANCSA pending adjudication of the disputed allotment, and will dismiss the appeal.

Order

The Bureau of Land Management is hereby Ordered to exclude the N $\frac{1}{2}$ SW $\frac{1}{4}$ and N $\frac{1}{2}$ S $\frac{1}{2}$ SW $\frac{1}{4}$ of Sec. 18, T. 23 N., R. 5 E., C.R.M., from conveyance pursuant to the Alaska Native Claims Settlement Act pending Departmental determination of whether appellant timely filed an allotment application and, if so, pending adjudication of said application.

Further, the Board hereby dismisses the above-designated appeal.

ABIGAIL F. DUNNING

Administrative Judge

JOSEPH A. BALDWIN

Administrative Judge

**APPEAL OF SINGLETON
CONTRACTING CORP.**

IBCA-1413-12-80

Decided *August 12, 1981*

Contract No. NA79RAC00076, National Oceanic and Atmospheric Administration.

Granted.

1. Contracts: Disputes and Remedies: Jurisdiction—Rules of Practice: Appeals: Generally

An appeal may be decided on the basis of a theory not advanced by the parties so long as the theory is consistent with the facts of record or legitimate inferences therefrom.

2. Contracts: Construction and Operation: Changed Conditions (Differing Site Conditions)—Contracts: Construction and Operation: Differing Site Conditions (Changed Conditions)—Contracts: Construction and Operation: Estimated Quantities

Where under a reroofing contract the quantity of roofing required to be used is substantially greater than the quantity of roofing estimated by the Government and it is determined that the quantity of roofing required for performance of the contract could not have been verified by a prebid investigation, the Board finds that the substantially greater amount of roofing required to complete the contract work than the Government had estimated constitutes a first category differing site condition for which the contractor is entitled to an equitable adjustment under the Differing Site Conditions clause.

3. Contracts: Construction and Operation: Notices—Contracts: Disputes and Remedies: Jurisdiction

Written notice given a week after completion of the contract work is found to satisfy the requirement of the Differing Site Conditions clause for written notice to the contracting officer before the conditions are disturbed where the evidence shows that the Government had actual notice of the operative facts related to double roofing at the time the double roofing was encountered and no showing was made that any prejudice to the Government had resulted from the belated written notice.

August 12, 1981

4. Contracts: Construction and Operation: Changed Conditions (Differing Site Conditions)—Contracts: Construction and Operation: Differing Site Conditions (Changed Conditions)

A second category differing site conditions is found to exist where the Government tacitly acknowledged that double roofing encountered under a contract calling for reroofing of a building in Miami, Florida, constituted an unknown condition and the testimony offered in support of the contractor's claim shows that while double roofing is not unusual in some areas of the country, it is unusual in the southern areas where there is a lot of mildew and moisture, humidity, as would be true of the particular locale in which the instant contract was performed.

APPEARANCES: Wayne Singleton, President, Singleton Contracting Corp., Atlanta, Georgia, for Appellant; Jerry A. Walz, Government Counsel, Washington, D.C., for the Government.

*OPINION BY
CHIEF ADMINISTRATIVE
JUDGE MCGRAW
INTERIOR BOARD OF
CONTRACT APPEALS*

The contractor has timely appealed the contracting officer's denial of its claims for additional compensation totaling \$15,115¹ comprised of a claim for roofing in excess of the approximate quantities set forth in the specification (\$12,961) and a second category differing site conditions claim (\$2,154).² In a letter to the Board

under date of Jan. 22, 1981 (received in the offices of the Board on Feb. 2, 1981), the appellant confirmed that its notice of appeal of Dec. 1, 1980, was intended to serve as its complaint; that it desired an oral hearing; and, that it desired the appeal to be processed under the accelerated procedure. A hearing on the appeal was held in Atlanta, Georgia, on May 15, 1981. Briefing action on the appeal was completed on July 24, 1981, when the appellant's reply brief was received by the Board.

Findings of Fact

1. Invitation For Bids NOAA 37-80 (involving a total set-aside for small business concerns), was issued under date of Jan. 24, 1980, and provided for the opening of bids at the issuing office in Boulder, Colorado, on Feb. 15, 1980. The invitation provided for the furnishing of plant, labor, material, and equipment required to reroof the Atlantic Oceanographic and Meteorological Laboratories building located at 15 Rickenbacker Causeway, Miami, Florida. The invitation was issued by the National Oceanic and Atmospheric Administration office in Boulder, Colorado, and both the contracting officer and the administrative contracting officer were located there. Bidders were advised in the invitation that arrangements for an on-site inspection were to be made with Mr. James Barker, who was designated in the specification as the contracting officer's technical

¹ Appeal File (hereinafter AF) 5.

² The amount allocated to each claim is from the appellant's letter to the Board dated Jan. 22, 1981.

representative (COTR).³ Mr. Barker viewed his position as comparable to a project engineer of a building (AF 9; Tr. 14-15).

2. Contract No. NA79RAC00076 was awarded to the contractor by the National Oceanic and Atmospheric Administration (NOAA) on Mar. 6, 1980, in the amount of \$53,009. The contract incorporated the provisions of invitation for bid (SF 20), which included instructions to bidders (SF 22),⁴ General Provisions (Construction Contract) (SF 23-A, Apr. 1975 Edition), and Specification for reroofing Atlantic Oceanographic and Meteorological

Laboratories building. Included among the contract's specifications are the following provisions:

1.1 *Summary of Work*

The Contractor shall provide all labor, material and equipment required to re-roof the Atlantic Oceanographic and Meteorological Laboratories building located at 15 Rickenbacker Causeway, Miami, Fla.* * *

1. Existing roofing shall be taken down to insulation board and replace all damaged insulation where needed.

3rd Floor approx. 15,552 square feet

4th Floor approx. 2,352 square feet

5th Floor approx. 4,434 square feet

*The built-up roofs on the 4th and 5th floors are not as damaged as the 3rd floor. All contractors should bid on the 3rd floor roofing job—with the 4th and 5th floors as optional price bids. Depending on available finding [sic] these optional price bids may be accepted individually or severally as a part of this bid.

* * * * *

1.3 *Site Investigation*

Bidders are required to visit the site of the work and by their own investigation determine the quantities of work and existing conditions affecting the work covered by these specifications. The successful bidder shall assume all responsibility for his conclusions as to the difficulties and quantities of work to be performed.

1.4 *Pre-Construction Conference*

After the award of the contract and prior to the start of construction, the Contractor shall meet with the Contracting Officer and/or the COTR to establish work schedules and procedures.

(AF 9).

3. In response to the invitation and prior to the opening thereof the contractor submitted a bid in the amount of \$53,009 broken down as follows: For the third floor only,

³In especially pertinent part the contract specification provision read as follows:

"The COTR will be Mr. James Barker (305) 361-3361. The COTR is responsible for the technical aspects of the project and technical liaison with the Contractor. The COTR is also responsible for the inspection and acceptance of materials, services and such other specific authorized responsibilities as may be stipulated in the contract. The COTR is not authorized to make any commitments or otherwise to obligate the Government or to authorize any changes which affect the contract price, or other terms or conditions of the contract. Any such changes shall be referred to the Contracting Officer through the COTR. No such changes shall be made without the expressed prior authorization of the Contracting Officer."

(1.2 Contracting Officer's Technical Representative (COTR)) (AF 9).

⁴Among such provisions was the following:

"2. Conditions Affecting the Work.—Bidders should visit the site and take such other steps as may be reasonably necessary to ascertain the nature and location of the work, and the general and local conditions which can affect the work or cost thereof. Failure to do so will not relieve bidders from responsibility for estimating properly the difficulty or cost of successfully performing the work. The Government will assume no responsibility for any understanding or representations concerning conditions made by any of its officers or agents prior to the execution of the contract, unless included in the invitation for bids, the specifications, or related documents."

(AF 9, Instructions to Bidders).

August 12, 1981

\$34,512; option #1 for fourth floor only, \$7,248; and option #2 for fifth floor only, \$11,249.

The bid was based on the contractor's estimate that the quantity of reroofing required for the job would total 22,308 square feet made up of 15,522 square feet, 2,352 square feet and 4,434 square feet.⁵ The latter figures are the same figures used in the invitation as the approximate quantities of roofing required for the third, fourth, and fifth floors, respectively of the building covered by the contract (Finding 2). The Government concedes that the appellant roofed approximately 27,720 square feet of the building which is the total quantity of roofing reflected in appellant's claim computation. The claim for excess roofing is for 5,412 square feet (27,720 square feet less 22,308 square feet), *i.e.*, approximately 24 percent greater than the total quantity reflected in the specifications (PFF 6 and 9).⁶

4. The appellant testified to having made an on-site inspection prior to submitting its bid (Tr. 25-28, 69-71). In answer to an interrogatory prepared by the Government,⁷ Mr. Singleton (the appellant's president) made the following state-

⁵ The contractor's estimate was received in evidence as Appellant's Exhibit (hereinafter AX) 1.

⁶ Accompanying the respondent's posthearing brief was Appendix A, Stipulations and Proposed Findings of Fact. PFF is the abbreviation for Proposed Findings of Fact in the brief and in this opinion.

⁷ The interrogatories and the appellant's answers thereto were received in evidence as Government's Exhibits (hereinafter GX) A and B.

ment respecting the actions the company had taken to familiarize itself with the work to be performed at the worksite: "Visual inspection of jobsite as to the nature and location of the work to be performed. Measurements taken at jobsite as to the nature, configuration, size, and quantity of work to be performed * * *. All such steps taken by either Wayne Singleton and/or Paul Webb" (GX A and B, Question and Answer 2d).

Answering another question in the same set of interrogatories as to why it was impossible to form a conclusion as to the quantities of work to be performed other than that which was given in the specifications, Mr. Singleton stated:

No plans were provided by Respondent in bidding material by which Appellant could determine correctness or even location of quantity of work to be performed. No information was given by Respondent in bidding material by which Appellant could ascertain what areas were to be reroofed, were to be roofed, were not to be reroofed, were not to be roofed, and what areas had an existing double roofing system.

GX A and B, Question and Answer 3a).

5. In its answer the respondent admits that the contract documents furnished to the appellant for the purposes of bidding and then construction consisted of a set of specifications and no plans (Respondent's Answer at 1; Tr. 7).⁸ Upon

⁸ Upon direct examination Mr. Singleton stated:

"[I]f there had been a set of plans furnished with the contract documents, which

—Continued

cross-examination, Mr. Singleton acknowledged that his answer to question 2d of respondent's interrogatories respecting measurements taken at the jobsite as to quantities may be a little ambiguous (Tr. 70-71). Elsewhere in his testimony, however, he noted the absence of any plans having been submitted with the bidding and contract documents and the fact that he had not considered it necessary to make any field measurements to determine any quantities because under sec. 1.1, paragraph 1 (Finding 2, *supra*), the Government had indicated for each floor the quantities of roofing involved in the contract work (Tr. 27).

In the claim letter of Sept. 24, 1980 (AF 5), the contractor states:

In accordance with what we have been instructed to remove and replace, we have had or will have to remove and replace 5412 S.F. more roofing than that which was specified and bid on. We have taken the time to draw a set of drawings⁽⁵⁾ showing the roof areas, which

had dimensions on it I would tend to agree that the contractor may have a responsibility for calculating, using those dimensions, and relying upon those dimensions, and making a determination as to whether or not the Specification quantities were accurate or not. But, in this instance, the Contracting Officer, or the owner, didn't even provide a set of drawings. All he did was tell you where the building was located. Nowhere in these specifications did it notify the contractor that any portion of any of the roofs would not be roofed."

(Tr. 36-37).

⁵ Commenting upon these drawings, Mr. Singleton states: "[A]ppellant's Exhibit AX 2 was prepared by appellant after the opening of bids on the subject project and at the time he submitted his claim, 24 September 1980 (Tab 5)" (Appellant's Reply to Government's Brief at 2).

The Board notes that the drawing which

have been reroofed on the above referenced project.

6. Accordingly to the testimony of Mr. James Barker (COTR) the approximate quantities of reroofing used by the Government in the invitation had been developed by a roofer whose name he did not know. Mr. Barker stated that the Government simply took the roofer's word for the quantities involved and the Government's estimated cost for performing the contract work was based on such quantities. The appellant relied on the quantities of roofing set forth in the invitation¹⁰ and based its bid upon them (Tr. 7-10, 27-32, 35-36).

7. After the award of contract, Mr. Singleton was called by Mr. Daniel Gomez (administrative contracting officer) for the purpose of arranging a preconstruction conference at the jobsite in Miami, Florida, between him and the COTR. When Mr. Singleton arrived at the jobsite from Atlanta, Georgia, how-

accompanied the contractor's claim letter of Sept. 24, 1980 (AF 5), appears to be identical to the drawing received in evidence as AX 2, except for the fact that the drawing which accompanied the Sept. 24, 1980, letter (AF 5), was apparently cut up by someone to facilitate including the drawing in the letter size appeal file.

¹⁰ After referring to the fact that there were areas on the third floor that the contractor was not required to reroof as shown on AX 2 and GX E, Mr. Singleton states:

"[O]n this particular contract, there was an area of the third floor, which we were not required to reroof. And I would assume that that area never was intended to be reroofed. Now, how a potential bidder or contractor could read these specifications, and visit the jobsite, and make a determination on that, as to whether or not that area was to be reroofed, to me, is an impossibility." (Tr. 28-29).

August 12, 1981

ever, the COTR was not there.¹¹ Mr. Gomez was called in Colorado, and notified of these developments. He instructed Mr. Singleton to get in touch with a Mr. Parker. After a 5 minute discussion with Mr. Parker, Mr. Singleton as referred to Mr. Eddie Brille. Later Mr. Singleton learned that Mr. Brille was either a maintenance manager or simply a maintenance man at the building in question. While Mr. Brille was very helpful, he was unable to answer many pertinent questions which he stated would have to be answered by Mr. Barker (Tr. 33-35).

8. The appellant has also submitted a second category differing site condition claim as a result of having discovered a double roofing system in two different areas on the third floor of the building covered by the contract. In the decision from which the instant appeal was taken, the contracting officer interposed the defense of lack of timely notice with respect to this claim. It is undisputed that the first written notice of the claim was the contractor's letter dated Sept. 24, 1980 (AF 5), which may have been a week after the discovery of the condition. Mr. Singleton was unable to state the date upon which he was informed by telephone of the double roofing having been encountered on the job and he had not known prior to the hearing that double roofing was involved in

two different areas of the third floor roof (AF 1 and 5; Tr. 17, 51-53, 74-75).

9. In his testimony Mr. Paul Webb (roofing subcontractor) stated that the contractor's personnel was unaware of double roofing being involved until they had cut up at least half of it. The COTR (Mr. Barker) was present when this occurred and in response to a question from Mr. Webb stated that he wanted all of it off.¹² At that time, Mr. Webb was also informed by Mr. Barker that a second area involving double roofing would be encountered and that the double roofing in that area was also to be removed.¹³ The COTR was

¹² Testifying upon direct examination concerning conversations that he had had with Mr. Barker about the double roofing when first encountered, Mr. Webb stated:

"Yes, there were different occasions, when I had mentioned, I had said, 'This here is a double roof' and I believe I mentioned 'do we have to go all the way down?' And he said, 'All of it, I want it all off', and I said, 'Okay, you'll probably owe us a Pepsi or a cup of coffee for this extra work.'"

(Tr. 84).

Upon cross-examination, Mr. Webb acknowledged that at or near the end of the contract the laboratory people had invited Mr. Webb and the workers to a free picnic barbecue and that at that time they had had a chance to get a Pepsi or a cup of coffee (Tr. 83).

¹³ The following colloquy occurred upon direct examination of Mr. Webb in regard to the double roofing:

"Q. After encountering it on the first section, did anyone give you notice about you would encounter it in another location?"

"A. I believe at that time we were also informed—how shall I say it—that there was this other section. But I [sic] want it all removed, so I just went ahead under the orders to go ahead and remove it. But we weren't there only a few more days.

"Q. Did Mr. Barker ever give you any notification or have any discussions to the effect that the Government may wish to do something other than what you were getting ready to do?"

"A. No, he said he wanted it removed all the way down to the insulation."

(Tr. 85).

¹¹ Mr. Barker attributed his absence from the preconstruction conference to the fact that he was on training duty with the Navy for 2 weeks. In the course of his testimony he noted, however, that "whatever pertained to that roof, myself or Edmond Parker knew about it" (Tr. 22-23).

aware of the areas involving double roofing before they were encountered and acknowledges that he was informed of the double roofing system at the time when the contractor started tearing it up (Tr. 16-17, 84-85).

The areas of double roofing were slated to be reroofed because they had leak problems there. Once the double roofing had been removed, it was necessary to proceed with the new roofing immediately to protect the building which had been opened up and was exposed to the weather. Mr. Barker conceded that there would have been no opportunity to give the contracting officer notice with respect to the first area of double roofing encountered but noted that written notice could have been given with respect to the second area involving the same condition. Mr. Barker also conceded that it was not apparent a double roofing system would be involved until the contractor dug into the existing roof.¹⁴ It is undisputed that at no time during the performance of the contract was Mr. Baker ever notified by the contractor that it planned to submit a claim relating to the double roofing (Tr. 17, 20-21, 47-51, 75, 92).

10. Respecting the additional cost occasioned by the double roofing, Mr. Singleton testified that the removal of the double roofing required an extra amount of labor for

handling the extra material involved and that twice as much cleanup was required by reason of having twice as much debris to handle. Mr. Webb also testified to the substantial increase in cost associated with the double roofing system,¹⁵ noting that on some days the crew had had to work 9 to 12 hours (Tr. 53, 76, 86-87).

11. After referring to the elements required for the proof of a second category differing site conditions claim, Mr. Singleton testified that a second roofing system, lying underneath a first roofing system, meets the definition of unknown. Based upon his 11 years in contracting in which he could recall only one other instance of encountering a building or a project with a double roofing system on it and the fact that nowhere in the specifications did it notify the contractor that there were two roofing systems, he considered the two roofing systems to be of an unusual nature (Tr. 51-52). Testifying with respect to the unusual nature of the double roofing systems encountered in contract performance, Mr. Webb (who had had 34 years of roofing experience) stated that a double system of roofing was not unusual in some areas but that "in this particular locale, in the Southern areas, where there is a lot of mildew and moisture, humidity, it's the accepted rule that you do not apply another layer over a layer" (Tr 81-83).

¹⁴ Tr. 20-21. Later in his testimony Mr. Barker indicated that a double roofing area might have been suspected from a hump or small buildup apparent from visual inspection (Tr. 92-93).

¹⁵ In respondent's posthearing brief at page 7, Government counsel observes that there is no issue with respect to the credibility of Mr. Webb who appeared to be very concerned with testifying truthfully.

August 12, 1981

12. The change order request for claimed extra work submitted with the contractor's letter of Sept. 24, 1980, was in the amount of \$15,115 (AF 5). In support of the requested change order, the contractor asserted: (i) that the bidding and contract documents furnished to the contractor for bidding and construction consisted of a set of specifications, estimated quantities of work to be performed and no plans; (ii) that the bidding and contracting documents called for replacing a total of 22,308 square feet of roofing on the third, fourth, and fifth floors of the building covered by the contract; (iii) that performance of the contract had involved replacing 27,720 feet of roofing or 5,412 square feet more roofing than that which was specified and bid on; (iv) that the contractor had also been required to remove 5,692 square feet of double roofing from the third floor, although its bid had been based on the assumption that only one roofing system would have to be removed: and (v) that the total amount requested for performing the extra work (including overhead and profit) was in the sum of \$15,115.

13. In denying the contractor's claims in a letter dated Oct. 28, 1980 (AF 1), the contracting officer stated:

[Y]our claim is herewith denied. Your contract in the total amount of \$53,009.00, in accordance with IFB NOAA 37-80, is "For the entire job (including both options)" to furnish plant, labor, material, and equipment to reroof the 3rd, 4th and 5th floors of the Atlantic Oceanographic

and Meteorological Laboratories (AOML) building.

In regards to those portions of your letter dated September 24, 1980 concerning estimated quantities, the specifications Section 1.3 Site Investigation specifically delineates bidder and successful bidder requirements and responsibilities i.e. "The successful bidder shall assume all responsibility for his conclusions as to the difficulties and quantities of work to be performed." (emphasis added). Should your claim be in reference to a differing site condition, i.e., double roofing etc., a written request describing such must be submitted in writing to the Contracting Officer *before* such conditions are disturbed (Reference Standard Form 23-A Clause 4).

14. The parties have stipulated that the quantum of the excess roofing claim is \$12,368 and that the quantum of the double roofing claim is \$850 (Respondent's Post-hearing Brief and Appendix A, Stipulations and Proposed Findings of Fact). Assuming that liability is found to exist for both claims, the stipulated amount for quantum totals \$13,218.

Claim for Roofing in Excess of Quantities Estimated by Government—\$12,368

Discussion

[1] The appellant's claim for excess roofing is being asserted under Clause 3 (Changes) of the General Provisions on the ground that the specifications were defective. Defending against the claim, the Government relies principally upon the fact that the appellant has failed to show it is entitled to any relief under Clause 4 (Differing Site Condi-

tions) of the General Provisions. The Board considers that the claim as presented may properly be considered as a first category differing site conditions claim and will so treat it in this decision.¹⁶

[2] In the Government's view the question presented is whether, in the circumstances of this case, the appellant can rely on the estimate contained in the contract specifications as the basis for a claim for work done in excess of the estimate. Addressing this question, Government Counsel states:

Pulling aside for the moment the question of whether the square footage in the Government's estimate was erroneous¹⁷ and the legal effect of the term

¹⁶ The Board is not necessarily precluded from deciding a claim on the basis of a theory not advanced by the parties so long as the theory is consistent with the facts of record or legitimate inferences from such facts. *Paul C. Helmich Co.*, IBCA-39 (Oct. 31, 1956), 63 I.D. 363, 365-66, 56-2 BCA par. 1096 at 2777-78. *Cf. American Cement Corp.*, IBCA-496-5-65 and IBCA-578-7-66 (Jan. 10, 1967), 74 I.D. 15, 23-27, 66-2 BCA par. 6065 at 28,069-72 (no party should be compelled to try its cause under legal theories and allegations advanced on its behalf by the opposing party).

¹⁷ See *Womack v. United States*, 182 Ct. Cl. 399 (1968), for a case in which in the circumstances there present the Court of Claims found that the Government's erroneous estimate was the result of negligence.

In this case there was at least one instance involving a serious maladministration of the contract. We refer to the situation where the Administrative Contracting Officer in Boulder, Colorado, scheduled a preconstruction conference between Mr. Singleton and the COTR in Miami, Florida. Departing from Atlanta, Georgia, for Miami, Florida, Mr. Singleton discovered when he arrived at the time and place scheduled for the preconstruction conference (i) that Mr. Barker (COTR) was not there by reason of being on training duty with the Navy; (ii) that Mr. Barker (who was reported to be knowledgeable with respect to whatever pertained to the roof) devoted only approximately 5 minutes of time to discussions with Mr. Singleton; and (iii) that Mr. Eddie Brille

approx. (approximately), the crux of this case is that Appellant has admitted that it made a pre-bid site investigation and took measurements as to the quantity of work to be performed¹⁸

After quoting from the answer given by the appellant to question 2d of the Government's interrogatories (Finding 4), Government counsel offers the following comment: "The above interrogatories and testimony at trial (Tr. 70) clearly show that this site visit was prior to the time that Appellant submitted its final bid and that Appellant therefore either had or should have had actual knowledge as to the amount of roofing required" (Respondent's Posthearing Brief at 3, 4).

In answer to one of the Government's interrogatories the appellant did state that it had taken measurements at the jobsite as to the quantity of work to be performed (Finding 4). If we were to attach the same significance to appellant's answer to that interrogatory as the Government apparently does, that answer might well preclude recovery in this case on the ground that the appellant had not relied on the Government's estimate for the bid submitted. The Board considers ap-

(either maintenance manager for the building or a maintenance man) was very helpful in areas with which he was conversant but he was not in a position to answer questions normally raised by a contractor at a preconstruction conference (Finding 7).

¹⁸ Although no portion of the record is cited, Government counsel has suggested that the drawing introduced into evidence as AX 2 may reflect the measurements taken by the appellant during the prebid site visit. The appellant states that AX 2 was prepared after the opening of bids on the project and at the time it submitted its claim (n.9, *supra*).

August 12, 1981

pellant's answer to Government interrogatory 2d has little probative value, however, even though neither at the hearing nor in its post-hearing briefs has the appellant given any satisfactory explanation as to why the particular question was answered the way it was.

At the outset we note the unqualified assertion by the appellant in the same set of interrogatories that it was not possible to form a conclusion as to the quantity of work to be performed except on the basis of the estimates given by the Government in the specifications. Also noted is the fact that the 22,308 square feet of roofing reflected in the contractor's estimate corresponds exactly with the total figures for roofing derived from the addition of the approximate quantities of roofing given for the third, fourth, and fifth floors in the invitation for bids (Findings 2 and 3).

Entirely aside from the above considerations, however, is the fact that the Government has not only failed to prove but has not even undertaken to show how it would have been possible for the appellant or anyone bidding on the job to verify by means of a site investigation the quantity of roofing that would be required for the project. In this case, the specification failed to indicate the areas in which the roofing was to be performed; neither plans nor drawings were furnished; and the areas to be roofed were apparently determined on the basis of directions received from the COTR or someone authorized to act for him

(Finding 9 nn.8, 10 & 13, *supra*). Based upon the foregoing analysis, the Board finds that it would have been impossible for the contractor to verify from an on-site inspection either the quantity of roofing required or where it would be required. In such circumstances, the appellant clearly had no alternative but to base its bid upon the estimated quantities of roofing set forth in the invitation. This is what it did as shown by its testimony and its bid estimate (Finding 3). So finding, the Board considers that, insofar as the claim for excess roofing is concerned, this case is very similar to that involved in *Lee R. Smith-Contract Builder*, ASBCA No. 11135 (Sept. 23, 1966), 66-2 BCA par. 5857.

The *Lee R. Smith* case, *supra*, involved a reroofing contract where there was a substantial difference between the approximate quantity of reroofing estimated in the invitation (610 squares) and the quantity of reroofing required to complete the contract work (691 squares), i.e., an overrun of approximately 13.28 percent. Commenting upon the effect of the contractor's failure to make a site inspection in that case, the Armed Services Board states:

There is no contention that appellant could have detected the error in the Government's statement of quantity in any way except by a site examination. The fact that appellant made no prebid site inspection makes no difference, as he is chargeable with knowledge of what he could have discovered by a reasonable prebid site inspection, but is not charge-

able with knowledge of what would not have been disclosed by such an inspection. The crucial issue in this appeal is whether appellant could have discovered the error in Government's quantity statement by a proper site inspection.

(66-2 BCA par. 5857 at 27,181). In its posthearing brief at page 4, the respondent attempts to distinguish the *Lee R. Smith* case, on the ground that in that case the contractor did not make a prebid site investigation which included measurements as to the quantity of work to be performed. If, as we have found, however, the contractor could not and therefore did not verify the accuracy of the estimated quantity of roofing set forth in the invitation by means of its site investigation, the distinctions made by the Government between the two cases are not considered to be of any real significance.

Apparently, with a view to establishing that the term approx. (approximately) does not necessarily imply a certain precision in the respondent's figures, Government counsel cites the decision of this Board in *Swauger Contractor*, IBCA-609-12-66 (July 11, 1967), 67-2 BCA par. 6430. In that case we recognized that although the term approximately is not synonymous with the term estimated, it is often used in such a context. The Board found that to be the case in *Swauger* where, however, the overrun was only approximately 3 percent of the total estimate and the contract clearly used the two terms interchangeably. Here the overrun quantities were in excess of

24 percent above the estimate and there is no language in the contract indicating the two terms were being used interchangeably.

Remaining for consideration is the effect to be given to the site investigation provision of the specifications under which the successful bidder was required to assume all responsibility for the conclusions reached as to the difficulties and quantities of work to be performed (Finding 2). Addressing this question Government counsel calls attention to case of *Archie and Allan Spiers, Inc. v. United States*, 155 Ct. Cl. 614 (1961) in which the Court of Claims noted that *Hollerbach v. United States*, 233 U.S. 165 (1914) and other cited cases did not stand for the proposition that all warning and exculpatory clauses are without effect.

Construing clauses generally comparable to those included in the instant contract, this Board stated in *Swauger*, *supra* at 29818: "Provisions such as the 'Conditions Affecting the Work' clause, *supra*, relied upon exclusively by the Contracting Officer in deciding this claim, or the 'Examination of Project Site' clause, do not operate to eliminate the 'Changed Conditions' clause" (footnotes omitted). Since the Board has found that it would not have been possible to ascertain the quality of reroofing work from a site examination in the instant case,¹⁹ there is no need to determine

¹⁹ Cf. *Benson Tree Co.*, IBCA-812-11-69 (Nov. 10, 1970), 70-2 BCA par. 8549 at 39,754 ("[W]e do not think that a reasonable prebid

August 12, 1981

the effect to be given to exculpatory clauses in other circumstances.

Decision

For the reasons stated and on the basis of the authorities cited, the Board finds that the appellant is entitled to an equitable adjustment under the Differing Site Conditions clause in the amount of \$12,368 for 5,412 square feet of roofing in excess of the aggregate quantity of roofing represented by the Government in the specifications as required for the performance of the contract work (Finding 3, 14).

Claim for Double Roofing (Second Category Differing Site Conditions)—\$850

Discussion

[3] In the course of performing the instant contract the contractor encountered double roofing in two different areas of the third floor roof. It is undisputed that no written notice was given to the contracting officer prior to the time the conditions were disturbed. Appellant offered testimony to show that the double roofing encountered was both unknown and unusual. The Government's position is that the contractor's failure to give written notice to the contracting officer before the conditions were disturbed precludes the allowance of the

double roofing claim. The Government also states that the appellant has not shown that the double roofing was a condition of an unusual nature differing materially from conditions ordinarily encountered in performing the type of work covered by the contract.

Citing *Carson Linebaugh, Inc.*, ASBCA No. 11384 (Oct. 5, 1967), 67-2 BCA par. 6640 as authority, the Government asserts that appellant's failure to give the notice required by the Differing Site Conditions clause is fatal to its claim, at least insofar as the second area of double roofing encountered is concerned. In *Carson Linebaugh, supra*, however, the Armed Services Board recognized that written notice may be waived by the Government or may become supererogatory where the Government has in fact knowledge of the condition and of the difficulties encountered by the contractor.

A review of Board decisions in the area of notice under different clauses²⁰ discloses that ever since the Court of Claims decision in *Hoel-Steffen Construction Co. v. United States*, 197 Ct. Cl. 561 (1972), involving consideration of timeliness of notice under a Suspension of Work clauses,²¹ the

site examination, admittedly omitted by appellant, would necessarily have revealed the condition, in view of the sampling method employed by the Government to establish the approximation, and the even more elaborate and sophisticated methods used to verify it").

²⁰ None of the cases discussed in the text involve a contractor's failure to file a timely notice of appeal. For a case in which a contractor's failure to take an appeal within the time specified in the contract was fatal to its claim, see *Harry Claterbos Co., JV*, IBCA-1153-5-77 (Dec. 6, 1977), 84 LD. 969, 78-1 BCA par. 12,888.

²¹ See our discussion of *Hoel-Steffen*, text *supra*, in *Hartford Accident and Indemnity Co., IBCA-1139-1-77* (June 23, 1977), 84 LD. 296, 301-03, 77-2 BCA par. 12,604 at 61,075-76.

Boards have been loath to deny a claim on the basis of a contractor's failure to comply with the notice provisions of various clauses (*e.g.*, Changes, Differing Site Conditions), where the Government was found to have actual knowledge of the operative facts and no prejudice was shown to have resulted from a belated written notice. *See*, for example, *Mutual Construction Co., Inc.*, DOT CAB No. 1075 (Aug. 18, 1980), 80-2 BCA par. 14,630 at 72,157-58; *Smith & Pittman Construction Co.*, AGBCA No. 76-131 (Mar. 2, 1977), 77-1 BCA par. 12,381 at 59,929; and *A. Belanger & Sons, Inc.*, ASBCA No. 19187 (Jan. 29, 1975), 75-1 BCA par. 11,073 at 52,714. *Cf. Phillips Construction Co.*, IBCA-1295-8-79 and IBCA-1296-8-79 (July 31, 1981), 88 I.D. 689, 81-2 BCA par. — (appellant not foreclosed from asserting the defense of an excusable cause for delay under Clause 5 of the General Provisions of Standard Form 23-A construction contract simply because of the alleged technical inadequacy of the written notice).

Turning to the facts having a bearing on the question of notice in this case, we note that if the type of preconstruction conference apparently arranged for by the administrative contracting officer had been held as planned by him, it is entirely possible that Mr. Singleton would have been informed at that time that he would encounter areas involving double roofing. He would then clearly have had an opportunity to file a timely protest predicated upon the fact that the bid sub-

mitted had included no allowance for the additional expenses involved in the removal and disposal of the excess material necessarily encompassed in double roofing. As we have noted, however, the COTR did not attend the scheduled preconstruction conference as the administrative contracting officer had apparently contemplated. Mr. Parker was apparently preoccupied with other matters and Mr. Eddie Brille was not knowledgeable of the conditions which might be expected to obtain in performing the contract work. The conditions under which the preconstruction conference scheduled by the administrative contracting officer went forward raises a serious question as to whether the Government's own conduct may have contributed to the contractor's delay in giving notice that additional compensation would be expected for the double roofing work. *Cf. J. A. LaPorte, Inc.*, IBCA-1014-12-73 (Sept. 29, 1975), 82 I.D. 459, 483, 75-2 BCA par. 11,486 at 54,780 ("[T]he Government's actions contributed to and may even have been the principal cause of the delay in giving notice of the claim" (footnote omitted)).

In this case it is undisputed that the COTR knew of the double roofing being present in two different areas of the third floor prior to the issuance of the invitation; that the invitation contained no reference to double roofing; that prior to the time the double roofing was encountered neither the contractor nor the roofing subcontractor had been informed that it would be; that the

COTR was present when the double roofing was first encountered by the roofing subcontractor; that in response to a question received from the roofing subcontractor the COTR directed him to take all of the double roofing off; and at that time the COTR informed the roofing subcontractor that double roofing would be encountered in another area and that all of that should be removed also down to the insulation (Findings 8 and 9).

From the record made in these proceedings it is clear that the Government in the person of the COTR was aware of the operative facts pertaining to the double roofing claim. The Government has failed to offer any evidence to show that the contractor's delay in giving the written notice impeded its investigation of the claim or that if an earlier written notice had been given it would have proceeded differently. Absent such showing, the Board is persuaded and so finds that the Government was not prejudiced²² by the contractor's delay in giving written notice of the claim for double roofing²³ and that the

claim should be considered on the merits.

[4] With respect to the merits of the double roofing claim, Government Counsel has raised a number of defenses, among which are; (i) under the terms of the contract the COTR had no authority to authorize a change or to obligate the Government in any way which could affect the contract price; (ii) when the double roofing was first encountered the roofing subcontractor had indicated that a Pepsi or a cup of coffee would be sufficient compensation for any additional work involved; and (iii) that the evidence offered at the hearing had failed to show that encountering the double roofing in either area of the third floor roof was an unusual condition within the meaning of the Differing Site Conditions clause.

As to the first point the Board notes that the fact the COTR was without authority to contract on behalf of the Government does not mean that he had no duty to report matters to the contracting officer which were brought to his attention regarding the performance of the contract work (*Mutual Construction Co., Inc., supra*), or that the knowledge that he possessed of a potential claim could not be imputed to the contracting officer. *Environment Consultants, Inc., IBCA—1192-5-78* (June 29, 1979), 86 I.D. 349, 357-58, 79-2 BCA par. 13,937 at 68,396. It is clear that directions received from a person without authority to contract can in certain circumstances form a predicate for the allowance of a

²² See *Parcoa, Inc.*, AGBCA No. 76-130 (July 19, 1977), 77-2 BCA par. 12,658 at 61,361-62 ("In connection with allegations of prejudice resulting from lack of timely written notice of changes or differing site conditions, it is the Government's burden to prove prejudice since there is no presumption that prejudice resulted").

²³ Since our decision is grounded on the Government having actual knowledge of the operative facts and on the lack of a showing of any prejudice to the Government as a result of the belated written notice and since that rationale encompasses both areas in which the double roofing was encountered, we have not considered that there is any need to distinguish between them.

claim for additional compensation. *Barton & Sons Co.*, ASBCA Nos. 9477 and 9764 (May 21, 1965), 65-2 BCA par. 4874.

The weight that Government counsel attaches to a remark made by the roofing subcontractor when the double roofing was first encountered does not appear to be warranted by the record made in this case. Considering the additional work involved in handling the double roofing according to the undisputed testimony offered by Mr. Singleton and Mr. Webb, it appears to the Board that Mr. Webb's remark about accepting a Pepsi or a cup of coffee for such work must have been made in a jocular vein. In any event, it is clear that Mr. Webb's remark was made at a time before he could have been fully aware of the possible dimensions of the problem and prior to the time he had communicated information about double roofing having been encountered to Mr. Singleton, who was clearly the one that would decide whether a claim for the double roofing would be submitted. Moreover, both Mr. Singleton and Mr. Webb testified that the contractor's cost were substantially increased by reason of encountering the double roofing. Based upon this uncontradicted testimony, the Board finds this to be the case.

Remaining for consideration is the Government's assertion that the double roofing did not constitute an unusual condition. Appellant's witnesses Singleton and Webb both testified that encountering the

double roofing in the performance of the contract work was unusual. Mr. Webb's testimony was subject to the qualification that double roofing could only be said to be unusual if encountered in southern areas of the country (Finding 11). The Board takes administrative notice of the fact that Miami, Florida, is located in a southern area of the country. The Board therefore finds that the double roofing encountered in performing the instant contract constituted an unusual condition within the meaning of Clause 4, Differing Site Conditions of the contract (AF 9).

Decision

For the reasons stated and on the basis of the authorities cited, the Board finds that the appellant is entitled to an equitable adjustment under the Differing Site Conditions clause in the amount of \$850 by reason of having encountered double roofing in two different areas on the third floor of the building involved in the instant contract which double roofing constituted an unknown physical condition at the site, of an unusual nature, differing materially from those ordinarily encountered and generally recognized as inhering in work of the character provided for in the contract.

Summary

The appeal is granted in the amount of \$13,218 (Finding 14), plus interest thereon computed in accordance with the Contract Dis-

G. HERBERT PACKWOOD
Administrative Judge

OLD HOME MANOR, INC.

3 IBSMA 241

Decided August 13, 1981

Appeal by the Office of Surface Mining Reclamation and Enforcement for review of the Dec. 8, 1980, decision of Administrative Law Judge Sheldon L. Shepherd, Docket No. CH 1-55-R, granting Old Home Manor, Inc., temporary relief from a cessation order issued pursuant to sec. 521(a)(3) of the Surface Mining Control and Reclamation Act of 1977, 30 U.S.C. § 1271(a)(3) (Supp. II 1978).

Reversed.

1. Surface Mining Control and Reclamation Act of 1977: Backfilling and Grading Requirements: Generally

Backfilling and grading requirements of 30 CFR 715.14 are to be satisfied as contemporaneously as possible with surface coal mining operations to accomplish timely reclamation of disturbed areas.

2. Surface Mining Control and Reclamation Act of 1977: Backfilling and Grading Requirements: Generally

Whether particular backfilling and grading activity is timely must be determined taking into account the overall circum-

stances of a surface coal mining and reclamation operation.

3. Surface Mining Control and Reclamation Act of 1977: Temporary Relief: Generally

Where OSM provides the maximum time allowable under 30 CFR 722.12(d) for the abatement of a violation, an Administrative Law Judge may not effectively extend this time by granting temporary relief from the abatement requirement.

4. Surface Mining Control and Reclamation Act of 1977: Abatement: Generally

A permittee's noncompliance with an order by OSM to abate an alleged violation of the backfilling and grading requirements of 30 CFR 715.14 cannot serve to excuse the permittee's noncompliance with an order by OSM to abate an alleged violation of the revegetation requirements of 30 CFR 715.20.

APPEARANCES: William F. Larkin, Esq., Office of the Field Solicitor, Charleston, West Virginia, Marcus P. McGraw, Esq., Assistant Solicitor, Branch of Litigation and Enforcement, Division of Surface Mining, and John Pendergrass, Esq., Division of Surface Mining, for the Office of Surface Mining Reclamation and Enforcement; Gregg M. Rosen, Esq., Pittsburgh, Pennsylvania, for Old Home Manor, Inc.

OPINION BY THE INTERIOR BOARD OF SURFACE MINING AND RECLAMATION APPEALS

This appeal was brought by the Office of Surface Mining Reclamation and Enforcement (OSM) for review of the Dec. 8, 1980, decision

of Administrative Law Judge Sheldon L. Shepherd granting Old Home Manor, Inc. (Manor), temporary relief from Cessation Order (CO) No. 80-I-59-10. OSM issued this cessation order pursuant to sec. 521(a)(3) of the Surface Mining Control and Reclamation Act of 1977 (Act),¹ as implemented in 30 CFR 722.13, on the basis of Manor's alleged failure to abate two violations of the Department's regulations charged in Notice of Violation (NOV) No. 80-I-59-18. We reverse the decision granting temporary relief and reinstate the CO pending its final review.

Factual and Procedural Background

On Aug. 18, 1980, OSM inspected the Hamil surface coal mine permitted to Manor (permit 615-35) in Westmoreland County, Pennsylvania, in response to a citizen's complaint (Tr. 16; Exh. A). At the conclusion of this inspection OSM issued Notice of Violation No. 81-I-59-18, charging the company with

violations of 30 CFR 715.14, 715.17, and 715.20. Two of the alleged violations are involved in this appeal: (1) Failure to transport, backfill, compact, and grade all spoil material to achieve the approximate original contour, with all highwalls, spoil piles, and depressions eliminated, in violation of 30 CFR 715.14; and (2) failure to establish on disturbed land a diverse, effective, and permanent vegetative cover, in violation of 30 CFR 715.20. The remedial actions prescribed by OSM to abate these alleged violations were for Manor to backfill and grade the disturbed land to achieve the approximate original contour, and to seed and mulch the topsoil storage piles.² These actions were to be taken within 90 days of the issuance of the NOV.³

The circumstance that prompted issuance of the NOV was that reclamation activity at the Hamil minesite appeared to be at a stand-

¹ Act of Aug. 3, 1977, 91 Stat. 445-532, 30 U.S.C. §§ 1201-1328 (Supp. II 1978). Sec. 521(a)(3), 30 U.S.C. § 1271(a)(3), provides in pertinent part:

"If, upon expiration of the period of time as originally fixed or subsequently extended, for good cause shown and upon the written finding of the Secretary or his authorized representative, the Secretary or his authorized representative finds that the violation has not been abated, he shall immediately order a cessation of surface coal mining and reclamation operations or the portion thereof relevant to the violation. * * * In the order of cessation issued by the Secretary under this subsection, the Secretary shall determine the steps necessary to abate the violation in the most expeditious manner possible, and shall include the necessary measures in the order." 30 CFR 722.13 contains language to the same effect as that quoted above.

² The NOV (Exh. A) as originally issued required Manor to abate the violation of 30 CFR 715.20 (violation 5 in the NOV) by seeding and mulching the disturbed area upon the completion of backfilling and grading. During a minesite meeting between representatives of OSM and Manor, on Oct. 22, 1980, OSM informed Manor that it would terminate violation 5 of the NOV when the stockpiles of topsoil on the permit area were seeded and mulched (Tr. 35).

As a general rule modifications of a NOV must be written. *Drumond Coal Co.*, 3 IBAMA 100, 106 n.6, 88 I.D. 474, 477 n.6 (1980). Because there is no disagreement between the parties in this case on the fact and terms of the oral modification, however, we are willing to recognize it.

³ OSM first specified that these actions be completed by Sept. 19 and 20, 1980, respectively. On Oct. 15, 1980, OSM issued a written modification of the NOV (Exh. F) extending the abatement deadlines for both alleged violations to Nov. 16, 1980.

still, even though spoil and topsoil piles, depressions, a portion of the highwall created during mining, and areas of limited or no vegetation remained (Tr. 17, 23-27; Exhs. S1-S10). Mining activity had ended at the site in October 1979 (Tr. 100). Backfilling operations begun at that time were discontinued in June 1980 "due to management's decision" (Tr. 101). At that time seven persons were employed on the site in reclamation activity (Tr. 103).

Reclamation operations were recommenced at the Hamil site in September 1980. Between then and OSM's issuance of the CO to Manor on Nov. 24, 1980, two men and two pieces of earthmoving equipment were employed in one-shift 5-day work weeks, to accomplish abatement of the violations charged in the NOV (Tr. 114, 119-20, 140).⁴ When OSM reinspected the minesite on November 24, the backfilling and grading operations remained incomplete and none of the topsoil stockpiles had been seeded and mulched (Tr. 37, 41-43).⁵

Manor applied for temporary relief from the CO and a review hearing was held on Dec. 5, 1980. The Administrative Law Judge's

decision, issued Dec. 8, 1980, granted Manor "[t]emporary relief * * * to vacate the cessation order and [to toll] the \$750 per day civil penalty as to [Manor's alleged failure to return the disturbed area to its approximate original contour and to seed and mulch the topsoil stockpiles] until [Manor's] application for review [of the CO] is disposed of" (Decision at 4-5). In accordance with 43 CFR 4.1267, OSM appealed this decision. Both parties filed briefs.

Discussion and Conclusions

As a preliminary matter we address OSM's argument that the decision below improperly granted Manor permanent relief. We agree with OSM's contention that before permanent relief may be granted from its enforcement action the parties must have notice of the intention of an Administrative Law Judge to render a final decision on the merits of a case, in accordance with the provisions of 43 CFR 4.1123 and 4.1167. *See Cravat Coal Co.*, 2 IBSMA 136, 87 I.D. 308 (1980).⁶ We do not believe, however, that it was the Administrative Law Judge's intention in the instant case to grant permanent relief. The order states in pertinent part: "Temporary relief shall be granted to vacate the cessation order * * *

⁴ This effort to accomplish reclamation contrasts with Manor's use of seven men (and, presumably, more than two pieces of equipment) for reclamation work before abandoning this work in June 1980 (Tr. 103).

⁵ The OSM inspector testified that he did not take precise measurements but that he would guess that, between the dates of the issuances of the NOV and CO in August and November respectively, the highwall was reduced from 50 to 30 feet in height (Tr. 75-76, 83, 90).

⁶ *Cf. Grafton Coal Co., Inc.*, 2 IBSMA 316, 319 n.2, 87 I.D. 521, 523 n.2 (1980) (in which the Board indicated that it is incumbent upon the potentially disadvantaged party to object to permanent relief granted in the context of a proceeding for temporary relief).

until the application for review is disposed of" (Decision at 4-5). We consider this language to grant temporary relief only.⁷

A party seeking temporary relief from enforcement action by OSM must show (1) "a substantial likelihood that the findings and decision of the administrative law judge in the matters to which the application relates will be favorable to the applicant" and (2) "that the relief sought will not adversely affect the health or safety of the public or cause significant, imminent environmental harm to land, air, or water resources." 43 CFR 4.1263; *see* 43 CFR 4.1191. The Administrative Law Judge concluded that the record supports a decision in favor of Manor under both these criteria. We disagree with the determination that there is a substantial likelihood that Manor ultimately will prevail on the merits of its case. In view of this disagreement with the decision below, we need not address the Administrative Law Judge's determination that a grant of temporary relief to Manor would not adversely affect the health or safety of the public or cause significant environmental harm to land, air, or water resources. We note, however, that his determination is not supported by reference in the decision to evidence

supporting it, as is required by 43 CFR 4.1127(a).⁸

[1] The first issue is whether OSM can require a permittee to satisfy the performance standards of 30 CFR 715.14 within a particular time. As Manor correctly points out, the provisions of sec. 715.14 do not contain a time schedule for completion of backfilling and grading operations. These provisions, however, must be read in conjunction with the Act and other regulations. Specifically, 30 CFR 715.13(a) provides that "[a]ll disturbed areas shall be restored in a timely manner." This requirement, in turn, correlates with sec. 102(e) of the Act, 30 U.S.C. § 1202(e) (Supp. II 1978), in which one purpose of the surface mining legislation is specified to be "[to] assure that adequate procedures are undertaken to reclaim surface areas *as contemporaneously as possible with the surface*

⁸ Indeed, the Administrative Law Judge's recitation of the evidence of a "50-foot unreclaimed highwall * * * severe erosion on spoil piles * * * caused by the lack of vegetation * * * as well as due to lack of protection of the spoil piles and topsoil piles" (Decision at 2), indicates otherwise. Looking beyond the decision to the record as a whole, the only support we find for the Administrative Law Judge's determination is Manor's argument that OSM's issuance of an NOV rather than a CO in August "constitutes a tacit admission by OSM that Old Home Manor has met its burden of establishing the absence of an adverse, environmental impact" (Manor's Brief at 11). For Manor's proposition to be acceptable, an assumption must be made either that conditions at the minesite are static (which is clearly not the case) or that Manor's reclamation activity would hold constant or reduce the likelihood of harm to the public or environment resulting from conditions at the minesite. The latter assumption, while not patently unreasonable, is insufficient to support the conclusion urged by Manor.

⁷ Because the Administrative Law Judge used the term "vacate" rather than "stay" in describing the relief granted Manor, OSM's interpretation of the intended relief is plausible. We decline to adopt this interpretation, however, on the basis of our reading of the order as a whole.

coal mining operations." (Italics added.) These provisions demonstrate that timing is an important factor in OSM's evaluation of a permittee's compliance with the performance standards in 30 CFR 715.14.⁹

[2] Whether particular reclamation work is "timely" must be determined taking into account the overall circumstances of a surface coal mining and reclamation operation. The record here informs us that Manor did not begin its backfilling activity until its mining was completed; that the company discontinued that activity, for unexplained reasons, before its completion; and that it did not show any disposition to recommence reclamation until after it was charged with a violation of 30 CFR 715.14, some 9 months after the conclusion of mining. Moreover, we are informed that in response to OSM's enforcement action Manor devoted significantly fewer resources to reclamation than it had used prior to OSM's action.¹⁰ These circumstances certainly do not suggest timely performance of backfilling and grading. Thus, at this stage in the review process there does not appear to be a substantial likelihood that the alleged violation of

30 CFR 715.14 will be vacated upon final review.¹¹

[3] Manor further contends that OSM exceeded its authority in requiring the company to complete backfilling and grading operations within 90 days of the issuance of the NOV. OSM is directed by sec. 521(a)(3) of the Act, 30 U.S.C. § 1271(a)(3) (Supp. II 1978), and 30 CFR 722.12(d), however, the able time for abatement of any violation alleged in a NOV. Under 30 CFR 722.12(d), however, the time set cannot exceed 90 days. *Universal Coal Co.*, 3 IBSMA 218, 88 I.D. 672 (1981).¹² OSM's requirement that Manor complete backfilling and grading was certainly consonant with the violation of 30 CFR

¹¹ The Administrative Law Judge apparently failed to consider the background of 30 CFR 715.14 in arriving at the conclusion that Manor's performance was consistent with that regulation. He stated in this regard the following:

"Specifically, I feel that, as to the requirement that the applicant regrade and reclaim the spoil and return it to the approximate original contour, this is being done in a reasonably diligent manner to the extent the resources of the applicant have been applied to the reclamation process. The regulations and the Act do not, as the applicant's attorney pointed out, provide timetables nor do they provide equipment requirements. Obviously of course, one old man with a wheelbarrow and a shovel could hardly be construed to be a diligent reclamation effort. On the other hand I do not feel that the regulations or the Act authorize the respondent to order the applicant to devote 100 percent of its efforts on one reclamation project to the exclusion of all other activity."

(Decision at 4).

¹² Under present regulations a permittee's inability to comply with a proper abatement requirement cannot be the basis for extending the abatement period beyond 90 days. See 30 CFR 722.17.

⁹ While it would have been useful for OSM to refer to 30 CFR 715.13(a) in the NOV, the lack of reference to this provision does not render the NOV defective in terms of the requirements of 30 U.S.C. § 1271(a)(5) (Supp. II 1978). See *Renfro Construction Co., Inc.*, 2 IBSMA 372, 87 I.D. 584 (1980); cf. *Old Ben Coal Co.*, 2 IBSMA 38, 87 I.D. 119 (1980).

¹⁰ See n.4 and accompanying text.

715.14 alleged, and OSM provided Manor with the full 90 days allowable under 30 CFR 722.12(d) to abate this violation. It was, therefore, improper for the Administrative Law Judge to grant Manor temporary relief effectively extending the time for abatement beyond 90 days. Accordingly, we reverse the decision granting temporary relief from violation 1 of the CO.

The other element of the CO (violation 3) which is at issue is the allegation that Manor failed to seed and mulch its topsoil storage piles to abate the violation of 30 CFR 715.20 charged in the NOV. The Administrative Law Judge granted temporary relief from this element of the CO despite his conclusion "that the applicant is required to protect the topsoil and spoil piles to preserve the stockpiles and to prevent erosion" (Decision at 4). Without attempting to resolve this apparent inconsistency in the decision below we hold that temporary relief was improperly granted as to violation 3.

[4] Manor argues that it was continuing to add topsoil to existing stockpiles during the course of backfilling and grading operations and that, therefore, it "would have been futile to mulch the topsoil pile" (Manor's Brief at 9). This argument is not persuasive. Although the record is ambiguous concerning how many stockpiles existed when the CO was issued, it appears that Manor was adding topsoil to

only one stockpile.¹³ More importantly, had the company completed backfilling and grading operations as required by OSM it would have salvaged all remaining topsoil in time to seed and mulch the stockpiles in accordance with the terms of the NOV. We do not accept Manor's noncompliance with 30 CFR 715.14 as an excuse for its noncompliance with 30 CFR 715.20(d).

For the above-stated reasons the decision on appeal granting Manor temporary relief from violations 1 and 3 of Cessation Order No. 80-I-59-10 is reversed.¹⁴ No civil penalty shall be assessed for these alleged violations for the period beginning with the issuance of the CO and terminating with Manor's receipt of this decision.¹⁵

McGraw, Esq., Assistant Solicitor, Branch of Litigation and Enforcement, Office of the Solicitor, Washington, D.C., for the Office of Surface Mining Reclamation and Enforcement.

OPINION BY THE INTERIOR BOARD OF SURFACE MINING AND RECLAMATION APPEALS

Delta Mining Corp. (Delta) has sought review of an Apr. 17, 1981, decision of Administrative Law Judge Frederick A. Miller in Docket Nos. IN 0-10-P and IN 0-17-P denying its petition for an award of costs and expenses, in-

cluding attorneys' fees. The award was sought under the provisions of the Surface Mining Control and Reclamation Act of 1977 (Act)¹ and its implementing regulations in 43 CFR 4.1290 through 4.1296. For the reasons set forth below, we affirm that decision.

Background

Delta filed its petition in order to recover costs associated with administrative review of Notice of Violation No. 79-III-6-40, issued by the Office of Surface Mining Reclamation and Enforcement (OSM) on July 25, 1979, and of Cessation Order No. 79-3-6-14, issued on Oct. 1, 1979, for failure to abate the violation listed in the notice. The notice alleged that Delta had violated 30 CFR 715.14 (h) (3) and (4) at its Sendelwick Pit in Dubois County, Indiana, by failing properly to transport, backfill, and grade the entire disturbed area. The notice had required Delta to return equipment to the site, on which mining had been completed, and to finish reclamation by Aug. 15, 1979.

Delta sought review of these enforcement actions and on Jan. 22, 1981, received a decision from the Hearings Division vacating the notice and order. The basis of that decision was that 30 CFR 715.13(a), which requires that "[a]ll disturbed areas shall be restored in a timely

¹ Act of Aug. 3, 1977, 91 Stat. 445, 30 U.S.C. §§ 1201-1328 (Supp. II 1978).

manner" after mining is completed, did not, in the Administrative Law Judge's view, grant authority to OSM to establish schedules for the completion of reclamation. OSM did not appeal this decision.

On Mar. 5, 1981, Delta filed its petition for costs with the Administrative Law Judge. OSM filed a memorandum in opposition to the petition on Apr. 9, 1981. On Apr. 17, 1981, the Administrative Law Judge denied the petition. Delta appealed this decision to the Board on May 1, 1981, and both parties filed briefs.

Discussion and Conclusions

43 CFR 4.1294(c) provides that costs and expenses, including attorneys' fees, may be awarded "[t]o a permittee from OSM when the permittee demonstrates that OSM issued an order of cessation, a notice of violation or an order to show cause why a permit should not be suspended or revoked, in bad faith and for the purpose of harassing or embarrassing the permittee." In *Dennis R. Patrick*, 1 IBSMA 248, 86 I.D. 450 (1979), we held that a petitioner must prove the elements listed in 43 CFR 4.1294(c) and that such proof must consist of more than assertions of personal belief.

Delta's only argument to show bad faith and harassment is that OSM has evidenced an "attitude of bureaucratic arrogance" in pursuing its case. This argument is based on the fact that the Jan. 22, 1981, decision for Delta was the second decision from the Hearings Divi-

sion vacating enforcement action taken by OSM on the ground that OSM could not impose schedules for the completion of reclamation after mining had been concluded.² See *Old Home Manor*, Docket No. CH I-55-R (Dec. 8, 1980).

In *Miami Springs Properties*, 2 IBSMA 399, 404, 87 I.D. 645, 647 (1980), the Board noted that a decision of the Hearings Division is the law of that case only and is not precedential authority for future cases. Although the Administrative Law Judge here characterized that statement as "an invitation * * * to be inconsistent in the application and interpretation of the terms of the Act and the regulations" (Jan. 22, 1981, Decision at 3),³ it is more appropriately considered an acknowledgement that the Secretary deserves the best effort of each Administrative Law Judge and Board member in attempting to implement the statutes entrusted to the Department. Those best efforts may at times lead to different approaches or results. Such diversity is a constructive way to help the Board and the Secretary to discover problem areas and to choose between alternative approaches to resolving those problems.

² But see *Cape Coal Corp.*, Docket No. NX 9-105-R (Mar. 12, 1981).

³ This and similar hyperbole in the decision may well have encouraged the filing of this petition.

Such statements can also have a chilling effect on the parties' development of their own theories of the case and of the law involved. The parties should be free to present any arguments not inappropriate to the issues in a case. The Department, the industry, and the public are all better served by such exposition.

Therefore, OSM is not required to change its policies on the basis of an adverse decision from the Hearings Division.⁴ Indeed, OSM had appealed *Old Home Manor, supra*. The Board today reversed the Hearings Division's decision in that case and held that OSM may establish schedules for reclamation after the completion of mining. *Old Home Manor*, 3 IBSMA 241, 88 I.D. 737 (1981).

[1] Delta's claim for costs and expenses, therefore, rests only on the ground that it prevailed in the original litigation. This is not sufficient to show bad faith by OSM or an intent to harass or embarrass Delta.

The Apr. 17, 1981, decision of the Hearings Division is affirmed.

REITZ COAL CO.

3 IBSMA 260

Decided August 20, 1981

Petition by Reitz Coal Co. for review of the Oct. 15, 1980, decision of Admin-

istrative Law Judge Sheldon L. Shepherd, Docket No. CH 9-35-P, upholding Notice of Violation No. 79-I-21-3, against petitioner's assertion that the coal preparation facility where the alleged violation occurred is not subject to the regulatory authority of the Office of Surface Mining Reclamation and Enforcement, and reducing the associated civil penalty assessment.

Reversed.

1. Surface Mining Control and Reclamation Act of 1977: Tipples and Processing Plants: At or Near a Minesite—Surface Mining Control and Reclamation Act of 1977: Words and Phrases

"Surface Coal Mining Operations." Mere evidence that a coal processing facility receives some undisclosed percentage of the coal production of two mines operated in connection with the facility, and located distances of 8 and 11 miles from the facility, is not sufficient to establish that the facility is "at or near" either of the mines, within the meaning of the definition of "surface coal mining operations" at 30 CFR 700.5.

APPEARANCES: John J. Dirienzo, Jr., Esq., Fike, Cascio & Boose, P.C., Somerset, Pennsylvania, for Reitz Coal Co.; William F. Larkin, Esq., Office of the Field Solicitor, Charleston, West Virginia, Marcus P. McGraw, Esq., Assistant Solicitor, Branch of Litigation and Enforcement, and Glenda R. Hudson, Esq., Division of Surface Mining, Office of the Solicitor, Washington, D.C., for the Office of Surface Mining Reclamation and Enforcement.

⁴ Continued adverse decisions from different Administrative Law Judges may strongly suggest, however, that OSM should change its policy or appeal one or more of those decisions to the Board.

*OPINION BY THE INTERIOR
BOARD OF SURFACE
MINING AND
RECLAMATION APPEALS*

Reitz Coal Co., (Reitz) has petitioned the Board to review the Oct. 15, 1980, decision of the Hearings Division upholding Notice of Violation No. 79-I-21-3 and assessing a civil penalty against Reitz. The notice was issued to Reitz for its alleged discharges of surface runoff containing suspended solids in excess of those permitted under 30 CFR 717.17(a). Reitz has challenged this enforcement action, on the ground that the Office of Surface Mining Reclamation and Enforcement (OSM) lacks authority to regulate operations at the subject coal preparation and loading facility, as well as the civil penalty assessment.

*Factual and Procedural
Background*

Reitz operates a coal preparation facility in Central City, Pennsylvania, pursuant to a permit from the State Bureau of Water Quality Management. The facility occupies approximately 15 to 20 acres. Coal is received there from various mines in Somerset County. The coal is stockpiled, blended, and passed through a cleaning plant; transferred by conveyor belts to storage silos; and, ultimately, loaded into rail cars.

In February and March 1979, 33,857 tons of coal were delivered

to Reitz's preparation facility from mines 2 to 11 miles from it. Of this amount 16.6 percent came from two mines operated by Reitz and located 8 and 11 miles from the preparation facility.¹

On Mar. 5, 1979, OSM inspected Reitz's coal preparation facility and issued Notice of Violation No. 79-I-21-3, charging Reitz with discharging surface runoff containing suspended solids in excess of 70 mg/l, in violation of 30 CFR 717.17(a). To abate this alleged violation,

¹ Petitioner's Exhibit E discloses the identity of companies operating mines from which coal was supplied to Reitz's preparation facility in Feb. and Mar. 1979; the amount of coal delivered from each mine; the proportion of the total deliveries that each amount represents; and the distance between each mine and Reitz's facility. The exhibit is reproduced in essential part, below.

February, 1979

Mine	Tons delivered	Percent	Haulage
Potochar.....	151	1	8
Trent Coal Co.....	194	1	10
J & D Mining.....	10,208	76	2
Reitz #22.....	2,901	22	8
Subtotal.....	13,454		

March, 1979

J & D Mining.....	7,811	38	2
Cairnbrook Coal.....	3,496	17	5
J & P Mining.....	6,392	32	3
Reitz #24.....	427	2	11
Reitz #22.....	2,277	11	8
Subtotal.....	20,403		
Total.....	38,857		

The information contained in this exhibit was augmented by related testimony at the review hearing: Berwind Corp. owns Reitz Coal Co. and Wilmore Coal Co. (Tr. 118-19); Wilmore Coal Co. owns the coal indicated to have been supplied to Reitz's preparation facility by J & D Mining, Cairnbrook Coal Co. (Tr. 119), and the Reitz's Nos. 22 and 24 mines (Tr. 124); and Anthony T. Sossong is the president of both Reitz and Wilmore (Tr. 122).

Reitz was required to construct a sedimentation control structure for treatment of the surface runoff. The original abatement period set by OSM was 60 days. This was extended to 90 days after Reitz had substantially complied with OSM's remedial requirement. The notice of violation was terminated on May 21, 1979.

OSM first proposed a civil penalty of \$2,500. At the assessment conference conducted pursuant to 30 CFR 723.17, OSM reduced this amount to \$1,700.

A hearing on the notice and proposed assessment was held by the Hearings Division on June 6, 1980. The Administrative Law Judge upheld OSM's assertion of authority over Reitz's preparation facility and the violation of 30 CFR 717.17(a) charged by OSM, but reduced the civil penalty assessment from \$1,700 to \$1,000. Reitz's petition to the Board followed and was granted on Jan. 26, 1981.² Both parties filed briefs.

Discussion

The Administrative Law Judge held that Reitz is engaged in surface coal mining operations subject to OSM's regulatory authority. In support of its petition for review, Reitz contends that its coal processing facility is not located "at or near" a minesite and, thus, that the

facility is not embraced by the definition of "surface coal mining operations" set forth in 30 CFR 700.5.

The controlling definition is as follows:

Surface coal mining operations means—

(a) Activities conducted on the surface of lands in connection with a surface coal mine or, subject to the requirements of Section 516 of the Act, surface operations and surface impacts incident to an underground coal mine, the products of which enter commerce or the operations of which directly or indirectly affect interstate commerce. *Such activities include excavation for the purpose of obtaining coal, including such common methods as contour, strip, auger, mountaintop removal, box cut, open pit, and area mining, the uses of explosives and blasting, and in situ distillation or reorting, leaching or other chemical or physical processing, and the cleaning, concentrating, or other processing or preparation, loading of coal for interstate commerce at or near the mine-site.* [Italics added.] *Provided,* These activities do not include the extraction of coal incidental to the extraction of other minerals, where coal does not exceed 16% per centum of the tonnage of minerals removed for purposes of commercial use or sale, or coal exploration subject to Section 512 of the Act; and *Provided further,* that excavation for the purpose of obtaining coal includes extraction of coal from coal refuse piles; and

(b) Areas upon which the activities described in paragraph (a) above occur or where those activities disturb the natural land surface. These areas shall also include any adjacent land the use of which is incidental to any such activities, all lands affected by the construction of new roads or the improvement or use of existing roads to gain access to the site of those activities and for haulage and excavation, workings, impoundments,

² On Nov. 26, 1980, the Board denied Reitz's petition on the basis of its apparent untimeliness. *Reitz Coal Co.*, 2 IBSMA 381 (1980). Upon Reitz's motion for reconsideration of this order, the Board granted the petition. Order of Jan. 26, 1981.

dams, ventilation shafts, entryways, refuse banks, dumps, stockpiles, overburden piles, spoil banks, culm banks, tailings, holes or depressions, repair areas, storage areas, processing areas, shipping areas, and other areas upon which are sited structures, facilities, or other property or material on the surface, resulting from or incident to those activities.

The Board has previously determined that, during the initial regulatory program, the activities enumerated in the first part of this definition qualify as surface coal mining operations only if they are conducted "in connection with" and "at or near" a mine. *See, e.g., Falcon Coal Co., Inc.*, 2 IBSMA 406, 87 I.D. 669 (1980). Because Reitz has not questioned the determination that its coal processing facility is conducted "in connection with" a mine, the Board need only address whether the facility is located "at or near" a mine. I conclude that it is not so located.

This conclusion is based upon my view that the only mines that Reitz's processing facility may be said to be operated "in connection with" are the two mines, Reitz Nos. 22 and 24, which the company owns and operates.³ These are located 8 and 11 miles from the processing facility, respectively. Obviously the facility is not "at" either of these mines; therefore, the issue becomes whether it is "near" either mine.

³ The record discloses (n.1, *supra*) that the coal supplied by J & D Mining and Cairnbrook Coal Co. to Reitz's processing facility is owned, ultimately, by Berwind Corp., which owns Reitz Coal Co. This does not establish, however, that Reitz's processing facility is operated "in connection with" the mines producing that coal.

In the Board's previous decisions concerning coal processing facilities the term "near" has been characterized as a relative term, depending on the context of its use for its precise meaning. *See, e.g., Drummond Coal Co.*, 2 IBSMA 96, 87 I.D. 196 (1980), *rev'd, Drummond Coal Co. v. Andrus*, CV 80-M-0829 (N.D. Ala. Apr. 20, 1981). The context provided by the definition of "surface coal mining operations," quoted *supra*, is that of a broad and comprehensive statement of the many activities and areas of land that Congress and the Department consider to be subject to OSM's regulatory authority.⁴ This statement convinces me that the significance of "near" is not meant to be formulated in terms of a precise, linear measurement applicable under all circumstances.⁵ Thus, I have previously joined the other members of the Board in considering the nature and extent of activities conducted at a particular coal processing facility, as well as the geographical relationship between the facility and the associated mine or mines, in determining whether the facility is located "near" the mine(s).

While I remain convinced that this circumstantial approach to

⁴ The definitions of "surface coal mining operations" in the Act and regulations are identical except for the additional proviso in the regulations that "excavation for the purpose of obtaining coal includes extraction of coal from coal refuse piles." Compare 30 CFR 700.5 with 30 U.S.C. § 1291(28) (Supp. II 1978).

⁵ Indeed, the lack of a prescribed distance or even a general definition of the term "near," in both the Act and regulations, further supports a functional consideration of the term.

identifying nearness is that indicated by the definition of surface coal mining operations and other interpretive aids, the decision of the district court in *Drummond Coal Co., supra*, has persuaded me that the Board must proceed cautiously in cases concerning OSM's regulatory authority over processing facilities, to avoid giving the impression that so long as there are ownership and functional connections between a processing facility and a mine the Board's determination that the facility is "at or near" the mine will follow automatically.⁶

[1] From the record in this case we know that the Reitz Nos. 22 and 24 mines supply some undetermined amount of their coal production to the Reitz processing facility. We know also that these mines are located 8 and 11 miles, respectively, from the facility. We do not know more precisely the geographical relationship between the mines and processing facility; nor do we know more about the functional relationship between them.⁷ Under these circumstances I am not prepared to hold that the facility is "near" the mines, for the functional and geographical relationships disclosed lack even the indicia of nearness which the Board found in the

Drummond processing facility/mine configuration.⁸

For the foregoing reasons I would reverse the decision below.

MELVIN J. MIRKIN

Administrative Judge.

ADMINISTRATIVE JUDGE FRISHBERG CONCURRING:

I agree with the conclusion of Administrative Judge Mirkin that Reitz's coal preparation facility is not located at or near a mine. The basis of my agreement, however, represents a more radical departure from the Board's prior decisions on this point than that suggested in his decision; therefore, I write separately.

⁸ The concurring and dissenting opinions deserve some comment. The concurrence says it is abandoning a functional definition in favor of a solely geographical one. It then defines a geographic relationship in terms of physical integration. How this simplifies or aids us in determining "near," geographically, evades me.

The dissent questions the advisability of our generating opinions on coal processing facilities that only "produce results but no consistent rationale" (Dissenting Opinion at 757). I voiced a similar sentiment in *Drummond Coal Co.*, 2 IBSMA at 103, 87 I.D. at 199. The dissent now suggests that we leave the matter to the Secretary to clarify by appropriate regulations. I do not disagree. My only amplification is that while we are awaiting such clarification we should resolve all doubts against, not in favor of, regulability. See *Western Engineering, Inc.*, 1 IBSMA 202, 86 I.D. 336 (1979).

As for the dissent's consideration of the preamble materials, at 44 FR 14915 (Mar. 13, 1979), concerning the meaning of "at or near" as reflected in regulatory provisions of the permanent program, I note that we considered those materials in *Western Engineering, supra*, and did not then find it necessary to sound the dissent's alarm about their import in enforcement action taken during the initial program after their publication. Although we should remain open to argument in this regard, I cannot now agree with the speculation of the dissent regarding our future behavior.

⁶ Such an impression might readily follow from two of our decisions which antedated the district court's decision in *Drummond: Falcon Coal Co., Inc.*, 2 IBSMA 406, 87 I.D. 669 (1980); *Wolverine Coal Corp.*, 2 IBSMA 325, 87 I.D. 554 (1980).

⁷ For example, we do not know whether all coal from these mines is processed at Reitz's facility or whether some is processed at a competing, possibly closer, facility.

In *Drummond Coal Co. v. Andrus* the Chief Judge for the Northern District of Alabama opined that this Board's decision in that case rendered the term "near" a redundant element of the definition of "surface coal mining operations." CV 80-M-0829 at 5-6. I am inclined to agree. See *Drummond Coal Co.*, 2 IBSMA at 105-07, 87 I.D. at 200-01 (dissenting opinion). In *Drummond* and subsequent cases the Board's opinions have placed almost exclusive emphasis on the elements of functional and economic integration between a coal processing facility and mine, to the exclusion of the geographic relationship. See, e.g., *Falcon Coal Co., Inc.*, *supra* n.6; *Wolverine Coal Corp.*, *supra* n.6. In view of the district court's *Drummond* decision and the increasing sense of arbitrariness conveyed in the Board's pronouncements about the meaning of "at or near," I believe the Board should retreat to an interpretation that better informs those conducting processing activities of their exposure to OSM's regulatory authority.¹

The starting point for the approach we should adopt is an unequivocal acknowledgement that the phrase "at or near" connotes a geographical, not functional relationship.² Further, our inquiry into

whether the requisite geographical relationship between a processing facility and mine exists should be the primary element of our determination whether the processing activities are conducted "in connection with" a coal mine.³ Only if there is a sufficient geographical relationship should we examine other indicia of a connection, such as functional and economic ties.

As for the question of what constitutes the requisite geographical relationship, I answer that only when a processing or similar facility is so physically integrated with the situs of coal extraction activi-

than its functional relationship to a mine." *Drummond Coal Co. v. Andrus*, CV 80-M-0829 at 6 (emphasis in original)

¹ I place primary emphasis on the geographical relationship because the qualifying phrase "at or near" appears in the definition of surface coal mining operations" as part of an enumeration of "[a]ctivities conducted * * * in connection with a surface coal mine." 30 CFR 700.5. The geographical relationship may ultimately be a product of functional considerations, but it is a processing facility's physical proximity to a mine, not the considerations giving rise to that proximity, that should be the focus of our attention. This represents a departure from preceding Board decisions, for under my formulation the consideration of nearness is not a test separate from that of connection; rather, it is the primary element of connection.

In this regard I do not accept the dissent's reading of subsec. (b) of the definition of surface coal mining operations at 30 CFR 700.5. This subsection includes within the meaning of surface coal mining operations the "[a]reas upon which the activities described in paragraph (a) * * * occur or where those activities disturb the natural land surface." The dissent suggests that this provision somehow has significance independent of the provisions of subsec. (a). Clearly to the contrary, however, the areas of land referenced in subsec. (b) are only those affected by the activities described in subsec. (a). Thus, the restriction imposed by the term "at or near" in subsec. (a) is not erased by the language of subsec. (b).

¹ My previous acquiescence in the Board's approach to this issue was based on the plurality decision in *Drummond*. The district court's reversal of that decision has obviated any necessity for my further acquiescence.

² As the district court observed in *Drummond*, "it is plain that the Act and regulations intended 'near' to describe the location of a processor with respect to a mine rather

ties that regulation by OSM of the latter cannot occur effectively without regard to the former is the facility "at or near" the mine.⁴ Under this formulation, of course, processing and similar activities conducted pursuant to the same permit as coal extraction activities, and thus part of the same permit area, are "at or near" the mine.

Reitz's processing facility has not been shown to be either within the permit area of any of the mines which supply coal to it or so physically integrated with any of these mines as to require its regulation by OSM in order to render effective OSM's regulation of the mines. Accordingly, I do not consider the facility to be "at or near" any of the mines.

⁴ A consequence of this view is that the regulation of the environmental or health and safety effects of many coal preparation or processing activities may be left to authorities other than OSM. I do not believe, however, that we should risk denial of due process to various elements of the coal industry to avoid this consequence. See *Western Engineering, Inc.*, 2 IBSMA at 213-14 n.12, 86 I.D. at 341-42 n.12 (1979).

That the location of coal processing plants and their support facilities is not a determinant of OSM's regulatory authority over them under the permanent program regulations does not alter my view of OSM's authority under the initial program. In the permanent program regulations the Department has clearly specified performance standards applicable to "coal processing plants and their support facilities not located within the permit area for a mine." 30 CFR Part 827. There is no such provision in the initial program regulations. See generally *Western Engineering, Inc.*, 2 IBSMA at 211-12 n.9, 86 I.D. at 340-41 n.9. Thus, I share Administrative Judge Mirkin's reservation about the potential relevance of the permanent program interpretation of the definition of "surface coal mining operations" (*supra* n.8) to enforcement action under the initial program.

For the foregoing reasons I agree that the decision of the Hearings Division should be reversed.

NEWTON FRISHBERG
Administrative Judge

CHIEF ADMINISTRATIVE JUDGE IRWIN DISSENTING:

Since my colleagues give the recent decision of the U.S. District Court for the Northern District of Alabama in the *Drummond Coal Co.* case¹ as the reason they wish respectively to "proceed cautiously" and "retreat" in interpreting the application of the definition of "surface coal mining operations" to coal processing facilities, perhaps it would be helpful to set forth the relevant portions of that decision.

In his memorandum opinion Chief Judge McFadden first addressed the question whether Drummond's coal processing activities were conducted in connection with a surface coal mine:

The first question is whether plaintiff's cleaning or processing of coal occurs "in connection with" the mining conducted at its seven mines. Plaintiff owns both the mines and the processing plant. The two make up an integrated mining and processing operation in which plaintiff first extracts the coal from the mine and then prepares it at the plant for shipment to consumers. There is an economic integration between the mines and the plant and the court is of the opinion that the plant is operated in connection with the surface mines.^[2]

¹ *Drummond Coal Co. v. Andrus*, CV 80-M-0829 (N.D. Ala. Apr. 20, 1981).

² *Id.* at 5.

Next, Judge McFadden dealt with the question whether the processing activity occurred "at or near" a minesite:

The second issue is whether the processing occurs "at or near" the mine site. The nearest supply mine is nine miles away, and some of the mines are as distant as 30 miles. The seven mines are spread through three counties. Despite these facts, the Secretary held that the plant was "near" all the mines by construing "near" a mine to mean essentially the same as "in connection with" a mine. Speaking through the Board, he said:

"In this case, Drummond's coal processing activities are *functionally and economically integrated* with the operation of several neighboring mines. It is true that *distances of 9-30 miles separate the coal processing facility from these mines, but that circumstance alone should not be decisive in light of the context in which the activities at the facility are conducted.* The fact of the facility's location in relation to Drummond's mines and the fact that these mines all use that facility outweigh the almost coincidental fact that the closest mine is nine miles away. Under these circumstances Drummond's coal processing activities are conducted 'near' its mines."

2 IB SMA at 102 (italics supplied).

The Secretary, thus, made "near" a term connoting functional and economic integration rather than geographical proximity. In context, however, it is plain that the Act and regulations intended "near" to describe the *location* of a processor with respect to a mine rather than its functional relationship to a mine. If "near" means "in connection with," as the Secretary suggests, then its inclusion in the Act and regulations would be unnecessary and redundant, for the phrase "in connection with" is already a part of the Act and regulations.

The court is of the opinion, therefore, that the Secretary erred in holding the term "near" to denote something other than geographical proximity. The court

further concludes that under the most generous and deferential reading of the regulation, a processor nine to thirty miles from the mines is not "near" them. While the court would not go so far as to hold that "at or near" means "adjacent to," the court holds on the facts of this case that the Secretary was unreasonable to exert jurisdiction over the Sayre Processing plant.³ [Italics in original.]

On this second issue Judge McFadden mischaracterized the Board's decision in *Drummond*, when he stated that it "made 'near' a term connoting functional and economic integration rather than geographical proximity." This misunderstanding can be made clear by a more focused emphasis on the Board language he quoted: "It is true that *distances of 9-30 miles separate the coal processing facility from these mines, but that circumstance alone should not be decisive in light of the context in which the activities at the facility are conducted.*" (Italics supplied.)

That is, "geographical proximity," although of course important, is not the only factor that determines whether a facility is "near" a mine or group of mines. Expressed otherwise, a distance that is not "near" in one context may be "near" under other factual circumstances. "Near" is a word without abstract or absolute meaning; rather, it derives its meaning from the subject matter involved and the relationship of the particular objects.⁴ For

³ *Id.* at 5-6.

⁴ Judge McFadden did not consider this approach or any of the several cases offered him in support of it. See, e.g., *Kirkbride v. Lafayette County*, 108 U.S. 208, 211 (1883); *City of Nashville v. Vaughan*, 159 Tenn. 498, —Continued

August 20, 1981

example, in our solar system, our moon is near Earth; in an atom an electron is not near a neutron.

In *Drummond*, the facility was located among seven mines also owned by Drummond. Administrative Judge Mirkin's opinion in this case emphasizes the absence of this "configuration" and the absence of knowledge about how much of the coal from Reitz mines Nos. 22 and 24 goes to the facility in question as reasons for finding the distances of 8 and 11 miles not close enough to be "near." Since *Drummond*, however, we have frequently held a facility that was not surrounded by a constellation of mines subject to OSM authority.⁵ It does not well serve the Board's efforts to develop a consistent rationale, predictable both for the industry and the regulatory authority, to abandon those holdings at this stage. As for the information Administrative Judge Mirkin believes fatally lacking, in my view it is virtually inconsequential for two reasons. First, the functional inquiry concerning the

relationship between a processing facility and a mine or mines asks not only how much a mine depends on a facility but also how much a facility's activities depend on the mine(s).⁶ Focusing on the percentage of the mine's production that goes to the facility views the matter from only one end.

But second, and more importantly, given all other facts known about the functional and economic relationships in this case, how much of the production of the Reitz Nos. 22 and 24 mines is sent to the facility is, of itself, relatively unimportant.

I appreciate that Administrative Judge Mirkin believes that it is only the relationships between the processing facility and the Reitz Nos. 22 and 24 mines that are relevant in this case. I believe this is too narrow a perspective to take. Our cases on this subject subsequent to the *Drummond* decision have shown that there are a myriad of legal arrangements, in addition to common ownership, in which these relationships are manifested. If one looks only at the information concerning the Reitz processing facility and the mines named Reitz Nos. 22 and 24, it shows that in February and March 1979 these mines, respectively, supplied 22 percent and 13 percent of the coal processed by the facility.

14 S.W. 2d 716, 717 (1929); *Fall River Iron Works v. Old Colony and Fall River R.R. Co.*, 87 Mass. 221, 227 (1862). See generally 65 C.J.S. *Navigable Waters* at 378-380 (1966) (definition of "near").

Nor did Judge McFadden offer any suggestions, beyond saying it did not have to be "adjacent," for determining how geographically close a facility should be to be considered "near" a mine.

⁵ *Falcon Coal Co., Inc.*, *supra* n.6 (two mines, 11 and 13 miles distant); *Wolverine Coal Corp.*, *supra* n.6 (two mines, 7 and 13 miles distant); *Bethlehem Mines Corp.*, 2 IBSMA 215, 87 I.D. 380 (1980) (one mine, 2 miles distant); *Drummond Coal Co.*, 2 IBSMA 189, 87 I.D. 347 (1980) (three pits, perhaps all part of one mine, 8, 10, and 15 miles distant).

⁶ See *Wolverine Coal Corp.*, *supra* n.6, at 328 (69 percent of the facility's processed coal came from the two Wolverine mines); *Bethlehem Mines Corp.*, *supra* at 218 (95 percent of the facility's processed coal came from the Bethlehem mine and the tippie closed when the mine was closed).

But if one views the context as a whole, the facility's role becomes much more central. At the top of the legal structure is the Berwind Corporation; its president is Andrew T. Sossong. Berwind has two wholly owned subsidiary corporations, Reitz Coal Co. and Wilmore Coal Co.; Sossong is president of both. Wilmore owns coal mined by J & D Mining. J & D Mining delivered 76 percent of the coal processed by the Reitz facility for February 1979 and 38 percent for March 1979 under a contract with Reitz that gives Reitz right of first refusal on coal J & D Mining mines (Tr. 117). Wilmore also owns the coal mined by Cairnbrook Coal Co.; in March 1979 Cairnbrook delivered 17 percent of the coal processed by the Reitz facility. Wilmore also owns the coal mined in the Reitz Nos. 22 and 24 mines (Tr. 124). Reitz has direct control over Wilmore (Tr. 122). The J & D Mining deep mine is located 2 miles from the facility; the Cairnbrook deep mine is located 5 miles away.

I analyze whether a facility is "near" one or more of these mines (and it need only be one) by weighing physical (or geographical) proximity and legal, economic, and functional integration. It is not simply a matter of saying the more integration there is the less physical proximity is necessary between a facility and a mine. The nature of the legal arrangements is a factor; the degree of functional dependence and the strength of the economic ties are factors, as well. Where, af-

ter considering these factors independently and together, a facility seems, on balance, essential to a neighboring mine or mines, then it seems to me reasonable to regard it as "near" even though several miles separate it geographically. Where the relationships are more tenuous the distances must be shorter. I am aware this is not an easy formula; in my view the interdependencies involved in this definition do not lend themselves to ready formulation—or resolution.

In this case, although the mines that supply coal to the facility are not all owned by the company that owns the facility, that company controls where their production goes either by corporate direction or contract. How much of their production is directed to the facility depends on what the market is for certain qualities and quantities of coal (Tr. 123, 125). Thus, the facility is both legally related to and economically and functionally integrated with these mines. It is 2, 5, 8, and 11 miles distant from them. In this context I believe it is "near" the mines. It is also operated "in connection with" them.

Administrative Judge Frishberg's opinion is not merely inconsistent with previous Board decisions; it is based on a distorted reading of the definition of "surface coal mining operations." As I understand it, his position is that one asks first "Is an activity conducted at or near a mine?" and then, if the answer is "yes," asks "Is it also conducted in connection with a mine?"

If the second answer is also "yes," the activity is a surface coal mining operation. He takes this position "because the qualifying phrase 'at or near' appears in the definition of 'surface coal mining operations' as part of an enumeration of '[a]ctivities conducted * * * in connection with a surface coal mine.'" But this confuses example with principle. "At or near" modifies only a few of several examples of the kinds of activities included (*not* enumerated) among those conducted in connection with a surface coal mine that are to be regarded as surface coal mining operations. Activities conducted in connection with a surface coal mine are only one part (subsec. (a)) of what "surface coal mining operations" are defined to mean. Areas where these activities occur or disturb the natural land surface are also "surface coal mining operations" in accordance with subsec. (b) of the definition. This subsection alone would be adequate to cover Reitz's coal processing plant, at least under my interpretation of subsec. (a), but, even without resorting to it for that purpose, the subsection demonstrates that determining whether an activity is a surface coal mining operation does not begin with answering the question "Is it near a surface coal mine?" The definition is a general, two-part statement of activities and areas that constitute surface mining, with illustrations of both activities and areas included within its scope. The question to begin with under subsec. (a) is "Is this activity

conducted on the surface of lands in connection with a surface coal mine?"⁷

Administrative Judge Frishberg acknowledges that a consequence of his approach is "that the regulation of the environmental or health and safety effects of many coal preparation or processing activities may be left to authorities other than OSM." This directly contravenes Congressional intent to implement a national system of coal mining regulation by covering all coal surface mining and the surface impacts of underground mines *and* coal processing.⁸ Coal processing was specifically covered because Congress intended the Act to prevent, among other environmental or health and safety effects of coal preparation activities, future events such as occurred when a dam retaining coal processing wastes failed at Buffalo Creek in West Virginia.⁹

The Congress specifically addressed the relationship between the Department under the Act and other agencies under other environmental laws. In order to avoid inconsistent standard-setting activities, the Secretary is required to obtain the concurrence of the Environmental Protection Agency (EPA) before promulgating performance standards concerning air and water pollu-

⁷ This assumes, of course, that what is involved is not a surface operation or impact incident to an underground coal mine that affects interstate commerce—the other category included in subsec. (a).

⁸ H.R. Rep. No. 95-218, 95th Cong., 1st Sess. 57 (1977).

⁹ *Id.* at 125; H.R. Rep. 94-1445, 94th Cong., 2d Sess. 19 (1976).

tion, for example.¹⁰ So far as other regulatory activities are concerned, the Congress directed that "maximum coordination [is] required and that any risk of duplication or conflict be minimized."¹¹ Although EPA has general pollution control responsibilities under the Clean Water Act, the Resource Conservation and Recovery Act, and the Clean Air Act, OSM has more experience regulating the special water, waste and air pollution problems occasioned by surface coal mining. It seems to me there is a far better chance for achieving "maximum coordination" and minimizing the "risk of duplication or conflict" if OSM is responsible for regulating coal processing facilities as well as surface coal mines, rather than leaving the former to EPA and the latter to OSM.

Administrative Judge Frishberg also remarks: "That the location of coal processing plants and their support facilities is not a determinant of OSM's regulatory authority over them under the permanent program regulations does not alter my view of OSM's authority under the initial program." At best I find this a misleading statement. The definition of "surface coal mining operations," as revised and interpreted on Mar. 13, 1979, became applicable to both the initial and the permanent regulatory programs on

Apr. 12, 1979.¹² Under this interpretation the phrase "at or near the minesite" applies only to facilities that are engaged in the loading of coal. Cleaning, concentrating, or other processing or preparation of coal are subject to OSM regulation if they are operated "in connection with" a surface coal mine.¹³ This interpretation has not been applied by the Board in previous cases—or in this case—because the enforcement actions involved took place before its effective date. Presumably this interpretation will govern in future cases that might arise from enforcement actions taken subsequent to its promulgation. The absence of performance standards specifically applicable under the initial regulatory program to coal processing facilities separated from the mine permit areas does not undermine the expressed intention that this interpretation apply during the initial program.

Whatever else might be said about the opinions of my colleagues in this case, they indicate that the efforts of the Board to maintain a consensus on behalf of the Secretary concerning OSM's authority to regulate coal processing facilities

¹² 44 FR 14902 (Mar. 13, 1979); 44 FR 15485 (Mar. 14, 1979). See *Farmington Coal Corp.*, 3 IBSMA 182, 88 I.D. 616 (1981).

¹³ "Changes have been made in the permit and performance standard provisions of the rules to reflect the Office's interpretation that the phrase 'at or near the minesite,' used in the statutory definition of 'surface coal mining operations,' modifies only 'loading of coal.' The Office interprets the Act as setting no territorial limitation on its jurisdiction over other facilities identified in the statutory definition preceding 'loading of coal.'" 44 FR 14915 (Mar. 13, 1979).

¹⁰ Sec. 501(a)(B), 30 U.S.C. § 1251(a)(B) (Supp. II 1978).

¹¹ H.R. Rep. No. 95-218, 95th Cong., 1st Sess. 142 (1977).

under the initial program have reached at least a temporary impasse. Further Board decisions on this question apparently will produce results but no consistent rationale. Under these circumstances it seems appropriate that the Secretary himself clarify the intended coverage of the definition of surface coal mining operations during the initial regulatory program, either by amending the language of the regulation or by revising the comments that accompany it, if he deems it worth the time and effort to do so given the relatively short life expectancy of this program.

WILL A. IRWIN,
Chief Administrative Judge

**U.S. FISH AND WILDLIFE
SERVICE**

6 ANCAB 37

Decided August 21, 1981

**Appeal from the Decision of the
Alaska State Office, Bureau of Land
Management AA-6697-A through
AA-6697-E.**

Dismissed.

**1. Alaska Native Claims Settlement
Act: Alaska Native Claims Appeal
Board: Appeals: Dismissal**

An appeal to the Secretary of the Interior will be dismissed when enactment of legislation renders moot the questions raised on appeal.

APPEARANCES: David Fisher, Esq.,
for U.S. Fish and Wildlife Service;
Robert Spitzfaden, Esq. and John A.

Smith, Esq., Smith & Gruening, Inc.,
for Tanadgusix Corp.; Russell L. Win-
ner, Esq., Office of the Regional So-
licitor, for the Bureau of Land Man-
agement.

**OPINION BY ALASKA
NATIVE CLAIMS APPEAL
BOARD**

Summary of Appeal

The sole issue raised by Appellant U.S. Fish and Wildlife Service in this appeal is whether the Bureau of Land Management erred in failing to determine in the issued Decision to Issue Conveyance that Walrus Island and Otter Island are part of the National Wildlife Refuge System and therefore subject to the provisions of §§ 22(e) and (g) of ANCSA. The Bureau of Land Management denied that either of these two islands were part of the National Wildlife Refuge System and subject to the referenced provisions of ANCSA.

The Secretary of the Interior was authorized and directed to acquire lands including Walrus and Otter Islands for inclusion in the Alaska Maritime National Wildlife Refuge, pursuant to provisions of Title XIV, § 1417 of the Alaska National Interest Lands Conservation Act.

Based upon this Congressional act directing acquisition by the Federal Government of the lands involved in the sole appealed issue, the appeal itself is mooted and will be dismissed.

Jurisdiction

The Alaska Native Claims Appeal Board, pursuant to delegation of authority to administer the Alaska Native Claims Settlement Act, 85 Stat. 688, *as amended*, 43 U.S.C. §§ 1601-1628 (1976 and Supp. I 1977) (ANCSA), and the implementing regulations in 43 CFR Part 2650 and 43 CFR Part 4, Subpart J, hereby makes the following findings, conclusions and decision.

Procedural Background

The Bureau of Land Management (BLM) published in 43 FR 35116 (1978), its Decision to Issue Conveyance (DIC) of land to Tanadgusix Corp. (Tanadgusix) in response to village selection applications AA-6697-A through AA-6697-E, *as amended*. The DIC was issued pursuant to § 12 of the Alaska Native Claims Settlement Act of Dec. 18, 1971 (85 Stat. 688, 701; 43 U.S.C. §§ 1601, 1611 (Supp. V 1975)), for the surface estate of certain lands in the Pribilof-Aleutian Island area, including Walrus and Otter Islands.

On Sept. 8, 1978, the U.S. Fish and Wildlife Service (FWS), Department of the Interior, filed its Notice of Appeal from the above-referenced DIC. The FWS, in Statement of Facts and Reasons, contends that Walrus and Otter Islands comprise a unit of the National Wildlife Refuge System and, therefore, any conveyance of these islands must be subject to §§ 22(e)

and (g) of ANCSA. Tanadgusix and BLM assert in their respective Answers that Walrus and Otter Islands were probably never a part of the refuge system and therefore the restrictive language of § 22 has no bearing on the conveyance.

The FWS, on Feb. 14, 1979, filed an additional statement of facts and reasons. Subsequently, the Board ordered the parties to submit information on specific questions raised by the Board and listed in its Order Requesting Further Information, dated June 6, 1979. The FWS filed its response on July 16, 1979.

Thereafter, the parties were granted numerous extensions of time in which to file responses. Proceedings were then suspended at the request of the parties, pending settlement negotiations and passage of the Alaska National Interest Lands Conservation Act, P.L. 96-487, 94 Stat. 2371 (1980) (ANILCA), which contained amendments to ANCSA.

On Nov. 25, 1980, Tanadgusix reported that (1) the D-2 Bill (Alaska National Interest Lands Conservation Act) had passed Congress; (2) once the Bill was enacted into law, the parties would file a motion for dismissal to ANCAB; and (3) the Bill completely settled the dispute between the parties. Tanadgusix expressed its understanding that FWS concurs with this report.

ANILCA, in § 1417, authorizes and directs the Secretary of the Interior to acquire certain lands in-

August 21, 1981

cluding Walrus and Otter Islands.

Tanadgusix, on June 3, 1981, moved for dismissal of this appeal, without prejudice. In the Affidavit of Counsel, Tanadgusix informs the Board, *inter alia*, that counsel for FWS concurs.

Decision

Title XIV of ANILCA amends the Alaska Native Claims Settlement Act. Sec. 1417, authorizes and directs the Secretary of the Interior to acquire certain lands on the Pribilof Islands, as follows:

(a) Congress finds and declares that—

(1) certain cliff areas on Saint Paul Island and Saint George Island of the Pribilof Islands group in the Bering Sea and the entirety of Otter Island, and Walrus Island, are used by numerous species of migratory birds, several of them unique, as rookeries;

(2) these areas are of singular high values for such birds;

(3) these cliff areas, from the line of mean high tide to and including the bluff and areas inland from them, and the entirety of Otter Island, and Walrus Island, aggregating approximately eight thousand acres, properly ought to be made and be managed as a part or parts of the Alaska Maritime National Wildlife Refuge free of any claims of Native Corporation ownership; and

(4) this can best be accomplished through purchase by the United States

(b) The Secretary is authorized and directed to acquire the lands described in subsection (a)(3) of this section on the terms of and conditions set forth in the Agreement known as the "Pribilof Terms and Conditions", between Tanadgusix, Incorporated, Tanaq, Incorporated, the Aleut Corporation, and the Department of the Interior, incorporated as an Attachment of the letter of the Direc-

tor, Fish and Wildlife Service, Department of the Interior, dated August 4, 1980, file reference FWS 1366, addressed to the Aleut, Tanadgusix, and Tanaq Corporations. The "Pribilof Terms and Conditions," as referenced in this subsection, are hereby ratified as to the duties and obligations of the United States and its agencies, Tanadgusix, Incorporated, Tanaq, Incorporated, and the Aleut Corporation: *Provided*, That the "Pribilof Terms and Conditions" may be modified or amended, upon the written agreement of all parties thereto and appropriate notification in writing to the appropriate committees of the Congress, without further action by the Congress. Upon acquisition by the United States, the lands described in such subsection (a)(3) shall be incorporated within, and made a subunit of, the Alaska Maritime National Wildlife Refuge and administered accordingly.

(c) There are hereby authorized to be appropriated for the purposes of this section, out of any money in the Treasury not otherwise appropriated, for the acquisition of such lands, not to exceed \$7,500,000, to remain available until expended, and without regard to fiscal year limitation.

(d) The land or money exchanged under this section shall be deemed to be property exchanged within the meaning of section 21(c) of the Alaska Native Claims Settlement Act.

The lands in dispute in this appeal are included in lands to be acquired by the Secretary of the Interior for the United States to be incorporated as a subunit of the Alaska Maritime National Wildlife Refuge. ANILCA moots the issues on appeal before ANCAB.

[1] An appeal to the Secretary of the Interior will be dismissed where enactment of legislation renders moot the questions raised on

appeal. *See Gibbonsville Townsite*, 30 IBLA 74 (1977). Accordingly, the appeal of FWS must be dismissed. Counsel for Tanadgusix, in affidavit filed with motion for dismissal, states that "[w]hile Mr. Fisher [counsel for FWS] and I do not foresee any problems in obtaining the appropriation and effectuating the exchange, the remote possibility of a problem dictates that the appeal be dismissed without prejudice."

The *Appeal of U.S. Fish and Wildlife Service*, ANCAB VLS 78-61, is hereby dismissed.

The dismissal of this appeal has no effect on any right of appeal which may accrue under terms of the above-referenced legislation.

ABIGAIL F. DUNNING
Administrative Judge

JOSEPH A. BALDWIN
Administrative Judge

OREGON PORTLAND CEMENT CO.

6 ANCAB 65

Decided August 25, 1981

Appeal from the Decision of the Alaska State Office, Bureau of Land Management AA-14015.

Decision affirmed.

1. Alaska Native Claims Settlement Act: Native Land Selections: Regional Selections: Allocations—Alaska Native Claims Settlement Act: Withdrawals and Reservations: Withdrawals for Native Selection: Generally

Sec. 14(h)(8)(B) of ANCSA, which governs withdrawal and allocation of lands for selection by the Native regional corporation for southeastern Alaska, constitutes an exception to the requirement that lands withdrawn and allocated by the Secretary under § 14(h)(8) must be from unreserved and unappropriated lands outside areas withdrawn by §§ 11 and 16.

2. Alaska Native Claims Settlement Act: Alaska Native Claims Appeal Board: Appeals: Generally—Regulations: Generally

The Board is bound by duly-promulgated Departmental regulations as well as by Departmental policy expressed in Secretarial Orders published in the *Federal Register* or set forth in the Departmental Manual.

3. Alaska Native Claims Settlement Act: Administrative Procedure: Generally—Alaska Native Claims Settlement Act: Conveyances: Valid Existing Rights: Third-Party Interests—Mining Claims: Determination of Validity

Pursuant to the Departmental Manual 601 DM 2, requirements in Secretary's Order No. 3029, as to adjudication of Federally-created interests, do not apply to unpatented mining claims and the Bureau of Land Management is not required to adjudicate mining claims before conveyance. Pursuant to ANCSA and Secretary's Order No. 3029, *as amended*, lands selected by a Native corporation must be conveyed by the Bureau of Land Management notwithstanding the existence of an unpatented mining claim within such lands which has not been adjudicated for validity under the general mining laws.

4. Alaska Native Claims Settlement Act: Conveyances: Generally

When lands have been selected by a Native corporation and approved by the

Bureau of Land Management for conveyance under ANCSA, such lands may be excluded from conveyance only pursuant to provisions of ANCSA or implementing regulations which constitute an exception to the requirements of Secretary's Order No. 3029, *as amended*.

5. Alaska Native Claims Settlement Act: Native Land Selections: Selection Limitations

Regulations in 43 CFR 2651.4(e) cannot be applied to permit a selecting Native corporation to exclude lands within unpatented mining claims after the selection period has terminated.

6. Alaska Native Claims Settlement Act: Conveyances: Generally

Exclusion of the disputed mining claims from conveyance, pending their adjudication, is not permitted under any provision of ANCSA or implementing regulations.

7. Alaska Native Claims Settlement Act: Conveyances: Valid Existing Rights: Third-Party Interests—Mining Claims: Possessory Right

When an unpatented mining claim is situated within lands selected and approved for conveyance under ANCSA, the possessory interest of the mining claimant is protected under provisions of § 22(c) and 43 CFR 2650.3-2 as a valid existing right notwithstanding that the Bureau of Land Management has not adjudicated such unpatented mining claim prior to conveyance.

APPEARANCES: Frank E. Nash, Esq., Miller, Anderson, Nash, Yerke & Wiener, for appellant; Dennis J. Hopewell, Esq., Office of the Regional Solicitor, for the Bureau of Land Management; Richmond F. Allan, Esq. and Dan A. Hensley, Esq., Duncan,

Weinberg & Miller, P.C., for Sealaska Corp.

OPINION BY ALASKA NATIVE CLAIMS APPEAL BOARD

Summary of Appeal

The appellant challenges conveyance to a southeastern Alaskan Native regional corporation under § 14(h)(8)(B) of ANCSA, of lands on which appellant has unpatented mining claims. Issues decided include whether the appropriate effect of the mining claims prevented withdrawal of the land for selection under § 14(h)(8)(B), on the grounds that such withdrawals were required to be from unre-served and unappropriated lands; whether the Bureau of Land Management is required to adjudicate the validity of mining claims before conveyance under ANCSA of the land upon which they are located; whether, if adjudication is not a prerequisite to conveyance, such lands may be excluded from conveyance, without prejudice to the grantee Native corporation's selection rights, until adjudication is completed; and whether unpatented mining claims are protected as valid existing rights under ANCSA.

The Board finds that withdrawals under § 14(h)(8)(B) of ANCSA are not required to be from unappropriated lands; that the Bureau of Land Management is not required to adjudicate unpatented mining claims as a prerequisite to

conveyance under ANCSA of land on which they are located; that lands on which unpatented mining claims are located may not be excluded from conveyance in the manner advocated by parties to this appeal; and that possessory interests created by unpatented mining claims are protected pursuant to § 22(c) of ANCSA.

Jurisdiction

The Alaska Native Claims Appeal Board, pursuant to delegation of authority to administer the Alaska Native Claims Settlement Act, 85 Stat. 688, *as amended*, 43 U.S.C. §§ 1601-1628 (1976 and Supp. I 1977), and the implementing regulations in 43 CFR Part 2650 and 43 CFR Part 4, Subpart J, hereby makes the following findings, conclusions and decision.

Procedural Background

Sealaska Corp. (Sealaska), on Dec. 12, 1974, filed selection application AA-14015, *as amended*, under the provisions of § 14(h)(8) of the Alaska Native Claims Settlement Act of Dec. 18, 1971 (85 Stat. 688, 705; 43 U.S.C. §§ 1601, 1613(h)(8) (1976)), for surface and subsurface estate of certain lands withdrawn pursuant to § 16(a) (43 CFR 1615(a)) for Native villages in southeast Alaska.

On May 3, 1979, the Bureau of Land Management (BLM) published in 44 FR 25940, a Decision to Issue Conveyance (DIC) to Sealaska pursuant to § 14(h)(8) of

ANCSA including certain lands in question located in T. 78 S., R. 82 E., Copper River meridian.

On May 23, 1979, the Appellant, Oregon Portland Cement Co. (OPC), filed its notice of appeal and statement of reasons asserting that BLM erred by failing to exclude from the DIC lands which had been appropriated in 1965 by the location of 40 limestone placer mining claims. The appellant asserts that lands appropriated under the mining laws are not available under § 14(h)(8) of ANCSA, and further that § 14(g) of the Act protects the inchoate right of a mineral locator as a valid existing right.

Sealaska responded on June 20, 1979, that no appropriation of disputed lands can be claimed until the validity of the unpatented mining claims has been adjudicated. Sealaska states that: (1) selection under § 14(h)(8) is not subject to land availability pursuant to § 14(h)(8)(B), but is made from public lands pursuant to § 16(a) and § 3(e) of ANCSA; (2) the validity of appellant's mining claims, and their resulting status as valid existing rights, can only be determined by adjudication under the mining laws; (3) Secretary's Order No. 3029, 43 FR 55287 (1978) (S.O. 3029) does not apply to mining claims; (4) § 22(c) of ANCSA requires conveyance of lands to Native corporations subject to mining claims; and (5) BLM is required to determine validity of mining claims and jurisdiction over segregated lands should be remanded.

BLM asserts that the primary issue is whether § 14(h), requiring selections to be from "unreserved and unappropriated" lands, applies to Sealaska's selection under § 14(h)(8)(B). BLM contends that selection under subsection (B) is an exception to § 14(h).

Further briefing filed by parties reflects consideration of the Secretary of the Interior's Order of Nov. 20, 1979, amending S.O. 3029, and also findings of the U.S. District Court in *Alaska Miners v. Andrus*, A-76-263 (D. Alaska), Memorandum and Order dated Oct. 19, 1979.

BLM contends that if § 14(h)(8)(B) is an exception to the criteria for determining land availability in § 14(h), then the decision in *Alaska Miners, supra*, is applicable. The Secretary's amendment of S.O. 3029 in Departmental Manual Release No. 2246 (601 DM 2), does not require BLM to adjudicate the validity of OPC mining claims before conveyance to Sealaska. BLM also states that conveyance may be made in absence of application made pursuant to 43 CFR 2650.3-2(b).

After giving consideration to the Secretary's amendment of S.O. 3029 and of decision in *Alaska Miners, supra*, Sealaska has proposed termination of this appeal. While continuing to assert BLM's obligation to determine the validity of appellant's mining claims, Sealaska concedes that such a determination is not a dispositive issue in this appeal.

Sealaska proposes that the Board remand to BLM with directions to: (1) define lands in dispute with more specificity; and (2) exclude the land area of the disputed mining claims from the DIC while leaving the same land, alternatively, subject to Sealaska's selection and available for later conveyance to Sealaska, or available for later patent to the appellant under the mining laws, upon final adjudication.

On Jan. 15, 1980, BLM agreed to this proposal except that further definition of lands in dispute was not possible due to insufficient data. BLM suggests vacation of presently segregated lands from the DIC by order of the Board; Sealaska agrees. It is asserted that the proposed alternatives would enable Sealaska to:

1. relinquish selection of disputed lands;
2. contest the validity of the mining claims;
3. request conveyance of lands subject to unpatented mining claims while allowing appellant to:
 - a. pursue mining claims to patent;
 - b. continue possession of claims; or
 - c. give up the mining claims.

OPC has moved to exclude the land subject to this appeal and terminate the appeal without prejudice to any party.

Sealaska cites 43 CFR 2650.0-8 as Secretarial authority to waive agency regulations. Sealaska submits that 43 CFR 2651.4(e) poses no ban to the disposition of this appeal in the manner sought by all of the parties and the Board ought

now proceed to effect such disposition.

Initial briefs of all parties in this appeal identified lands in dispute as within the withdrawal area of Klukwan Native village. This was in error and the parties now agree that all lands in dispute are located within the withdrawal area of Hydaburg Native village which is listed in § 16(a) of ANCSA. The Board accepts that all disputed lands in this appeal are withdrawn in the vicinity of Hydaburg Native village pursuant to § 16(a).

Decision

The first issue raised by OPC is that BLM erred in failing to exclude their mining claims from lands approved for conveyance in the DIC, because § 14(h) of ANCSA limits selections to "unreserved and unappropriated public lands," withdrawn for this purpose; since the unpatented mining claims constituted an appropriation of land affected, they are not available under ANCSA for selection by Sealaska.

In application AA-14015 Sealaska selected entirely from lands withdrawn by the Secretary for selection under provision of § 14(h)(8) of ANCSA. Withdrawals under terms of § 14(h) are required to be from "unreserved and unappropriated public lands" located outside areas withdrawn by §§ 11 and 16 of ANCSA. This scheme was unworkable in southeastern Alaska and corrective measures were attempted by amendment to

ANCSA, as explained in the legislative history and purpose of P.L. 94-204, 1976, U.S. Code Cong. & Adm. News, p. 2396:

The Native region created by the Settlement Act for southeastern Alaska was precluded, generally, by the Congress from sharing in the land benefits of the Act. This area encompasses the Tlingit-Haida Indians. Prior to enactment of the Settlement Act, this tribe recovered an award of several million dollars against the United States for extinguishment of their aboriginal land claims in the southeastern area.

In consideration of this fact, the southeast region (Sealaska, Inc.) does not generally share in the land benefits accorded to other regional corporations. However, Sealaska, Inc., does receive certain land entitlements under section 14(h)(8) of the Act. The estimate is that Sealaska's share will approximate 200,000 acres.

Practically the entire area of southeastern Alaska is encompassed by the Tongass National Forest. What remains is either State or privately-owned lands, national monuments, village selected lands, mountain tops or glaciers, or otherwise valueless lands. If Sealaska's entitlement under section 14(h)(8) is not to be meaningless, it must be allowed to select lands within the Tongass National Forest.

This section [section 10] provides that Sealaska, Inc., may select its approximately 200,000 acre entitlement from lands which were withdrawn in the National Forest for selection by village corporation of the southeastern region, but which were not so selected. This section provides that Sealaska, Inc., may not select any lands an [sic] Admiralty Island in the withdrawal for the village of Angoon. In addition, no selections can be made in the withdrawal for the villages of Yakutat and Saxman, unless the Governor of the State of Alaska or his delegate consents to such selection.

The initial pertinent amendment to ANCSA was by P.L. 94-204, Sec. 10, 89 Stat. 1146 (1976), referred to as "this section" in the legislative history just quoted. This amendment was deleted as part of § 16(b) and added to § 14(h) (8) as (B) by P.L. 95-178, Sec. 2, 91 Stat. 1369 (1977).

For reasons stated in the above legislative history, the acreage allocation to Sealaska under § 14(h) (8) could not be met under the criteria for availability of land for selection under § 14(h). As withdrawals for southeastern villages under terms of § 16(a) were with few exceptions, "reserved and appropriated" lands within the Tongass National Forest, they were unavailable for selection under § 14(h). Thus Sealaska's allocation of acreage must either have come from additional portions of the National Forest outside the area of § 16(a) withdrawal,¹ or from lands already withdrawn for village selection which remained unselected after the village entitlement was satisfied. The latter alternative was chosen in the amendment with the result that lands available for selection would include all public lands as defined in § 3(e) of ANCSA located within § 16(a) withdrawal area and not selected by the village corporation. Public lands are defined in § 3(e) as follows:

¹ The regional Native corporation for southeastern Alaska would have no selection rights to lands outside of the areas withdrawn by § 11 of ANCSA.

"Public lands" means all Federal lands and interests therein located in Alaska except: (1) the smallest practicable tract as determined by the Secretary, enclosing land actually used in connection with the administration of any Federal installation, and (2) land selections of the State of Alaska which have been patented or tentatively approved under section 6 (g) of the Alaska Statehood Act, as amended (72 Stat. 341, 77 Stat. 223), or identified for selection by the State prior to January 17, 1969;

Thus under § 14(h) (8) (B) Sealaska was permitted to select its allocated acreage from lands withdrawn in areas withdrawn pursuant to § 16(a) of ANCSA, which were reserved and appropriated. This moots as an issue whether a valid perfected unpatented mining claim is such an appropriation of public land as to prevent withdrawal of lands under § 14(h) of ANCSA.

[1] Sec. 14(h) (8) (B) of ANCSA, which governs withdrawal and allocation of lands for selection by the Native regional corporation for southeastern Alaska, constitutes an exception to the requirement that lands withdrawn and allocated under § 14(h) (8) can only be unreserved and unappropriated lands outside areas withdrawn by §§ 11 and 16.

The next issue is whether the BLM is required to adjudicate the validity of unpatented mining claims located within the lands selected prior to conveyance pursuant to ANCSA. Both appellant and Sealaska initially urged the Board to remand for adjudication by BLM the issue of validity of ap-

pellant's unpatented mining claims before conveyance. However, a decision in the case of *Alaska Miners, supra*, and the Secretary's amendment to S.O. 3029 on Nov. 20, 1979, are controlling on this issue.

In *Alaska Miners, supra*, three Alaska miners filed suit before the District Court of Alaska seeking to have certain portions of the Alaska Native Claims Settlement Act, 43 U.S.C. § 1601 *et seq.*, and implementing regulations, declared to be void as an unconstitutional taking of their property interests in located and perfected but unpatented mining claims. The Court decided only on the question of "whether the United States may transfer whatever legal interest it retains in perfected unpatented mining claims to a third party * * *." The Court declared that:

The fate of mining claims was expressly addressed in Section 22(c) of the Settlement Act: * * * The clear thrust of these provisions [22(c)] is to permit conveyance to a Native corporation of lands on which a perfected mining claim has been located. The regulations implementing this section further lend support to this reading. 43 C.F.R. 2650.3-2. It is not argued here that conveyance will work to divest plaintiffs of their possessory right in their unpatented mining claims. The government does not urge this nor do I find this to be so. * * *

* * * * *

The parties are in apparent agreement that a claimant who perfects a mining claim, without seeking patent, acquires the substantial property right of possession. This right of possession is exclusive and remains with the claimant so long as the claim remains perfected,

30 U.S.C. 26, 28; *Wilbur v. Krushnic*, 280 U.S. 306, 316-17 (1930). * * *

Alaska Miners, supra, at 2-3.

S.O. 3029 establishes the Department's position regarding valid existing rights under ANCSA.

In addressing the issue of adjudication of third-party interests, S.O. 3029 states:

Another issue for resolution is to what extent the law and regulations require the Department to identify and determine the validity of (adjudicate) third party valid existing rights.

Clearly the administrative act of listing an interest as a valid existing right or of failing to list it does not create or extinguish the right. Because of this the ultimate validity of all interests may require court litigation.

*Nevertheless it is appropriate for BLM to determine in the first instance the validity of those interests which are created by federal law since BLM is in most cases the agency charged with the administration of those laws. * * ** [Italics added.]

43 FR 55291.

The underlined sentence above would lead one to understand that mining claims must be adjudicated before conveyance.

Subsequently, on Nov. 20, 1979, the Secretary in the amendment to S.O. 3029, after alluding to some confusion caused by S.O. 3029, stated in pertinent part:

The sentence [in S.O. 3029] concerned the adjudication by the Bureau of Land Management (BLM) of certain potential third party interests in land being conveyed to Natives. It reads:

"Nevertheless it is appropriate for BLM to determine in the first instance the validity of those interests which are created by Federal law since BLM is in

August 25, 1981

most cases the agency charged with the administration of those laws."

This sentence was not intended to require the adjudication of unpatented mining claims located under the Mining Law of 1872, 17 Stat. 92, 30 U.S.C. § 22 *et seq.* Congress, in section 22(c) of ANCSA, specifically treated unpatented mining claims differently from other types of possible pre-existing rights. Section 22(c) and the regulations implementing it provide that the land on which an unpatented mining claim is located, if selected by a Native corporation, will be conveyed unless prior to conveyance the claimant files an application for mineral patent or mineral survey. 43 CFR 2650.3-2. * * *

* * * * *

For the foregoing reasons, the sentence should be revised to read:

"Nevertheless, it is appropriate for BLM to determine in the first instance the validity of those interests created by federal laws, which are administered by BLM, other than unpatented mining claims under the Mining Law of 1872, 30 U.S.C. § 22 *et seq.*, * * *."

Appendix 2 to 601 DM 2.

Thus the Department policy is that determination by BLM of the validity of unpatented mining claims is not a prerequisite to conveyance to a Native corporation and land on which an unpatented mining claim is located will be conveyed to the selecting Native corporation.

The Board has previously held that it is bound by statements of Secretarial policy contained in a Secretarial Order published in the *Federal Register*. *Appeal of Ouzinkie Native Corp.*, 4 ANCAB 3, 86 I.D. 618 (1979) [VLS 78-7]. The Board is also bound by statements

of policy made by the Secretary and contained in a published Departmental Manual Release.

[2] The Board is bound by duly-promulgated Departmental regulations as well as by Departmental policy expressed in Secretarial Orders published in the *Federal Register* or set forth in Departmental Manuals.

[3] Thus pursuant to 601 DM 2, requirements in S.O. 3029, as to adjudication of Federally created interest, do not apply to unpatented mining claims and BLM is not required to adjudicate mining claims before conveyance. Pursuant to ANCSA and S.O. 3029, *as amended*, lands selected by a Native corporation must be conveyed by BLM notwithstanding the existence of an unpatented mining claim within such lands which has not been adjudicated for validity under the general mining laws.

In the absence of a requirement for adjudication before conveyance, the parties request that conveyance to Sealaska of lands affected by the mining claims be delayed pending an ultimate adjudication of the mining claims and urged termination of the appeal without prejudice to Sealaska's selection rights or to the validity of the claims. Having found that S.O. 3029, *as amended*, mandates conveyance, the Board cannot grant this request.

[4] When lands have been selected by a Native corporation and approved by BLM for conveyance under ANCSA, such lands may be excluded from conveyance

only pursuant to provisions of ANCSA or implementing regulations which constitute an exception to the requirements of S.O. 3029, *as amended*.

In addressing the question whether any provision of ANCSA or regulations in 43 CFR can enable the Board to terminate this appeal in the manner proposed, all parties briefed the possible effect of provisions in § 2651.4(e) on this issue. Sec. 2651.4(e) states:

Village or regional corporations are not required to select lands within an unpatented mining claim or millsite. Unpatented mining claims and millsites shall be deemed to be selected, unless they are excluded from the selection by metes and bounds or other suitable description and there is attached to the selection application a copy of the notice of location and any amendments thereto. If the village or regional corporation selection omits lands within an unpatented mining claim or millsite, this will not be construed as violating the requirements for compactness and contiguity. If, during the selection period, the excepted mining claims or millsites are declared invalid, or under the State of Alaska mining laws are determined to be abandoned, the selection will no longer be considered as compact and contiguous. The corporation shall be required to amend its selection, upon notice from the authorized officer of the Bureau of Land Management, to include the lands formerly included in the mining claim or millsite. If the corporation fails to amend its selection to include such lands, the selection may be rejected.

Thus under § 2651.4(e) the selecting Native corporation has an initial choice: to omit from its selection lands situated within an unpatented mining claim or to select lands upon which the mining claims are situated. Among the effects of

such an omission are elimination of any concern with the mining claimant's possessory interest as an encumbrance, and entitlement to selection from excess selected lands to replace those in the omitted mining claims. The usual requirement of compactness in selection is excused to permit such omissions.

If, however, during the remainder of the selection period the mining claim is either found invalid or abandoned, this finding would eliminate the basis for omission of the claim and would again make applicable the requirement for compactness. In that case, failure of the Native corporation to amend the selection application and select the previously omitted mining claim may cause their selection to be rejected under § 2651.4(e).

43 CFR 2652.3(e) provides: "Regional corporations are not required to select lands within unpatented mining claims or millsites, as provided in § 2651.4(e) of this chapter."

The selecting Native corporation is authorized to omit unpatented mining claims *only* until termination of the selection period designated in § 2653.4(c): "As to all recipients under section 14(h) (8) of the Act * * * September 18, 1978." The terms of § 2651.4(e) are not applicable to the issues raised in this appeal because Sealaska did not choose to omit OPC's unpatented mining claims from lands selected during their selection period, nor do they wish to do so at this time.

August 25, 1981

[5] The Board concludes that regulations in 43 CFR 2651.4(e) cannot be applied to permit a selecting Native corporation to exclude lands within unpatented mining claims after the selection period has terminated.

OPC contends that § 2653.9(b) does support the requested action by permitting selection of acreage in excess of actual land entitlement in event of any conflicts. The Board disagrees.

Sec. 2653.9(b) provides in pertinent part: "A regional corporation may select a total area in excess of its entitlement * * * in the event of any conflicts."

The purpose of this provision is to assume full selection entitlement despite any selection conflicts. In any case, the selection scheme of this provision calls for the prioritizing of alternate selections during the selection period. Pursuant to the DIC issued by BLM the disputed lands in this appeal were properly selected and were approved for conveyance to Sealaska notwithstanding the existence of OPC's unpatented mining claims.

Because there is no conflict with Sealaska's selection of lands upon which OPC's unpatented mining claims are situated, this provision is not applicable to any issue in this appeal.

Regulations which govern selection applications by a Native regional corporation for lands allocated under terms of § 14(h)(8) are found in 43 CFR 2653.9(c) which states in pertinent part:

Selections need not be contiguous but must be made along section lines in reasonably compact tracts * * * not including any unavailable land contained therein. * * * Each tract selected shall not be considered to be reasonably compact if (1) it excludes other lands for selection within its exterior boundaries * * *.

This regulation defines the requirement for compactness in regional § 14(h)(8) selections which prohibits exclusion of lands otherwise available within a selected tract. An exception to this compactness requirement is found in § 2651.4(e) which specifically authorizes a Native corporation to omit lands within an unpatented mining claim from selection during the selection period.

Sec. 14(h)(8)(B) of ANCSA provides in part: "Such allocation as the Regional Corporation for southeastern Alaska shall receive under this paragraph shall be selected and conveyed * * *" and regulations in 43 CFR 2652.0-3 provides in part: "[S]elections 14 * * * (8), provide for the conveyance to regional corporations of the selected surface and subsurface estates, as appropriate."

From the above regulations and from S.O. 3029, *as amended*, the Board has found it to be axiomatic that all lands which are available as public lands under § 3(e) of ANCSA, and have been properly selected by a Native corporation, must be conveyed by BLM unless there is lawful authority not to convey.

The parties have further con-

tended that such authority is found in various provisions of ANCSA and regulations in 43 CFR which fall into two general categories.

First, the Board should make an analogy to regulations under which the selection of lands may be amended by the selecting Native corporation or lands are excluded after selection.

BLM asserts that the exclusion of mining claims may be based upon the similarity with provisions of 43 CFR 2650.2(d)(1) and (f). These regulations provide for additional and amendatory filings of applications or how land selection adjustments are made after the initial selections either by the applicant or with their consent. They do not purport to allow any action on land selections after the filing period has expired.

BLM refers to 43 CFR 2651.4(e) as an example of regulations permitting exclusion of mining claims from conveyance. The Board has ruled herein that these regulations do not apply in the circumstances of this appeal because the selection period is over.

Furthermore, Sealaska has consistently adhered to its right to conveyance of the disputed lands and is not even now seeking to omit those lands from its selection. To the contrary, Sealaska and OPC insist that conveyance rights to the disputed lands under ANCSA must be retained after conveyance of the unaffected lands. Sealaska does not now seek to omit OPC's unpatented mining claims from selection but

seeks to retain its selection rights after the lands are excluded from the initial conveyance.

Regulations in 43 CFR 2650.3-2, as referred to in S.O. 3029, *as amended*, allow a mining claim for which mineral patent application has been made, to be excluded from conveyance. This regulation has no application to the present appeal because OPC has not applied for mineral patent to the mining claims in question.

The Board finds that the analogies made in reference to these regulations are not applicable to the issue presented in this appeal.

Secondly, the Board is referred to regulations which provide for the use of Secretarial discretion in waiving regulatory requirements.

OPC refers to use of discretion as illustrated in § 22(f) (authorizing land exchange) and § 17(b)(3) (authorizing public easements) of ANCSA.

Sealaska urges use of a discretionary waiver of requirements as in 43 CFR 2650.0-8, which reads:

The Secretary may, in his discretion, waive any nonstatutory requirement of these regulations. When the rights of third parties will not be impaired, and when rapid, certain settlement of the claims of Natives will be assisted, minor procedural and technical errors should be waived.

BLM contends that termination of the appeal as requested requires utilization only of policy and raises no legal issue.

None of the provisions for use of discretion or waiver have been delegated to this Board, and in any case,

August 25, 1981

the issues now on appeal have nothing to do with the specific subject matter upon which the Secretary's discretion is to be exercised.

Land selections made under terms of § 14(h)(8)(B) may be viewed as exceptional procedures which required a different selection schedule for Sealaska than for the other Native regional corporations. However, no such selection schedule has been set forth and therefore the provisions of current regulations must govern.

[6] Accordingly, the Board finds that exclusion of the disputed mining claims from conveyance, pending their adjudication, is not permitted by any provision of ANCSA or implementing regulations.

As an additional basis for appeal OPC asserts that BLM failed to recognize in the DIC that their unpatented mining claims are valid existing rights under § 14(g) of ANCSA.

Sealaska states its position insofar as OPC's unpatented mining claims within their selected lands as follows:

The ultimate issue between appellant, and Sealaska, on the other, is whether appellant's claims are valid. If they prove to be, they constitute valid existing rights under the Settlement Act (and generally) and entitle appellant to remain in undisturbed possession (so long as they remain valid) and, if appellant elects, to enter the claims for patenting. * * *

Sealaska's Brief in Response to Order of July 3, 1979, at 3.

It is undisputed that if OPC's unpatented mining claims within lands approved for conveyance to Sealaska are valid under the general mining laws, their possessory interest constitutes a valid existing right which is recognized under ANCSA.

As a result of the Secretary's amendment of S.O. 3029, 601 DM 2.3, the Board concludes that the possessory interest of an unpatented mining claimant is protected by § 22(c) of ANCSA and regulations in 43 CFR 2650.3-2.

[7] When an unpatented mining claim is situated within lands selected and approved for conveyance under ANCSA, the possessory interest of the mining claimant is protected under provisions of § 22(c) and 43 CFR 2650.3-2 as a valid existing right notwithstanding that the BLM has not adjudicated such unpatented mining claim prior to conveyance.

Based upon the discussion and findings herein, the Board concludes that the parties' agreement regarding termination of the appeal and exclusion of the mining claims from conveyance is not consistent with provisions of ANCSA and regulations. BLM's decision to convey the selected lands including the unpatented mining claims is affirmed.

ABIGAIL F. DUNNING

Administrative Judge

JOSEPH A. BALDWIN

Administrative Judge

UNITED STATES
v.
ONEIDA PERLITE CORP.

57 IBLA 187

Decided August 27, 1981

OPINION BY ADMINISTRATIVE JUDGE STUEBING

INTERIOR BOARD OF LAND APPEALS

Appeal by the Forest Service, Department of Agriculture, from the decision of Administrative Law Judge Michael L. Morehouse holding that 580 acres were embraced in valid mining claims held by Oneida Perlite Corp. Motion by the corporation for rehearing.

Set aside and remanded.

1. Administrative Practice—Administrative Procedure: Administrative Review—Appeals—Mining Claims: Contests—Mining Claims: Excess Reserves—Rules of Practice: Appeals: Generally

Where, following the contest of a number of mining claims, a decision is rendered by an Administrative Law Judge holding certain claims and portions of claims to be valid and invalidating the remainder for lack of mineral or as embracing excess mineral reserves, and the Government appeals from that decision but the claimant does not, that decision will be set aside and the case remanded for rehearing on the basis of a judicial decision in another case, made while the subject appeal was pending, that there can be no invalidation of mining claims by this Department on a finding that the claimant has acquired claims for far more mineral than the market can absorb within the foreseeable future.

APPEARANCES: Erol R. Benson, Esq., Office of the General Counsel, Department of Agriculture, Ogden, Utah, for appellant; William J. Critchlow III, Esq., Ogden, Utah, and Louis F. Racine, Jr., Esq., Pocatello, Idaho, for Oneida Perlite Corp.

Oneida Perlite Corp., (Oneida) applied to the Bureau of Land Management (BLM), Department of the Interior, for patent of 15 association placer mining claims.¹ The claims, which are located for the mineral substance perlite, are situated in Oneida and Bannock Counties, Idaho, and embrace an area of 2,000 acres within Caribou National Forest, which is administered by the Forest Service (FS), Department of Agriculture.²

Disposition of federally owned minerals under the general mining law is a function of the Secretary of the Interior, notwithstanding that the land in which such minerals occur may be withdrawn for the use of another Federal agency and be administered by that agency for its own purposes. However, under the provisions of a memorandum of understanding between BLM and FS in effect since 1957, FS is authorized to conduct mineral examinations of claims on national forest lands, render reports, make recommendations concerning patent applications, or request initiation of

¹ The subject claims are the Wright Creek Nos. 1 through 9, Wright Creek Nos. 13, 14, and 16, and placer claims P-17 through P-19, more particularly described in the patent application (Exh. G-3), the contest complaint, and exhibit "U."

² A 40-acre tract, (the Wright Creek No. 14 claim) apparently reserved by the United States as an administrative site, was withdrawn from the patent application by the company, leaving an area of 1,960 acres.

August 27, 1981

contests of the validity of claims. Should FS recommend contest, BLM, upon its determination that the elements of a contest are present, prepares and serves an appropriate contest complaint. Upon receipt of a timely and responsive answer, the case is referred to the Hearings Division, Office of Hearings and Appeals, Department of the Interior. At the hearing, the memorandum of understanding provides that the Government will be represented by an attorney of the Office of the General Counsel, Department of Agriculture. The initial decision is made by the presiding Administrative Law Judge, an Interior employee, and either party may appeal from his decision to this Board. Thus, in the administrative process, all decisionmaking authority is reposed in officials who exercise the delegated authority of the Secretary of the Interior.

That procedure was followed faithfully in this case. Following their location by associations of individuals who conveyed the claims to Oneida, they were examined by FS minerals personnel. The first report of such examination allegedly found that all of the claims were supported by a qualifying discovery of valuable mineral deposits. A second examination was conducted by FS following Oneida's submission to BLM of its patent application. An effort at negotiation between FS and Oneida, whereby FS would recommend part of the area for patent and Oneida would withdraw the remaining area

from its patent application without prejudice to reapply in the future, failed to achieve agreement. Thereafter, FS recommended to BLM that 100 acres be approved for patent (comprised of portions of three claims), and that contest proceedings be initiated against the remaining claims and portions of claims. BLM issued and served the contest complaint; Oneida filed its timely answer; and BLM referred the case for hearing.

The case was assigned to Administrative Law Judge Morehouse, who presided over the hearing which was held in Pocatello, Idaho, on Feb. 17 and 18, 1978. By his decision dated Feb. 12, 1979, Judge Morehouse held that portions of six claims, aggregating 580 acres, were valid and should be patented, and that the remaining claims and portions of claims were invalid.³

³ In calculating the acreage for patent in his decision the Administrative Law Judge included 100 acres which were not part of the contest, but were, in fact, the same 100 acres which were recommended for patent by FS. Therefore, of the 1,860 acres contested the Administrative Law Judge validated 480 acres and invalidated 1,380 acres. The proper acreage figures are:

	Contested	Validated by ALJ	Invalidated by ALJ	FS Recommendation
Claim No. 1.....	130	90	40	30
Claim No. 2.....	160	120	40	-----
Claim No. 3.....	110	50	60	50
Claim No. 4.....	140	60	80	20
Claim No. 5.....	160	80	80	-----
Claim No. 6.....	160	80	80	-----
Claim No. 7.....	160	-----	160	-----
Claim No. 8.....	160	-----	160	-----
Claim No. 9.....	160	-----	160	-----
Claim No. 13.....	160	-----	160	-----
Claim No. 16.....	120	-----	120	-----
P-17.....	40	-----	40	-----
P-18.....	80	-----	80	-----
P-19.....	120	-----	120	-----
Total.....	1,860	480	1,380	100

FS appealed to this Board from Judge Morehouse's decision. Oneida did not appeal, but contended itself with filing an answer to the statement of reasons for appeal filed by FS.

The contest had proceeded on the basis of a complaint which embodied the following three charges:

a. There are not presently disclosed within the boundaries of the mining claims or portions of mining claims, minerals of a variety subject to the mining laws sufficient in quality, quantity, and value to constitute a discovery.

b. In the alternative, the minerals or mineral materials on the subject claims constitute excessive reserves.

c. The land is nonmineral in character.

In commenting on these charges at the outset of his decision, Judge Morehouse made the following observation: "The only material allegations of the complaint are set out in paragraphs a and b above, since if the claims are not supported by a proper discovery or constitute excess reserves they are invalid and it is immaterial whether the land is mineral or nonmineral in character" (Decision at 2).

At the time Judge Morehouse authored the foregoing, we would have regarded it as a generally correct statement, although charges a. and b. are conceptually redundant. However, subsequent decisions by the Court of Appeals for the Ninth Circuit have made the reference to "excess reserves" an anathema, while lending enhanced significance to the term "nonmineral in character," as will be discussed, *infra*.

At the hearing the Government

had devoted considerable effort toward establishing its contention that Oneida had located claims for far more perlite mineral than could be extracted, processed, and absorbed by the market for as far into the future as one might reasonably see.⁴ As the hearing progressed and evidence was adduced, Judge Morehouse commented, "However, the issue in this case, I think it's clear to everyone, is one of excess reserves" (Tr. 246). Both sides repeatedly referred to the perlite deposits on the claims as "massive," and evidence was admitted to show the extent of reserves based upon various measures such as total annual United States consumption, the current rate of production by the contestee, maximum plant capacity, etc. The FS mineral examiner testified that on the 100-acre area he recommended for patent there is in excess of 5,300,000 tons of commercial perlite which, based on the contestee's annual production, would provide a reserve for 1,000 to 1,200 years (Tr. 68). Contestee had arranged to have the claims examined by an expert in perlite who enjoys a worldwide reputation as such, Herbert A. Stein, whose report is appended to the patent application. Stein estimated the total reserves on the subject claims at 200,000,000 to 300,000,000 tons. The FS mineral

⁴ For example, at the opening of the hearing, counsel for contestant declared: "We believe that on a hundred acres a valuable discovery had occurred, and also that on that hundred acres there is at present rate of production about—anywhere from fifty thousands to a million years reserve supply for the company" (Tr. 8). This may have been an indulgence in hyperbole.

examiner estimated that this is enough to supply the entire needs of the United States at current levels of consumption for "more than two or three hundred years." The national rate of production was given as 602,000 tons per annum.⁵ In 1977, the latest year for which figures were available at the time of the hearing, 80 percent of the national output was produced in New Mexico, the remainder being produced in Arizona, California, Colorado, Idaho, and Nevada. Twelve mines were producing in those six States (Exh. G-8). The United States is an exporter to the extent of 18,000 tons per annum (Exh. G-9).

The Administrative Law Judge and FS were familiar with and guided by a decision of this Department which also was a case in which there had been multiple claims (covering 2,165 acres of land in the Santa Fe National Forest, New Mexico, and 200 acres of BLM land for vast deposits of perlite estimated at more than 25,000,000 tons). In that case, *United States v. Anderson*, 74 I.D. 292 (1967), the Department found that although a market exists for a certain amount of perlite, so that the claimants might mine some of it at a profit, the limitations of the market were such that it could not all be absorbed, and thus huge quantities were not marketable. In locating multiple claims for reserve deposits

which were far more than needed as a reasonable reserve supply, the claimants had laid claim to "excess reserves" which had no economic worth as mineral. The mining law requires that each claim be supported by the "valuable" mineral deposit within its boundaries. 30 U.S.C. § 22 (1976). Noting that, "What must be shown is that at the present time there is an existing market and that there is a reasonable justification for believing that the product of each claim can be disposed of in that market at a profit," the *Anderson* decision held that patent could be approved only for sufficient reserves necessary to sustain a mining operation of the size contemplated for a reasonable period of time. The remaining claims were held to be invalid on the ground that there was no discovery thereon of a mineral deposit which was "valuable" in terms of present marketability at a profit.

There is such a remarkable resemblance between the circumstances which characterized *United States v. Anderson*, *supra*, and those which obtain in the case at bar that the two cases are virtually indistinguishable in any relevant particular.⁶ It seemed apparent that the

⁵ Our calculations show that on this basis there is sufficient perlite on the claims to equal the entire United States production for from 332 years to 498 years, including the total domestic consumption and total exports.

⁶ In his decision Judge Morehouse noted that the *Anderson* case was "considerably different" than the instant case because the *Anderson* claimants had not then built a mill or expanding plant or constructed roads, whereas Oneida had done so, and had sold approximately 2,500 tons of expanded perlite per year for the years 1976 and 1977. However, this distinction would have no bearing on the extent of the market, the economics of exploitation, the nature of the deposit, the quality of the mineral or the applicable law.

law of the case in *Anderson* would apply to and control the result here.

The contestee, however, argued that its reasonable reserve requirements should not be gauged solely on the tonnage of perlite within the claims, but consideration should also be given to the fact that there are 14 different varieties of perlite with different uses and potential markets, and that the various types are not closely concentrated on any one claim but are distributed on several claims over an extensive area. Therefore, contestee said, it must have more than the area recommended for patent by FS (which contains only three types of perlite), in order to supply "any known and future use for the mineral" and impart value to the mining venture which will attract additional investment capital. For this reason, contestee argued, type—not tonnage—is the critical consideration in calculating reasonable reserves.

Contestant countered this argument with the assertion that the evidence presented showed that only 2 or 3 of the 14 types of perlite are currently being marketed.⁷ It was contended that the mining law does not provide for the patenting of large acreages and vast quantities on the hope or speculation that

some day a market for the other perlite varieties might be developed.

Nevertheless, Judge Morehouse was persuaded that it was appropriate to validate a sufficient area of the claimed lands to encompass all the varieties which the company said it required for an existing market and potential future markets. In doing so he expressly recognized that if all of the estimated reserves on claims 1, 3, and 4 were mineable, there would be enough to operate to the total maximum capacity of the company's mill for 35 years. (The mill has a present capacity of 70,000 tons per year, but can be converted to handle 140,000 tons per year, although annual sales for the 2 preceeding years (1976-77) were only 2,500 tons per annum.) However, he found that not all types of perlite were present on claims 1, 3, and 4, but that other required types were present on claims 2, 5, and 6. Accordingly, Judge Morehouse held that 580 acres, comprised of portions of six claims containing all varieties of perlite, should be patented without regard for the volume of perlite within that area.⁸ Also included in the 580 acres ordered to patent by Judge Morehouse were the areas occupied by contestee's mill and an improved spring which contestee's president

⁷ On appeal, FS asserts that "only one or two types of perlite are presently being marketed," other than "the possible exception of the pumicite." In its answer, Oneida says, "Currently there are approximately six to seven different types of perlite being sold, but there are fourteen different types of perlite found on the 580 acres which impart to these claims the unique characteristics of being able to meet every known demand for perlite." The record does not resolve the disparity.

⁸ Actually, there is no way of knowing or estimating the quantity of perlite within that particular 580 acres, as evidence was not presented concerning the volume on each claim and each portion thereof. We can only speculate that it must exceed by several times the 5,000,000 tons included in the portion recommended for patent by FS.

August 27, 1981

testified was desired "in case we need wet scrubbers in the mill for environmentalists" (Tr. 184-85).

The 1,380 acres occupied by the remaining claims and portions of claims which were held invalid by Judge Morehouse were eliminated for various reasons. He found that there was insufficient evidence adduced by the contestee to show that valuable deposits are present on claims 7, 8, 13, 16, P-17, P-18, and P-19, and he held that these claims are invalid for lack of discovery. Applying the "10-acre rule," under which aliquot 10-acre increments which contain no commercial mineral can be excluded from a placer claim, Judge Morehouse eliminated the SE $\frac{1}{4}$ of claim 1, the SW $\frac{1}{4}$ of claim 2, the SE $\frac{1}{4}$ and S $\frac{1}{2}$ SW $\frac{1}{4}$ of claim 3, and the E $\frac{1}{2}$ of claim 4. Then, applying the rule relating to "excess reserves" as articulated in *United States v. Anderson, supra*, Judge Morehouse concluded that 540 acres comprised of portions of claims 1, 2, 3, 4, 5, and 6, and all of claim 9 constituted locations of "excessive reserves" of perlite for which there is no existing or potential market.

In its appeal to this Board from the decision of Judge Morehouse, FS maintained, *inter alia*, "[t]hat the reserves allowed by the Judge

are greatly in excess of reasonable needs"; that his validation of claims for perlite varieties for which there is no present market was violative of the requirement that the value of a deposit be determined by whether it is presently marketable at a profit; that in awarding Oneida a portion of Wright Creek No. 2 claim for "pumicious perlite," which is used as an abrasive, the Judge erred in granting patent for a mineral which has been barred from location under the Act of July 23, 1955 (30 U.S.C. § 611 (1976)); that the patenting of a mining claim, or portion thereof, where there is no mineral in order to make provision for the site of Oneida's mill is violative of the mill-site statutes, 30 U.S.C. § 42 (1976); that the allowance of a portion of Wright Creek No. 3 claim, not shown to contain commercial perlite, to accommodate Oneida's desire to have a spring, was contrary to the holding of the Supreme Court in *Andrus v. Charleston Stone Products Co., Inc.*, 436 U.S. 604 (1978); and that portions of claims ordered to patent by Judge Morehouse were not shown to contain commercial perlite. However, appellant's principal point of contention concerned Judge Morehouse's award to Oneida of what it asserted were excess reserves, and it relied heavily on *United States v. Anderson, supra*, to support its contention.

Oneida did not appeal, but responded to the appeal of FS urging the propriety of the decision of the Administrative Law Judge.

⁹ Reference to "the E $\frac{1}{4}$ of Claim No. 4" on page 12 of Judge Morehouse's decision is an apparent typographical error. On page 15 of the decision it becomes evident that he excluded the E $\frac{1}{2}$ of the claim.

The Baker Decision

While this appeal was pending, indeed, after it had been reached for adjudication on the docket of this Board and was actually under review, the Court of Appeals for the Ninth Circuit issued its decision in *Baker v. United States*, 613 F.2d 224 (9th Cir. 1980). In that decision the Court held that this Board's application of the excess reserves rule, yclept the "*too much test*," exceeded the Board's discretionary and statutory powers, and amounted to a legislative enactment by an executive tribunal, was arbitrary, capricious, and an abuse of discretion. The Court held, in effect, that there can be no such thing as an "excess reserves test" or a "*too much test*." (Italics by the Court.) In so doing the Court of Appeals declared that *United States v. Anderson, supra*, and other Departmental decisions which referred to "excess reserves" or "reasonable reserves" were based upon a faulty premise. The Board's decision in that case, *United States v. Baker*, 23 IBLA 319 (1976), noted that the claimant had, prior to July 23, 1955, located the Wildcat Hill Nos. 1 through 5 placer claims for common cinders, and had made application for patent. At the request of FS, contest proceedings had been initiated to determine their validity and that of a sixth claim, known as the "Cinder." Subsequently, the contest proceedings against the Wildcat Hill No. 5 and the Cinder claims were dismissed, leaving only the Wildcat Hill Nos. 1 through 4 at issue. The hearing established

that marketable cinders were exposed in vast quantities on all four claims, and that a profitable market for such cinders had existed since prior to July 23, 1955. Accordingly, the Administrative Law Judge held that all four claims were valid. FS then appealed to this Board. Upon review of the record, we noted that Baker had located claims covering 15,000,000 tons of cinders by his own estimate; that his sales over the preceding 18 years amounted to from 700,000 to 1 million tons; that a substantial volume of these sales were for fill or other nonmineral purposes which could not be recognized under the holding in *United States v. Barrows*, 76 I.D. 299 (1969), *aff'd*, *Barrows v. Hickel*, 447 F.2d 80 (9th Cir. 1971); that at 10 cents per ton for the material, the maximum gross income from his operation was \$100,000 over the preceding 18 years, or an average of \$5,555 per annum; that the supply of cinders in the area significantly exceeded the demand; and that there were numerous competitive producers in the vicinity. Depending on the figures used for the projection, Baker's location of four claims containing 15,000,000 tons of cinders gave him a reserve supply which could not be consumed in less than 270 years and most probably would last more than 400 years. Accordingly, we held that Baker had located extra claims for "excess reserves," *i.e.*, reserves which could not be marketed, which had no value, which no prudent man would produce, and which were therefore invalid for lack of a discovery of a

August 27, 1981

valuable deposit of mineral. We held that two of his claims were valid instead of one because his main pit and principal improvements extended into both claims and we did not wish to disrupt his operation. Assuming that the 15,000,000 tons were uniformly distributed on the four claims at issue, the two claims cleared for patent by the Board's decision provided him with sufficient reserves to supply his market from 100 to 200 years, *not* including his other sources.

We therefore found "that although Baker was justified in the reasonable and prudent anticipation that a valuable mine could be developed on this deposit, and in proceeding with the expenditure of his labor and means to that end, he located claims for far more land and mineral than reason and prudence would allow." *United States v. Baker, supra* at 335. This statement was the Board's expression and application of the time-honored "prudent man rule," first articulated in *Castle v. Womble*, 19 L.D. 455 (1894), which has since been repeatedly approved by the Supreme Court. *Andrus v. Charlesstone Stone Products Co., Inc., supra* at 607 n.4; *United States v. Coleman*, 390 U.S. 599 (1968); *Best v. Humboldt Placer Mining Co.*, 371 U.S. 334, 336 (1963); *Cameron v. United States*, 252 U.S. 450, 460 (1920); *Chrisman v. Miller*, 197 U.S. 313, 322 (1905). Statute provides that "valuable" mineral deposits are open to exploration and purchase. 30 U.S.C. § 22 (1976).

Whether a deposit has economic value is determined by whether there exists a profitable market which will receive the material, as "[m]inerals which no prudent man will extract because there is no demand for them at a price higher than the cost of extraction and transportation are hardly economically valuable." *United States v. Coleman, supra* at 602. Moreover, this test of whether claims are supported by a qualifying discovery of an economically valuable deposit of mineral must be applied to *each claim individually*. *United States v. Melluzzo (Supp. On Judicial Remand)*, 32 IBLA 46 (1977), *aff'd*, *Melluzzo v. Andrus*, No. CIV-79-282-PHX CAM (D. Ariz. May 20, 1980), and cases cited. An assumption that a qualifying discovery on one claim can inure to the benefit of another is a mistake of law. *Henrikson v. Udall*, 229 F. Supp. 510, 512 (N.D. Calif. 1964), *aff'd*, 350 F.2d 949 (9th Cir. 1965), *cert. denied*, 384 U.S. 940 (1966). Where *multiple* claimants have located multiple claims for an infinite amount of mineral which is widespread and abundant for which there is only a limited market demand, the Court of Appeals for the Ninth Circuit has held that claims which are not already developed and producing profitably to supply that market must be held invalid where it cannot be proven that they are presently capable of such profitable participation. *Melluzzo v. Morton*, 534 F.2d 860 (9th Cir. 1976). Of course, where, for exam-

ple, 50 different claimants locate 50 separate claims for a superabundance of the same mineral with a limited market, the question of "excess reserves" does not arise. Each claim is regarded individually and a determination made that the mineral deposit is or is not "valuable" according to the test applied by the Supreme Court in *United States v. Coleman*, *supra*, and interpreted by the Ninth Circuit in *Melluzzo v. Morton*, *supra*. Those claims determined to be not qualified according to these criteria are properly held to be invalid for want of discovery of a valuable deposit of mineral.

Where a single claimant or association of claimants locates multiple claims for far more mineral than the market can absorb the test of the validity of each claim is *precisely the same*. No "legislative enactment by an executive tribunal," violative of "our system of separation of powers" is required in order for the Department to discharge its historic responsibility in this regard.¹⁰ The only distinction between the situation involving *multiple* parties locating multiple claims involving a superabundant mineral with a limited market, and the situation where a single locator or association does so, is in the terminology employed to describe what has happened. Assuming that the single locator does have, at present, a profitable market for a limited amount of material which

can easily be supplied from one claim, the question of the value of the deposits of the same mineral on the rest of the claims necessarily arises. Usually, the claimant asserts that the additional claims are needed as a *reserve* supply in order to continue his operation when the supply on the first claim is exhausted or severely depleted. This Board has recognized repeatedly the right of a mining claimant to locate claims containing *valuable* deposits of mineral and to hold them, without development, as "*reasonable reserves*." See, e.g., *United States v. Bunkowski*, 5 IBLA 102, 79 I.D. 43 (1972); *United States v. Harenberg*, 9 IBLA 77, 80 (1973).¹¹ In *United States v. Gibbs*, 13 IBLA 382, 396 (1973), we discussed the concept of "reasonable reserves" and application of a test of the validity of a claim allegedly located for that purpose, as follows:

The Judge further found that the absence of sales was attributable to the fact that the operator chose to put his plant on the adjacent claim and hold the material from the contested claim in reserve. He concluded that the holding of a claim without development as a reasonable reserve supply is a permissible procedure under the rules announced in the case of *United States v. Anderson*, 74 I.D. 292, 303 (1967), noting that the reserves afforded by the Sorefoot No. 10

¹¹ This case, *United States v. Harenberg*, *supra*, is not the same one referred to by the Ninth Circuit in the *Baker* decision, which found a later decision, *United States v. Harenberg*, 11 IBLA 153 (1973), to be unhelpful on the issue of locating claims for reserve supplies. The second *Harenberg* decision alluded to the discussion of "reserves" contained in the first *Harenberg* decision.

¹⁰ The role and authority of the Department in the determination of the validity of mining claims is discussed, *infra*.

August 27, 1981

were clearly not in excess of the 30-year supply held to be a reasonable amount in the *Anderson* case. Again, we agree.

The question of the propriety of holding mining claims as reserve sources of supply has been considered in other cases. It is well established that the holding of a mining claim as a reserve of sand and gravel for future development *without present marketability* does not impart validity to the claim. *United States v. O'Callaghan*, 8 IBLA 324 (1972); *United States v. Stewart*, (1972), *supra*; *United States v. McCall*, 1 IBLA 115 (1970); *United States v. Hinde*, A-30634 (July 9, 1968); *United States v. Schelden*, A-29078 (April 26, 1963); *United States v. Fischer Contracting Co.*, A-28779 (August 21, 1962). But where the marketability of the deposit has been established for the critical dates by a demonstration that the claimant could then have mined and sold the material at a profit, his election to retain that deposit intact as a reasonable reserve for future use will not operate to invalidate an otherwise valid claim. *United States v. Harenberg*, *supra*. The location of claims for the purpose of securing reasonable reserve supplies is not prohibited by the United States mining laws, but claims so located must meet the same standards and pass the same tests of validity as other claims, including [where the mineral is a "common variety"] a showing of marketability on or before July 23, 1955. *United States v. Stewart*, (1972) *supra*, at p. 56. [Italics in original.]

But where a claimant has located multiple claims embracing deposits of mineral so vast that the limited market for that mineral, reasonably projected for growth, could not be expected to absorb it over the course of hundreds or even thousands of years, we have held that such an appropriation of public land cannot be justified under the mining laws as necessary "reasonable re-

serves." Instead we have characterized such locations as "excess reserves," a term which the Ninth Circuit has disdained in favor of its own descriptive phrase "the *too much* test" (always italicized by the Court). The reserves are in excess of the ability of the market to absorb them and, correspondingly, in excess of the claimant's need of them for any legitimate purpose under the mining law. The claims located for such additional amounts are invalid for lack of a discovery of a valuable mineral deposit on each of them, since no prudent man would spend his labor and means in an effort to produce mineral in such quantity that the market could not accept even a small percentage of it.

Theoretically, mineral from all the claims blanketing an homogeneous, massive, and extensive deposit could be marketed profitably to supply a limited demand by the simple expedient of taking a little material from each claim as the opportunities for sales presented themselves. But this would be deliberately inefficient mining, not bona fide development but a clear subterfuge to control the land, either to preclude its acquisition by competitors, or for other purposes. *United States v. Osborne (Supp. on Judicial Remand)*, 28 IBLA 13, 29 (1976). "Under the mining laws Congress has made public lands available to people for the purpose of mining valuable mineral deposits and not for other purposes." *United States v. Coleman*, *supra* at 602. Moreover, the Court of Appeals for the Ninth

Circuit, prior to its decision in *Baker*, had considered and rejected the notion that simply because a limited market exists for a mineral which is the subject of a great many claims, we must consider that each claim, viewed in isolation from all the rest, is capable of being developed as a profitable source of supply for that market. In *Melluzzo v. Morton*, *supra*, at 864 n. 4, the Court said:

A hypothetical market in which the claimant's material is the only unmarketed material taken into account is hardly a useful supposition. If claimant's material can be marketed, then so can that from all potentially competitive sources. To exclude all unmarketed material save that of the claimant *could result in the unrealistic conclusion that all such material, considered claim by claim, is marketable at a profit notwithstanding the fact that if the claims had all been actively operated none could have done so profitably.* [Italics added.]

The same theory (that since a limited market existed locally in an area of superabundant supply, material could be taken from *any* claim and sold at a profit into that market) was addressed in *Osborne v. Hammitt*, 377 F. Supp. 977, 985 (D. Nev. 1964), where the Court said:

We think the Secretary was right in holding the proofs insufficient here to establish present marketability under the quoted standards. If we were to judge the case solely on the basis of the conflicting evidence bearing upon the theoretical marketability of the sand and gravel from the Bradford Claims, we would be inclined to agree with the Hearings Officer rather than the Secretary* * *. But the record discloses a situation where, if

the Bradford Claims could be sustained on the hypothetical and speculative opinion evidence relied upon by the plaintiffs, each of the claims in the valley comprising over 100,000 acres * * * of public lands would have been patented as valuable for mining, where it is evident and shown by the record that not more than one percent of the material might have been marketable in the reasonably foreseeable future.

In *Melluzzo v. Morton*, *supra* (as in *Osborne v. Hammitt*, *supra*), the Court was dealing with a superabundant supply from many sources held by diverse owners and claimants, and the Court was in full agreement with the Department that claims for surplus mineral which simply overwhelm the available market are invalid for want of discovery. The same factors were operative in the *Baker* case, but it was unnecessary to deal with them at length because Baker's own claims constituted such a surplusage on the basis of his own experience after 18 years of operation. Thus, in *Baker*, it was unnecessary to develop evidence concerning the total available supply from all the sources in the area in order to ascertain whether Baker had located far more than his market could absorb or whether he had merely provided himself with "reasonable reserves." In making this determination, the Board could not even consider increases in the market since July 23, 1955, as the cinders on Baker's claims were a common variety. Therefore, the validity of each claim had to be tested on the basis of whether the deposits on each claim were marketable at a profit

August 27, 1981

as of that date. *Barrows v. Hickel*, 447 F.2d 80 (9th Cir. 1971).

Nevertheless, although Baker's principal workings and improvements were on his Wildcat Hill Nos. 2 and 3 claims, where he had a sufficient supply of cinders for 100 to 200 years, the Court of Appeals noted that, "Baker had, in fact, developed and marketed the cinders from claims one and four," and that "he had actually extracted and marketed cinders from the contested claims at a profit." *Baker v. United States*, *supra* at 228.

The Court of Appeals for the Ninth Circuit has previously considered a classic case wherein a claimant acquired multiple claims for common, abundant mineral, some of which could be then profitably disposed in the market while the balance could not be, because the claimant's own production from one of its claims was sufficient to satisfy the existing market. In that case, *Clear Gravel Enterprises, Inc. v. Keil*, 505 F.2d 180 (9th Cir. 1974), *cert. denied*, 421 U.S. 930 (1975), the Court noted that appellant had held 16 association placer claims of 160 acres each located for common sand and gravel in the Las Vegas Valley, and had leased all 16 claims to the second largest producer of sand and gravel in the area. The lessee company had opened a mine on only one of these claims. The validity of 14 of the claims had previously been litigated, as the result of which 7 were ordered to patent and 7 claims were declared in-

valid.¹² Before the Court was the question of the validity of the remaining two claims, neither of which was the claim being mined by the lessee. The Court noted and held as follows:

Other evidence produced at the time of the hearing before the Hearings Examiner further demonstrated that the one mine being operated provided sufficient sand and gravel to meet the needs of the market and that it could yield a sufficient quantity of sand and gravel to provide for any increased share of the market to its producer.

* * * * *

Of particular significance is the obvious fact appearing from the record that the quantity of Appellant's other sand and gravel holdings in the area, when combined with the state of the market, were such as to deter the Appellant from expending money and effort to extract and market the sand and gravel from the claims in question from the time of location in 1946 until approximately 1963. [Italics added.]

Id. at 505 F.2d 181. Although the Court did not use the terms "too much" or "excess reserves," either phrase would have served to characterize its findings. The Court had, from the outset, identified the issue in the case as being whether there had been a discovery of valuable

¹² *Palmer v. Dredge Corp.*, 398 F.2d 791 (9th Cir. 1968), *cert. denied*, 39 U.S. 1066 (1969). This case presents the first discussion by the Ninth Circuit of the application of the marketability test to determine whether a deposit is "valuable" following the Supreme Court's decision in *United States v. Coleman*, *supra*. There it is also reported that the Dredge Corp. actually held 36 sand and gravel claims in the area at the time the various proceedings were initiated.

minerals deposits on the claims within the definition of "the prudent man rule" as tested by an ability to market the material at a profit during the critical period. Upon finding "that the *quantity* of Appellant's *other * * * holdings * * ** were such as to deter the Appellant" (*italics added*) from attempting to mine the subject claims, they were held to be invalid. However, as the material on all the claims was homogenous, it must be presumed that profitable sales of material from each of the claims could have been made to some limited extent, just as was done in the *Baker* case. Nevertheless, in deciding *Baker*, the Court said, "However, *Clear Gravel* cannot be read as establishing or even supporting a *too much* test." *Baker v. United States*, *supra* at 227.

In *Hallenbeck v. Kleppe*, 590 F.2d 852, 859 (10th Cir. 1979), the Court of Appeals quoted with approval from the decision of the district court in that case saying:

We feel the court correctly followed the test of present marketability. See, *e.g.*, *Coleman*, *supra*, 390 U.S. at 602-03, 88 S.Ct. 1327; *Barrows v. Hickel*, 447 F.2d 80, 83 (9th Cir.). The court's findings in the instant case stated that: "A private litigant cannot locate claims upon public lands and then simply wait until the minerals are in sufficient demand to be marketed at a profit," and also that: "... plaintiffs cannot hoard common sand and gravel on public lands until it becomes profitable to market such deposits." The court also quoted the following statement from the opinion in *Foster v. Seaton*, 106 U.S.App. D.C. 253, 255, 271 F.2d 836, 838: "To allow such land to be removed from the public domain because unforeseeable

development might some day make the deposit commercially feasible can hardly implement the congressional purpose in encouraging mineral development."

In reversing the Board's decision in the *Baker* case insofar as it held that two claims were invalid by reason of being located "for far more land and mineral than reason and prudence would allow" (the "prudent man test"), the Court of Appeals asked a number of rhetorical questions. In view of the fact that we are remanding the instant case for rehearing, we will supply responses to some of the Court's rhetorical questions for the edification and guidance of the parties and the Administrative Law Judge who will hear and decide the contest on remand.

Stating that, "Under the [*too much*] rule, Interior reserves to itself the decision as to how slowly or rapidly a claim can be worked," the Court asked, "Will the large well-endowed corporation * * * with extensive and valuable open-pit or subsurface claims, be subject to the same standards as the sole 'pack-string' prospector?" *Baker v. United States*, *supra* at 229.

The Department has never indicated, even by implication, that it reserves to itself the decision as to how slowly or rapidly a claim can be worked. Moreover, this Board has held repeatedly that the test of whether there has been a discovery of a valuable mineral deposit on any claim is an objective test, not a subjective one, and that the financial abilities of the claimants are irrelevant to this inquiry. See, *e.g.*,

August 27, 1981

United States v. Reynders, 26 IBLA 131, 136 (1976), wherein we said, "The prudent man test is objective, and subjective considerations, such as willingness to work for little or no return, simply have no place in the calculus of prudence." (Citations omitted.) The inquiry is limited to whether the mineral on the claim can be extracted, beneficiated, transported, and disposed in the market at a profit to the claimant which is sufficiently attractive to warrant a person of ordinary prudence, not necessarily a skilled miner, to expend his labor and means, with a reasonable prospect of success, in developing a paying mine. *Castle v. Womble*, *supra*. Unpatented mining claims are property in the fullest sense, and may be sold, leased, transferred, mortgaged, inherited, sold on execution, or acquired by condemnation. Accordingly, the relative size or wealth of a particular claimant is not, and never has been, a factor in the Department's consideration of the validity of a claim. Only the claim itself is at issue, and that is the reason that a Government contest of mining claim has historically been regarded as an action *quasi in rem*, rather than *in personum*.

The Court of Appeals in the *Baker* decision asks, "To what locality or geographic region will [the *too much* test] apply? To what classification of mineral deposits will it apply? To what geologic structures will it apply?" *Baker v. United States*, *supra* at 229. The

answer, of course, is that it applies to multiple locations of claims to land containing vast amounts of minerals of a type which can be marketed at a profit only in limited quantities from a few claims. For example, *United States v. Duval*, 1 IBLA 103 (1970), the claimants had located 24 association placer claims on 3,080 acres in what became the Oregon Dunes Recreation Area. The claims were located for silica quartz sand suitable for glass making. Not only was the market so limited that no sand from these claims had been sold, the evidence established "that other sands found in numerous deposits along the Oregon coastal regions and in the entire Pacific Northwest might also be used in glass making with varying needs for beneficiation, sizing and screening and these deposits are in the millions, if not billions, of tons." *Id.* at 107. Our decision holding these claims invalid was affirmed in *Duval v. Morton*, 347 F. Supp. 501 (D. Ore. 1972), which was affirmed in turn by the Ninth Circuit's memorandum opinion of Dec. 19, 1973, No. 72-2839.

In *Ideal Basic Industries, Inc. v. Morton*, 542 F.2d 1364 (9th Cir. 1976), appellant had located and applied for patent 45 claims in a national forest in Alaska. These claims were located for limestone which the claimant could presently use in its own plants in the manufacture and sale of cement at a profit. Nevertheless, because that limestone could only be utilized at a cost of \$1.94 per ton at plants where

ample supplies of limestone from other sources were available at \$1.48 per ton, the Court perceived that even though the company could still make a profit through the sale of cement made from the stone from the subject claims, it could only do so "by sacrificing profits properly attributable to manufacturing or selling." *Id.* at 1369-70. The Court affirmed the authority of this Department to pursue its inquiry through hearing procedures to determine whether the company would be prudent to sacrifice profits which could be made by utilizing the limestone which was available at significantly lower cost, and whether the limestone on the claims was truly presently marketable at a profit under these circumstances. (Trask, J., dissenting).

In *Multiple Use, Inc. v. Morton*, 504 F.2d 448, 450 (9th Cir. 1974), the Court noted that, "There was no evidence that the sand and gravel were used *in quantity* prior to July 23, 1955, hence they are not locatable deposits. The stone 'and similar deposits are along the creek bed for miles and appear as common as drops of water in San Francisco Bay.'" (Italics by the Court.)

In *Dredge Corp. v. Penny*, 362 F.2d 889 (9th Cir. 1966), the Court encountered a situation where the plaintiff had located sand and gravel claims covering 16 quarter-sections of land (2,560 acres) in the Las Vegas Valley, Nevada. (The case was decided on the basis of the status of the land rather than

on the discovery issue.) Another example of superabundant supplies of sand and gravel situated on numerous claims in the Las Vegas Valley was *Foster v. Seaton*, 271 F.2d 836, 838 (D.C. Cir. 1959), where the Court noted:

With respect to widespread non-metallic minerals such as sand and gravel, however, the Department has stressed the additional requirement of present marketability in order to prevent the misappropriation of lands containing these materials by persons seeking to acquire such lands for purposes other than mining. Thus, such a "mineral locator or applicant, to justify his possession, must show that by reason of accessibility, *bona fides* in development, proximity to market, *existence of present demand*, and other factors, the deposit is of such value that it can be mined, removed and disposed of at a profit." *Layman v. Ellis*, 54 I.D. 294, 296 (1933), emphasis supplied. See also *Estate of Victor E. Hanny*, 63 I.D. 369, 370-72 (1956). Particularly in view of the circumstances of this case, we find no basis for disturbing the Secretary's ruling. The Government's expert witness testified that Las Vegas valley is almost entirely composed of sand and gravel of similar grade and quality. To allow such land to be removed from the public domain because unforeseeable developments might some day make the deposit commercially feasible can hardly implement the congressional purpose in encouraging mineral development. [Italic by the Court.]

Thus, the Department's concern for the location of claims for excess reserves is *geologically* limited to those types of minerals which occur in such abundance that only a small portion of the known deposits can be absorbed by the market at a profit. Minerals for which there is virtually unlimited demand, such as

August 27, 1981

precious metals, and which can be extracted and sold at a profit, of course would not be the subject of such concern. The distinction between the two categories was noted by the Supreme Court in *United States v. Coleman, supra*. With respect to the other questions raised by the Court in *Baker*, the only concern of the Department for *locality* or *geographic region* in the context of excess reserves would relate to local or geographic influences on the marketability of the mineral, e.g., market areas, hauling distances and costs, etc. We can think of no way in which the nature of a particular *geologic structure* might influence the concept of excess reserves.

In *Baker, supra* at 229, the Court of Appeals also asked:

Will claimants of all variety now be forced to locate and claim only mediocre discoveries, exploitable within 1, 5 or 10 years? Will claimants be forced to overlook those claims with extremely rich and extensive deposits which may require many more years to develop and exploit, but which are by all present day statutes and relevant decisions legally exploitable claims?

As explained above, claims "which are by all present day statutes and relevant decisions legally exploitable" would never be considered excess reserves by this Department. And, as also related above, *reasonable* reserves, liberally projected for many years into the future, have been consistently approved by this Department as legitimately within the scope and purpose of the general mining law.

United States v. Anderson, supra; United States v. Harenberg, supra; United States v. Gibbs, supra; United States v. Baker, supra. See also United States v. McElwaine, 26 IBLA 20 (1976). What amount of reserves is "reasonable" is a determination to be decided on the basis of the evidence in each case. The nature of the mineral, its unit value, the extent of the market, and whether it is expanding or diminishing, the amount of similar mineral which can supply that market from other sources (*Melluzzo v. Morton, supra*), might all bear on the question of whether the location of additional claims for the same mineral was justified as the act of a prudent man in the reasonable belief that by the expenditure of his labor and means a valuable mine might be developed on each such claim.

The Court of Appeals in the *Baker* case stated at 229:

The *too much* rule is, in our view, a wholly unreliable subjective analysis, resting too much in the eye of the administrative beholder.

The IBLA exceeded its discretionary and statutory powers when it adopted its *too much* or excess reserves rule. Although Congress may see fit to deal with the issue, it has never done so. The IBLA decision amounts to a legislative enactment by an executive tribunal. The IBLA possesses no such authority under our system of separation of powers.

As hereinbefore indicated, a reference to "excess reserves" does not describe a new rule of law invented by this Department, or a super imposition of a new test of a

claim's validity on the existing law. It is nothing more or less than a descriptive phrase applicable to a particular set of circumstances. It describes the location of claims for far more land and mineral than reason and prudence would allow because there is such a superabundance of the material that the market simply cannot accept all of it at a profit. Therefore, some of the deposits must be regarded as not valuable in an economic sense. This concern for excess reserves is rooted in the basic statute, 30 U.S.C. § 22 (1976), and controlled by the "prudent man" test of discovery as complemented by the requirement that the economic value of the deposit be measured by a determination of whether it is presently marketable at a profit. *United States v. Coleman, supra*. In the making of this determination, it is appropriate to consider the quantity of the claimant's other holdings of this same mineral, and the limitations of the market, and the claimant's share of that market. *Clear Gravel Enterprises v. Keil, supra*. It is also appropriate to consider the magnitude and sources of other supplies of that mineral to the same market. *Melluzzo v. Morton, supra*.

The authority of the Department of the Interior to make such determinations has been reiterated frequently. See, e.g., *Ideal Basic Industries v. Morton, supra* at 1367.

The Supreme Court of the United States has repeatedly acknowledged and defined the judicial role of the Secretary.

Congress has placed the Land Department under the supervision and control of the Secretary of the Interior, a special tribunal with large administrative and quasi-judicial functions, to be exerted for the purpose of the execution of the laws regulating the disposal of the public lands. [Italics in original.]

Plested v. Abbey, 228 U.S. 42, 52 (1913). *Accord, United States ex rel. Ness v. Fisher*, 223 U.S. 683, 693, (1912); *United States ex rel. Riverside Oil Co. v. Hitchcock*, 190 U.S. 316, 324 (1903).

[T]he Secretary of the Interior is the supervising agent of the government to do justice to all claimants and preserve the rights of the people of the United States. * * * "The statutes in placing the whole business of the Department under the supervision of the Secretary, invest him with authority to review, reverse, amend, annul or affirm all proceedings in the Department * * * by direct orders or by review on appeals."

Knight v. United States Land Association, 142 U.S. 161, 178 (1891). *Accord, Cameron v. United States*, 252 U.S. 450 (1920); *United States v. Fisher, supra*; *Stoneroad v. Stoneroad*, 158 U.S. 240 (1895); *Orchard v. Alexander*, 157 U.S. 372 (1895); *McDaid v. Oklahoma Territory*, 150 U.S. 209 (1893); *Hastings & Dakota R.R. Co. v. Whitney*, 132 U.S. 357 (1889).

The determination of the validity of claims against the public lands was entrusted to the General Land-Office in 1812 (2 Stat. 716) and transferred to the Department of the Interior on its creation in 1849. 9 Stat. 395. Since that time, the Department has been granted plenary authority over the administration of public lands, including mineral lands; and it has been given broad authority to issue regulations concerning them. *Cameron v.*

August 27, 1981

United States, supra—an opinion written by Mr. Justice Van Devanter, who, as Assistant Attorney General for the Interior Department from 1897 to 1903, did more than any other person to give character and distinction to the administration of the public lands—illustrates the special role of the Department of the Interior in that field. [Footnotes omitted.]

Best v. Humboldt Placer Mining Co., 371 U.S. 334, 336-37 (1963).

By general statutory provisions the execution of the laws regulating the acquisition of rights in the public lands and the general care of these lands is confided to the land department, as a special tribunal; and the Secretary of the Interior, as the head of the department, is charged with seeing that this authority is rightly exercised to the end that valid claims may be recognized, invalid ones eliminated, and the rights of the public preserved.

Cameron v. United States, 252 U.S. 450, 459-60 (1920).

The Interior Board of Land Appeals "is an authorized representative of the Secretary for the purpose of hearing, considering and determining, as fully and finally as might the Secretary, matters within the jurisdiction of the Department involving hearings, and appeals and other review functions of the Secretary." 43 CFR 4.1. If, as was said by the Court of Appeals in the *Baker* case, "Interior Board of Land Appeals' 'too much rule,' prohibiting the mining claimant from locating claims in excess of reasonably anticipated market need, was abuse of discretion."¹³ Contrary to

existing mining law" (Syllabus), then there is no entity within the Federal establishment with the requisite jurisdiction, authority, and responsibility to challenge and determine the validity of "extra" claims containing deposits of mineral which are without value because of the limitations of the market and superabundant existing supply. Land located for such claims would pass from Federal ownership by default simply because of an absence of any governmental authority to administer the law. We cannot believe that was the intended consequence of the holding in *Baker*, although the dissenting Justices of the United States Supreme Court perceived that it might have that effect.

The Department of the Interior recommended to the Department of Justice that application be made to the Supreme Court for a writ of Certiorari in the *Baker* case. The Solicitor General concurring, this was done, but the Supreme Court denied the petition on Oct. 20, 1980. *Andrus v. Baker*, 101 S. Ct. 332 (1980). Mr. Justice Blackmun authored a dissenting opinion, in which he was joined by Mr. Justice Marshall and Mr. Justice Powell. The dissent noted that this Board had nullified two of Baker's four contested Wildcat Hill claims, "rea-

¹³ Since the *Baker* case involved a claim to property, the contest and administrative appeal were conducted pursuant to the Adminis-

trative Procedure Act. Such cases are not resolved by the discretionary powers of the Secretary, which do not arise. As there was no discretion exercised by the Board in making its decision, it is difficult to understand the Court's holding that the decision constituted an abuse of discretion.

soning that development of all four claims would be imprudent." The opinion also noted that proceedings against a fifth Wildcat Hill claim had been dismissed. Mr. Justice Blackmun related the Board's action to the "prudent person" test and its correlative marketability standard, and opined at 333:

I believe that, as in *Coleman*, the Court of Appeals may have unduly restrained the Secretary's authority to evaluate claims of mineral discoveries on public lands; its ruling appears to be based on the perception, possibly a misperception, that the Secretary's "excess reserves" analysis does violence to the statute. In light of that ruling, one now may expect the assertion of additional claims involving "valuable" mineral deposits not marketable in the foreseeable future.

"It is still proper here that the Secretary 'take into account the economics of the situation.'" *Roberts v. Morton*, 549 F.2d 158, 163 (10th Cir. 1976), quoting from *Converse v. Udall*, 399 F.2d 616, 622 (9th Cir. 1968). *Roberts v. Morton*, *supra*, affirmed a decision of this Board styled *United States v. Zweifel*, 11 IBLA 53, 80 I.D. 323 (1973), in which one man located 2,910 association placer mining claims for himself and as agent for 250 colocators, filing the majority of said claims within a span of 10 months.

The McCall v. Andrus Decision

The decision in *Baker v. United States*, *supra*, was handed down by the Court of Appeals for the Ninth Circuit on Feb. 11, 1980. On July 10, 1980, that Court issued its decision in *McCall v. Andrus*, 628 F.2d

1185, *cert. denied*, 49 USLW 3710 (Mar. 23, 1981); as related in the syllabus, in part:

The Court of Appeals, Farris, Circuit Judge, held that: (1) [Board of Land Appeals] in concluding that claimant would have a reserved supply of sand and gravel for 100 years and that, without expanded market, it was not economically feasible to produce material on contested tracts was proper application of test for determining whether land was mineral in character; (2) testimony of government expert that he had examined claims and that contested areas were not mineral in character because materials from them could not have been mined and marketed for profit at time of his examination or at any time earlier constituted substantial evidence of prima facie case by government that lands were not mineral in character, and testimony of one of claimant's experts that sand and gravel on contested area could have been marketed at profit but that he had not made market study was not enough to undermine substantiality of government's case; * * *. [Italics added.]

William A. McCall, Sr., and another had acquired 26 association placer mining claims of 80 acres each, located for deposits of sand and gravel in the Las Vegas Valley. The 2,080 acres comprising the claims adjoined the boundaries of the city of Las Vegas and lay approximately 6 miles westerly from the Clark County Courthouse in the center of the city. Some of the claims and/or portions of claims had been developed and material therefrom was being extracted and sold at a profit. The claimants had applied for patent to all the claims. Two patents had been granted in response, one for 40 acres and one for 190 acres, covering parts of five

August 27, 1981

claims. Contest proceedings were initiated, the complaint charging that the remaining portions of these five claims, amounting to 170 acres, were not mineral in character.

At the hearing the evidence, including that presented by the Government, established that on each 10-acre subdivision of the contested portions of the several claims there existed sand and gravel which was inferentially of the same character as the material under the patented portions of these same claims and under other patented claims adjacent. However, most of the contested areas were overlain by a dense, cemented caliche-type conglomerate which would make extraction of the commercial sand and gravel beneath more difficult and expensive than on the patented claims adjacent. Moreover, the evidence showed that this mineral material in easily recoverable form exists over many square miles of the Las Vegas Valley, and that there were numerous sand and gravel operators in the area at the time of the hearing and that there had been many active operators there for the preceding 30 years, with operations being conducted on widely dispersed tracts, including the patented portions of the five claims involved in the contest proceeding. In addition the hearing examiner noted that the contestees had already received patents for 230 acres containing over 3,500,000 yards of sand and gravel which, "If they had a market for this amount they would have a reserve supply

for one hundred years." On the basis of these facts the examiner held that the contested portions of the claims were "nonmineral in character" and void, notwithstanding that there existed on each of the contested portions mineral of the same type and quality as on the patented portions which had been found by the Department to be valid claims. Underlying this holding was a finding that given the limitations of the market to absorb the material, the vast local abundance of it, and numerous competitive suppliers, coupled with the fact that the Department had already awarded the claimants patents to Federal lands containing 100 years' reserve supply, it would not have been prudent or reasonable to attempt development of the contested deposits at any time prior to July 23, 1955, when common sand and gravel ceased to be locatable, because these deposits were more costly to develop than what was already available in superabundance.

On appeal, this Board reversed the decision of the hearing examiner as to three of the contested 10-acre subdivisions where mining operations were actually conducted, and affirmed his decision that the remaining portions were null and void because they were "nonmineral in character." *United States v. McCall*, 7 IBLA 21 (1972).

Suit for judicial review of this Board's decision was dismissed on summary judgment by the United States District Court for the District of Nevada, and the claimants

appealed to the Court of Appeals for the Ninth Circuit.

In affirming the Board's decision the Court observed:

[6, 7] McCall's contention that the Board based its decision on the absence of actual mining is incorrect. The Board adopted the conclusions of the hearing examiner who stated:

"It is only those tracts with a deposit which can be extracted, processed, and marketed at a profit in competition with other deposits that are valuable and mineral in character. The contestees believe that the caliche material can be blasted and processed at a competitive price at the present time. [The contestees] have received a patent for 230 acres which has over three and one-half million yards of sand and gravel in every ten feet of depth. If they had a market for this amount they would have a reserve supply for one hundred years.

"The contestees offered no evidence to suggest that they had a market for any more than this amount of material either in 1948, 1953, or 1955. Without an expanded market it was not economically feasible to produce the material on the contested tracts. Consequently it had no value as a mineral prior to July 23, 1955."

This is a proper application of the test for determining whether land is mineral in character. [Italics added.]

McCall v. Andrus, supra at 1188.

Again, in this case the Court did not employ the phrases "*too much*" or "excess reserves," although it did stress the fact that if appellants had a market for all the material on other lands which they claimed and had been granted title to "they would have a *reserve supply* for one hundred years." (Italics added.) The Court then said, "*McCall presented no contrary evidence to show that a market existed in Las*

Vegas in 1955 in which he could have sold at a profit more sand and gravel than the amount contained in the already patented areas." *Id.* at 1189 (Italics added). Clearly, the Court was of the opinion that the claimants had a market for *some* of the material, but they were asserting claims to *more land and mineral than could be profitably exploited* and which, therefore, constituted an *additional* "reserve supply" on which a prudent man would not be justified in expending his labor and means to develop in the reasonable anticipation of creating a valuable mine. This precisely parallels the rationale of this Board in the *Baker* case, *supra*.

However, in *McCall*, the Court attempted to distinguish *Baker*, saying at 628 F.2d 1189:

Our recent decision in *Baker v. United States*, 613 F.2d 224 (9th Cir. 1980), is not controlling here. *In Baker*, the Board had refused to grant a patent for three entire claims even though it found that a valid discovery had been made on each claim.¹⁴ [Italics added.] The claims were all composed of similar material. The Board invalidated two of the claims because it found that Baker had located claims in excess of the reasonably anticipated market need for the mineral (the "too much" test). We held that there was no statutory support for the Board's action. Unlike *Baker*, here the character of the land claimed was con-

¹⁴ The sentence emphasized in the quotation contains two misstatements of fact. First, the Board's decision in *Baker* held that *two* claims of the Wildcat Hill Group were invalid, not three claims. Second, the Board's decision did not find "that a valid discovery had been made on each claim." That finding had been made in the decision of the Administrative Law Judge who presided at the hearing, but was expressly reversed by the Board as to the two claims held to be invalid upon appeal to the Board.

August 27, 1981

tested. The claims which were held invalid here were all covered by caliche material. The hearing examiner noted that it was not economically feasible to extract the type of material on these tracts since there were large deposits of easily removable sand and gravel on the other tracts.

The Court has thus approved a finding by this Board that claims to lands on which there are mineral deposits which exceed the ability of the market to absorb at a profit are invalid because such *lands* are "non-mineral in character," but rejected a similar finding where such *deposits* were characterized as "excess reserves."

The "Mineral in Character" Concept

The term "mineral in character," or its antonym, "nonmineral in character" is unfortunately ambiguous as a term of art. It can be used interchangeably to describe either a geologic condition in the land or an economic condition. That is, "nonmineral in character" may describe *land* which is virtually barren of the mineral which is the subject of an alleged discovery, or it may describe *land* on which there are vast deposits of the mineral claimed which are of no commercial value because of the superabundant supply available to meet a limited demand. To illustrate this duality of usage of the same term, consider two hypothetical examples.

First, a 160-acre association placer claim is located for gold based upon a discovery of placer gold in an alluvial wash. The gold

is present in the wash and may be economically recovered and disposed at a profit. However, the wash occupies only parts of two 10-acre subdivisions of the 160-acre claim, while the remaining fourteen 10-acre subdivisions which comprise the upland portion of the claim are devoid of any trace of gold. Each such barren, upland 10-acre tract may be invalidated on the basis that it is "nonmineral in character," which clearly it is because the mineral which was discovered and served as the basis for the location of the claim simply does not exist on that portion of the claim.

The second hypothetical example concerns two association placer claims of 80 acres each held by the same claimants and located prior to 1955 on a vast and extensive deposits of common pumice. The total reserves are estimated at not less than ten million tons, and perhaps as much as twenty million tons may be present on the two claims. There are two other operators of competitive sources active in the area. The only buyer is the local paving contractor, who uses the pumice as an additive in concrete to surface roads on jobs within a 40-mile radius. Beyond that distance there are plentiful additional sources which are cheaper for the contractor to use because of hauling costs. Any of the three local competitive producers could easily supply the contractor's entire needs from a single 20-acre pit for the next 50 years, but the contractor divides his purchases between them on the basis of which is

closest to the particular job site. Even if the two competitors discontinued operations and the claimants gained the entire market, there is enough pumice on the two claims to supply that limited market for 250 years. The claimants are mining from a single pit on two 10-acre subdivisions of one claim. The remaining portions of the claim being operated and the additional claim not being operated are properly described as "nonmineral in character," despite the presence of great quantities of pumice on every portion of both claims. This is explained by the Ninth Circuit's decision in *McCall v. Andrus*, *supra*, where the Court took notice of the Department's finding that McCall had already been granted patents to public lands containing a reserve supply of mineral ample for 100 years; that he offered no evidence of a market for any more; that without an expanded market it was not economically feasible to produce material from the contested tracts; and that consequently the additional material was without value as mineral. The court then said:

This is a proper application of the test for determining whether land is mineral in character. The test is whether "the known conditions at the time of [the patent] proceedings were plainly such as to engender the belief that the land contained mineral deposits of such quality and in such quantity as would render their extraction profitable and justify expenditures to that end." *Diamond Coal and Coke Co. v. United States*, 233 U.S. 236, 239-40, 34 S. Ct. 507, 509, 58 L. Ed. 936 (1914) (concerning

whether land claimed as a homestead was mineral land not subject to homestead claims). See also, *United States v. Southern Pacific Co.*, 251 U.S. 1, 40 S. Ct. 47, 64 L. Ed. 97 (1919); *Standard Oil Co. of California v. United States*, 107 F.2d 402 (9th Cir.), *cert. denied*, 309 U.S. 654, 60 S. Ct. 469, 84 L. Ed. 1003 (1940); *United States v. Bunkowski*, *supra* at 55.¹⁵

Id. at 1188.

Seven days before the Ninth Circuit issued its decision in *United States v. Baker*, *supra*, this Board published its decision styled *United States v. Williamson*, 45 IBLA 264, 87 I.D. 34 (1980), in which we discussed the interrelationship of the terms "mineral in character" and "excess reserves," as follows:

[8] Mineral in character and excess reserves can be seen as differing facets of a single concept. Land is mineral in character when known conditions engender the belief that the land contains mineral of such quantity and quality as to render its extraction profitable and justify expenditures to that end. *United States v. Meyers*, 17 IBLA 313 (1974); *United States v. McCall*, 7 IBLA 21, 79 I.D. 457 (1972). The charge that the lands embraced by a mining claim are not mineral in character can raise two discrete issues. First, it can challenge the validity of the entire claim. As such, it is the normal adjunct to a charge of no discovery. Alternatively, it can be applied to placer claims which are supported by a discovery, with the effect that the claimant must show that each 10 acres of the claim are mineral in character. *Id.* Thus, to the extent that

¹⁵ It is perhaps noteworthy that the Board's decision in *United States v. Bunkowski*, *supra*, 79 I.D. 43 (1972), was criticized by the Ninth Circuit in its *Baker* opinion as it "shares the same faulty premise" as the Board's *Baker* decision. However, in the *McCall v. Andrus* decision issued 6 months later, the Ninth Circuit cites *Bunkowski* twice with approval.

August 27, 1981

a placer claim embraces 10-acre subdivisions which do not have the located mineral present, those portions which are nonmineral will be declared null and void.

[9] Questions relating to excess reserves, though they are interrelated to a determination of the mineral character of land, arise in a different context. The charge of invalidity due to the presence of excess reserves *admits* that the mineral, *qua* mineral, exists within additional claims, but raises the contention that because of the quantity of mineral in other claims owned by a mining claimant, the mineral in certain claims would have no market and thus is essentially valueless. [Italics in original.]

Id. at 293-94, 87 I.D. at 50.

Thus, because in the *McCall* case we were applying the "10-acre rule" to *portions* of claims which had been treated as valid otherwise, we regarded the *lands* containing the additional, unmarketable, valueless sand and gravel as "nonmineral in character," because the 10-acre rule provides for the elimination of aliquot 10-acre portion of *lands* which are "nonmineral in character" from otherwise valid placer claims. But in the *Baker* case we were eliminating two *entire claims* for the reason that the cinder *deposits* were unmarketable and valueless because the three other claims in that group contained more material than Baker's market could absorb over the next 200 years. Therefore, we characterized the *deposits* as "excess reserves." We might just as easily have said that the *lands* were "nonmineral in character."

Both terms relate to the absence

of a "valuable" deposit of mineral. In both *Baker* and *McCall* the claimants had applied for patents, and patents had been approved covering vast amounts of materials on some of the lands applied for. However, as declared in *Barton v. Morton*, 498 F.2d 288, 292 (9th Cir.), *cert. denied*, 419 U.S. 1021 (1974):

But there are other considerations. A patent passes ownership of public lands into private hands. So irrevocable a diminution of the public domain should be attended by substantial assurance that there will be a compensating public gain in the form of an increased supply of available mineral resources. The requirement that actual discovery of a valuable mineral deposit be demonstrated gives weight to this consideration.

In sum, the terms "mineral in character" and "nonmineral in character" refer to the *land* which is the subject of the claim, while the terms "excess reserves" and "reasonable reserves" refer, in certain circumstances, to the *deposit* of mineral which serves as the object of the claim. All of these expressions relate to whether or not there has been a qualifying discovery of a valuable deposit of mineral on that particular claim or portion thereof.

Instructions on Remand

Oneida Perlite Corp., which did not appeal the decision of the Administrative Law Judge, was requested to file a brief analyzing the effect of the decision of the Ninth Circuit in *Baker v. United States*, *supra*, on the instant appeal. It re-

sponded by asserting that the Administrative Law Judge committed reversible error in determining that the principal issue was "excess reserves" and in finding certain claims were invalid by reason of being located for "excess reserves." Oneida now contends that it is entitled to be issued a patent to the entire 1,960 acres, and requests "a rehearing by an Administrative Law Judge freed from the inhibiting shackles of excess reserves." Oneida says further:

It is also respectfully submitted that, because of the confusion of both fact and law out of which the decision to patent only 580 acres was concluded, this Board cannot render a decision without becoming a long distance trier of facts or substituting its collective guess for the apparent guess of the Administrative Law Judge. This case should consequently be remanded for a *de novo* hearing pursuant to the altered state of the law.

Counsel for the Forest Service, the appellant before this Board, argues that because Oneida filed no appeal from the decision of Judge Morehouse, that decision "became final as to any disallowances made by him, and properly so, based upon the state of the law as it then existed."

In other circumstances we would agree with appellant. However, in this instance we are disposed to remand for rehearing for two distinct reasons. First, some of the issues raised by appellant cannot be decided by this Board on the basis of the record before it, and more evidence must be adduced on these issues. Second, in light of the pro-

nouncements by the Court of Appeals for the Ninth Circuit in *Baker v. United States*, *supra*, and *McCall v. Andrus*, *supra*, this Department should strive to conform any final administrative determination to the prevailing law of that circuit. Accordingly, the case will be remanded for rehearing.

As we have heretofore explained at length, the term "excess reserves" is *not* a rule of law invented by the Department, nor does it represent a superimposition on existing law of some new test of the validity of a mining claim. It is merely a descriptive phrase used in certain circumstances to characterize *deposits* which are not "valuable" within the meaning of 30 U.S.C. § 22 (1976) because the claimant already possesses an ample supply of such mineral to satisfy his share of a limited market for years into the future, and the additional deposits so described are consequently of no economic value because they cannot be presently marketed at a profit. Thus, claims located for deposits of such economically worthless minerals are invalid because they are not supported by a "discovery" of a "valuable" deposit of mineral within the boundaries of *each* claim. Therefore, on rehearing charge b. of the contest complaint (referring to excessive reserves) will be dismissed because it is redundant of charge a. of the complaint (referring to the absence of discovery).

It being understood that the term "excess reserves" is merely a descriptive phrase, there is no need

August 27, 1981

that it be stricken from the lexicon of terms employed in the administration of the mining law, and references thereto shall not be deemed to have prejudicial effect.

Charge c. of the contest complaint (referring to the nonmineral character of the land), which was dismissed by Judge Morehouse, will be reinstated on rehearing in view of the holding in *McCall v. Andrus*, *supra*.

On remand evidence will be adduced and specific findings will be made by the Administrative Law Judge on the following issues:

1. The extent of the present market for perlite which can be satisfied by material from these claims, or any of them.

2. The extent to which deposits of perlite on these claims cannot presently be marketed at a profit, if any.

3. What types of perlite exist on these claims which at present can be marketed at a profit.

4. What types of perlite exist on these claims which cannot presently be marketed at a profit.

5. Whether each type of perlite presently marketable at a profit from these claims has value peculiar to that particular type, or whether some other type would be equally satisfactory to the purchaser. This inquiry focuses on whether it would be prudent to develop separately and produce from several deposits of distinctive types of perlite to meet a market demand which could not be satisfied from the production of other types.

6. Whether the pumicious perlite found on the Wright Creek No. 2 claim is a locatable mineral, or a common variety of pumice or pumicite which is not subject to appropriation under the mining laws pursuant to 30 U.S.C. § 611 (1976).

7. Whether the thick rhyolite cap which allegedly covers portions of the area claimed is analogous to the cemented caliche cap described in *McCall v. Andrus*, *supra* at 628 F.2d 1188, and has a similar effect on the costs or projected costs of extracting, removing, and marketing the mineral from those areas.

8. Whether the area of the Wright Creek No. 3 claim which embraces the improved spring and which was ordered to patent by Judge Morehouse is nonmineral in character as determined by each aliquot 10-acre subdivision concerned, bearing in mind that water is not a locatable mineral. *Andrus v. Charlestone Stone Products Co., Inc.*, *supra*.

9. Whether the land which is the situs of the mill can be patented as land which is mineral in character and embraced within the boundary of a valid mining claim, or whether it must be relocated as a millsite claim or claims with appropriate configuration pursuant to 30 U.S.C. § 42 (1976), understanding that millsites may be located only on nonmineral land. The object of this inquiry is not to deprive Oneida of the land on which its mill is situated, but to ensure that any grant contemplated is in conformity with applicable law, so that no further proceedings are necessitated.

10. Whether each claim individually is supported by a qualifying discovery of a valuable deposit of mineral, taking into account the limitations of the market, if any, and the other sources of supply available to that market, including, but not limited to, supplies available from the other claims in the same group. *Melluzzo v. Morton, supra*; *Clear Gravel Enterprises, Inc. v. Keil, supra*.

11. The extent to which specific 10-acre aliquot parts of subdivisions on each claim which is otherwise valid must be eliminated as nonmineral in character, if any.

Hypothetical, theoretical, and speculative opinion evidence of the sort rejected by the Court in *Osborne v. Hammitt, supra* at 985, will not be relied upon as the basis for a finding. *Cf. United States v. Gibbs*, 13 IBLA 382, 389-90 (1973). "Locations based on speculation that there may at some future date be a market for the discovered material cannot be sustained." *Barrows v. Hickel, supra* at 83.

Any stipulated agreement between the Forest Service and Oneida Perlite Corp. as to facts, issues, or disposition of lands involved will be submitted to the presiding Administrative Law Judge for approval upon his determination that it comports with the facts and law bearing on the matter which is the subject of the stipulated agreement.

Therefore, pursuant to the authority delegated to the Board of Land Appeals by the Secretary of

the Interior, 43 CFR 4.1, the decision appealed from is set aside and the case remanded for rehearing.

(A JOINT VENTURE)

August 27, 1981

APPEARANCES: Walter S. Rados, Santa Anna, California, and Marin A. Kordick, Irvine, California, for Appellant; William A. Perry, Department Counsel, Denver, Colorado, for the Government.

*OPINION BY
ADMINISTRATIVE
JUDGE DOANE*

*INTERIOR BOARD OF
CONTRACT APPEALS*

Background

The subject contract, dated Sept. 27, 1977, between Kordick and Son, Inc., and Steve P. Rados, a joint venture, hereinafter, "contractor" or "appellant," and the Bureau of Reclamation of the U.S. Department of the Interior, hereinafter, "Bureau" or "Government," required the furnishing and laying of 96- and 102-inch-diameter pipes and constructing structures for about 2.3 miles of pipeline to transport water for municipal and industrial use through the Main Aqueduct "B" Line. The work to be performed on this project was located about 6 miles north of Boulder City, Nevada, in Clark County, and was part of the Southern Nevada Water Project, Second Stage, encompassing Main Aqueduct "B" Line station 56 + 30.13 to station 186 + 52.82.

The estimated contract price was \$3,216,283. Appellant received its notice to proceed on Sept. 29, 1977. The time allowed for completion

was 400 calendar days from the date of receipt of such notice. The date for completion of all work under the contract was extended 23 calendar days to Nov. 26, 1978. On Nov. 27, 1978, the contract was considered to have been substantially completed.

By letters to the Bureau, dated Apr. 19 and June 6, 1979, appellant claimed additional compensation in the amount of \$16,033.50 for the cost of furnishing and installing four *insulating fittings* (couplings) at joints where line-pipe containing a steel cylinder are joined to steel pipe. By his findings of fact and decision of Jan. 22, 1979, the contracting officer (CO) denied the claim for reasons substantially as follows: (1) that the specifications of subparagraph 3.1.5b(4) clearly required either flexible or rigid insulating fittings to obtain electrical discontinuity at joints where line-pipe alternatives containing a steel cylinder are joined to steel pipe; (2) that insulating fittings are not shown on the drawings because of the pipe alternatives allowed by the specifications and, therefore, the contractor could have selected a type of pipe containing a steel cylinder which would not be joined to steel pipe thus eliminating the requirement for insulating fittings; (3) that no employee of the Bureau could be found, as contended by the contractor, who ever orally advised the contractor that insulating fittings would not be required; and (4) that in addition to the specifi-

cation cited above, the last paragraph of a letter to the contractor, dated Jan. 3, 1978, also indicated that insulated fittings would be required.

It is undisputed that the specifications allowed one of four options to the contractor with respect to the type of line-pipe which could be furnished for the project; that two of the alternatives contained steel cylinders and two did not; and that the type of pipe ultimately chosen by the contractor for the project was the prestressed embedded cylinder pipe which did contain a steel cylinder (Tr. 39-46). Neither is it disputed that the drawings did not show insulated fittings at the four locations where they were to be installed, but did show steel connections at those locations (Tr. 46), nor that the specification at paragraph 3.1.5b(4)(b) provides as follows: "(4) Electrical isolation in the form of either flexible or rigid insulating fittings as specified herein shall be provided as required to obtain electrical discontinuity at: * * * (b) Joints where line-pipe alternatives containing a steel cylinder are joined to steel pipe."

The contractor appealed to this Board from the CO's decision and alleged in its complaint the following:

1. Prior to the bid we were informed by the Bureau that insulated fittings were not required on the Project.

2. In November of 1977, Mr. George Metz'ler of the Conduit Fabricators Co., our sub-contractor for the Cathodic and Corrosion monitoring systems, was informed by your Mr. Veda that the in-

sulated fittings were not required. This confirmed our pre-bid information.

3. There is no indication that these fittings would be required on the original drawing. Also, the submittals from Conduit Fabricators did not include any insulation couplings and the submittals were approved as submitted.

The Government denied, by its answer, each of appellant's allegations. A 1-day hearing was held at Los Angeles, California, pursuant to the request of appellant. The Government filed a posthearing brief, but by letter, dated Feb. 15, 1980, appellant declined to do so, stating, "We will accept the Board's decision in regards to all relevant material as it stands in the record."

The principal question to be resolved by the Board is whether appellant sustained its burden of proof in establishing entitlement to the claimed extra costs for furnishing and installing the subject four insulating fittings.

Discussion

An examination of the record reveals that appellant's claims are not supported by any substantial evidence.

The first paragraph of appellant's complaint alleges that prior to the bid, appellant was informed by the Bureau that insulated fittings were not required on the Project. The second paragraph alleges a conversation in November 1977 to the effect that insulated fittings were not required. The only witness for appellant, Mr. Martin Kordick, testified that the prebid information resulted from a conversation be-

(A JOINT VENTURE)

August 27, 1981

tween a Mr. Don Eichner of appellant's staff and "somebody back in Denver" (Tr. 24 and 39). He did not identify the Government employee with whom Mr. Eichner was alleged to have conversed. The evidence relied upon for the second conversation stems from a letter, dated Jan. 30, 1978, from a Mr. George W. Menzler, corrosion specialist of Arizona Corrosion Control, Inc., a subcontractor, addressed to appellant (AF Exh. 3b), which stated in pertinent part:

Dear Ernie:

I visited the site where Aqueduct "B" is being installed and consulted with Marty Kordick then Bob Burneel and Bob Welsh from the Bureau of Reclamation, and then called Mr. Ueda [sic] at the Denver office and came up with the following requirements:

* * * * *

2. Due to the fact that all components that are being installed are concrete coated and lined, no insulation fittings will be necessary.

As pointed out in the Government's brief, it is significant that appellant failed to produce either Don Eichner or George Menzler as a witness. Thus, appellant's evidence adduced to prove the first two paragraphs of its complaint amounted to little more than conclusory hearsay, without reference whatever to the literal substance of either alleged conversation.

Mr. Harry K. Uyeda, a graduate civil engineer, has been employed by the Bureau since 1960 in the Material Science Section of the Applied Sciences Branch of the Divi-

sion of Research, and since 1971 has been specializing in corrosion control by cathodic protection (Tr. 55). He was the principal and only witness for the Government. His testimony included the following pertinent points: That direct current flow of direct current electricity causes corrosion of metals; that steel corrodes at the rate of about 22 pounds per ampere year, reducing it to iron rust; that such fact comes from the application of an electrochemical formula based on Ohms law with the weight loss determined by Faraday's Equivalent; that a simplified explanation of the theory of cathodic protection for the subject pipeline is that by requiring a means of interrupting the flow of electric current through the steel structure by use of insulated fittings made of a different metal, in this case, high silicon cast iron, the corrosion to the steel pipe is eliminated and the corrosion is transferred to the fittings which can be replaced without great cost over the life of the pipeline; that he was the author of the standards from which the cathodic protection and monitoring paragraphs of sec. 3.1.5 of the specifications were made (Tr. 64).

Mr. Uyeda further testified that he had no recollection of any telephone conversations with contractor personnel prior to the bid opening; that he did recall talking to George Menzler around November of 1977 and recalled essentially repeating the specification requirements for corrosion control; that he

did tell Mr. Menzler that he did not have to have insulated fittings if he chose certain options, but did have to have them if he chose certain other options; and that he did not outright tell him that there would be no insulated fittings required (Tr. 71). Later on in his testimony (Tr. 75-76) he opined that the whole problem surrounding the erroneous statement of paragraph 2 of the Jan. 30, 1978, letter resulted from miscommunication somewhere.

The third paragraph of appellant's complaint alleges that the submittals from Conduit Fabricators did not include any insulation couplings and the submittals were approved as submitted. The evidence totally refutes the accuracy of that allegation.

Appellant's exhibits A, B, C-1, and C-2 were drawings prepared by Arizona Corrosion Control, Inc., appellant's subcontractor, and were submitted by appellant to the Bureau in November 1977 and February 1978. By letter dated Jan. 3, 1978 (AF Exh. 4) the Bureau stated that appellant's exhibit A was not satisfactory and in the concluding paragraph stated: "Therefore, please submit plan drawings of the pipeline showing locations of test stations by type, insulating fittings by type, cathode connections, and metallic casings. Also provide details of the proposed test stations as well as the design for the impressed current cathodic protection system."

In a letter dated Mar. 27, 1978 (AF Exh. 5) the Bureau answered

the second submittal by the following language:

The submittal fails to conform to the specifications as follows:

1. The drawings fail to show the locations of insulating fittings required by subparagraph 3.1.5.b(4) (a) of the specifications, i.e., insulating fittings are required at joints where line pipe alternatives containing a steel cylinder are joined to steel pipe. Therefore, insulating fittings are required at stations 125+44.65, 150+32.20, 150+93.02, and 186+41.84 where the embedded cylinder prestressed concrete pipe joins to fabricated steel closure sections (steel pipe).

* * * * *

Please submit a revised design meeting these requirements. The type of insulating fittings proposed should be completely identified.

Finally, the transcript, at page 41, disclosed the following admission by Mr. Kordick after explaining that the final choice of the optional type of pipe was made because of the considerable savings that could be realized by appellant: "A. [answer] At this juncture in time, the [*sic*] gentlemen—I am going to tell you something. *We had forgotten about couplings.*" (Italics supplied).

This admission, that appellant had *forgotten* about the couplings (referring to insulating fittings) seems to us to absolve the Government from any liability for claimed extra costs, notwithstanding, and we so find, that appellant has failed to present any substantial evidence in support of any of the three allegations of its claim.

Based on the foregoing, we hold that appellant has failed to sustain

August 28, 1981

its burden of proof of entitlement to the claimed extra costs.

Decision

Wherefore, the claim of \$16,033.50, for costs allegedly incurred by appellant to furnish and install the subject four insulating fittings, is hereby denied.

APPEAL OF EVERGREEN HELICOPTERS, INC.

IBCA-1388-8-80

Decided August 28, 1981

Contract No. YA-554-CTO-118, Bureau of Land Management.

Sustained in part.

Contracts: Disputes and Remedies:
Damages: Generally—Contracts: Performance or Default: Breach

In a contract which provided for helicopter spraying of herbicide on grass after spring sprouting and the Government, after giving notice to proceed and granting permission to the contractor to mix the herbicide for the entire project, changed its mind about the readiness of the grass for spraying and imposed a noncontractual requirement that the grass be 4 inches high before spraying, the Board found that the Government breached its duty not to interfere with the contractor's performance and that

the contractor was entitled to damages in the form of standby costs for its helicopter and for the tank truck in which the herbicide was mixed.

APPEARANCES: J. Chris Edwardsen, General Counsel, Evergreen Helicopters, Inc., McMinnville, Oregon, for Appellant; Gerald D. O'Nan, Department Counsel, Denver, Colorado, for the Government.

OPINION BY ADMINISTRATIVE JUDGE PACKWOOD

INTERIOR BOARD OF CONTRACT APPEALS

The Bureau of Land Management (BLM) awarded Contract No. YA-554-CTO-118 to Evergreen Helicopters, Inc. (Evergreen), on Mar. 5, 1980. The contract called for herbicide spraying on 193 acres of forest land, 106 acres which the parties referred to as the north area and 87 acres at another location referred to as the south area. The contract provided that the starting date for spraying would be after spring sprouting of the target species of grass (Appeal File Exh. 15).

The Government gave the contractor notice to proceed on Mar. 10, 1980. On Mar. 19, 1980, the Government notified the contractor that spraying would begin on Mar. 25, 1980. The contractor requested and received permission from the Government to mix all of the herbicide for both areas at one time. Government personnel observed the mixing in a tank truck at Evergreen's head-

quarters in McMinnville, Oregon, on Mar. 25, 1980. The contractor's crew and the Government personnel then traveled from McMinnville to the north area but no spraying took place on March 25 because of bad weather (Appeal File Exh. 17; Tr. 81, 82).

The environmental coordinator, who was employed by the BLM but who had no responsibility for contract administration, inspected the north area on March 25 and decided that the grass was not ready to be sprayed. He inspected the area again on the morning of March 26 and became convinced that spraying the north area at that growth stage would not be effective. He expressed this view to the project inspector and his supervisor, who decided not to spray at that time (Tr. 83, 122-24).

No spraying was accomplished on March 26 because of bad weather. On March 27 the south area was sprayed. Before returning to the north area, the project inspector advised Evergreen's pilot that the north area would not be ready to spray for a week to a week and a half (Tr. 85). After Evergreen's crew and the Government personnel returned to the north area, both the Government project inspector and the environmental coordinator told Evergreen's pilot that the north area would not be sprayed for a week to a week and a half (Tr. 87) or for a week to 10 days (Tr. 122).

Evergreen's helicopter remained at the north area from March 27 to April 1, when a written stop work

order was received and Evergreen was able to retrieve its helicopter and use it for other work (Tr. 4, 46).

On April 10 the project inspector called Evergreen to advise that the north area would be ready to spray on April 11 (Appeal File Exh. 17). The written start work order was issued on April 11. Due to repairs on Evergreen's helicopter, it did not become available until late in the day on April 11, when no spraying could be accomplished because of bad weather. Spraying was begun and completed on the north area on Apr. 12, 1980 (Tr. 91, 92).

Evergreen claimed that it lost the use of its helicopter for 4 days from March 28 to April 1, when the stop work order was issued, and that it lost the use of the partially filled chemical truck for 15 days from March 28 to April 11 (Tr. 52-64).

Decision on Liability

Evergreen argues that the Government, by failing adequately to inspect the north area prior to issuing the notice to proceed, breached an implied obligation on the part of the Government to do nothing to prevent, interfere, or hinder Evergreen in its performance of the contract.

We do not agree that the Government failed to make an adequate inspection of the north area prior to issuing the notice to proceed. The project inspector personally inspected the south area and sent an employee of the BLM, whom he trusted, to inspect the north area.

The employee reported that the grass was green and it was ready to spray (Tr. 100). The difficulty arose when the environmental coordinator inspected the north area on March 25 and 26 and was "thoroughly convinced that the spray wouldn't be very effective if we did, indeed, spray at that growth stage" (Tr. 124). The view of the environmental coordinator was that the grass should be at least 4 inches tall before spraying would be effective (Appeal File Exh. 18). While this view may be a sound one, it is not in accord with this contract, which requires only that the spraying will take place after spring sprouting of the grass (Contract, Item 1, Special Instructions, Appeal File Exh. 15). It should not be necessary to observe that a considerable period of time can elapse after sprouting and before the growth reaches 4 inches.

By imposing a requirement that the grass be 4 inches tall, the Government departed from the terms of the contract and reached "the implied provision of every contract, whether it be one between individuals or between an individual and the Government, that neither party to the contract will do anything to prevent performance thereof by the other party or that will hinder or delay him in its performance." *Lewis-Nicholson, Inc. v. United States*, 213 Ct. Cl. 192, 204 (1977). Accordingly, the Board finds that Evergreen is entitled to damages flowing from the Government's breach of its obligation.

Decision on Damages

Evergreen claimed loss of use of its helicopter for 4 days from March 28 to April 1, when it received the written stop work order and was able to retrieve its helicopter and use it for other work.

The Government argues that the statements by the project inspector to Evergreen's pilot on March 27, to the effect that the north area would not be ready to spray for a week to a week and a half, constituted a stop work order. This argument ignores the fact that the contract required stop work orders to be in writing and the project inspector testified that he was not authorized to sign a stop work order (Tr. 106). A conversation between a company representative and the Government's project inspector, who has no authority to issue a stop work order, cannot be construed as a stop work order under any circumstances.

The Government's argument that Evergreen's appeal must be decided under the suspension of work clause does not address the nature of Evergreen's appeal. Evergreen did not submit a claim under the suspension of work clause but instead characterized its claim as arising from the Government's breach of its duty not to interfere with or delay Evergreen in the performance of the contract. In view of the Board's finding, above, that the Government did commit such breach, the Government's attempt to limit the relief available to that

provided in the suspension of work clause is without merit. The subsidiary arguments that Evergreen should not recover for Sundays or days of bad weather because this contract described such days as nonwork days are dependent upon the Government's erroneous assertion that Evergreen's claim must be considered under the suspension of work clause. Evergreen does not claim that it would have worked in bad weather or on Sundays under this contract but rather that it was prevented from using its equipment for other work where the provisions of this contract do not apply (Tr. 44).

Evergreen submitted a cost analysis for the daily cost of one of its helicopters based on the fleet average costs for the previous year divided by the 111 days which the average helicopter was able to work during the year. Evergreen's calculations yielded an average cost of \$1,517 for each revenue-producing day (Appellant's Exh. A). The contracts administrator for Evergreen testified that the figures presented in exhibit A "are representative of the amount that we hope to obtain when we bid the job" (Tr. 61).

The Government attempted to show that the cost of a standby helicopter should be considerably less than \$1,517 per day. The contracting officer's authorized representative testified that he had learned from a contracting officer in Boise, Idaho, that a helicopter similar to the one furnished by Evergreen could be obtained on a standby basis for \$400 per day (Tr. 141). The Government did not offer in evi-

dence any copies of contracts where such service was actually purchased. The record will not support a finding that the contracts for standby helicopters awarded in Boise, Idaho, are comparable to the instant contract.

Evergreen's cost calculations from which it derived a cost of \$1,517 per day for its helicopter leave much to be desired. The inclusion of unacceptable and unsubstantiated cost elements in the yearly total and the use of non-standard accounting practices make it difficult to determine the actual cost with any degree of mathematical certainty.

Evergreen included \$15,260 for interest in its yearly total. Its contracts administrator testified that the interest claimed represented the annual cost of the money tied up in the helicopter (Tr. 53).

In *Dravo Corp. v. United States*, 594 F.2d 842 (1979), the Court of Claims denied a claim for imputed interest for the use of equity capital, stating that unless the evidence shows that the Government's actions caused a clear necessity for borrowing, the evidence is insufficient to prove a claim for interest. In the present case, there is not even an allegation that the Government's actions caused Evergreen to borrow any money. The amount of the interest must be excluded from the calculation of cost.

Evergreen also included \$9,900 as the yearly cost of per diem at a rate of \$30 per man day. There is no evidence to show that any member of the crew was paid per diem during the period for which standby

costs are claimed. On the basis of failure of proof, per diem costs must be excluded from the cost calculation.

Another questionable item is the amount of \$9,000 for the yearly cost of a pickup truck. Evergreen's contracts administrator testified that the pickup truck used on this contract was not at the job site during the 4 days for which loss of use of the helicopter was claimed, but the pickup truck was probably at Evergreen's headquarters in McMinnville during that time (Tr. 73). There is no evidence that Evergreen was deprived of the use of the pickup truck during the 4 days in question and the costs of the pickup truck must therefore be excluded from the calculation.

Evergreen included \$8,500 for other costs, which included the cost of purchasing and maintaining a spray system for the helicopter and the cost of maintaining a trailer to transport the helicopter (Tr. 71, 72). The contracts administrator offered no breakdown as to the amount of these costs allocable to the spray system, which was used on this contract, and the amount allocable to the trailer, which was not (Tr. 72).

Overhead was included in Evergreen's cost calculations in the amount of \$25,500, a figure derived by taking 15 percent of the insured value of the helicopter. It was not explained why the helicopter was insured for \$170,000 when the fleet average cost of such aircraft was \$109,000. No explanation was offered for the unusual accounting

procedure of figuring indirect costs as a percentage of an arbitrary insurance value rather than as a percentage of direct costs. The prescribed method of treating indirect costs under the Federal Procurement Regulations is found in 41 CFR 1-15.203.

Actual costs incurred by a contractor are presumed to be reasonable. *Ocean Technology, Inc.*, ASBCA No. 21363 (Apr. 28, 1978), 78-1 BCA par. 13,204. In the present case, however, the foregoing deficiencies in Evergreen's evidence on costs have resulted in a record that will not support a finding as to the actual costs incurred by Evergreen for its helicopter. It is clear that the delay in performance, caused by the Government's unwarranted reversal of its opinion that north area was ready to spray, resulted in increased costs to Evergreen. Accordingly, the Board finds, in the nature of a jury verdict, that Evergreen is entitled to recover \$3,500 for the loss of use of its helicopter during the period from Mar. 28 to Apr. 1, 1980.

Evergreen's claim for loss of use of its tank truck was for the 15 days from Mar. 28 through Apr. 11, 1980. To establish the amount claimed, Evergreen's contracts administrator testified that someone higher up in the management had told him that it cost \$60,000 to operate the tank truck for a year. He used that figure and divided it by 111 days to arrive at a cost of \$541 per day, but was unable to offer any evidence in support of the \$60,000 figure for operating costs (Tr. 51-53, 67).

Such conclusory evidence, based

on hearsay and unsupported by any documentation, is entitled to little, if any, weight. We turn instead to the evidence furnished by the Government in its exhibit 28, which is a portion of an inter-agency agreement between the State of Oregon, and U.S. Forest Service, and the Bureau of Land Management, setting forth the rates these agencies will charge each other for the use of fire fighting equipment (Tr. 139). The exhibit lists standby rates for fire trucks which are similar to the tank truck used by Evergreen to mix the herbicide for spraying, except that the fire trucks lack the agitator used in Evergreen's truck to keep the chemical mixed (Tr. 139).

The contract required a tank truck with a minimum capacity of 1,000 gallons but no maximum capacity was specified (Contract at 34, Appeal File Exh. 15). The truck actually used by Evergreen had a capacity of between 4,000 and 5,000 gallons (Tr. 76). Government's exhibit 28 shows that the standby rate for a fire truck having a capacity of 4,000 to 4,999 gallons is \$16.90 per hour, or \$405.60 for a full 24-hour day.

Evergreen claimed compensation for loss of use of its tank truck from March 28 through April 11, a period of 15 days. For the period from March 28 to April 1, when Evergreen received the written suspension of work order, the Government argues that Evergreen should not recover because the weather would have prevented spraying on March 28, 29, and 31, and March 30 was a Sunday which was a nonworking

day under the contract. As in the helicopter claim, this argument misconstrues the nature of Evergreen's claim. If the Government had not interfered with Evergreen's performance of the contract on March 27, the spraying would have been completed on that date and Evergreen could have used its equipment for other work where the weather and Sunday provisions of this contract did not apply. The Board finds that Evergreen is entitled to recover for loss of use of its tank truck on March 28, 29, 30, and 31.

For the period from April 1 to April 11, the Government again argues that Evergreen should not recover the standby costs of the tank truck for April 6, a Sunday, and April 7, 8, and 9 when bad weather would have prevented spraying. The Government further argues that there should be no recovery for April 10 and 11 because Evergreen did not have a helicopter ready to spray and repairs to the one that was eventually used prevented spraying on those dates. In the alternative, the Government argues that Evergreen could have mitigated its damages by storing the chemical mixture in plastic containers or by dumping it after the Government project inspector advised on April 1 that the Government would probably pay for any additional herbicide if it had to be dumped (Tr. 88).

The Government's arguments with respect to mitigation of damages are flawed by the lack of evidence to show that the actions suggested by the Government would, in fact, have saved money. Para-

graph 11 of the Specifications requires the contractor to dispose of surplus herbicide and herbicide containers in a manner which completely safeguards the public welfare. In the absence of any evidence of record as to the cost of complying with this provision of the contract, the record will not support a finding that Evergreen could have mitigated its damages by following the Government's suggestions.

When the Government granted permission for Evergreen to mix the herbicide for both the north and south areas, it had determined that both areas were ready to spray. The reversal of the Government's position on the north area was not authorized by any provision of the contract and was the direct cause of immobilizing Evergreen's tank truck so that it could not be used for other work. The restrictions in this contract against spraying on Sunday or in bad weather do not provide a basis for denying recovery on those days for loss of use of the tank truck for other work. When Evergreen received the written order to resume work on April 11 it was unable to do so because of repairs to its helicopter. Evergreen cannot reasonably expect to recover standby costs for its truck on April 11 when the Government was no longer causing any delay and the repairs prevented performance.

Accordingly, the Board finds that Evergreen is entitled to recover standby costs for its tank truck for 10 days for the period April 1 through April 10. Together with the Board's finding, above,

that Evergreen was entitled to 4 days standby costs before issuance of the stop work order, the total period for recovery of standby costs for the tank truck is 14 days. At the rate of \$405.60 provided in the interagency agreement in Government's exhibit 28, the amount of the recovery is \$5,678.40 for loss of use of the tank truck.

Summary

By reason of the Government's interference with the performance of this contract, Evergreen is entitled to recover \$3,500 for loss of use of its helicopter and \$5,678.40 for loss of use of its tank truck, a total recovery of \$9,178.40.

G. HERBERT PACKWOOD

Administrative Judge

I CONCUR:

WILLIAM F. MCGRAW

Chief Administrative Judge

APPEAL OF DEAN PROSSER & CREW

IBCA-1471-6-81

Decided August 28, 1981

Contract No. (Not applicable), Bureau of Land Management.

Government Motion to Dismiss granted.

Contracts: Contract Disputes Act of 1978: Jurisdiction—Contracts: Formation and Validity: Implied and Constructive Contracts—Rules and Practice: Appeals: Dismissal—Rules of Practice: Appeals: Motions—Rules of Practice: Appeals: Standing to Appeal

A Government motion to dismiss an appeal is granted where no express contract between the parties exists, there is no evidence from which an implied in fact contract could be inferred, and the Board is without jurisdiction over contracts implied in law, assuming appellant is seeking such relief.

APPEARANCES: Dean Prosser, Gold Hill, Oregon, for Appellant; Arthur V. Biggs and Eugene A. Briggs, Department Counsel, Portland, Oregon, for the Government.

*OPINION BY CHIEF
ADMINISTRATIVE
JUDGE McGRAW*

*INTERIOR BOARD OF
CONTRACT APPEALS*

The Government has filed a motion to dismiss the instant appeal citing, *inter alia*, sec. 2(4) and 6(a) of the Contract Disputes Act of 1978 (41 U.S.C. §§ 601(4) and 605(a) (Supp. II 1978)). Not cited by the Government in its motion but considered by the Board in reaching its decision is sec. 8(d) of the Contract Disputes Act of 1978 (41 U.S.C. § 607(d) (Supp. II 1978)).¹

On June 4, 1981, the appellant filed an appeal with this Board from a decision by the Bureau of Land Management (hereafter BLM) on Mar. 16, 1981, to reject the original

bid of Mar. 5, 1981, of the Foothills Creek residents (sometimes referred to as the Crew) to hand clear and plant the 22-acre unit #553 on Foothills Creek. In the notice of appeal the appellant states: "[N]ow that we have satisfactorily completed a BLM project with 700 hours and our own resources, all for free, it seems timely to make this appeal again, and to the proper Board."

In support of the appeal the appellant alleges (i) that the policy of the Department of the Interior stresses the use of nonchemical methods of forest management wherever possible; (ii) that the bid the Foothills Creek residents submitted on Mar. 5, 1981, was for the hand clearing and planting of the 22-acre proposed spray site #553, as the residents felt they were all adversely affected (their homes and livelihoods) by chemical forest management; (iii) that the bid was for far less than the equivalent cost of herbicides; (iv) that the bid was rejected principally on the ground that BLM had not solicited bids for the work, although BLM has authority to negotiate contracts under \$10,000, as was the case here;² (v)

² The notice of appeal states that the appeal had been submitted to the IBLA (Interior Board of Land Appeals) on Mar. 17, 1981. Accompanying the notice of appeal was a letter dated Mar. 17, 1981, in which the appellant states:

"The citizens of Foothills Creek request that the BLM solicit competitive bids for the hand-clearing of the proposed spray site on Right Fork, Foothills Creek. In light of all the facts which have been brought to your attention (presence of endangered species, documented sensitive individual in the vicinity, our willingness to work immediately and for a price under the BLM's estimated herbicide costs), we believe that the BLM should follow the mandate of the Dept. of the Interior to use this environmentally feasible alternative of hand-clearing."

¹ The section of the Act cited reads as follows:

"(d) Each agency board shall have jurisdiction to decide any appeal from a decision of a contracting officer (1) relative to a contract made by its agency, and (2) relative to a contract made by any other agency when such agency or the Administrator has designated the agency board to decide the appeal. In exercising this jurisdiction, the agency board is authorized to grant any relief that would be available to a litigant asserting a contract claim in the Court of Claims."

August 28, 1981

that on Apr. 3, 1981, BLM agreed to let the Foots Creek residents do the project for free;³ (vi) that the crew had invested 700 hours of its time and considerable expense in gas and tools but in March it had presented a viable, inexpensive alternative to herbicide management with its bid which was rejected; and (vii) that the project has cost the crew money and time and that they are being penalized for BLM's mismanagement (failure to acknowledge pine tree damage).⁴

In an affidavit which accompanied the Government's motion to dismiss the appeal, Mr. Hugh Shera, Medford District Manager, Bureau of Land Management states:

4. The Bureau records disclose that at no time has the Bureau of Land Management awarded, entered into or made a contract with Dean Prosser with respect to the 22 acre tract of land identified as Unit #553.

³ In a letter to the Board under date of Aug. 10, 1981, the appellant states:

"1.) The BLM repeatedly refused to publicly solicit bids and to contract with us fairly in spite of our timely and extremely low bid (March 5). 2.) Our contract for a timely, efficient low-cost means of doing the project was rejected by BLM in favor of a less efficient and more costly means. A paid contract not made with us in March was the worst sort of breach of contract, because then in April, when the BLM discovered that our proposal was indeed the most efficient means after all, then we were told we could do the project for free. 3.) The breach of contract is this: we worked 700 hours on a free contract because the BLM chose to disregard our contract for paid work."

⁴ In a letter to Mr. and Mrs. Dean Prosser under date of June 12, 1981, Mr. Gerald Nilles, BLM Area Manager, states:

"9. The crew volunteered to do this work for nothing if the BLM would not use herbicides on this unit. We sprayed several other units in the Rogue Resource Area with the same atrazine and 24D mix scheduled for Foots Cr. and received virtually no damage at all to the pine trees in those units."

5. Since there has never been a contractual relationship between Dean Prosser and the Bureau of Land Management regarding Unit #553, Dean Prosser has never submitted any claim against the Government relating to a contract for a decision of a contracting officer.

6. The Bureau records show that Dean Prosser and other residents of the Foots Creek area volunteered to donate without charge and did so donate their labor and materials to hand clear and plant the 22 acres of land known as Unit #553 and that the Bureau accepted this donation of services and materials in accordance with Section 307 of the Federal Land Policy Management Act (43 U.S.C. § 1737 (c) (1976)). Dean Prosser and the other residents volunteered to do this work on a without charge basis to avoid the Bureau's use of herbicides to clear this unit.

(Affidavit dated July 20, 1981, at 1, 2).

The Government acknowledges that it did solicit bids for a contract involving the use of herbicides for the spraying of 22 acres of land in the Foots Creek area; that it received an unsolicited proposal from Dean Prosser and Crew dated Mar. 5, 1981; that it subsequently accepted the offer of Dean Prosser and other residents of the Foots Creek area to donate without charge their labor and materials to hand clear and plant the 22 acres of land known as Unit #553; that the Bureau accepted the offer of Dean Prosser & Crew in accordance with the provision of the Federal Land Policy and Management Act, *supra*, and that the work of clearing and planting the 22-acre tract of land was performed by the appellant.

The appellant does not deny that it offered to perform the work in

question for free but advances the thesis that it is entitled to be paid for such work because its unsolicited proposal for the same work had been improperly rejected (nn. 2, 3, and accompanying text). The appellant has cited no authority for its position, however, and we are aware of none.

Generally speaking, matters within the discretion of the contracting officer are not subject to review by this Board. This is true not only with respect to decisions made prior to the time of contracting,⁵ but even after the contract is awarded.⁶ In this case there was no express contract and the admissions made by the appellant preclude a finding as to the meeting of the minds of the parties⁷ from which a contract implied in fact can be inferred.⁸ While the appellant's po-

sition appears to be that as a matter of law⁹ it should be paid for the services rendered and materials furnished in the course of hand clearing and planting the 22-acre tract of land involved in this case, the Court of Claims does not have jurisdiction over contracts implied in law;¹⁰ nor do we.¹¹

Decision

On the basis of the authorities cited and for the reasons stated, the Government's motion to dismiss the appeal is granted.

WILLIAM F. MCGRAW
Chief Administrative Judge

I CONCUR:

G. HERBERT PACKWOOD
Administrative Judge

⁵ *Circleville Metal Works, Inc.*, ASBCA No. 13177 (June 4, 1969), 69-1 BCA par. 7,718 (Government's decision to readvertise the procurement involved a policy matter and as such was outside the authority of the Board to review).

⁶ *Pirate's Cove Marina*, IBCA-1018-2-74 (Feb. 25, 1975), 75-1 BCA 11,109 (construing a concessionaire contract under which the contracting officer was authorized to relieve the contractor of its obligations when he determined that such action was in the interests of the United States, the Board found that in the absence of a clear showing of flagrant abuse, it could not look behind the contracting officer's failure to exercise his discretion in favor of the appellant).

⁷ As stated in *Porter v. United States*, 204 Ct. Cl. 355, 365 (1974), "[t]he general rule in government contract law is that a contract implied in fact is one 'founded upon a meeting of minds, which, although not embodied in an express contract, is inferred, as a fact, from the conduct of the parties showing, in the light of the surrounding circumstances, their tacit understanding.' *Baltimore & Ohio R.R. v. United States*, 261 U.S. 592, 597 (1923); *Algonac Manufacturing Co. v. United States*, 192 Ct. Cl. 649, 673-74 * * *." (Footnote omitted.)

⁸ In *Porter v. United States*, n.7 *supra*, the Court of Claims found that an implied in fact

contract could not be inferred from the circumstances involved in that case.

⁹ In *Algonac Manufacturing Co. v. United States*, *supra* at 649, the Court of Claims had occasion to note the basic difference between a contract implied in fact and a contract implied in law. Respecting the latter term the Court of Claims quotes with approval from the decision in *Baltimore & Ohio R.R. v. United States*, *supra* at 592, 597 in which the Supreme Court had stated: "The 'implied agreement' * * * is not an agreement 'implied in law,' more aptly termed a constructive or quasi contract, where, by fiction of law, a promise is imputed to perform a legal duty, as to repay money obtained by fraud or duress * * *." (*Algonac Manufacturing Co. v. United States*, *supra* at 673).

¹⁰ The Court of Claims has no jurisdiction over contracts implied in law. *Merritt v. United States*, 267 U.S. 338, 341 (1925). ("The Tucker Act does not give a right of action against the United States in those cases where, if the transaction were between private parties, recovery could be had upon a contract implied in law * * *"); *Putnam Mills Corp. v. United States*, 202 Ct. Cl. 1, 8 n.3 (1973).

¹¹ Under the Contract Disputes Act of 1978, the jurisdiction of the various boards with respect to the claims brought before them is the same as that of the Court of Claims (n.1, *supra*).

GEOTHERMAL LEASING IN DESIGNATED WILDERNESS AREAS*

M-36937

June 11, 1981

Act of December 24, 1970—Geothermal Resources—Words and Phrases

"*Mineral*." Geothermal steam, as defined in sec. 2(c) of the Geothermal Steam Act of 1970, 30 U.S.C. § 1001(c), is not a "mineral" as the term is used in the mineral leasing laws. Congress generally did not intend the Steam Act to be treated as a "mineral leasing law."

Act of September 3, 1964—Geothermal Leases: Lands Subject to

Congress, with the passage of the Geothermal Steam Act, 30 U.S.C. § 1001 *et seq.*, intended that geothermal leases be deemed as within the mineral leasing exception of sec. 4(d)(3) of the Wilderness Act of 1964, 16 U.S.C. § 1133(d)(3). Designated wilderness are open to geothermal leasing to the same extent they would have been at the date of their creation. Such leases are subject to the provisions of sec. 4(d)(3) of the Wilderness Act.

OPINION BY OFFICE OF THE SOLICITOR

TO: DIRECTOR, BUREAU OF LAND
MANAGEMENT

THROUGH: ASSISTANT SECRETARY—
LAND AND WATER RESOURCES
FROM: SOLICITOR

SUBJECT: GEOTHERMAL LEASING IN
DESIGNATED WILDERNESS AREAS

By memorandum of Nov. 3, 1980,
you requested this office to comment

*Not in chronological order.

on an opinion prepared by the Office of General Counsel, Department of Agriculture, on the captioned subject and to respond to certain questions on how BLM and Forest Service would correlate geothermal leasing on Forest Service lands in the event that we concur in the General Counsel's opinion. That opinion concluded that since geothermal resources were not minerals, they were not subject to the mineral leasing laws exception found in sec. 4(d)(3) of the Wilderness Act of 1964, 16 U.S.C. § 1133(d)(3), and therefore not available for leasing. In our letter to the General Counsel of Jan. 9, 1981, we suggested how BLM and Forest Service might handle applications for geothermal leases in designated wilderness areas administered by Forest Service if geothermal leasing in those areas were held not permissible under present law. This memorandum presents our opinion as to whether geothermal leasing is in fact permissible.

ISSUE

May the Secretary of the Interior issue geothermal leases for lands that are within the boundaries of designated wilderness areas?

SUMMARY

Based on an examination of the Geothermal Steam Act, the Wilderness Act of 1964, their respective legislative histories and pertinent case law, we conclude that geothermal steam (as defined in sec. 2(c) of the Geothermal Steam Act

(Steam Act), 30 U.S.C. § 1001(c)) is not a "mineral" as that phrase is used in the mineral leasing laws and that Congress generally did not intend the Steam Act to be treated as a mineral leasing law, but that wilderness areas designated subsequent to Dec. 24, 1970, are open to leasing under the Steam Act.

I. Geothermal Resources Are Not "Minerals" Within the Meaning of the Mineral Leasing Laws.

A. Legislative History

One of the early issues faced by Congress in considering legislation for geothermal resource disposal was the nature of that resource. One of the first bills introduced in 1962, H.R. 9515, 87th Cong., 2d Sess., would have amended 43 U.S.C. § 971 (providing for permits to build bathhouses next to mineral and medicinal springs) to provide for permitting of lands for geothermal development. A second legislative proposal, H.R. 11084, 87th Cong., 2d Sess., would have inserted the words "or geothermal steam" immediately following the word "gas" wherever that word appears in the Mineral Leasing Act of 1920.

At this same time, and for a few years previous, individuals had attempted appropriation of geothermal resources through the existing mineral and water disposal laws. Geothermal developers utilized among other tools placer mining claims, oil and gas leases, and state water appropriation permits in attempts to acquire rights to geother-

mal resources which would allow them to begin development. Needless to say, the system adopted by the individual developer influenced his perception of the nature of the thing being developed.¹

The Department responded by examining each of the federal mineral and water disposal laws in turn to determine if geothermal resources were susceptible to acquisi-

¹ One commenter made the following observation:

"The legal draftsman is met at the outset with a question: 'What are we looking for * * * leasing * * * purchasing * * * going to develop?' And many answers come back.

"The subject at hand involves a resource which is, basically, a gas. Or a liquid. Or a solid. In any case it either is or is not a 'mineral.'"

"We deal, from an examination of the nomenclature used in technical papers, in contracts for private geothermal resource development, records and reports of the Department of the Interior, variously with: geothermal water, geothermal steam, geothermal minerals, hot spring water and heat, earth thermal resources, earth heat, natural steam, geothermal products, earth-heatpower, geothermal steam and associated resources, geothermal water and associated resources, or "all fluid products of geothermal action * * * and any mineral or other product derived therefrom."

"As will become evident, the definition chosen very directly affects property and contractual rights. So too, may determination in any given instance that the product extracted from the earth is derived from meteoric water rather than magmatic water. And in turn, those seeking to acquire rights under present Federal law must early determine whether: to locate a mining claim under the General Mining Law of 1872; to file a lease offer under the Mineral Leasing Act of 1920; to file a prospecting permit application under the Mineral Leasing Act of 1920; to seek to obtain rights under the Mineral and Medicinal Springs Act of 1925; to file under the Materials Act of 1947; to obtain a water well drilling permit under applicable law of the state in which it is proposed to explore for geothermal resources—or to do all, or more than one, of these things simultaneously."

Geothermal Steam Leasing: Hearings on S. 883 before the Senate Subcommittee on Minerals, Materials and Fuels, Part I, 88th Cong., 1st Sess. at 78-79 (1963). (Footnotes omitted.)

June 11, 1981

tion. In an opinion dated Aug. 28, 1961, the Solicitor held that geothermal steam contained in public lands was not subject to sale as a mineral material under the Materials Act of 1947, *as amended*, 30 U.S.C. § 601 *et seq.* Solicitor's Opinion M-36625, "Authority of the Department of the Interior to dispose of geothermal steam contained in the public lands" (Aug. 28, 1961), reprinted in *Geothermal Steam Leasing: Hearings on S. 883* before the Senate Subcomm. on Minerals, Materials and Fuels, Part I, 88th Cong., 1st Sess. at 70-71 (1963). That opinion also held that hot springs which would be susceptible to beneficial development for geothermal use had been withdrawn from state water law appropriation by Executive Order No. 5389 of July 7, 1930.

Likewise, while seeking geothermal resource leasing legislation the Department consistently took the position that no conversion rights (*i.e.*, rights to trade or exchange existing mining claims or mineral leases for geothermal leases) be accorded to holders of either unpatented mining claims or mineral leases since neither the General Mining Law nor the Mineral Leasing Act of 1920 authorized the acquisition of geothermal development rights. *See e.g.*, Hearings on S. 883, Part II, *supra* at 107; S. Rep. No. 1508, 88th Cong., 2d Sess. 9-10 (1964); H.R. Rep. No. 2140, 89th Cong., 2d Sess. 26 (1966); *Disposition of Geothermal Steam: Hearings on H.R. 7334, H.R. 10204,*

S. 1674 before the House Subcomm. on Mines and Mining 33, 35 (1966); H.R. Rep. No. 91-1544, 91st Cong., 2d Sess. 6-7, 10 (1970). Indeed, the issue of conversion rights was one of the principal reasons for President Johnson's veto of S. 1674, *See* H.R. Doc. 47, 90th Cong., 1st Sess. 7-8 (1967); H.R. Rep. No. 91-1544, *supra* at 6.

This debate over conversion rights highlighted the question of the nature of the resource. Both Congress and the Executive Branch were well aware that geothermal resources were not "mineral" within the meaning of the mineral leasing laws. H.R. Rep. No. 2140, *supra* at 7 (S. 1674 not an "extension of the mineral laws"); *Id.* at 8 (geothermal leasing bill allowing for development of otherwise locatable mineral by-products not to be construed as precedent for general leasing system for locatable minerals); Hearings on H.R. 7334, *supra* at 33-34 (geothermal steam "is not a mineral under the public land laws"); S. Rep. No. 1508, *supra* at 10 (mineral deposits contrasted with "another resource," *i.e.*, geothermal). In addition, both Congress and the Executive Branch were well aware that existing statutes did not authorize the disposition of geothermal steam from the public lands.² *See, e.g.*, H.R.

² While both the Department and the Congress agreed that the mineral laws did not cover geothermal resources, they disagreed as to what preference, if any, should be granted to those who had attempted appropriation of geothermal resources under the mining and mineral leasing laws. Congress prevailed in allowing the preference. *See* 30 U.S.C. § 1003.

Rep. No. 91-1544, *supra*, at 5; S. Rep. No. 1508, *supra* at 1-2.

B. Case law

There are three cases helpful in addressing the question whether the Geothermal Steam Act is a law pertaining to mineral leasing.

The first case is *United States v. Union Oil Co. of California*, 549 F.2d 1271 (9th Cir.), *cert. denied sub nom. Ottoboni v. United States*, 434 U.S. 930 (1977), *rehearing denied*, 435 U.S. 911 (1978). The case was brought by the Attorney General pursuant to the direction in sec. 21(b) of the Steam Act, 30 U.S.C. § 1020(b), that an action be brought to obtain an authoritative judicial determination whether the mineral reservation in lands where the surface estate had been patented included geothermal resources.³ The *Union Oil* case involved lands patented under the Stock-Raising Homestead Act of 1916, 43 U.S.C. § 291 *et seq.*

After stating that "no one contends that water cannot be classified as a mineral" in the broadest sense of the word, *Union Oil*, *supra* at 1273 n. 5, the court turned to an examination of Congress' intent in enacting the Stock-Raising Homestead Act and its mineral reservation provision, 43 U.S.C. § 299. A review of the legislative history persuaded the court that Congress meant to create a surface estate sufficient for stock raising or forage

farming and a subsurface estate to be retained in government control for separate disposition. *E.g.*, *id.* at 1276, 1276 n.11, 1277, 1279. The Ninth Circuit concluded:

the mineral reservation is to be read broadly in light of the agricultural purpose of the grant itself, and in light of Congress's equally clear purpose to retain subsurface resources, particularly sources of energy, for separate disposition and development in the public interest. Geothermal resources contribute nothing to the capacity of the surface estate to sustain livestock. They are depletable subsurface reservoirs of energy, *akin* to deposits of coal and oil, which it was the particular objective of the reservation clause to retain in public ownership. *The purposes of the [Stock-Raising Homestead] Act will be served by including geothermal resources in the statute's reservation of "all the coal and other minerals."* Since the words employed are broad enough to encompass this result, the Act should be so interpreted.

Id. at 1279. (Italics added.)

The court at various points in the discussion tends toward classifying geothermal resources as a mineral. It never does so, however, since the question of the scope of the reservation is resolved by the legislative intent behind the Stock-Raising Homestead Act, to sever reserved subsurface resources from the conveyed agricultural estate. *Id.* at 1280 n. 19.

The Ninth Circuit did hold water to be a valuable mineral deposit for the purposes of the general mining laws. *Charlestone Stone Products Co., Inc. v. Andrus*, 553 F. 2d 1209 (9th Cir. 1977). On a writ of certiorari, the Supreme Court reversed

³ Sec. 21(b) was added by the House Committee on Interior and Insular Affairs to S. 368 in 1970, because of the conflicting views on the issue which had been presented to the Committee. H.R. Rep. No. 91-1544, *supra* at 8.

June 11, 1981

in *Andrus v. Charlestone Stone Products Co., Inc.*, 436 U.S. 604 (1978). The Supreme Court rejected the Ninth Circuit's line of reasoning that since water was a mineral, in the broadest sense of the word, it was therefore subject to the mining laws. *Id.* at 610-611. Instead, the court looked to the purpose and meaning of the general mining laws, and their history and implementation, in concluding that water was not within the scope of those laws.⁴ While not dispositive on the question of geothermal resources, the fact that the court held water not subject to location under the mining law while denying a petition for rehearing on its original denial of a writ of certiorari in the *Ottoboni* case supports the distinction that the latter case turned upon the nature and purpose of the statutory reservation rather than the nature of the resource involved.⁵

⁴In this respect, the court's conclusion is the same as the Department's position in the often-cited Weinberg letters of Dec. 16, 1965, that water is not a mineral in the public land laws. Letters to Mr. Walter P. Capaccioli and Mrs. H. S. Gilmore, of Dec. 16, 1965, from Deputy Solicitor Edward Weinberg, reprinted in H.R. Rep. No. 91-1544, *supra* at 15-18. Mr. Weinberg went on to reason that geothermal steam was therefore not reserved to the United States under such acts as the Stock-Raising Homestead Act. As discussed previously, the Ninth Circuit arrived at the contrary conclusion based not on the nature of the resource but rather on the intent of the reservation.

⁵Petitioners in *Ottoboni* sought rehearing of the denial of certiorari after the Supreme Court had granted certiorari in *Charlestone Stone Products*. They expressly argued that the government was trying to have both sides of the argument, i.e., water a mineral under the Stock-Raising Homestead Act but not a mineral under the general mineral laws. See Petitioner's Brief for Rehearing at 4, 6, *Ottoboni v. United States*, *supra*. While no implication as to the merits of the case is

The only other case is *Reich v. Commissioner of Internal Revenue*, 52 T.C. 700 (1969), *aff'd*, 454 F.2d 1157 (9th Cir. 1972), where geothermal steam was found to be included within the word "gas" for the purpose of depletion allowances under 26 U.S.C. § 613(b).⁶ The tax court had held that: (1) steam, not heat, was the commercial product of the wells, since it was the steam's pressure that drove turbines; (2) steam was a gas within the meaning of secs. 613(a) and (b) (1) by ordinary commercial usage and technical definition; (3) steam was an "exhaustable resource"; and (4) there was nothing to show that Congress did not consider steam in enacting sec. 613(a) and (b). Given the finding that steam is an exhaustible natural resource, it is not surprising that the court looked for some place in 26 U.S.C. § 613(b) to pigeon hole geothermal steam.⁷ Again, as in *Union Oil*, the court's conclusion is

ordinarily to be drawn from the denial of certiorari, *United States v. Kras*, 409 U.S. 434 (1973), the Supreme Court had the argument of inconsistency before it and in our view confirmed the construction expressed herein by its action in *Charlestone Stone Products*. As pointed out above, when the holding of the Ninth Circuit's decision in *Union Oil* is compared with the holdings in the Supreme Court's decision in *Charlestone Stone Products*, the alleged inconsistency is resolved. See Government's Brief in Opposition to Petition for Rehearing at 3-8, *Ottoboni v. United States*, *supra*.

⁶Congress in the Energy Tax Act of 1978, P.L. 95-618, 92 Stat. 3174, specifically provided depletion allowance rates for geothermal resources and further provided that geothermal resources would not be treated as gas.

⁷Sec. 613(b) provided, in 1969, for varying percentage rates of depletion allowances depending on the mineral involved. A review of that section indicates that "gas" was probably the most logical place to put "steam."

not that geothermal resources are minerals for the purposes of the mineral leasing laws but rather that it was a "gas" for the purposes of the tax law.⁸

The most that can be said is that the Ninth Circuit in attempting to fit a "recent" resource into existing statutory and case law has often resorted to the analogy of leasable minerals. Neither the Ninth Circuit nor any other court has held, however, that geothermal resources are minerals for the purposes of the mineral leasing laws.

C. Effect of Section 26.

Sec. 26 of the Steam Act, which amends sec. 11 of the Multiple Mineral Development Act of 1954, 30 U.S.C. § 530, to include geothermal leasing in its provisions was suggested as an amendment to H.R. 2370 by the Department in 1970. Its purpose was described as amending the Multiple Mineral Development Act of 1954 (30 U.S.C. § 521 *et seq.*) "to make the Geothermal Steam Act a 'mineral leasing law' and to make geothermal resources a 'Leasing Act mineral' *within the meaning of the 1954 Act.*" H.R. Rep. 91-1544, *supra* at 14. (Italics added.)

As the quoted language makes clear and other provisions of the Steam Act suggest, however, this provision was only for the purpose of allowing and reconciling multiple development of locatable minerals and leasable geothermal resources on the same lands. In in-

cluding this provision the Department wisely forestalled the problems which had existed prior to the 1954 Act arising from different mineral lessees or applicants under the 1920 Leasing Act and mining claimants seeking various minerals on the same lands. See *Roos v. Altman*, 54 I.D. 47 (1932); *Sullivan v. Tendolle*, 48 L.D. 337 (1921).

The provisions of sec. 3 of the Steam Act suggest that sec. 26 is limited to questions of multiple "mineral" development. Sec. 3 authorizes the Secretary to issue leases on lands administered by him, including withdrawn lands. We have previously advised you informally that lands "withdrawn" from "mineral leasing" are available for geothermal leasing without modification of existing public land orders. In part, this is because sec. 3 makes withdrawn lands available for leasing, but it is also in part because geothermal leasing is not included within the meaning of the phrase "mineral leasing" in the standard public land order foreclosing mineral leasing.

D. Conclusion

We are of the opinion, therefore, that geothermal resources are not "mineral" as that word is generally understood in the mineral leasing laws. Further, geothermal leasing generally is not included in the phrase "mineral leasing laws" unless Congress has indicated an intent so to include it for specific purposes.

II. Wilderness Areas Designated Subsequent To The Geothermal

⁸ Cf. *United States v. Shurbert*, 347 F.2d 103 (5th Cir. 1965), holding "mined" ground water an exhaustible resource subject to a depletion allowance.

June 11, 1981

Steam Act Are Subject To Geothermal Leasing.

Sec. 4(d)(3) of the Wilderness Act provides that, until midnight Dec. 31, 1983, "the United States mining laws and all laws pertaining to mineral leasing shall, to the same extent as applicable prior to Sept. 3, 1964, extend to those national forest lands designated * * * as 'wilderness areas.'" 16 U.S.C. § 1133 (d)(3) (1976). The question posed is whether Congress, with the passage of the Geothermal Steam Act, intended to include geothermal leasing in the mineral leasing exception of sec. 4(d)(3). We are persuaded that it did.

A. Legislative History

As concluded in Part I of this memorandum, geothermal leasing is generally not included in the phrase "mineral leasing laws" unless Congress has indicated an intent to so include it for a specific purpose. With respect to wilderness areas, such an intent is found in the legislative history of the Steam Act itself.

During hearings on H.R. 7334, H.R. 10204 and S. 1674 held in 1966, Committee Chairman Aspinall explored the scope of exclusions of lands from leasing under what is now sec. 15 of the Steam Act with Assistant Secretary of the Interior Anderson. Since that discussion and the Department's response is pivotal to the present issue, we present it in full.

Mr. ASPINALL. * * * You suggested that you did not want any development in na-

tional park areas and one or two other areas. Do you want any development in wilderness areas or primitive areas?

These are policy questions. This is the reason we have the Secretary here.

Mr. ANDERSON. Sir, as far as involvement in the wilderness area and in the primitive areas and other areas are concerned, what we are primarily interested in here is to protect the major purpose for which these areas are set forth, just like the national parks. Now, we have provided here that we may lease, may provide for leasing on the wildlife areas. The wilderness areas are in a different category, and I am not sure, Mr. Chairman, where they would fall.

Mr. ASPINALL. I think perhaps the Department had better answer that question, too. So unless there is an objection the answer will be received and placed in the record at this place. We have been through all this, Mr. Secretary.

Hearings on H.R. 7334, H.R. 10204, S. 1674, *supra* at 48. The Department responded by letter of July 13, 1966, to Congressman Aspinall stating:

Under S. 1674, geothermal leasing is not prohibited in wilderness and primitive areas.

Section 4(d)(3) of the Wilderness Act of September 3, 1964 (78 Stat. 894), continues mineral leasing laws in effect within the National Forest Wilderness until midnight December 31, 1983, subject to regulation by the Secretary of Agriculture and to protective reasonable stipulations that he may impose. After that date mineral leasing is prohibited.

If S. 1674 is enacted in its present form, we would apply to geothermal leasing the same policy that applies to mineral leasing. We would have no objection, however, to writing that policy into the bill.

Under the provisions of section 3(b) and (c) of the Wilderness Act, primitive areas in the national forests, and road-

less areas meeting size standards in the National Park System and National Wildlife Refuge System, and all roadless islands in the National Wildlife Refuge System, are currently undergoing review on the basis of which recommendations will be submitted by the President to the Congress with respect to whether each area or island is suitable or not suitable for preservation as wilderness. Whether the mineral leasing laws should continue to apply is one of the questions involved in the review. Similarly, whether geothermal leasing should be completely precluded in such areas or islands, or whether it should remain as a matter for administrative discretion, will be considered. Such questions are amenable to legislative resolution as the review reports are received and considered by the Congress.

Id. at 49.

The Department's testimony and comments in the July 13, 1966, letter are not entirely logical. They imply that the reason geothermal leasing would be allowed is because it falls within the "mineral leasing" language of sec. 4(d)(3) of the Wilderness Act. That is inconsistent with Anderson's own testimony as to the "mineral" character of geothermal resources. Hearings on H.R. 7334, *supra* at 33-34. Further, those comments imply that geothermal leasing would apply to existing, designated wilderness. That implication, in turn, ignores the language in 4(d)(3) that such leasing be allowed "to the same extent" as occurring at the time of designation, even though there was no geothermal leasing authority then in existence. (*See* discussion *infra*.) Despite the fact that there existed some confusion in the logic of the

underpinnings of the Department's comments and testimony, it is clear that the Department intended that geothermal leasing would be allowable in wilderness areas consistent with the Wilderness Act. Congress' agreement with this result is evidenced, in part, by sec. 15 of the Steam Act.

Sec. 15(c) contains the list of lands which are excluded from leasing. They include lands administered under the National Parks Act of 1916, national recreation areas, wildlife refuges, ranges and management areas, lands acquired or reserved for protection of endangered species and Indian trust or restricted lands. Congress chose not to include wilderness areas in this statutory list of excluded lands. In light of the fact that the Department told the Congress how it intended to administer the Steam Act in wilderness areas, the absence of wilderness from sec. 15 corroborates Congressional agreement.⁹

This conclusion that Congress intended geothermal leasing to take place in designated wilderness does not automatically open all areas of the Wilderness Preservation System to leasing. As previously noted, the language of sec. 4(d)(3) of the

⁹ Congress was well aware of the scope of the exclusions in the Steam Act inasmuch as the provision dealing with wildlife refuges, game ranges and management areas was added and deleted in several bills over the course of congressional deliberation. *See, e.g.*, S. 883 [Committee Print] of Oct. 1, 1963; Hearings on S. 883, *supra* at 91-105, 107; S. Rep. No. 1508, *supra* at 7, 8, 12; sec. 4 of S. 883 of the House (as referred to Committee on Aug. 31, 1964); S. Rep. No. 683, 89th Cong., 1st Sess. at 3 (1965); H.R. Rep. No. 2140, *supra* at 4; 9; S. Rep. No. 91-1544, *supra* at 5.

June 11, 1981

Wilderness Act provides for leasing "to the same extent as applicable prior to Sept. 3, 1964." We believe that the operative date for fixing the nature and scope of the applicable "mineral" leasing laws and mining laws (including geothermal resource leasing) is the date on which the area is designated as wilderness.¹⁰ This is consistent with the Wilderness Act itself, which applies the mineral leasing laws as they existed prior to the date of its passage to the wilderness areas it designated. It is also consistent with Congressional statements in later wilderness bills indicating that for purposes of administration of the areas under sec. 4(d)(3) any reference to the effective date of the Wilderness Act should be deemed to be a reference to the effective date of the bill. *E.g.*, Rattlesnake National Recreation Area and Wilderness Act of 1980, P.L. 96-476, 94 Stat. 2271, § 2(b).

For those areas designated as wilderness by the Wilderness Act prior to Dec. 24, 1970, geothermal leasing would not be allowed since there was no "same extent" with regard to the geothermal leasing as of the dates of designation of those wilderness areas. For wilderness areas designated since 1964, as previously stated, we are of the opinion that the "same extent" language fixes the leasing system as of the

date of designation and not the date of passage of the Wilderness Act. Thus, lands designated as wilderness subsequent to the passage of the Steam Act would be available for leasing under that Act to the "same extent" they were prior to designation. However, lands designated prior to the passage of the Steam Act would not be available for leasing.

III. Conclusions

We are of the opinion that geothermal resources are not "mineral" as that term is used in the mining and mineral leasing laws. Further, Congress generally has not included geothermal leasing when it uses phrases such as "mineral leasing laws." However, in certain instances, Congress has deemed geothermal leasing to fall within the phrase "mineral leasing." Such inclusion is to be shown by clear legislative intent.

We are further persuaded that Congress did intend geothermal leasing to be within the scope of the phrase "laws pertaining to mineral leasing" in sec. 4(d)(3) of the Wilderness Act, and that designated wilderness areas remain available for geothermal leasing to the "same extent" they were at time of designation. This means that only lands in wilderness areas designated subsequent to the passage of the Steam Act in 1970 would be available for geothermal leasing.

WILLIAM H. COLDIRON

Solicitor

¹⁰ It follows from the conclusions of this memorandum that the other provisions of sec. 4(d)(3) of the Wilderness Act apply in like manner to geothermal leasing as they do to the mineral leasing and mining laws.

UNITED STATES

9 IBIA 70

Decided September 9, 1981

Decision on petition for reconsideration in Alaska Native Disenrollment contest following decision ordering appellants disenrolled from the roll of beneficiaries of the Alaska Native Claims Settlement Act, 43 U.S.C. §§ 1601-1628 (1976 and Supp. I 1977).

Reconsideration denied.

**1. Indian Tribes: Alaskan Groups—
Alaska Native Claims Settlement Act:
Disenrollment: Metlakatla Natives—
Administrative Authority: Estoppel**

Exclusion of appellant members of the Metlakatla Community from benefits under provisions of the Alaska Native Claims Settlement Act held not to be precluded by a contrary result reached in a prior Administrative Law Judge's decision in a similar case. The determination by the agency factfinder in the separate but similar situation is not binding upon the Board of Indian Appeals, which renders final decision for the Department in disenrollment appeals referred on appeal to the Board.

APPEARANCES: Barbara J. Blasco, Esq., and Stephen R. West, Esq., for appellants Corinne Mae Howell, Gary Arnold Howell, Richard Dewayne Howell, and Darcy Lynn Howell; Bruce Schultheis, Esq., Anchorage Solicitor's Office, for appellee.

**OPINION BY
ADMINISTRATIVE
JUDGE ARNESS**

**INTERIOR BOARD OF
INDIAN AFFAIRS**

On June 29, 1981, appellants requested the Board to reconsider its June 11, 1981, decision holding that they should be disenrolled as beneficiaries under the Alaska Native Claims Settlement Act (ANCSA), 43 U.S.C. §§ 1601-1628 (1976 and Supp. I 1977). (9 IBIA 3, 88 I.D. 575 (1981)). Appellants argue that the doctrines of res judicata, stare decisis, and collateral estoppel prevent the Board from reaching a decision contrary to that reached in *United States v. Anderson*, Docket No. AL 77-57D, decided Nov. 30, 1977. That case allowed disenrollment contestees who had one-fourth or more Native ancestry other than Tsimshian to be enrolled under ANCSA whether or not they were also enrolled in the Metlakatla Community on Apr. 1, 1970.¹ This argument must be rejected for several reasons.

[1] First, *Anderson* was decided by an Administrative Law Judge of the Office of Hearings and Appeals. It was not appealed as permitted by 43 CFR 4.1010. The Secretary's final review authority over disenrollment contests is vested in the Interior Board of Indian Appeals, sitting as an Ad Hoc Appeals Board, not in Departmental Administrative Law Judges. 43 CFR 4.1(b)(6) and 4.1010. Therefore,

¹ The Apr. 1, 1970, date is made determinative by 25 CFR 43h.11.

September 9, 1981

whatever *res judicata*, *stare decisis*, or collateral estoppel arguments may be raised against the Department by the contestees in *Anderson*, those arguments cannot be used to bind the Secretary to an interpretation of law which the Board has determined to be incorrect.²

Second, even if the decision in *Anderson* were held to be prior precedent of equal dignity with a Board ruling, the Board would not be precluded from correcting an erroneous prior interpretation of the statute. See *McDade v. Morton*, 353 F. Supp. 1006 (D.D.C. 1973), *aff'd*, 494 F.2d 1156 (D.C. Cir. 1974). The Board decision in this case clearly sets forth and rejects the mistake of law upon which *Anderson* was based. *Howell v. United States*, 9 IBIA 3, 88 I.D. 575 (1981). Therefore, to the extent that the present decision could be construed as a departure from the prior administrative position, that departure is adequately shown to be neither arbitrary nor capricious. See *Squaw Transit Co. v. United States*, 574 F.2d 492 (10th Cir. 1978); *FTC v. Crowther*, 430 F.2d 510 (D.C. Cir. 1970).³

² Appellants argue that they will be treated differently from the similarly situated contestees in *Anderson* as a result of this decision. To the extent that disparate treatment results, it is the consequence of an earlier erroneous interpretation of the law. Prior error, however, cannot be raised as a bar to the correction of that error. Furthermore, the Board cannot assume that the prior erroneous determination in the *Anderson* cases will go uncorrected.

³ Both of these cases acknowledged the agency's right to change its policy, but ordered the agency to explain its departure from prior rulings.

Third, appellants' reliance on *Anderson* ignores the existence of a subsequent ruling by the Board on this issue. In *Alaska Native Disenrollment Appeals of James Edward Scott, Sr. and Robert Charles Scott*, 7 IBIA 157, 86 I.D. 333 (1979), the Board upheld the disenrollment under ANCSA of an individual who was an enrolled member of the Metlakatla Community on Apr. 1, 1970. Because that fact alone was found to be dispositive under ANCSA, the Board did not consider the individual's Native ancestry. Similarly, in *Henry Sam Littlefield, Jr.*, 7 IBIA 128, 133, 86 I.D. 217, 219 (1979), the Board's opinion observed "that membership in the Metlakatla Indian Community on April 1, 1970, presents a bar to enrollment under the Alaska Native Claims Settlement Act."⁴ Thus, the decision now under consideration conforms with established Board precedent.

Finally, appellants' argument misconstrues the doctrines of *stare decisis*, *res judicata*, and collateral estoppel in the appellate process. According to appellants' interpretation of these doctrines, an appellate tribunal could never correct an error made at the hearing level, but would be bound to perpetuate the error of the earlier decision. Such reasoning puts form over substance and negates the essence of the appellate process—reviewing and correcting error.

⁴ The Board went on to find in *Littlefield* that the appellant was not a member of the community and so was eligible for enrollment under ANCSA.

For these reasons, appellants' request for reconsideration is denied.

ATOMIC FUEL CO., INC.

3 IBSMA 287

Decided September 17, 1981

Appeal by the Office of Surface Mining Reclamation and Enforcement from that portion of a Dec. 23, 1980, decision, in Docket No. CH 0-295-R, by Administrative Law Judge Tom M. Allen, which vacated Cessation Order No. 80-I-43-7, issued to Atomic Fuel Co., Inc., for failure to abate a violation of the approximate original contour requirements (30 CFR 715.14) promulgated under the authority of the Surface Mining Control and Reclamation Act of 1977.

Reversed.

1. Surface Mining Control and Reclamation Act of 1977: Enforcement Procedures: Generally

Filing an application for review of a notice of violation does not stay that notice.

APPEARANCES: James M. McElfish, Esq., and Marcus P. McGraw, Esq., Assistant Solicitor, Office of the Solicitor,

Washington, D.C., for appellant, Office of Surface Mining Reclamation and Enforcement.

OPINION BY THE INTERIOR BOARD OF SURFACE MINING AND RECLAMATION APPEALS

Factual and Procedural Background

On June 17, 1980, an Office of Surface Mining Reclamation and Enforcement (OSM) inspector visited the surface mine (State permit 2087) of Atomic Fuel Co., Inc. (Atomic), in Buchanan County, Virginia. During his inspection of the mine, the inspector, acting pursuant to his authority under the Surface Mining Control and Reclamation Act of 1977 (Act),¹ issued Notice of Violation No. 80-I-43-25 (NOV) charging Atomic with a violation of the approximate original contour requirements of 30 CFR 715.14, and prescribing a 90-day period for abatement of the violation. Atomic filed an application for review of the NOV on June 30, 1980.

The inspector returned to the mine on Sept. 24, 1980, after the abatement period had elapsed. He determined that Atomic had not properly abated the violation and accordingly issued Cessation Order No. 80-I-43-7 (CO). On Oct. 23, 1980, during the pendency of the application for review of the under-

¹ Act of Aug. 3, 1977, P.L. 95-87, 30 U.S.C. §§ 1201-1328 (Supp. II 1978).

lying NOV, Atomic applied for review of the CO.

The proceeding for review of the NOV was consolidated with the proceeding for review of the CO, and the Administrative Law Judge held a hearing in the case on Oct. 28, 1980.²

In his Dec. 23, 1980, decision, the Administrative Law Judge, among other actions, affirmed the issuance of the NOV in part but vacated the CO because Atomic had filed for review of the NOV before issuance of the CO. He stated: "[S]ince the violations were challenged by the applicant prior to the issuance of the cessation order, said cessation order should not have been issued until a resolution of the validity of the [NOV] had occurred and for that reason only the same should be set aside * * *" (Decision at 4).

OSM appealed, and only OSM

filed a brief with the Board on review.

Discussion

[1] The action vacating the CO was clearly erroneous. The Act and the regulations provide that the filing of an application for review of a notice of violation does not enjoin the issuance of a cessation order under the authority of sec. 521(a)(3) of the Act.³ That section requires the issuance of a cessation order upon failure to abate a violation. (The inspector "*shall* immediately order a cessation of surface coal mining and reclamation operations or the [appropriate] portion" (*italics added*) of the operations if abatement has no occurred.) The regulations are to the same effect. 30 CFR 722.13. Moreover, the Act specifically provides in sec. 525(a)(1) (as do the regulations, even more explicitly, in 43 CFR 4.1116) that the filing of an application for review shall not operate as a stay of any order or notice (unless temporary relief is granted).⁴ If such

² Although the Administrative Law Judge's decision of Dec. 23, 1980, includes the designation "Application for Temporary Relief" in the caption (along with "Application for Review"), and although both the decision (at 4) and the transcript (at 4, 6, and 92) mention temporary relief, there is no application for temporary relief in the record certified to us by the Administrative Law Judge. OSM suggests that the Administrative Law Judge treated the application for review of the CO as an application for temporary relief. OSM Brief at 2. Whether or not that is so, the Administrative Law Judge conducted the consolidated hearing by receiving testimony on the merits of the NOV first, correctly stating that the outcome "may eliminate the necessity for considering an application for temporary relief either way" (Tr. at 6). At the conclusion of that portion of the hearing and in the decision the Administrative Law Judge also correctly stated that since he had upheld the violation a hearing on temporary relief was unnecessary (Tr. at 92; Decision at 4). Thus, even if there were an application for temporary relief, as the Administrative Law Judge indicated (Tr. at 92), it was properly denied.

³ 30 U.S.C. § 1271(a)(3) (Supp. II 1978).

⁴ The Administrative Law Judge acknowledged this provision but disregarded it, saying: "[I]t has been the customary practice in Region I [of OSM] not to issue a cessation order for failure to abate where an application has been filed when no imminent or foreseeable danger to person, property or the environment will occur or be occasioned by the delay." Decision at 4 n.2. OSM denies there is such a customary practice; what it says it does occasionally is postpone reinspection or extend the period of abatement within the 90-day maximum when an application for temporary relief has been filed and a hearing has been scheduled near the end of the abatement period. OSM Brief at 10-11. Even if OSM had such a policy, there was no testimony concerning it introduced at the hearing.

filing may not operate as a stay, the most notable effect of that provision, at least as far as notices are concerned, is that the running of the abatement period time will continue.

The proper and only avenue for avoiding the effect of sec. 525 (a) (1) is to obtain an order granting temporary relief under the authority of sec. 525(c). Here, Atomic did not file for temporary relief from the NOV and could not have obtained in it any event because the Administrative Law Judge affirmed the issuance of the NOV. Finally, the Department contemplates the possibility that a cessation order may be issued during the pendency of review of an underlying notice of violation, for the regulations require the applicant, in 43 CFR 4.1170, to file in a notice of violation review proceeding a copy of a cessation order issued because of the failure to abate that underlying notice of violation.

Therefore, the decision appealed from is reversed.

DIAMOND COAL CO.

3 IBSMA 292

Decided September 17, 1981

Appeal by the Office of Surface Mining
Reclamation and Enforcement from

those portions of a Mar. 31, 1980, decision by Administrative Law Judge Tom M. Allen in Docket Nos. NX 9-63-P and NX 0-25-P vacating four violations charged against Diamond Coal Co. and setting penalty assessments for two other notices of violation at amounts below those proposed by OSM.

Reversed in part, affirmed in part,
and remanded in part.

1. Surface Mining Control and Reclamation Act of 1977: Topsoil: Generally—Surface Mining Control and Reclamation Act of 1977: Words and Phrases

"Contaminant." Where OSM shows that spoil materials have been mixed with topsoil it has made a prima facie case of a violation of 30 CFR 715.16 for failure to protect the topsoil from contaminants.

2. Surface Mining Control and Reclamation Act of 1977: Signs and Markers: Generally

Where a mine identification sign is located on one side of a highway and is clearly visible from the other side from which there is access to the mine's nearby processing facility, the Board is unwilling to say that that is insufficient to comply with the requirement of 30 CFR 715.12 (b).

3. Surface Mining Control and Reclamation Act of 1977: Civil Penalties: Hearings Procedure—Surface Mining Control and Reclamation Act of 1977: Hearings: Procedure

Even where the petitioner, in a civil penalty proceeding, admits the validity of the issuance of a notice of violation and the hearing proceeds on the penalty

amount issues only, the Administrative Law Judge is not bound to accept the admission when the penalty amount evidence raises a question in his mind whether the violation in fact occurred.

4. Surface Mining Control and Reclamation Act of 1977: Civil Penalties: Hearings Procedure—Surface Mining Control and Reclamation Act of 1977: Hearings: Procedure

Where the parties have agreed to the existence of a violation and a penalty hearing is conducted on the basis of that agreement, if the Administrative Law Judge determines, either during or after the hearing, that the evidence may not support a violation, he shall make that determination known to the parties and, if necessary, reopen the hearing to allow OSM an opportunity to prove its case and the operator to counter that proof.

5. Surface Mining Control and Reclamation Act of 1977: Civil Penalties: Generally

Although the Hearings Division is not bound to accept the OSM Assessment Branch's evaluation of the evidence in terms of assigning civil penalty points, where an Administrative Law Judge finds a violation occurred, he is required to adhere to the point system in 30 CFR 723.13 unless he determines that a waiver would further abatement of violations of the Act.

APPEARANCES: John Philip Williams, Esq., Office of the Field Solicitor (Knoxville), and Marcus P. McGraw, Esq., Assistant Solicitor for Enforcement, Washington, D.C., for the Office of Surface Mining Reclamation and Enforcement; and Charles J. Baird, Esq., Baird and Baird, Pikeville, Kentucky, for Diamond Coal Co., Inc.

OPINION BY THE INTERIOR BOARD OF SURFACE MINING AND RECLAMATION APPEALS

In the Hearings Division, this case was a civil penalty proceeding consolidated to review the merits of and the assessments proposed for seven notices of violation and one cessation order. The enforcement documents collectively charged 21 violations of the Surface Mining Control and Reclamation Act of 1977 (Act) ¹ at Diamond Coal Company's (Diamond) mine and processing plant in Pike County, Kentucky. On May 20, 1980, we granted the Office of Surface Mining Reclamation and Enforcement's (OSM) petition for discretionary review of the Administrative Law Judge's Mar. 31, 1980, decision concerning six of the alleged violations reviewed. We discuss these violations under four parts below.

I.

[1] On Dec. 21, 1978, an OSM inspector issued Notice of Violation No. 78-II-18-9 to Diamond. The first violation charged was for "a failure to prevent topsoil from being contaminated by spoil and waste materials" contrary to the requirements of 30 CFR 715.16. The evidence established that there were spoil materials on the topsoil pile. See Decision at 5. The Administrative Law Judge nevertheless vacated the violation on the basis of

¹ Act of Aug. 3, 1977, 91 Stat. 445, 30 U.S.C. §§ 1201-1328 (Supp. II 1978).

his construction of the following portion of the regulation: "§715.16 * * * The topsoil shall be segregated, stockpiled, and protected from * * * contaminants *which lessen its capability to support vegetation* * * *." (Italics supplied.) The major controversy in this portion of the case has been over the proper construction of the phrase underscored above. Diamond agrees with the decision's approach that the phrase implies there are potentially two classes of contaminants, those that lessen the capability of the topsoil to support vegetation and those that do not. OSM's argument is that contaminants, by definition, lessen that capability and that the phrase is essentially gratuitous, being descriptive of all contaminants.² We are persuaded that OSM has the better argument.

"Contaminate" is the "admixture or introduction of undesired substances to a medium, thereby reducing the value of the medium or making it unfit for its intended use."³

Where, as in this case, OSM proves that spoil materials such as shale and coal were mixed with topsoil, the probability is high that the capacity of the topsoil to support

vegetation will be reduced. Based on that probability, a presumption arises that the topsoil is less capable of supporting vegetation, and OSM has made a prima facie case of a violation of the topsoil handling requirements of 30 CFR 715.16. An operator, of course, may rebut the presumption and overcome OSM's prima facie case by showing that the materials involved do not lessen the capability of the topsoil to support vegetation. Diamond made no such showing in this case.⁴ We reverse the Administrative Law Judge's decision vacating Notice of Violation No. 78-II-18-9 and remand the case in order to give Diamond the opportunity to make the necessary showing if it wishes to do so.

II.

On Feb. 12, 1979, an OSM inspector issued Notice of Violation No. 79-II-36-10 for three alleged violations at Diamond's processing and loading facility. That portion

² OSM also argues that the system established by the various topsoil handling provisions supports its position. For instance, there is the materials variance provision of sec. 715.16(a)(4), and there is the presumption in the removal provision of sec. 715.16(a)(1) and (2) that certain materials should be segregated because of their greater capacity for supporting vegetation.

³ A *Dictionary of Mining, Mineral, and Related Terms*, U.S. Department of the Interior at 254. See also *American Casualty Co. of Reading, Pa. v. Myrick*, 304 F.2d 179 (5th Cir. 1962), at 183.

⁴ Diamond did argue that it should be relieved of liability for the apparent violation because the placement of spoil on the pile was inadvertent and because, in any event, there was so little that no notice of violation should have been issued. As to inadvertence, it cannot be a defense. The purpose of the enforcement program is to require correction of violations regardless of their origin, not to impose liability based on intent. Regarding the quantity of spoil, the Administrative Law Judge made no finding. He apparently was satisfied that the elements necessary to establish a violation were present, other than the element he based on the phrase in sec. 715.16. At the hearing the Administrative Law Judge stated that an area 5 by 10 feet on a topsoil pile 40 feet square and 10 feet high was "disturbed" by contaminants (Tr. 89). This could well be enough contamination to inhibit the topsoil's capacity to support vegetation, depending on the nature of the contaminants.

of the decision from which review has been sought involves only one of those alleged violations, failure to post a mine identification sign at the entrance to the tippie from a public road in violation of the requirements of 30 CFR 715.12(b). The Administrative Law Judge vacated the violation because of his conclusion, relying on the reasoning of *Western Engineering, Inc.*, 1 IBSMA 202, 86 I.D. 336 (1979), that OSM did not have enforcement authority over the facility.

Whether or not this particular tippie is subject to the authority of OSM, the facts are that the mine access road and the tippie are on opposite sides of U.S. Highway 23 and that a mine identification sign on the mine side of the highway was clearly visible from the tippie side. In these circumstances, we are unwilling to say that the sign is insufficient to comply with the requirement OSM charged Diamond with breaching. Accordingly, we affirm.

III.

[3, 4] On Feb. 21, 1979, an OSM inspector issued Notice of Violation No. 79-II-36-11, charging six violations. Violations 4 and 5 charged Diamond with allowing spoil and debris to remain on the downslope in violation of 30 CFR 716.2 at two separate locations in the mine area. Diamond admitted the violations at the hearing, and the parties proceeded to present evidence only on the penalty amount issue. At the conclusion of the presentation, the

Administrative Law Judge orally upheld the violations and assessed penalties. In his written decision, however, and without further opportunity for presentation of evidence or argument by the parties, he reversed his oral ruling and vacated these violations. In the decision, he announced that his review of the transcript disclosed that the evidence presented on the penalty issues led him to the conclusion that there had not been a violation committed at either of the sites. His findings were that in each case the allegedly violative condition was caused by a slide occurring below an already reclaimed bench area and that the slides occurred without any causative action by Diamond. Moreover, as to violation 4, the area affected was outside the permit. Besides apparently concluding that Diamond was not responsible for the conditions because they occurred naturally below the area disturbed and after reclamation, the Administrative Law Judge also concluded that the material alleged to be spoil could not be because it came from an area not disturbed by Diamond and not as a result of any disturbance (Decision at 9-11).

OSM argues that, since Diamond admitted the violations at the hearing, OSM made no effort to present evidence supporting their existence and, therefore, the Administrative Law Judge's finding that they did not exist was made in the absence of notice and an opportunity to be heard on that issue.

We agree. OSM may indeed have evidence not presented at the hearing which would support its enforcement action (although, contrary to its assertion, it did present evidence which, at least in the Administrative Law Judge's view, did not relate solely to penalty issues and which detracted from the validity of its action). Thus, although the Administrative Law Judge properly did not ignore evidence he took to be contradictory to the fact of a violation, he should have informed the parties of his misgivings before proceeding further and given them an opportunity to present evidence and argument on the issue. Therefore, we vacate the decision on these violations and remand to the Hearings Division for taking further evidence and hearing further argument as appropriate.

IV.

On Jan. 25, 1979, an OSM inspector issued Notice of Violation No. 79-II-36-4, and on Aug. 3, 1979, an inspector issued Notice of Violation No. 79-II-55-17. Both charged violations of 30 CFR 715.17(a), excess suspended solids in discharge from a sedimentation pond. In each case the excess was caused, at least in part, by a slide from an already reclaimed outslope area off the permit. The OSM Assessment Branch had proposed penalties of \$1,800 and \$420, respectively, for the violations, based on 38 and 21 points. *See* 30 CFR 723.14.⁵ The Administrative Law Judge

affirmed the issuance of the notices with respect to these violations but reduced the penalties to \$40 each, based on two points for each violation.

[5] OSM is required to assign 15 points for the probability of a violation if it in fact occurred, 30 CFR 723.13(b)(2)(i), and at least 8 points if the damage the violated standard was designed to prevent extends outside of the permit area. 30 CFR 723.13(b)(2)(ii)(B).⁶ These two violations did occur and did extend outside Diamond's permit area. The Administrative Law Judge, however, assigned only one point for probability of occurrence and one for damage for each of these two violations. Although an Administrative Law Judge is not bound to adopt the Assessment Branch's evaluation of the evidence in assigning points, where, as here, he finds a violation occurred, he is required to adhere to the point system contained in 30 CFR 723.13 unless he determines that a waiver would further abatement of violations of the Act. 43 CFR 4.1157(b)(1). In this case the Administrative Law Judge did not make this determination or incorporate any basis or reasons for doing so. *See* 43 CFR 4.1127.⁷ Since we re-

⁵ 45 FR 58780, 58783 (Sept. 4, 1980).

⁷ This waiver is circumscribed. It may not be granted, for example, on the basis of an argument that a reduction in a proposed assessment could be used to abate other violations of the Act. 43 CFR 4.1157(b)(1). Even where it is granted, the Administrative Law Judge's decision should explain specifically how abatement of violations of the Act will be furthered. *Cf.*, 30 CFR 723.16 (45 FR 58780, 58784-58785, (Sept. 4, 1980)).

⁶ 45 FR 58780, 58784 (Sept. 4, 1980).

mand the case for the reasons stated in Parts I and III, we also remand this portion of the case so that the Administrative Law Judge may consider whether to make this determination, with additional argument from the parties if appropriate.

MELVIN J. MIRKIN

Administrative Judge

WEST VIRGINIA ENERGY, INC.

3 IBSMA 301

Decided September 17, 1981

Appeal by the Office of Surface Mining Reclamation and Enforcement from an Oct. 3, 1980, decision by Administrative Law Judge Sheldon L. Shepherd, vacating Notice of Violation No. 79-I-38-44 and Cessation Order No. 79-I-38-53 issued to West Virginia Energy, Inc., on the ground that the operation subject of the enforcement action was beyond regulation under the Act because of the Government-financed construction exemption of sec. 528(3).

Reversed except for remittance of penalties.

1. Surface Mining Control and Reclamation Act of 1977: Applicability: Generally

Where an operator removes coal in the process of rehabilitating a State road

but there is no proof that the State expended funds to finance the project comprising at least 50 percent of the cost of the project, the project does not fall within the definition of "Government-financed construction" in 30 CFR 707.5, and the operator therefore cannot claim the exemption from applicability of the Act appearing in sec. 528(3).

2. Surface Mining Control and Reclamation Act of 1977: Abatement: Remedial Action—Surface Mining Control and Reclamation Act of 1977: Cessation Orders: Generally

The Board will not uphold a cessation order issued for a failure to abate a violation charged where that failure is premised on noncompliance with a remedial measure which has no rational relationship to the violation charged.

APPEARANCES: Harold Chambers, Esq., Office of the Field Solicitor, Charleston, West Virginia, and James M. McElfish, Esq., and Marcus P. McGraw, Esq., Assistant Solicitor for Enforcement, Office of the Solicitor, Washington, D.C., for appellant Office of Surface Mining Reclamation and Enforcement; George J. Anetakis, Esq., Frankovitch and Anetakis, Weirton, West Virginia, for appellee West Virginia Energy, Inc.

OPINION BY THE INTERIOR BOARD OF SURFACE MINING AND RECLAMATION APPEALS

Factual and Procedural Background

Appellee/respondent West Virginia Energy, Inc. (Energy), conducts a surface mining operation

(State permit 32-78) in Brooke County, West Virginia. To facilitate its mining, Energy has used a public road, known as Forty-Nine Hill, for the purposes of access and haulage; this road was fully permitted and bonded.

The West Virginia State Highway authority received a significant number of complaints and expressions of concern from area residents regarding Energy's use of Forty-Nine Hill. Typical of those concerns were apprehensions about failed brakes on coal trucks and the potential consequences of confrontations between coal trucks and school buses, which also used the road. Because of the complaints, the highway department approached Energy seeking a solution. After discussions, Energy and the State signed an agreement which provided the following: (1) Energy would upgrade another existing public road (McCords Hill Road, State Route 67-2) for use as an access and haul road for a distance of 2,000 to 2,500 feet (while the State worked on another shorter section of the same road for the same purpose); (2) the State would provide Energy with certain assistance on the latter's portion of the project, including the provision of new culvert pipes to replace old, nonfunctioning culverts; and (3) upon completion of the project, Energy would dedicate the improvements to the State. The agreement also called for Energy's compliance with State highway grading and reclamation requirements. McCords Hill Road,

too, had been the subject of complaints from public users, albeit not as a result of an operator's usage. Although not as heavily traveled as Forty-Nine Hill (*i.e.*, apparently no school buses), it does provide access to a number of private residences, and, having been built in the area of an old underground mine and over some coal deposits, it was extremely unstable and the subject of a continuing series of slips as a result.

Energy owns the land on which McCords Hill Road is located, but the road is not on its permit. Anticipating that it would be removing coal in the conduct of the road rehabilitation project, Energy inquired of the State whether a permit would be required (Tr. 124-25). The State replied that no permit was necessary insofar as there was an agreement covering the project and that there was a performance bond (which Energy had posted for completion).

The preliminaries completed, Energy undertook the project, changing the existing contour of the land and ultimately disturbing about 5 acres, including a well-constructed hollow fill used for the storage of excess spoil. The Administrative Law Judge found that no area was disturbed (other than the fill) that was not part of the roadway, its right-of-way, or areas contiguous thereto, the disturbance of which was necessary to the proper completion of the project. Energy also worked on some old underground workings some distance from the road. Before Energy com-

September 17, 1981

pleted its efforts on them, the workings had been the source of drainage which had had considerable impact on the preexisting road's problems with stability. During the course of the road project, Energy removed and placed into interstate commerce 800 tons of coal. Although the State did provide some materiel to Energy and although it expended a considerable amount of effort on its part of the project, no State funds were used to complete Energy's part of the project.

On Sept. 5, 1979, an Office of Surface Mining Reclamation and Enforcement (OSM) inspector issued Notice of Violation No. 79-I-38-44 (NOV) to Energy for conducting surface mining operations without a permit with respect to the area of the road improvement project, in contravention of 30 CFR 710.11. The NOV required two remedial actions: (1) No further coal removal without permit and (2) return of the disturbed area to its predisturbance condition through revegetation and grading. OSM proposed an assessment of \$2,500 for the alleged violation. It was based upon a total of 45 points, computed in the following manner:

Seriousness	Points
1. Probability of occurrence.....	15
2. Extent of potential or actual damage	8
Subtotal	23
Lack of Good Faith.....	10
Negligence	12
Total	45

After an assessment conference the lack of good faith points were eliminated, resulting in a total of 35 points, for which a \$1,500 penalty was assessed.

On November 21 the inspector issued Cessation Order No. 79-I-38-53 (CO) for failure to comply with the second remedial action requirement (revegetation and grading). Two days later OSM terminated this order, ultimately proposing a second \$1,500 penalty. Energy applied for review of the enforcement documents and the proposed penalties.

Discussion

After the ensuing hearing the Administrative Law Judge concluded that the extraction activity under review was within the exemption of sec. 528(3) of the Act.¹ The basic underpinnings of this conclusion were that "[t]here was no evidence to indicate that the * * * coal * * * removed was any more than was necessary" for Energy to fulfill the terms and obligations of its road rehabilitation project agreement with the State (and thus the extraction was "incident to") (Decision at 4) and that this activity was "part of a State (partially financed) highway construction" (Decision at 4-5). According-

¹The referenced Act section reads as follows: "Sec. 528. The provisions of this Act shall not apply to any of the following activities: * * * (3) the extraction of coal as an incidental part of Federal, State or local government-financed highway or other construction under regulations established by the regulatory authority."

ly, he vacated the NOV and the CO. OSM appealed.

OSM's argument on appeal is that there has been a late regulatory explication of the sec. 528(3) exemption which makes clear that whatever else can be said about the road project here, it is beyond the exemption. The clarifying regulatory changes are (1) reference in the construction exemption provision in 30 CFR 700.11(d) to new 30 CFR Part 707 and (2) promulgation of that new part.² Sec. 707.5 sets out definitions applicable to the exemption, including "Government-financed construction," which is defined as "construction funded 50 percent or more by funds appropriated from a government financing agency's budget or obtained from general revenue bonds, but shall not mean government financing agency guarantees, insurance, loans, funds obtained through industrial revenue bonds or their equivalent, or in-kind payments."

[1] Clearly, the project involved here does not fall within the regulatory definition of "Government-financed construction"; there was no proof that the State expended *any* funds, much less that any funds expended totaled 50 percent or more of the project's cost nor that they came from the particular sources required by the definition.³

² As pointed out by OSM's brief, Subchapter A of Chapter VII of 30 CFR, which includes Part 707, is applicable during both the interim and the permanent programs.

³ Even assuming that the separate Energy and State efforts were actually part of one large endeavor so that inquiry could be made

Thus, the operations were not within the exemption.

Having reversed the Hearings Division the substantive considerations in the appeal, we must now consider the two \$1,500 penalties that were assessed by OSM. One was for having been under a cessation order for 2 days (\$750 per day pursuant to 30 CFR 723.14) and the other was for the 35 points that OSM had assigned pursuant to 30 CFR 723.12-13.

[2] The NOV was for having mined without the permit required by 30 CFR 710.11. The abatement required was twofold: (1) to cease mining until a permit was obtained and (2) to rehabilitate the disturbed area. We have already held that the absence of a permit does not insulate one from having to observe the performance standards of regulations. *Claypool Construction Co., Inc.*, 1 IBSMA 259, 86 I.D. 486 (1979); *Delight Coal Corp.*, 1 IBSMA 186, 86 I.D. 321 (1979). Consequently, one who should have a permit is chargeable with substantive violations even in the absence of the required permit. Energy, however, was not charged with any violation other than that of operating without a permit. The only remedial action appropriate to such a violation is to cease mining until a permit is obtained. By

about the relative costs of the separate efforts, there was no evidence to establish those facts. Energy complains that OSM did not consider that proposition and make that inquiry, but Energy's position is incorrect. A party seeking an exemption must prove the elements thereof. Thus, where there is no evidence going to those elements, Energy, being the exemption seeker, may not prevail.

the end of the abatement period, Energy had complied with that requirement (Tr. 20-21). What it did not comply with until the CO was issued was the reclamation requirements. Those requirements, though, no matter how germane they might have been to a notice of violation that charged a violation of one of the substantive performance standards, *e.g.*, revegetation pursuant to 30 CFR 715.20, are completely inappropriate to a single charge of mining without a permit. Those remedial requirements cannot stand, and if they fall so must any cessation order that was based upon them. See *Renfro Construction Co., Inc.*, 2 IBSMA 372, 377, 87 I.D. 584, 587 (1980). The CO before us was issued for failure to perform the improperly prescribed remedial action. It and the penalty attendant to it are, consequently, rescinded. *Little Byrd Coal Co., Inc.*, 3 IBSMA 136, 88 I.D. 503 (1981).

The \$1,500 assessment for having mined without a permit was in accordance with the regulatory formula for determining the penalty for an ascribed 35 points. 30 CFR 723.13. If we agree that 35 points were proper, that might be the end of it. But we do not agree. Under "seriousness," OSM assessed 23 of a possible 30 points. 30 CFR 723.12 (c). Fifteen of those points, the maximum allowable, were for "probability of occurrence." The event which the violation was designed to prevent was mining without a permit. There are not degrees of mining without a per-

mit. The probability of the occurrence, given the fact of mining and the lack of a permit, was 100 percent. Therefore the maximum point assessment was appropriate. The other 8 points for "seriousness" were for "extent of damage." The regulatory guidelines for the assessment of penalty points for "extent of damage" are found in 30 CFR 723.12(c)(2) and (3). Subparagraph (3) provides a formula for computing extent of damage points where the violation involved concerns a requirement "to keep records, give notice, or conduct any measuring or monitoring * * *." It is not applicable to this case since the violation charged, mining without a permit, is not described in any of the three categories mentioned in that subparagraph.

There are two separate methods under sec. 723.12(c)(2) for determining the proper number of extent of damage points to be assigned, each depending upon the geographical extent to which the damage or impact the violated standard is designed to prevent in fact occurs. Under sec. 723.12(c)(2)(i), up to seven points may be assigned if that damage or impact remains within the permit area, and under sec. 723.12(c)(2)(ii) from 8 to 15 points may be assigned if that damage or impact extends beyond the permit area. When the violation charged is mining without a permit, there is no permit area against which to judge which of these provisions to apply, so their applicability at all is in doubt at the

outset. Moreover, the language of these provisions, making the assignment dependent upon the location of the "damage or impact the violated standard is designed to prevent," suggests that they apply to violations of substantive performance standards and not to essentially procedural ones like mining without a permit. Thus in this case no points for extent of damage are appropriate.

Under "negligence," Energy has been assessed 12 of a possible 25 points. Twelve points are the most assessable for mere negligence. The additional points are permitted only where recklessness or intentional conduct is invoked. 30 CFR 723.12 (d). Considering that Energy was supported by the State in determining it was not required to have a permit, we cannot agree that its degree of negligence would support the assignment of more than three negligence points.

Thus, in our view the total number of points that should have been assessed is 18.⁴ Eighteen points would support a penalty of \$360. However, there is no requirement that a penalty be assessed when there are fewer than 30 points. 30 CFR 723.12(a). Given what we believe to have been Energy's partial reliance on State advice, its openness and its performance (when pressed), it is our opinion that no

purpose would be served by collecting a \$360 penalty.

Therefore, the decision under review is reversed as to the fact of violation and the ruling on exemption, but the penalty assessment proposal is vacated.

APPEAL OF ELLIOTT'S ROOFING CO.

IBCA-1330-1-80

Decided September 23, 1981

Contract No. H50C14201356, Bureau of Indian Affairs.

Sustained in part.

Contracts: Construction and Operation: Changed Conditions (Differing Site Conditions)—Contracts: Construction and Operation: Differing Site Conditions (Changed Conditions)—Contracts: Construction and Operation: Estimated Quantities—Contracts: Disputes and Remedies: Equitable Adjustments

Where under a reroofing contract the quantity of roofing required to be used is substantially greater than the approximate quantities estimated by the Government in the invitation for bids and there was no provision included therein requiring or requesting that the quantities specified be verified by prospective bidders, the Board finds that the substan-

⁴ Lest this be considered criticism of OSM, it is obvious that OSM was attaching points for failure to rehabilitate. Our examination is addressed solely to the failure to have a permit.

tially greater amount of roofing required to complete the contract work than the Government had estimated constituted a first category differing site condition for which the contractor is entitled to an equitable adjustment in the contract price.

APPEARANCES: Susan A. Hopkins, Attorney at Law, Dill & Showler, Redlands, California, for Appellant; Fritz L. Goreham, Department Counsel, Phoenix, Arizona, for the Government.

*OPINION BY CHIEF
ADMINISTRATIVE JUDGE
McGRAW*

*INTERIOR BOARD OF
CONTRACT APPEALS*

The contractor has timely appealed the denial of its claim for additional compensation in the amount of \$33,635.66 on the ground that the amount of built-up roofing required for performance of the contract was greatly in excess of the approximate quantity reflected in the invitation for bids and that the difference between the approximate quantity on which its bid was based and the actual quantity of roofing required for contract performance constituted a differing site condition for which it is entitled to an equitable adjustment. An oral hearing on the claim was held in Riverside, California, on August 12, 1980.

Findings of Fact

1. An invitation for bids was issued on June 7, 1979, with an opening date of July 11, 1979. The invitation called for the installation of

built-up roofing on various buildings at Sherman Indian High School, Riverside, California, in accordance with the requirements of Specifications No. H60-21-9-3500-9-23. Among the items of information included on the face of the invitation¹ were the following: "Bidders are requested to visit the project site and should contact Mr. McAllister at Sherman Indian High School, Riverside, California. * * * THIS PROJECT IS TOTALLY SET-ASIDE FOR SMALL BUSINESS."

2. Contract No. H50C14201356 was awarded to the contractor by the Bureau of Indian Affairs on July 20, 1979, in the amount of \$199,680.² The contract incorporated Standard Form 22 (Instructions to Bidders),³ General Provisions (Construction Contract) (Standard Form 23-A, Apr. 1975 Edition), and Specifications for the Installation of Built-Up Roofing.

¹ Appeal File (hereinafter AF) D.

² This was approximately \$150,000 higher than the lower figure the Government had estimated for the job and approximately \$100,000 higher than its higher estimated figure.

³ The following provision was included therein:

"2. Conditions Affecting the Work. Bidders should visit the site and take such other steps as may be reasonably necessary to ascertain the nature and location of the work, and the general and local conditions which can affect the work or the cost thereof. Failure to do so will not relieve bidders from responsibility for estimating properly the difficulty or cost of successfully performing the work. The Government will assume no responsibility for any understanding or representations concerning conditions made by any of its officers or agents prior to the execution of the contract, unless included in the invitation for bids, the specifications, or related documents."

Included among the contract provisions⁴ are the following:

**UNIT PRICE SCHEDULE
SCOPE OF WORK**

Furnish all labor, materials, equipment, tools and incidentals necessary, and perform all work in connection with preparation, restoration, and miscellaneous work necessary for the installation of built-up roofing, complete, on various buildings at Sherman Indian High School, California, in strict accordance with the specifications attached hereto for the prices applicable to each location below:

Item No.	Location	Amount bid
1.	Hogan, Building No. 1----	\$24,960.00
2.	Kiva, Building No. 2-----	24,960.00
3.	Wigwam Lodge, Building No. 3-----	24,960.00
4.	Teepee, Building No. 4----	24,960.00
5.	Teepee, Building No. 6----	24,960.00
6.	Teepee, Building No. 7----	24,960.00
7.	Teepee, Building No. 8----	24,960.00
8.	Teepee, Building No. 10---	24,960.00
Total amount bid----		199,680.00

Due to the limitation of funds, the Government reserves the right to make award on one, a combination, or all eight (8) buildings.

GENERAL PROVISIONS (Construction Contract)

13. CONDITIONS AFFECTING THE WORK

The Contractor shall be responsible for having taken steps reasonably necessary to ascertain the nature and location of the work, and the general and local conditions which can affect the work or the cost thereof. Any failure by the Contractor

to do so will not relieve him from responsibility for successfully performing the work without additional expense to the Government. The Government assumes no responsibility for any understanding or representations concerning conditions made by any of its officers or agents prior to the execution of this contract, unless such understanding or representations by the Government are expressly stated in the contract.

* * * * *

GENERAL CONDITIONS

* * * * *

GC-3 VISIT TO SITE AND SITE CONDITIONS: Bidders are expected to visit the site and to inform themselves concerning all the conditions under which the work is to be done. Failure to visit the site will in no way relieve the Contractor from the necessity of furnishing any materials and performing any work that may be required to complete the contract in strict accordance with the true intent and meaning of the drawings and specifications without an additional cost to the Government.

Information contained in the specifications or shown on the accompanying drawings as it relates to conditions at the site, is believed to be reliable but such information is furnished for the convenience of the bidders and no guarantee of the accuracy of the information is made or implied.

* * * * *

**TECHNICAL PROVISIONS
ROOF SURFACING**

1. **SCOPE:** Furnish all plant, labor, equipment, services, appliances and materials, and perform all operations in connection with the installation of built-up roofing, complete, in strict accordance with this specification. Work includes installation, the Contractors option, 4-ply fibrous glass roofing felts with gravel surfacing may be applied as specified hereinafter in lieu of the 4-ply asbestos

⁴ A.F.D.

roofing felts with gravel surfacing specified.

a. *Structures Requiring Re-roofing:*

- (1) Hogan, Bldg. #1—approximately 22,000 sq. ft.
- (2) Wigwam Lodge, Bldg. #3—approximately 22,000 sq. ft.
- (3) Tepee, Bldg. #4—approximately 22,000 sq. ft.
- (4) Yucca, Bldg. #6—approximately 22,000 sq. ft.
- (5) Wauneka, Bldg. #7—approximately 22,000 sq. ft.
- (6) Dawaki, Bldg. #8—approximately 22,000 sq. ft.
- (7) Ramona, Bldg. #10—approximately 22,000 sq. ft.
- (8) Kiva, Bldg. #2—approximately 22,000 sq. ft.

(AF D).

3. In response to the invitation the contractor submitted a bid in the amount of \$199,680 broken down as shown in Finding 2, *supra*. The instant contract was awarded on July 20, 1979. Notice to Proceed dated Aug. 7, 1979, was received by the contractor on Aug. 13, 1979, thereby establishing Aug. 14, 1979, as the start date and Oct. 12, 1979, as the completion date for contract performance (AF A, B, and C).

4. At the preconstruction conference on July 31, 1979, the contractor is reported to have raised a question as to the sizes of the roofs. In a letter written to the attention of the contracting officer under date of Aug. 15, 1979 (AF 1), the contractor stated:

[W]e believe an error has been made in the listing of sizes of roofs to be roofed.

Your Specifications (Technical) page 4 paragraph 1. Scope list all eight buildings as having 22,000 square feet to be roofed for a total of 176,000 sq. feet.

We bid this area for a total of \$199,680.00 or a price of \$113.45 per Square. (100 sq ft.)

Enclosed is a roof plan (existing site conditions) typical of each building; giving a tolerance [*sic*] of 6 inches each way. These dimensions show an area of 25,706 square feet per building, or more than 3,706 square feet additional. This totals 29,648 square feet more than specifications show. This is more area than one complete building, as shown.

This amounts to more than \$33,635.66 at the price per square we quoted in the bid price. Consequently we are at a loss to know just what to do. Do we roof only part of each building? If so which part do we not roof?

If we are to roof the entire buildings we must assume there has been an error in your calculations. Since we bid this job as per your specifications we only figured the areas you listed.

What shall we do? Do we roof certain areas; or do we roof it all and bill you for an extra? An urgent reply is requested.

5. By letter dated Aug. 29, 1979 (AF 2), the Bureau of Indian Affairs (hereinafter BIA) responded to the contractor's letter of Aug. 15, 1979, stating: "The area of 22,000 square feet given for each building in the technical specifications page 4 were approximate as stated therein."

The position taken by BIA was elaborated upon in the contracting officer's decision of Jan. 14, 1980 from which the instant appeal was taken. Citing GC-3 VISIT TO SITE AND SITE CONDITIONS and THE CONDITIONS AFFECTING THE WORK PROVISIONS (Clause 2 of SF 22 and General Provision 13 of SF 23-A) in support of the position taken in

his decision, the contracting officer stated:

The "Bid Schedule" lists each building by name and number and requires bidders to enter their bid price for each building by the unit. Therefore, it is important to note that the unit price is by the building and not the square foot.

The word "Approximately" as used in the technical provisions for roof surfacing, Page 4, was intended to alert prospective bidders the fact that the measurements given therein were other than [*sic*] precise or exact.

In addition, the specifications explicitly gives notice to all prospective bidders to visit the project site prior to submitting their bids, to ascertain the general and local conditions *which can affect the work* or the cost thereof and failure to do so would not relieve the bidder *from his responsibility for estimating properly the difficulty or cost of successfully performing the work.* [Italics in original.]

6. At the hearing appellant's only witness, Mr. William J. Elliott, testified that the bid submitted was based on the number of square feet reflected in the specifications. Mr. Elliott also testified: (i) that if the Government had not provided figures as to the size of the buildings to be reroofed, the appellant would have measured the buildings; (ii) that normally bidders are given a directive to measure the roofs on which bids are being requested rather than being given the size of the roofs covered by the solicitation; (iii) that in response to a question raised by him at the preconstruction conference he was advised that the dimensions shown for the roofs in the specifications were

stated as approximates;⁵ (iv) that the day following the preconstruction conference the appellant had measured the roofs and found they varied about 16 percent⁶ from the dimensions shown in the Government's specifications; and (v) that many things besides the interpretation bidders place upon the approximate size of the buildings could cause the bids received to vary substantially.⁷

7. At the time the bids were opened, Mr. Elliott was out of the state. He had prepared the company's bid prior to his departure, however, and it was hand-carried to the bid opening by the appel-

⁵ To Mr. Elliott the term "approximate" on a job of the size covered by the contract would involve 4 or 5 squares per building (a square consists of a hundred square feet) and should not involve a variance from the dimensions specified of more than 5 percent (Tr. 16-17; 34-35).

The Government's witness McAllister (supervisory general engineer) considers the term approximate to cover a range from a low of 5 percent to a high of 25 percent of the dimensions given (Tr. 56).

⁶ Based upon the measurements made the appellant calculated the total amount of re-roofing required for all eight buildings to be 29,648 square feet more than the specifications indicated or 3,706 additional square feet per building (25,706 less 22,000) (Tr. 28).

After the preconstruction conference Mr. McAllister and other BIA personnel made measurements of particular buildings on three occasions but came up with different results each time. The differences were attributed to the methods employed in the measurements. On one of these occasions Building No. 4 and Building No. 2 were measured at 25,267 and 25,303 square feet respectively compared to 25,706 square feet to which Mr. Elliott had testified (Tr. 50-51).

⁷ On redirect examination Mr. Elliott testified that there would be other things besides the size of the building that would make the bids submitted vary, after which he stated: "I have bid so far this year 71 jobs. I was second on 44. I only got 5." (Tr. 38-39).

September 23, 1981

lant's superintendent, Mr. Carl Hansen. Prior to that time Mr. Elliott had sent Mr. Hansen to visit the job to see if there was anything likely to cause them trouble such as any machinery or other items not shown on the plans (Tr. 7-10). Mr. Hansen testified to having gone to the site several times and to have talked to Mr. McAllister on one of such occasions. Mr. McAllister had no recollection of Mr. Hansen having visited the site prior to bid opening, however, and there was no entry in Mr. McAllister's diary indicating that Mr. Hansen had visited the site during the period in question. Mr. McAllister testified that three other bidders on the project did visit the site prior to the opening of bids and that they did take measurements of the roof using tapes or wheels. His diary contained entries reflecting the visit to the site of the other three bidders. There is no contention by either Mr. Elliott or Mr. Hansen that any measurements of the buildings in question were made or that it was ever contemplated that any such measurements would be made incident to the site visit (Tr. 47-48; 60-70).

8. At the time of the hearing Mr. Donald H. McAllister (supervisory general engineer, BIA, Sherman Indian High School), had been at the school for 5 years as facility manager. Mr. McAllister testified (i) that he had prepared the specifications with which we are here concerned; (ii) that the approximately

22,000 square feet figure shown in the specifications for each of the eight buildings had been derived from what was shown in the building book and the plans for such buildings; (iii) that the term "approximate" was used in the specifications because he did not know the exact size of the roofs; (iv) that aside from what was shown in the building book or the plans for the buildings, no prebid measurement had been made by the Government; and (v) that when Mr. McAllister drew up the specifications he intended the bidders to go out to the site and measure the size of the roofs.⁸

9. As has been noted previously (n.5, *supra*), the term "approximate" conveyed to Mr. Elliott the thought that on a job of the size covered by the instant contract, there might be variation from the roof sizes shown of 4 or 5 squares per building but should not involve a variance of more than 5 percent. The Government has also acknowledged that the term "approximate" could be interpreted to mean a variation from the dimensions given in the specifications of not more than 5 percent. If a variation in the

⁸ Tr. 60-61. The following colloquy occurred between the hearing member and Mr. McAllister at page 61 of the transcript:

"Q. But rather than relying on a boiler plate [clause] there, if you intended the bidders to measure these roofs, why didn't you just say so?

"A. I have never seen in a specification where you require the actual bidder to measure it. You require him to visit the site and determine the extent of work that's required, and that's what the general conditions, I believe, state."

amount of roofing required of precisely 5 percent above that indicated in the specifications had occurred, the contractor would have reroofed 184,800 square feet or 8,800 square feet in excess of the 176,000 square feet indicated in the specifications.

Discussion

This is another differing site conditions case involving roofing in which there is a significant difference between the amount of work estimated by the Government in the invitation and the amount of work required to be performed in order to complete the contract.⁹ The two principal questions¹⁰ to be decided are (i) the meaning to be ascribed to the term "approximately"

⁹In a very recent case this Board found a differing site condition to be present where under a reroofing contract the quantity of roofing required to be used was substantially greater than the approximate quantities shown in the invitation and it was determined that the quantity of roofing involved in the work could not have been ascertained by a prebid onsite investigation. See *Singleton Contracting Corp.*, IBCA-1413-12-80 (Aug. 12, 1981), 88 I.D. 722, 81-2 BCA par. —.

¹⁰In the decision from which the instant appeal was taken the contracting officer called attention to the fact that the bid schedule listed each building by name and number, after which he stated: "[I]t is important to note that the unit price is by the building and not the square foot." (Finding 5).

The same argument was made but was rejected in *Lee R. Smith—Contract Builder*, ASBCA No. 11135 (Sept. 23, 1966), 66-2 BCA par. 5857, in which the contractor was found to be entitled to an equitable adjustment for a changed condition because the actual quantity of reroofing necessary was substantially in excess of the quantity represented by the Government in the invitation for bids and in which, at page 27,179, the Armed Services Board stated: "While conceding that the quantity was substantially in excess of the quantity stated in the invitation for bids, the Government denied the claim on the ground that the contract called for re-roofing of the specified buildings at a lump sum price."

and (ii) the obligation a bidder has, if any, to verify dimensions given in the specifications as advertised for bids where, as here, the invitation qualified the dimensions listed for the roofs of the eight buildings involved¹¹ by stating them to be "approximately 22,000 sq. ft.," while advising bidders that they were "expected to visit the site and to inform themselves concerning all the conditions under which the work is to be done" (Finding 2).

In the very early case of *Carson Construction Co.*, IBCA Nos. 21, 25, 28, and 34 (Nov. 22, 1955), 62 I.D. 422, the Board was confronted with the question of interpreting the term "approximate." There the Board stated at page 434:

The plans indicated that the rock lines were "approximate." To be approximate, however, the lines would have to be close to or near to the elevations indicated on the plans, for it is in these terms that the dictionary defines the term "approximate." [12] Moreover, in a number of cases in which approximate quantities or factors have been involved in construction

¹¹The claim has been presented on the basis that for each of the eight buildings the amount of roofing installed in excess of the quantity shown in the invitation (approximately 22,000 square feet) totalled 3,706 square feet or 16.85 percent ($3706 \div 22,000$).

¹²Construing the term approximately in *Lee R. Smith*, n. 10, *supra*, the Armed Services Board stated at page 27,180: "The dictionary meaning of 'approximately' is 'very near, near to correctness, nearly exact'. It is derived from the Latin word 'proximus', meaning, 'the nearest, next' * * * The Government concedes that the actual quantity was at least 691 squares, which is substantially in excess of approximately 610 squares."

According to the figures used in calculating the amount of the equitable adjustment in the *Smith* case, the contractor involved there installed approximately 13.27 percent more roofing than had been indicated in the specifications.

contracts, the courts have held that the figure stipulated in the contract could not be unreasonably exceeded. Thus, the 1 foot 6 inches indicated on the plans as the depths of the footings were neither maximums nor minimums but approximate dimensions. [Footnote omitted.]

The parties involved in this appeal have widely divergent views as to the amount of variation connoted by the use of the term "approximately" before the 22,000 square feet of roofing estimated to be required for each of the eight buildings covered by the invitation for bids (Finding 2). To the appellant's Mr. Elliott, the term contemplates a variation from the dimensions specified of not more than 5 percent, while to the Government's witness, Mr. McAllister, the term covers a range from as low as 5 percent to as high as 25 percent of the dimensions specified (n.5, *supra*).

If we were to give effect to the higher percentage figure of 25 percent used by Mr. McAllister in his testimony, this would mean that in performing the work covered by the contract, the contractor might conceivably be required to perform as little as 132,000 or as much as 220,000 square feet of roofing¹³ for the contract price of \$199,680 (Finding 2). To accept Mr. McAllister's view of what is embraced within the term "approximately" in the circumstances of this case would

convert competitive bidding into a gambling transaction,¹⁴ where the bidder receiving the award could reap a windfall or suffer a substantial loss depending upon how much and in what direction the amount of work required varied from the Government's estimate.

The Board notes, however, that in his testimony Mr. McAllister acknowledged that the term "approximate" could be construed to mean a variation from the quantity of roofing specified by as little as 5 percent. At the hearing, Mr. Elliott recognized that the term "approximate" may involve a variation from the roofing dimensions specified in the invitation of up to 5 percent (n. 5 *supra*). On the basis of this testimony and the meaning ascribed to the terms "approximate" and "approximately" in the cases cited (n. 12, *supra* and accompanying text), the Board finds that the term "approximately" as used in the invitation for bids involved in this appeal encompasses variations from the

¹³ The 25 percent variation would involve 44,000 square feet up or down from the total estimated quantity for all eight buildings of 176,000 square feet (22,000 x 8). Multiplying the 44,000 square feet so determined by the contractor's bid price of \$113.45 per square produces the figure of \$49,918.

¹⁴ See *Peter Kiewit Sons' Co. v. United States*, 109 Ct. Cl. 517, 522-23 (1947), in which, after quoting and commenting on a specification provision which said that the estimated quantities listed in the contract schedule were to serve only as a basis for canvassing offers and for determining the approximate amount of consideration of the contract, the Court of Claims stated: "But it certainly does not mean that Article 4 of the contract which promises a modification of the contract to conform to unforeseen subsurface or latent conditions, 'or unknown conditions of an unusual nature, differing materially from those ordinarily encountered * * *' is to be canceled out of the contract. Neither does it mean that all considerations of equity and justice are to be disregarded, and that a contract to do a useful job for the Government is to be turned into a gambling transaction."

roofing dimensions specified therein of 5 percent.

We turn now to consideration of the question of the effect to be given to the provisions of the specifications relating to visits to the site. While there is a conflict in the evidence as to whether a representative of the contractor did visit the site prior to the opening of bids (Finding 7), we find it unnecessary to resolve the conflict in the circumstances present in this appeal. The material question to be decided here is whether the contractor was obligated to verify the roofing dimensions given in the invitation. In this connection, we note the absence of any contention by the appellant that it undertook to verify such dimensions in the course of the prebid visits to the site that it allegedly made.

Irrespective of whether the appellant did make a visit to the site prior to bid opening, it is chargeable with knowledge of what would have been revealed by a reasonable prebid site examination. It is not chargeable with knowledge of information, however, which would not have been disclosed had such an examination taken place. *Maverick Diversified, Inc.*, ASBCA Nos. 19838, 19955, and 20091 (Aug. 26, 1976), 76-2 BCA par. 12,104 at 58,150.

In this case Mr. McAllister testified that when he drew up the specifications he intended that the bidders would go out to the site and measure the size of the roofs and that three of the bidders did visit

the site prior to the opening of bids and did take measurements of the roofs using tapes or wheels (Findings 7 and 8).

Except in those cases where by the terms of the invitation bidders are requested to verify the dimensions given by the Government,¹⁵ it does not appear that they are required to do so or that they are chargeable with the knowledge which they might have obtained had they done so. Addressing this question in *Oren Childers Paint Contracting Co.*, ASBCA No. 14165 (June 16, 1970), 70-1 BCA par. 8340, the Armed Services Board stated at 38,808:

Because the site examination is generally limited to those matters which are usually discoverable by a visual examination, thereby precluding the necessity for resort to detailed and unusually burdensome or expensive procedures, the requirement for taking actual on-site interior measurements of numerous buildings, as suggested by the Government, appears unreasonable. Under these circumstances, the use of disclaimers, caveats or exculpatory provisions by the Government is unavailing to restrict the appellant's rights reserved under the Differing Site Conditions clause. [¹⁶]

¹⁵ *Archie and Allan Spiers, Inc. v. United States*, 155 Ct. Cl. 614 (1961), is an example of such a case. There a claim based upon misrepresentation was denied where the Court of Claims found that the contract, the specifications, and the drawings relating to a contract to rehabilitate existing pipelines on Navy piers all contained warnings that the contractor should carefully check the dimensions contained thereon.

¹⁶ In *Swauger Contractors*, IBCA-609-12-66 (July 11, 1967), 67-2 BCA par. 6430, the Board construed a clause captioned "Conditions Affecting the Work" which contained language identical to General Provision 13 (Finding 2). Concerning that clause and another exculpatory clause, the Board stated at 29,818: "Provisions such as the 'Conditions
—Continued

At page 4 of the Government's posthearing brief, the Department Counsel quotes from a reference work which says that the contractor involved in the *Lee R. Smith* case (n.10, *supra*) had made no prebid examination of the site, because such an examination would not have disclosed the quantity. This is not an accurate reading of the holding in the *Smith* case. The basis for a decision favorable to the contractor in that case was not that the contractor was unable to verify the dimensions of the roofs as he was specifically advised to do in the invitation and as he failed to do. It was rather that the effort involved in verifying the dimensions furnished by the Government would have been entirely disproportionate to the amount of the procurement. This is clear from the opinion in the *Smith* case (n.10, *supra*) from which the following is quoted:

The principle of full and free competition by formal advertising pursuant to 10 U.S.C. Section 2304 dictates that the expense of bidding not be disproportionate to the dollar amount of the procurement. When it is considered that numerous bids are received under one invitation and that bidders are called on to prepare several times as many bids as they receive awards, [17] it is unreasonable to expect a bidder to incur the time and expense of making prebid on-site measurements of 20 buildings to verify the

Affecting the Work' clause, *supra*, relied upon exclusively by the Contracting Officer in denying this claim, or the 'Examination of Project Site' clause, do not operate to eliminate the Changed Conditions clause (footnote omitted)."

¹⁷ See n.7, *supra*.

Government's quantity representation when bidding on a contract for less than \$12,000.

(66-2 BCA par. 5858 at 27,181).

The invitation for bids with which we are concerned contained no provision requiring or requesting prospective bidders to verify the dimensions of the roofs furnished by the Government in the specifications. There was no information included in the plans or specifications¹⁸ from which bidders could have determined the dimensions of the roofs on which bids were being sought. The general language contained in the "Conditions Affecting the Work" clauses and in the "Visit to Site and Site Conditions" clause (Finding 2) is not sufficient to override the language of the Differing Site Conditions clause.¹⁹

Remaining for consideration is the question of the equitable adjustment to which the contractor is en-

¹⁸ Recovery has been denied where the board concerned found that the specifications contained an explicit reference to the "extent of the work indicated in the drawings" and the number of plans was not extensive from which the appellant could have ascertained the actual area involved. *Oren Childers Paint Contracting Co.*, text, *supra*. See also *A & M Gregos, Inc.*, ASBCA No. 17347 (May 29, 1973), 73-2 BCA par. 10,129.

¹⁹ *Swauger Contractors*, n.16, *supra*; *Fehlhaber Corp. v. United States*, 138 Ct. Cl. 571, 584 (1957): "Plaintiff had a right to rely on the Government's specifications and drawings and the Government is bound by any assertions made therein notwithstanding the fact that it was stated that that data would be for information only. Moreover, this court has repeatedly held that the specifications cannot alter the effect of the specific language of the *Changed conditions* sections of the contract." (Citations omitted).

titled for the differing site conditions claimed for in this case. The appellant has acknowledged that in preparing its bid for the quantity of reroofing indicated in the specifications, it interpreted the term "approximately" as embracing a variation of up to 5 percent from the quantity specified by the Government in the invitation (Finding 9). Since this was the interpretation the appellant placed upon the terms of the invitation, it presumably included an allowance in its bid for an upward variation of 5 percent from the quantity of reroofing on which bids were solicited. In any event, we find that in such circumstances a prudent contractor would have included an appropriate allowance²⁰ in its bid price as a hedge against such a recognized contingency occurring.

Decision

1. For the reasons stated and on the basis of the authorities cited, the Board finds that the appellant is entitled to an equitable adjustment under the Differing Site Conditions

clause²¹ in the amount of \$23,655.96 for the amount of roofing in excess of the aggregate quantity of roofing represented by the Government in the specifications as required for the performance of the contract, after giving effect to a 5 percent upward variation from the quantity of roofing specified found to have been provided for in the bid submitted (Finding 9, nn. 18-20, *supra*, and accompanying text).

2. The equitable adjustment provided for herein shall also include an allowance for interest on the above-stated amount of \$23,655.96 computed in accordance with the Contract Disputes Act of 1978 from Aug. 17, 1979.

RUSSELL C. LYNCH
Administrative Judge

GREATER PARDEE, INC.

3 IBSMA 313

Decided September 24, 1981

Appeal by Greater Pardee, Inc., from the Sept. 18, 1980, decision of Administrative Law Judge David Torbett, sustaining violation 1 of Notice of Violation No. 80-2-89-27, issued for failure to pass all surface drainage from the disturbed area through a sedimentation pond or series of sedimenta-

²⁰ The quantity of roofing furnished in excess of the Government's estimate represented an increase of 16.85 percent above that specified in the invitation for bids (n.11, *supra*). The bid submitted should have included an allowance for a variation in quantity of roofing from that specified of up to 5 percent. The claimed amount of \$33,635.66 multiplied by .2967 (.05 divided by .1685) results in the dollar figure of \$9,979.70. Deducting this figure from the claimed amount of \$33,635.66 results in a net amount of \$23,655.96. This figure is over and above the 5 percent allowance presumed to have been included in appellant's bid for contemplated variations from the quantity of reroofing specified by the Government in the invitation for bids.

²¹ The relief provided is for a first category differing site condition. See *Singleton Contracting Corp.* n.9, *supra*.

tion ponds prior to leaving the permit area as required by 30 CFR 717.17(a).

Affirmed.

1. Surface Mining Control and Reclamation Act of 1977: Applicability: Initial Regulatory Program—Surface Mining Control and Reclamation Act of 1977: State Regulation: Generally

Compliance with state mining permit conditions does not excuse noncompliance with the initial Federal performance standards.

APPEARANCES: Daniel R. Bieger, Esq., Norton, Virginia, for Greater Pardee, Inc.; Courtney W. Shea, Esq., Office of the Field Solicitor, Knoxville, Tennessee, James F. Roberts, Esq., Mark Squillace, Esq., and Marcus P. McGraw, Esq., Assistant Solicitor for Enforcement, Division of Surface Mining, Office of the Solicitor, Washington, D.C., for the Office of Surface Mining Reclamation and Enforcement.

**OPINION BY THE INTERIOR
BOARD OF SURFACE MIN-
ING AND RECLAMATION
APPEALS**

Greater Pardee, Inc. (Greater Pardee), has appealed the Sept. 18, 1980, decision of Administrative Law Judge David Torbett sustaining violation 1 of Notice of Violation No. 80-2-89-27, issued for "failure to pass all surface drainage from the disturbed area through a sedimentation pond or a series of sedimentation ponds prior to leaving the permitted area" in violation of 30 CFR 717.17 (a).

In its brief to this Board, appellant contends that it had been exempted by the regulatory authority, the Commonwealth of Kentucky, from the requirement that all surface drainage pass through a sedimentation pond. It further states that it has operated in accordance with its duly authorized State permit, and is therefore not responsible for the requirements of the Federal program.

[1] These arguments are the same as those presented by appellant to the Administrative Law Judge prior to his Sept. 18, 1980, decision.¹ We have thoroughly reviewed the record and the arguments advanced by the parties. The decision of the Administration Law Judge summarizes the evidence and applicable law and fully responds to appellant's arguments. We agree with his findings and conclusions and adopt his decision as the decision of the Board. A copy of the decision is attached as Appendix A.

Accordingly, that part of the decision appealed from is affirmed.

NEWTON FRISHBERG
Administrative Judge

GREATER PARDEE, INC., APPLICANT v. OFFICE OF SURFACE MINING RECLAMATION AND EN- FORCEMENT (OSM), RESPONDENT	} Docket No. NX 0-219-R Application for Review Notice of Violation No. 80-2-89-27
---	---

DECISION

APPEARANCES: Daniel R. Bieger, Esq., P.O. Box 668, Norton, VA 24273, for Applicant; Courtney W. Shea, Esq., Office of the Field Solicitor, 530 S. Gay Street, Knoxville, Tennessee 37901, for Respondent.

BEFORE: Administrative Law Judge Torbett

PROCEDURAL BACKGROUND

In accordance with § 525 of the Surface Mining Control and Reclamation Act of 1977 (the Act), Greater Pardee, Inc., Applicant applied on July 3, 1980 for review of a notice of violation issued by the Office of Surface Mining Reclamation and Enforcement, Respondent.

A hearing was held before the undersigned on August 13, 1980 in Abingdon, Virginia. The schedule for the filing of briefs was set and these briefs have now been filed and fully considered. Where applicable parts of these briefs have been incorporated into this opinion.

FACTS

Reclamation Specialists Samuel Turner and Charles Saylor of the Office of Surface Mining conducted an inspection of the Greater Pardee, Inc., underground mine, permit no. 267-5032 on June 5, 1980. The two OSM inspectors met a representative of the mining company, Michael Fouts, at the intersection of the haulroad and a Kentucky state road. The inspectors examined the permit map and permit application package brought by Mr. Fouts and proceeded to the mine openings to conduct the inspection (Tr. 8, Resp. Ex. 1).

The surface disturbance of this underground mine consists of the two areas at the underground mine openings, connecting coal car tracks and a permitted haulroad. During the proceedings, the two underground mine opening areas were referred to as areas A and B. Area A was first described by Inspector Turner and is designated by the left yellow shaded area on Respondent's Exhibit 3 (Tr. 10).

On the date of the inspection, water was running in a culvert from the underground mine opening at Area A down a ditch line to the right of the tracks, as one is facing towards the mine opening (Resp. Ex. 5; Tr. 11-12). Some drainage crossed under the tracks at a culvert and some crossed further down at a crossover to the left side of the tracks (Resp. Ex. 6; Tr. 11-12). The drainage proceeded in a ditch down the left side of the tracks, away from the mine opening (Tr. 12-14; Resp. Ex. 7, 8, 9 and 10). The tracks are permitted for a width of ten feet. This drainage ditch was approximately on the edge of the permitted area (Tr. 19-20, 39). The drainage then crossed under the haulroad, and continued down the hollow towards a "blue line stream", the Trace Fork, without passing through a sedimentation pond (Tr. 13-14; Resp. Ex. 3).

Area B was the area surrounding the second underground mine opening, and is indicated by the uppermost yellow shade portion of Respondent's Exhibit 3. On the date of inspection, a black hose or pipe originating from inside this underground mine opening was discharging water to the right side of the disturbed area facing towards the underground mine (Tr. 14-15; Resp. Ex. 3). Also,

drainage from the uphill side of the underground mine collected in a depression to the left of the underground mine opening, and then traveled under the track through a culvert where it joined the discharge from the underground mine and continued down the hollow (Tr. 16-17; Resp. Ex. 3, 14 and 15). Nowhere at the minesite were there sedimentation ponds or silt control to control drainage resulting from precipitation falling on the disturbed area or discharges from the underground mine workings (Tr. 9, 13-14, 17, 23).

The inspectors testified that they checked the points of intersection of the permit road with the Kentucky state road and the permit road with the Virginia-Kentucky border and they could find no mine identification signs at either point (Tr. 18-19, 23; Resp. Ex. 3, 16 and 17). The inspectors did not question Mr. Fouts or any employee of the Applicant as to the location of mine identification signs. Mr. Fouts testified that a sign had been placed at the point of intersection of the permitted road with the haulroad to another minesite at the Virginia-Kentucky border (Tr. 30, 38). It was uncontested that there was no sign at the other intersection of the Kentucky state road with the permit road (Tr. 38).

The road in question is permitted from the Kentucky-Virginia boundary where it intersects the haulroad of another coal mine operation, to the first portal. The portion of the permitted road from the intersection with the Kentucky State highway, to the top of the mountain at the Kentucky-Virginia border is also a state road (Tr. 17-19, 36, 37; Resp. Ex. 3).

Notice of Violation 80-2-89-27 was issued containing two violations. Violation 1 was issued for "Failure to pass all surface drainage from the disturbed area through a sedimentation pond or a series of sedimentation ponds prior to leaving the permitted area" in violation of 30 CFR § 717.17. The remedial action given was to pass all surface drainage from

the disturbed area through a sedimentation pond or a series of sedimentation ponds prior to leaving the permitted area.

Violation 2 was issued for failure to post a mine identification sign in violation of 30 CFR § 717.12(b). The remedial action given was to post a mine identification sign at all points of access to the permitted area.

DISCUSSION AND CONCLUSIONS AS TO VIOLATION NO. 1

Violation No. 1 charged the Applicant with violating 30 CFR § 717.17 which provides in pertinent part:

"(a) *Water quality standards and effluent limitations.* All surface drainage from the disturbed areas, including disturbed areas that have been graded, seeded or planted and which remain subject to the requirements of this section, except for drainage from disturbed areas that have met the requirements of § 717.20 shall be passed through a sedimentation pond or series of sedimentation ponds prior to leaving the permit area."

This permit had a surface disturbance of nine acres (Appl. Ex. 1). It was the uncontroverted testimony of both Inspector Turner and Inspector Saylor that no sedimentation ponds existed to handle either the surface drainage from the permitted area or the discharge from the underground mine workings (Tr. 9, 14, 17, 23, 28-29).

There was testimony that at one of the underground portal areas described as area B, the uphill surface drainage was diverted underneath the permitted tracts, away from the permitted area (Tr. 16-17 and 28-29). The witness for the Applicant, Mr. Fouts, further testified that the surface drainage from off the permit area was diverted around the permit area at area A, however, no specific reference was made as to where this diversion occurred. Inspector Turner described the surface area of area A, indi-

cated the surface drainage pattern through blue arrows on Respondent's Exhibit 3, traced the discharge from the underground mine as it passed over the surface of the permit area before being discharged in Trace Fork, and described the lack of sedimentation structures to control surface drainage (Tr. 9-14, App. Ex. 4-10).

The undersigned concludes that surface drainage from the permit area did not pass through a sedimentation pond or series of sedimentation ponds.

The Applicant claims that it had been exempted by the regulatory authority, the State of Kentucky, from the requirement that all surface drainage pass through a sedimentation pond. The Respondent concedes in its brief (page 6 of Respondent's Brief) that "a regulatory authority, Kentucky in this case, could exempt an operation from that requirement that all surface drainage be passed through a sedimentation pond if it is demonstrated that the drainage area is small, and that the effluent limitations can be met without ponds. 30 CFR § 717.17(a)." Whether or not the State of Kentucky had exempted the Applicant from the requirements of 30 CFR § 717.17 is the controlling issue as to Violation No. 1.

Applicant held a surface disturbance mining permit from Kentucky for its underground mine. As Greater Pardee was an underground mine in operation before May 3, 1978 it had limited requirements necessary for it to obtain a permit under 405 KAR* 3:050. Section 4(2) states that:

"The application shall include the information described in this subsection through subsection (13) of this section, except that existing underground mining operations not engaging in new surface operations shall comply with only subsections (1), (2)(a) through (g), (3), (4) except for paragraph (c), (14) and (15) of this section."

It is uncontroverted that Greater Par-

dee, Inc. did not have to include the information set forth in 405 KAR 3:050 § 4(10) and that it was therefore exempt from submitting a surface water control and monitoring plan or demonstrating how it would comply with 405 KAR 3:130 with regard to protection of the hydrologic system.

Respondent contends that considering the permit of Greater Pardee, Inc. and the requirements of Kentucky regulations as a whole, that the exemption of Greater Pardee, Inc. from submitting certain information in its permit application was not intended to exempt it from the federal regulations requiring the passage of surface drainage through a sedimentation pond. The undersigned agrees with the contention of the Respondent.

To begin with, the Kentucky regulations regarding surface effects of underground coal mining are set forth at 405 KAR Chapter 3. A general provision of these regulations states as follows:

"Section 5. Obligations of Operators.
(1) General Obligation: (a) No person or operator shall engage in surface operations of underground coal mining without having obtained from the department a valid permit covering the area of land to be affected, except that underground mining operations existing on or before May 3, 1978, shall be August 3, 1980 make application to the department for a permit pursuant to the provisions of 405 KAR 3:050.

...
"(e) On or after May 3, 1978, any person or operator engaged in surface operations of underground coal mining shall comply with the requirements of this Chapter, except when compliance with this Chapter would preclude compliance with the requirements of Public Law 95-87, August 3, 1977/The Surface Control and Reclamation of 1977", and the regulations adopted pursuant thereto."¹

The general provisions of Kentucky regulations then provide the pre-existing underground mines should have a permit,

*Kentucky Administrative Register

¹ 405 KAR 3:020, see Exhibit "A".

and shall comply with both Kentucky and federal regulations. Section 2 of the General Provisions also provides that these regulations are to be construed as compatible with the federal regulations issued pursuant to the Surface Mining Control and Reclamation Act.² No where in the general provisions are pre-existing underground mines given exemptions from the performance standards. The only exemptions in from portions of the permitting requirements.

An examination of the Kentucky regulations setting forth permitting requirements again fails to reveal any exemption from Kentucky or federal performance standards. In fact, 405 KAR 3:050 § 1, (3) states that a permittee is not relieved of responsibility to comply with federal and state laws and regulations (Appl. Ex. 3).

Greater Pardee, Inc.'s permit contains on its face, the following statement:

"the permittee is advised that although some *planning aspects* for this mine was exempted in the application for permit, the environmental performance standards apply in addition to all applicable federal, state and local laws and regulations. [*italics added*]"

The underlined language indicates that the Responent's interpretation is correct. Kentucky exempted underground mines existing before May 3, 1978, from having to submit certain information to obtain a permit but this did not exempt an underground mine from any performance standards. Instead, the only exemption is from what submissions are necessary to obtain a permit.

The undersigned concludes that the language quoted above and contained on the face of the Applicant's permit specifically informs the Applicant that it is not exempt from the requirements of sedimentation ponds. Having previously concluded that there are no sedimentation ponds to control drainage from the Applicant's permitted area, the undersigned is of the opinion that the Respond-

ent, by a preponderance of the proof, had sustained Violation No. 1 of the Notice of Violation.

DISCUSSION AND CONCLUSIONS AS TO VIOLATION NO. 2

Violation No. 2 was written to the Applicant for failing to comply with 30 CFR § 717.12(c) which states:

"Signs identifying the mine area shall be displayed at all points of access to the permit area from public highways."

Greater Pardee, Inc. has a long permitted access road which intersects with other roads at two points. Coming from the underground mine portals, the first intersection is with a Kentucky state road. It is admitted by the Applicant's witness that no sign was posted at this point (Tr. 37-38). This is the point designated by the blue circle on Respondent's Exhibit 3, which is closer to the mine openings. It is obvious from the testimony and the exhibits that this is a point of access to the permitted road from the Kentucky state road which would be a public highway. As no sign was posted there, the violation in question was properly issued.

ORDER

It is hereby ordered that Notice of Violation No. 80-2-89-27 is sustained.

DAVID TORBETT
Administrative Law Judge

ROSS TIPPLE CO.

3 IBSMA 322

Decided September 24, 1981

Appeal by the Ross Tipple Co. from the Oct. 29, 1980, decision of Administrative Law Judge Joseph E. McGuire upholding the validity of Notice of Violation No. 78-II-7-12 and Cessation Order No. 79-II-7-9, and concluding that the appellant was engaged

² 405 KAR 3:020, see Exhibit "A".

in "surface coal mining operations" as that term is defined in 30 CFR 700.5 and, thus, subject to the jurisdiction of the Office of Surface Mining Reclamation and Enforcement.

Reversed.

1. Surface Mining Control and Reclamation Act of 1977: Tipples and Processing Plants: At or Near a Minesite—Surface Mining Control and Reclamation Act of 1977: Words and Phrases

"Surface coal mining operations." Under the facts of this case a processing plant located 22 miles from the minesite that supplies coal to it is not "at or near" the minesite within the meaning of the definition of "surface coal mining operations" in 30 CFR 700.5.

APPEARANCES: Russel Wilson, Robbins, Tennessee, for Ross Tipple Co.; Charles P. Gault, Esq., Office of the Field Solicitor, Knoxville, Tennessee, Glenda R. Hudson, Esq., and Marcus P. McGraw, Esq., Assistant Solicitor for Enforcement, Division of Surface Mining, Washington, D.C., for the Office of Surface Mining Reclamation and Enforcement.

OPINION BY THE INTERIOR BOARD OF SURFACE MINING AND RECLAMATION APPEALS

Ross Tipple Co. (Ross Tipple) has appealed the Oct. 29, 1980, decision of Administrative Law Judge McGuire upholding the validity of the enforcement action taken by the Office of Surface Mining Reclamation and Enforcement (OSM), and concluding that Ross Tipple was engaged in "surface coal mining operations" and, thus, subject to the jurisdiction of OSM.

A consolidated hearing on separate applications for review of the notice and cessation order was held on Jan. 31, 1980, in Knoxville, Tennessee. On Sept. 29, 1980, counsel for OSM advised the Administrative Law Judge that he had withdrawn his request for a supplemental hearing and further requested that a decision be prepared based upon the evidence then of record. OSM's request was granted and the Oct. 29, 1980, decision was issued accordingly.

The Administrative Law Judge's opinion in this case both sets forth the facts fully and applies the definition of "surface coal mining operations" to those facts consistently with Board interpretations of that definition before its recent decision in *Reitz Coal Co.*, 3 IBSMA 260, 88 I.D. 745 (1981). It is therefore attached in full as Appendix A.

The facts in this case do not differ sufficiently from those in *Reitz* to cause any of us to reach a different conclusion or express a different rationale than we did in *Reitz*. The Oct. 29, 1980, decision of the Hearings Division is therefore reversed and the July 31, 1979, order vacating the notice of violation and cessation order and ordering remittance of the \$2,200 civil penalty is hereby reinstated.

Department of the Interior, for
Respondent.

Before: Administrative Law Judge
McGuire.

Background

This is a consolidated proceeding under section 525(a) (1) of the Surface Mining Control and Reclamation Act of 1977 (Act),¹ following the timely filing of separate applications for review of a notice of violation and a cessation order issued by the Office of Surface Mining Reclamation and Enforcement pursuant to section 521(a) (3) of the Act, as well as a constructive request for review of a proposed civil penalty assessed in accordance with the provisions of section 518 of the Act.

On December 20, 1978, immediately following an inspection of applicant's premises, respondent issued and served upon applicant Notice of Violation No. 78-II-7-12, in which it was alleged that applicant had failed to pass all surface drainage from the disturbed area through a sedimentation pond or series of sedimentation ponds, in violation of 30 CFR 715.17(a). The required remedial action consisted of constructing a sedimentation pond or a series of sedimentation ponds, revegetating all areas disturbed by that construction, and preparing and submitting plans for permanent sediment control measures to the Tennessee De-

partment of Public Health, Division of Water Quality Control. That construction and the submission of plans were to be accomplished by 10 a.m. January 16, 1979. Applicant was assessed a proposed civil penalty of \$2,200 on January 16, 1979, and on February 26, 1979, applicant's application for review of Notice of Violation No. 78-II-7-12, together with its check in full payment of the proposed \$2,200 civil penalty, was received in the Hearings Division, Office of Hearings and Appeals. Although applicant did not formally request a review of the proposed civil penalty or otherwise comply with the requirements of 43 CFR 4.1152 at the time of submitting its \$2,200 check, that request for relief will be implied in order to grant applicant the widest range of relief affordable under the Act and the procedural rules.

On January 25, 1979, because of inclement weather, applicant requested and received an extension of the abatement period to 10 a.m. EST on February 22, 1979. On the latter date the abatement period was again extended for the same reason to 10 a.m. on March 21, 1979. The final inspection on that date resulted in respondent issuing and serving upon applicant Cessation Order No. 79-II-7-9 for the alleged failure to abate the conditions for which it had been previously cited. That cessation order was terminated on March 29, 1979. On April 19, 1979, applicant filed an application for review of that cessation order and on May 1, 1979, respondent filed a motion to consolidate. That motion was granted on May 10, 1979, and applicant's separate applications and request for review were ordered con-

¹ 91 Stat. 445, 511; 30 U.S.C.A. § 1275(a) (1) (Supp. I 1977).

solidated for purposes of hearing and decisionmaking.

After due notice, the consolidated hearing on applicant's separate applications and request for review was held as scheduled before the undersigned on June 19, 1979, in Knoxville, Tennessee. On July 31, 1979, the undersigned issued a written decision in which Notice of Violation No. 78-II-7-12 and Cessation Order No. 79-II-7-9 were ordered vacated and the proposed civil penalty amount, \$2,200, was ordered to be remitted to the applicant, with interest at the rate of 6 percent or at the then prevailing Department of the Treasury rate, whichever was greater. The order in that decision was based upon the June 22, 1979, ruling of the Interior Board of Surface Mining and Reclamation Appeals (Board) in *Western Engineering, Inc.*, 1 IBSMA 202, 86 I.D. 336 (1979).

Respondent filed a timely notice of appeal, or alternatively, a petition for discretionary review, with the Board on September 7, 1979. On September 18, 1979, the Board issued its order granting respondent's petition for discretionary review. On October 26, 1979, respondent filed a motion to remand for further proceedings, together with its brief in support thereof. On December 3, 1979, the Board issued an order of remand in *Ross Tipple Co.*, 1 IBSMA 303 (1979), in which it was announced that, in deciding the *Western* case, it was the Board's intention that whether an operation is regarded as a "surface coal mining operation" depended upon the particular factual circumstances of each case. Accordingly, the matter was remanded to the undersigned so that a decision could be prepared based upon the particular facts of this case. Respondent filed a motion on December 17, 1979, in which it requested a supplemental hearing for the purpose of adducing additional evidence.

The requested hearing was scheduled on January 31, 1980, in Knoxville, Tennessee. The undersigned and respondent's counsel appeared at the scheduled hearing, but weather conditions prevented the

appearance of Russell Wilson of the applicant firm. Counsel for respondent advised that the additional evidence would be secured by way of discovery rather than by eliciting hearing testimony. However, on September 29, 1980, respondent's counsel advised the undersigned by letter that he had withdrawn his request for a supplemental hearing and further requested that a decision be prepared based upon the evidence then of record. Respondent's request was granted and this decision prepared accordingly.

Summary of Evidence

The oral and documentary evidence presented at the June 19, 1979, hearing furnished the following facts.

Russell Walter Wilson, age 26, testified that he received his Bachelor of Science degree in Business Administration from the University of Tennessee in 1975. He is the president and owns 50 percent of the outstanding stock of Ross Coal Company, a closely-held Tennessee corporation incorporated in 1976 or 1977. The remaining shareholder and only other officer of that corporation is Charles Ross. On June 6, 1977, he formed a partnership with the same Charles Ross and a third person, Russell Troxel, in order to do business as Ross Tipple Company. Ross Coal Company operates a surface coal mine in Scott County, Tennessee, and Ross Tipple Company is located in Robbins, Tennessee, some 22 miles distant. On December 12, 1977, Ross Coal Company, then described in the pertinent lease agreement as a copartnership consisting of Charles Ross and Russell Wilson, entered into a lease with The Cincinnati, New Orleans and Texas Pacific Railway Company, an Ohio corporation, to occupy and use as a tipple a triangularly shaped parcel of land, measuring 1.81 acres, of the latter firm's right-of-way property in Robbins, Tennessee.

The tipple operation is located on land adjacent to tracks of the Southern Railway Company and has a rail spur that will accommodate at least forty-five 100-ton railroad coal hauling cars. It is

manned by three employees and the tipple's equipment includes a scale house, conveyor belt, crusher, and loading ramps. Coal shipments received total some 3,000 tons weekly, equally divided between receipts from Ross Coal Company and another firm for which it processes and loads coal for interstate shipment in single 100-ton car lots to nearby Tennessee Valley Authority plants in Tennessee and other consignees in Georgia and South Carolina. However, on the date of the issuance of the pertinent notice of violation Ross Coal Company was supplying all of the coal processed at Ross Tipple Company.

During February and March 1979, two temporary sedimentation ponds were built on the tipple premises and on March 16, 1979, engineering plans were submitted to the Tennessee regulatory authority as part of applicant's original application for a coal tipple discharge permit. Those plans contained the information that the maximum daily surface discharge would be 2,500 gallons and that the average daily surface discharge was estimated at 250 gallons. Two permanent sedimentation ponds, being 0.94 acre and 0.4 acre in size, respectively, were provided for, as well as a drainage ditch to be constructed around the perimeter of the drainage area in order to control all runoff and cause it to pass through those sedimentation ponds. The applicant firm further stated in that application that the affected area would be revegetated immediately upon completion according to the reclamation rules and regulations covering revegetation activities. The State regulatory authority advised applicant of several deficiencies in the plans submitted on March 16, 1979, and applicant submitted amended engineering plans on June 18, 1979, the day prior to the hearing. At the time of the hearing the applicant firm was awaiting approval of that amended application. Mr. Wilson further testified that on March 21, 1979, the date upon which Office of Surface Mining Inspector Stephen Davis con-

ducted his final inspection and issued the cessation order, the appropriate remedial measures had been taken on the disturbed areas.

Kenny Totty, conservation engineer for Ross Tipple Company and Ross Coal Company, testified that in February or March 1978 he consulted with Nick Wright and Dewey Henry, both of whom then worked as biologists for the State regulatory authority, Tennessee Department of Public Health, Division of Water Quality Control, concerning the construction of sedimentation ponds. They advised him that none were necessary, owing to the small amount of acreage upon which the tipple operation was being conducted. Messers. Wright and Henry further advised him that the surface discharge could be effectively controlled by the use of crushed limestone rock at the points of discharge in the tipple area.

Stephen H. Davis testified that he holds an Associate of Arts Certificate in Forestry from the University of Kentucky and had been employed for some 14 months as a reclamation specialist supervisor at the Office of Surface Mining. He had been previously employed for 6½ years at the Tennessee Valley Authority as a reclamation inspector of surface and deep mines. On December 20, 1978, accompanied by Gary Chitwood, the foreman at Ross Tipple Company, he inspected applicant's tipple facility in Scott County, Tennessee, and cited applicant for failure to have the required sediment controls. It was noted that the applicant's triangularly shaped leased site was bounded on one side by a ditch some 3 feet deep which separated the tipple yard from the main rail line. Some of the coal, which had been stockpiled close to that ditch, had fallen into the ditch and coal dust was washing into it, also. The ditch ran some 200-300 yards before draining into a small stream nearby. He noted limestone piled some 2 feet high across the ditch at the point it left the coal storage yard. Except for that ditch there

were no drainage features and consequently rain would have caused drainage over, through, and away from the tipple area without having passed through a sedimentation pond. The limestone rock was heavily stained with iron deposits and small pools of water were observed in the ditch. When tested in the presence of Gary Chitwood, the water in these pools showed a pH factor of 4.5, or well below the minimum regulatory pH factor of 6.0, and when tested for iron, the reading exceeded the scale of the testing instrument. He observed massive amounts of iron and coal dust in the water that had been discharged from the tipple area and stated that this discharge would detrimentally affect the lower forms of the food chain, such as minnows, in nearby streams.

The tipple operation affected an additional area estimated as being some four-tenths (0.4) of an acre in size beyond the area leased for the tipple operation, owing to applicant's storage of spoil in that area. He felt that applicant's violation of 30 CFR 715.17(a) was negligent, as opposed to willful, and granted applicant until January 26, 1979, to abate the conditions. Inclement weather caused him to extend the period to February 22, 1979, initially, and eventually to March 21, 1979. On reinspecting the tipple area on the latter date he observed that all remedial work had not been completed, despite adequate periods of good weather during which that work could have been done. Because 30 CFR 722.12(d) provides that the total time for abatement as originally fixed and subsequently extended shall not exceed 90 days, he issued a cessation order on that date. He felt that the applicant firm had cooperated in abating the violation but that it had not taken extraordinary measures to do so.

Issues

The threshold issue presented by these facts is that of determining whether the activities of the applicant firm are subject to the enforcement authority of

OSM. That will depend upon whether its tipple operations are viewed as "surface coal mine operations," as that term is defined in section 701(28) of the Act² as well as in section 700.5 of the regulations.³ Should that issue be resolved affirmatively, five additional issues are suggested: (1) whether the pertinent notice of violation was properly issued; (2) whether the pertinent cessation order was properly issued; (3) whether the amount of the proposed civil penalty, \$2,200, is appropriate under these facts; (4) whether OSM has jurisdiction to enforce the Act and regulations under these facts, since, as applicant contends, its tipple operation was conducted on leased premises less than 2 acres and thus excluded from coverage under section 700.11(b) of the regulations;⁴ and (5) whether the activities of the applicant firm, if found to be in violation of the interim regulations, can be excused for the reason that applicant relied upon the statements of two former State regulatory employees to the effect that, owing to the size of the applicant's lease premises, no sedimentation ponds were required.

Discussion, Findings, and Conclusions

The construction of the term "surface coal mining operations" as it relates to coal loading facilities, tipples and preparation and/or processing plants, has been the principal issue in six Board rulings. The initial case was that of *Western Engineering, Inc., supra*. The applicant therein operated a river terminal at which coal was received from 8 to 10 mines located some 10 to 60 miles from that facility. It processed the coal and loaded it onto river barges for interstate shipment. The status of Western was found to be that of a contract handler of coal because it did not own, lease, or operate any coal mines, nor did it take

² 91 Stat. 445, 516; 30 U.S.C. § 1291(28) (Supp. I 1977).

³ 30 CFR 700.5.

⁴ 30 CFR 700.11(b).

title to any product it processed and loaded.

OSM had issued a cessation order for failure to abate conditions which allegedly violated the Act and Western sought temporary relief from that cessation order, urging that it was not subject to OSM's jurisdiction because it was not engaged in "surface coal mining operations," per se. In denying the application for temporary relief and finding that the tipple operator therein was engaged in "surface coal mine operations," the undersigned prepared and issued a written decision, dated March 7, 1979, in which it was held that Western's operation of that river terminal should be regarded as a "surface coal mining operation" for the reason that, where administrative powers are granted for the express purpose of effectuating broad regulatory programs which are deemed to be essential to the public welfare, the statutory interpretation given to the provisions of the Act should be that which insures that the full benefits of the legislation, as expressed in section 102 of the Act,⁵ can be realized. This was accomplished by so interpreting the definitional language at issue therein. Although the terms "coal loading facility," "tipple," "coal processing plant," "coal preparation plant," or similar terms were not used definitionally in the Act or regulations, those type facilities are recognized to be such integral components of the surface coal mining industry that Congress logically and pragmatically would almost certainly have intended that operations and activities of that type be covered under the Act and the regulations. However, the Board, in its June 22, 1979, reversing decision, declared at page 204:

"We find that since the definition of "surface coal mining operations" in the Act and regulations is ambiguous as it applies to Western's operations, and since it is not clear from the provisions of the ini-

tial regulatory program, taken as a whole, that operations such as Western's were intended by the Secretary to be subject to those provisions, the decision of the ALJ must be reversed."

There followed for Board review five cases involving the same central issue but presenting varying factual situations. Without particularizing the facts in each of those cases, the most recent of which was decided by the Board on September 26, 1980, in *Roberts Brothers Coal Co., Inc.*, 2 IBSMA 284, 87 I.D. 439 (1980), the facts of the instant case will be reviewed and the rulings of the Board applied. In its post-*Western* decisional activity in this area, the Board has announced that before a coal loading facility, a tipple, or a coal preparation and/or processing plant can be considered to be a "surface coal mining operation" and thus subject to OSM's jurisdiction, it must pass a two-part test: (1) its activities must be conducted in connection with a surface coal mine, and (2) the facility in question must be located at or near the minesite. *Drummond Coal Co.*, 2 IBSMA 96, 87 I.D. 196 (1980). The instant facts will now be analyzed to determine if the tipple facility was being conducted "in connection with" a surface coal mine and, if so, whether that the tipple facility was located "at or near the minesite."

The evidence discloses that on December 20, 1978, the issuance date of the relevant notice of violation, all of the coal processed at the Ross Tipple Company facility came from one mine, which was owned by Ross Coal Company. Ross Tipple Company has been described in the evidence as being a partnership formed on June 6, 1977, in order to operate the tipple in question. The partners were Russell Wilson, Charles Ross, and Russell Troxel. Meanwhile, Ross Coal Company was described in the testimony of Russell Wilson as being a closely-held Tennessee corporation which was incorporated in 1976 or 1977. The only officers and shareholders of that corporation were Russell Wilson, its president and 50 percent

⁵ 91 Stat. 445, 449; 30 U.S.C. § 1202 (Supp. I 1977).

shareholder, and Charles Ross, the remaining officer and thus the remaining 50 percent shareholder. Although Ross Tipple Company, the partnership, reportedly operated the tipple facility, it did not lease the 1.81-acre parcel on which the tipple facility is located. Instead, on December 12, 1977, Ross Coal Company, the corporate entity, but described in the written lease agreement as a copartnership consisting of Russell Wilson and Charles Ross, entered into a lease with the Cincinnati, New Orleans and Texas Pacific Railway Company, an Ohio corporation, to occupy and use as a tipple a parcel of land some 1.81 acres in size and located in Robbins, Tennessee (Applicant's Exh. 1).

In any event, aside from the forms of business entities that were chosen by Messrs. Russell Wilson and Charles Ross, one may very reasonably assume that Ross Coal Company and Ross Tipple Company were commonly owned. It has been previously noted that on the date of the issuance of the pertinent notice of violation, all coal processed at the Ross Tipple Company facility had been mined at the Ross Coal Company mine located some 22 miles away. Accordingly, common ownership and use of the tipple activity and that surface coal mine have been shown. In deciding *Drummond Coal Co., supra*, on June 3, 1980, the Board announced that the common ownership and use of an activity, such as a coal processing facility/plant and a surface coal mine, would be a sufficient basis for satisfying the connection test and thus the operation of such an activity, coupled with the operation of a surface coal mine, would be found to be conducted "in connection with" a surface coal mine. On that basis, I find that on December 28, 1979, the tipple facility operated by Ross Tipple Company was being operated in connection with the surface coal mine operated by Ross Coal Company.

The remaining inquiry involves whether that tipple operation was also being conducted "at or near the minesite," given the fact that some 22 miles sepa-

rated their respective locations. In that same ruling, *Drummond Coal Co., supra*, the Board also found that the preparation plant therein was located "near" the pertinent minesite since the jointly owned active mining pits were located within 30 miles. Therefore, I find that this tipple facility located some 22 miles from the commonly owned strip mine, was located "near" that minesite, thus falling within OSM's enforcement authority inasmuch as the applicant firm was engaged in "surface coal mining operations" as that term is defined in the Act and the regulations.

In deciding the second issue, that of determining whether respondent properly issued Notice of Violation No. 78-II-7-12, alleging one violation of the regulations, i.e., 30 CFR 715.17(a), the evidence will be examined to determine if the required measure of proof has been offered. Respondent's burden of proof is set forth in the procedural regulations at 43 CFR 4.1171:

"(a) In review of section 521 notices of violation or orders of cessation or the modification, vacation, or termination thereof, including expedited review under § 4.1180, OSM shall have the burden of going forward to establish a prima facie case as to the validity of the notice, order, or modification, vacation, or termination thereof.

"(b) The ultimate burden of persuasion shall rest with the applicant for review."

A review of the testimony of the OSM inspector, Stephen H. Davis, discloses that the applicant firm had failed to install the required sedimentation pond(s) in order that all surface drainage from the disturbed area would have passed through a sedimentation pond or a series of sedimentation ponds before leaving the permit area, as required by 30 CFR 715.17(a). Applicant did not rebut that fact. Instead, its evidence disclosed that the sedimentation pond(s) had not been constructed because in reaching that decision it relied upon informal and inaccurate advice received from two former employees of the appropriate State regulatory authority. Respondent's evidence convinc-

ingly showed that there was surface drainage, that it did not pass through a sedimentation pond, and that the drainage left the disturbed area. This quantum of evidence, if not rebutted, is sufficient to establish a violation of 30 CFR 715.17 (a), *Black Fox Mining & Development Corp.*, 2 IBSMA 277, 87 I.D. 437 (1980). After reviewing the evidence addressed to this issue, I find that Notice of Violation No. 78-II-7-12, dated December 20, 1978, was properly issued.

The next issue outlined is that of determining whether Cessation Order No. 79-II-7-9, dated March 21, 1979, was properly issued. Under the terms of the pertinent notice of violation the applicant firm was granted until 10 a.m. EST on January 26, 1979, to complete the specific remedial action and thus abate the violative conditions. Inclement weather caused the abatement period to be twice extended to March 21, 1979, or some 90 days after the issuance date of the notice of violation. Inspector Davis testified that because there were adequate periods of good weather in which the remedial work could have been performed and because of the further fact that section 722.12 of the regulations⁶ does not permit the period for abatement to be extended beyond 90 days, he issued the pertinent cessation order on March 21, 1979, because his inspection of the applicant firm's tittle facility on that date revealed that the required remedial work had not been completed and that the offending conditions had not been abated. This testimony was not rebutted by the applicant firm. Because the violation had not been abated at the time the cessation order was issued on March 21, 1979, this finding alone is sufficient to sustain the issuance of the pertinent cessation order, *Hayden & Hayden Coal Co.*, 2 IBSMA 238, 241, 87 I.D. 414 (1980). Based upon that ruling as well as on the provisions of section 521(a)(3) of the Act⁷ and sec-

tion 722.13 of the regulations,⁸ I find that Cessation Order No. 79-II-7-9, dated March 21, 1979, was properly issued.

The third issue involves the appropriateness of the \$2,200 civil penalty assessed. Under 43 CFR 4.1155, OSM has the burden of going forward to establish a prima case and the ultimate burden of persuasion as to be fact of violation and as to the amount of the penalty. A prima facie case will have been made if respondent has presented sufficient evidence to establish essential facts which, if uncontroverted, would permit, if not compel, a finding in favor of OSM. *Burgess Mining and Construction Corp.*, 1 IBSMA 293, 298, 85 I.D. 656, 658 (1979); *James Moore*, 1 IBSMA 216, 223, 86 I.D. 369, 373 (1979); *Dean Trucking Co., Inc.*, 1 IBSMA 229, 337, 86 I.D. 437 (1979). Since the fact of violation has been ruled upon previously in this decision in respondent's favor, the inquiry to be presently commenced will be that dealing solely with the appropriateness of the amount of the civil penalty.

Evidence in support of the appropriateness of the civil penalty took the form of the hearing testimony of OSM Inspector Stephen H. Davis. In addition, respondent placed in evidence a copy of the January 16, 1979, proposed assessment of penalty notice sent to the applicant firm by respondent's Assessment Office in Washington, D.C., including the method of computing the 42 penalty points, which resulted in a proposed civil penalty of \$2,200 (Respondent's Exh. F). Respondent's Assessment Office assigned 42 total assessment points in the following manner: No points were assessed because of previous violations, 30 total points were assessed because of the seriousness of the violation, that is, 15 points owing to the probability of occurrence and 15 points arising out of the extent of potential or actual damage, 12 points were assessed because of applicant's negligence and no

⁶ 30 CFR 722.12.

⁷ 91 Stat. 445, 504; 30 U.S.C. § 1271(a) (1) (Supp. I 1977).

⁸ 30 CFR 722.13.

points were added nor was there any point reduction based upon applicant's show of good faith.

Because no prior violations by applicant were shown, no penalty points were properly assigned under that criterion. The respondent properly assigned 15 penalty points owing to the probability of occurrence of the event intended to be prevented, namely, water pollution caused by the failure to install sedimentation ponds because that condition had, in fact, occurred and section 723.12 of the regulations⁹ provides for that total point assessment in that event. Regarding the assessment of the maximum 15 penalty points because of the extent of potential or actual damage, section 723.12(c) (2) (ii) of the regulations¹⁰ provides that 8 to 15 points shall be assigned if the damage or impact against which the violated standard is designed to prevent would extend outside the permit area. Respondent did not abuse its discretion in assessing 15 points on that basis because the evidence disclosed that the damage or impact had occurred beyond the permit area. Finally, the imposition of 12 assessment points for negligence is in order because an assessment of 13 through 25 penalty points requires a finding of a greater degree of negligence and the record does not show that applicant's violation of the regulation was reckless, knowing, or intentional. Therefore, I find that the assessment of 42 penalty points, converted to a civil penalty assessment of \$2,200, by the use of the conversion schedule contained in 30 CFR 723.13, was appropriate under these facts.

The gravamen of the next issue is the physical size of applicant's tippie facility premises. Applicant urges that its tippie operation is conducted on leased premises measuring some 1.81 acres, as shown by the copy of the pertinent lease (Applicant's Exh. 1) and thus is excluded from the Act's coverage, owing to the wording

of 30 CFR 700.11(b), which applicant contends is exclusionary as applied to areas measuring 2 acres or less. An orderly discussion of this contention requires an examination of that section of the regulations. 30 CFR 700.11(b) in its entirety provides that: "The regulations in this chapter apply to all surface coal mining and reclamation operations except * * * (b) The extraction of coal for commercial purposes where the surface mining and reclamation operation affects two acres or less * * *."

The applicant's argument is flawed in two respects. Initially, Ross Tipple Company was not engaged in the extraction of coal, per se, but rather as the operator of a tippie. Instead, Ross Coal Company, the commonly-owned enterprise, mined the coal. Secondly, this surface mining operation disturbed an area in excess of 2 acres inasmuch as the unrebutted testimony of the OSM inspector revealed that an area measuring some four-tenths (0.4) of an acre beyond the leased premises was being utilized as a spoil storage area, thus increasing the disturbed area to at least 2.21 acres, not considering the additional area represented by the water in the nearby stream affected by the entry of the unimpounded surface drainage. For either of the foregoing reasons, applicant has misplaced its reliance on 30 CFR 700.11(b) as relieving it of liability under the Act.

The final issue presented involves applicant's contention that, if its activities are found to be in violation of the Act or the regulations, its reliance upon the informal advice of two former State regulatory employees to the effect that the size of applicant's leased premises relieved it of the duty to install the required sedimentation ponds, should be viewed as an exculpatory factor. Applicant has failed to furnish authority, either in the Act, the regulations, or decisionally, which would entitle it to such consideration, and a search of those sources by the undersigned has proven unproductive. Accordingly, because it

⁹ 30 CFR 723.12.

¹⁰ 30 CFR 723.12(c) (2) (ii).

lacks statutory, regulatory, or decisional basis, this unsupported argument must be rejected as being without merit.

In summary, I find that on December 20, 1978, Ross Tipple Company, as the operator of the involved tipple facility, was engaged in "surface coal mining operations," as that term is defined in the Act and in the regulations; that Notice of Violation No. 78-II-7-12 and Cessation Order No. 79-II-7-9 were properly issued; that the \$2,200 civil penalty was appropriately assessed; that the physical size of applicant firm's tipple facility, as utilized, did not deprive OSM of enforcement jurisdiction; and finally, that applicant firm's activities, otherwise violative of the Act and the regulations, cannot be condoned because it received and acted upon improper advice.

Order

Applicant's separate applications for review of Notice of Violation No. 78-II-7-12, dated December 20, 1978, and Cessation Order No. 79-II-7-9, dated March 21, 1979, as well as its constructive request for review of the proposed civil penalty, are denied. It is further ordered that the sum of \$2,200, based upon 42 penalty points, is the total appropriate civil penalty for the two violations set forth in Notice of Violation No. 78-II-7-12.

The previous order of the undersigned, entered as part of the decision dated July 31, 1979, is hereby set aside and superseded by this order.

JOSEPH E. MCGUIRE

Administrative Law Judge

Appeal Information

This decision may be appealed in accordance with 43 CFR Subtitle A, Part 4, Subpart L, section 4.1100-4.1296, Special Rules to Surface Coal Mining Hearings and Appeals, by filing a notice of appeal and/or a petition for discretionary review within 30 days from receipt

of this decision with the Board of Surface Mining and Reclamation Appeals, U.S. Department of the Interior, 4015 Wilson Boulevard, Arlington, Virginia 22203.

MOUNTAIN ENTERPRISES COAL CO.

3 IBSMA 338

Decided September 25, 1981

Appeal by Mountain Enterprises Coal Co., from a decision of Administrative Law Judge Tom M. Allen in Docket No. CH 0-236-R that affirmed the validity of Notice of Violation No. 80-I-47-23, issued to the appellant for allegedly failing to eliminate all highwalls where mining reaffected previously mined lands that were not restored to the approximate original contour, in violation of 30 CFR 715.14(b) (1). Appellant likewise appeals from the modification of the Administrative Law Judge's decision by Board order dated Sept. 18, 1980.

Affirmed as modified.

1. Surface Mining Control and Reclamation Act of 1977: Backfilling and Grading Requirements: Previously-mined Lands

The backfilling and grading requirements of 30 CFR 715.14 apply to previously mined lands where surface coal mining operations result in an adverse physical impact to the preexisting highwall which is reaffected by such operations.

2. Surface Mining Control and Reclamation Act of 1977: Initial Regulatory Program: Generally—Surface Mining

Control and Reclamation Act of 1977: State Regulation: Generally

Compliance with state mining permit conditions does not excuse noncompliance with the initial Federal performance standards.

3. Estoppel

Failure to disavow a state memorandum implying OSM approval of its contents or failure to object to the issuance of a state permit containing terms inconsistent with Federal regulations does not constitute action that estops OSM from taking an enforcement action.

APPEARANCES: Benjamin F. Sutherland, Esq., Clintwood, Virginia, for Mountain Enterprises Coal Co.; Harold Chambers, Esq., Office of the Field Solicitor, Charleston, West Virginia, Marianne D. O'Brien, Esq., and Marcus P. McGraw, Esq., Assistant Solicitor for Enforcement, Division of Surface Mining, Office of the Solicitor, Washington, D.C., for the Office of Surface Mining Reclamation and Enforcement.

OPINION BY THE INTERIOR BOARD OF SURFACE MINING AND RECLAMATION APPEALS

Mountain Enterprises Coal Co. (Mountain Enterprises) has appealed the Aug. 28, 1980, decision of Administrative Law Judge Tom M. Allen upholding the issuance of Notice of Violation No. 80-I-47-23, which charged Mountain Enterprises with failure to eliminate all highwalls where mining has re-affected previously mined lands that were not returned to the approximate original contour, in violation of 30 CFR 715.14(b)(1).

For the reasons set forth below we affirm the Administrative Law Judge as modified by this decision.

Procedural and Factual Background

On Dec. 12, 1978, the deputy director of the Virginia Division of Mined Land Reclamation (DMLR) issued a directive to "[a]ll Coal Operators and Engineers." It stated that the Commissioner of the DMLR, "after consulting with the Office of Surface Mining personnel," had outlined the DMLR's "policies and interpretations" concerning second mining on preexisting highwalls. It read in pertinent part:

Additional Cut on Pre-Existing Highwalls

In situations when an operator wishes to take an additional cut on a pre-existing highwall and it is not economically feasible to take a large enough cut to obtain the necessary amount of material to completely eliminate the entire highwall then the following procedures are to be followed:

* * * * *

When an operator wishes to take an additional cut on a pre-existing highwall, the operator will be required to eliminate the highwall to the maximum extent possible. A determination will be made on a site specific basis based upon detailed plans submitted to the Division. [Italics supplied.]

On July 30, 1979, Mountain Enterprises applied to the DMLR for issuance of a surface mining permit. The permit application stated that Mountain Enterprises "plans to take an additional cut on the existing highwall left by previous

September 25, 1981

mining of the Clintwood seam by Stabeth, Inc.”¹ Stabeth had left an unreclaimed highwall ranging in height from 60 to 80 feet for a distance of about 1.5 miles. On Aug. 27, 1979, DMLR approved the application and issued permit 3066 to the appellant. The regrading portion of the permit provided that all material was to be hauled back behind the mining operation to eliminate the existing highwall “as much as possible” (Respondent Exh. 1-C at 2). OSM received a copy of this permit on Aug. 30, 1979. Mining operations began after approval of the permit and terminated in March 1980. Reclamation continued until September 1980.

When appellant’s operation was inspected by OSM in September and October 1979, it was not cited for a violation. In October and November 1979 the Office of Surface Mining Reclamation and Enforcement (OSM) reviewed all permits issued by DMLR which OSM considered not to conform with the requirements of the Act.² This in-

cluded Mountain Enterprises’ permit because it authorized only partial reclamation of the highwall. DMLR was notified by OSM of all instances in which permits issued by DMLR did not conform to OSM’s interpretation of the Act and regulations. OSM assumed the position in discussions with DMLR that an operator would be cited by OSM if it was operating in compliance with a Virginia permit but not with the Federal regulations. A review of the record indicates that no Virginia operators, including Mountain Enterprises, were notified of OSM’s position, either by DMLR or by OSM.

On June 24, 1980, the OSM inspector visited the site for the purpose of discussing the highwall with appellant’s reclamations specialist and indicated that partial restoration of the highwall would probably be insufficient for purposes of compliance with Federal standards. On July 22, 1980, the inspector returned and issued Notice of Violation No. 80-I-47-23, which charged appellant with failing “to eliminate all highwalls where mining has reaffected previously mined lands that were not restored to the approximate original contour,” in violation of 30 CFR 715.14(b)(1).

The inspector testified that appellant partially reclaimed most of the preexisting highwall so that it had been reduced in those areas to a height of 40 to 60 feet (Tr. 98). In some areas the preexisting highwall was not affected. (Tr. 91). In other areas the highwall had been com-

¹ The “Operations” section of the permit application states in part that:

“Since this operation will consist of taking an additional cut on a preexisting highwall, all overburden will be retained on the solid portion of the existing Clintwood bench, and all highwalls will be eliminated to the *maximum extent possible*. The extent of highwall elimination will vary throughout the area due to the varying heights of the existing highwall.” (App. Exh. 7) (italics supplied).

“The highwall will be completely eliminated and covered with spoil except in those cases where an additional cut is taken on a preexisting highwall and the highwall will be eliminated to the *maximum extent possible* with available material.”

(App. Exh. 8) (italics supplied).

² Act of Aug. 3, 1977, 91 Stat. 445, 30 U.S.C. §§ 1201-1328 (Supp. II 1978).

pletely eliminated. The inspector found that approximately 1,000 linear feet of unreclaimed highwall remained (Tr. 99). The evidence also shows that approximately 3 feet of spoil had been spread upon the bench for a distance of 150 to 250 feet from the face of the highwall toward the downslope.

On Aug. 18 and 22, 1980, respectively, appellant applied for review and temporary relief. On Aug. 28, 1980, the Administrative Law Judge issued a written decision affirming the notice of violation and denying the application for temporary relief. On Sept. 15, 1980, both appellant and OSM filed notices of appeal. OSM also moved to vacate that part of the decision which prohibited and enjoined OSM from requiring remedial action to abate the notice of violation and from assessing a civil penalty.

On Sept. 18, 1980, the Board issued an order granting OSM's motion and vacating the Administrative Law Judge's suspension of reclamation activities and imposition of civil penalties until the Board decided the issue on appeal, dismissed OSM's appeal and denied appellant's motion to vacate the imposition of penalty points. Both parties filed timely briefs with the Board.

Discussion and Conclusions

As a preliminary matter, Mountain Enterprises has appealed the Board's Sept. 18, 1980, order. 43 CFR 4.1116 provides that the filing of an application for review does

not stay a notice of violation or cessation order. If temporary relief is not granted in accordance with sec. 525(c), 30 U.S.C. § 1275(c) Supp. II 1978), as it was not by the Administrative Law Judge in this case, then the remedial action called for by the Notice of Violation, and the assessment of civil penalties based on it, cannot be stayed. *See Atomic Fuel Co., Inc.* 3 IBSMA 287, 88 I.D. 824 (1981).

Mountain Enterprises was issued Notice of Violation No. 80-I-47-23 which charged a violation of 30 CFR 715.14. That section provides in relevant part:

In order to achieve the approximate original contour, the permittee shall, except as provided in this section, transport, backfill, compact (where advisable to ensure stability or to prevent leaching of toxic materials), and grade all spoil material to eliminate all highwalls, spoil piles, and depressions.

[1] In *Cedar Coal Co.*, 1 IBSMA 145, 86 I.D. 250 (1979), and *Miami Springs Properties*, 2 IBSMA 399, 87 I.D. 645 (1980), the Board has addressed the applicability of this requirement when previously mined land is involved. These cases make clear that the issue is whether the new mining has had an adverse physical impact on the orphaned highwall. *Cedar Coal Co.*, 1 IBSMA at 155, 86 I.D. at 256; *Miami Springs Properties*, 2 IBSMA at 403, 87 I.D. at 647.

Appellant argues that *Cedar* supports its partial reclamation of newly created highwall, and that such partial reclamation conforms

to the purpose of the Act.³ However, the facts of this case are readily distinguishable from those in *Cedar*. In that case, the Board found that the operator removed overburden from the base of the orphaned highwall, which resulted in new highwall exposure. There was no showing, however, that Cedar's removal of overburden resulted in any adverse physical impact on the orphaned highwall. In this case the orphaned highwall was not merely affected, it was removed. As the Administrative Law Judge found, Mountain Enterprises' additional cuts created a new highwall face some 60 feet back from the original face of the preexisting highwall (Decision at 4). Although some dispute exists as to whether all available material was used to eliminate the new highwall,⁴ it is nevertheless uncontroverted that it was not eliminated.

[2] Appellant's permit called for the elimination of the highwall to the "maximum extent possible" with available material. This procedure was approved by the DMLR in its directive dated Dec. 12, 1978. How-

³ See sec. 102(h) of the Act, which provides:

"It is the purpose of this Act to—

"(h) promote the reclamation of mined areas left without adequate reclamation prior to the enactment of this Act and which continue, in their unreclaimed condition, to substantially degrade the quality of the environment, prevent or damage the beneficial use of land or water resources, or endanger the health or safety of the public." 30 U.S.C. § 1202(h) (Supp. II, 1978).

⁴ OSM asserts that appellant trucked approximately 600 tons of overburden from permit 3066 to adjacent permit 2420, using this material to eliminate highwall on permit 2420 and to construct the hollow fill (Brief at 3).

ever, the evidence shows that approximately 3 to 4 feet of spoil had been spread upon the bench for a distance of 150 to 250 feet outward from the face of the highwall toward the downslope. Even if such reclamation could be deemed to comply with the grading requirements contained in the Virginia permit, or was otherwise authorized by the State, as Mountain Enterprises asserts (Tr. 29, 34, 55), it was inadequate to comply with 30 CFR 715.14 (b) (1), which provides in part:

The requirements of this paragraph may be modified by the regulatory authority where the mining is re-affecting previously mined lands that have not been restored to the standards of this section and sufficient spoil is not available to return to the slope determined according to paragraph (a) (1). Where such modifications are approved, *the permittee shall, as a minimum, be required to—*

* * * * *

(ii) Backfill and grade to *the most moderate slope possible* to eliminate the highwall which does not exceed the angle of repose or such lesser slopes as is necessary to assure stability. [Italics supplied.]

Spreading material on the bench as it was done in this case does not constitute backfilling "to the most moderate slope possible." As we have consistently held since *Cedar*, 1 IBSMA at 153, 86 I.D. at 255, compliance with a state mining permit requirement does not change obligations under Federal law and does not excuse noncompliance with the initial performance standards.⁵

⁵ 30 CFR 720.11 provides:

"Enforcement authority.

"Nothing in the Act or these regulations shall be interpreted to preclude a State from

The evidence in the instant case indicates that appellant failed to meet the minimum Federal requirements contained in 715.14(b)(1), and, therefore, the notice was properly issued.

[3] Appellant argues that because OSM did not object to the issuance of the permit or inform it or any other operator that it disavowed the implication in the Virginia memorandum that it approved the state policy concerning reclamation after mining preexisting highwalls it should be estopped from the enforcement action it took. We have stated standards for demonstrating that OSM might be estopped.⁶ We are not, however, persuaded that they have been met. The Virginia memorandum did not say any more than that DMLR had "consulted" OSM personnel; their names or apparent authority were not specified nor did the memorandum say that the OSM personnel

agreed with the statements.⁷ There is no evidence that OSM intended that Mountain Enterprises or anybody else rely on the policy statements it contained. Nor does OSM's failure to disavow them or object to the issuance of the permit constitute action that would reasonably give Mountain Enterprises the right to believe that OSM did intend they be acted on. This is particularly so given the fact that OSM's involvement with Virginia's surface mining activities was effectively precluded for several months until shortly before the time of issuance of the permit because of the Federal district court's injunction that prevented OSM from enforcing the Act in that state.⁸ Even apart from that, OSM is not obligated to discover or repudiate every inaccurate statement about applicable Federal law that a state might make. A permittee is obligated to comply with the initial Federal program regulations, as published. 30 CFR 710.11(a)(3). A state is obligated to issue permits whose terms comply with the perform-

exercising its authority to enforce State law, regulations, and permit conditions, unless compliance with the State law, regulations, or permit condition will preclude compliance with these regulations."

See also, 30 CFR 710.4(b): "The States are responsible for issuing permits and inspection and enforcement on lands on which operations are regulated by a State to insure compliance with the initial performance standards in Parts 715 through 718 of this chapter."

⁶ See *Daniel Brothers Coal Co.*, 2 IBAMA 45, 52, 87 I.D. 138, 141 (1980):

"(1) The party to be estopped must know the facts; (2) he must intend that his conduct shall be acted on or must so act that the party asserting the estoppel has a right to believe it is so intended; (3) the latter must be ignorant of the true facts; and (4) he must rely on the former's conduct to his injury. [*United States v. Georgia-Pacific Co.*, 421 F.2d 92, 96 (9th Cir. 1970).]"

See also *United States v. Ruby Co.*, 588 F.2d 697 (9th Cir. 1978).

⁷ The only testimony at the hearing concerning whether OSM agreed with the DMLR policy statements was the report of Doug Stone, OSM District Supervisor, that Regional Director Beasley had told him "there had been no agreement on that issue at that time in December" (Tr. 142).

⁸ From February to August 1979 Virginia kept copies of all permits it issued and held them for OSM until this litigation was settled (Tr. 143, 144). They were given to OSM when it came back into the state in August (Tr. 146). Because OSM's first priority was to inspect all active surface mines in the state, it did not begin to review permits until November (Tr. 147). That review indicated that Mountain Enterprises' permit was among those with terms inconsistent with the provisions of the initial program.

September 25, 1981

ance standards in those regulations. *Id.* and 30 CFR 710.4(b).

For the foregoing reasons, the Aug. 28, 1980, decision of the Administrative Law Judge upholding Notice of Violation No. 80-I-47-23, is affirmed as modified by this decision.

**PIERCE COAL AND CONSTRUCTION,
INC.**

3 IBSMA 350

Decided September 25, 1981

Appeal by Pierce Coal and Construction, Inc., for review of the Dec. 24, 1980, decision of Administrative Law Judge Sheldon L. Shepherd, Docket No. CH 1-57-R, denying appellant's application for temporary relief from Notice of Violation No. 80-I-61-26 and Cessation Order No. 80-I-61-3 (based, in pertinent parts, on an alleged failure by appellant to restore in a timely manner the areas disturbed by its coal mining operations to conditions capable of supporting the uses they were capable of supporting before mining).

Affirmed.

1. Surface Mining Control and Reclamation Act of 1977: Notices of Violation: Permittees

During the initial regulatory program the person named in the state permit for a surface coal mining operation is the permittee with respect to that operation and, as such, a proper person to be issued a notice of violation concerning the operation.

APPEARANCES: Frederick P. Grill, Esq., Clarksburg, West Virginia, for Pierce Coal and Construction, Inc.; Harold Chambers, Esq., Office of the Field Solicitor, Charleston, West Virginia, Glenda R. Hudson, Esq., and Marcus P. McGraw, Assistant Solicitor, Division of Surface Mining, Office of the Solicitor, Washington, D.C., for the Office of Surface Mining Reclamation and Enforcement.

**OPINION BY THE INTERIOR
BOARD OF SURFACE MIN-
ING AND RECLAMATION
APPEALS**

This appeal was brought by Pierce Coal and Construction, Inc. (Pierce), for review of the decision of the Hearings Division denying Pierce temporary relief from enforcement action by the Office of Surface Mining Reclamation and Enforcement (OSM) taken as the result of Pierce's alleged failure to comply with the requirement of 30 CFR 715.13(a) for timely restoration of all areas disturbed by mining to conditions capable of supporting the uses they were capable of supporting prior to mining. Pierce contends that it is not responsible for the mining and reclamation activities that resulted in OSM's enforcement action. We affirm the denial of temporary relief.

*Factual and Procedural
Background*

The State of West Virginia issued to Pierce mine permit 16-78 on Jan. 24, 1978, authorizing mining operations near Hacker Creek in Upshur County, West Virginia (Applicant's Exh. B). Surface mining and reclamation operations under this permit have been performed by MLM Corporation (MLM) (Tr. 23-25, 50). Mining operations were discontinued in November 1979 except for limited, experimental mining performed in April 1980 (Tr. 50).

In May 1980 Richard N. White, president of MLM, and Ernest B. Pierce, president of Pierce, signed a document entitled "APPLICATION FOR OPERATOR RE-ASSIGNMENT" concerning permit 16-78 (Applicant's Exh. B; Tr. 100-01). This application was for the purpose of transferring the mining rights under the permit from Pierce to MLM; however, it is not indicated on the face of the document whether it was approved by the State of West Virginia.

OSM inspected the Hacker Creek mining operation on Sept. 4, 1980, and issued Notice of Violation No. 80-I-61-26 on September 5 (Exh. R 1). Three violations of the Department's regulations were alleged in the notice: (1) Failure to monitor ground water to determine the effects of surface coal mining on the recharge capacity of reclaimed lands, in violation of 30 CFR 715.17 (h) (3); (2) failure to restore in a

timely manner all areas disturbed to conditions that are capable of the uses they were capable of supporting prior to mining, in violation of 30 CFR 715.13(a); and (3) failure to pass all surface drainage from the disturbed area through a sediment pond or series of sediment ponds, in violation of 30 CFR 715.17. The first and third alleged violations were terminated by OSM on Oct. 9, 1980 (Motion for Temporary Relief, dated Dec. 8, 1981, at Exh. C). On the basis of Pierce's alleged failure to abate violation 2 of the notice, OSM issued Cessation Order No. 80-I-61-3 on Dec. 8, 1980 (Application for Review of CO 80-1-61-3, dated Dec. 12, 1980, at Exh. A).

A hearing on Pierce's motion for temporary relief from violation 2 of the notice of violation was held on Dec. 11, 1980. The Administrative Law Judge denied temporary relief in a ruling from the bench. After this ruling Pierce requested temporary relief from the cessation order, based on the record of the December 11 hearing. In a written decision issued on Dec. 24, 1980, the Administrative Law Judge confirmed his oral denial of temporary relief from the notice of violation and denied temporary relief from the cessation order, explaining that Pierce did not show a substantial likelihood that a decision on its applications for review of the notice of violation and cessation order would be favorable to the company. Pierce appealed the decision; both parties filed briefs.

Discussions and Conclusions

Pierce's primary contention in support of its appeal is that it should not be held responsible for the actions of MLM which resulted in OSM's issuance of a notice of violation and cessation order. For the reasons set forth below we reject this contention.

[1] The Board has held that during the initial regulatory program the person named in the state permit for a surface coal mining operation is the "permittee" with respect to that operation and, as such, a proper person to be issued a notice of violation concerning the operation. *Wilson Farms Coal Co.*, 2 IBSMA 118, 87 I.D. 245 (1980).¹ It is Pierce, not MLM, that is named in the West Virginia permit for the Hacker Creek mining operation (Applicant's Exh. B). The application for operator reassignment (Applicant's Exh. B) signed on behalf of Pierce and MLM contains the recital by the president of Pierce: "I further understand that this application transfers the mining rights only and that this permit

is non-transferable." Consequently, even assuming that the application was duly approved, on the basis of the evidence now before it the Board must conclude that Pierce remains the holder of the state permit and was a proper company to be served with the notice of violation and related cessation order.²

There remains the question of the merits of the violations alleged in the notice of violation and cessation order. In the former Pierce was charged, in pertinent part, with a failure to restore in a timely manner the areas disturbed by its mining to a condition capable of supporting the uses they could support prior to mining; in violation of 30

² Cf. *Marco, Inc.*, 3 IBSMA 128, 88 I.D. 500 (1981) (in which the Board held that a company which had relinquished its state permit to mine on property on which it had never conducted mining operations was thereby relieved of its "permittee" status).

¹ As was noted in the Board's *Wilson Farms* decision, the responsibility of a permittee for operations on the permit area is explained in the preamble to the initial regulations at 42 FR 62671 (Dec. 13, 1977):

"17. Comments were received suggesting that the attribution to the permittee of the actions of all persons working on the mine site was improper. They were rejected. The Act, and indeed State laws, makes the permittee liable for the conduct of the mining and compliance with the law. Anyone working on the mine is there for the benefit of or at sufferance of the permittee. To excuse the permittee from violations resulting from activity of such people would undermine the permittee's motivation to exercise his control to protect against violations."

The authorities cited by Pierce in support of the contention that MLM should be held solely responsible for any violations discovered at the permit 16-78 area are not persuasive. The cases cited by Pierce relate to the Coal Mine Health and Safety Act and address the question whether independent construction contractors at a mine, rather than the owner or lessee of the mine, may be liable for violations of this Act. Both the Fourth Circuit and the U.S. Court of Appeals for the District of Columbia have answered this question affirmatively. *Republic Steel Corp. v. Interior Board of Mine Operations Appeals*, 581 F.2d 868 (D.C. Cir. 1978); *Association of Bituminous Contractors, Inc. v. Andrus*, 581 F.2d 853 (D.C. Cir. 1978); *Bituminous Coal Operators' Association, Inc. v. Secretary of the Interior*, 547 F.2d 240 (4th Cir. 1977). In so ruling, however, the Fourth Circuit further held that the owner or lessee of a mine may be liable for actions of a construction company, *Bituminous Coal*, 547 F.2d at 246-47, and this holding was cited approvingly in dictum contained in *Republic Steel*, 581 F.2d at 870 n.5. Thus, these decisions do not support Pierce's contention that only MLM should be held liable under enforcement actions by OSM with respect to permit 16-78.

CFR 715.13(a) (Exh. R 1); in the latter, Pierce was charged with a failure to abate this alleged violation within the period prescribed by OSM for abatement in the notice (Application for Review of Cessation Order No. 80-1-61-3, dated Dec. 12, 1980, at Exh. A).

The Administrative Law Judge made only cursory reference to the evidence concerning the violations alleged in the notice and order (Decision of Dec. 24, 1980, at Exh. 1); Pierce has not addressed the merits of the alleged violations on appeal. Nonetheless, because there may be further review of the notice and order we will comment that the record now before us shows that little or no reclamation work was performed on Pierce's permit area between the conclusion of active mining in November 1979 and OSM's inspection on Sept. 4, 1980. Under these circumstances we cannot conclude that there is a substantial likelihood that Pierce will be able to demonstrate that OSM's enforcement action was invalid. *See Old Home Manor, Inc.*, 3 IBSMA 241, 88 I.D. 737 (1981).

Because of our agreement with the Administrative Law Judge's holding that Pierce did not show a substantial likelihood of prevailing under the application for review of the notice of violation and cessation order, we need not address the requirement of 43 CFR 4.1263(c) that an applicant for temporary relief must show that "the relief sought will not adversely affect the health or safety of the public or cause

significant, imminent environmental harm to land, air, or water resources."

For the foregoing reasons the decision of the Administrative Law Judge denying Pierce Coal and Construction, Inc., temporary relief from Notice of Violation No. 80-I-61-26 and Cessation Order No. 80-I-61-3 is affirmed.

58 IBLA 145

Decided September 25, 1981

Appeal from the decision of the New Mexico State Office, Bureau of Land Management, dismissing protest against simultaneous oil and gas lease application NM 44535.

Affirmed.

1. Oil and Gas Leases: Applications: Attorneys-in-Fact or Agents

Under 43 CFR 3102.2-1, a simultaneous oil and gas lease applicant may file for reference the statement of qualifications of his agent required by 43 CFR 3102.2-6 in any Bureau of Land Management office. Upon acceptance of the filing by BLM and assignment of a serial number, the applicant may properly reference the serial number on future oil and gas applications filed with any BLM office in lieu of resubmitting the statement.

**2. Oil and Gas Leases: Applications:
Attorneys-in-Fact or Agents**

Pursuant to 43 CFR 3112.2-1(b), a simultaneous oil and gas lease application must be manually signed in ink either by the applicant or someone authorized to sign on behalf of the applicant. Where applicant's agent has typed the applicant's name and manually signed as agent, the application conforms to the regulations.

APPEARANCES: R. Hugo C. Cotter, pro se.

*OPINION BY
ADMINISTRATIVE
JUDGE HENRIQUES*

*INTERIOR BOARD OF
LAND APPEALS*

R. Hugo C. Cotter has appealed from the decision of the New Mexico State Office, Bureau of Land Management (BLM), dated July 20, 1981, dismissing his protest as the number two drawee for lease offer NM 44535 against issuance of the lease to the number one drawee, Hampton P. Stewart.

On Mar. 31, 1981, appellant protested that Stewart had failed to file an agency statement as required by 43 CFR 3102.2-6(a) and had failed to complete the application form. He argued that Stewart's simultaneous oil and gas lease application was signed by one John C. Saunders as "attorney-in-fact" and therefore Stewart was required to submit a personally signed statement setting forth his arrangement with Saunders with his lease application. Appellant indicated that

his examination of the case file and inquiry at the BLM office on Mar. 30, 1981, revealed no such statement.

Appellant also asserted that

not only did the applicant Hampton P. Stewart not sign the application, but the printed word "Signature" above his typed name was stricken out and the word "NAME" substituted. Therefore, the only "undersigned" as to this application is John C. Saunders. Section 3102.2-2 of the regulation permits an agent to certify as to age, citizenship, and compliance with acreage limitations, so paragraphs (a), (b), and (c) above the Saunders' signature may be effective. This is not true of (e) and (f). Here Saunders certifies that he, not the applicant, is not bound by any collateral agreements as to outside interests in the application, and further that he, not the applicant, does not have any interest in other applications on the same parcel.

After examining a statement of qualifications previously filed by Stewart in the Colorado State Office, BLM, under serial No. C-30669, appellant supplemented his protest on May 21, 1981, arguing that the power-of-attorney authorizing John C. Saunders to sign simultaneous oil and gas applications on Stewart's behalf envisioned that Saunders would sign Stewart's name manually and, only if he did so, would the certifications expressed by questions (e), (f), and (g) on the application be valid for Stewart.

On Apr. 10, 1981, BLM required Stewart to provide additional information as to his qualifications to hold a lease and the circumstances surrounding the execution of his

application. Stewart reported that he did not submit the statement required by 43 CFR 3102.2-6(a) with lease application NM 44535 because he had previously filed the necessary statement for reference with the Colorado State Office and under the regulations only had to reference the filing on his application which he had done. He indicated that his file, C-30669, contains his agreement with Bryan Bell to recommend parcels for leasing and to provide clerical assistance and a power-of-attorney authorizing Saunders to sign lease applications for him.

BLM dismissed appellant's protest stating that information obtained from the Colorado State Office indicated that Stewart was qualified to hold a lease and that he filed the lease application in accordance with the regulations.

In his statement of reasons, appellant argues nevertheless that, under 43 CFR 3102.2-6, the agreement had to be submitted with the application and, since it was not, the application is fatally defective. He urges that the reference filing of the agreement between Bell and Stewart in the Colorado State Office does not satisfy 43 CFR 3102.2-1(c) because it is not a "statement of qualifications" of Stewart's agent. He construes "statement of qualifications" to mean a statement certifying to compliance with age, citizenship, and acreage requirements. *See* 43 CFR 3102.2-2. Appellant also reiterates that the manner in which Saunders executed Stewart's application does not meet the requirement that Stew-

art certify that he is a sole-party-interest and that no multiple filing has occurred.

[1] The term "statement of qualifications" as used in 43 CFR 3102.2-1(c) is broader than the definition advocated by appellant. The regulation reads as follows:

(c) *Filing statements for reference.* A statement of the qualifications of a trust or guardianship (§ 3102.2-3), association (§ 3102.2-4), corporation (§ 3102.2-5), agent, if the duration of the authority to act is less than 2 years and is specifically set out (§ 3102.2-6) or municipality (§ 3102.2-9) may be placed on file with a Bureau of Land Management office described in § 1821.2-1 of this title. The office receiving the statement shall indicate its acceptance of the qualifications by assigning a serial number to the statement. Reference to this serial number may be made to any Bureau of Land Management office in lieu of resubmitting the statement. Such a reference shall constitute certification that the statement complies with paragraph (b) of this section. Amendments to a statement of qualifications shall be filed promptly and the serial number shall not be used if the statement on file is not current.

As the text of the regulation suggests, it must be read in conjunction with 43 CFR 3102.2-6 for the purpose of the appeal herein and with the other cited regulations as appropriate. The regulations referenced in 43 CFR 3102.2-1(c) direct an oil and gas lease applicant to the particular requirements for a statement of qualifications in the case of certain kinds of applicants or certain circumstances. These special requirements are in addition to the certification required of all applicants, offerors, and agents by 43 CFR 3102.2-2. An applicant certi-

fies to the requirements specified in 43 CFR 3102.2-2 on the applicaiton form itself not in the statement of qualifications addressed in 43 CFR 3102.2-1(c). Thus, in the case before us, where Stewart was going to use an agent for executing simultaneous oil and gas lease applications, he had to comply with 43 CFR 3102.2-6. In lieu of resubmitting the appropriate statement of qualifications with every application filed, however, under 43 CFR 3102.2-1(c) Stewart could submit the appropriate statement to BLM to be kept on file for reference and thereafter refer to the file serial number on applications so long as the statement contained therein remained current.

[2] The regulation governing the signing of a simultaneous oil and gas lease application, 43 CFR 3112.2-1(b), reads:

(b) The application shall be holographically (manually) signed in ink by the applicant or holographically (manually) signed in ink by anyone authorized to sign on behalf of the applicant. *Applications signed by anyone other than the applicant shall be rendered in a manner to reveal the name of the applicant, the name of the signatory and their relationship.* (Example: Smith, agent for Jones; or Jones, principal, by Smith, agent.) Machine or rubber stamped signatures shall not be used. [Italics added.]

The regulation requires that at least one manual signature appear on the application, either that of the applicant or the applicant's agent. *See Betty J. Thomas*, 56 IBLA 323 (1981). Where an agent executes the application, the name of the ap-

plicant must be revealed in some manner; there is no requirement that the name be manually applied. The signature of an authorized agent is sufficient to constitute certification by the applicant to the statement on the application. Nevertheless, even assuming *arguendo* that appellant is correct that the agent, as the undersigned, is the only one certifying to the statements on the application, Stewart has affirmed his qualifications to hold a lease by complying with 43 CFR 3102.2-6 and by filing the additional evidence required by BLM's Apr. 10, 1981, request which sought the same information.

Accordingly, pursuant to the authority delegated to the Board of Land Appeals by the Secretary of the Interior, 43 CFR 4.1, the decision of the New Mexico State Office is affirmed.

H. S. RADEMACHER

58 IBLA 152

Decided September 25, 1981

Appeal from decision of the Oregon State Office, Bureau of Land Management, declaring mining claims aban-

doned and void. (OR MC 28368 through OR MC 28387).

Affirmed.

1. Federal Land Policy and Management Act of 1976: Recordation of Mining Claims and Abandonment—Mining Claims: Abandonment

The failure to file the instruments required by sec. 314 of the Federal Land Policy and Management Act of 1976, 43 U.S.C. § 1744 (1976), and 43 CFR 3833.1 and 3833.2 in the proper Bureau of Land Management office within the time periods prescribed therein conclusively constitutes abandonment of the mining claim by the owner.

2. Evidence: Presumptions—Evidence: Sufficiency—Mining Claims: Assessment Work

The legal presumption that administrative officials have properly discharged their duties and not lost or misplaced legally significant documents filed with them is rebuttable by probative evidence to the contrary. However, an affidavit that evidence of assessment work was timely filed with the proper BLM office must ordinarily be corroborated by other evidence to establish filing where there is no evidence of receipt of the documents in the file.

APPEARANCES: H. S. Rademacher, President, Kettle River Consolidated Mines, Inc.

OPINION BY ADMINISTRATIVE JUDGE GRANT

INTERIOR BOARD OF LAND APPEALS

H. S. Rademacher, President, Kettle River Consolidated Mines, Inc., appeals from a decision of the Oregon State Office, Bureau of

Land Management (BLM), dated Aug. 18, 1980, declaring mining claims OR MC 28368 through 28387, as listed in the appendix, located prior to Oct. 21, 1976, in Stevens County, Washington, and recorded with BLM on Oct. 17, 1979, abandoned and void for failure to file evidence of assessment work or notice of intention to hold the claims on or before Oct. 22, 1979, as required by statute. Federal Land Policy and Management Act of 1976 (FLPMA), sec. 314, 43 U.S.C. § 1744 (1976); 43 CFR 3833.2-1(a). The BLM decision stated that although the instruments and fees required for recordation (of notices of location) of appellant's claims had been received at the BLM office prior to Oct. 22, 1979, the filings were not accompanied by an affidavit of assessment work or notice of intention to hold the claims. BLM further noted that a search of thousands of filings did not reveal that an affidavit or notice had been separately filed with the BLM office by Oct. 22, 1979.

In his statement of reasons, appellant alleges that he enclosed the required notices of location and fees, along with two recorded proofs of labor covering the 20 claims, in a large envelope and sent it by certified mail to the proper BLM office on Oct. 15, 1975. Appellant asserts that it is BLM's responsibility to produce these recordings. Appellant tendered with his notice of appeal copies of proof of labor recorded with the county recorder's office on Aug. 13, 1979.

In response to appellant's assertion that the required evidence of assessment work had been filed with BLM together with the notice of location of the subject claims, this Board on May 1, 1981, requested BLM to recheck and verify whether or not any proof of labor with respect to the subject claims had been filed but inadvertently omitted from the case files. The BLM reply indicated that the mining claim records were again checked and no evidence of assessment work filed with BLM during 1979 was found.

[1] Under sec. 314 of FLPMA, 43 U.S.C. § 1744 (1976), the owner of a mining claim located before Oct. 21, 1976, must file notice of intention to hold the claim, or evidence of the performance of annual assessment work on the claim, in the proper BLM office on or before Oct. 22, 1979, and prior to December 31 of each year thereafter. This requirement is mandatory, not discretionary, and failure to comply is deemed conclusively to constitute an abandonment of the claim by the owner, and renders the claim void. *Lynn Keith*, 53 IBLA 192, 196, 88 I.L.D. 369, 371 (1981).

[2] Although appellant asserts that the required evidence of assessment work was mailed to BLM with the notices of location, the record does not show that BLM received the documents. There is a legal presumption of regularity which attends the official acts of public officers in the proper discharge of their official duties. *Legille v. Dann*, 544 F.2d 1 (D.C. Cir. 1976); *Lawrence*

E. Dye, 57 IBLA 360, 363 (1981); *John Walter Starks*, 55 IBLA 266, 270 (1981); *Bruce L. Baker*, 55 IBLA 55, 57 (1981); *L. E. Garrison*, 52 IBLA 131, 133 (1981). It is presumed that administrative officials have properly discharged their duties and not lost or misplaced legally significant documents submitted for filing. *John Walter Starks*, *supra* at 270. This Board has recognized that this presumption may be rebutted by probative evidence to the contrary. *Bruce L. Baker*, *supra* at 57; *L. E. Garrison*, *supra* at 133.

The effect of a rebuttable presumption of law is to invoke a rule of law compelling the trier of fact to reach a conclusion in the absence of evidence to the contrary, but the presumption disappears if evidence to the contrary is submitted and the case is then in the fact-finders hands free from any rule. *Legille v. Dann*, *supra* at 5-6 (citing 9 J. Wigmore, Evidence § 2491, at 289 (3d ed. 1940)). The evidence submitted by appellant in the form of an affidavit that the proofs of labor for the claims were transmitted in the same envelope with the notices of location precludes resolution of the case solely on the basis of the presumption that the documents would have been placed in the file if actually tendered. However, this does not preclude consideration of evidence that the documents were not found in the files and that BLM follows regular procedures to insure that submitted materials are not mis-

handled. *See Legille v. Dann, supra* at 8-9.

The issue of what kind of evidence is sufficient to establish the filing of a document despite the absence from the appropriate file of such a document is one which has troubled this Board previously. *See David F. Owen*, 31 IBLA 24 (1977) (with dissenting opinion). This Board has found the inference of nonfiling drawn from the absence of the document from the case file to be effectively rebutted by a preponderance of the evidence in those cases where appellant's assertion that the document was timely filed is supported by substantial corroborating evidence. *Bruce L. Baker, supra*; *L. E. Garrison, supra*. In *Bruce L. Baker, supra*, the assertion that the document in issue was actually filed was supported by an affidavit setting forth in detailed chronological sequence the events surrounding the filing which affidavit in turn was corroborated by the dates of notarial seals and filing with the county recorder's office. In the *L. E. Garrison* case, *supra*, claimant's assertion that the document in issue had been filed with BLM was corroborated by an affidavit of a subsequent telephone conversation with a BLM employee who opened the mailing and acknowledged timely receipt of the required document. The phone conversation was in turn documented by a long-distance telephone bill reflecting the call. On the other hand, the Board has held that uncorroborated statements, even where

placed in affidavit form, to the effect that a document was filed are not sufficient to overcome the inference of nonfiling drawn from the absence of the document from the file and the practice of BLM officials to handle properly filings of legally operative documents. *See Lawrence E. Dye, supra* at 364; *John Walter Starks, supra*; *Metro Energy, Inc.*, 52 IBLA 369, 371 (1981); *Charles J. Babington*, 36 IBLA 107 (1978).

In the case before us, the cover letter submitted by appellant with the notices of location filed with BLM on Oct. 17, 1979, makes no mention of the proof of labor and refers only to the service fee enclosed for recording the notices of location for 20 claims. Although there is little doubt that assessment work was performed for the subject claims and that proof of labor was filed with the county recorder's office, the evidence in this case does not establish that the proof of labor was filed for record with BLM on or before Oct. 22, 1979.

Therefore, pursuant to the authority delegated to the Board of Land Appeals by the Secretary of the Interior, 43 CFR 4.1, the decision appealed from is affirmed.

APPEAL OF IRT CORP.

IBCA-1347-4-80

Decided September 25, 1981

Contract No. H0188094, Bureau of
Mines.

Sustained.

1. Contracts: Construction and Opera-
tion: Allowable Costs

Under a cost-plus-fixed-fee contract wherein the Government has agreed to reimburse the contractor for its allowable costs not exceeding a ceiling amount for reimbursement, the Board finds the disallowance of costs alleged to have resulted from an unauthorized change to have been improper because the otherwise allowable costs exceeded the contract ceiling amount by more than the disallowance.

APPEARANCES: Walter D. Bowne, Manager, Contracts, IRT Corp., San Diego, California, for Appellant; Ross W. Dembling, Department Counsel, Washington, D.C., for the Government.

OPINION BY
ADMINISTRATIVE
JUDGE LYNCH

INTERIOR BOARD OF
CONTRACT APPEALS

This is a timely appeal from the contracting officer's decision to disallow \$4,111.51 of the costs claimed by appellant under a cost-plus-fixed-fee contract. The contract required the development of an ion implementation system for surface alloying, and the Government con-

tends that the disallowed costs were incurred in adding a neutral beam trap representing a change in scope of the contract not approved by the contracting officer. Appellant contends that the addition of the neutral beam trap was within the scope of the contract, that the work was done at the direction of the technical project officer and, that the completed addition was delivered to the Government as a part of the material furnished under the contract. Appellant also claims that the disallowance is not proper because it expended \$18,761 over the contract ceiling amount for reimbursement, which costs were allocable and otherwise allowable if the ceiling amount were raised. The appeal has been submitted to the Board on the record.

A note from the contract specialist dated Sept. 15, 1978, indicates that prior to signing the contract on Sept. 25, 1978, the contract language was modified to require a neutral beam trap "if deemed necessary by the technical project officer." By memorandum dated Mar. 5, 1980, the technical project officer advises that he did not direct appellant to initiate the task, but only to investigate making the change to include the neutral beam trap. The addition to the contract regarding the neutral beam trap prior to its execution clearly indicates that both parties contemplated that a neutral beam trap would be added to the system if it were deemed necessary by the technical project officer. The contract language dele-

gates to the technical project officer the decision as to the necessity of the neutral beam trap. Therefore, the decision to disallow the costs of the trap because of the lack of approval of the contracting officer is not proper because the decision authority had been delegated to the technical project officer. The question of whether the technical officer's direction to investigate changing the design to include the trap was sufficient authority to authorize the completion of the task is not necessary in order to dispose of this appeal.

The audit report on the contract is dated Feb. 25, 1981. The report concludes that the ceiling cost amounts of \$137,735 were incurred as allowable costs under the contract and are therefore allowable. The audit report also finds that \$18,761 in additional allocable and allowable costs were incurred in excess of the contract ceiling amount, but were not claimed because these costs exceeded the contract ceiling amount for reimbursement. By letter dated Mar. 30, 1981, appellant claims that the ceiling amount of \$137,735 should be allowed regardless of whether the cost of the neutral beam trap (\$4,111.51) is allowed, because the audit discloses otherwise allowable costs exceeding the contract amount by \$18,761. The Government did not respond to this contention by appellant.

The Board can only assume that the Government's position is that the costs for including the neutral beam trap could be segregated from

all other costs and disallowed from the ceiling amount. We find to the contrary. Under the cost-plus-fixed-fee contract with a ceiling for reimbursement, the Government agrees to reimburse the appellant for its allowable costs up to the ceiling amount. The unchallenged audit report shows that appellant incurred allowable costs in excess of the ceiling amount by \$18,761. Therefore, the Government's audit of appellant's costs shows that appellant is entitled to recover the ceiling amount of \$137,735.

Conclusion

We find that the disallowance of \$4,111.51 of the contract costs was improper because the costs found to be allowable in the Government audit report exceeded the ceiling amount for reimbursement in excess of that amount. The appeal is sustained.

I CONCUR:

WILLIAM F. MCGRAW
Chief Administrative Judge

TEXAS OIL & GAS CORP.

58 IBLA 175

Decided September 28, 1981.

Appeal from a finding by the New Mexico State Office, Bureau of Land

Management, that oil and gas lease NM-A 37903 (OK) had terminated for nonpayment of rental pursuant to 30 U.S.C. § 188 (1976), and that no petition for reinstatement had been filed by the lessee.

Reversed.

1. Administrative Procedure: Administrative Review—Appeals—Rules of Practice: Appeals: Generally

A finding by BLM that some statutory mechanism has been triggered which automatically divests a right does not and cannot mean that the adversely affected party is denied recourse to the appellate process. The Board of Land Appeals is the exclusive arbiter of its jurisdiction, and neither employees of BLM nor attorneys of the Office of the Solicitor may create or deny the right of appeal to the Board.

2. Oil and Gas Leases: Competitive Leases—Oil and Gas Leases: Future and Fractional Interest Leases—Oil and Gas Leases: Reinstatement—Oil and Gas Leases: Rentals—Oil and Gas Leases: Termination

Where a competitive, fractional interest, oil and gas lease is issued with conflicting and confusing rental provisions recited in the lease terms and in an attachment to the lease, a deficient rental payment by the lessee in reasonable reliance on the section providing for rental based upon the pro rata fractional interest of the United States will be considered justified so as to qualify the terminated lease for reinstatement.

APPEARANCES: Joseph R. Binford, Esq., Dallas, Texas, for appellant; Gayle E. Manges, Esq., Field Solicitor, Santa Fe, New Mexico, for the Bureau of Land Management.

OPINION BY ADMINISTRATIVE JUDGE STUEBING

INTERIOR BOARD OF
LAND APPEALS

An exposition of the background of this case will be conducive to an understanding of the issues raised and our disposition of the appeal.

In July 1979 a competitive oil and gas lease sale was conducted by the New Mexico State Office of the Bureau of Land Management (BLM). That sale included parcel 18, the subject tract of acquired land, embracing 90.39 acres in Oklahoma, in which the United States held a fractional mineral interest amounting to 50 percent.¹ The high bidder was Hoover H. Wright. His bid was accepted by BLM's decision of Aug. 21, 1979, which called upon him to submit the first year's advance rental in the amount of \$182, calculated on the basis of \$2 for each acre or fraction thereof. Wright paid this rental amount and complied with the other requirements, and was issued the lease effective Oct. 1, 1979.

Wright had assigned the entire lease to Texas Oil & Gas Corp. prior to its effective date, and BLM approved the assignment, also with an effective date of Oct. 1, 1979.

On Sept. 24, 1980, Texas Oil & Gas Corp. paid the annual advance rental (due no later than October

1) in the amount of \$91. A receipt for this amount issued on October 9 with the following statement printed thereon, "Under payment [*sic*] of \$91.00 unless other action is pending or the balance due is paid by the due date this lease may be terminated."²

Texas Oil & Gas Corp. then tendered a second payment in the amount of \$91, which was received by BLM on Oct. 14, 1980. BLM apparently made no response until Feb. 6, 1981, when it wrote a letter to the lessee, stating that the lease had terminated on Oct. 1, 1980, that the annual rental was \$182, and that the partial payment of \$91 would be refunded. No right of appeal was referred to.

Texas Oil & Gas Corp. responded with a letter, dated Feb. 20, 1981, addressed to the Chief, Oil and Gas Section, New Mexico State Office. Although this letter is captioned "Notice of Appeal," it does not appear that it was intended to invoke the jurisdiction of this Board. Rather, it "requests your reconsideration of the letter of February 6, 1981, and that this lease be treated as in full force and effect. Should it be necessary that this matter be submitted to the Interior Board of Land Appeals and further filings need to be made by Texas Oil & Gas Corp., please advise." The letter was an attempt to persuade the Chief, Oil and Gas Section, that the lease rental had been paid timely and in full, and had not terminated.

¹ T. 8 N., R. 22 E., Indian meridian, Oklahoma. Sec. 6, S., 16.07 acres of lot 4, lots 5, 6, NW 1/4 SE 1/4 NW 1/4 containing 90.39 acres, Haskell County.

² Of course, by the time this notice was issued the "due date" had passed.

September 28, 1981

The basis of this contention was stated in the letter as follows:

The lease provides that it is "subject to the terms and provisions of the Act of August 7, 1947 (61 Stat. 913), herein-after referred to as the Act, and to all applicable regulations thereunder *now* or hereafter in force *when not inconsistent with any express and specific provisions of this lease*, which are made a part hereof" (italics added). The lease provides specifically in section 4 "Undivided fractional interest—Where the interest of the United States in the oil and gas underlying any of the lands described in Section 1 is an undivided fractional interest, the following terms and conditions shall apply: (a) Rentals and royalties payable on account of each such tract shall be in the same proportion to the rentals and royalties provided for herein as the undivided fractional interest of the United States in oil and gas underlying such tract is to the full fee simple interest". We are aware of the September 30, 1976 amendment to section 3130.2 of title 43 which predates the subject lease. However, when this lease was issued, as noted in the language quoted above, it became subject only to existing regulations *not inconsistent* with the *express and specific provisions* of the lease; and as I have quoted above, the lease specifically and expressly provides for proportionate reduction of the rentals. Thus, by execution of this lease with the proportionate reduction provision specifically set forth, the lease provision prevails over the 1976 amendment. It is on this basis that rentals were tendered in the amount of \$91.00. Had it been intended that the lease be subject to the amended provisions of section 3103, then the provisions set forth in section 4(a) of the lease should have been struck.

Instead of considering and replying to this letter, BLM was guided by its caption ("Notice of Appeal"), and referred it, with the

lease file, to the Field Solicitor with an inquiry concerning whether "an appeal from Texas Oil & Gas Corporation is warranted so we can transmit the case file to IBLA." Apparently the Field Solicitor replied in the affirmative, as the case was sent to this Board together with the Field Solicitor's entry of his appearance and his response to Texas Oil & Gas Corporation's "Statement of Reasons," which he treated the letter of Feb. 20, 1981, as representing.

[1] The response by the Field Solicitor includes a motion for dismissal of the appeal, asserting first that this Board has no jurisdiction, because termination of an oil and gas lease for nonpayment of rental occurs automatically by operation of law without any administrative action by the Bureau to terminate the lease. "For this reason," the Field Solicitor says, "Appellant was not granted a right to appeal to the Board. The Board has no jurisdiction. It is a statutory matter."

We will dispose of this motion for dismissal before taking up the substantive issues. Neither BLM nor attorneys of the Office of the Solicitor may create or deny the right of appeal to this Board, and BLM's initial attitude that no appeal was "warranted" was clearly erroneous. The fact that BLM finds that some statutory mechanism has been triggered which automatically divests a right does not, and cannot, mean that the affected party is denied recourse to the appellate process to as-

sert that BLM's finding is wrong! This applies not only in cases of oil and gas lease terminations, but across the spectrum of statutory divestitures, including reverters of title under the Recreation and Public Purposes Act, conclusively deemed abandonments of mining claims under the recordation provisions of the Federal Land Policy and Management Act, the invalidation of land scrip pursuant to the Scrip Recordation Act, and the loss of forest lieu selection rights pursuant to the "Sisk Act." This Board is the exclusive arbiter of its jurisdiction. Under 43 CFR 4.410, any party who is adversely affected by a decision of BLM shall have a right of appeal to this Board. Denial of such right would contravene the Congressional policy enacted in sec. 102(a)(5) of FLPMA, 43 U.S.C. § 1701(a)(5) (1976), providing for an "objective administrative review of initial decisions" of BLM. *See Suzanne A. Halliday*, 34 IBLA 219 (1978); *United Park City Mines, Co.*, 33 IBLA 358 (1978); *Francher Brothers*, 33 IBLA 262 (1978).

Moreover, it is specious to assert that BLM made no "decision" in this case. BLM is asserting that the rental for this lease is \$182, and that because that amount was not paid on or before the anniversary date, the lease automatically terminated. Appellant disputes this, contending that the correct lease rental in this case is \$91, which was fully and timely paid, so that no termination could have occurred under the statute. This certainly gives rise to

a justiciable issue, which is indisputably within the jurisdiction of this Board.

The motion to dismiss is denied.

[2] Appellant is correct in its assertion that the lease provides that it is "subject to the terms and provisions of * * * all applicable regulations now or hereafter in force *when not inconsistent with any express and specific provisions of this lease*, which are made a part hereof," and that there is an "express and specific provision" in the lease form to the effect that the lease rental for fractional, undivided Federal interests in oil and gas shall be prorated in proportion to the full, fee simple interest in the tract. *Lease Terms*, sec. 4(a). Therefore, absent any other consideration, if the rental for a full 100 percent competitive lease is \$2 per acre, the rental on a lease in which the United States owned a 50 percent undivided interest in the oil and gas would be \$1 per acre, notwithstanding any regulation to the contrary in effect when the lease issued.

There *was* a contrary regulation in effect at that time. As noted by appellant, 43 CFR 3130.2 was amended on Sept. 30, 1976, in 41 FR 43149, to read as follows:

Rental shall not be prorated for any lands in which the United States owns an undivided fractional interest but shall be payable at the same rate as provided in Subpart 3103 of this chapter for the full acreage in such lands.

Significantly, the lease form, which contains the express provi-

sion for prorated rentals regardless of the existence of any regulation inconsistent with that provision, was published by the Department in August 1977, nearly a year after the regulation was amended. This, in itself, is a sufficient basis to entitle a lessee to assume that the rental described in the text of the lease was knowingly and deliberately included by the Department, and represented its intention. There is, after all, a presumption of regularity which supports the official acts of public officers and, in the absence of clear evidence to the contrary, courts presume that they have properly discharged their official duties. *United States v. Chemical Foundation, Inc.*, 272 U.S. 1, 14-15 (1926); see 2 Am. Jur. 2d, *Administrative Law* § 748 (1962). In this same context, appellant's observation that if prorated rental was not intended, the provision should have been stricken is also germane, especially in view of the fact that in this same lease a portion of sec. 12 (pertaining to stipulations) was deleted as inapplicable, thereby demonstrating that BLM had reviewed the lease terms and acted to strike whatever was not intended to apply. This certainly would tend to reinforce the lessee's belief that the remaining lease provisions were deliberately unaltered and intended to control.

Moreover, it is a basic rule of contract law that a written contract is construed most strongly against its author, in this case the

Department.³ 4 *Williston On Contracts* § 621 (3rd ed.).

Counsel for BLM, in his reply to appellant's statement of reasons, argues that various records in the case file indicated that the proper rental was \$182, not \$91. These records are (1) the BLM decision of Aug. 21, 1979, addressed to Hoover H. Wright and informing him that his high bid had been accepted, and calling upon him to remit \$182 as the first year's rental; (2) Form 1370-41, "Receipt and Accounting Advice," indicating that Wright had paid \$182 as rental for this lease; and (3) Form 3120-9 (February 1965), "Rentals and Royalties For Oil And Gas Leases," which is appended to the lease form and which provides under "Schedule 'B'—Competitive":

RENTALS. To pay the lessor in advance on or before the first day of the month in which the lease issued and for each lease year thereafter prior to a discovery of oil or gas on the leased lands, an annual rental of \$2 per acre or fraction thereof.

We regard only the latter document as significant to this adjudication. With respect to the first two documents, even if appellant had actual knowledge that BLM had demanded \$182 of Wright and had

³ There is an exception to this rule to the effect that grants of franchises and contracts or agreements affecting the public interest are to be construed liberally in favor of the public. However, we do not regard it as applicable in this instance because, "To the extent that there is no general public interest to be safeguarded, contracts and agreements between a public body and a private person or corporation are interpreted in the same way as those between individuals." 4 *Williston on Contracts* § 626 (3rd ed.).

been paid this amount by him, appellant would still be justified in relying on the "express and specific provisions of this lease," which state clearly and without the slightest ambiguity that the rental shall be in the proportion that "the undivided fractional interest of the United States * * * is to the full fee simple interest."

However, a distinct ambiguity was created by the appendage of the separate schedule and rentals and royalties to the basic lease form, which were not consistent with sec. 4(a). Nevertheless, even the effect of this form is diminished upon analysis. It addresses itself only to competitive leases generally, and makes no reference whatever to competitive leases of undivided fractional interests, which sec. 4(a) of the lease does specifically. Moreover, when this appended form was adopted and published by the Department in February 1965 it was totally inapplicable to leases of fractional interests and not intended for use in connection with such leases. It was not until 11 years after the adoption of the form, in 1976, when the amendment of the regulation altered the method of calculating rentals for fractional-interest leases that the language of the form coincided with the provisions of the regulation. And, as we have noted, it was nearly a year after the regulatory change that the lease instrument was published by the Department with its "express and specific provision" of the proportion of rental. Thus, notwithstanding the appendage of Form

3120.9, anyone examining the lease might still reasonably conclude that the \$91 prorated rental was correct, and the Form 3120-9 was attached through error.

This raises the question of whether, under this particular lease, \$91 is the correct rental, or if \$182 is.⁴ If a \$91 rental is correct, no lease termination occurred. If \$182 is the legally imposed rental amount, the lease terminated automatically by operation of law, and we must consider the subsidiary questions of whether reinstatement is authorized, and if so, whether it is warranted in these circumstances.

We find that the lawful rental is \$2 per acre or fraction thereof, or \$182 per annum. We base this finding on the fact that the appendage and incorporation of Form 3120-9 ("Rentals and Royalties For Oil And Gas Leases"), notwithstanding its general application and ancient origin, was an accurate expression of the correct rental and, when read in conjunction with 43 CFR 3130.2, was sufficient to establish the rental at \$182 for this lease. Accordingly, we hold that lease NM-A 37903 (OK) terminated as a matter of law on Oct. 1, 1980.

Counsel for BLM acknowledges that appellant paid the past-due balance within the statutory 20 days after the lease anniversary date, and that appellant's letter of Feb. 20, 1981, was received within

⁴ This case is distinguished from *Thomas F. Keating*, 53 IBLA 349 (1981), wherein BLM rejected a lease offer because it was accompanied only by an advance rental prorated on the basis of the Federal fractional interest, rather than by the rental fixed by the regulations.

September 28, 1981

15 days of BLM's notice of termination. However, BLM takes the position that this document did not purport to be a petition for reinstatement (presumably because it was captioned "Notice of Appeal"), although BLM concedes that, "It did request that the lease be placed in full force and effect." As we have already noted, it requested the Chief, Oil and Gas Section in BLM's State Office, to reconsider his conclusion that the lease had terminated, and offered a full explanation of appellant's reasons for its actions. Moreover, it referred in future terms to the possible necessity of involving the Board of Land Appeals. Under the circumstances, we think BLM should have regarded appellant's letter of Feb. 20, 1980, as a petition for reinstatement.

On appeal, however, BLM contends that even if that letter is considered a petition for reinstatement, it should be denied because, "an erroneous calculation of rentals based upon erroneous advice is no showing that could be satisfactory to the Secretary as required by 43 CFR 3108.2-1(c)," and also because, "The business practices of appellant which may have led to the wrong rental payment are no justification for reinstatement."

We reject both of these arguments. There is nothing in the record to suggest that any "business practice" peculiar to appellant's conduct of its affairs resulted in the underpayment. *Cf. Melbourne Concept Profit Sharing Trust*, 46 IBLA 87 (1980); *Fuel Resources Devel-*

opment Co., 43 IBLA 19 (1979); *Shell Oil Co.*, 30 IBLA 290 (1977); *Phillips Petroleum Co.*, 29 IBLA 114 (1977); *Mono Power Co.*, 28 IBLA 289 (1976). An effort by a lessee to pay rental in compliance with the express terms of his lease cannot be characterized as a "business practice" peculiar to him. Moreover, BLM is simply wrong in its argument that erroneous advice cannot serve to justify an erroneous payment. Erroneous advice by an officer of BLM can provide excellent justification for an erroneous rental payment. In fact, the statute itself provides that where a payment is deficient because it was calculated in accordance with the acreage figure stated in the lease, or in any decision affecting the lease, or made in accordance with an erroneous bill or decision, "such lease shall not automatically terminate * * *." 30 U.S.C. § 188(b) (1976). We might even hold properly that the issuance of this lease without the deletion of sec. 4(a) was sufficient to bring the case within the ambit of this statutory provision, so that no termination occurred. However, we would still be obliged to hold that the initial rental payment was deficient and that the correct rental is \$182, and in view of our reinstatement of the lease, *infra*, such a holding would amount to a distinction without a difference.

We conclude that the lease instrument issued by BLM created a sufficient ambiguity by its conflicting provisions to justify appellant's payment of the deficient amount;

that its remittance of the balance was within the statutory time; that the letter of Feb. 20, 1980, should have been considered appellant's petition for reinstatement; and that it was timely filed.

Oil and gas lease NM-A 37903 (OK) is hereby reinstated at an annual rental of \$182 per annum.

Therefore, pursuant to the authority delegated to the Board of Land Appeals by the Secretary of the Interior, 43 CFR 4.1, the decision appealed from is reversed.

DOYON, LTD.

6 ANCAB 95

Decided September 28, 1981

Appeal from the Decision of the Alaska State Office, Bureau of Land Management F-22740, F-22750, F-22751 and F-22757.

Affirmed.

1. Alaska Native Claims Settlement Act: Alaska Native Claims Appeal Board: Appeals: Generally—Alaska Native Claims Settlement Act: Administrative Procedure: Generally

In the absence of allegation of error in the decision itself, an allegation that an internal unpublished agency practice regarding predecision procedure was vio-

lated does not provide a basis for appeal to this Board.

2. Alaska Native Claims Settlement Act: Administrative Procedure: Decision to Issue Conveyance—Alaska Native Claims Settlement Act: Administrative Procedure: Publication—Alaska Native Claims Settlement Act: Administrative Procedure: Generally

The general language of 43 CFR 2650.0-2 and § 2(b) of the Alaska Native Claims Settlement Act that the settlement of claims of Alaska Natives be accomplished with maximum participation by Natives in decisions affecting their rights and property does not establish an appealable right to predecision notice of Departmental intent to reject a selection.

3. Alaska Native Claims Settlement Act: Definitions: Public Lands: Generally

"Public lands" as defined by § 3(e) of the Alaska Native Claims Settlement Act do not include lands identified for selection by the State of Alaska prior to Jan. 17, 1969.

4. Alaska Native Claims Settlement Act: Native Land Selections: Selection Limitations

Only unreserved and unappropriated public lands are available for selection under § 14(h)(1) of the Alaska Native Claims Settlement Act.

5. Alaska Native Claims Settlement Act: Administrative Procedure: Generally—Alaska Native Claims Settlement Act: Native Land Selections: Regional Selections: Generally—Regulations: Interpretation

Departmental regulations at 43 CFR 2653.5, insofar as they prescribe a specified course of action including publication, referral, investigation, conferring, reporting, etc., by the Department with regard to selections of public lands made

pursuant to § 14(h)(1) of the Alaska Native Claims Settlement Act, cannot apply when the selected lands are not public lands and the selection applications must be rejected at the outset.

APPEARANCES: Elizabeth S. Ingraham, Esq., and James Q. Mery, Esq., for Doyon, Limited; G. Kevin Jones, Esq., and Elizabeth J. Barry, Esq., Office of the Regional Solicitor, for the Bureau of Land Management.

**OPINION BY ALASKA
NATIVE CLAIMS
APPEAL BOARD**

Summary of Appeal

On Apr. 15, 1980, the Bureau of Land Management rejected several of Doyon, Limited's § 14(h)(1) applications for cemetery and historical sites because the subject lands had been selected by the State of Alaska prior to Jan. 17, 1969, and were thus neither unappropriated nor public lands at the time of Doyon's selection. Doyon appealed the decision on the grounds that the Bureau of Land Management (1) erred in not issuing and serving Doyon with a draft decision rejecting the corporation's selection applications, and (2) failed to follow Departmental regulations at 43 CFR 2653.5(h) through 43 CFR 2653.5(k).

The Board holds that the Bureau of Land Management did not, as a matter of law, err in not issuing and serving upon Doyon, Limited a pre-decision draft rejecting the corporation's § 14(h)(1) selection applications. Further, Departmental regulations at 43 CFR 2653.5(h) through 43 CFR 2653.5(k), insofar

as they prescribe a specified course of Departmental action including publication, referral, investigation, conference, reporting, etc., cannot apply when the lands selected pursuant to § 14(h)(1) are unavailable and the selection must be rejected at the outset.

Jurisdiction

The Alaska Native Claims Appeal Board, pursuant to delegation of authority to administer the Alaska Native Claims Settlement Act, 85 Stat. 688, *as amended*, 43 U.S.C. §§ 1601-1628 (1976 and Supp. I 1977) (ANCSA), and the implementing regulations in 43 CFR Part 2650 and 43 CFR Part 4, Subpart J, hereby makes the following findings, conclusions and decision.

Procedural Background

On Sept. 29, 1960, the State of Alaska (State), pursuant to §§ 6(b) and 6(g) of the Alaska Statehood Act of July 7, 1958 (72 Stat. 339), filed selection application F-026809 for all available lands in T. 1 N., R. 7 W., Fairbanks meridian, Alaska. On June 16, 1972, the State amended its application to include all unpatented lands.

On June 29, 1976, pursuant to § 14(h)(1) of ANCSA, Doyon, Limited (Doyon) filed selection applications F-22740, F-22750, F-22751, and F-22757 for "[c]ertain available public lands as defined by Section 3(e) * * * of the Alaska Native Claims Settlement Act." The lands were in each application specified to be unoccupied cemetery and/or historical sites in T. 1 N.,

R. 7 W., Fairbanks meridian, Alaska.

On Apr. 15, 1980, the Bureau of Land Management (BLM) rejected Doyon's above-designated applications in their entirety except as to one small parcel of land within the scope of Doyon's application F-22750. The rejection was based on two factors:

(1) Departmental regulation 43 CFR 2627.4(b) provides that "[l]ands desired by the State * * * will be segregated from all appropriations based upon application or settlement and location * * * when the state files its application for selection in the proper office properly describing the lands * * *." Therefore, BLM declared in its decision that "the State of Alaska's selection application is an appropriation of lands filed prior to Doyon's selections * * *."

(2) For the purposes of ANCSA, section 3(e) of ANCSA defines "public lands" as "all Federal lands and interests therein located in Alaska except * * * (2) land selections of the State of Alaska which have been * * * identified for selection by the State prior to January 17, 1969." Due to State selection F-026809, BLM found that "[e]xcept as to U.S [sic] Survey No. 5096, the lands selected by Doyon in applications F-22750, F-22740, F-22751, and F-22757 do not meet the definition of public lands available for Native selection."

Sec. 14(h)(1) of ANCSA authorizes conveyance only of "unreserved and unappropriated public lands." The BLM determined that, except as to U.S. Survey No. 5096, the lands selected by Doyon in the subject applications were neither "unappropriated" nor "public lands."

On May 13, 1980, Doyon appealed the above-referenced decision of the BLM. Doyon's appeal raised two issues:

(1) whether BLM erred in not issuing and serving Doyon with a draft decision rejecting Doyon's selection applications, and

(2) whether BLM failed to follow the applicable regulations.

Doyon declared that it is BLM policy to serve Doyon a draft copy of BLM decisions rejecting the corporation's selection applications for Doyon's review and comments. Doyon alleged that the BLM's failure to implement such policy in the present case denied Doyon the opportunity to review the decision prior to publication and prevented Doyon from exercising "its right to relinquish its selection applications in lieu of rejection." Doyon cited the requirements of 43 CFR 2650.0-2 and § 2 of ANCSA that the settlement be accomplished with maximum participation by Natives in decisions affecting their rights and property.

Doyon also declared that BLM failed to follow the Departmental regulations at 43 CFR 2653.5(h) through 43 CFR 2653.5(k) pertaining to the processing of selection applications for cemetery and historical sites. Said regulations provide for (1) publication by the BLM of notice of filing of the application, including "the date by which any protest of the application must be filed"; (2) forwarding of the application to the Bureau of Indian Affairs (BIA) "for investigation, report, and certification"; (3) BIA's identification on a map and marking on the ground of "the location and size of the site or place with sufficient clarity to enable the [BLM] to locate on the ground said site or place"; (4) BIA's certifica-

tion "as to the existence of the site or place and that it meets the criteria in this subpart"; (5) BIA's notice to the applicant, the BLM, and other affected Federal agencies, of any error in the application as to the location of the site, after receipt of which notice the applicant shall have 60 days in which to file an amendment to its application with respect to the location of the site, (6) BIA's submission of its report and certification to BLM; and (7) with minor exceptions, if the selected land is available, issuance by the BLM of a decision to convey. Doyon declared that none of the procedures itemized were accomplished, and that the unavailability of the land does not excuse the BLM from performance.

In its Answer, BLM declared that it is not required, nor is it Departmental policy, to issue and serve a regional corporation with a draft decision rejecting selection applications. BLM maintained that it has never had a practice of circulating copies of draft selection rejections for review.

BLM argued that the regulations at 43 CFR 2653.5, describing the steps the Department takes to evaluate lands selected under § 14(h) (1) of ANCSA, do not apply when the selected lands are unavailable and the selection applications must be rejected at the outset. BLM stated that the regulations are silent as to what is required in the event that the selected lands are unavailable from the start, but asserted that where the Secretary has no discretion under ANCSA to

convey the selected lands, no purpose would be served by requiring the Department to conduct the investigations described in 43 CFR 2635.5. BLM declared that regulations, like statutes, should not be construed to reach unreasonable, useless, or absurd results.

Doyon replied that evaluation of the historic characteristics of an identified site is required under a number of laws besides ANCSA and is also necessary to properly adjudicate the State selection. Doyon argued:

If such an evaluation shows that the land is not vacant nor unappropriated then the State selection must be rejected, and, in fact, the land is then available for Doyon selection since regional corporations are the only entities which have statutory authority to select such cultural sites.

Doyon's Reply at 2.

Doyon asserted:

BLM's contention that Doyon's selection had to be "rejected at the outset" is not factual. There must be a field investigation before it can be determined that the State selection is valid and did, in fact, segregate the lands from selection by Doyon.

Doyon's Reply at 3.

With regard to the matter of notice, Doyon declared that it has, in fact, apparently been the policy of the Department to serve Doyon with notice of its intent to reject selection applications, particularly § 14(h)(1) cemetery and historic site selections. Doyon contended that it has been the long-standing practice of the Department to do so, and attached as Appendix I to its Reply copies of three recent BLM

notices of intent to reject Doyon § 14 (h) (1) selections and requests for relinquishment of the selections. Doyon asserted that there are sound reasons for the Department to inform Doyon prior to rejection of § 14(h) (1) selections:

(1) opportunity for Doyon to correct, where necessary, the legal descriptions of selected sites;

(2) opportunity for Doyon to file, where appropriate, a relinquishment of the selection; and

(3) satisfaction of the requirement of maximum participation by Natives in decisions affecting their rights and property.

In reply, BLM reasserted that it has not had a policy of circulating copies of draft selection rejections. BLM distinguished the notices filed by Doyon as involving § 14(h) (1) selections of lands included in other Native selections rather than of lands which were unavailable for § 14(h) (1) selections due to prior State selections. BLM reiterated its position that it is not required to give Doyon advance notice of rejections of § 14(h) (1) selections of State-selected lands, and that BLM's failure to issue such notice does not preclude protection of preservation of cultural sites.

Decision

BLM's decisionmaking process must follow applicable published Departmental regulations and policies. Doyon does not allege the existence of any published Departmental regulation or policy requiring notice of intent to reject prior to the publication of a final decision pursuant to 43 CFR 2650.7(d). Doyon has alleged that the BLM, as

a matter of consistent practice, issues notice of intent to reject § 14 (h) (1) selections of lands previously selected by the State.

[1] Even if an internal agency policy or practice such as that asserted by Doyon in fact exists, Doyon has failed to show how violation thereof creates error in the appealed decision of the BLM. In the absence of allegation of error in the decision itself, an allegation that an internal unpublished agency practice regarding predecision procedure was violated does not provide a basis for appeal to this Board.

Citing 43 CFR 2650.0-2 and § 2 of ANCSA, Doyon argues that BLM's failure to serve Doyon with a draft copy of the subject BLM decision denied Doyon the opportunity for maximum participation in the decisionmaking process.

[2] The Board recognizes the importance of the policy established by § 2 of ANCSA. Nonetheless, in this appeal Doyon's reliance on § 2 is misplaced. The general language of 43 CFR 2650.0-2 and § 2(b) of ANCSA that the settlement of claims of Alaska Natives be accomplished with maximum participation by the Natives in decisions affecting their rights and property does not establish an appealable right to predecision notice of Departmental intent to reject a selection.

BLM asserts that State selection of the lands prior to Jan. 17, 1969, excluded the lands from the definition of public lands in § 3(e) of ANCSA, thus making them unavailable for selection under § 14 (h) (1). The Board agrees. Doyon

did not appeal the BLM's finding that the selected lands (except U.S. Survey No. 5096) were not public lands, but did argue that the lands were not necessarily unavailable for § 14(h) (1) selection.

[3, 4] "Public lands" as defined by § 3(e) of ANCSA do not include lands identified for selection by the State prior to Jan. 17, 1969. Further, only unreserved and unappropriated public lands are available for selection under § 14(h) (1) of ANCSA. Since the subject lands, because of their selection by the State on Sept. 29, 1960, were not public lands, they are unavailable for § 14(h) (1) selection, and Doyon's selections thereof must be rejected.

Doyon argues that regardless of the land's availability for § 14(h) (1) selection, the Department is required to follow the course of procedure described in 43 CFR 2653.5 (h) through 43 CFR 2653.5(k).

The Board disagrees. These regulations establish a standard procedure for agency review of § 14(h) (1) selections of unreserved and unappropriated public lands. The BLM determined, and the Board has here affirmed, that the lands selected by Doyon were not public lands within the scope of ANCSA. Since the Secretary of the Interior has no discretion to convey nonpublic lands, the agency procedure described in the regulations cannot affect the decision to reject the selection. It would be a meaningless act with no legal consequence to apply regulations governing the validity of a selection of public

lands to a selection of nonpublic lands.

[5] The Board finds that Departmental regulations at 43 CFR 2653.5, insofar as they prescribe a specified course of action including publication, referral, investigation, conferring, reporting, etc., by the Department with regard to selections of public lands made pursuant to § 14(h) (1) of ANCSA, cannot apply when the selected lands are not public lands and the selection applications must be rejected at the outset.

Doyon claims that evaluation of historic characteristics of an identified site is required under laws besides ANCSA, and that transfer of such sites to the State without field examination violates the Act of Aug. 31, 1979 (P.L. 96-95), the Act of Aug. 21, 1935, and Executive Order No. 11593.

The decision here appealed only rejects certain of Doyon's § 14(h) (1) selections, and in no manner approves conveyance of the subject lands to the State. Furthermore, potential violation of the acts and executive order cited by Doyon are immaterial to rejection of Doyon's § 14(h) (1) selections. Thus, Doyon's concerns regarding such violations are not properly a portion of an appeal of the BLM decision herein appealed. This appeal must be dismissed as to those issues.

Based on the above findings and conclusions, the Board hereby affirms the above-designated decision of the Bureau of Land Management.

This represents a unanimous decision of the Board.

KING QUARRIES, INC.

3 IBSMA 357

Decided *September 29, 1981*

Appeal by King Quarries, Inc., for review of the Feb. 6, 1981, decision of Administrative Law Judge Sheldon L. Shepherd, Docket No. IN 1-15-R, denying temporary relief from Notice of Violation No. 80-3-13-83 in which the Office of Surface Mining Reclamation and Enforcement charged a violation of 30 CFR 715.15(a) (requirements for the disposal of excess spoil).

Affirmed as modified.

1. Surface Mining Control and Reclamation Act of 1977: Spoil and Mine Wastes: Generally—Surface Mining Control and Reclamation Act of 1977: Words and Phrases

"Excess spoil." When the evidence does not support a finding that spoil is being used to achieve the approximate original contour of the mined area, temporary relief will not be granted from an alleged violation of the requirements for the handling of excess spoil set forth in 30 CFR 715.15(a).

APPEARANCES: Neal S. Tostenson, Esq., Cambridge, Ohio, for King Quarries, Inc.; Myra Spicker, Esq., Office of the Field Solicitor, Indianapolis,

Indiana, Susan A. Shands, Esq., and Marcus P. McGraw, Assistant Solicitor, Division of Surface Mining, Office of the Solicitor, for the Office of Surface Mining Reclamation and Enforcement.

OPINION BY THE INTERIOR BOARD OF SURFACE MINING AND RECLAMATION APPEALS

This appeal was brought by King Quarries, Inc. (King Quarries), for review of the decision from the Hearings Division denying the company temporary relief from violation 3 of Notice of Violation No. 80-3-13-83, in which the Office of Surface Mining Reclamation and Enforcement (OSM) charged a violation of the general requirements of 30 CFR 715.15(a) for the disposal of excess spoil. For the reasons set forth below we affirm the denial of temporary relief.

Factual and Procedural Background

King Quarries conducts surface coal mining and reclamation operations pursuant to Ohio strip mine permit C-1233 in Muskingum County, Ohio. At this site the company is engaged in a type of mining called "daylighting," by which the crown of a hill is removed to expose an underlying seam of coal (Tr. 69).

When an OSM inspector visited King Quarries' permit area on Dec. 18 and 19, 1980, he observed that the company had pushed spoil from a portion of the hill being mined into two hollows (referred to as

hollows 3 and 5) at the base of the hill, below the elevation of the coal seam (Tr. 18-20, 27-35; Respondent's Exhs. 3-11). In both hollows the spoil had disrupted the natural drainage course (Tr. 27-35; Respondent's Exhs. 4-11). On the basis of these observations the inspector charged King Quarries with violating the general requirements of 30 CFR 715.15(a) concerning the disposal of excess spoil (Respondent's Exh. 1).

King Quarries explains its placement of spoil in hollows 3 and 5 as part of its plan to return the mined area to its approximate original contour (Tr. 65-66, 69). The company intends to recreate the hill being mined by moving the overburden from each new exposure of coal to the preceding area of coal excavation (*id.*). In this process the overburden first removed from the hill will be graded out into hollows 3 and 5 where it will form part of the base of the reformed hill (Tr. 65-66, 75-76, 97-98; Respondent's Exh. 12; Applicant's Exh. 2).

The mining plan concerning hollows 3 and 5 that King Quarries first submitted to the Ohio Department of Natural Resources included a provision for the construction of valley fills in the hollows, pursuant to State regulations (Tr. 69-70; Respondent's Exh. 12). Informed by State officials that the proposed valley fill structures would not be necessary, the company abandoned its original mining plan in this regard (Tr. 76-77; *see* Tr. 40, 44, 51, 62).

Following OSM's issuance of the notice of violation to King Quar-

ries, the company sought temporary relief from the alleged violation of 30 CFR 715.15(a). In support of its application King Quarries attempted to show that the spoil placed in hollows 3 and 5 would be used to return the mined area to its approximate original contour and, thus, that it is not "excess spoil" that must be handled in accordance with 30 CFR 715.15(a). A hearing on the application was held on Jan. 29, 1981; the Administrative Law Judge issued a written decision denying temporary relief on Feb. 6, 1981. The basis of this decision was set forth as follows:

I do not believe that it is a question of excess spoil versus spoil necessary to return to the approximate original contour. The crux of the problem after hearing the testimony and reviewing the evidence was stated in Comment No. 11 of 42 FR 62648 (December 13, 1977) regarding 30 CFR 715.15. The commenters stated as follows: "The intent of the regulation is to require that all fills that encroach upon or obstruct any natural stream channel, other than those channels on highland areas such as natural rills and gullies, meet the requirements of § 715.15(b)." The purpose of those detailed requirements is to attempt to prevent the erosion of the spoil. If the spoil is merely shoved in the hollow, graded and reseeded, it would be very susceptible to erosion. The requirements of rock underdrains, depositing in lifts and compacting may be expensive. So would the results or erosion of the spoil which is disposed in an uncontrolled manner such as in this case.

In my judgment that is the situation at hand, and I believe that the spoil material, whether or not it is excess spoil or whether or not it is necessary to return to the approximate original contour when it is disposed of in a valley such as the one in question, must be disposed of in a certain manner set forth in 715.15(b).

The requirements are generally those required in the remedial action portion of Violation No. 3 of the above notice of violation.

I, therefore, conclude that the applicant has not shown that there is a substantial likelihood that the findings of the Secretary will be favorable to it as required for granting temporary relief under Section 525 of the Act.

(Decision of Feb. 6, 1981, Docket No. IN 1-15-R, at 3).

Discussion and Conclusion

Because of the basis for the Administrative Law Judge's holding against it, King Quarries reasserts on appeal that the spoil placed in hollows 3 and 5 is not "excess spoil" and, thus, that it has not violated the provisions of 30 CFR 715.15(a) for the placement of excess spoil. On the basis of the record before us, we conclude that the spoil appears to be "excess" and, therefore, we affirm the decision on appeal as so modified.

Excess spoil is described in 30 CFR 715.15(a) as "[s]poil not required to achieve the approximate original contour within the area where overburden has been removed." The term "approximate original contour" is defined to mean "that surface configuration achieved by backfilling and grading of the *mined area* so that the reclaimed area * * * closely resembles the general surface configuration of the land prior to mining *and blends into and complements the drainage pattern of the surrounding terrain.*" 30 CFR 710.5 (italics added).

[1] The record before us shows that hollows 3 and 5 are below the

elevation of the coal seam that King Quarries intends to mine; therefore, they will not be part of the "mined area." Thus, in accordance with the provisions above, the placing of spoil into these hollows can only be considered as a part of returning the mined area to its approximate original contour if the spoil does not interfere with drainage through the hollows. OSM's evidence tends to show that drainage through the course of the hollows has been impeded by the spoil graded into them; therefore, we cannot conclude at this stage in the proceedings that the spoil is being used to achieve the approximate original contour of the mined area.¹

Perhaps upon further review King Quarries will be able to show that after final grading the drainage pattern of the area surrounding the mined area will be essentially the same as before mining.² The company has not shown this in the record of the proceedings on its application for temporary relief;

¹ The posture of the Ohio regulatory authority in this regard cannot relieve King Quarries of its obligations under the Department's regulations. *E.g.*, *Cedar Coal Co.*, 1 IBSMA 145, 86 I.D. 250 (1979).

² There may also be considered the possibility that the spoil that has been placed in hollows 3 and 5 might be needed elsewhere within the permit area to return the mined area to its approximate original contour, assuming that King Quarries does not show upon further review that spoil may be placed in these hollows to achieve the approximate original contour of the mined area. *See generally Tennessee Consolidated Coal Co., Inc.*, 3 IBSMA 145, 88 I.D. 508 (1981) (evidence held not to support OSM's contention that spoil material temporarily placed on working bench would not be necessary to achieve approximate original contour). Neither King Quarries nor OSM has presented evidence to this effect thus far in the proceedings.

therefore, it has not shown a substantial likelihood that it will receive a favorable decision on its application for review.

Because of our holding that King Quarries has not shown a substantial likelihood of prevailing under its application for review of the notice of violation, we need not address the requirement of 30 U.S.C. § 1275(c) (1976) and 43 CFR 4.1263(c) that an applicant for temporary relief must state and show that such relief "will not adversely affect the health or safety of the public or cause significant, imminent environmental harm to land, air, or water resources."

For the foregoing reasons the decision of the Hearings Division denying King Quarries, Inc., temporary relief from Notice of Violation No. 80-3-13-83 is affirmed.

APPEAL OF SELDO CO., INC.,
D.B.A. DESERT MATERIALS CO.
IBCA-1194-5-78

Decided September 30, 1981

Contract No. YA-511-CT6-138 and
Contract No. YA-511-CT6-184, Bureau of Land Management.

Sustained in part.

1. Contracts: Disputes and Remedies: Equitable Adjustments

Where the Government admits liability and the quantum evidence adduced by the parties is not satisfactory, the Board will determine the amount of equitable adjustment by utilizing the jury verdict approach.

2. Contracts: Construction and Operation: General Rules of Construction

The Board rejected the argument of the contractor that the language of the Work Stoppage Clause, providing that the contractor will not be entitled to additional compensation for stop work orders of reasonable duration, should be interpreted to allow a claim to be compensable where the total duration of a series of stop work orders was over 50 percent of the total performance time of the contract. The Board found that no single stop work order in a series of five issued was of unreasonable duration and held that the subject language was intended to apply to only one stop work order at a time, and since the parties stipulated that each stop work order was reasonably and properly issued, the claim was not compensable.

3. Contracts: Construction and Operation: Drawings and Specifications

Where the Board found that the Government withheld information from the contractor pertaining to test results showing the plasticity index of an alternate borrow pit, it was held that the contractor was entitled to an equitable adjustment for resulting additional costs on the basis of defective specifications.

APPEARANCES: Joseph J. Ford, Hudson, Creyke, Koehler, Tacke & Bixler, Attorneys at Law, Washington, D.C. for Appellant; William A. Perry, Department Counsel, Denver, Colorado, for the Government.

OPINION BY
ADMINISTRATIVE
JUDGE DOANE

INTERIOR BOARD OF
CONTRACT APPEALS

Background

This is an appeal from the contracting officer's final decision involving three claims under two contracts numbered YA-511-CT6-138 and YA-511-CT6-184 (hereinafter, #138 and #184). The first contract #138 was entered into between Seldo Co., Inc., d.b.a. Desert Materials Co. (Seldo), and the Bureau of Land Management (BLM or Government) for the repair of a dam break and other related work at the Upper Centennial Detention Dam in Yuma County, Arizona. The contract price was \$33,484. The second contract, #184, between the same parties, was for the construction of a reinforced concrete retaining wall and other related work, also at Yuma County, Arizona. The contract price for the second contract was \$13,520.

The first claim arose out of the failure of the Government to furnish an anchor chain as required by the specifications. The contracting officer allowed Seldo \$10,985.62 as an equitable adjustment, but Seldo claims \$14,536.25 plus \$1,084.92 profit. Since the Government admits liability, the remaining issue pertains to quantum only. The second claim stems from a series of "stop work" and "resume work" orders issued by the Government during the project. The parties agree that the issue here is not one of fact but strictly a question

of law, that is, whether the claim is compensable. The third claim presents a question of fact—that is, whether Seldo was given certain information pertaining to the soil condition in an alternate borrow area. The legal basis of this claim is alleged to be a differing site (or changed) condition. The parties have agreed that on claims 2 and 3, only the question of entitlement is at issue and that should Seldo prevail on either or both claims, the question of quantum should be remanded for negotiation.

A 1-day hearing was held with respect to this appeal at Phoenix, Arizona, and both parties submitted posthearing briefs.

*Claim No. 1—The Anchor Chain
Claim*

Discussion

Seldo argues that it is entitled to the amount supported by the Government audit with respect to this claim, since the Government had admitted liability (AB-2).¹ The Government contends (GB-2, 3) that: The audit did not find anything due the contractor but is an expression of Seldo's total costs for the two contracts; that the only analysis of the claim appears in the contracting officer's findings (AF-21, Contract #138); that appellant has submitted no evidence to establish that such analysis is wrong; that some of the days of delay were

¹ References to the record throughout this opinion will be typically abbreviated as follows: Appeal File, Item 2—(AF-2); Appellant's Exhibit 8—(AX-8); Government Exhibit 3—(GX-3); Transcript, page 24—(Tr. 24); Appellant's Brief, page 16—(AB-16); Government's Brief, page 10—(GB-10).

due to rain, as shown by the inspector's logs (GX-8); and that the audit report provided no credit to the Government for those days, while the equitable adjustment determined by the contracting officer did.

The contracting officer was not produced as a witness to explain his analysis nor was any auditor called as a witness to show what factors were considered or excluded in making the audit report. The audit (AF-11, Contract #138), the contracting officer's findings and decision (AF-21, Contract #138), and the inspector's logs (GX-8), constitute the only evidence of record referred to by the parties as supporting their respective positions.

These three documents, by themselves, are inconclusive toward furnishing a reliable basis for our determination of this quantum question. The audit report contains different terminology with respect to cost items from that used by the contracting officer in his decision so that a rational comparison appears impossible. Seldo had the burden of proof and relied entirely on the audit report to support its claim, but as pointed out by the Government counsel, the report does not purport to analyze any technical or engineering factors that may be involved. On the other hand, the contracting officer has made no attempt in his finding and decision to justify his variances with the audit report.

Decision

Therefore, not being satisfied with the quantum evidence adduced

by either party, we are compelled to resort to a jury verdict approach and find that appellant is entitled to an additional equitable adjustment of \$2,320, approximately half the difference between the allowance made by the contracting officer and the total costs plus profit as verified by the audit report.

Claim No. 2—The Flooding Conditions

Discussion

The parties stipulated that five stop work and resume work orders were issued by the Government on the following dates:

Stop work	Resume work	Total days
1. Aug. 13, 1976..	Aug. 23, 1976	11
2. Sept. 5, 1976---	Sept. 15, 1976	11
3. Sept. 23, 1976--	Oct. 6, 1976	14
4. Oct. 23, 1976--	Nov. 16, 1976	25
5. Dec. 31, 1976--	Jan. 10, 1977	11
Total-----		72

The parties also stipulated that the Government acted reasonably and properly in issuing these stop work and resume work orders when they did. Government fault is not the issue. It is undisputed that the subject orders were issued under Clause 13 of the Additional General Provisions contained in both contracts. That clause reads as follows:

13. WORK STOPPAGE BY THE GOVERNMENT—The Contracting Officer, by issuance of a stop work order, may direct the Contractor to shut down any work that may be subject to damage be-

cause of weather conditions, fire danger, or because it is impracticable to work during the winter season. The Contractor will be given a resume work order, which will document the date the work stoppage ends. The Contractor will not be entitled to additional compensation for such stoppages which are of reasonable duration. The Contractor will be given a time extension equal to the period of fire danger or winter shutdown, but will not be granted a time extension because of reasonable stoppage for weather conditions unless the delay, caused by such stoppage, is excusable within the meaning of Clause 5(d) of SF-23A or Clause 2(b) of SF-19, whichever form is part of this contract.

Appellant makes two arguments with respect to the second claim:

(1) That the total of 72 days of delay compared with the total performance time of both contracts, 140 days, suggests that the stoppages were of unreasonable duration, and therefore, by implied construction of the third sentence of Clause 13, *supra*, the contractor is entitled to additional compensation; and (2) that Clause 13 "is much akin to the Suspension of Work Clause" (Clause 23 of the General Provisions contained in the subject contracts) and, based upon the reasoning of the Court of Claims, applied in *Fruehauf Corp. v. United States*, 587 F. 2d 486 (1978), citing *Merritt-Chapman & Scott Corp. v. United States*, 192 Ct. Cl. 848, 429 F. 2d 431 (1970), Seldo should not have to bear the burden of a drastic increase in its time and cost of performance resulting from delays of an unreasonable duration.

We reject Seldo's first argument concerning the construction of the third sentence of Clause 13. The language of that sentence does not

in any way purport to deal with the total duration of a number or series of stop work orders. It is our view that such language, of necessity, pertains to only one stop work order at a time, since under any particular contract, there is no way of pre-determining whether none, one, or several stop work orders may be required because of fire danger or adverse weather conditions. As pointed out in the Government's brief, the inspector's logs (GX 6, 7, and 8) show that the stop work orders were issued because of rainfall; that they were in effect only so long as the conditions at the site were unsuitable for work; and that the resume work orders coincide with Seldo's own suggestions as to when it would be able to resume work. In these circumstances, we find that no stop work order continued for an unreasonable duration.

Appellant's second argument, likewise, is without merit. It is true that Clause 13 and the standard suspension of Work Clause are alike in that they both deal with work stoppages. However, their "kinship" stops there. The two clauses have different functions. The Suspension of Work Clause reads as follows:

23. SUSPENSION OF WORK

(a) The Contracting Officer may order the Contractor in writing to suspend, delay, or interrupt all or any part of the work for such period of time as he may determine to be appropriate for the convenience of the Government.

(b) If the performance of all or any part of the work is, for an unreasonable period of time, suspended, delayed, or interrupted by an act of the Contracting Officer in the administration of this con-

tract, or by his failure to act within the time specified in this contract (or if no time is specified, within a reasonable time), an adjustment shall be made for any increase in the cost of performance of this contract (excluding profit) necessarily caused by such unreasonable suspension, delay, or interruption and the contract modified in writing accordingly. However, no adjustment shall be made under this clause for any suspension, delay, or interruption to the extent (1) that performance would have been so suspended, delayed, or interrupted by any other cause, including the fault or negligence of the Contractor or (2) for which an equitable adjustment is provided for or excluded under any other provision of this contract.

(c) No claim under this clause shall be allowed (1) for any costs incurred more than 20 days before the Contractor shall have notified the Contracting Officer in writing of the act or failure to act involved (but this requirement shall not apply as to a claim resulting from a suspension order), and (2) unless the claim, in an amount stated, is asserted in writing as soon as practicable after the termination of such suspension, delay, or interruption, but not later than the date of final payment under the contract.

It is apparent that Clause 13 pertains to work stoppages which may be issued by the contracting officer because of fire danger or adverse weather conditions, while Clause 23 allows the contracting officer to issue stop work orders for other reasons as may be appropriate for the convenience of the Government. Since it is undisputed that the stop work orders here were properly issued under Clause 13 because of rainfall, it follows that the *Fruehauf* and *Merritt-Chapman* cases, *supra*, cited by Seldo are not in point. In those cases, stop work orders were issued under Clause 23.

Furthermore, the limitation of the second sentence of Clause 23(b), under the facts of this case, prevents the equitable adjustment sought by Seldo.

Decision

Therefore, having failed to sustain its burden of proof in support of entitlement, Seldo's claim No. 2 is hereby denied.

Claim No. 3—The Soils Condition Claim

Discussion

The question here is whether appellant is entitled to an equitable adjustment for extra costs resulting from the Government's failure to furnish information pertaining to the plasticity of soils in the alternate borrow area to be used to repair the breach in the dam.

It is undisputed that the contract drawings showed a plasticity index of 4 for the principal borrow area but did not show the plasticity index for the materials in the alternate borrow area; that a general note on drawing No. AZ-02-9172-2 stated, "materials from the principal and alternate borrow pits will be blended at the most optimum mix to obtain desirable properties of the borrow materials in the compacted earthfill embankment and core trench" (AF-2); that in April of 1976, Mr. Kenneth F. Hansen, an engineer for BLM, and the engineer who prepared the plans and specifications of the breach work, determined that the plasticity test results for the principal borrow

area were too low in that the soils were too sandy or permeable to achieve the desired compaction; that the plasticity index of 4 was indicated on the contract drawings for the primary area, but because of the cutoff date for submission of the contract document in order to have the contract awarded by the end of the fiscal year, Mr. Hansen designated only the location of the alternate borrow pit on the plans leaving out the plasticity index information for that pit; that the cutoff date was April 15 and that the test results showing the plasticity of the soils in the alternate pit were not received until after May 10, 1976; that the plasticity index for that alternate pit was 12 as shown by Government Exhibit 4, dated May 10, 1976; and that such information was never incorporated into the contract documents, but Mr. Hansen requested that the District Office for BLM make the information available to all the bidders.

The Government contends (1) that Mr. Paul E. McCollum, the project engineer for appellant, should have known from the general note on the drawings that since the plasticity index of 4 was indicated for the primary pit and a blending of the two pits was required, the plasticity index for the alternate pit would have to be higher in order to repair the breach; (2) that Mr. McCollum had previous experience for 30 years in that part of Arizona where the project was located and was therefore chargeable with knowledge of local condi-

tions; (3) that during the prebid site inspection, Mr. McCollum declined to make a closeup inspection of the alternate borrow area, and that since Mr. Wilson, the District Engineer for the Government, testified (Tr. 78) that he showed all the prospective bidders the test results for the alternate borrow area (GX-4), and since it is standing policy in the District Office to make available to bidders all the information it has about a project, "there is no reason to believe Mr. Wilson did not make Government Exhibit 4 available to the contractor."

There is a direct conflict of testimony whether Government Exhibit 4 was actually shown to Mr. McCollum by Mr. Wilson.

Mr. McCollum testified that he made an appointment with Mr. Wilson to meet at the Lower Centennial Dam site early in June 1976 for a prebid site inspection; that he had bummed a ride with another contractor, Mr. Jack W. Taylor, who had no interest in the subject contracts, but who was making a trip to the general area in connection with bidding on other projects (Tr. 14, 15); that Mr. Wilson did not show up at the appointed time of 10:30 a.m. on the appointed day, but did show up at the town of Salome that day where McCollum and Taylor were having lunch; that after lunch the three of them went back to the Lower Centennial Dam site, the location of the retaining wall project, but did *not* visit the Upper Centennial site; and that he, McCollum, was *not* given any information, either written or oral,

concerning the nature of borrow pits at the Upper Centennial site, where the breach repair project was located (Tr. 16).

On the other hand, John L. Wilson, then the District Engineer for BLM, testified that he escorted the prospective bidders for the subject contracts at the prebid onsite inspection, and that he did go with McCollum and Taylor on the tour of the Lower Centennial Dam site as related by McCollum (Tr. 77). When asked how many people were in the party, Mr. Wilson testified as follows: "I don't know for sure. It seemed like there were quite a few when we went to the Centennial Narrows. And then I showed them the water spreader system below Centennial Narrows *and at that point most of the contractors left*" (Tr. 77 (*italics supplied*)).

Mr. Wilson also testified that his recollection coincided with the testimony of Mr. McCollum and Mr. Taylor except that he did take them to the Upper Centennial Dam site and when on top of the dam pointed out the alternate borrow area and asked them if they would like to go down and see it and they said they did not want to; and that upon returning to the vehicles, he showed Mr. McCollum Government Exhibit 4, the test results (Tr. 78), but gave him no copies and did not have a signature acknowledging that Mr. McCollum had examined the document (Tr. 79).

The testimony of Mr. McCollum regarding the onsite inspection at the Lower Centennial Dam was corroborated by the testimony of Mr.

Jack W. Taylor. He verified that the Government representative did *not* take them to the Upper Centennial Dam and that no written information was given either to Mr. McCollum or himself related to the Upper Centennial (Tr. 41-44). Mr. McCollum also testified (Tr. 26-33) that Seldo had great difficulty in achieving the correct blend of materials in the two borrow pits and in getting water to permeate the alternate borrow pit material so that proper compaction could be accomplished and that it was not until late December of 1976, after incurring considerable extra costs, when he requested the Government inspector, Mr. Martin Fuller, to see if the BLM Office had any further information on the alternate borrow pit material. The inspector's log for December 22 (GX-7), verifies that the inspector did obtain the information contained in Government Exhibit 4 by radio and that upon giving the information to Mr. McCollum, Mr. McCollum said that the information had been withheld from him when he bid the job and that he intended to make a claim for a changed condition.

There was no corroboration of Mr. Wilson's testimony that he gave the information to McCollum at the onsite inspection. The corroboration of McCollum's testimony by both the testimony of Mr. Jack Taylor and the entry in the inspector's log of Dec. 22, 1976, together with the unlikelihood of Seldo going to all the extra work and expense of trying properly to blend the soils in the two borrow pits if the plasticity

index information had been given Seldo, compels our finding that the conflict of testimony, by a preponderance of the evidence, must be resolved in favor of appellant. We do not believe that Mr. Wilson deliberately misrepresented the facts but, more than likely, having escorted numerous bidders to the project sites on prebid inspections, simply confused McCollum and Taylor with other contractors and believed he had actually shown them the contents of Government Exhibit 4.

The theory of appellant's claim to entitlement is on the basis of a differing site (or changed) condition. We do not believe that theory is applicable here since there was no change, the plasticity index of the alternate borrow area was, through inadvertence, neglect, or whatever reason, simply withheld by the Government from the contractor. However, in *Buck Brown Contracting Co., Inc.*, IBCA-1119-7-76 (Aug. 1, 1978), 78-2 BCA par. 13,360, this Board held a road surfacing contractor entitled to an equitable adjustment for costs incurred as a result of failure by the Government to inform him of the actual condition of an existing subgrade. But that holding was on the basis of a defect in specifications.

There was no satisfactory explanation made by the Government in this case why a change order or amendment to the contract drawings was not made to indicate the plasticity index of the alternate borrow pit, if not in the prebid documents, at least soon after the contract award. We hold, therefore, as

we did in the *Brown* case, that appellant has made out a case for entitlement to an equitable adjustment, not on a theory of a differing site condition, but rather on a theory of defective specifications.

It has been a longstanding rule of this Board that we may decide a claim on a theory not advanced by the parties if consistent with the facts of record or legitimate inferences therefrom. *Paul C. Helmick Co.*, IBCA-39 (Oct. 31, 1956), 63 I.D. 363, 365-66, 56-2 BCA par. 1096 at 2777-78; *Singleton Contracting Corp.*, IBCA-1413-12-80 (Aug. 12, 1981), 88 I.D. 722, 81-2 BCA par. ____.

Decision

Wherefore, appellant's claim No. 3 for entitlement to an equitable adjustment is sustained and the matter of quantum is remanded to the contracting officer for negotiation pursuant to stipulation of the parties.

Summary

By way of recapitulation, the Board has decided the three claims involved in this appeal as follows:

Claim No. 1—Sustained in the amount of \$2,320.

Claim No. 2—Denied.

Claim No. 3—Sustained as to entitlement and remanded for negotiation as to quantum.

Section 7: Consultation**

Earlier Solicitor's Opinions on cumulative impact analysis have been withdrawn. Solicitor's Opinion M-36905 (Supp.), 88 I.D. 903 (1981). Sec. 7 consultation under the Endangered Species Act must consider past and present impacts of all projects and human activities, whether private, state or federal. Consultation must also consider the cumulative impacts of other proposed future federal projects in the vicinity which have undergone sec. 7 consultation and received favorable biological opinions. Finally, consideration should also be given to the impacts of proposed state or private actions whose completion prior to the completion of the federal project subject to consultation is reasonably certain.

*OPINION BY OFFICE
OF THE SOLICITOR*

**TO: DIRECTOR, FISH AND WILDLIFE
SERVICE**

**FROM: ASSOCIATE SOLICITOR, CON-
SERVATION AND WILDLIFE**

**SUBJECT: CUMULATIVE EFFECTS TO
BE CONSIDERED UNDER SECTION 7 OF
THE ENDANGERED SPECIES ACT**

This memorandum sets forth the legal requirements for consideration by federal agencies of the "cumulative effects" of other projects and impacts in determining whether a particular proposed action complies with sec. 7(a) of the

*Not in chronological order.

Endangered Special Act (ESA or Act), 16 U.S.C. § 1536(a). The Solicitor has now withdrawn all prior legal opinions¹ on cumulative impacts and sec. 7. This memorandum shall control the scope of consultation and cumulative impact analysis under the Endangered Species Act.

Sec. 7 requires all federal agencies, in consultation with the Fish and Wildlife Service (FWS or Service), to insure that their actions are not likely to jeopardize the continued existence of endangered or threatened species, or adversely modify their critical habitats. The Service consults with federal agencies and renders a biological opinion on the effects of agency action upon listed species, pursuant to sec. 7(b), 16 U.S.C. 1536(b).

Consideration of the legal requirements for cumulative effects analysis arose in 1978, as the result of sec. 7 consultations for two water development projects on the North and South Platte Rivers: the Grayrocks Dam and the Narrows Project. As proposed, both projects would affect downstream flows in the Big Bend area of the Platte River in Nebraska, an area designated as critical habitat for the whooping crane. During these consultations, the Service requested a Solicitor's Opinion on whether sec. 7 requires consideration of the effects of other water projects in the area which were then in the plan-

ning or construction phases, would affect the crane's habitat, and would have impacts which might be cumulative to those of the proposal at hand.

An opinion issued on July 19, 1978, concluded that federal agencies must consider the cumulative effects of other projects, whether federal, state or private, during consultations under sec. 7. Although the July 19 opinion did not expressly define the term "cumulative effects", a July 24, 1978, opinion stated that for any ecosystem upon which an endangered or threatened species depends, all pending project impacts must be considered if those impacts can reasonably be anticipated to occur either before or after the completion of the project which is the subject of consultation.

For the reasons that follow, the definition of cumulative effects used in these prior opinions is inappropriate when applied to sec. 7.

Consideration of Cumulative Effects Under Sec. 7

The previous Solicitor's Opinions used concepts developed in NEPA law² which should not be applied, without modification, to sec. 7 con-

¹ 85 I.D. 275 (July 19, 1978) (supplemented July 24, 1978). See Appendix A. An earlier Deputy Solicitor's opinion issued on May 25, 1978, was withdrawn on June 5, 1978.

² The Council on Environmental Quality regulations implementing the National Environmental Policy Act (NEPA), 42 U.S.C. § 4332 (2)(C), define the term "cumulative impact" as—

"the impact on the environment which results from the incremental impact of the action when added to other past, present, and reasonably foreseeable future actions regardless of what agency (Federal or non-Federal) or person undertakes such other actions. Cumulative impacts can result from individually minor but collectively significant actions taking place over a period of time."

40 CFR 1508.7 (1980).

ENDANGERED SPECIES ACT

August 27, 1981

sultations. The first reason is that the *substantive* consequences of requiring such cumulative effects to be considered under sec. 7 differ from the *procedural* consequences of environmental planning statutes such as NEPA. Sec. 7 is a substantive statute which provides:

Each federal agency shall, in consultation with and with the assistance of the Secretary [of the Interior or Commerce], insure that any action authorized, funded or carried out by such agency * * * is not likely to jeopardize the continued existence of any endangered species or threatened species or result in the destruction or adverse modification of habitat of such species which is determined by the Secretary, after consultation as appropriate with the affected States, to be critical.

16 U.S.C. 1536(a)(2). The Supreme Court, in interpreting a slightly different, earlier version of sec. 7, has noted the difference from NEPA:

NEPA essentially imposes a procedural requirement on agencies, requiring them to engage in an extensive *inquiry* as to the effect of federal actions on the environment; by way of contrast, [section 7 of] the 1973 Act is substantive in effect, designed to *prevent* the loss of any endangered species, regardless of the cost.

Tennessee Valley Authority v. Hill, 437 U.S. 153, 188 n.34 (1978) (Italics in original).

A wholesale adoption of the cumulative effects approach under NEPA is thus inappropriate because prerequisite authority for a proposed action subject to consultation could be denied because of the effects of other speculative and un-

related future actions which might be likely to jeopardize a listed species. This substantive result is quite different from that under planning statutes such as NEPA, where an analysis of the cumulative effects of other unrelated future actions means only that such effects be *considered* before proceeding with the proposed action undergoing environmental review. See, *Natural Resources Defense Council v. Calloway*, 524 F.2d 79 (2d Cir. 1979).

The second reason for not adopting NEPA's approach to cumulative effects analysis under sec. 7 is that all other *future federal* actions will themselves be subject to the restraints of sec. 7 at some later date. It is, therefore, more appropriate to consider the effects of future federal actions in a given area at the time consultation under sec. 7 is initiated for those actions. That is, the impact of future federal projects should be addressed sequentially, rather than collectively, since each must be capable at some point of individually satisfying the standards of sec. 7. Thus for federal projects, sec. 7 provides a "first-in-time, first-in-right" process whereby the authorization of federal projects may proceed until it is determined that further actions are likely to jeopardize the continued existence of a listed species or adversely modify its critical habitat. Environmental planning statutes such as NEPA do not impose such substantive limitations on future federal conduct, and so it is more

appropriate for them to require the collective consideration of reasonably foreseeable, future federal activities. The substantive nature of sec. 7, however, suggests that a project-by-project sequential review of federal actions is a more appropriate approach for endangered species consultation.

A recent case which considered NEPA and the ESA side by side in a given factual situation implicitly recognized different approaches for cumulative impact analysis under NEPA and the ESA, requiring broad agency consideration of cumulative impacts under NEPA while focusing on a more limited analysis of impacts under sec. 7.

In *North Slope Borough v. Andrus*, 486 F. Supp. 332 (D.D.C. 1980), *rev'd. on other grounds*, 642 F.2d 589 (D.C. Cir. 1980), the court considered NEPA and ESA compliance for offshore oil and gas leasing. Both the district and appeals courts held that the cumulative effects of "other significant Federal and state energy development projects * * * in progress and planned for the North Slope Region," had to be considered in the EIS. 486 F. Supp. at 347; 642 F.2d at 600. The cumulative effects of these other actions, however, were not mentioned by either court in their discussion of the proper scope of agency review under sec. 7. Instead, for sec. 7 purposes, the courts only focused on the impacts of the lease sale itself. 486 F. Supp. at 350-51; 642 F.2d at 608-609. Thus, though both courts required consideration of the cumulative effects of unrelated future state

and federal actions for purposes of NEPA, each implicitly endorsed a more limited review of the leasing proposal under sec. 7.

Sec. 7 Consultation Process

Having concluded that limited analysis of cumulative effects is required under sec. 7, we will now discuss how that analysis should occur.

Obviously the first task in consultation is to define the scope of the project under review. In the case of construction activities, a "project" is both the proposed activity itself and any "connected" activity as well. Connected activities are those which are related to (interrelated) or dependent upon (interdependent) a proposed project. Interdependent actions are those which have no independent utility apart from the proposed project. Interrelated actions are those which are part of a larger project and cannot proceed unless other actions are taken previously or simultaneously.³ Thus, in the case of a reservoir project with a proposed lattice work of irrigation canals, in all likelihood the canals would be considered part of the "project" for purposes of sec.

³ See *Sierra Club v. Calloway*, 499 F.2d 982 (5th Cir. 1974); *Friends of the Earth v. Coleman*, 518 F.2d 323 (9th Cir. 1975); *Trout Unlimited v. Morton*, 509 F.2d 1276 (9th Cir. 1974); *Sierra Club v. Stamm*, 507 F.2d 788 (8th Cir. 1974); *Sierra Club v. Froehke*, 392 F. Supp. 130 (D. Mo. 1975); *aff'd* 534 F.2d 1289 (5th Cir. 1975); *Environmental Defense Fund v. Armstrong*, 356 F. Supp. 131 (N.D. Cal. 1973), *aff'd* 487 F.2d 814 (9th Cir. 1974); 40 CFR 1508.25(a).

See also *Atchison, Topka and Santa Fe R.R. v. Callaway*, 382 F. Supp. 610 (D.D.C. 1974); *City of Rochester v. U.S. Post Office*, 541 F.2d 967 (2d Cir. 1976).

7 consultation because it is unlikely that they would have any independent utility *but for* the impoundment.

Once the "project" has been defined, the consultation team should then focus on analyzing the environment baseline in the affected area. This is necessary for determining what the environmental "status quo" is going to be at the time of consultation on the proposed project. The impacts of the project under review should then be measured against this environmental baseline.

In determining the environmental baseline, the consultation team should consider the *past* and *present* impacts of *all* projects and human activities in the area, regardless of whether they are federal, state or private in nature. This is logical since the actual impacts of these projects and activities are not dependent upon the origin of their sponsorship; rather, they all are contributing influences which mold the present environmental status quo of any given area.

Furthermore, the consultation team should consider as part of the environmental baseline the anticipated impacts of all *proposed* federal projects in the affected area which have previously been the subject of sec. 7 consultation and received a favorable biological opinion. This is consistent with the "first-in-time, first-in-right" approach discussed earlier, since a

project passing muster under sec. 7 is in effect allocated the right to consume (and is presumed to utilize) a certain portion of the remaining natural resources of the area. It is this "cushion" of remaining natural resources which is available for allocation to projects until the utilization is such that any future use may be likely to jeopardize a listed species or adversely modify or destroy its critical habitat.⁴ At this point, any additional federal activity in the area requiring a further consumption of resources would be precluded under sec. 7.

However, the consultation team should not consider as part of the environmental baseline the anticipated impacts of future federal projects which have *not* been previously reviewed under sec. 7. Those projects are not part of the environmental baseline and have not had their priority set under the first-in-time system. They would undergo separate review by the consultation team and could only be authorized if it was subsequently concluded that a sufficient "resource cushion" still remained, or if an exemption was granted by the Endangered Species Committee under subsec. 7 (h) of the ESA.

⁴ We recognize that a determination of the size of this so called "cushion" may be difficult to make in some instances and may escape enacting delineation and consist of merely a range of anticipated impacts and effects. Nevertheless, we conclude that the 1979 Amendments to the Act requires some sort of final biological analysis and recommendation to result from the consultation process. 125 Cong. Rec. 9650 (Oct. 24, 1979); H.R. Rep. No. 697, 96th Cong., 1st Sess. 12 (1979).

The impact of state or private actions which are contemporaneous with the consultation in process should also be factored into the environmental baseline for the project area.

Having thus established an environmental baseline, the consultation team must then determine what the *direct* and *indirect* effects of the project under review will be. Such effects must be analyzed as part of the consultation process. See *Tennessee Valley Authority v. Hill*, 439 U.S. 153 (1978); *National Wildlife Federation v. Coleman*, 529 F. 2d 1064 (5th Cir. 1976); See also *North Slope Borough v. Andrus*, 486 F. Supp. 332 (D.D.C.), *aff'd in part and rev'd in part*, 642 F. 2d 589 (D.C. Cir. 1980).

Finally, the consultation team should consider the "cumulative impacts, of *future* state or private sections where such actions are *reasonably certain* to occur prior to the completion of the federal project. A non-federal action is "reasonably certain" to occur if the action requires the approval of a state or local resource or land use control agency and such agencies have approved the action, and the project is ready to proceed. Other indicators which may also support such a determination include whether the project sponsors provide assurance that the action will proceed, whether contracting has been initiated, whether there is obligated venture capital, or whether State or local planning agencies indicate that grant of authority for the

action is imminent. These indicators must show more than the *possibility* that the non-federal project will occur; they must demonstrate with reasonable certainty that it *will occur*. The more that state or local administrative discretion remains to be exercised before a proposed state or private action can proceed, the less there is reasonable certainty that the project will be authorized. In summary, the consultation team should consider only those state or private projects which satisfy all major land use requirements and which appear to be economically viable.

APPENDIX A

July 24, 1978

MEMORANDUM

TO: DIRECTOR, FISH AND WILDLIFE SERVICE

FROM: SOLICITOR

SUBJECT: CUMULATIVE IMPACTS—SECTION 7 OF THE ENDANGERED SPECIES ACT

On May 25, 1978 the Deputy Solicitor issued an opinion regarding the subject impacts as they relate to the proposed Narrows Project on the South Platte River in Colorado. On June 5, 1978, I withdrew that opinion pending my personal review of the subject.

In general, that opinion adopted the position that the "rule of reason" developed in NEPA case law should be applied in determining the scope of review and consultation for sec. 7 of the Endangered Species Act. I concur in that portion of the opinion.

On the last page of the opinion however, two limitations were placed upon

REVIEW AND VALID EXISTING RIGHTS

October 5, 1981

the application of the "rule of reason," namely, that impacts need only be considered (1) which can reasonably be anticipated to occur prior to the completion of the project, or (2) which will definitely occur before or after completion of the project under consultation.

I am not persuaded that these limitations should be placed on the "rule of reason" test. If other activities (both private and governmental) can be reasonably anticipated to impact the endangered species or its critical habitat, those impacts should be included within the scope of the consultation. To exclude consideration of activities and projects which will occur after the completion of the project under consultation could result in our ignoring impacts which are likely to occur and otherwise cognizable under the "rule of reason." Likewise, projects and activities for which administrative discretion remains should also be considered. The degree of administrative discretion, and the likelihood of that discretion being exercised in a manner to diminish impact on the subject species, are matters which should be included under the "rule of reason" test.

In conclusion, the opinion of May 25, 1978 is reissued with the removal of the two limitations in the first full paragraph on the last page. The "rule of reason" test should be used to evaluate impacts which can reasonably be anticipated to occur from projects and activities before or after the completion of the project under consultation or on which administrative discretion remains. These projects and activities, along with their impacts, should be considered and given an appropriate weight in the application of the "rule of reason."

The reissued opinion, modified as indicated in this memorandum, is attached.

Solicitor

THE BUREAU OF LAND MANAGEMENT WILDERNESS REVIEW AND VALID EXISTING RIGHTS

M-36910 (Supp.)

October 5, 1981

Federal Land Policy and Management Act of 1976: Wilderness

Valid existing rights are limitations upon the Secretary's authority to manage activities occurring within wilderness study area under the nonimpairment standard. In general, the nonimpairment standard remains the management norm unless it would preclude enjoyment of the rights. When it is determined that the rights can be enjoyed only through activities that will permanently impair an area's suitability, the Secretary must manage the lands to prevent unnecessary and undue degradation and to afford environmental protection.

Solicitor's Opinion M-36910, 86 I.D. 89 (1979), modified.

OPINION BY OFFICE OF THE SOLICITOR

TO: SECRETARY

FROM: SOLICITOR

SUBJECT: THE BLM WILDERNESS REVIEW AND VALID EXISTING RIGHTS

I. INTRODUCTION

On Sept. 5, 1978, the Solicitor issued opinion M-36910, 86 I.D. 89 (1979), interpreting sec. 603 of the Federal Land Policy and Management Act (FLPMA), 43 U.S.C. § 1782. In addition, two supplementary memoranda have been issued. The first, the memorandum of Aug.

7, 1979 ("Palmer Oil/Prairie Canyon"), reviewed the "grandfather clause" of sec. 603. The second, the memorandum of Feb. 12, 1980 ("Further Guidance on FLPMA's section 603"), discussed the Bureau of Land Management's Interim Management Plan and valid existing rights in the context of mining claims located pursuant to the general mining laws.

This opinion addresses the relationship between valid existing rights and the wilderness review requirements of sec. 603.¹ It modifies Solicitor's Opinion No. M-36910 and incorporates the memorandum of Feb. 12, 1980.

II. THE NONIMPAIRMENT STANDARD AND ITS EXCEPTIONS AND LIMITATIONS

Congress has delegated to the Secretary general and comprehensive authority to manage the public lands. As the Supreme Court has noted, the Secretary "has been granted plenary authority over the administration of public lands * * * and * * * has been given broad authority to issue regulations concerning them." *Best v. Humboldt Placer Mining Co.*, 371 U.S. 334, 336

(1963). See also *Cameron v. United States*, 252 U.S. 450, 459-60 (1920); *Boesche v. Udall*, 373 U.S. 472, 477-78 (1963). See generally 30 U.S.C. §§ 22, 189; 43 U.S.C. §§ 2, 1712. With the enactment of FLPMA, Congress has restricted the Secretary's discretion in managing the public lands by imposing two standards to guide management decisions. The first is a general standard applicable to all management activities: "In managing the public lands the Secretary shall, by regulation or otherwise, take any action necessary to prevent unnecessary and undue degradation of the lands." 43 U.S.C. § 1732(b). The second and more stringent limitation is part of the wilderness review mandated by sec. 603 of FLPMA. 43 U.S.C. § 1782.

Under sec. 603 of FLPMA, the Secretary is directed to review the public lands and identify those areas that meet the wilderness criteria contained in sec. 2(c) of the Wilderness Act, 16 U.S.C. § 1131 (c). Those areas that have wilderness characteristics are then to be studied to determine their suitability for inclusion in the National Wilderness Preservation System. The Secretary is required to make recommendations on their suitability or nonsuitability to the President by Oct. 21, 1991. In turn, the President makes recommendations to the Congress which decides which areas will be designated wilderness.

Sec. 603(c) establishes a specific management standard, known as the "nonimpairment standard," appli-

¹ This opinion formalizes and is consistent with the position adopted by the Department on appeal from the decision of *Rocky Mountain Oil & Gas Association v. Andrus*, 500 F. Supp. 1338 (D. Wyo. 1980), appeal docketed, No. 81-1040 (10th Cir. Jan. 5, 1981). Although consistent with the result reached by the court in regard to allowing activities on oil and gas leases issued prior to Oct. 21, 1976 (pre-FLPMA leases), this opinion does not adopt the court's rationale.

REVIEW AND VALID EXISTING RIGHTS

October 5, 1981

cable only during this wilderness review:

During the period of review of such [wilderness study] areas and until Congress has determined otherwise, the Secretary shall continue to manage such lands according to his authority under this Act and other applicable law in a manner so as not to impair the suitability of such areas for preservation as wilderness, subject, however, to the continuation of existing mining and grazing uses and mineral leasing in the manner and degree in which the same was being conducted on the date of approval of this Act: PROVIDED, That, in managing the public lands the Secretary shall by regulation or otherwise take any action required to prevent unnecessary or undue degradation of the lands and their resources or to afford environmental protection.

43 U.S.C. § 1782(c) (italics added). See generally Solicitor's Opinion M-36910, 86 I.D. 89, 109-11 (1979).

There is, however, an exception to and a limitation on the nonimpairment standard. The exception is the section's grandfather clause which authorizes the continuance of existing mining, grazing, and mineral leasing uses, "in the manner and degree" in which they were occurring on Oct. 21, 1976, the date of enactment of FLPMA. This grandfather clause was analyzed in both the initial Solicitor's Opinion and the supplemental memorandum of Aug. 7, 1979.

The limitation on the nonimpairment standard, and the subject of this opinion, is the savings clause of sec. 701(h) of FLPMA. This section provides:

All actions by the Secretary concerned

under this Act shall be subject to valid existing rights.

43 U.S.C. § 1701 note.

The clause limits the applicability of the nonimpairment standard by specifying that the standard cannot be applied in a manner that would prevent the exercise of any "valid existing rights."

III. VALID EXISTING RIGHTS

Although the legislative history is largely silent on the scope of this term,² it is not unique to FLPMA. The term has an extensive history both in the Department and the courts.

In defining "valid existing rights," the Department distinguishes three terms: "vested rights," "valid existing rights," and "applications" or "proposals."³ "Valid existing rights" are distinguished from "applications" because such rights are independent of any secretarial discretion. They are property interests rather than mere expectancies. Compare *Schraier v. Hickel*, 419 F.2d 663, 666-67 (D.C. Cir. 1969) and *George J. Propp*, 56 I.D. 347, 351 (1938) with *Udall v. Tallman*, 380 U.S. 1, 20 (1965), *United States ex rel. McLennan v.*

² See generally H.R. Rep. No. 1724, 94th Cong., 2d Sess. 65 (1976), reprinted in Senate Comm. on Energy & Natural Resources, 95th Cong., 2d Sess., *Legislative History of the Federal Land Policy and Management Act of 1976* at 871, 935 (Comm. Print 1978).

³ Each of these terms applies only to third parties. They do not apply to interests of federal agencies, departments, or agents. See, e.g., *Townsite of Liberty*, 40 I.B.L.A. 317, 319 (1979).

Wilbur, 283 U.S. 414, 420 (1931), and *Albert A. Howe*, 26 I.B.L.A. 386, 387 (1976). "Valid existing rights" are distinguished from "vested rights" by degree: they become vested rights when all of the statutory requirements required to pass equitable or legal title have been satisfied.⁴ Compare *Stockley v. United States*, 260 U.S. 532, 544 (1923) with *Wyoming v. United States*, 255 U.S. 489, 501-02 (1921) and *Wirth v. Branson*, 98 U.S. 118, 121 (1878). Thus, "valid existing rights" are those rights short of vested rights that are immune from denial or extinguishment by the exercise of secretarial discretion.

Valid existing rights may arise in two situations. First, a statute may prescribe a series of requirements which, if satisfied, create rights in the claimant by the claimant's actions under the statute without an intervening discretionary act. The most obvious example is the 1872 Mining Law: a claimant who has made a discovery and properly located a claim has a valid existing right by his actions under the statute; the Secretary has no discretion in processing any subsequent patent application. Second, a valid existing right may be created as a result of the exercise of secretarial discretion. For example, although

the Secretary is not required to approve an application for a right-of-way, if an application is approved the applicant has a valid existing right to the extent of the rights granted. Similarly, the Secretary has discretion to approve, deny, or suspend an application for an oil and gas lease. Once the lease is issued however, the applicant has valid existing rights in the lease.

Valid existing rights are not, however, absolute. The nature and extent of the rights are defined either by the statute creating the rights or by the manner in which the Secretary chose to exercise his discretion.⁵ See, e.g., *Best v. Humboldt Placer Mining Co.*, 371 U.S. 334 (1963); *Continental Oil Co. v. United States*, 184 F. 2d 802, 807 (9th Cir. 1950). Thus, it is not possible to identify in the abstract every interest that is a valid existing right; the question turns upon the interpretation of the applicable statute and the nature of the rights conveyed by approval of an application. Because of the importance of the individual approval and its stipulations, a review of each ap-

⁵ For example, there are interests less than leaseholds that are "valid existing rights." These include noncompetitive (preference right) coal lease applications that were preserved by the "valid existing rights" clause of sec. 4 of the Federal Coal Leasing Act Amendments of 1976, 90 Stat. 1085, amending 30 U.S.C. § 201(b) (1970). The Secretary does not have the discretion to reject these applications if the applicant can meet the statutory test for lease issuance. Nevertheless, the right to a lease does not accrue until that determination has been made. *NRDC v. Berkland*, 609 F.2d 553 (D.C. Cir. 1979); *Utah International, Inc. v. Andrus*, 488 F. Supp. 962, 969 (D. Utah 1979). The right preserved is to an adjudication and, if that adjudication is favorable, to a lease.

⁴ "Vested rights" has a narrower meaning within public land law terminology than in other areas of the law. In public land law, "vested rights" typically applies to legal or equitable rights to a fee title. See e.g., *Wyoming v. United States*, supra at 501-02. Oil and gas leases, which do not convey fee title, have not been couched in terms of the traditional "vested right" usage.

REVIEW AND VALID EXISTING RIGHTS

October 5, 1981

proval document will be required to determine the precise scope of an applicant's valid existing rights where such rights are created by an act of Secretarial discretion.

IV. REGULATION OF VALID EXISTING RIGHTS UNDER SEC. 603 OF FLPMA

The determination that a particular interest is a "valid existing right" is a limitation on the congressionally mandated management standard applicable to activities occurring within wilderness study areas. Although the nonimpairment standard remains the norm, this standard cannot be enforced if to do so would preclude recognition of the right or, in the case of an issued lease, would preclude development under the right. In general, restrictions on the right designed to protect wilderness values may not be so onerous that they unreasonably interfere with enjoyment of the benefit of the right. In other words, regulations may not be "so prohibitively restrictive as to render the land incapable of full economic development." *Utah v. Andrus*, 486 F. Supp. 995, 1010 (D. Utah 1979).

The resolution of specific cases under these general guidelines is dependent upon an analysis of two variables. The first is the scope of developmental rights actually conveyed by the person's actions under the statute or by the Department's issuance of the lease or other docu-

ment. The second variable is the site-specific conditions confronting the right holder. In general, however, the nonimpairment standard governs activities unless this would unreasonably interfere with enjoyment of the valid existing rights. When the nonimpairment standard would unreasonably interfere with the use of the rights conveyed, the holder of the rights may exercise the rights although it impairs the area's suitability for preservation as wilderness. For example, under such circumstances a claimant with a valid mining claim under the Mining Law of 1872 may develop the claim even if this impairs the area's suitability for wilderness preservation. Similarly, the holder of an oil and gas lease or a right-of-way authorization issued prior to the enactment of FLPMA may develop the leasehold or right-of-way to the extent authorized by the issuance or approval document.

It is important to note the distinction between pre- and post-FLPMA leases and authorizations. With the enactment of FLPMA on Oct. 21, 1976, the Secretary was required to manage the public lands under wilderness review "so as not to impair the suitability of such areas for preservation as wilderness." 43 U.S.C. § 1782(c). Thus applicants who received a lease or other use authorization after Oct. 21, 1976, for lands within an area under wilderness review did not receive an unlimited right to develop since after that date the Secretary had author-

ity only to issue those leases, permits, and licenses that would not impair an area's suitability for preservation as wilderness. *See generally Utah v. Andrus*, 486 F. Supp. 995, 1006 (D. Utah 1979).

The right to develop even if it impairs an area's suitability does not, however, mean that the right is unlimited. The Secretary remains under a statutory mandate to manage these areas and their resources: "in managing the public lands the Secretary shall by regulation or otherwise take any action required to prevent unnecessary or undue degradation of the lands and their resources or to afford environmental protection." 43 U.S.C. § 1782(c).⁶ By implication, this standard allows the Secretary to authorize uses or activities necessary to the purposes of the valid existing rights subject to reasonable mitigating measures to protect environmental values. The requirement that the Secretary regulate uses and activities to prevent unnecessary and undue degradation and to afford environmental protection is consistent with the power of the Federal Government to regulate property interests. Since the regulation extends at a minimum only to prohibiting activities that are not necessary or that are excessive or unwarranted, the taking issue is not implicated.⁷

⁶ See also 43 U.S.C. § 1732(b).

⁷ These management requirements are compatible with the concept of valid existing rights. First, such rights may constitutionally be regulated and their value diminished for a proper governmental purpose. *See, e.g., Andrus v. Allard*, 100 S.Ct. 318 (1979); *Penn Central Transp. Co. v. City of New York*, 438 U.S. 104 (1978); *Goldblatt v. Hempstead*, 369

V. CONCLUSION

Valid existing rights may be created by operation of a statute or an act of secretarial discretion. A valid mining claim, an oil and gas lease, and a right-of-way authorization are examples of valid existing rights. If such rights were created prior to the enactment of FLPMA, they limit the congressionally imposed nonimpairment standard. Although the nonimpairment standard remains the norm, valid existing rights that include the right to develop may not be regulated to the point where the regulation unreasonably interferes with enjoyment of the benefit of the right. Resolution of specific cases will depend upon the nature of the rights conveyed and the physical situation within the area. When it is determined that the rights conveyed can be enjoyed only through activities that will permanently impair an area's suitability for preservation as wilderness, the activities are to be regulated to prevent unnecessary and undue degradation or to afford environmental protection. Nevertheless, even if such activities impair

U.S. 590 (1962). Since the management standard prohibits only "unnecessary and undue degradation," it does not raise constitutional issues. Second, the rights granted by the United States are often explicitly limited by the government's authority to regulate. For example, the 1872 Mining Law provides that "all valuable mineral deposits in lands belonging to the United States * * * shall remain free and open to exploration and purchase * * * under regulations prescribed by law." 30 U.S.C. § 22. *See generally* 30 U.S.C. § 189; *Boesche v. Udall*, 373 U.S. 472, 477-78 (1963); *United States v. Richardson*, 599 F.2d 290 (9th Cir. 1979), cert. denied, 444 U.S. 1014 (1980).

the area's suitability, they must be allowed to proceed.

58 IBLA 268

Decided *October 8, 1981*

Appeal from decision of the Montana State Office, Bureau of Land Management, rejecting simultaneous noncompetitive oil and gas lease application M 49009.

Affirmed.

1. Oil and Gas Leases: Applications: Generally—Oil and Gas Leases: Applications: Attorneys-in-Fact or Agents

An oil and gas lease application, Form 3112-1 (June 1980), is not completed in accordance with regulation 43 CFR 3112.2-1 or the instructions on the application itself where questions (d) through (f) are not answered by checking appropriate boxes in the application as the instructions require.

2. Administrative Authority: Laches—Estoppel—Laches

The authority of the United States to enforce a public right or protect a public interest is not vitiated or lost through lack of enforcement by some of its officers.

APPEARANCES: Bruce A. Budner, Esq., Dallas, Texas, for appellant.

*OPINION BY CHIEF
ADMINISTRATIVE JUDGE
PARRETTE*

**INTERIOR BOARD OF
LAND APPEALS**

Clyde K. Kobbeman filed a simultaneous noncompetitive oil and gas lease application for parcel MT 1 in the September 1980 drawing in the Montana State Office, Bureau of Land Management (BLM). This application was drawn with first priority and assigned serial number M 49009.

On Apr. 30, 1981, BLM issued a decision rejecting Kobbeman's application because questions (d), (e), and (f)¹ were not completed on the back of the application by checking appropriate boxes, which violates 43 CFR 3112.2-1(a) (1980). Kobbeman appealed this decision.

[1] We agree that appellant's application was not completed and that BLM therefore properly rejected it. A simultaneous noncompetitive oil and gas lease application must be *completed* (43 CFR 3112.2-1(a)) or it must be rejected as an improper filing. 43 CFR 3112.6-

¹ The portion of the application in question is as follows:

"UNDERSIGNED CERTIFIES AS FOLLOWS (check appropriate boxes) [emphasis in original]:

"(d) Does any party, other than the applicant and those identified herein as other parties in interest, own or hold any interest in this application, or the offer or lease which may result? Yes ☐ No ☐.

"(e) Does any agreement, understanding, or arrangement exist which requires the undersigned to assign, or by which the undersigned has assigned or agreed to assign, any interest in this application, or the offer or lease which may result, to anyone other than those identified herein as other parties in interest? Yes ☐ No ☐.

"(f) Does the undersigned have any interest in any other application filed for the same parcel as this application? Yes ☐ No ☐.

1(a). Thus, failure to complete items (d), (e), and (f) on the back of the application justifies its rejection. *Simon A. Rife*, 56 IBLA 378 (1981); *Edward Marcinko*, 56 IBLA 289 (1981); *Vincent M. D'Amico*, 55 IBLA 116 (1981) (appeal pending).

Appellant's application was filed on his behalf by the Federal Energy Corp. (FEC), an oil and gas lease filing service. Appellant's statement of reasons alleges that FEC attached to his application a copy of a document entitled "Addendum to Service Agreement with Federal Energy Corp.," executed on July 8, 1980, by applicant and his wife. A copy of this document accompanies the statement of reasons. However, the record contains no such attachment.

We have additional reason to doubt the allegation that an executed separate statement accompanied appellant's application. The present record, and records of other cases involving the applications of FEC's clients during the same period² reveal that FEC had adopted a procedure under which it filed a general information package concerning its clients' applications with BLM State offices in advance of the drawings. FEC apparently retained executed copies of the documents relating to each client in its files.

Specifically, the package included a blank copy of its standard service agreement with its clients, a

copy of its published brochure describing its services, a list of its clients, and a document entitled "Statements of Qualifications," which is otherwise identical with the "Addendum to Service Agreement" and which provides as follows:

"STATEMENT OF QUALIFICATIONS"

Undersigned certifies as follows:

(a) I hereby grant FEC the authority to sign all "Simultaneous Oil & Gas Lease Applications" (form 3112-1) being submitted on my behalf as if I had signed same.

(b) I am a citizen of the United States; an association of such citizens; a corporation organized under the laws of the United States, or any State or Territory thereof; or a municipality.

(c) I am at least 21 years of age.

(d) Applicant is in compliance with acreage limitations set forth in 43 CFR 3101.1-5 and 3101.2-4. (I do not hold more than 246,080 acres in any one state.)

(e) [?] Does any party, other than yourself and those identified herein as other parties in interest, own or hold any interest in any applications being submitted on your behalf by FEC, or any offer or lease which may result? — Yes — No

(f) Does any agreement, understanding, or arrangement exist which requires the undersigned to assign, or by which you have assigned or agreed to assign, any interest in any applications being submitted on your behalf by FEC, or the offer or lease which may result, to anyone other than those identified herein as other parties in interest? — Yes — No

(g) Are you filing applications or do you have any interest in other applica-

² We refer to the records in *Vincent M. D'Amico*, *supra* (IBLA 81-186, 81-190), and in *Janet A. Rodgers*, IBLA 81-792, issued with this decision.

³ Questions (e), (f), and (g) on the "Statements of Qualifications" correspond approximately to questions (d), (e), and (f) on the application.

October 8, 1981

tions being filed that may be in conflict with those being submitted on your behalf by FEC? — Yes — No

Since the executed "Addendum" which appellant alleges was filed with his application is, except for its title, the same as this "Statements of Qualifications," the "Addendum" may well have been taken from the file copy retained by FEC, but it was not filed with appellant's individual application.

Under 43 CFR 3102.2-6(b) an agency such as a filing service which has a uniform agreement with several applicants may file a single copy of the agreement with BLM in lieu of filing a personally signed copy of the agreement or a personally signed statement from each applicant, provided that it also files a list of its clients. Thus, FEC's filing of its service agreement and information brochure apparently conformed to the procedure established by this section.

However, neither this section, which is expressly limited to the question of how to file *agency* statements, nor any other provision of the regulations, authorizes a filing service to state the qualifications of its clients to apply for a particular parcel by executing general statements with them in advance of drawings and then filing a blank reference copy with BLM along with a list of its clients' names. Nothing in the regulations allows a filing service to invent its own method of application or otherwise to modify the prescribed procedure. BLM's application form expressly

directs an applicant to "*check appropriate boxes*" (italics in original) as part of his certification. BLM may properly insist that an applicant comply strictly with the instructions on its application to check the boxes on the application itself and may reject nonconforming applications. To hold otherwise would allow others to invent divergent ways to file applications. In view of the vast number of applications handled by BLM each month, the result of such indulgence could be chaos.

For example, 51,810 applications were filed with the Montana State Office, BLM, in September 1980 alone. In October 1980, the Wyoming State Office received 345,602 applications. When such numbers are involved, it is reasonable for the Department not to take extra steps to protect those who do not comply with its application instructions. *See Federal Energy Corp.*, 51 IBLA 144 (1980). The need to process applications efficiently at a minimum of taxpayer expense justifies BLM's insistence on strict compliance with its filing procedures.

Even if we accepted his allegation that he submitted it, appellant's use of a separate statement to answer these questions would not satisfy the requirement that the application be completed. Regulation 43 CFR 3102.2-7, on which appellant principally relies, does no more than to allow an applicant to list the names of other parties in interest on a separate sheet. It does not

authorize him to substitute an alternative document for the approved application form. Moreover, nothing in the regulations suggests that an applicant may use a separate sheet to certify that he has no interest in any other offer for the same parcel as he is required to do by question (f).

[2] The fact that other BLM state offices may improperly have accepted similar filings in the past does not alter the result here. BLM's right to insist on a completed application, in accordance with 43 CFR 3112.2-1(a) is not vitiated or lost through lack of enforcement or by the acquiescence of some of its officers or agents. *Vincent M. D'Amico, supra*; 43 CFR 1810.3(a).

Therefore, pursuant to the authority delegated to the Board of Land Appeals by the Secretary of the Interior, 43 CFR 4.1, the decision appealed from is affirmed.

CONOCO, INC.

58 IBLA 390

Decided *October 21, 1981*

Appeal from the decision of the Wyoming State Office, Bureau of Land

Management, declaring an unpatented oil placer mining claim abandoned and void. W MC 142785.

Affirmed.

1. Federal Land Policy and Management Act of 1976: Recordation of Mining Claims and Abandonment—Mining Claims: Abandonment—Mining Claims: Assessment Work—Mining Claims: Placer Claims—Mining Claims: Recordation

Oil placer mining claims located pursuant to the Petroleum and Mineral Oils Act of Feb. 11, 1897, c. 216, 29 Stat. 526, and preserved by sec. 37 of the Mineral Leasing Act of 1920, 30 U.S.C. § 193 (Supp. II 1978), are subject to the recordation requirements of sec. 314 of the Federal Land Policy and Management Act of 1976, 43 U.S.C. § 1744 (1976).

2. Federal Land Policy and Management Act of 1976: Recordation of Affidavit of Assessment Work or Notice of Intention to Hold Mining Claim—Mining Claims: Recordation

Under sec. 314 of the Federal Land Policy and Management Act of 1976, 43 U.S.C. § 1744 (1976), the owner of a mining claim located on or before Oct. 21, 1976, must file a notice of intention to hold or evidence of performance of annual assessment work on the claim on or before Oct. 22, 1979, and prior to Dec. 31 of each year thereafter. This requirement is mandatory and failure to comply is deemed conclusively to constitute an abandonment of the claim by the owner and renders the claim void.

3. Federal Land Policy and Management Act of 1976: Recordation of Mining Claims and Abandonment—Mining Claims: Abandonment

The conclusive presumption of abandonment which attends the failure to file an

instrument required by 43 U.S.C. § 1744 (1976) is imposed by the statute itself. A matter of law, it is self-operative and does not depend upon any act or decision of an administrative official. In enacting the statute, Congress did not invest the Secretary with authority to waive or excuse noncompliance with the statute, or to afford claimants any relief from the statutory consequences.

4. Administrative Authority: Generally—Constitutional Law: Generally—Federal Land Policy and Management Act of 1976: Recordation of Affidavit of Assessment Work or Notice of Intention to Hold Mining Claim—Mining Claims: Recordation

Department of the Interior, as an agency of the executive branch of Government, is without jurisdiction to consider whether the mining claims recordation provisions of the Federal Land Policy and Management Act of 1976 are constitutional.

APPEARANCES: Clyde O. Martz, Esq., Stephen D. Alfors, Esq., and Janice K. Borgerson, Esq., Denver, Colorado, for appellant; Marla E. Mansfield, Esq., Office of Regional Solicitor, Denver, Colorado, for BLM.

**OPINION BY
ADMINISTRATIVE JUDGE
HENRIQUES**

**INTERIOR BOARD OF
LAND APPEALS**

Conoco, Inc., has appealed the decision of the Wyoming State Office, Bureau of Land Management (BLM), dated June 12, 1981, declaring the Black Bird #3 mining claim, W MC 142785, abandoned and void for failure to file evidence of assessment work or a notice of

intention to hold the claim during calendar year 1980 on or before December 30, as required by 43 CFR 3833.2-1(a).

The Black Bird #3 claim is an unpatented oil placer mining claim which was located on Aug. 31, 1915, in the NE $\frac{1}{4}$ SE $\frac{1}{4}$ sec. 3, T. 33 N., R. 76 W., sixth principal meridian, Converse County, Wyoming, pursuant to the Petroleum and Mineral Oils Act of Feb. 11, 1897, c. 216, 29 Stat. 526. On Oct. 4, 1979, appellant timely filed the notice of location for the claim and evidence of assessment work for the 1978 assessment year in order to comply with sec. 314 of the Federal Land Policy and Management Act of 1976 (FLPMA), 43 U.S.C. § 1744 (1976). On Oct. 18, 1979, appellant filed evidence of assessment work for the 1979 assessment year. BLM did not receive any filings from appellant in 1980.

In its statement of reasons, appellant argues that the Black Bird #3 claim is not subject to the recordation requirement of sec. 314 of FLPMA because it was a valid oil placer mining claim on the date of passage of the Mineral Leasing Act of 1920, 41 Stat. 437 (Feb. 25, 1920) (codified, *as amended*, at 30 U.S.C. §§ 181-287 (1976 and Supp. II 1978)), and is governed, therefore, by sec. 37 of that Act, 30 U.S.C. § 193 (Supp. II 1978).¹ The Miner-

¹ We note that, on Oct. 4, 1979, Conoco submitted to BLM a certified copy of the notice of location for the Black Bird #3 placer mining claim, as well as the ancillary information required by 43 CFR 3833.1-2, including an affidavit of assessment work for the

—Continued

al Leasing Act of 1920 removed various mineral substances, including oil, from mining location under the mining laws and permitted disposal of them only under lease from the United States. Sec. 37 preserved valid existing claims which would thereafter be maintained in compliance with the laws under which they were initiated and which could be perfected under such laws, including discovery.²

assessment year ending Sept. 1, 1978. The letter of transmittal stated: "We wish to comply with Section 314 of the Federal Land Policy and Management Act of 1976, requiring the recordation of unpatented mining claims located on public land with the Bureau of Land Management, and . . . 43 CFR 3833." An affidavit of assessment work for the assessment year ending Sept. 1, 1979, was filed with BLM Oct. 18, 1979. Subsequently, in a letter dated June 5, 1981, Conoco admitted that the 1980 affidavit of assessment work was not filed because of inadvertence. These actions by Conoco tend to undermine its protestations on appeal.

² The current version of section 37 reads:

"§ 193. Disposition of deposits of coal, and so forth

"The deposits of coal, phosphate, sodium, potassium, oil, oil shale, and gas, herein referred to, in lands valuable for such minerals, including lands and deposits in Lander, Wyoming, coal entries numbered 18 to 49, inclusive, shall be subject to disposition only in the form and manner provided in this chapter, except as provided in section 1716 and 1719 of title 43, and except as to valid claims existent on February 25, 1920, and thereafter maintained in compliance with the laws under which initiated, which claims may be perfected under such laws, including discovery."

The most recent amendment to sec. 37 is the phrase "except as provided in section 1716 and 1719 of title 43," which refers to secs. 206 and 209 of FLPMA. Sec. 4, P.L. 95-554, 92 Stat. 2074 (1978). The amendment was passed after discovery that sec. 37 would appear to preclude disposition of lands containing the minerals identified in sec. 37 under secs. 206 and 209 of FLPMA to exchange and convey lands containing the minerals listed in sec. 37 which minerals by its terms are only subject to disposition under the Mineral Leasing Act. Appellant suggests that this amendment to sec. 37 is further indication that Congress did not intend that sec.

Appellant argues that sec. 37 provides that valid claims existing on Feb. 25, 1920, are subject to compliance only with the laws under which they were initiated, as those laws were administratively and judicially interpreted in 1920, because sec. 37 in effect repealed those laws. More specifically, appellant asserts that post-1920 standards and requirements governing mining claims cannot be imposed on its claims. Appellant urges that this view has been given judicial approbation by the Supreme Court in *Andrus v. Shell Oil Co.*, 446 U.S. 657 (1980). Appellant concludes that, since sec. 314 of FLPMA did not exist in 1920 and FLPMA did not purport to repeal sec. 37 of the Mineral Leasing Act, its claim is not subject to the requirements of FLPMA.

In addition appellant urges that sec. 314 of FLPMA violates the due process clause of the Fifth Amend-

314 of FLPMA apply to claims preserved by sec. 37. Appellant argues that if Congress had intended that the requirements of sec. 314 of FLPMA apply to claims such as its oil placer, Congress would have expressly done so when it was resolving the conflict between secs. 206 and 209 of FLPMA and sec. 37. This argument does not withstand scrutiny. The concern in amending sec. 37 focused solely on the language mandating that the listed substances be disposed of *only* under the Mineral Leasing Act, which language directly conflicted with the authority Congress had intended to impart to the Secretary of the Interior in secs. 206 and 209 of FLPMA. H.R. Rep. No. 95-1635, 95th Cong., 2d Sess. 14, reprinted in [1978] *U.S. Code Cong. & Ad. News* 4737, 4747-48. We conclude that it is purely speculative to connect this amendment with Congress intention with respect to the relationship of sec. 37 and sec. 314 of FLPMA. Clearly, it is more reasonable to suggest that Congress did not see *any* conflict between sec. 37 and sec. 314 and thus did not need to clarify the relationship.

ment of the United States Constitution because (1) it deprives appellant of an interest in property by erecting a conclusive presumption of abandonment of its claim, and (2) it denies appellant equal protection of the laws.

In response to appellant's statement of reasons, BLM argues generally that the recordation requirements of FLPMA apply to all unpatented mining claims on public lands and specifically that the unpatented Black Bird #3 oil placer claim is subject to the General Mining Law of 1872, *as amended*, 30 U.S.C. §§ 21-54 (1976) (hereinafter General Mining Law), by virtue of the language of the Petroleum and Mineral Oils Act. BLM urges that sec. 37 of the Mineral Leasing Act did not exempt mining claims located for Mineral Leasing Act minerals from the operation of the General Mining Law, rather, it preserved such claims so long as they were maintained in accordance with the General Mining Law. Further, BLM asserts that the General Mining Law is not static and that changes may be applied to any unpatented mining claim until all steps precedent to patent has been taken, and that *Andrus v. Shell*, *supra*, does not stand for the proposition that appellant asserts. Finally, BLM urges that the application of the recordation requirements of FLPMA to mining claims located for Mineral Leasing Act minerals is consistent with the purpose of the requirement to identify existing mining claims on public

lands and to clear the books of any claims no longer being maintained as required by law.

The issue in this case is whether the requirements of sec. 314 of FLPMA apply to appellant's unpatented oil placer claim. We find that they do.

[1] The recordation requirements of sec. 314 of FLPMA are imposed on the owner of any "unpatented lode or placer mining claim." The statute does not define or limit the term "mining claim." Departmental regulations implementing sec. 314, however, define "unpatented mining claim" to mean "a lode mining claim or a placer mining claim located under the General Mining Law of 1872, as amended (30 U.S.C. 21-54) for which a patent under 30 U.S.C. 29 and [43] CFR Part 3860 has not been issued." 43 CFR 3833.0-5(b).

Appellant seemingly argues that because the Black Bird #3 claim was located pursuant to the Petroleum and Mineral Oil Act of 1897 it was not "located under the General Mining Law of 1872." Further, appellant asserts that if Congress had wanted the claims protected by sec. 37 to be maintained under the General Mining Law, it would have so specified.

The Petroleum and Mineral Oils Act encompassed a broader body of law than mere reference to the statute suggests. The Act stated:

That any person authorized to enter lands under the mining laws of the United States may enter and obtain patent to lands containing petroleum or

other mineral oils, and chiefly valuable therefor, under the provisions of the laws relating to placer mineral claims: [italics added] *Provided*, That lands containing such petroleum or other mineral oils which have heretofore been filed upon, claimed, or improved as mineral, but not yet patented, may be held and patented under the provisions of this Act the same as if such filing, claim, or improvement were subsequent to the date of the passage hereof.

Thus Congress authorized the location of mining claims for oil under the provisions of the general laws relating to placer mining claims. The laws referred to were, at that time, Revised Statutes, secs. 2329-2333, and are now codified at 30 U.S.C. §§ 35-38 (1976). These provisions are part of the General Mining Law. *Chrisman v. Miller*, 197 U.S. 313, 320 (1905). The Petroleum and Mineral Oils Act, when enacted, was simply an affirmation of the principle that lands containing petroleum and other mineral oils were subject to mining location under the mining laws of the United States. *Union Oil Co. (On Review)*, 25 L.D. 351 (1897).³ Thus, appel-

lant's oil placer mining claim falls within the ambit of 43 CFR 3833.0-5(b). Further, in the case of the Black Bird #3 claim we conclude that the phrase "laws under which [the claim was] initiated" in sec. 37 must include the General Mining Law. We also find that sec. 37 must be read to include judicial interpretation of the applicable mining statutes because of the reference in sec. 37 to "discovery," which is a principle of mining law not defined by a particular statute but by judicial declaration. *Chrisman v. Miller*, *supra* at 321.

to such an extent that many titles to lands patented as mineral because of the valuable oil deposits contained therein, are now dependent upon it. * * *

* * * * *

"It is proper, in this connection, to refer to the act of February 11, 1897, *supra*, passed soon after the decision under review was rendered. * * *

* * * * *

"The language of the act clearly indicates, and the debates of Congress, as well as the report of the Public Lands Committee of the House on the bill, unmistakably show, that it was passed for the purpose of restoring the practice which had prevailed in the Land Department prior to the decision under review. In the House Committee's report reference was made to that decision in connection with some of the earlier rulings on the subject, as hereinbefore set out, and *inter alia*, it was said:

"Public lands containing petroleum and other mineral oils have been held and patented under the placer mining acts of the United States for many years past. * * * The bill simply provides by legislation for procedure in the entry and patenting of those lands along the lines that have been pursued in the past under the decisions of the General Land Office; so that there is no departure whatever from the procedure in the past for the development and acquirement of such properties."

"This legislative action, so promptly taken after the departure from the earlier rulings and the long established practice thereunder, is significant, and can hardly be considered as less than a disapproval by Congress of the changed ruling."

³ The cited decision reviewed in the case of *Union Oil Co.*, 23 L.D. 222 (1896), wherein Union's oil mining claim was situated on land selected as indemnity by a railroad, and the Department found that only lands containing metallic minerals were within the contemplation of Congress in the enactment of the mining statutes and in making an exception of all mineral lands from a grant to a railroad company. The decision in *Union Oil Co. (On Review)*, *supra* at 355-56, which was issued Nov. 6, 1897, following passage of the Petroleum and Mineral Oils Act discussed the meaning of its passage as follows:

"Sufficient has been said to show that ever since the circular of July 15, 1873, until the date of the decision under review, the practice of the Land Department has uniformly been to allow entries under the mining laws of the lands containing valuable deposits of petroleum, and that this view has obtained

Further examination of sec. 37 of the Mineral Leasing Act and the Petroleum and Mineral Oils Act, *supra*, leads us to conclude as well that appellant's assertion that sec. 37 mandates that the law governing appellant's oil placer claim remain fixed as of Feb. 25, 1920, is incorrect. We do not find that Congress intended to so limit its power to regulate such unpatented mining claims; rather, by sec. 37 Congress preserved a claimant's opportunity to bring an existing claim to patent under the General Mining Law even though the Mineral Leasing Act removed the mineral from operation of the General Mining Law.

As we have observed, the Petroleum and Mineral Oils Act *only* reasserted authority for the location of placer mining claims for petroleum and other mineral oils under the General Mining Law governing all placer mining claims. The Act did *not* specify any requirements peculiar to placer claims located under the Act.⁴ Congress did not by sec. 37 repeal the General Mining Law, as to existing mining claims for Mineral Leasing Act minerals, and we find no basis for asserting

that Congress intended that unpatented oil placer claims located under the Petroleum and Mineral Oils Act would not be subject to changes in the mining laws governing unpatented placer claims. While Congress did single out claims such as the Black Bird #3 oil placer claim in order to preserve valid existing rights to such claims, it did not intend that such claims would receive special treatment as against other placer mining claims; and the Petroleum and Mineral Oils Act provides no basis for distinguishing appellant's claims. Furthermore, the purpose of sec. 314 of FLPMA is to provide a record of continuing activity on unpatented mining claims on public domain lands so that the Federal Government will know which claims are being maintained and which have been abandoned. *See Topaz Beryllium Co. v. United States*, 479 F. Supp. 309, 311-12 (D. Utah 1979), *aff'd*, 649 F.2d 775 (10th Cir. 1981). Arguably, these requirements are particularly apropos to claims as old as the one at issue herein.

We do not agree that the Supreme Court's opinion in *Andrus v. Shell Oil Co.*, *supra*, supports appellant's argument. In that case, the Court affirmed for pre-1920 oil shale mining claims an exception to the general principles for determining whether there has been a discovery of a valuable mineral deposit under the mining laws. *Frederick H. Larson v. Utah*, 50 IBLA 382 (1980). The Court ruled that the Department of the Interior could

⁴ Where the statute, under which a claim protected by sec. 37 was initiated, does contain specific requirements, those requirements are applicable and would control as to other conflicting requirements imposed on the mining claims. For example, in *John B. Forrester*, 48 L.D. 188 (1921), cited by appellant, the Department held that the question of whether the appellant had a preexisting coal entry under sec. 37 did not have to be reached because appellant had not maintained the entry pursuant to the law under which it was initiated. Appellant had not complied with a regulation implementing the notice requirement imposed by the law governing coal entries.

not impose the present marketability test, approved by the Court in *United States v. Coleman*, 390 U.S. 599 (1968), as a complement to the prudent man test, on oil shale placer claims as of 1920. The Court was making an exception to the application of the General Mining Law based on both the history of the Mineral Leasing Act and the post-1920 treatment of oil shale claims by the Department of the Interior, rather than finding that sec. 37 required the application of pre-1920 standards. *Andrus v. Shell Oil Co.*, *supra* at 673. The Court focused particularly on the Department's decision captioned *Freeman v. Summers*, 52 L.D. 201 (1927), wherein the Department had ruled that present marketability was not a prerequisite to patenting oil shale claims.⁵ This Board had overturned *Freeman v. Summers*, *supra*, on the basis of *United States v. Coleman*, *supra*. The Court reflected that Congress had recognized oil shale as valuable by preserving oil shale claims in sec. 37 even though oil shale was not a marketable commodity in 1920 and that therefore the imposition of a marketability test as of 1920 by the Board was inappropriate. The situation of oil shale claims was unique, and the Court expressly stated that this exception applies only to oil shale claims. *Andrus v. Shell Oil Co.*, *supra* at n.11. We find no basis for construing the opinion to limit the applicability of the General Mining

Law to other placer claims preserved by sec. 37.⁶

[2] Having found that sec. 314 of FLPMA is applicable to appellant's oil placer claim, we now find that BLM properly declared the claim abandoned and void. Under sec. 314 of FLPMA the owner of an unpatented placer mining claim located before Oct. 21, 1976, must file evidence of annual assessment work or notice of intention to hold the claims in the proper BLM office on or before Oct. 22, 1979, and prior to December 31 of each calendar year thereafter. This requirement is mandatory, and failure to comply conclusively constitutes abandonment of the claim by the owner and renders the claim void. *Lynn Keith*, 53 IBLA 192, 88 I.D. 369 (1981); *James V. Brady*, 51 IBLA 361 (1980).

[3] With respect to appellant's remaining arguments, we note that the conclusive presumption of abandonment which attends the failure to file an instrument required by 43 U.S.C. § 1744 (1976) is imposed by the statute itself. As a matter of law, it is self-operative and does not depend upon any act or decision of an administrative official. In enacting sec. 314 of FLPMA Congress did not invest the Secretary of the Interior with authority to waive or

⁵ *Freeman v. Summers*, *supra*, did not discuss sec. 37. It focused entirely on the principles of discovery as applied to oil shale mining claims.

⁶ We note as well that part of the Court's discussion of sec. 37 claims detracts from appellant's argument. The Court discusses the viability of a 1956 statute which amended the mining laws to eliminate a requirement imposed on locators seeking patents for mining claims preserved by sec. 37. *Andrus v. Shell Oil Co.*, *supra* at 671. Presumably if Congress was not restricted from changing the requirements applicable to such claims in 1956, it was also not restricted from doing so in 1976.

excuse noncompliance with the statute, or to afford appellant any relief from the statutory consequences. *Lynn Keith, supra*.

[4] Appellant's argument that the recordation requirements are unconstitutional may not be considered by this Board. The Department of the Interior as an agency of the executive branch of the Federal Government is not the proper forum to consider the constitutionality of the recordation provisions of FLPMA. *Hugh A. Johnson*, 54 IBLA 144 (1981); *Lynn Keith, supra*. However, we note that to the extent that Departmental regulations implementing FLPMA, which mirror the statute, have been considered by the courts, they have been upheld. *Topaz Beryllium Co. v. United States, supra*; *Western Mining Council v. Watt*, 643 F.2d 618 (9th Cir. 1981); *Northeast Citizens for Wilderness Mining Co., Inc. v. Bureau of Land Management*, Civ. No. 78-46M (D. Mont. June 19, 1979).

Accordingly, pursuant to the authority delegated to the Board of Land Appeals by the Secretary of the Interior, 43 CFR 4.1, the decision of the Wyoming State Office is affirmed.

v.

RICHARD P. HASKINS

59 IBLA 1

Decided October 21, 1981

Appeal from a decision of Administrative Law Judge Michael L. Morehouse declaring the Haskins Quarries placer mining claim valid and recommending issuance of patent. CA-2755.

Appeal reviewed de novo; decision below reversed; claim held null and void.

1. Mining Claims: Lode Claims

To constitute discovery upon a lode mining claim, there must be exposed within the limits of the claim a vein or lode of quartz or other rock in place, bearing gold or some other mineral deposit in such quality and quantity which would warrant a prudent man in the expenditure of his time and money with a reasonable prospect of success in developing a valuable mine.

2. Mining Claims: Placer Claims

A placer mining claim has been defined as ground that includes valuable deposits not in place, that is, not fixed in rock, but which are in a loose state.

3. Mining Claims: Placer Claims—Act of August 4, 1892

Under provisions of the Act of Aug. 4, 1892, 30 U.S.C. § 161 (1976), known as the Building Stone Act, land chiefly valuable for building stone can only be entered by mining claims in the placer form, regardless of the actual mode of occurrence of the deposit.

excuse noncompliance with the statute, or to afford appellant any relief from the statutory consequences. *Lynn Keith, supra*.

[4] Appellant's argument that the recordation requirements are unconstitutional may not be considered by this Board. v.

RICHARD P. HASKINS

59 IBLA 1

Decided October 21, 1981

Appeal from a decision of Administrative Law Judge Michael L. Morehouse declaring the Haskins Quarries placer mining claim valid and recommending issuance of patent. CA-2755.

Appeal reviewed de novo; decision below reversed; claim held null and void.

1. Mining Claims: Lode Claims

To constitute discovery upon a lode mining claim, there must be exposed within the limits of the claim a vein or lode of quartz or other rock in place, bearing gold or some other mineral deposit in such quality and quantity which would warrant a prudent man in the expenditure of his time and money with a reasonable prospect of success in developing a valuable mine.

2. Mining Claims: Placer Claims

A placer mining claim has been defined as ground that includes valuable deposits not in place, that is, not fixed in rock, but which are in a loose state.

3. Mining Claims: Placer Claims—Act of August 4, 1892

Under provisions of the Act of Aug. 4, 1892, 30 U.S.C. § 161 (1976), known as the Building Stone Act, land chiefly valuable for building stone can only be entered by mining claims in the placer form, regardless of the actual mode of occurrence of the deposit.

4. Mining Claims: Location—Mining Claims: Lode Claims—Mining Claims: Placer Claims—Act of August 4, 1892

While deposits of limestone chiefly valuable for building stone were subject to location only as placer claims, deposits of limestone valuable for their chemical or metallurgical properties are properly located according to the form of their deposition.

5. Mining Claims: Possessory Right

Under the provisions of 30 U.S.C. § 38 (1976), the holding and working of a claim for the period of time equal to the State's statute of limitations is the legal equivalent of proofs of acts of location, recording, and transfer. This provision does not, however, alter other requirements of the mining laws, such as the necessity of a discovery or limitations on acreage which may be taken up in a claim.

6. Mining Claims: Possessory Right

The requirements of 30 U.S.C. § 38 (1976), relating to "holding" and "working" a claim may be met where the assessment work requirements have been met *and* where there is actual possession or occupancy of the claim.

7. Mining Claims: Discovery: Marketability—Act of August 4, 1892

Land may be considered "chiefly valuable for building stone" where the building stone values of the mineral deposit sought are greater than any other mineral values or nonmineral values for which the land may be appropriated.

8. Mining Claims: Placer Claims—Mining Claims: Possessory Right

Nothing in 30 U.S.C. § 38 (1976) alters the requirement limiting each individual claimant to 20 acres per location. Thus, for a single possessory claim of 85 acres to be sustained, it must be shown that five individuals held and worked the claim for the requisite period of time.

9. Administrative Authority: Estoppel—Administrative Practice—Rules of Practice: Generally

Where a party, in the course of various proceedings before the Department, asserts facts that would, if proven, entitle him or her to obtain patent to land owned by the United States, and the litigation proceeds on the assumption that the facts are as stated, appellant will not be heard in a subsequent hearing to deny that those facts existed.

10. Mining Claims: Millsites—Mining Claims: Possessory Right

Since millsites may only be located on nonmineral land, a millsite claim is necessarily adverse to a mining claim. Thus, land embraced by a millsite claim is not open to the initiation of rights under 30 U.S.C. § 38 (1976).

11. Mining Claims: Location—Mining Claims: Placer Claims

All placer claims must conform "as near as practicable" with the system of rectangular public land surveys. Where a claim does not so conform and it is not possible to amend the claim so that it does, the entry must be canceled.

12. Mining Claims: Assessment Work—Mining Claims: Withdrawn Land

Failure to substantially comply with the requirements to annually perform assessment work on a claim which is located on withdrawn land results in a forfeiture of that claim to the United States.

13. Federal Land Policy and Management Act of 1976: Recordation of Mining Claims and Abandonment—Mining Claims: Abandonment—Mining Claims: Possessory Right

The recordation provisions of sec. 314 of the Federal Land Policy and Management Act of 1976, 43 U.S.C. § 1744 (1976), applies to claims which rely on the provision of 30 U.S.C. § 38 (1976) to

prove location and posting. Where such claims have not been duly recorded, they are a nullity.

APPEARANCES: Charles F. Lawrence, Esq., Office of the General Counsel, Department of Agriculture, for the Government; Hale C. Tognoni, Esq., Phoenix, Arizona, for appellee.

*OPINION BY
ADMINISTRATIVE JUDGE
BURSKI*

*INTERIOR BOARD OF
LAND APPEALS*

Administrative Law Judge Michael L. Morehouse, by decision dated Dec. 30, 1977, found the Haskins Quarries placer mining claim to be supported by a discovery and recommended the issuance of a patent. The Government has appealed this finding to the Board.

The history of this claim is both long and convoluted, with Departmental adjudication already stretching over half of a century, intermittently punctuated by Federal Court review. A thorough knowledge of this history is, unfortunately, essential to both understanding and determining the present appeal. Accordingly, this history will be set out in detail.

The lands embraced within the confines of the Haskins Quarries patent application were originally subject to four lode and two millsite claims.¹ The four lode claims were

known as the Lone Jack, Lap Wing, Roger Williams, and Lady Helen while the two millsites were referred to as the Lap Wing and Lady Helen.

The Lone Jack was originally located on Jan. 10, 1894, by Frederick A. Lovell. On Feb. 28, 1907, Tessie Cooke-Haskins located the Lap Wing. This was followed by the location of the Roger Williams by Richard P. Haskins, husband of Tessie Cooke-Haskins, together with Frederick A. Lovell and Francis H. Clark on Jan. 2, 1909. The Lady Helen mining claim was also located on Jan. 2, 1908, by Frederick A. Lovell and Francis H. Clark. Later that year, on Nov. 14, 1908, Tessie Cooke-Haskins located the Lap Wing millsite, which was followed the next year by the location on Nov. 10, 1909, of the Lady Helen millsite by Richard P. Haskins.

The strike of the four mining claims was generally northwest by southeast. The Lap Wing was the southernmost claim. The Lone Jack abutted the Lap Wing on the north. The Lady Helen was adjacent to the west of the Lone Jack, with some area of the Lady Helen also abutting the west sideline of the Lap Wing, while the Roger Williams was adjacent to the west side of the Lady Helen. The Lap Wing millsite was in the shape of an irregular pentagon, with one side adjacent to the south portion of the east sideline of the Lap Wing mining claim. The Lady Helen millsite, in rectangular form, abutted the Lap Wing millsite along its northeastern boundary.

¹ The land involved, aggregating approximately 85.1 acres of land, is located in secs. 27 and 28, T. 3 N., R. 14 W., San Bernardino meridian, approximately 3 miles north of the Los Angeles city limits and is situated in the Angeles National Forest. Actually, not all of the original Roger Williams is included within the limits of the Haskins Quarries claim.

As noted above, Tessie Cooke-Haskins was the sole locator of both the Lap Wing mining claim and Lap Wing millsite, while Richard P. Haskins was the sole locator of the Lady Helen millsite. Full title to the Lone Jack mining claim was apparently acquired by Richard P. Haskins through quitclaim deeds in 1907 from Frederick A. Lovell and one Carrie L. Simmons.² On Jan. 15, 1981, Richard P. Haskins quitclaimed the Lone Jack mining claim to his wife. Richard P. Haskins acquired full title to the Roger Williams and Lady Helen lode mining claims from Francis H. Clark and Frederick A. Lovell in 1908.

In 1928, the area embraced by the claim was withdrawn from location and entry by sec. 1 or the Act of May 29, 1928, 45 Stat. 956, known as the Watershed Withdrawal Act. Sec. 2 of that Act provided that "this Act shall not defeat or affect any lawful right which has already attached under the mining laws and which is hereafter maintained in accordance with such laws."

Richard P. Haskins died the following year, and his wife, Tessie Cooke-Haskins, subsequently made application for patent of the Lone Jack and Lap Wing lode claims, together with the Lap Wing millsite.³ In her application, filed Aug.

15, 1929, Tessie Cooke-Haskins alleged a discovery of gold and vanadium. By letter of Jan. 6, 1930, the District Forester of the Angeles National Forest filed a protest with the Register of the land office requesting cancellation of the mining locations for lack of discovery and because the land thereby embraced was nonmineral in character, and also seeking invalidation of the millsite for nonuse for mining and milling purposes. On Jan. 9, 1930, the Department caused a complaint to issue against the patent application based on the grounds alleged by the District Forester. An answer was duly filed and a hearing was set before the Register.⁴

The hearing was held on Nov. 21, 1930. While the thrust of this hearing dealt with the question of the existence of gold, silver, and vanadium within the limits of the claims, there was testimony relating to dolomitic limestone deposits located both on these two claims and

discovery tunnel valued at \$720 and three cuts and tunnels with a total value of \$1,899. The improvements on the Lap Wing noted the existence of a discovery point with no value accorded it, and a tunnel with an assessed value of \$1,820. The total value of labor and improvements on the two mining claims was estimated to be \$4,439. The survey also recorded three cabins, a storehouse, and a blacksmith shop on the millsite.

⁴ Until *United v. O'Leary*, 63 I.D. 341 (1956), hearings in mining contests were held before the Register and, subsequently, the land office manager upon the abolition of the position of Register. In *O'Leary*, the Department decided that the strictures of the Administrative Procedure Act applied to mining claim contest hearings and that such hearings must therefore be before someone appointed under the provisions of 5 U.S.C. § 3105 (1976).

² The quitclaim deed given by Carrie L. Simmons granted Haskins all rights and privileges running from another claim, named the "Mammoth" claim, located on Oct. 5, 1906, which overlapped the Lone Jack claim.

³ The mineral survey, No. 5902 A and B, which accompanied the application for patent listed improvements on the Lone Jack as a

October 21, 1981

on the adjacent Lady Helen claim.⁵ The Government mining engineer, William H. Friedhoff, noted that a lime kiln existed behind one of the houses on the millsite (1930 Tr. 10). The engineer testified that there was a "dolomitic lens in this just to the west of these claims that has apparently either folded into the gneiss with the gneiss or has faulted in here, this is on a claim west of the Lone Jack, I believe" (1930 Tr. 11-12). In response to a question relating to the existence of a cut in the lime rock, the engineer stated:

Fifty feet north west of the north west corner of the Lapwing there is a quarry face in impure dolomitic limestone thirty feet wide; extends about thirty feet north where it is cut off by granite and gneiss; probably lenticular; a fault is on the adjacent claim; dolomite was hauled from here and there is a large pile near the road.

(1930 Tr. 12).

While there was a clear agreement on the existence of the lime kiln, Tessie Cooke-Haskins testified that it was presently being used as a storage area (1930 Tr. 24, 35). She testified as to a number of sales of lime

rock. *See* 1930 Tr. 26-29. The following colloquy then ensued:

Q. Do you know the uses this lime rock is put to?

A. Yes.

Q. What are some of them?

A. The American Legion Building in Pasadena has floors made of it; it has been used for roofing paper; I understand for fluxing but I don't know much about that but I have sold quite a bit of it for that use for mining and golf courses; they used quite a lot for ornamental purposes.

Q. Do they use it for building activities?

A. Yes; plaster.

(1930 Tr. 29). In all, she testified that about 1,000 tons of lime rock had been sold from the claims at issue. In response to a question of where exactly the rock was removed she answered, "practically from the creek up the hill" (1930 Tr. 34).

Frederick A. Lovell, the original locator of the Lone Jack, also testified on behalf of Haskins. In reference to a request that he describe the formation which passed through the Lone Jack and Lap Wing claims the following discussion occurred:

Q. What is it?

A. Why the west walls; the west side of that ground is lime formation.

Q. What is the east side?

A. It would be granite.

Q. What would you call the intruded or the vein; the so called vein matter?

A. Well, highly mineralized roscolite [*sic*] schist.

Q. How wide is that vein matter?

A. Well possibly three or four hundred feet; probably six hundred; between the main granite walls and the lime; I would figure about that.

(1930 Tr. 43-44).

⁵ There are a total of four separate hearings involved in this case. One occurred in 1930 and another in 1933 relating to the Lone Jack, Lap Wing, and Lap Wing millsite. These are found in exhibit G-4. The third hearing arose as a contest of a verified statement filed pursuant to the provisions of sec. 5 of the Surface Resources Act, Act of July 23, 1955, 69 Stat. 367, 369, 30 U.S.C. § 613 (1976). The fourth hearing was held by Judge Morehouse in 1977, which hearing related to the instant placer claim. For convenience, citations to transcript will be by the year of the hearing followed by the page of that transcript. Thus, a citation to the initial hearing will be "1930 Tr. —."

Jesse A. Tiffany, who had purchased some of the lime rock and was a graduate chemist, also testified on behalf of Haskins. He stated that in 1922 he had approached Richard Haskins and taken a lease on the lime rock deposit.

A. There was the lime rock on the Lapwing at that time has not been opened up; previous work in the lime rock had been to pick up wash float in the canon that came from adjoining properties.

Q. Did you open up the lime rock deposit under this contract?

A. Yes, sir.

Q. Was there any lime rock removed?

A. Yes, sir; we removed quite a bit of lime rock from just above the tunnel on the present location of the Lapwing.

Q. What method was used in getting this rock out?

A. We removed the overburden on it; then blasted it out in places; broke it up and rolled it into the gulch below.

Q. It was a solid formation?

A. Yes; it was a very large body of crystallized lime rock.

Q. What disposition was made of that lime rock?

A. We brought it down to the plant on San Fernando Road and broke it up and ground part of it for grit; chicken grit; a great deal of it was broken into gravel for this mosaic terrazzo and sold to contractors that were using it for the construction of various buildings in the city.

(1930 Tr. 53-54).

Tiffany stated that he removed between 500 and 600 tons of rock at that time. While he stated that a reasonably prudent man would be justified in spending money on the claim, he noted that it would take a considerable investment, as a large plant would be necessary (1930 Tr. 55). When asked what he would develop he stated:

A. Gold; silver; platinum; vanadium.

Q. Is that all?

A. That is all.

* * * * *

Q. You would not figure anything on the lime that is on the claim?

A. I think most of it has been removed since that time.

Q. Most of the lime has been removed?

A. I believe so.

(1930 Tr. 55-56).

A number of miners also testified on behalf of the claimant. Jesse Barnes, a miner with 40 years experience, testified:

Q. Are you familiar with the formation of the Lapwing and Lone Jack lode claims?

A. I call it lime on one side and altered granite on the other side.

Q. On which side is lime?

A. On the west side.

Q. Does that lime extend for any great length?

A. Cuts right through the country there.

Q. And that lime is in place; is it?

A. Yes, sir, it goes right through there; you can trace it right through on the surface outcrops.

Q. What width is the vein between the altered granite and the lime?

A. In some places a couple of hundred feet thick where it crops out; I should judge.

(1930 Tr. 65).

Similarly, T. A. Hamilton, a miner with 30 years experience, stated:

I went over the formation there I would judge somewhere between one hundred and fifty and two hundred feet of mineral zone; on one side of the mineral zone on the west side carries the lime belt following through there; opens out; crops out every once in a while then goes in and comes out on top of the ridge.

(1930 Tr. 71). Hamilton noted that the lime was very good lime which he had used in fluxing, but indicated that he was primarily interested in it to the extent that it formed a wall for the porphyry⁶ (1930 Tr. 74).

The Register, in a decision dated Apr. 25, 1931, held for the claimant on the basis of a discovery of gold, silver, and vanadium. No value was accorded to the lime deposits about which a number of individuals had testified, as set forth, *infra*. An appeal was taken from this decision to the Commissioner of the General Land Office.

By decision of Feb. 5, 1932, the Commissioner reversed the decision of the Register. Of relevance herein, the Commissioner made the following statement:

As to the limestone there is no evidence in the record that the limestone said to occur on the Lap Wing claim is in vein or lode formation and one of contestee's witnesses testified that the supply was about exhausted. Contestee testified that the deposit of limestone was about 50 feet west of the tunnel on that claim. As the tunnel is only a short distance from the west line of the claim, even if any portion of the deposit remains, it must be largely outside the limits of the claims upon contestee's own testimony, whereas Friedhoff testified that the only limestone in the vicinity is west of the claim. When all of the facts are considered, it is not possible to hold that the Lap Wing claim is of potential value for its limestone content or that the lime-

stone, assuming its presence, is locatable as a vein or lode.

(Los Angeles 047535 "N" CRB at 11-12).

Tessie Cooke-Haskins thereupon appealed the decision of the Commissioner to the Secretary of the Interior. On appeal to the Secretary, Haskins directly argued that the limestone with in *vein* formation. See Brief and Argument, filed Apr. 4, 1932, at 2. With her brief and argument appellant submitted a report prepared by one Ralph S. Baverstock, relating to an examination of the two claims, as well as the Lady Helen, directed at analyzing the dolomitic limestone. The report noted that "footwall formation is feldspathic granite—hanging wall gneiss and granite."

In his decision of June 6, 1932, the Assistant Secretary noted that the evidence was conflicting as to whether a commercial lode deposit of limestone was disclosed on the two claims. Thus, the Assistant Secretary held that the Forest Service had not met its burden of showing no discovery.⁷ On the other hand, the Assistant Secretary, noting that a patent application had been filed, held that the claimant had failed to "affirmatively show" that within

⁷ It should be remembered that prior to *United States v. Strauss*, 59 I.D. 129 (1945), Government mining contests had generally proceeded with the United States bearing the ultimate burden of proof. In *Strauss*, however, the Department held that once the Government makes a prima facie case of no discovery, the burden then shifts to the claimant to overcome this showing. This procedure received judicial approval as being in accord with the Administrative Procedure Act in *Foster v. Seaton*, 271 F.2d 836 (D.C. Cir. 1959).

⁶ We would note that Friedhoff, in rebuttal, denied that any porphyritic, iron-stained quartz was disclosed, declaring that the belt was granitic gneiss with schist indications. He further argued that there was no limestone within the limits of the two claims (1930 Tr. 81-82).

each claim there existed a limestone deposit such as probably could successfully be mined at a profit. Absent such showing no patent would issue. Accordingly, the case was remanded to the Register, to afford claimant the opportunity to establish her entitlement to patent.

A rehearing was subsequently held before the Register on Nov. 13, 1933. Unlike the 1930 hearing, this second hearing focused almost totally on the presence or absence of a commercial deposit of limestone. Claimant's first witness was Ralph S. Baverstock. Baverstock testified as to his onsite inspection of the Lone Jack and Lap Wing claims. He stated that he found an outcrop of lime rock approximately 25 feet in width and 150 feet in length, dipping to the east within the west line of the Lone Jack, which was the claim at the top of the mountain (1933 Tr. 2). He also stated he found an "outcrop" in the Lap Wing on the south side of the gulch at the foot of the hill.

Baverstock testified that he was sure that the outcroppings occurred within the limits of the two claims, and then addressed the question of form of deposition:

Q. Do these deposits exist as ledges or veins, or lenses, or how would you describe them?

A. I would describe them as lenticular deposits.

Q. And they are in place, or as distinguished from float?

A. They are most decidedly in place.

(1933 Tr. 5).

This testimony as to the nature of the deposit was corroborated by

a geologist, Ellis Mallery, who had extensive experience with limestone deposits. He stated that the deposits "are lenses or masses of the limestone in the surrounding rock under a common occurrence" (1933 Tr. 10). He noted that the deposit was also found on the Lady Helen claim to the west, noting "I am stressing the continuity of the vein from a geological standpoint, the vein was strong and a lot of limestone there" (1933 Tr. 16). He also noted that the deposit was high grade refractory (1933 Tr. 17).

Tessie Cooke-Haskins testified as to the quarrying and marketing of limestone from the claims. Because of the importance of this testimony we will set it out at some length. In response to a question relating to the removal and marketing of the lime rock, she stated:

A. [Tessie Cooke-Haskins] For a couple of months in the latter part of 1920 my husband was negotiating with several parties to try to work the lime-rock and they started a pit twenty feet from the west side line and two hundred feet from the north end line of the Lapwing and seventy five feet south of the Lapwing tunnel.

Q. Do you know how much material was removed from that pit or cut?

A. Eighteen hundred tons.

Q. On the Lapwing?

A. On the Lapwing, during several years.

Q. And that removal began about what time did you say?

A. 1921, they started work in 1920.

Q. How much of it has been removed, has there been any removed recently?

A. From the cut that is now open I would say about fifteen tons.

Mr. Dechant, Is that the same cut?

A. No sir.

October 21, 1931

By Mr. Hintze,

Q. Now what happened to that cut that was originally on the Lapwing claim?

A. It was worked for several years and a cloud burst covered it up.

Q. Is there any evidence on the surface showing this cut at this time?

A. No sir.

Q. Now what was done with the lime-rock that was taken from the Lapwing claim at that time?

A. Part of it is in the floor of the American Legion building in Pasadena.

Q. To whom did you sell it?

A. To Mr. Packard of the California Rock Products Company.

Q. Did you sell it to anybody else?

A. To Mr. Mcpherson and Mr. Morris and Captain Tiffany.

Q. Do you remember what compensation you received from them for the Limerock.

A. All the way from twenty five cents to one dollar and one dollar and a quarter per ton, usually fifty cents.

Q. Would it average fifty cents a ton?

A. Yes.

By the Register.

Q. At what point?

A. On the Lapwing.

Q. Fifty cents F.O.B. at the mine.

A. Yes at the mine.

Q. F.O.B. in place or after it was taken out; that was fifty cents F.O.B. in place?

A. Yes.

Q. In other words the purchaser paid for the extracting?

A. Yes.

By Mr. Hintze,

Q. Did you ever go up to the limerock deposit on the Lone Jack?

A. Yes a long time ago.

Q. You know nothing about the conditions there at the present time?

A. Well, you could see the deposit, I have been half way up the hill, four years ago I was all over the property.

CROSS EXAMINATION,

By Mr. Dechant,

Q. You said fifteen tons were taken recently from a cut now open, am I correct in that?

A. Some of that had been mined from this original cut, the storm waters would come down and we had to protect it where they had mined and there was a pile of rock on high ground, I would say about ten tons taken from this cut that is there now.

* * * * *

Q. Now these fifteen tons you say were taken out recently, what was done with them?

A. Sold.

Q. To whom?

A. To Mr. Scheerer, Joseph Scheerer.

Q. Where is he located?

A. He is trying to get my lime deposit started in pretty good shape, he has sold more tonnage than that, there is eighty-five tons gone from the Lady Helen and Lapwing.

Q. From the Lapwing you say there is fifteen tons gone, what are they using that for?

A. Sound proofing in studios, stores.

Q. What other purpose?

A. Stucco.

(1933 Tr. 23-26).⁸

Bartholomew Haskins, son of Richard P. and Tessie Cooke-Haskins, also testified as to the existence of limestone outcrops within the limits of the claims. He noted that "since Mr. Baverstock made his inspection, I have opened it up quite a bit. I have put in several blasts of dynamite; quite a number of tons of rock we have got piled up; I have opened it up considerably since then" (1933 Tr. 32). He testified that the limestone was used for ter-

⁸ Various questions and answers concerning the exact situs of these cuts have been deleted. They were relevant in that hearing to determine the presence, *within each mining claim*, of a physical exposure of limestone. Inasmuch as the present claim is an aggregate of all three claims involved therein, the exact situs of each cut is not of particular importance.

razzo, stucco, chicken grit, sound proofing, as flux, in soda plants, the sugar industry, and in the manufacture of paint (1933 Tr. 34, 38).

Richard P. Haskins, Jr., another son of Richard P. and Tessie Cooke-Haskins, also testified. The following exchange occurred between him and counsel for the Government.

Q. What kind of a deposit is this limestone joining the Lady Helen, what kind of a deposit do you call it?

A. What do you mean, by chemical, content.

Q. No. What kind lode or placer?

A. Lode.

Q. Why lode?

A. It is in vein formation.

Q. In what shape does that vein formation occur?

A. What do you mean when you say shape in that way.

Q. What is the characteristic of the vein if there is any characteristic?

A. It runs in a northerly and southerly direction.

Q. Now you look at this lode formation. Is it a solid mass of lime all the way through?

A. Yes.

Q. You don't agree with some of these previous witnesses, it is a lenticular deposit?

A. Not being a technical man—

Q. You don't know what that means?

A. I am just describing what it looks to me.

(1933 Tr. 44-45).

The first witness for the Government was E. C. Galbraith, a mining engineer employed by the Department of the Interior, who had examined the claims. The thrust of his testimony was that while the lime was clearly in a lenticular vein deposition, the vast amounts of the product were more easily quarried from an area on the Lady Helen

claim (1933 Tr. 46-51). William H. Friedhoff's testimony was to the same effect at this hearing. *See generally* 1933 Tr. 56-64.

On Jan. 31, 1934, the Register issued his decision. After reviewing the evidence, the Register concluded:

I am of the opinion that the lands in question are not valuable as a mining proposition, it appearing that the deposit on the Lone Jack is inaccessible and not conducive to practical mining; and that the deposit on the Lap Wing, and the character of the mineral disclosed thereon would not warrant a prudent man in expending his time and money thereupon in the reasonable expectation of success in developing a paying mine.

(Decision at 9-10). Thus, he recommended rejection of the application for patent, but he did not declare the claims null and void.

Tessie Cooke-Haskins duly appealed this decision to the Commissioner of the General Land Office, who by decision dated Nov. 10, 1934, affirmed the Register for the reasons given in his decision. The Commissioner, however, in addition to rejecting the application, declared the claims null and void. This decision was then appealed to the Secretary. In her statement of reasons for appeal, Tessie Cooke-Haskins noted that it was contradicted that the deposit on the Lone Jack "exists in vein formation between well defined walls and dips to the east *under* said Lone Jack claim," and that, the total record showed "that lime rock exists on both claims in vein formation."⁹

⁹ Appeal from Commissioner's decision, filed Dec. 19, 1934, at 3, 6.

October 21, 1981

The Acting Solicitor of the Department of Agriculture, in reply, contended that the most recent testimony showed "the limestone occurs in lenses and not in vein formation,"¹⁰ and criticized the profit estimates of appellant by noting that "counsel has overlooked the large lime deposit on the Lady Helen and other claims to the west as a source of revenue for the claimant at the theoretical profits disclosed on counsel's brief."

In a decision dated Apr. 22, 1935, the First Assistant Secretary generally affirmed the Commissioner. See *United States v. Tessie Cooke-Haskins*, A-18453. In his review of the evidence, he noted:

It is undisputed that on the [Lady] Helen claim and possibly others held by the claimant and lying adjacent to the lodes in question on the west there are considerable deposits of limestone which have been quarried and marketed; that there are certain lenses of limestone disclosed close to the west side line of the claims, running athwart the general trend of the gneissic formation and within the boundaries of the claims.

The evidence is conflicting, however, as to whether these limestone lenses within the claims are of sufficient extent or are of such quality or are in such a place as to be feasible to work them.

Upon a review of the evidence, the Assistant Secretary concluded that the claimant had not shown that the claims could be successfully mined and marketed. He also

noted "it is not beyond the bounds of possibility that by subsequent exploration and development such demonstration could be made." Accordingly, the Assistant Secretary held that "[u]nder all the circumstances disclosed, the fair and proper action seems to be to merely reject the patent application and leave the mineral claimant free to further pursue exploration under her location."¹¹

¹¹ This action by the Assistant Secretary was based on the doctrine demarcated by the *Clipper Mining Company* cases. Without digressing into the long history of that litigation, which includes a Supreme Court decision styled *Clipper Mining Co. v. Eli Mining & Land Co.*, 194 U.S. 220 (1904), we would note that the rule was eventually enunciated that the Government rejection of a patent application merely determined that a discovery as a then present fact, such as would justify issuance of patent, had not been shown; it did not constitute a "definitive" finding that the land was nonmineral in character or that there was "a total absence" of discovery requisite to location. Thus, rejection of the patent application did not determine the validity or invalidity of the mining location. See generally *The Clipper Mining Co. v. The Eli Mining & Land Co.*, 33 L.D. 660 (1905).

The reason for this approach is more easily appreciated when it is remembered that until the decision in *United States v. Strauss*, *supra*, in 1945, the Government was deemed to have the burden of proof that the claim was invalid in mining claim contests. See n.7, *supra*. When the claimant sought a patent, however, the Department required the claimant to prove entitlement thereto. Thus, the *Clipper Mining* doctrine was a logical outgrowth of burden of proof analysis. If, in a given case, the evidence was inconclusive, whichever side bore the burden could be deemed to have failed to discharge the same. When a patent application was sought, the claimant would lose, and where a declaration of invalidity was sought, the Government would lose. Once the Department decided in *United States v. Strauss*, *supra*, however, that the mining claimant bore the burden of proof, regardless whether or not a patent application was the subject of the contest, the logical support of the *Clipper Mining* rationale collapsed. It is, therefore, not surprising that this doctrine was eventually expressly overruled in *United States v. Carlile*, 67 L.D. 417 (1960).

¹⁰ We are unable to explicate the distinction which the Acting Solicitor was apparently trying to draw though he may have been contending that the vein was intermittent, rather than continuous, in addition to being lenticular. Compare with *San Francisco Chemical Co. v. Duffield*, 201 F. 830 (8th Cir. 1912).

By letters of June 19, 1935, to President Roosevelt and Secretary Ickes, Tessie Cooke-Haskins objected to the Assistant Secretary's decision. This was treated as a petition for reconsideration. Upon notification of this fact, Haskins wrote to Secretary Ickes and noted that the demand for dolomitic limestone had increased markedly during the Depression. She contended that "the uptrend of the steel industry has made the present demand for dolomite as a fluxing stone increase tremendously. It is also used extensively as a pigment in the manufacture of paint."¹²

By decision of July 23, 1935, the Department granted the claimant a new hearing, conditioned upon the submission of an affidavit corroborated by two disinterested witnesses setting forth in detail the quantity of limestone quarried, shipped, and sold from the claims and all relevant factors surrounding such actions. Claimant subsequently filed a three-page affidavit, witnessed by her two sons. In transmitting the case files to the Register, the Commissioner of the General Land Office stated that while the affidavit submitted did not fully meet the Department's requirements, action on the rehearing would be stayed pending a further examination of the claims by the Forest Service.

The report of this examination, conducted by Friedhoff, was submitted Jan. 22, 1936. In essence, the report indicated that nothing had

changed over the past 2 years, and Friedhoff was not swayed from his view that claimant had not shown a discovery. In the course of his report, however, Friedhoff made the following observation:

There are from 5 to 10 acres of flat land on the Lap-Wing lode and Millsite, which being within 3 miles of the City limits of Los Angeles has considerable real estate value and accounts for the claimant's persistent efforts to patent this land while not being interested in patenting the claims on which the dolomite is located, *which later are unquestionably patentable.* [Italics supplied.]

The emphasized section of this quotation has been frequently alluded to in the subsequent history of these claims.

Here the matter apparently rested, until June 1, 1962, when Richard P. Haskins, Jr., the present contestee (Tessie Cooke-Haskins having died in 1954 and Bartholomew Haskins in 1962), filed a verified statement pursuant to the provisions of sec. 5 of the Surface Resources Act, 30 U.S.C. § 613 (1976). This statement covered all four claims and both millsites which occupied the land involved in this appeal.

On July 17, 1964, the Department of the Interior, at the request of the Forest Service, issued a contest complaint alleging that the lands embraced by the mining claims were nonmineral in character and that no discovery existed within the limits of any claim; that a residential building had been constructed upon the Lap Wing mining claim, and that the Lap Wing claim

¹² Exh. G-4, letter dated July 18, 1935.

October 21, 1981

was being utilized for purposes other than mining; and that the two millsites were not being occupied or used for mining or milling purposes. The charges were duly denied and a hearing was held on Jan. 28, 1965, before Hearing Examiner Graydon E. Holt.

The Government's sole witness was Emmett B. Ball, a mining engineer. Ball testified that the limestone deposits were in pods or lenses, ranging from a few feet to 60 feet across, the 60-foot measurement being taken from an outcrop just inside the Lone Jack claim (1965 Tr. 32). He described various markets for limestone in the Los Angeles area, such as roofing rock, in foundries and steel mills and as asphalt filler (1965 Tr. 34).

Ball testified as to the assay results of three samples he had taken. The first sample was from the northwest corner of the Lone Jack, just across from the Lady Helen. The sample was assayed as 31.78 percent calcium oxide (CaO), 18.25 percent magnesium oxide (MgO), and 356 percent silica (SiO₂). Ball stated that while some foundries could utilize limestone with the high percentage of magnesium shown, the silica content was too high (1965 Tr. 42). The same would hold true for use in tile though Ball thought the dust could be used for filler in asphalt. Ball stated that, in view of the difficulty in obtaining access to the deposit, it could not be economically mined.

Ball also stated that he took two

other samples, both from the Lady Helen claim. These two samples assayed at 34.56 percent CaO, 14.77 percent MgO, 5.51 percent SiO₂, and 31.04 percent CaO, 19.78 percent MgO, 1.53 percent SiO₂, respectively. With regard to the first sample, Ball contended that, with the high silica content, the only use would be roof granules, but since white rock was adjacent to black this would not be feasible.¹³ While Ball noted that the second sample showed a significantly lower percentage of silica, he stated that the main market would still be for use in roofing granules and that this deposit suffered the same infirmities as far as color consistency, as did the other ore on the Lady Helen. *See generally* 1965 Tr. 45-50; Exhs. 10, 11.

At the conclusion of Ball's testimony the Government withdrew its charge relating to the utilization of the Lap Wing claim for purposes other than mining. Richard P. Haskins, Jr., then took the stand. Haskins described the strikes of the various deposits noting that they tended in a northwesterly direction (1965 Tr. 114-16). He estimated total tonnage on all four claims of 500,000 tons (1965 Tr. 118). With respect to the two millsites, Haskins noted that the Lap Wing had, in the past, been used for storage, though he intended at some future time to use it for crushing pur-

¹³ Ball subsequently testified on cross-examination that limestone for roofing granules had to be white, not gray, because that is what customers wanted (1965 Tr. 83-85).

poses.¹⁴ With respect to the Lady Helen millsite he stated that years ago it had a miner's cabin on it, and was used for living purposes.

Haskins testified as to certain past sales of dolomite from the claims. These were various sales to Hill Brothers between 1934 through 1936, which Haskins estimated ran 80 to 90 tons per month and which was crushed and used for additives and filter materials (1965 Tr. 126). Haskins also referred to sales to Kinney Iron Works, Washington Elger, which made bathroom fixtures, and Kennedy Minerals, all from 1934 to 1940 (1965 Tr. 125-28). He noted that the foundry specifications required that the product be uniform in size, and that most of the product shipped from the claims varied from 3 inches down to $\frac{3}{4}$ of an inch (1965 Tr. 130-31). He estimated a total of 18,000 tons had been removed during the period from 1934 to 1940 (1965 Tr. 145).

Norman Whitmore, a mining engineer with more than 40 years experience, also testified on behalf of the claimant. He estimated that, from the largest deposit located in the Lone Jack and Lady Helen claims, there existed in excess of 200,000 tons of dolomite and the probability of twice that (1965 Tr. 155-57). He noted that the "strike in this vein" was northwesterly with a dip of 70 degrees (1965 Tr. 178-79). Throughout his testimony

he was quite insistent upon the difference between dolomite and limestone. He stated that "real true dolomite is approximately half calcium and half magnesium" but noted that this theoretical dolomite was a very rare thing. A sample which showed 58 percent CaCO_3 and 41 percent MgCO_3 he considered to be a good grade of dolomite (1965 Tr. 187). With respect to his assays of various pieces of rock taken from the claims he stated:

A. They will run all the way from almost pure dolomite down to what we would call low dolomite, low magnesium content. We didn't get any of them below around about 10 per cent.

Q. Ten per cent of what?

A. Magnesium.

Q. Below 10 per cent of magnesium?

A. Yes. That's why we consider this a dolomite deposit, not a limestone deposit.

(1965 Tr. 189-90).¹⁵

Whitmore testified to chemical uses of dolomite:

They put it in the bottom of a furnace so it won't heat out. Then in refractory brick to line furnaces. In cements, like they build steps out of. Then, the sugar industry. Glass, plastics, like in manufacturing of rayon. Also for fertilizers, plant use and insecticides. They even put it in cow feed. Also in the rubber industry, fluxes. In the chemical industry, calcium carbide. Oil industry, tan-

¹⁵ Whitmore's insistence on the term "dolomite" is clearly shown in an exchange he had with Government's counsel:

"Q. Did you examine the point where quantities of limestone had been removed back in the 40's?

"A. Well, I thought this was a dolomitic property instead of limestone property.

"Q. Well, I don't mean to play on words. Whatever material was removed back in the '30's, '40's."

(1965 Tr. 180).

¹⁴ Haskins subsequently stated that he did have portable mining equipment presently on the lower portion of the Lap Wing (1965 Tr. 142-44).

ning. It can be used in the white of the paper.

(1965 Tr. 161). He stated that he thought the property was worth exploiting its present condition (1965 Tr. 166).

By decision of June 18, 1965, Hearing Examiner Holt declared the claims null and void. After recounting the history of the claims and the evidence adduced at the hearing, he concluded that the main deposit on the Lady Helen, from which "wages" might have been obtained in the 1930's, was now substantially depleted. The hearing examiner noted:

Dolomitic limestone is widespread throughout Southern California and the market is being supplied by presently operating companies. A new small scale dolomite operation in competition with the present quarries is likely to be successful only where it has distinct advantages such as accessibility, high quality material, nearness to a market, and conditions which permit very cheap quarrying. The contestee did not establish that his quarry had any of these advantages. Until he does there is no basis for believing that the further expenditure of labor and means on the claims would have a reasonable prospect of success or that there is a present market for the material.

(1965 Decision at 7). The decision of the hearing examiner was received by Haskins' counsel on June 24, 1965.

On July 9, 1965, counsel for Haskins filed a notice of appeal to the Office of Appeals and Hearings, Bureau of Land Management (BLM). Thus commenced a procedural wrangle that took the better

part of a decade to resolve. The hearing examiner acknowledged receipt of the notice of appeal, but noted that the Departmental appellate regulations required the submission of \$5 for each mining claim involved in an appeal. *See* CFR 1842.4(b) (1965).¹⁶ Appellant's check for \$30 was received July 21, 1965. Appellant's statement of reasons was filed with the Office of Appeals and Hearings on August 16, 1965.

By decision of Sept. 28, 1966, the appeal was dismissed by the Chief, Branch of Mineral Appeals, on the ground that the statement of reasons had not been filed within 30 days of the filing of the notice of appeal as required by the applicable regulation, 43 CFR 1842.5-1 (1965) (now 43 CFR 4.412). On Oct. 17, 1966, the claimant sought reconsideration of this decision. First, he pointed out that he had filed his statement of reasons within 30 days of perfecting his appeal, *i.e.*, the tendering of the \$30 filing fee on July 21, 1965. Second, he adverted to the 10-day grace period provided by 43 CFR 1840.0-8(b) (1965) (now 43 CFR 4.401(a)), and argued that his statement had been received within the grace period. Third, he argued that the regulations provided a total of 60 days in which one could file a statement

¹⁶ This filing fee requirement was abolished upon the establishment of the Office of Hearings and Appeals in 1970, at which time the Office of Appeals and Hearings, BLM, was merged with the appellate adjudicatory function of the Assistant Solicitor—Public Lands, in creating the Board of Land Appeals.

of reasons from the date of receipt of an adverse decision, and that this he had done.

These arguments were unavailing. By letter of Oct. 21, 1966, the request for reconsideration was denied. His appeal to the Secretary was denied by decision styled *United States v. Haskins*, A-30737 (Dec. 19, 1966). Haskins then sought judicial review of this ruling.

By decision of Apr. 15, 1968, styled *Haskins v. Udall*, No. 67-1815-CC, the District Court for the Central District of California dismissed the appeal and affirmed the action of the Department. An appeal was taken from this decision to the Ninth Circuit Court of Appeals. During the pendency of this appeal, the Ninth Circuit issued a decision in *Tagala v. Gorsuch*, 411 F.2d 589 (1969), holding that dismissal for failure to file timely a statement of reasons was not mandatory under the Department's regulations, but rather required the exercise of discretion.¹⁷ Accordingly, the parties stipulated that the Haskins' appeal be remanded to the Director, BLM, for the exercise of discretion, and this order was approved by the Court on Oct. 3, 1969.¹⁸

While the above matter was proceeding through the Federal Courts,

¹⁷ Prior to *Tagala v. Gorsuch*, *supra*, the Department had consistently interpreted the 30-day filing requirement for the statement of reasons as mandating the dismissal of all late filings, absent a showing that the 10-day grace period was applicable. Thus, though the two decisions issued by BLM and the Assistant Solicitor, respectively, did not indicate that dismissal was mandatory, there is no question that it was so perceived at that time.

¹⁸ Copies of the documents involved in the Court proceedings are found in Exhibit G-2.

however, Haskins filed an application for patent for a placer claim denominated as the Haskins' Quarries placer mining claim. This application was filed on May 27, 1968, and was based on the provisions of 30 U.S.C. § 38 (1976) and 30 U.S.C. § 161 (1976). While a mineral surveyor was subsequently selected, the State Director of the California State Office, by decision of May 29, 1969, suspended the survey until further notice.

Counsel for Haskins then moved the Department to stay action on the remand from the Ninth Circuit until a determination had been made as to the validity of the asserted placer claim. This request was denied in the decision of this Board, dated July 30, 1971, and styled *United States v. Haskins*, 3 IBLA 77 (1971). This decision also examined the circumstances behind the original late filing of the statement of reasons, but held that the record did not show a sufficient basis upon which to grant relief, and refused to waive the late filing. *Id.* at 83. With respect to the placer claim, the opinion noted "the propriety and validity of the asserted placer claim are not before this office for decision." *Id.* at 84 n.9. While Haskins subsequently argued that this statement meant that the placer claim should be surveyed, the California State Director, by letter of Sept. 3, 1971, canceled the mineral survey.

On Feb. 3, 1972, the United States filed in the U.S. District Court for the Central District of

California, a complaint in ejectment against Haskins, premised on the Department's 1971 decision, which in effect, had held the four lode claims and two millsites invalid. In addition, the suit sought rental for past use. On March 2, Haskins filed an answer and a counterclaim. Haskins' answer denied that the decision of the Secretary declaring the claims invalid was final, binding, and conclusive since a reasonable time had not expired from the date of that decision, and also adverted to the existence of the Haskins Quarries placer mining claim. In his counterclaim, Haskins alleged that he possessed a possessory right to the land based on an asserted placer location made under the provisions of 30 U.S.C. § 38 (1976), and prayed for a declaration that the Haskins Quarries placer claim was a valid existing claim. The United States subsequently filed a motion to dismiss the counterclaim.

On May 18, 1972, the District Court issued a memorandum opinion. See *United States v. Haskins*, No. 72-246-JWC (C.D. Cal. 1972). The Court noted:

In moving for a summary judgment of dismissal of defendant's counterclaim, the Government urges that since the land embraced within the lode claims was held to be without commercial value in the contest proceedings, the issue is res adjudicata in the patent application proceedings relating to the placer claim. But this is not necessarily so. There is after all a difference between a lode claim and a placer claim. The former relates to a vein of quartz or other rock in place,

whereas a placer claim covers all forms of deposit excepting a vein of quartz or other rock in place, and what might be an insufficient showing of commercial value in support of a lode claim, might well be sufficient to establish a valid placer mining claim. Both types of claims can, of course, be made upon the same property and can co-exist, even though in different ownership.

Although the Director might well believe, with the knowledge obtained from the contest proceedings, that defendant could not possibly make a showing of value sufficient to support a placer claim, the claimant is, nevertheless, entitled to try, and is further entitled to have any adverse ruling reviewed by this court.

(Memorandum Opinion at 3-4). The Court, however, declined to rule on the existence of a discovery within the limits of the claim, contending that this was properly subject to the initial jurisdiction of the Department of the Interior.

A motion for rehearing was filed by the Government and opposed by the claimant. On June 28, 1972, the District Court denied the motion, but, noting that there were controlling questions of law for which there were substantial ground for differences of opinion, authorized an immediate appeal as provided by 28 U.S.C. § 1292(b) (1976), with respect to three questions of law:

1. Can the defendant pursue his application for patent of the Haskins Placer Mining Claim pursuant to Title 30 U.S.C. § 38 where his lode claims under which he had previously worked the property have been declared invalid for lack of discovery?

2. Does defendant's possession of the property which antedates the effective date of the Watershed Withdrawal Act of 1928 by more than five years, entitle

him to proceed with his patent application notwithstanding the fact that his notice of intention to hold as a placer mining claim was not filed until subsequent to the effective date of the Water-shed Withdrawal Act?

3. If the defendant is entitled to proceed with his patent application and since the Government has chosen this Court as a forum, does this Court have jurisdiction over the patent application proceeding to the extent that it may make an order declaring the defendant entitled to a patent, or should these proceedings be remanded to the Department of the Interior to process defendant's application administratively?

The Department did pursue such an appeal. By decision of Oct. 25, 1974, reported as *United States v. Haskins*, 505 F.2d 246, the Ninth Circuit affirmed the District Court in all respects. In its decision, the Court adverted to an affidavit of E. Rowland Tragitt, a mineral engineer with nearly 30 years of experience in the Government, which had been filed in the District Court to support the claimant's motion for summary judgment. Thus, the Ninth Circuit noted that Tragitt had stated that:

[T]here is a minimum of 900,000 tons of dolomite on the claims and that the use of dolomite in the Los Angeles area included the following: Flux in iron and steel foundries, filler in paints, asphalt and rubber, the manufacture of glass, paper, refractories, insulation and fertilizer, and as a supplement in animal feed. Mr. Tragitt also stated: "That in addition to the dolomite, there are a minimum of 100,000 tons of decorative stone marketable for use as roofing granules, terrazzo chips, and decorative stone in walls, rock gardens, fire places, and patios."

505 F.2d at 248.

After briefly reviewing the history of the litigation surrounding the claim, the Ninth Circuit turned to the issues posed by the District Court. Concerning the applicability of 30 U.S.C. § 38 (1976), the Court noted that "[t]he evidence unequivocally shows that Haskins and predecessors have been in possession of the ground and have worked the claims for over half a century," and that sec. 38 permitted them to assert valid placer locations for the ground in question without proof of posting, recording notices of location, and the like. *Id.* at 250. The Court noted, however, that a discovery was necessary to acquire any rights under 30 U.S.C. § 38 (1976).

The Court then examined the question of the status of dolomite in lode form on the claims. The Court noted that "[t]he Interior Department has held that limestone deposited in lode formation is properly claimable as a lode claim and not as a placer claim. * * * That seems to be true of the dolomite and dolomite limestone deposits in the present case." *Id.* at 251. Referring to the prior adjudications of the lode claims the Court stated:

It may be that some of the dolomite is not in lode formation. To the extent that it is deposited as a zone or belt of mineralized rock lying within boundaries separating it from neighboring rock, Haskins cannot twice litigate the issue of the existence of this valuable mineral in the ground. He is precluded by the doctrine of *res judicata*. Consequently, whatever the merits of Haskins' claimed placer locations, their validity cannot be supported by proof of the presence of dolomite or dolomite limestone in lode formation. *Haskins cannot use the same*

October 21, 1981

material that he relied on as discovery of valuable mineral under his lode locations to support his present placer applications. [Italics supplied.]

Id.

With respect to the validity of Haskin's "placer claims as building stone locations"¹⁹ under 30 U.S.C. § 161 (1976) the Court referred to Tragitt's affidavit as to the 100,000 tons of decorative stone for use as roofing granules, etc., and stated:

Our search of the record has disclosed no instance in which the validity of mining locations for this mineral on the ground in question has been decided, or even placed in issue. Further, it cannot be determined from the present record whether the placer location for building stone was thrown in as an afterthought and not in good faith. The difficulties inherent in proving up on a placer location for building stone are apparent to anyone familiar with the mining laws. * * * Nevertheless, in the language of the District Court, the "claimant is entitled to try." [Citations omitted.]

Id. at 252.

The Court also held that it was too late for Haskins to seek review of the Board's 1971 decisions. Rather, upon the filing by the Government of the complaint in ejectment it became Haskins' obligation to directly attack the Board's decision in a compulsory counterclaim. Having failed to so proceed, the Board's decision was no longer

open to assault. The Court also noted that, while there was some question as to the claimant's good faith in this placer claim assertion, in view of the record "the least that can be said is that there is a disputed issue of material fact which precludes summary judgment." *Id.* at 253. Finally, the Circuit Court agreed with the District Court that insofar as the question of discovery is concerned, "the expertise of the Department in the premises is appropriately invoked."

The case was remanded for further action consistent with the opinion. Accordingly, on Mar. 7, 1975, a complaint was issued, seeking to have the mineral entry canceled and the Haskins Quarries placer mining claim declared void.²⁰ An answer was timely filed, and the case came on for a hearing in 1977.

Before discussing the evidence adduced at this most recent hearing, it is helpful to examine the various legal principles involved in this controversy. All claims, be they in lode or placer form, and regardless of how they are initiated, are valid only if they are supported by a discovery of a valuable mineral deposit. In *Castle v. Womble*, 19 L.D. 455, 457 (1894), the Department laid down a test which has remained at the bedrock of mining claim adjudication to this day. A discovery exists, Secretary Smith stated, "where minerals have been found and the evidence is of such a character that a person of ordi-

¹⁹ The Court's use of the plural in this sentence is somewhat confusing. In contradistinction to the separate lode claims which appellant asserted in the three previous contests, there is, in actuality, only one placer claim asserted, which embraces all of the land sought under the four lode and two millsite claims. This is a matter of some importance to which we will return, *infra*.

²⁰ The exact grounds for this action are set forth in detail, *infra*.

nary prudence would be justified in the further expenditure of his labor and means, with a reasonable prospect of success, in developing a valuable mine." The test soon won the approbation of the United States Supreme Court in *Chrisman v. Miller*, 197 U.S. 313 (1905). Over a considerable period of time, this test was refined to require a showing of present marketability, that is, that the claimant has a reasonable expectation that the mineral can be extracted, removed, and marketed at a profit. See *United States v. Coleman*, 390 U.S. 599 (1968).

[1, 2] There are two basic methods of locating a mining claim, dependent upon the nature of the mineral deposition, i.e., lode and placer.²¹ Inasmuch as the difference between these two modes of location lies at the center of this case, we will examine both the historical genesis of these two types of claims and the subsequent application of the theoretical bases upon which these different types of location are premised.

The first congressional enactment relating to the general disposition

of mineral lands was the Act of July 26, 1866, 14 Stat. 251.²² Sec. 1 of the Act declared that

the mineral lands of the public domain, both surveyed and unsurveyed, are hereby declared to be free and open to exploration and occupation * * * subject to such regulations as may be prescribed by law, and subject also to the local customs or rules of miners in the several mining districts, so far as the same may not be in conflict with the laws of the United States.^[23]

But, while mineral deposits, however found, were declared open to exploration and occupation, subsequent sections provided only for the acquisition of title to certain lode claims. Thus, secs. 2 and 3, which enacted various procedures for obtaining patent, applied only to a claim of "a vein or lode of quartz,

²² While, prior to this enactment, there had been a number of specific pieces of legislation relating to the sale of lands valuable for lead, copper, and coal, the Act of July 26, 1866, *supra*, was the first Federal legislation to deal with mining as a general proposition. See Act of Mar. 3, 1829, 4 Stat. 364; Act of July 11, 1846, 9 Stat. 37; Act of Mar. 1, 1847, 9 Stat. 146; Act of July 1, 1864, 13 Stat. 343; Act of Mar. 3, 1865, 13 Stat. 529.

²³ Even prior to this enactment, Courts had recognized the validity of rules, regulations, and customs established by mining districts as they related to a possessory right to a mining claim. Thus, in *Sparrow v. Strong*, 70 U.S. (3 Wall.) 97 (1865), Chief Justice Taney noted:

"We know, also, that the Territorial legislature has recognized by statute the validity and binding force of the rules, regulations, and customs of the mining districts. And we cannot shut our eyes to the public history, which informs us that under this legislation, and not only without interference by the national government, but under its implied sanction, vast mining interests have grown up, employing many millions of capital, and contributing largely to the prosperity and improvement of the whole country." (Footnote omitted.)

Id. at 104.

²¹ In this regard, we would note that a tunnel site located under the Tunnel Site Act, § 4 of the Act of May 10, 1872, 17 Stat. 91, 92, 30 U.S.C. § 27 (1976), is not properly deemed a mining claim. *Credde & Cripple Creek Mining & Milling Co. v. Vinta Tunnel Mining & Transportation Co.*, 196 U.S. 337, 359 (1905). It is, indeed, only a means of exploration and discovery, in the nature of a right-of-way. *Id.* at 357-59; see also *Calhoun Gold Mining Co. v. Ajax Gold Mining Co.*, 182 U.S. 499 (1901); *United States v. Livingston Silver, Inc.*, 43 IBLA 84 (1979). The status of a millsite as a mining claim was recently discussed in *Feldalite Corp. of America*, 56 IBLA 78, 88 I.D. 643 (1981).

or other rock in a place, bearing gold, silver, cinnabar, or copper.”²⁴

Four years later, Congress remedied its previous omission by adopting the Act of July 9, 1870, 16 Stat. 217, generally referred to as the Placer Act. That Act provided, in relevant part, “[t]hat claims, usually called ‘placers,’ including all forms of deposit excepting veins of quartz, or other rock in place, shall be subject to entry and patent under this act, under like circumstances and conditions, and upon similar proceedings, as are provided for vein or lode claims.”

Two years subsequent, Congress adopted the Act of May 10, 1872, 17 Stat. 91. Together with various provisions of the 1866 and 1870 Acts, the general mining law of the United States was thereby established. *See generally* 30 U.S.C. §§ 21–47 (1976). For our purposes, it is important, at this point, to focus on two specific aspects. First, sec. 2 of the 1872 Act established new limitations on the length and width of lode deposits. In so doing, however, Congress also enlarged the ambit of the 1866 Act in relation to the nature of the lode claims that might go to patent. Sec. 2 referred to “mining claims upon veins or lodes of quartz or other rock in place bearing gold, silver, cinnabar, lead, tin, copper, or other valuable deposits” in promulgating the new

limitations. (*Italics supplied.*) Second, sec. 10 of the 1872 Act provided that the various provisions of the Placer Act of 1870 “shall be and remain in full force” subject to certain specified changes.²⁵

Thus developed the essential statutory dichotomy which exists to this day. A lode claim is one located “upon veins or lodes of quartz or other rock in place bearing gold, silver, cinnabar, lead, tin, copper or other valuable deposits.” 30 U.S.C. § 23 (1976). A placer claim is essentially everything else. 30 U.S.C. § 35 (1976). Thus, in *United States v. Iron Silver Mining Co.*, 128 U.S. 673, 679 (1888), a placer claim was defined as “ground that includes valuable deposits *not in place*, that is, not fixed in rock, but which are in a loose state.” (*Italics added.*)

While such a bifurcated approach would seem to minimize uncertainties as to the proper mode of location, in reality, such has not been the experience of mining claimants. However, before exploring the various judicial and Departmental interpretations relating to this question, we should note one other statute which is involved in this appeal, namely the Act of Aug. 4, 1892, 27 Stat. 348, 30 U.S.C. § 161 (1976).

[3] This Act, occasionally referred to as the Building Stone Act, was adopted by Congress in order

²⁴ Lindley suggests that the failure of Congress to provide for a means of patenting placer claims was occasioned by a decline in the once predominant placer mining activity in California, whereas lode mining was increasing. *See Lindley on Mines*, § 57 (1897).

²⁵ Among these changes was a requirement that no location “shall include more than twenty acres for each individual claimant.” Section 10 of the Act of May 10, 1872, 17 Stat. 91, 94. This is a point which will be examined, *infra*.

to clear up confusion which had been generated by various decisions of the Interior Department.²⁶ The Act provided, in relevant part, that:

Any person authorized to enter lands under the mining laws of the United States may enter lands that are chiefly valuable for building stone under the provisions of the law in relation to placer mineral claims. Lands reserved for the benefit of the public schools or donated

to any States shall not be subject to entry under this section.

30 U.S.C. § 161 (1976). Thus, by statute, lands chiefly valuable for building stone must be entered as placer claims.²⁷

Of crucial import in the distinction between lode and placer claims was the fact that "[a] placer discovery will not sustain a lode location nor a lode discovery a placer location." *Cole v. Ralph*, 252 U.S. 286, 295 (1920).²⁸ Thus, error in the

²⁶ Commissioner McFarland of the General Land Office had originally ruled that lands chiefly valuable for building stone might be entered as placer claims. *H. P. Bennet, Jr.*, 3 L.D. 116 (1884). This ruling, however, was brought into question by Assistant Secretary Chandler's decision in *Conlin v. Kelly*, 12 L.D. 1 (1891), wherein the Department held that a quarry of stone useful for general purposes was not subject to entry as a placer mining claim. The following year, Congress adopted the Act of Aug. 4, 1892, *supra*. Subsequently, Assistant Secretary Chandler, in a decision which involved a claim located prior to the 1892 Act, distinguished *Conlin v. Kelly*, *supra*: "In that case the stone was useful only for general building purposes, while in this case the stone is not only useful for those purposes, but also very valuable for the ornamentation of buildings, and for monuments and other commercial purposes." (Italics in original.) *McGlenn v. Wienbroer*, 15 L.D. 370, 374 (1892). In this case, the Department held that the land was properly located as a placer claim under the 1872 Mining Act.

This sequence of events had generally been interpreted as meaning that the Building Stone Act applied only to common varieties of building stone, with uncommon varieties (whatever they might be) subject to the location provisions of the general mining laws. Under this interpretation, the passage of sec. 3 of the Act of July 23, 1955, 30 U.S.C. § 611 (1976), known as the Common Varieties Act, which removed common varieties of building stone from location under the mining laws, including the Building Stone Act, would have effectively repealed the Building Stone Act since it only applied to such types of building stone. See generally 1 *American Law of Mining* § 5.20 (1980). The Supreme Court decision in *United States v. Coleman*, *supra*, however, which expressly held that the Common Varieties Act left "30 U.S.C. § 161, the 1892 Act, entirely effective as to building stone that has 'some property giving it distinct and special value' (expressly excluded under § 611)," 390 U.S. at 605, must be seen as substantially undermining this analysis.

²⁷ We note that in *Bowen v. Sil-Flo Corp.*, 451 P.2d 626, 632-33 (Ariz. App. 1969), the Arizona Court of Appeals, in examining an argument that perlite was a building stone, and as such must be located as a placer, cited the statutory language of 30 U.S.C. § 161 (1976) and then stated: "By its very terms, this statute is permissive ('may'), and the appellant has cited no authority holding that, because a mineral deposit might be locatable under this section of the code, it necessarily could not be located as a lode." 451 P.2d at 634. With due deference to the Court, however, we must point out that it has misinterpreted the statutory usage of the word "may" in the context of the Building Stone Act.

As noted in our discussion in n.26, *supra*, the Building Stone Act was adopted to effectively overrule the Department's decision in *Conlin v. Kelly*, *supra*, which held that a stone quarry was not subject to entry under the mining laws. That decision had noted, however, that the land was available for entry under the Timber and Stone Act, Act of June 3, 1878, 20 Stat. 89. The use of the word "may" in the Building Stone Act referred not to the possibility that lands chiefly valuable for building stone might be entered as a lode as well as a placer, but rather to the fact that lands chiefly valuable for building stone were subject to location under the mining laws as a placer or subject to entry under the Timber and Stone Act. While there may be few cases on this point, the reason for this is that it has been universally assumed that lands chiefly valuable for building stone could be taken up only as placer claims. See, e.g., PLRC Report entitled *Legal Study of the Nonfuel Mineral Resources*, at 317; *Meklejohn v. F. A. Hyde & Co.*, 42 L.D. 144 (1913); *Henderson v. Fulton*, 35 L.D. 652 (1907).

²⁸ Among other important distinctions are the price paid per acre (\$5 for lode, but \$2.50 for placer, see 30 U.S.C. §§ 29 and 37 (1976)), and the fact that extralateral rights may appertain to lode locations, but do not apply to placer locations. 30 U.S.C. § 26 (1976).

mode of location could result in the invalidation of a claim.

Among the early definitions relating to lode deposits were those of Justice Field, sitting at circuit, in *Eureka Consolidated Mining Co. v. Richmond Mining Co.*, 8 F. Cas. 819 (C.C.D. Nev. 1881), *aff'd*, 103 U.S. 839, and Judge Hallett of the Colorado Circuit Court in *Stevens v. Williams*, 23 F. Cas. 44 (C.C.D. Colo. 1879), both of which achieved immediate currency. In *Eureka*, Justice Field wrote:

It is difficult to give any definition of the term as understood and used in the Acts of Congress, which will not be subject to criticism. A fissure in the earth's crust, an opening in its rocks and strata made by some force of nature, in which the mineral is deposited, would seem to be essential to the definition of a lode, in the judgment of geologists. But to the practical miner, the fissure and its walls are only of importance as indicating the boundaries within which he may look for and reasonably expect to find the ore he seeks. A continuous body of mineralized rock lying within any other well-defined boundaries on the earth's surface and under it, would equally constitute, in his eyes, a lode. We are of opinion, therefore, that the term as used in the Acts of Congress is applicable to any zone or belt of mineralized rock lying within boundaries clearly separating it from the neighboring rocks. It includes, to use the language cited by counsel, all deposits of mineral matter found through a mineralized zone or belt coming from the same source, impressed with the same forms, and appearing to have been created by the same processes.

8 F. Cas. at 823.

In *Stevens*, *supra*, Judge Hallett charged the jury:

[A]s to the word "vein" or "lode," it seems to me that these words may em-

brace any description of deposit which is so situated in the general mass of the country, whether it is described in any one way or another; that is to say, whether, in the language of the geologist, we say that it is a bed, or a segregated vein, or gash vein, or true fissure vein, or merely a deposit * * *. [W]henver a miner finds a valuable mineral deposit in the body of the earth * * * he calls that a lode, whatever its forms may be, and however it may be situated, and whatever its extent in the body of the earth.

23 F. Cas. at 45.

Both of these definitions were subsequently cited, with approval, by the United States Supreme Court in *Iron Silver Mining Co. v. Cheesman*, 116 U.S. 529, 533-34 (1886). See also *United States v. Iron Silver Mining Co.*, *supra* at 680; *Reynolds v. Iron Silver Mining Co.*, 116 U.S. 687, 695 (1886).

While these definitions sufficed to cover many types of mineral deposition, there were mineral deposits which were not easily classified as either lode or placer.²⁹ Because the instant appeal implicitly raises the question of the proper mode of location for limestone deposits, the subsequent analysis will relate only to such claims.

[4] Early cases involving limestone deposits, such as *Eureka Consolidated Mining Co. v. Richmond Mining Co.*, *supra*, actually con-

²⁹ The questions have continued through the years, particularly as the types of minerals being located have changed. For a discussion on problems associated with uranium locations, see D. Sherwood and G. Greer, *Mining Law in a Nuclear Age: The Wyoming Example*, 3 Land and Water Law Review 1 (1968). See also *Geomet Exploration, Ltd. v. Lucky Mc Uranium Corp.*, 601 P.2d 1344, 1345 (Ariz. App.), *rev'd*, 601 P.2d 1339 (Ariz. 1979).

cerned limestone deposits which themselves were mineral bearing, *i.e.*, the claims were not located for the limestone, but rather were located for precious metals which were carried within the limestone structure. *See also Jupiter Mining Co. v. Bodie Consolidated Mining Co.*, 11 F. 666, 675 (C.C.D. Cal. 1881). Thus, while these claims were lode locations, this fact was not dispositive of the question of the proper form of location for limestone claims.

Limestone, itself, was held to be a mineral within the meaning of the mining laws as early as Secretary Teller's decision in *Maxwell v. Brierly*, 10 C.L.O. 50 (1883). Ten years later, in *Shepherd v. Bird*, 17 L.D. 82, 84-85 (1893), the Department expressly held that limestone suitable for making lime was subject to mineral entry under the placer form and not as lode location.³⁰ *See also Long v. Isaksen*, 23 L.D. 353 (1896). Later, in *Henderson v. Fulton*, 35 L.D. 652 (1907), the Acting Secretary held that marble could not be located as a lode claim because it did not "possess the elements of rock in place bearing one or more of the minerals specified in the statute, or some other mineral that would be embraced within the added words 'other valuable deposits.'" *Id.* at 663 (italics supplied). While this case expressly applied only to deposits of marble, its logic, of course, would apply to limestone. Under such analysis, no

deposit of limestone, regardless of the nature of its deposition, which was valuable for the limestone, could be located as a lode.

Approximately 5 months after the Department's decision in *Henderson v. Fulton*, *supra*, however, the Eighth Circuit Court of Appeals held that asphaltum was locatable as a lode claim in *Webb v. American Asphaltum Mining Co.*, 157 F. 203 (1907). The Court noted that:

The test which Congress provided by this legislation to be applied to determine how these deposits should be secured was the form and character of the deposits. If they are in veins or lodes in rock in place, they may be located and purchased under this legislation by means of lode mining claims; if they are not in fissures in rock in place but are loose or scattered on or through the land they may be located and bought by the use of placer mining claims.

Id. at 206. Inasmuch as asphaltum (also known as gilsonite) is the vein itself, this decision cast serious doubt on the correctness of the *Henderson* analysis. *See also San Francisco Chemical Co. v. Duffield*, *supra*.

Eventually in *Dunbar Lime Co. v. Utah-Idaho Sugar Co.*, 17 F.2d 351 (8th Cir. 1926), it was held that a limestone deposit which was useful in flux and in the making of cement was locatable as a lode. This decision rejected an argument that the deposit should have been located as a placer in conformity with the Building Stone Act, inferentially holding that such qualities as the deposit possessed did not make the

³⁰ The decision held that such a limestone deposit was also subject to purchase under the Timber and Stone Act, *supra*.

October 21, 1981

land chiefly valuable for building stone.³¹

The import of such judicial pronouncements was not lost upon the Department. In *Big Pine Mining Corp.*, 53 I.D. 410, 412 (1931), the Department invalidated various placer locations of limestone on the grounds that there was no showing of marketability. The decision further noted that "it is undisputed that the deposit is in lode formation" and cited *Cole v. Ralph*, *supra*, for the proposition that a lode discovery would not sustain a placer location. A year later, in *Vivia Hemphill*, 54 I.D. 80 (1932), the Department expressly abandoned the rule enunciated in *Shepherd v. Bird*, *supra*, and *Henderson v. Fulton*, *supra*, and held that a deposit of limestone which existed in lode form with well defined walls and which was valuable for the burning of lime and the manufacture of portland cement was subject to location as a lode or vein.

³¹ *Dunbar Lime Co. v. Utah-Idaho Sugar Co.*, *supra*, involved the specific question whether lands within numbered school sections which were embraced by certain limestone lode claims were chiefly valuable for building stone. At the time of the Utah Enabling Act, known mineral lands were excluded from the grants to the State. See *United States v. Sweet*, 245 U.S. 563 (1918). This limitation was subsequently removed by the Act of Jan. 25, 1927, 44 Stat. 1026. Lands chiefly valuable for building stone, however, were, by the express terms of the Building Stone Act, subject to the grant to the State. Thus, had the land been chiefly valuable for building stone, the State's title would have attached in 1894 despite the prior appropriation of a mineral claimant. Because the Court held that the limestone was not chiefly valuable for building stone, the mineral claimant prevailed over the State's subsequent lessee.

While the Department has followed the ruling of *Vivia Hemphill* ever since its rendition,³² we must recognize that a certain anomaly exists with respect to the proper mode of location for limestone. If the lands embraced by a claim for limestone are chiefly valuable for building stone purposes that claim must, under the Building Stone Act, be located as a placer claim, *regardless* of the actual form of deposition. *United States v. Gardner*, 14 IBLA 276, 280, 81 I.D. 58, 60 (1974). On the other hand, if the limestone is chiefly valuable because of chemical or metallurgical properties, the proper mode of location is dependent upon the nature of the deposition. The relevancy of this distinction will be discussed, *infra*.

[5] Turning to the acts necessary for location, the only express Federal requirements for location relate to the necessity of making a discovery of a vein or lode within the limits of a lode claim (30 U.S.C. § 23 (1976)), and the marking of the boundaries of a lode claim on the ground (30 U.S.C. § 28 (1976)). See *Vevelstad v. Flynn*, 230 F.2d 695 (9th Cir. 1956). The contents of the actual notices of location and the manner of recordation were left to the local mining districts and the

³² While the argument is still occasionally made that the rock in place must be mineral-bearing rather than valuable in itself (see discussion, *infra*), in order for it to be locatable as a lode, this argument has been consistently rejected. See *Bowen v. Sil-Flo Corp.*, *supra*; *United States v. Bowen*, 38 IBLA 390, 399-400 (1979).

various states.³³ Nevertheless, failure to follow state requirements may result in the invalidation of a claim under the Federal laws. See *Roberts v. Morton*, 549 F.2d 158, 161-62 (10th Cir. 1977), *aff'g United States v. Zweifel*, 11 IBLA 53, 80 I.D. 323 (1973).³⁴

The patent provisions for both lode and placer claims, however, direct the claimant to show compliance with the various requirements of the General Mining Laws. See 30 U.S.C. §§ 29, 35 (1976). Thus, in the course of a patent application, the Department has consistently required a claimant to show a possessory right to the claim supported by a certificate or abstract of title. 43 CFR 3862.1-3(a), 3863.1-3(a). See *Kerr-McGee Nuclear Corp. (On Reconsideration)*, 43 IBLA

348 (1979); *Daniel Cameron* 4 L.D. 515 (1886). Situations, however, could arise in which such proofs were difficult, if not impossible, to obtain. Congress in the 1870 Placer Act had made provision for situations in which, due to this passage of time, it would become difficult to prove that the initial acts of location and recordation, as well as subsequent transfers, had occurred in compliance with the law. Sec. 38 of Title 30 provides:

Where such person or association, they and their grantors, have held and worked their claims for a period equal to the time prescribed by the statute of limitations for mining claims of the State or Territory where the same may be situated, evidence of such possession and working of the claims for such period shall be sufficient to establish a right to a patent thereto under this chapter and sections 71 to 76 of this title, in the absence of any adverse claim.

30 U.S.C.A. § 38 (West 1971).

The Supreme Court discussed this provision in *Cole v. Ralph*, *supra*. Therein, the Court noted that sec. 38 is a remedial provision and was designed "to make proof of holding and working for the prescribed period the legal equivalent of proofs of acts of location, recording and transfer." 286 U.S. at 305.³⁵ The Court, noting that the above statement had received approbation in numerous judicial and Depart-

³³ It should be noted, however, that certain posting requirements were established by sec. 1(a) of the Act of Aug. 12, 1953, 67 Stat. 539, 30 U.S.C. § 501(a) (1976); sec. 1(a) of the Multiple Mineral Development Act, Act of Aug. 13, 1954, 68 Stat. 708, 30 U.S.C. § 521(a) (1976); and sec. 2 of the Act of Aug. 11, 1955, 69 Stat. 679, 30 U.S.C. § 541(a) (1976). See also 43 CFR 3831.1. In addition to the above laws, various recording requirements also existed in sec. 2(b) of the Mining Claims Rights Restoration Act, Act of Aug. 11, 1955, 69 Stat. 682, 30 U.S.C. § 621(b) (1976). No general Federal recordation requirements existed until 1976, when Congress adopted sec. 8 of the Mining in the Parks Act, Act of Sept. 28, 1976, 90 Stat. 1342, 1343, 16 U.S.C. § 1907 (1976), and sec. 314 of the Federal Land Policy and Management Act of 1976, 90 Stat. 2743, 2769, 43 U.S.C. § 1744 (1976).

³⁴ While the Department had originally taken the position that compliance with state law requirements was not a matter of concern in mining claim contests within the Department (see *Reins v. Murray*, 22 L.D. 409 (1896)), the adoption of a regulation specifically requiring compliance with state laws, see 43 CFR 3831.1, was held by the Court in *Roberts v. Morton*, *supra*, to result in a Federal requirement that such laws be complied with.

³⁵ In *Humphreys v. Idaho Gold Mines Development Co.*, 120 P. 823, 827 (Idaho 1912), the Supreme Court of Idaho noted that "[t]he adverse possession referred to in the statute is intended to supply the place of an abstract of title and such proofs as are furnished by the county recorder."

mental rulings, proceeded to issue an important caveat:

But those rulings give no warrant for thinking that it disturbs or qualifies important provisions of the mineral land laws, such as deal with the character of the land that may be taken, the discovery upon which a claim must be founded, the area that may be included in a single claim, the citizenship of claimants, the amount that must be expended in labor or improvements to entitle the claimant to a patent, and the purchase price to be paid before the patent can be issued. Indeed, the rulings have been to the contrary.

Id. at 306. See also *Belk v. Meagher*, 104 U.S. 279, 287 (1881); *Capital No. 5 Placer Mining Claim*, 34 L.D. 462 (1906).

[6] It is important to note that the operative statutory phrase in 30 U.S.C. § 38 (1976), is "held and worked." Since the entire purpose of sec. 38 was to obviate the necessity of proving formal location and recording, which acts, of course, serve to notify the world of the claimant's appropriation of the land, it was obvious that there must be some method by which other parties would be put on notice that the land was under the claim of another. Thus, a claimant was required to prove that he had held or worked his claim *in addition to* such other showings as were required by law.

The early cases which examined the applicability of this provision (at that time commonly referred to as R.S. 2332) clearly recognized that it embraced two separate concepts. Thus, it was generally con-

ceded that performance of annual assessment work would fulfill the requirement that the claims be "worked." See, e.g., *Law v. Fowler*, 261 P. 667, 670 (Idaho 1927); *Newport Mining Co. v. Bead Lake Gold-Copper Mining Co.*, 188 P. 27, 28 (Wash. 1920). See also *United States v. Bowen*, *supra* at 402 (1979).³⁶ If, as occurred in a num-

³⁶ There is an implicit degree of interrelation among the provisions of 30 U.S.C. §§ 28, 38, and the concept of *pedis possessio*. Sec. 28, the assessment statute, is designed to assure diligent development of mining claims and to prevent thwarting of that purpose by the mere location of claims to tie up land and let it stay idle. *Powell v. Atlas Corp.*, 615 P.2d 1225 (Utah 1980); *Smith v. Union Oil Co.*, 135 P. 966 (Cal. 1913), *aff'd*, 249 U.S. 337 (1919); *James V. Joyce (On Reconsideration)*, 56 IBLA 327 (1981). Thus, a claim validly located and supported by a discovery is nevertheless open to relocation by another upon the failure of the claimant to perform annual assessment work, and may well be liable to forfeiture to the United States because of assessment work lapses if situated on withdrawn land. See *United States v. Bohme*, 48 IBLA 267, 87 L.D. 248 (1980).

Sec. 38 and the doctrine of *pedis possessio* have a more ameliorative focus. The doctrine of *pedis possessio*, as enunciated in *Union Oil Company of California v. Smith*, 249 U.S. 337 (1919), applies to pre-discovery claims and, in effect, provides that if a qualified person in good faith enters unappropriated public domain for the purpose of mineral exploration, such an individual will be protected against all intrusions so long as he remains in continuous, exclusive occupancy and diligently works towards making a discovery. See generally T. Fiske, *Pedis Possessio—Modern Use of An Old Concept*, 15 Rocky Mt. Min. Law Inst. 181 (1969). Sec. 38 provides a mechanism in which the occupation and working of a claim for a period of time equal to the state's statute of limitations would obviate the need for proving formal location. This is an important concept since, as the Court held in *Belk v. Meagher*, *supra*, "[t]he right to the possession comes only from a valid location." 104 U.S. at 284.

Since the duty to perform assessment work attaches only upon a discovery, mere performance of "assessment work" cannot, by itself, hold a claim under *pedis possessio*. See, e.g.,

—Continued

ber of years, assessment work requirements were suspended, compliance with the filing requirements of the suspension statutes would constitute "working" under sec. 38. See *Judson v. Herrington*, 130 P.2d 802 (Cal. Dist. Ct. App. 1942).³⁷

While it was also understood that a claim must be "held" as well as "worked," Courts seldom examined the parameters of this concept beyond noting in individual cases that the specific land involved either had or had not been "held" in compliance with the statutory provisions. See, e.g., *Law v. Fowler*, *supra*; *Phelps v. Pacific Gas & Electric Co.*, 246 P.2d 997 (Cal. App. 1952); *Lind v. Baker*, 88 P.2d 777 (Cal. App. 1939). The Courts did recognize, however, that "actual possession" of the claim was required and that this encompassed something more than simply performing assessment work. Thus, the Court in *Law v. Fowler*, *supra*, stated:

Actual possession therefore means something more than mere compliance with the requirement to do the annual assess-

McInerny v. Allebrand, 290 P. 530, 532-34 (Cal. App. 1930).

Inasmuch, however, as the failure to perform annual assessment work would subject a claim, properly located and supported by a discovery, to relocation or forfeiture, the performance of assessment work has generally been seen as the minimum amount of work necessary to assert a claim of adverse possession under 30 U.S.C. § 38 (1976). As will be shown, *infra*, other factors will also have an impact in determining the extent of the claim.

³⁷ In this regard we would point out that contrary to the intimation of the Board's decision in *United States v. Bowen*, *supra*, it is the actual performance of the work, and not merely the recording of a statement that the work was done, which is dispositive of this question. See *California Dolomite Co. v. Standridge*, 275 P.2d 823, 825 (Cal. App. 1954); cf. *Ainsworth Copper Co. v. Beu*, 53 I.D. 382 (1931).

ment work as a basis of title under claim of adverse possession. Plaintiff has shown that at times, when doing assessment work and while the claim was worked under lease, she was in actual possession thereof. She has not shown that she was in such possession for any period of 5 consecutive years as prescribed by the statute (C. S. § 6600). The record shows that she failed to keep the boundaries of the Montezuma claim marked and indicated on the ground so as to afford actual notice. It also fails to show that plaintiff was in actual possession or occupancy of the Montezuma claim during the subsequent period when defendants initiated their rights by locating the Jennie R. claim.

261 P. at 670.

Under the above analysis, the fact that claimants therein had performed assessment work, while a necessary prerequisite to the assertion of a claim under 30 U.S.C. § 38 (1976), was not, itself, dispositive of the question of "holding." This question has traditionally been deemed to be one of fact, determinable only by reference to the specific evidence in any case. See *California Dolomite Co. v. Standridge*, *supra* at 825 (and cases cited). What we must initially examine, however, is whether the Ninth Circuit's decision in *United States v. Haskins*, *supra*, prohibits any Departmental inquiry into these matters.

Certainly some of the language used by the Court seems to foreclose examination by the Department of the applicability and extent of Haskins' sec. 38 claim. Thus, the Court stated:

We agree with the district court that the section is applicable to this case. The evidence unequivocally shows that Haskins and predecessors have been in pos-

session of the ground and have worked the claims for over half a century and for much longer than five years prior to the enactment of the Watershed Withdrawal Act of May 29, 1928. Section 38 permits them to assert valid placer locations for the ground in question without proof of posting, recording notices of location and the like. [Citations omitted.]

505 F.2d at 250.

Subsequently, the Court declared:

Haskins having occupied and worked the ground for more than five years may assert placer locations without proof of recording and posting. He must, nevertheless, prove discovery of a valuable mineral because the statute has no application to a trespasser on public lands, title to which cannot be acquired by entry under the mining laws of the United States. *Cole v. Ralph, supra*; *Chanslor-Canfield Midway Oil Co. v. United States*, 266 F. 145 (9th Cir. 1920).

Id. at 251.

As our review of the evidence adduced at the prior hearings shows, it is clear that appellant's family did work portions of the land now embraced by the Haskins Quarries placer mining claim, well before the withdrawal in 1928. The question which we wish to raise, however, is whether it was the intent of the Court to rule definitively on the areal extent of the placer claim or merely to rule that a showing of holding and working had been made, leaving the actual configuration of the claim, as well as its validity, to be determined by the facts as were developed at the subsequent hearing. We must admit that, whether intentionally or not, the Court arguably appeared to foreclose this entire line of inquiry. Nevertheless, absent a clear state-

ment that the issue of the extent of appellant's holding and working, or the permissible ambit of the claim, was beyond scrutiny of this Department, we will not assume the Court meant to preempt this Department's authority to initially determine all facts related to a claim of entitlement to land or the minerals found therein. *See generally Cameron v. United States*, 252 U.S. 450 (1920); *Schade v. Andrus*, 638 F.2d 122, 124-25 (9th Cir. 1981). Accordingly, to the extent we think necessary, we will treat these issues as open to our review.

First of all, however, we must determine whether the Haskins Quarries placer mining claim was, in 1928, and is today, supported by a discovery of a valuable mineral deposit in a placer formation. We will now examine the record developed at the most recent hearing.

The contest complaint which issued on Mar. 7, 1975, charged, *inter alia*,³⁸ that, with respect to the material in placer formation:

1. There are not presently disclosed within the boundaries of the mining claim, nor have there been disclosed at any time up to the present, minerals of a variety subject to the mining laws, sufficient in quantity, quality, and value to constitute a discovery nor is such land chiefly valuable for building stone.

2. The land embraced within the claim is nonmineral in character.

³⁸ The allegations relating to materials other than those in placer formation are omitted since the decision of the Ninth Circuit clearly held that the lode values could not be utilized to support the placer location. *United States v. Haskins, supra* at 251. In any event, as we noted above, a lode discovery would not support a placer location. *See, e.g., Cole v. Ralph, supra.*

With reference to the claim, itself, the Department made seven separate allegations:

1. The claim does not conform to the United States system of public-land surveys and the rectangular subdivisions thereof.

2. The claim includes more than twenty acres for each individual claimant.

3. The boundaries of the claim have not been clearly marked on the ground.

4. The land embraced within the claim is not held in good faith for mining purposes.

5. The \$100 worth of labor or improvements required by 30 U.S. Code Section 28 has not been performed or made on or for such claim.

6. It has not been worked as a claim within the meaning of 30 U.S. Code Section 38; or has not been so-worked since May 29, 1928.

7. No portion is, nor since 1900 has it been, used or occupied as a millsite by the proprietor of a vein, lode, or placer for mining, milling, processing or beneficiation purposes or other operations in connection with such mines, nor has it been so-used by the owner of a quartz mill or reduction works.

On Mar. 27, 1975, contestee filed an answer denying all of the above allegations. A prehearing conference was held on Sept. 24, 1976, and the case came on for hearing on Feb. 1, 1977, and continued for 2 more days.

The first witness called by the Government was the contestee, Richard P. Haskins, who was examined as an adverse witness.³⁹ Haskins testified generally as to the

operation of the claim in the 1920's and 1930's, noting that after his father's death in 1929, his mother managed the claims until her death in 1954. At this time his brother, Bartholomew, assumed the major responsibility, which appellant, himself, assumed upon his brother's death in 1962. He testified, however, that except for the period from 1944 to 1954, he always stayed in contact with what was transpiring with the claim (1977 Tr. 122). He noted that in the 1930's material was being shipped to iron foundries and to Hill Brothers Chemical (1977 Tr. 122). He noted that his brother had been responsible in 1930 for contacting the iron foundries and initiating "the flux stone business" (1977 Tr. 123).

In response to a number of questions relating to the lode/placer conflict, Haskins testified that he had never used either term in describing his claim and basically stated that it was not until Emmett Ball, the Government mineral examiner in the 1965 hearing, had spoken with him, and Hale C. Tognoni, his present lawyer, had examined the claim, that Haskins commenced referring to the claim as a placer (1977 Tr. 123-25).⁴⁰ There was also general testimony that Tognoni had prepared the affidavit, dated June 2, 1972, which had been submitted to the District Court in connection with *United States v.*

³⁹ Actually, the first witness to testify was Patrick R. Haskins, son of the present claimant. His testimony was taken out of order to accommodate his schedule. This testimony will be discussed in the general analysis of contestee's evidence, *infra*.

⁴⁰ This reference to Ball was subsequently explained as follows: "[Mr. Ball] made the statement that it was illegal when I was selling rock there because it was placer material. This was in May of 1963." (1977 Tr. 142). See also 1977 Tr. 403; Exh. R-7.

Haskins, No. 72-246-JWC (*see* Exh. G-2 at 233), on the basis of "months of memoranda" which Haskins had sent to him (1977 Tr. 130). Haskins was admittedly unable to define all the terms used therein.

In discussing this affidavit, however, the following colloquy transpired:

Q. What do you understand to be meant by this selecting mining?

A. Well, you can pick out as to what it is all twisted so much. If you want a piece of gneiss, which is all broken loose, and everything, if you want a piece of dolomite, if you even want a piece of quartz, that is laying there, if you want a piece of quartz—

Q. Just a moment. What does the meaning consist of with this steep wall and steep slope?

A. Well, in other words, mother nature does the mining actually by storms and it loosens it and it throws it down into the creek bottom itself of lime rock creek.

Q. Are you stating that mother nature selectively mines this quarry face?

A. Well, lets put it this way. It will bring it all down. Then, you can shake it as it hits the main flow in the creek.

JUDGE: In other words, mother nature does mine it, is that it?

THE WITNESS: Yes. That is right. That is what I would say. It has removed it from its original location.

(1977 Tr. 131-32). Haskins subsequently testified, in relation to a statement in the affidavit concerning the selective mining of limestone which was kilned and sold as plaster, as follows:

JUDGE: All right. What is your definition or idea of what selectively mined means?

What do you mean by that?

THE WITNESS: If you are going to mine out a piece of dolomite, you are going to cut a piece out.

JUDGE: So, you can go up there and you cut a piece out.

THE WITNESS: Yes. That is right. (1977 Tr. 136-37).

Haskins also testified that, so far as he knew, there had never been any removal of materials from the two millsites (1977 Tr. 141-42). In reference to sales from the claim (which were listed with the 1968 application for patent, *see* Exh. R-6), appellant stated he was unable to say whether they differed from those used to support the patent application in the 1930's (1977 Tr. 169-70, 265).

Three other witnesses were called by the Government. Edward Medina, a realty assistant dealing in land administration, testified as to a search of the records of the county recorder's office to ascertain the nature and kind of proofs of labor which had been filed in reference to the lands embraced by the claim. His results were tabulated and submitted as Exhibit G-7. Medina pointed out that there was no recorded mention of a placer claim until 1968. While this compilation indicated that no evidence of assessment work or notice of holding under a suspension statute had been filed for a number of years for the lode claims, on cross-examination, when Medina was confronted with evidence that documents had been recorded for those years (*see* Exh. R-12), he admitted that the recorder's office had obviously made some errors (1977 Tr. 198-200).

James R. Mason, Jr., a mineral examiner, testified as to his physical examination of the site, and a number of photographs showing the claim were put into evidence. With specific reference to the area comprised by the streambed, Mason testified that there were 2.44 acres inside the flood plain on the Lap Wing and 1.23 acres inside the flood plain on the Lady Helen (1977 Tr. 223-24). Based on these figures, Mason then estimated the tonnage of carbonate rock on three different assumptions relating to its presence as a constituent component of all the material in the streambed, viz., 1 percent, 5 percent, and 10 percent. His conclusions were that on the Lady Helen, depending upon presumed percent of carbonate rock, there would be 29.72 tons per foot of depth (tpf), 148.6 tpf, and 297 tpf, respectively. For the Lap Wing, the estimated tonnage was 59 tpf, 295 tpf, and 590 tpf, respectively. His calculated figure for the total flood plain, at a 10 percent estimated presence of carbonate rock, was 887 tpf of depth (Exh. G-13). Mason's calculations also showed that, assuming 3 feet of depth on the Lap Wing, there would be 11,800 cubic yards on the Lap Wing, or roughly, 17,700 tons.

Finally, Gerald E. Gould, Regional Mining Engineer for the Forest Service, testified. His testimony was primarily directed to the physical situs of the claim. He stated that, based on the description in a notice of the claim filed by appellant in the county recorder's office on May 2, 1968 (Exh. R-1),

he had attempted to plot the claim. Based on his calculations, he stated that there was a descriptive error of over 46 feet, and that the description would be completely inadequate for the purposes of passing title (1977 Tr. 238-39). Similarly, he found that the description which Haskins had filed in his answer to the Government suit in ejectment (*see* Exh. G-2 at 19), had a closure error on the order of 350 feet (1977 Tr. 253). He admitted that he had not gone on the grounds of the claim in making his calculations (1977 Tr. 257).

Contestee presented the evidence of three witnesses: Richard Haskins, the claimant, Patrick R. Haskins, his son, and Dudley L. Davis, a registered geologist and mining engineer.

Patrick R. Haskins, who is employed by the California State Department of Transportation as a heavy equipment mechanic, testified that he also worked as a mechanic operator for his father. He stated that he was on the claim regularly from 1955 to 1968, and actually helped his father work the claim from 1966 to 1968. In 1968 he entered the military service. Subsequent to 1972, when he left the service, he has been responsible for maintaining the equipment and helping out with road repairs, though since his marriage he has had less time to help (1977 Tr. 48-50).

He described the mining operation as basically being one in which they hauled material from the streambed to a working area near

the highway where it would be accessible to trucks. There it would be stockpiled and loaded onto pallets, bound with chicken wire (1977 Tr. 51-52). He stated that mining was primarily down in the canyon and explained how the supply of minerals was replenished as follows:

A. During rain storms or we had earthquakes, that would knock hundreds of tons of rock down. However, normally if we wanted a specific rock out of this, we would take the D-8 and build the road up to it and take a cut out of it. When the rock falls, it comes into the creek and we pick it up.

However, usually something of this matter, we wouldn't have to go right to the face or whatever, because enough of it is in the creek already.

Q. It keeps falling off the creek?

A. Keeps falling from the lode or the face of the deposit.

Q. Well, after the earthquake, then, a lot of rock came down into the canyon?

A. Yes. In some areas it literally filled up the canyon.

Q. After each storm?

A. Okay. Those materials that have been knocked down by the earthquake had been washed down the creek. Usually your sand and dirt and what have you would be washed off exposing the boulder and your larger rocks.

Q. Well, each year then your road would be covered with the material washed down from the canyon?

A. Yes.

(1977 Tr. 54-55). He mentioned many times in his testimony that while the quarry faces were the source of the materials, most mining activities consisted of culling the dolomite which the rain had washed into the canyon (1977 Tr. 69, 78, 81, 84-85). He stated that his

father did not engage in drilling or blasting because of bad experiences he had had on other properties (1977 Tr. 73-74). He also stated that insofar as he could recollect, nothing had ever been removed from the two millsites, though they were used for stockpiling (1977 Tr. 66).

While Patrick Haskins made a number of references to veins, including a statement that "the veins are running parallel with the creek in some area" (1977 Tr. 89), he later explained that he used the term "vein" interchangeably with "outcropping" and that he was also using that term to refer to material after it was dislodged from an outcropping (1977 Tr. 106-08). He admitted, however, that he had no difficulty identifying the dolomite upon the hill.

The claimant, Richard P. Haskins, in addition to testifying as an adverse witness for the Government's case, also provided testimony for the contestee's side. First, Haskins described the history of the claims. He noted that while lime had been produced from the claims in the early years, production ceased around the late 1880's and that by 1915 the lime kilns were used as storage sheds (1977 Tr. 283-84).

He described the work done from 1900 to 1920 as primarily tunnel work looking for gold, silver, and precious metals. He also noted, though, that some dolomite was used as chicken grits, and cobble stones were sold for building houses (1977 Tr. 291-92). He subsequently

stated that both granite and dolomite were used for chicken grits (1977 Tr. 354). Haskins focused particularly on the period between 1918 and 1928.

Q. Then in 1918 and 1929 your dad was evidently managing and operating all the way through there?

A. Yes.

Q. What other kinds of rock were you selling? Now, we have chicken grits; you said dolomite?

A. Yes.

Q. What were you doing with that?

A. That was dolomite that was sold to—oh, they were sold to companies down in town here or they would process it themselves. I don't know exactly of this production here.

JUDGE: What kind of companies were they?

THE WITNESS: They were lime product works. They would crush the material. The companies or one of the companies were right by the gas works over there.

(1977 Tr. 305-06). Concerning recordkeeping, Haskins testified that he was the bookkeeper from 1930 on, but most of the records were destroyed after his mother's death.

Haskins then recounted more recent mining activities on the claim noting that most of the material has fallen into the creek over a period of years and that this process has been accelerated by storm waters. There have been times, however, when crowbars and dynamite were used to help a rock down the hill or to crack larger boulders (1977 Tr. 332-33, 396-97). He noted that an earthquake in 1970 deposited a lot of material in the creekbed (1977 Tr. 342). He stated that his present sales consist primarily of dolomite

with occasionally other rocks being sold (1977 Tr. 379).

Haskins was then examined concerning the similarity of the sales submitted as an exhibit to the 1968 placer patent application (*see* Exh. R-6) with those previously submitted in support of the lode claims. He indicated that the first 12 entries in exhibit R-6 were not duplicates of sales submitted in support of the lode claims in the 1965 hearing (1977 Tr. 394-95), though the rest of the sale listed were referred to in the 1965 hearing (1977 Tr. 409).

On cross-examination, Haskins was asked what he understood was meant by the term "building stone." The following discussion transpired:

A. Building stone, to my way, is to building walls, ornamental things, fireplaces, rock gardens, or even houses. The facing of houses, also.

Now, they use[d] to build them out of it but now they just use it as facing.

Q. Well, the answer may be obvious to you, but I would like your understanding.

Would you include material used in terrazzo?

A. Well, that could be because it is used as a flooring.

Q. It is essentially small pieces?

A. That is correct.

Q. The size of gravel?

A. Yes.

Q. You would regard that as building stone?

A. That would be processed building stone to me. It is put together.

Q. It could equally be any kind of stone process, couldn't it?

A. Yes, but you have to actually—terrazzo is made for the actual beauty and durability of it. You can't use all kinds of stone.

Q. Is it the use of material as terrazzo which in your mine [*sic*] makes it building stone?

A. Yes.

Q. I would infer that you would not include flux as building stone, would you?

A. Flux stone can be used as building stone.

Q. Yes, but when it is used as flux it is not used for building, is it?

A. That is correct.

Q. All right.

A. There is nothing left of it after it is used.

Q. You would not consider, I take it, stone used metallurgically as building stone?

A. I would.

Q. You would?

A. You can use it for that.

Q. Well, do you mean that anything which can be used in a building is building stone?

A. Any rock material.

Q. Which can be used in a building?

A. That is right.

Q. Is any rock material which can't be so used?

A. Well, soft sandstone or a decomposed granite.

Q. Other than that, almost any stone could be a building stone; is that correct?

A. If it is a presentable stone. It all depends as to what they want and as they it.

Q. I see. You include stone used for landscaping as building stone?

A. Yes. That can be used to build a wall or make a design or anything.

Q. What about roof granulars?

A. Roof granulars is actually most of it, is on your white type of material.

Q. But do you regard that as building stone?

A. It can be used for building stone.

Q. What about chicken grits?

A. Well, chicken grits can be used for building stone if it is hard enough.

Q. What about fillers?

A. Fillers is a filler material. It is your certain building material like dolomite ground up two or three hundred.

Q. I take it you include these things I have enumerated as building stone provided they could be used as building stone?

A. They can be used both ways. Some of them can.

(1977 Tr. 415-18).

Haskins admitted that the material which he presently sells is the same material which he had always sold (1977 Tr. 421) but that he had no idea of the amount of material sold, either before or after 1930, which was actually used in building (1977 Tr. 427). He stated that he had found no mineral values on the millsites (1977 Tr. 445). He also stated that the "decorative stone" consists of dolomite, gneiss, and granite-type of materials (1977 Tr. 446).

The last witness called by contestee was Dudley L. Davis, a registered geologist and mining engineer, who had considerable mining experience with both lode and placer claims. He first testified as to his general impression concerning lode and placer locations. Thus, concerning a question relating to whether the rock in place is locatable on the vein, he responded: "The valuable mineral which is contained in the vein is what you are actually looking for or locating for" (1977 Tr. 464). He subsequently elaborated on his understanding:

Q. Then you are talking about this vein being between some walls and rock in place. What do they mean by that?

A. The rocks there that I am talking about is the country rock which is distinctly different from the vein.

Q. Well, the vein can be any number of types of materials, is that correct?

A. That is correct.

Q. But is it the vein itself that is locatable or the gold?

A. I said that, in my opinion, it is the valuable minerals as contained within the vein which you are actually locating, which the claimant actually claims the valuable minerals.

(1977 Tr. 474-75).

Davis, noted, however, that building stones were locatable in placer form (1977 Tr. 476, 480). Davis also attempted, at a number of points, to define what he meant by "building materials." We set forth a consolidated version of his attempts.

BY MR. TOGNONI:

Q. When you spoke of building materials being locatable, what do you mean by building materials? What are some of the things included on that?

A. Building materials include granite, limestone, dolomite, schist, gneiss, and any other stone which are hard enough to be used in building.

(1977 Tr. 481).

[BY MR. LAWRENCE]

Q. All right. Now, you have used the expression building stone, in one or more places. What do you mean by that?

A. I think I defined that as any stone which is suitable for building, either because of its hardness or its beauty or its texture. Whatever appeals to a person that wants to use it in a building or garden or whatever.

Q. Do you imply in your definition, sir, that the stone can be so used?

A. Not necessarily. It should be useful as building.

Q. But it is acceptable use?

A. Yes.

(1977 Tr. 502).

BY MR. LAWRENCE:

Q. Okay. Going back, did you include terrazzo as a building stone?

A. Terrazzo are the chips which are made from building stone.

Q. I see.

A. They are put into cement and then they are polished and used for building purposes.

(1977 Tr. 553).

Davis also explored, in some detail, his perception of the proper mode of locating limestone. Because of its importance, we set out this exchange *in extenso*.

[BY MR. LAWRENCE]

Q. Now, do you have any knowledge as to whether or not limestone has been held properly locatable as a lode?

A. Yes. And it is my understanding that it depends on the use to which limestone is to be put.

Q. Do you believe it has no relationship to the mode in which it occurs in the ground?

A. Rather the use to which it has been put is my understanding of whether you should locate it as lode or placer.

Q. Well, would you explain that more fully? What is the difference?

A. My understanding is that if the material is to be used for chemical purposes you are not supposed to locate it as a placer claim.

Otherwise, it is my understanding that is should be located as a placer claim.

Q. But conversely it would be your understanding that it should be located as a lode?

A. If you do not use one you should use the other, correct.

Q. You would not automatically say that a lode location was improper?

A. I don't know what they are going to use it for, you see.

Q. But without further inquiry you would not question a lode location, would you?

A. A lode location of a limestone deposit?

Q. Yes.

A. I would question it immediately because if I were locating it I would locate it as placer.

However, if the material was to be used for chemical purposes, then, it is my understanding that it is properly located as a lode.

Q. You would include material used as flux stone?

A. I suppose so, although it is a matter of judgment of the locator.

Q. I mean you would regard that as a chemical use?

A. Yes.

Q. And the same would be true of a metallurgical use, is that the same thing?

A. Same thing.

Q. General chemical use as being the same thing?

A. I say it is a matter of—you don't know when you locate these claims what it is going to be used for. You think it is valuable for one thing and sometimes it turns out to be valuable for another.

* * * * *

BY MR. LAWRENCE:

Q. Now, in the event that a limestone vein or lode has been located as a lode claim and is used for chemical purposes, the entire body of the lode is utilized; is that correct?

A. It may or may not be.

Q. It can be used?

A. We are talking about a theoretical situation now?

Q. Yes.

A. It might be used regardless of how it is located, either properly or improperly. They might mine the entire body if that is your question.

Q. Yes.

A. Okay.

Q. In that event, the valuable continuity is the limestone itself; is that right?

A. The calcium carbonate that is in the limestone.

Q. Not a single component but in the limestone?

A. No. The limestone has a little dolomite and a little this and a little of that.

Q. Well, those are impurities?

A. You can see the entire amount they would not be so used. They would cast out the impurities that was conveniently possible.

Q. In some instances they would be further retained, right?

A. Yes.

(1977 Tr. 513-17).

Subsequently, Davis elaborated further on his contentions:

BY MR. LAWRENCE:

Q. Do you agree that dolomite deposited at a zone or mineralized rock lying within boundaries separating it from neighboring rock, may be regarded as a lode?

A. It may be by the uninitiated.

Q. By that you mean persons who have not been initiated by court's decision?

A. No. Who has not been through a course of geology because a sedimentary bed is always bounded by an entirely different rock.

If that sedimentary bed is then uplifted because it stands at a high angle so that its original sedimentary characteristics are obliterated, the uninitiated might consider it a lode.

Does that answer your question?

Q. Yes. I take it then you do not use the word lode to describe the kind of formation I have just described to you?

A. No. Not if I can determine that it is in or was in fact a sedimentary bed in its initial stages.

(1977 Tr. 520).

While Davis admitted that the materials found on the claim were of common and widespread occurrence, he argued that the claim provided a convenient gathering together in one spot of various varieties of stone (1977 Tr. 508). When asked to enumerate the deposits

which he thought were valuable he stated "schist, gneiss, quartzite, and dolomite and perhaps some others" (1977 Tr. 544). When asked of the distinction between the deposit and country rock, Davis declared "what you are calling the country rock I am calling building stone. There is no distinction in my mind" (1977 Tr. 541).

At one point, Davis attempted to shift the emphasis from dolomite. Thus, he declared: "I might state that [there] has been a great deal of emphasis placed on dolomite, but there has also been considerable material in the nature of building stone as decomposed granite and other stones which have been mined from the property other than dolomite" (1977 Tr. 524). In a later discussion concerning Davis' expressed opinion that a discovery of the deposit existed prior to 1929 the following exchange took place:

Q. And in your opinion did this discovery take place prior to 1930?

A. I am sure it did, yes. The records show that they did mine and ship this deposit before 1930.

Q. Now, did the record show any shipment of gneiss prior to 1930?

A. They referred to it as building stone.

I have no way of knowing whether it was gneiss, schist, quartzite or, they do mention shipping dolomite. However, as to the other building stones, other than the chicken grits, I believe he called it chicken grits, which was actually or technically called chicken liquor.

(1977 Tr. 545).

In sum, Davis' testimony was that the deposit of building stone was properly located as a placer and is now, as it was in 1930, supported by a discovery.

With Davis' testimony, the hearing closed. Both sides subsequently filed briefs, and on Dec. 30, 1977, Judge Morehouse rendered his decision. First, he reviewed the seven specific charges which we set forth earlier and, for various reasons, ruled against the Government on every one.⁴¹ Then, Judge Morehouse turned to the question of the existence of a discovery of a placer mineral. Judge Morehouse declared:

This is the crucial issue and, having reviewed the entire record, it is my conclusion that there has been disclosed within the boundaries of the claim placer materials sufficient in quantity, quality, and value to constitute a valid discovery. The record shows that the dolomite lode deposit on the claim consists of a series of lenses of dolomite in the gneissoid granite from 30 to 40 feet thick and from 100 to 200 feet in length. Tragitt and Davis estimate the quantity of dolomite in this formation to be a minimum of 900,000 tons. The Ninth Circuit in *Haskins*, *supra*, specifically held:

"Whatever the merits of Haskins' claimed placer locations, their validity cannot be supported by proof of the presence of dolomite or dolomite limestone in lode formation. Haskins cannot use the same material that he relied on as a discovery of valuable mineral under his lode locations to support his present placer locations."

However, in addition to the material in lode formation described above, both Tragitt and Davis estimated that there was a minimum of 100,000 tons of decorative stone marketable for use as roofing granules, terrozzo [*sic*] chips, and decorative stone in walls, rock gardens, fireplaces, and patios. It is recognized that records of sales of placer material during the 1920's are not voluminous and most of the sales used in support of the

⁴¹ We will discuss various of these points, *infra*.

patent application for the lode claims are used in the placer patent application. That they were so used does not alter the nature of the rock formation from which these sales were made and the record is clear that at least some of those sales for which records do exist, and many other sales for which records do not, were made from rock in placer formation. Many of the records were lost following Mrs. Haskin's death in 1954 and others were lost in a fire. Of particular significance is the fact that nowhere in this record is there any testimony by a Government mining engineer or geologist to the effect that this was not a valuable placer mineral deposit. Neither Mr. Mason nor Mr. Gould, both mining engineers who testified for the Government, were asked this question. In addition, Mr. Emmett Ball, who first advised Haskins that placer materials were being sold from a lode claim in 1963, was present in the courtroom during the hearing and was not called as a witness. The only reasonable inference to be drawn is that all three considered the placer material on the claim to be a valuable mineral sufficient in quantity, quality, and value to constitute a discovery.

(Decision at 24-25).

Our de novo review of the entire record convinces us that Judge Morehouse misinterpreted both the evidence presented at the 1977 hearing and the Ninth Circuit's decision in *United States v. Haskins*, *supra*. In addition, we find the inferences which he sought to draw unsupported by the record. Finally, we think it clear that the Haskins Quarries placer mining claim, even assuming it ever existed, was not supported by a discovery of placer material in 1928, when the land was withdrawn, nor is it today, and that the purported claim must be determined a nullity.

It is essential to realize that contestee and his expert were actually testifying about two separate types of deposit. First, they referred to loose rocks deposited in the stream bed by the natural action of erosion and, at least lately, by earthquakes. The physical extent of this deposit is actually quite limited, testimony from Mason indicating that it embraced only 3.67 acres out of the total 85 plus acres sought. We will refer to this as the detrital deposit.

There is also, however, another deposit which is involved. This claimed deposit is coextensive with the original four mining claims because, of course, it is exactly the same deposit which has been litigated since at least 1933.⁴² Contestee's position as regards this deposit, which we will refer to as the source deposit, is simply that it should have been located as a placer claim rather than as lode claims. While these two deposits are clearly related, it is necessary that we differentiate between the two in our analysis. We will therefore examine first the source deposit.

A review of the record of all the proceedings heretofore held may leave the impression that over the period of adjudication contestee's experts have been irreconcilably contradictory in their testimony. Thus, Baverstock, claimant's expert in 1933, stated that the deposits

⁴² With respect to the lands embraced by the millsites, however, we shall show that there is no possible way that appellant's placer claim, consistent with both appellant's earlier arguments and most recent testimony, could embrace this land.

were lenticular and "are most decidedly in place" (1933 Tr. 10), and Mallery, another expert testifying for the claimant, stated "I am stressing the continuity of the vein from a geological standpoint" (1933 Tr. 16). On the other hand, Davis testified in 1977 that the source deposit was properly locatable as a placer. Although these witnesses seemingly disagree on the nature of the deposition, they actually do not. The key to reconciling the apparent contradictions rests in recognition of the fact that Davis was of the opinion that the claim was and had always been located for building stone, which by statute must be in placer form, whereas the earlier experts merely testified on the form of deposition, which happens to be lode.

As we noted above, lands chiefly valuable for building stone must be entered as placers under the Building Stone Act, *supra*. Where, however, a limestone deposit is valuable for its chemical or metallurgical properties, it is the nature of the deposition which determines the proper form of location. Davis clearly had reference to this dichotomy when he testified, in response to a question of whether or not limestone has been held properly locatable as a lode, "it is my understanding that it depends on the use to which limestone is put" (1977 Tr. 513).⁴³ Davis was not denying that

the source deposit was rock in place.⁴⁴ Rather, he was contending that because the source deposit was building stone, it was, of necessity, located as a placer. If the lands embraced by the dolomite deposit are now, and were in 1928, chiefly valu-

474-75). As we noted *supra*, while this was, at one time, the view of the Department, as such early cases as *Henderson v. Fulton*, *supra*, and *Jefferson-Montana Copper Mines Co.*, 41 L.D. 320 (1912), attest, subsequent Court and Departmental decisions have long since necessitated abandonment of this concept. See, e.g., *Dunbar Lime Co. v. Utah-Idaho Sugar Co.*, *supra*; *Webb v. American Asphaltum & Mining Co.*, *supra*; *United States v. Bowen*, *supra*.

If, however, one adheres to this old interpretation, the conclusion which must flow is that limestone valuable for the limestone, itself, is only locatable as a placer, since it cannot be a lode. Thus, while Davis obviously recognized that a number of decisions exist which have affirmed the propriety of locating a limestone deposit of chemical or metallurgical grade as a lode, he has misinterpreted the scope of these rulings. There is no rule, despite Davis' belief (see 1977 Tr. 513-15), that limestone valuable for chemical purposes must be located as a lode. Rather, the rule is that such a deposit is properly located according to the form of its deposition. See *Vivia Hemphill*, *supra*; *United States v. Wurts*, A-30945 (Jan. 23, 1969). As an example, if the detrital deposit herein was valuable for chemical purposes it would be locatable as a placer, not a lode, because it is a placer deposit. Since Davis does not recognize the propriety of locating limestone as a lode (the values being the vein itself, rather than what the vein carried), he has misread the Departmental rulings on this point.

⁴⁴ The closest Davis came to actually asserting that the deposit was not in lode form occurred in this testimony relating to sedimentary rock (1977 Tr. 520). To the extent Davis is of the belief that the fact that the deposit may have originated as a sedimentary bed precludes its location as a lode, he is wrong. See *United States Gypsum Co.*, 60 I.D. 24 (1947); *San Francisco Chemical Co. v. Duffield*, *supra*. As was noted in *McMullin v. Magnuson*, 102 Colo. 230, 239, 78 P.2d 964, 969 (1938), "by no statute or judicial pronouncement is the origin or method of formation of a mineral body controlling in determining whether the ground is subject to location as a lode or placer."

⁴³ At this point we would emphasize that Davis' understanding is somewhat flawed, though understandably so. Davis' testimony clearly showed that he was of the view that a lode or vein deposit was only located for the mineral carried therein (1977 Tr. 464,

able for building stone, there can be no gainsaying that conclusion.

[7] When the records of the hearings held prior to 1977 are examined, however, it becomes impossible to sustain the argument that the land was chiefly valuable for building stone at any time until the most recent past, if ever.⁴⁵

In the various proceedings which occurred between 1930 to 1965, the claimants and their witnesses testified to uses to which the dolomite was put, or for which it was suitable, ranging from floors, roofing paper, plaster, and golf courses (1930 Tr. 29), chicken grits and gravel for mosaic terrazzo (1930 Tr. 54), terrazzo, stucco, chicken grits, sound proofing, in soda plants and the sugar industry (1933 Tr. 25-26, 34, 38), crushed for use as additives and filters (1965 Tr. 126), cement, tanning, glass, plaster, cow feed, and paper (1965 Tr. 161). But by far the use most consistently mentioned has been as flux (1930 Tr. 29, 74; 1933 Tr. 34; letter of July 19, 1935, from Tessie Cooke-Haskins to Secretary Ickes; 1965 Tr. 125-28, 161). The simple fact of the matter, however, is that use of dolomite for flux is simply not building stone use. Indeed, of all the myriad uses for this stone mentioned over this period only three are even arguably

building stone uses: terrazzo, roofing granules, and stucco. Even assuming, *arguendo*, that these are building stone uses, nothing in the record generated prior to 1968 could possibly support the conclusion that the land was chiefly valuable for building stone.⁴⁶ This is so even without taking into account the fact that Hearing Examiner Holt, who considered combined sales for all possible uses, found the deposit on the Lady Helen depleted by 1965, and no existing market for any other deposit within the claims.

In any event, we note that the Ninth Circuit specifically directed that "whatever the merits of Haskins' claimed placer locations, their validity cannot be supported by proof of the presence of dolomite or dolomite limestone *in lode formation*." *United States v. Haskins*, 505 F.2d at 251 (italics added). Even were contestee able to show that the source deposit contained a marketable supply of building stone, such a deposit would nevertheless be *in lode formation*, and thus could not, consistent with the directions of the Court of Appeals, properly be considered in support of the placer claim.

⁴⁵ We note that the repeated comments relative to the value of the land for subdivisional purposes certainly raise questions as to the principal value of the claim, even assuming the presence of a discovery of a valuable placer mineral deposit. See generally *United States v. Kosanke Sand Corp. (On Reconsideration)*, 12 IBLA 282, 299-302, 80 I.D. 538, 547-48 (1973).

⁴⁶ We wish to clearly emphasize that we are assuming *only for the sake of argument* that the sales of dolomite herein for stucco, roofing granules, and terrazzo would be classified as building stone uses. It is arguable whether any of these uses relate to the purposes for which the Building Stone Act was adopted. See *Dunbar Lime Co. v. Utah-Idaho Sugar Co.*, *supra* (limestone useful in the making of cement not locatable under the Building Stone Act); *Stanislaus Electric Power Co.*, 41 L.D. 653 (1912) (Building Stone Act applies to stone of special value for structural work and other recognized commercial uses).

Thus, we are left to examine the detrital deposit. We think it clear that both the Ninth Circuit and Judge Morehouse were primarily concerned with this deposit. It is obvious to us that, *to the extent* that this deposit was created and replenished by the natural forces of erosion, water runoff, and earthquakes, the deposit is in clearly placer formation (though its physical area is necessarily quite limited).

Our problem derives, however, from the fact that despite both the Tragitt affidavit and the 1977 testimony of both contestee and Davis, it is impossible to read the early records as supporting a contention that this detrital deposit has been the historical focal point of mining activities.

In contradistinction to the laudations directed to the effect of water runoff in the 1977 hearing, such storm waters were seen as a positive menace in the earlier testimony. Thus, in 1933, in reference to the "original" cut on the Lap Wing, Tessie Cooke-Haskins stated that "it was worked for several years and a cloud burst covered it up" (1933 Tr. 23). Concerning a recent cut she stated "[s]ome of that had been mined from this original cut the storm waters would come down and *we had to protect it where they had mined* and there was a pile of rock on high ground, I would say ten tons taken from this cut that is there now" (1933 Tr. 25). Subsequently, she spoke of another cut which had been "obliterated" by the rain storms (1933 Tr. 25). While there was passing mention of wash

"float" by Jesse Tiffany (1930 Tr. 53), he also expressed the view that "most of the lime had been removed" (1930 Tr. 55).

Regardless of the methods claimant may use for mining today, it is clear that historically cuts were blasted in the mountain side (Tiffany, 1930 Tr. 53; Bartholomew Haskins, 1933 Tr. 32). The blasting of lode material into a gully does not transform the material into a placer deposit. Clearly, a certain percentage of the float got into the creekbed through the affirmative intervention of the claimants and not the benign forces of nature.

We are not unaware that the testimony at the first two hearings did not relate to either the Lady Helen or Roger Williams claims. And we do recognize that various statements were made, particularly by Friedhoff in 1936, which indicated that the Lady Helen (and possibly the Roger Williams) lode claims were valid. We also note, however, that not only were these statements naked opinions unsupported by any evidence of record, but that claimants never attempted to follow through and actually patent those claims. When they were finally tested at a hearing in 1965, Hearing Examiner Holt found that such accessible deposits as may have existed had long since been mined out. Only after this decision does the detrital deposit (like a veritable Phoenix) arise from the ashes of the claims.

Indeed, there is a certain disingenuousness to claimant's case.

Claims originally located for gold, silver, and vanadium through the passage of time became metamorphosed into lode dolomite claims, and finally take on shape as a single placer claim for schist, gneiss, quartzite, decomposed granite and some dolomite (1977 Tr. 524, 544). These protean claims have, over the years, changed in type, name, number, mineral nature (millsites are now part of a placer claim) and deposit sought. Indeed, the only aspect which has remained constant is the situs of the land and its proximity to Los Angeles. Long ago, though to a far less egregious extent, the Department was faced with a similar case, *Clark v. Ervin*, 17 L.D. 550 (1893). In *Clark v. Ervin*, *supra*, it was contended that a location for building stone made prior to the enactment of the Building Stone Act, which location had clearly been made to acquire the building stone located thereon, could nevertheless be validated by the subsequent discovery of fire clay. Therein, Secretary Smith noted:

The question therefore to be considered is whether this location may be sustained by reason of the existence of fire clay. I do not think it will be seriously contended that if the location made for the building stone fails because unwarranted in law, the locators or their assigns can be permitted to claim a valid location upon the subsequent discovery of some material that is subject to entry under the placer law. In other words if the locators now insist upon the validity of their location by reason of fire clay they must show that the location was made for that purpose and none other. *The placer mining law*

was not intended to be a catch-all system of taking public lands, allowing parties to play fast and loose to suit their own caprice. [Italics supplied.]

Id. at 552. Secretary Smith analyzed the record and, determining that the claim for fire clay was but an "after-thought" of the claimants, held that the claim was properly nullified. *Id.* at 553.

We expressly find that the building stone argument which claimant has advanced herein was "thrown in as an afterthought and not in good faith." *United States v. Haskins*, *supra* at 252. Appellee may well be selling decorative stone today. But there can be no question that during the period for which discovery must be shown, 1923 to 1928 (in order to prevent the Watershed Withdrawal Act from attaching), there was no discovery of valuable placer material, nor could the land be said to have been chiefly valuable for building stone.⁴⁷

Normally, having reached a decision which would be dispositive of the ultimate question before us, we would not further examine other subsidiary or independent questions which an appeal might present. However, considering the lengthy

⁴⁷ Insofar as Judge Morehouse sought to draw inferences from the failure of the Government experts to assert that the mineral deposit was lode in form, we think that such action would be questionable in even the most optimal circumstances. Inasmuch as no one, including Judge Morehouse, saw fit to question the two experts who testified on this point, it seems passing strange to impute conclusions which could have been directly ascertained. As far as the failure of Ball to testify is concerned, we see equally little justification for the inference Judge Morehouse ascribed to this non-event.

and tortured path which this case has already traversed, it is our intention to specify other deficiencies which are manifested in this record. Should, on appeal, a Court determine to overturn our analysis, it would therefore not be necessary to remand this case to the Department for yet further protracted hearings and appeals. Rather, having expressly ruled on each ground, the instant claim would be ripe for patent, needing only compliance with such procedural requirements as remain unaccomplished. There should come a time when even the most inventive litigation comes to an end.

[8] We turn, therefore, to the question of acreage within the Haskins Quarries placer mining claim. We noted above that the Supreme Court expressly held in *Cole v. Ralph*, *supra*, that 30 U.S.C. § 38 (1976) in no way modified the amount of acreage which can be embraced within a single claim. 252 U.S. at 306. Under the mining laws, specifically 30 U.S.C. § 35 (1976), no placer location can include more than 20 acres for each individual claimant. Up to eight individuals, however, may join together and thereby locate an association placer with a maximum size of 160 acres (20 acres per individual). *See* 30 U.S.C. § 36 (1976).

The Haskins Quarries placer claim embraces 85 plus acres. In order for a single claim to obtain that dimension, there must be five colocators. In the patent affidavit filed with BLM in 1968, there were only four locators listed: Richard P. Haskins, Sr., Tessie Cooke-Haskins,

Bartholomew Haskins, and Richard P. Haskins, Jr. Under this allegation, even assuming that it could be shown that these for individuals had held and worked the land embraced by the claim, not more than 80 acres could have been included in a single claim. This point apparently occurred to contestee's counsel, since great pains were taken at the hearing to add on the name of Margaret Maude Haskins as another locator (1977 Tr. 321).

We would point out that Bartholomew Haskins was born in 1905, Margaret Maude Haskins in 1909, and Richard P. Haskins, Jr., in 1911. Thus in 1923, by which date adverse occupancy must have begun, the children would have been 18, 14, and 12 at the oldest. We recognize, of course, that minors may locate claims, and that parents may locate claims on their behalf. *See West v. United States*, 30 F.2d 739 (D.C. Cir. 1929); *Thompson v. Spray*, 14 P. 182 (Cal. 1887); 43 CFR 3832.1. What is involved here, however, is not merely location of a claim as provided by 30 U.S.C. §§ 23 and 35 (1976), with the requisite acts of posting and recording as contemplated by 30 U.S.C. § 28 (1976). This, rather, is a claim grounded in adverse possession in which a showing of actual possession is a necessity.

The record is somewhat obscure concerning the onground activities of Margaret Maude Haskins, Bartholomew Haskins, and Richard P. Haskins, Jr., during the critical years. With respect to Margaret

October 21, 1981

Maude Haskins, claimant testified in the 1977 hearing that, while she was present on the property during weekends and the summer (1977 Tr. 287), he could not remember what she was doing (1977 Tr. 294), though some cooking was involved (1977 Tr. 315). Concerning his own activities, contestee stated that he was on the claim as early as age 4 (1977 Tr. 280), that he started physically working on the claim by age 7 (1977 Tr. 119, 285), and that some of his work included "helping and building trails" (1977 Tr. 155). Because he was attending school in Los Angeles, he, too, was only on the land on weekends and during the summer (1977 Tr. 311). In reference to the type of work he performed, he stated "it was my job to get up and milk the goats while [Bartholomew] slept and he went to work" (1977 Tr. 286). There were additional references to Bartholomew Haskins indicating that he was in the armed forces, and subsequently pursuing an education from 1918 to 1924 (1977 Tr. 310), after which he became involved, on a day-to-day basis, with the claims.

While we are willing to accept this evidence, meager though it may be, as establishing the necessary "holding and working" of Bartholomew Haskins for the requisite period (1923-28), we find the evidence insufficient to establish claimant's necessary possession. Sporadic weekend visits and summer vacations, when viewed in light of appellant's young age at that time, will not support a finding that

the claimant, personally, "held" or occupied the claim for 5 years prior to the Watershed Withdrawal Act. And there is no evidence, whatsoever, that claimant's sister ever "worked" the claim within the meaning of 30 U.S.C. § 38 (1976). Contestee has simply not established that Margaret Maude Haskins, or Richard P. Haskins, Jr., occupied and worked the land in conjunction with their parents during the necessary period.

We would point out that this whole question would have been avoided if Haskins had alleged *three* separate placer claims, since there is no limit to the number of 30 U.S.C. § 28 claims that can be simultaneously alleged. Indeed, there is sufficient confusion in the Ninth Circuit opinion to raise questions whether the Court clearly understood that there was only one placer claim. Thus, the Court's decision stated that "Haskins having occupied and worked the ground for more than five years may assert placer *locations* without proof of recording and posting." 505 F.2d at 251 (*italics supplied*). Haskins, however, was claiming only *one* location.

This is not a matter of technicalities. Had Haskins asserted more than one location he would have been required to show the individual validity of each claim. See *United States v. Williamson*, 45 IBLA 264, 278, 87 I.D. 34, 42 (1980); *United States v. Colonna and Company of Colorado, Inc.*, 14 IBLA 220, 226-27 (1974). He would

have been required to show the expenditure of \$500 per claim prior to the issuance of patent. *See* 30 U.S.C. § 29 (1976). And he would have been required to show that assessment work had been performed for the benefit of each of the placer claims.

We have examined the record and find no plausible way of holding that Margaret Maude Haskins or Richard P. Haskins, Jr., occupied any part of the land to the exclusion of others, either individually or in conjunction with their parents. Weekend visits and simply living on the claim are not "holding and working" within the meaning of 30 U.S.C. § 38 (1976). Appellant, having made the assertion of a single placer claim, must be limited to the natural and legal consequences thereof. Accordingly, we would hold that, even if the claim were to be found valid, to the extent that it exceeded 60 acres, such excess would be invalid under the dictates of *Cole v. Ralph, supra*.

[9] We also wish to focus on the question of the propriety of having this placer claim embrace land formerly within two millsites. In its decision of May 18, 1972, the District Court, in ruling in favor of contestee's right to allege a placer location under 30 U.S.C. § 38 (1976), noted: "There is after all a difference between a lode claim and a placer claim. * * * Both types of claims can, of course, be made upon the same property and can co-exist, even though in different ownership." *United States v. Haskins*, No. 72-246-JWC (C.D. Cal. 1972) at

3-4. This statement is correct, so far as it goes. But what neither the District Court nor the Circuit Court examined was the more particular question whether a *millsite* claim is compatible with a mining claim for the same land. The answer is clearly in the negative.

By statute, millsite claims may only be made on nonmineral lands. *See* 30 U.S.C. § 42 (1976). This has been the consistent ruling both of the Courts and the Department. *See Worthen Lumber Mills v. Alaska Juneau Gold Mining Co.*, 229 F. 966 (9th Cir. 1916); *Walsen v. Gaddis*, 194 P.2d 306, 318 (Colo. 1948); *Cleary v. Skiffich*, 65 P. 59 (Colo. 1901); *United States v. Silver Chief Mining Co.*, 40 IBLA 244, 248 (1979); *Emerald Oil Co.*, 48 L.D. 243, 245 (1921). In *United States v. Moorhead*, 59 I.D. 192 (1946), the Department examined an argument similar to that implicitly pressed herein by contestee—that a millsite location was not adverse to a subsequent placer location. In *Moorhead*, the Department noted:

Another contention of Moorhead is that the Coin No. 2 lode should be considered as an amendment of the Coin No. 2 mill site inasmuch as it was located by Thomas, the owner of the mill site, and was not an adverse location, and that therefore the Coin No. 2 mining claim should share in the common improvements as one of the earlier group of claims. This contention is clearly untenable. Rights to a mill site are initiated by its use for mining and milling purposes, whereas rights to a mining claim are initiated by discovery of mineral. The change of location from one to the other necessarily involves a change not merely of form but of purpose. The mill-site

must be located on nonmineral land. By changing the location to a lode claim because it was ascertained that the land therein was mineralized, it was thereby admitted that the mill site was void from its inception, and no mining title can be held to relate back to the inception of a void location. Furthermore, the common improvement work on the mill site could only be applied to the group of mining claims that it tended to benefit. Mill sites are not subject to the annual labor laws and there can be no such thing as the development of a mill site. [Italics supplied.]

Id. at 198.

We would point out that Tessie Cooke-Haskins attempted to acquire title to the Lap Wing mill site in 1929 on the implicit theory that the premises were nonmineral in character. In 1962, contestee, himself, represented that both millsites were nonmineral in character by filing a verified statement to that effect, and their validity was reasserted in his answer to the subsequent contest complaint filed by BLM.

We hold that, under the application of judicial estoppel, contestee cannot now be heard to contend that land he represented as nonmineral in character in prior actions, some of which sought the acquisition of title from the United States, was, in fact, during this entire period, mineral in character. The general parameters of the doctrine of judicial estoppel were described by the Tenth Circuit Court of Appeals in *In Re Johnson*, 518 F.2d 246 (1975):

Under the doctrine of judicial estoppel a party and his privies who have knowingly and deliberately assumed a particu-

lar position are estopped from assuming an inconsistent position to the prejudice of the adverse party. This rule ordinarily applies to inconsistent positions assumed in the course of the same judicial proceeding or in subsequent proceedings involving identical parties and questions.

Id. at 252. Considering the expense to which contestee had already put the Government by reason of the assertion of his millsite claims in past proceedings, contestee cannot now be heard to assert that the land is mineral in character.⁴⁸ Thus, even were we to find that a discovery of a placer deposit existed in 1929 and continues to exist to this day, we would exclude the lands embraced by the millsite claims from any patent which was to issue.

[10] Even without the invocation of judicial estoppel it is difficult to see how a 30 U.S.C. § 38 mining claim for the land embraced by the millsites could be sustained. The provisions of sec. 38 require that no "adverse claim" exist. Inasmuch as land cannot simultaneously be both mineral and nonmineral, the millsite claim would, perforce of logic, be adverse to the placer claim. In such a situation, the sec. 38 placer claim, to the extent of the conflict, must fall. *See Ikola v. Goff*, 107 Cal. Rptr. 663, 664-65 (Ct. App. 1973).

We will briefly examine two other issues which were raised by the complaint herein: (1) That the Haskins Quarries placer claim does not

⁴⁸ Contestee did not even attempt to show that the area formerly embraced by the millsite was mineral in character. Thus, Patrick Haskins stated that there had been no removals from the millsites (1977 Tr. 66), while the claimant said there were no mineral values on them (1977 Tr. 445). *But see* Exh. R-6, "Summary Report," at 7.

conform to the rectangular system of public land surveys, and (2) that \$100 of annual assessment work was not performed *for the benefit* of the Haskins Quarries placer claim as required by 30 U.S.C. § 28 (1976).

The first issue actually has two parts involved therein. First, is the question whether the various land descriptions provided for the placer claim attain the limits of closure. The second part, while related to the first, is substantially different and concerns the legal and factual question whether the physical configuration of the claim comports with the requirement of the law. The Government's contention relating to the first point was presented by the testimony of Gould relating to the failure of the land description to close within acceptable limits. Judge Morehouse's decision discussed only this question. The Judge noted that the claimant had attempted to describe the claim by metes and bounds and that since BLM had canceled the mineral survey of the placer claim, which claimant had sought, "the technical noncompliance is not of material significance" (Decision at 21).

Insofar as this aspect is concerned, we find ourselves in substantial agreement with Judge Morehouse. While we have no doubt that the descriptions provided by the claimant would be unacceptable as a basis upon which to pass title,⁴⁹

we note that such title as would pass would be based on a mineral survey. The question relevant herein is not whether the description is accurate to the extent that descriptive errors are within acceptable limits for a survey, but rather whether it is sufficient to reasonably describe the lands embraced by the claim. We hold that, for this purpose, the description is sufficient.

The second facet of this issue, as we have delineated it above, was not examined by Judge Morehouse. While this matter was admittedly not the subject of extensive analysis by the parties, there is sufficient information in the record for us to examine this question under our de novo review authority.

[11] Initially, we note that the Placer Act was amended in 1872 to provide that "all placer-mining claims located after the 10th day of May 1872, shall conform as near as practicable with the United States system of public-land surveys, and the rectangular subdivisions of such surveys." 30 U.S.C. § 35 (1976). The critical phrase, of course, is the qualifying "as near as practicable."⁵⁰

As early as the decision in *William Roblin*, 2 L.D. 764 (1884), the Department recognized that conformity was a question of reasonableness and, therein, expressly recognized that a placer claim along the bed of a river, surrounded by

⁴⁹ Thus, with respect to mineral surveys, the *Manual of Surveying Instructions*, 1973, par. 10-17 requires that "all surveys must close within 0.50 ft. in 1,000 ft., and the error must not be such as to make the claim exceed the statutory limit."

⁵⁰ The Placer Act as originally adopted, 16 Stat. 217, had provided that any placer location "shall conform to the United States surveys." The 1872 Act was designed to permit certain variations where there were acceptable reasons therefor.

precipitous banks, which stretched 12,000 feet down the riverbed, embracing only a small quantity of surface ground along the shore, was permissible as a location made in exceptional circumstances. This approach was reaffirmed in *Pearsall and Freeman*, 6 L.D. 227 (1887).

Subsequently, however, a vast array of differing shapes and forms were entered as placer claims and approved for patent. As a result of this increasing practice, irregular swaths were being carved out of the public domain, thereby making management of such lands as were not patented increasingly difficult. As a result of these practices, the question of conformity was reexamined in a series of cases beginning with the *Miller Placer Claim*, 30 L.D. 225 (1900), and the *Wood Placer Mining Co.*, 32 L.D. 198 (1903), finally culminating in the *Snow Flake Fraction Placer*, 37 L.D. 250 (1908).

In *Snow Flake Fraction Placer*, *supra*, the First Assistant Secretary examined the history of Departmental adjudication on this question and established a general rule that:

Whether a placer location conforms sufficiently to the requirements with respect to form and compactness is a question of fact for determination by the land department in the light of the showing made in each particular case, keeping in mind that it is the policy of the government to have all entries, whether of agricultural or mineral lands, as compact and regular in form as reasonably practicable, and that it will not permit or sanction entries or locations which cut the public

domain into long narrow strips or grossly irregular and fantastically shaped tracts.

Id. at 250 (syllabus). This constitutes the general rule which has been followed to the present time. *See, e.g., Fuller v. Mountain Sculpture, Inc.*, 314 P.2d 842 (Utah 1957); *United States v. Henrikson*, 70 L.D. 212, 217-20 (1963); *Fred B. Ortman*, 52 L.D. 467 (1928).

The shape of the instant claim is a matter of record. Its bizarre configuration, particularly the area embracing the Lap Wing and Lady Helen millsites, clearly compels the conclusion that this claim does not reasonably comport with the system of public land surveys "to the extent practicable."

We are well aware that various references were made to "gulch" placers. *See* 1977 Tr. 477, 487, 517. Both the Department and the Courts have long recognized that situations occasionally occur wherein a placer claim is located along a ravine, canyon, or gulch, surrounded by precipitous and, in many cases, impassable canyon walls and cliffs, which themselves contain no mineral values, and that in these situations, unusual modes of location may be necessary. Thus, in *William F. Carr*, 53 L.D. 431 (1931), the Department held proper a placer location over a mile in length which was located in a narrow gulch. Similar results were reached in *Wiesenthal v. Goff*, 120 P.2d 248, 252 (Idaho 1941), and *Steele v. Preble*, 77 P.2d 418, 427-28 (Ore. 1938).

It is impossible, however, to validate the instant claim as some sort of "gulch" placer. The critical factor in validating such locations is the inaccessibility of and lack of mineral values in the confining banks, which, as a practical matter, prevent the claimant from embracing these areas within the location. Clearly, this concept has no relevance to a situation, as is disclosed herein, where the claim actually does embrace the surrounding banks. Having actually located both the stream bed (which testimony indicated had an areal extent of only 3.67 acres) and the surrounding canyon walls, claimant can hardly contend that the unusual shape which resulted was occasioned by the location of a "gulch" placer.

We also recognize that the rule mandating conformity also excepts claimants in situations where the existence of other prior claims prevent location in compliance with the system of survey. *United States v. Henrikson, supra*; *William F. Carr, supra*; *Snow Flake Fraction Placer, supra*. At one point in the hearing, Davis testified that "since the area is bounded by other patent claims, and you could not take up a legal subdivision because of infringement on someone else, I might look at a part of it as a gulch placer" (1977 Tr. 487). Leaving aside this commingling of two discrete concepts, we merely note that the only land which has been patented that actually abuts the claim is on the western side, and, in fact, embraces land formerly within the

original Roger Williams location. Moreover, the relevant question is not what claims, if any, presently exist adjacent to or in the relevant vicinity of the Haskins Quarries placer, but what claims existed during the period from 1923-28 when the claim was purportedly located under 30 U.S.C. § 38 (1976). Contestee presented no evidence on this point, and, as the proponent of the rule that his claim was properly located (*see Foster v. Seaton, supra*), the absence of proof of justification impels a finding that no such justification existed. Finally, under the doctrine enunciated in *Cole v. Ralph, supra*, there is no warrant for holding that the nature of a claim established pursuant to the provisions of 30 U.S.C. § 38 (1976), alleviates the requirement that claimants make placer entries in conformance to the system of survey "to the extent practicable."

It does not necessarily follow that failure to comply with the conformity requirement works to invalidate the claim. Rather, invocation of the rule has normally resulted in requiring a claimant to amend the claim so that it does conform as nearly as practicable with the rectangular system of survey. Thus, in many cases, as in *Fred B. Ortman, supra*, failure to conform was held a curable defect which "in the absence of adverse claim to the added land" could be cured by either amendment or relocation. 53 L.D. at 471. *See also United States v. Henrikson, supra*; *Hogan and Idaho Placer Mining Claims*, 34 L.D. 42 (1905).

However, in those situations in which conformance was either judged to be impossible by the very nature of the original shape, as in *Miller Placer Claim, supra*, and *Wood Placer Mining Co., supra*, the entry was canceled. In the instant case, addition of new land either through amendment or relocation is not possible since the Watershed Withdrawal constitutes an adverse claim which prevents the acquisition of any rights to land not already appropriated. See generally *R. Gail Tibbetts*, 43 IBLA 210, 217-20, 86 I.D. 538, 542-43 (1979). Moreover, inasmuch as we have held, *supra*, that the evidence was sufficient to establish only three individuals as colocators, it would not be legally possible to add any land to this claim. Thus, the corrections that would be required could only be accomplished by the deletion of land.

We will not attempt, at this time, to delineate a configuration of the claim which would comport with the requirements of 30 U.S.C. § 35 (1976). If the other grounds relied upon in our decision are invalidated upon review, claimant should be accorded the initial opportunity to attempt to describe his claim in conformity to the system of survey. We can, however, see no way in which the area formerly embraced by the millsites could be conformed and, accordingly, we hereby reject the patent application to the extent that it includes this area for this additional reason.

[12] The second issue which we

wish to briefly address relates to the performance of assessment work *for the benefit* of the Haskins Quarries placer claim. Judge Morehouse in his decision noted that proofs of labor had been filed every year since 1921 and that the Government had made no effort to pursue this allegation in its brief, and then found "there has been substantial compliance with the provisions of 30 U.S.C. § 28" (Decision at 22).

On this point, we think that Judge Morehouse misinterpreted the thrust of the Government complaint. The crucial import of Medina's testimony was not the fact that he was unable to find recorded proofs of assessment for various years. See Exh. G-7. Indeed, Medina readily admitted on cross-examination that it was possible that the county records were inaccurate with respect to those years in which no assessment work had been recorded. Rather, the point which the Government was attempting to make was that these assessment proofs related only to the *lode* claims. The Government was, in effect, arguing that, since the claimant and his predecessors had not performed assessment work for the *placer* claim, that claim could not be validated.

We wish to make a few general observations on this point. In our recent decision in *United States v. Bohme, supra*, we reviewed, at considerable length, the historical development in the law concerning the performance of assessment work, which culminated in the Su-

preme Court decision in *Hickel v. The Oil Shale Corp.* (TOSCO), 400 U.S. 48 (1970). It is sufficient, for the purposes of this decision, merely to note that the Supreme Court held that failure to substantially comply with the requirements of 30 U.S.C. § 28 (1976) might, in certain circumstances, result in a forfeiture of those claims to the United States. It is our view that included within the ambit of this rule are those claims which are located on land now withdrawn from mineral entry and for which there has not been substantial compliance with the assessment work requirements.⁵¹ Cf. *Andrew L. Freese*, 50 IBLA 26, 36, 87 I.D. 395, 399 (1980).

The placer claim asserted herein is, by its nature, a separate and distinct entity from the lode claims and millsites which formerly embraced the subject lands. As such, the mere fact that assessment work was performed for the benefit of the lode claims does not, ipso facto, establish that assessment work was performed for the benefit of the placer claim. Indeed, some of the work involved herein, in particular the work relating to the construction of tunnels and adits to develop the lode claims for gold and vanadium, which expenditures were submitted in support of the original patent application in 1929, could not be seen as benefiting a placer loca-

tion for building stone, which claimant alleges was then in existence.

At the same time, however, while the recording of proofs of assessment work might provide some indication that the assessment work was actually accomplished, recordation neither established that the work was, in fact, accomplished (*California Dolomite Co. v. Standridge, supra*), nor did the failure to record locally establish conclusively that the work was not done (*United States v. Bohme, supra*).

The record on this point is less than clear. Work done in road construction and maintenance could clearly redound to the benefit of both the lodes and the asserted placer. While the question is not free of all doubt, we believe that Exhibit G-7, which showed that no assessment work had been recorded for the placer claim, established a prima facie case that the work had not been performed. The burden then devolved to the claimant to show that despite the absence of recorded statements, the requisite work *for the benefit of the placer claim* had been accomplished. This, we hold, the claimant has not done. Therefore, we hold that even were we to find that a discovery of a placer deposit had existed prior to the Watershed Withdrawal Act, the failure of the claimant to substantially comply with the requirements of 30 U.S.C. § 28 (1976) resulted in an effective forfeiture of the claim to the United States.

[13] Finally, we wish to address various concerns which were expressed by attorneys for both the

⁵¹ While the TOSCO case dealt with the question of maintenance of claims for minerals which were no longer locatable, due to the passage of the Mineral Leasing Act, the rationale is, we think, equally applicable to claims located on lands which are withdrawn from the initiation of new mineral rights.

October 21, 1981

Department of Justice (during the Federal Court litigation) and the Department of Agriculture concerning what was perceived as a likely result emanating from the District and Circuit Court approach in this case, viz., a practical requirement that every contest brought against either a lode or a placer claim would, for safety's sake, have to include a charge of invalidity directed to the *possibility* of the existence of a 30 U.S.C. § 38 claim in the form of a placer or lode, *mutatis mutandis*, or run the risk, at some indefinite future date, of being required to bring such an allegation to contest and hearing again.

Much of this concern was, we feel, generated by the essential difference between the factual milieu of the instant case and that which attended the decision in *Springer v. Southern Pacific Co.*, 248 P. 819 (Utah 1926), the only major precedent for the argument that a claimant could locate a 30 U.S.C. § 38 (1976) placer claim adverse to his own lodes. In that case, the Supreme Court of Utah found that Southern Pacific (the defendant) and its predecessors in interest had been in possession of lode claims adjacent to its track for over 20 years, and had expended upwards, if not in excess of \$500,000 for their development. These claims, however, while located as lodes, were located for building stone which could properly have been taken up by placer location. Plaintiffs, as the Court noted, "early in the morning of said day, long before working hours and either before or about daylight,

clandestinely and surreptitiously entered upon and invaded the actual possession of said claims" of the defendant. *Id.* at 821. The Court found, in fact, that this subsequent location was not made in good faith but was rather made "for the sole purpose of dispossessing the respondent and to compel it to pay tribute to appellants." *Id.* at 825. Thus, considering the manifest equities, it was not surprising that in a suit between the two locators the Court held that the railroad should prevail, on a theory that it was possessed of a subsisting placer claim under 30 U.S.C. § 38 (1976), embracing the area covered by its lodes.⁵²

This factual construct has been juxtaposed unfavorably with the instant case. Thus, it has been pointed out that the Department did not invalidate contestee's claims in the 1965 proceedings because they were in an improper form. Rather, considering most of the very sales presented herein, the Hearing Examiner had found the claims invalid because such marketable mineral as may once have existed had long since been depleted. Therefore, it has been argued that there was no justification for giving the claimant two bites out of the apple.

⁵² Indeed, to the extent the Court vitiated the location of the plaintiffs as invalid ("[w]hat one may not do by force he likewise may not accomplish surreptitiously or by stealth" 248 P. at 824), the Court was more properly invoking the doctrine of *pedis possessio* and not the adverse possession rationale implicit in 30 U.S.C. § 38 (1976). Though *pedis possessio* applies to prediscovery locations, since the claims were in lode form and the deposit in placer, there was no lode discovery. Thus, paradoxically, *pedis possessio* was factually applicable.

We, however, feel that both the District and Circuit Courts, mindful of the procedural difficulties which prevented the claimant from obtaining any substantive review of the 1965 determination of invalidity, and possibly misled by certain assertions on appeal, intended no such radical approach to public land law adjudication.

In any event, the adoption of sec. 314 of FLPMA, 43 U.S.C. § 1744 (1976), should allay such fears as have been expressed. The recordation provisions of FLPMA required the recording of all claims located prior to Oct. 21, 1976, no matter how located, on or before Oct. 22, 1979, or the claims would be deemed conclusively to be abandoned and void. *See* 43 U.S.C. § 1744(c) (1976). Specific provision was made for recording claims premised or dependent upon 30 U.S.C. § 38 (1976). *See* 43 CFR 3833.0-5(i); *Marvin E. Brown*, 52 IBLA 44 (1981).

Since FLPMA also required the recording of new claims within 90 days of their location, it is difficult to see how any new claims can arise, for which recourse to 30 U.S.C. § 38 (1976) *to establish the existence of the claim* is necessary or possible. Rights of individual ownership of the claim may still be determined by 30 U.S.C. § 38 (1976), but if that claim has not been duly recorded under FLPMA, it can only be treated as a nullity. Thus, the possible problems foreseen by some will not occur.

In summary, we hold that the evidence establishes that there was not disclosed within the limits of the claim, during the critical period, a

placer deposit of minerals of such quantity or quality as to constitute a discovery under the mining laws. In addition, we expressly find that the land was not chiefly valuable for building stone during this same period. We also find that appellant is estopped, under principles of judicial estoppel and the terms of 30 U.S.C. § 38 (1976), from asserting that the lands formerly embraced by the Lap Wing and Lady Helen mill-sites are now, and were at the critical time, mineral in character.

Insofar as the specific allegations of paragraph 5.C. of the complaint are concerned we find that the claim does not conform to the rectangular system of survey "to the extent practicable" (5.C.1); that the claim embraces more than 20 acres for each individual claimant (5.C.2.); and that the \$100 worth of labor and improvements required by 30 U.S.C. § 28 (1976) were not performed for the benefit of the Haskins Quarries placer mining claim as required by law (5.C.5).

Accordingly, pursuant to the authority delegated to the Board of Land Appeals by the Secretary of the Interior, 43 CFR 4.1, the decision appealed from is reversed, and the Haskins Quarries placer claim is declared null and void.

BERNARD V. PARRETTE
Chief Administrative Judge

BRUCE R. HARRIS
Administrative Judge

**APPEAL OF ALPINE MOVING
AND STORAGE****IBCA-1434-2-81**Decided *October 21, 1981***Purchase Order PX1379-0-0142, Na-
tional Park Service.****Sustained in part.****1. Contracts: Construction and Opera-
tion: Actions of Parties—Contracts:
Construction and Operation: General
Rules of Construction—Contracts:
Formation and Validity: Fixed-price
Contracts**

Where an appellant acknowledges that it received a purchase order calling for moving Government-owned furniture and furnishings shortly prior to the move and the record shows that without making a protest of any kind the contractor proceeded with the move and that it subsequently billed the Government for the services rendered in accordance with the rate stated in the purchase order, the Board finds the purchase order to constitute the agreement of the parties.

**2. Contracts: Construction and Opera-
tion: Modification of Contracts: Gener-
ally—Contracts: Formation and Va-
lidity: Fixed-price Contracts—Con-
tracts: Formation and Validity: For-
malities—Contracts: Formation and
Validity: Governing Law**

In a case involving the movement of Government office furniture and furnishings within the State of Colorado, the Board finds (i) that the National Park Service is not required to pay a higher rate for the movement of its property than the rate negotiated with the contractor as reflected in an accepted purchase order and (ii) that it is not required to forego presenting to the contracting officer for decision a claim for

damages sustained to Government property during the course of the move, even though at the time the move took place the tariff rates promulgated by the Colorado Public Utilities Commission required payment of a higher rate than that specified in the purchase order and even though the same tariff rates required payment of the full amount billed for services rendered before claims against the carrier for damages to property during the move could be entertained.

**3. Contracts: Disputes and Remedies:
Damages: Actual Damages—Con-
tracts: Disputes and Remedies: Dam-
ages: Measurement—Contracts: Dis-
putes and Remedies: Equitable Ad-
justments**

Where in connection with the movement of Government property, a contractor employs workers not provided for by terms of the purchase order covering the move and it appears that the need for such extra workers resulted in part from deficiencies in performance by the contractor and in part from failures of co-operation by the Government, the Board—noting the absence of any precise measurement for determining the relative fault of the parties—resorts to a jury verdict approach in finding the amount to which the contractor is entitled for one of the items included in the claim for equitable adjustment.

APPEARANCES: Timothy W. Ross, Alpine Moving & Storage, Gunnison, Colorado, for Appellant; Gerald D. O'Nan, Department Counsel, Denver, Colorado, for the Government.

*OPINION BY CHIEF
ADMINISTRATIVE JUDGE
McGRAW*

*INTERIOR BOARD OF
CONTRACT APPEALS*

The appeal with which we are

here concerned presents the following questions for our decision:

1. Whether the instant purchase order was accepted by the contractor when it performed thereunder without having taken exception to any of its terms prior to moving all of the Government-owned furniture and furnishings covered thereby.

2. Whether for moving its property within the State of Colorado the Government must pay the tariff rates established by the Colorado Public Utilities Commission¹ even though they are higher than the rates negotiated with the carrier months before the move as reflected in the instant purchase order.

3. Whether the Government must pay the carrier the entire amount billed at the rate established by the Colorado Public Utilities Commission even though Government property was damaged in the course of the move² for which the Govern-

ment is authorized to submit a claim to the contracting officer for decision³ as provided for in the Contract Disputes Act of 1978 (41 U.S.C. §§ 601-613 (Supp. II 1978)).

4. The extent to which the contractor is entitled to additional compensation by reason of actions of the Government which allegedly increased the cost of the move called for by the instant purchase order.

Findings of Fact

1. Purchase Order PX1379-0-0142, dated Mar. 27, 1980, shows an estimated price for the job of \$300 and includes the following provisions:

Move Office Furniture and All Furnishings From 216 N. Colorado to new Administrative Building located at Elk Creek, 16 miles west of Gunnison Co. approximately 1600 sq. feet on June 14, 1980.

Move three offices located at Elk Creek (Division Chiefs offices) to new Administrative Building, June 13, 1980 at 1:00 p.m.

Price was quoted at \$18.00 per hour, should not take more than the two days stated, June 13, June 14, 1980.

* * * * *

Alpine Moving will be responsible for all packing, handling and physical work involved in the move. [4]

for the filing of a claim, it is apparent that a freight bill must be paid before a claim can be filed."

(Complaint, Enclosure 3).

³ Sec. 6 of the Contract Disputes Act of 1978 (41 U.S.C. § 605 (Supp. II 1978)) provides:

"(a) All claims by a contractor against the government relating to a contract shall be in writing and shall be submitted to the contracting officer for a decision. All claims by the government against a contractor relating to a contract shall be the subject of a decision by the contracting officer."

⁴ Appeal File K; hereinafter AF followed by reference to the letter of the exhibit.

¹ In a letter to an official of the National Park Service under the date of Aug. 27, 1980, the Colorado Public Utilities Commission states:

"[E]stimates are not binding under Colorado Law, as carriers are specifically prevented by law from charging more, less or any different from the charges that they have legally on file with the Public Utilities Commission. * * * [T]he legal tariff charges on file at the time of the move are the charges that must be assessed by Alpine and these charges must be accepted for any and all time which was legitimately spent in making this move."

(Complaint, Enclosure 2).

² A letter from the Colorado Public Utilities Commission to the contractor under date of Sept. 23, 1980, answers the question in the affirmative, stating:

"I am enclosing a photocopy of page 7 of the Colorado Motor Tariff Bureau's Tariff No. 6, which is the household goods' tariff from which your rates would be determined. * * * Item 70 provides that any claim for loss, damage, or overcharge shall be in writing and shall be accompanied by the original paid bill for transportation. As this is a prerequisite

2. The date the instant purchase order was received is disputed with the contractor asserting that it was received just prior to the move. In a letter to the Colorado Public Utilities Commission dated July 11, 1980, the contractor asserts that the Park Service did not request an estimate and none was given. Later in the same letter, however, the contractor acknowledges (i) that it had been contacted in March by Malinda A. Spendlove of the National Park Service⁵ concerning this move; (ii) that when it quoted a rate of \$18 an hour for two men and a van in March, it was for a move that was supposed to occur in mid-April; (iii) that the mid-April move was delayed at the request of the Park Service because their new building was not ready; (iv) that subsequent to the March quote of tariff rates the contractor requested and was granted a tariff increase;⁶ and (v) that the active rate for June was \$20 per hour for two men and a van,

with additional charges for additional men (AF H, 2, 4-5).

3. The record shows that the office furniture and furnishings covered by the purchase order were moved on June 13, 14, and 16, 1980. In the decision from which the instant appeal was taken the contracting officer noted that the contractor was (i) requesting payment in the amount of \$1,044.60;⁷ (ii) asserting that the Government was obligated to pay the contractor at the rate increase approved by the Colorado Public Utilities Commission after the date of the purchase order but before the move, without regard to claims for damages to Government property sustained during the move which could only be settled after full payment to the carrier was made; and (iii) that the amount of \$18 per hour quoted by the contractor represented a charge for two men and a van.

Commenting upon various aspects of the claim, the contracting officer states:

[I]t is deemed appropriate to pay the contractor for the full period of time

⁷ The claim as initially presented and as finally submitted is as shown below:

Initial claim

28 hours (2 men w/van) @	
\$18.00 per hr-----	\$504.00
65 extra manhours @ \$6	
per hr-----	390.00
Boxes -----	94.60
	<hr/>
	\$988.60

Final submission

28 hours (2 men w/van) @	
\$20 per hr-----	\$560.00
65 extra manhours @ \$6	
per hr-----	390.00
Boxes -----	94.60
	<hr/>
	\$1,044.60"

(AF F and J).

⁵ In an affidavit dated July 30, 1981, Malinda A. Spendlove states: (i) that during the time in question she was a purchasing agent for the National Park Service, Curecanti National Recreation Area, Gunnison, Colorado; (ii) that she was involved in the preparation of the instant purchase order which resulted from a meeting with Alpine Moving and Storage (Alpine); (iii) that the move was discussed with Mrs. Eunice Ross of Alpine on several occasions prior to June 13, 1980; (iv) that Mrs. Ross came to one of the locations from which the furniture was to be moved but declined the opportunity to see the other offices from which furniture was to be moved or the new building to which the furniture would be moved; and (v) the purchase order was sent to Alpine on Mar. 27, 1980 (Government Brief, Affidavit at 1).

⁶ In the same letter, Mr. Tim Ross of Alpine expressed the opinion that its problem centers around what it had expected in March and what the move involved in June (AF H).

spent by the two men with the van, due to the fact that the total price was estimated and the quote by the contractor that the move "should not take more than two days" was somewhat indefinite * * *. [T]he Government's obligation to pay is limited to the \$18.00 rate specified on the purchase order. The prices and terms were accepted by the contractor and thereby became contractually fixed. Accordingly, the claim for \$504.00 is approved, but the \$56.00 representing the higher hourly rate is denied. We believe that if the contractor had packed the truck to full capacity the extra manhours would not have been necessary. The requirement for extra movers was not contemplated in the contractor's analysis of the job and was never approved by the National Park Service. The amount of \$94.60 claimed for furnishing boxes appears to be reasonable and it is approved.

(AF B, 2, 3).

4. According to the contractor's letter of July 11, 1980 (Finding 2), the conditions encountered in the move differed substantially from those anticipated in a number of respects. In that letter, Mr. Ross relates that personnel from his office did visit the Park Service office to see what the job would entail and that they were told that the Park Service would do all its own packing and have everything ready to move. They were not shown the storage room in the basement, however, which was packed to the rafters and even included a refrigerator and a large built-in cabinet, which the contractor's men had to disassemble, remove from the wall, and saw the base in two to get it out.⁸

⁸ The contracting officer found that during the course of the move damages to Government property amounted to \$210 for which the contractor was responsible (AF B, attachment B). In the Complaint, the appellant says

While acknowledging that the contractor had not correctly anticipated the time it would take to move the offices (e.g., narrow doors, long halls, short stairs, and equipment requiring special handling and disassembly), the contractor contends that it could not have anticipated that the Park Service personnel would keep changing their minds as to how their offices were to be arranged; nor could it have been foreseen that none of the desk drawers would have been emptied; that the tops of the drafting tables, file cabinets, and desks would be cluttered with small items (calculators, maps, coffee pot, supplies, coffee cups, and mail baskets) all of which had to be packed; and that the electric typewriters would have to be unplugged, requiring the movers to crawl under desks and chase drop cords (AF H at 3-4).

5. The Government has an entirely different view of the principal source of the problems encountered in the move. In an affidavit (n.5, *supra*), Malinda A. Spendlove states that the contractor's moving operations were very inefficient (e.g., it arrived at the Elk Creek facility without boxes; truck sometimes only partially filled, resulting in additional trips; movers very careless in manner in which furni-

that it is willing to accept the Park Service figure for damages to Government property during the move of \$210, except for the \$60 item claimed for damages to the desk. While denying that the contractor was directed to cut the desk in two, the Government's Answer says that the circumstances surrounding this particular allegation are sufficiently questionable for the Government to accept the appellant's position that damages to the Government's property during the course of the move amounted to \$150 (Government Answer, par. 8).

October 21, 1981

ture was handled). More specifically, the affidavit states:

12. Upon arrival with furniture, etc. at the new building, Alpine merely left filing cabinets and the like in the middle of the walkways. This necessitated NPS making a second move of the furniture just to get into the building to begin carrying the furniture.

* * * * *

14. * * * Alpine * * * sent people to perform the work who were unable to physically handle the weight of the furniture and other articles to be moved. In addition, Alpine was generally unorganized resulting in wasted time and effort.

(Government Brief, Affidavit at 2).

6. Accepting the contractor's statement that its bid was based on using two men and a van and that 28 hours had been spent in making the move, the contracting officer found that, at the bid price of \$18 per hour, the contractor was entitled to be paid the sum of \$504. Found reasonable and also allowed the \$94.60 claimed for furnishing boxes. Denied, however, was the \$56 claimed for the higher hourly rate for the 28 hours spent in moving and the \$390 claimed for extra movers (n.7, *supra*). Thus, the amount found due the contractor totalled \$598.60.

The contracting officer found for the Government, however, on its counterclaims totalling \$327 and comprised of a \$117 claim for Park labor used in the move⁹ and a \$210

claim for repairs to door and desk¹⁰ attributed to the move.

The net amount found due the contractor was \$271.60 (\$598.60 - \$327) (AF B, 3).

Discussion

In her affidavit, Malinda A. Spendlove states that the instant purchase order was prepared after a meeting with the contractor and was sent to the contractor on Mar. 27, 1980 (n.5, *supra*). The contractor asserts, however, that the purchase order was not received until just prior to the move (Finding 2). The Board notes (i) that the purchase order carries the date of Mar. 27, 1980; (ii) that the purchase order shows the \$18 per hour rate which the contractor acknowledges it had quoted to the Park Service in March of 1980; and (iii) that the purchase order shows the same address for the contractor as is shown on the notice of appeal, the complaint and other documents emanating from the contractor contained in the appeal file. There is nothing in the record indicating that the envelope or other means by which the purchase order was transmitted did not carry the same address.

[1] In the above circumstances, it appears that in resolving the disputed question of when the purchase order was received, the Board might rely on the long-established rule that a letter properly mailed and posted is presumed to have reached its destination and to have been received by the party to whom

⁹ The claim is for the services of two National Park Service employees who were furnished to move items placed in walkways by Alpine Movers so that the heavy furniture could be moved in. In a letter to the contractor dated July 24, 1980, the contracting officer states: "These men were furnished in response to a threat by one of your employees that the move would not be completed unless we moved these items ourselves" (AF G, 1).

¹⁰ Footnote 8, *supra*.

it is addressed. See *Sancolmar Industries, Inc.*, ASBCA No. 16879 (Dec. 12, 1972), 73-1 BCA par. 9,812. In this case, we need not rely upon any such presumption, however, since assuming *arguendo* that the purchase order was not received until shortly prior to the move as alleged by the contractor, the record clearly shows (i) that without taking exception to the terms of the purchase order or making a protest of any kind, the contractor proceeded with the move; (ii) that the bill submitted by the contractor for the services rendered during the course of the move reflected the terms of the purchase order prepared by the Park Service; and (iii) that it was a month after the move was completed before the Government was apprised that the appellant considered a higher rate was applicable than was stated in the purchase order (AF H, J, and K).¹¹ The Board, therefore, finds that the terms of the instant purchase order constitutes the agreement between the parties which will be used in determining the rights and obligations of the parties to this appeal.

In this case, the appellant and the

¹¹ Following the completion of the move, the contractor billed the Park Service at the \$18 per hour rate quoted for two men and a van. See Bill of Lading and Freight Bills 00396 (June 13) and 00397 (June 14 and 16) (AF J).

Insofar as the record discloses, it does not appear that the Government was aware of the \$20 per hour rate now claimed until July 16 (AF H), or a whole month after the move was completed. A claim reflecting the \$20 per hour rate was not presented to the contracting officer until the contractor's letter of Sept. 4, 1980, was received (AF F).

Colorado Public Utilities Commission seem to have been oblivious of the need to consider the question of the applicability of the doctrine of sovereign immunity to cases involving activities of the Federal Government in areas where state or local governments also exercise jurisdiction. One of the leading cases on the subject is *United States v. County of Allegheny*, 322 U.S. 174 (1944).¹² In that case the question presented was whether the County of Allegheny could impose and collect an ad valorem tax on property purchased or manufactured by a contractor but as to which title had passed to the Government upon reimbursement therefor by the United States. There the Supreme Court stated at page 183:

Procurement policies so settled under federal authority may not be defeated or limited by state law. The purpose of the supremacy clause was to avoid the introduction of disparities, confusions and conflicts which would follow if the Government's general authority were subject to local controls. The validity and construction of contracts through which the United States is exercising its constitutional functions, their consequences on the rights and obligations of the parties, the titles or liens which they create or permit, all present questions of federal law not controlled by the law of any State.

More directly applicable to the case at hand is the decision of the Supreme Court in the case of *Public Utilities Commission of California*

¹² Cited and quoted from in the Government Brief at 3 in support of the proposition: "The position that an apparent state regulation authorizing Appellant to raise its rates invalidates the specific terms of a contract entered into with the United States is untenable."

v. *United States*, 355 U.S. 534 (1958),¹³ in which it was held that a state may not regulate by tariff or by other means the contract prices under a Government contract. Five years later in the case of *United States v. Georgia Public Service Commission*, 371 U.S. 285 (1963),¹⁴ the Supreme Court held that a contract for the carriage of household goods of civilian employees of the United States was exempt from Georgia law which required that rates of carriage of household goods were to be based upon a single family unit.

[2] Turning to the case here in issue, the Board finds that the rates

¹³ There the Court states:

"* * * Here the conflict between the federal policy of negotiated rates and the state policy of regulation of negotiated rates seems to us to be clear. The conflict is as plain as it was in *Arizona v. California*, 283 U.S. 423, 451, where a State sought authority over plans and specifications for a federal dam, in *Leslie Miller, Inc. v. Arkansas*, *supra*, where state standards regulating contractors conflicted with federal standards for those contractors, and in *Johnson v. Maryland*, 254 U.S. 51, where a State sought to exact a license requirement from a federal employee driving a mail truck. The conflict seems to us to be clear as any that the Supremacy Clause, Art. VI, cl. 2, of the Constitution was designed to resolve."

(355 U.S. 544).

¹⁴ After noting that its decision in the Public Utilities Commission of California case (n.13, *supra*, and accompanying text) had involved construing regulations issued under the Armed Services Procurement Act of 1947 (10 U.S.C. § 2301 (1976)), the Supreme Court went on to state:

"The same policy of negotiating rates for shipment of federal property now governs nondefense agencies. The basic statute is the Federal Property and Administrative Services Act of 1949, 63 Stat. 383; 40 U.S.C. § 481; 63 Stat. 393, as amended, 41 U.S.C. § 251 *et seq.* Its procurement provisions are substantially similar to those contained in the Armed Services Procurement Act of 1947." (371 U.S. 289).

negotiated between the appellant and the National Park Service for the movement of its furniture and furnishings within the State of Colorado involved the exercise of a Federal procurement function; that the purchase order issued to the contractor and accepted by him reflected the policies established in the regulations issued under the Federal Property and Administrative Services Act of 1949 (n.14, *supra*, and accompanying text), and the Contract Disputes Act of 1978 (n.3, *supra*); and that under the authorities cited herein (nn.13 & 14, *supra*, and accompanying text), the National Park Service is not required to pay a higher rate for the movement of its property than specified in the instant purchase order; nor is it required to forego presenting a claim to the contracting officer for damages sustained to its property during the course of a move until after it has paid the amount billed by the contractor for the services rendered.

[3] Remaining for consideration is the amount the appellant is entitled to be paid for moving the furniture and furnishings covered by the instant purchase order. The contracting officer found that the contractor was entitled to be paid the sum of \$504 for 28 hours claimed by the contractor for two men with a van at the rate specified in the purchase order of \$18 per hour and an additional \$94.60 claimed for boxes used in the move. The amount so allowed totals \$598.60 (Finding 3).

For the reasons previously stated, the contracting officer properly denied the \$56 claimed by the contractor based upon the higher hourly rate of \$20 established by the Colorado Public Utilities Commission. Also denied by the contracting officer was the \$390 claim for extra manhours¹⁵ used in the move (n.7, *supra*) on the ground that it was not contemplated in the contractor's analysis of the job and was never approved by the National Park Service (Finding 3). While the contractor appears to have been somewhat slipshod in accomplishing the move, *e.g.*, utilizing some workers who were physically unable to handle the weight of the furniture (Finding 5), it does not appear that the Park Service personnel concerned took even rudimentary measures to prepare for the move (Finding 4). In the absence of any precise measurement being available for determining the relative fault of the parties, the Board concludes on the basis of a jury verdict approach¹⁶ that one-half of the amount claimed for extra movers of \$390 or \$195 should be allowed. Thus, the amount allowed the contractor on its claims totals \$793.60.

¹⁵ One of the contentions advanced by the appellant is that when its personnel visited the Park Service Office they had been told that the Service would do all of its own packing. This position is contrary to the plain terms of the purchase order (Finding 1), however, which we have found was accepted by the contractor. The appellant's contention is therefore found to be without merit.

¹⁶ *Cf. Seldo Co., Inc., d.b.a. Desert Materials Co.*, IBCA-1194-5-78 (Sept. 30, 1981), 88 I.D. 895, 81-2 BCA par. —.

With respect to the Government's counterclaims, the Board finds that damages to Park Service property sustained in the course of the move totaled \$150 (n.8, *supra*), and that \$117 was properly charged for the services of two National Park Service employees who moved items placed in walkways when the contractor's employees refused to move them (n.9, *supra*).

Giving effect to the amount to which the appellant has been found to be entitled of \$793.60 less approved Government counterclaims totaling \$267, the Board finds the contractor is entitled to be paid the net sum of \$526.60 for performing the work covered by the instant purchase order.

Decision

1. For the reasons stated and on the basis of the authorities cited, the appellant is found to be entitled to be paid the sum of \$526.60.

2. The amount found due herein shall also include an allowance for interest on the above-stated amount of \$526.60, computed in accordance with the provisions of the Contract Disputes Act of 1978 (41 U.S.C. §§ 605, 611 (Supp. II 1978)), from Sept. 8, 1980, until payment thereof.

RUSSELL C. LYNCH
Administrative Judge

ESTATE OF DANA A. KNIGHT**9 IBIA 82**

Decided *October 22, 1981*

Appeal from an order denying a petition for rehearing by Administrative Law Judge Sam E. Taylor.

Affirmed.

1. Indian Lands: Patent in Fee: Jurisdiction

The Federal trust responsibility over allotted land or any fractional share thereof is extinguished as to that interest immediately upon its acquisition by a non-Indian. The ministerial issuance of a fee patent serves only a recordkeeping function and is without legal significance in respect to dissolution of the Department's role as trustee.

2. Indian Lands: Patent in Fee: Jurisdiction

The Department of the Interior owes no fiduciary duties of any kind to a non-Indian who has acquired an interest in allotted trust land.

APPEARANCES: Yvonne T. Knight, Esq., for appellants Yvonne T. Knight, Hepsey Knight, Ruth Eva Knight, Vanessa Knight Wilson, and Rozina Knight. Counsel to the Board: Kathryn Lynn.

OPINION BY
ADMINISTRATIVE JUDGE
ARNESS

INTERIOR BOARD OF
INDIAN APPEALS

Dana A. Knight, an unallotted Ponca, died on Dec. 5, 1978, at the

age of 62 years. After a hearing held at Pawnee, Oklahoma, on Aug. 1, 1979, Administrative Law Judge Sam E. Taylor approved decedent's will dated Jan. 21, 1976, and ordered distribution of decedent's property to his wife, Hepsey Knight, and daughters Yvonne Teresa Knight, Ruth Eva Knight, Vanessa Knight Wilson, and Rozina Knight (appellants). The Judge denied a motion to include in decedent's trust property certain portions of allotments that had descended to decedent from his maternal Indian grandparents through his non-Indian father. The appellants petitioned for a rehearing on the sole issue of whether the motion was properly denied. On June 5, 1980, Judge Taylor denied the petition for rehearing and made several technical corrections to the earlier order approving the will and ordering distribution. Appellants sought review of that order by the Board.

Background

The decedent's mother, Lena Black Hair Horse Knight, Ponca Allottee No. 244, was the daughter of Black Hair Horse, Ponca Allottee No. 239, and Ruth Black Hair Horse, Ponca Allottee No. 240. Upon the deaths of her parents, Lena Black Hair Horse Knight inherited a portion of each of their allotments. Lena Black Hair Horse Knight died intestate on Apr. 25, 1955. Her heirs were determined to be her non-Indian husband, Tony

H. Knight, and her two sons, Dana A. Knight (decedent) and Louis V. Knight, both Ponca unallottees. Each heir inherited an undivided one-third interest in her trust property. *Estate of Lena Black Hair Horse Knight*, Probate No. H-171-55 (Aug. 5, 1955).

Tony H. Knight died testate in October 1956. Under the provisions of his will, all of his property was devised equally to his sons Dana A. Knight and Louis V. Knight. Included in Tony H. Knight's real property were the portions of Ponca allotments 239 and 240 inherited from his wife. *In the Matter of the Estate of Tony H. Knight, Deceased*, No. 14,547-A (Kay County Ct., Okla. Aug. 2, 1957). At the time of his death, Tony H. Knight had not been issued a fee patent to his inherited portions of Ponca Allotments 239 and 240.

Discussion and Conclusions

Appellants argue first that land allotted under the General Allotment Act of Feb. 8, 1887, 24 Stat. 388 (Act), which passes to a proper Indian beneficiary through a non-Indian, to whom a fee patent has not been issued, regains its full trust status under the Act. Appellants acknowledge that under *Bailess v. Paukune*, 344 U.S. 171 (1952), allotted Indian lands take on a different status when they are held by a non-Indian. They urge, however, that *Chemah v. Fodder*, 259 F. Supp. 910 (W.D. Okla. 1966), makes the issuance of a fee patent to the non-Indian owner the sig-

nificant point at which Federal Indian statutes no longer apply to the land. Until the fee patent is issued, they argue, title to the land remains in trust, although the Department of the Interior owes no fiduciary duties to the owner. If, therefore, the land is acquired by a proper Indian beneficiary before the fee patent is issued, this theory would revive the entire panoply of trust responsibilities involving the Department.

Appellants' characterization of the issue involved in this case attempts to shift the inquiry away from the effect of the inheritance of trust land by a non-Indian to the effect of a later inheritance by an Indian. The question before the Board, however, is not whether the General Allotment Act intends to protect Indians inheriting from non-Indians, but what the consequences are when trust property is inherited by a non-Indian.

The *Bailess* and *Chemah* opinions concern the legal status of allotted land in Oklahoma when inherited by non-Indians. Both *Bailess* and *Chemah* agree that the acquisition of an interest in trust property by a non-Indian renders the trust "dry and passive." The Supreme Court held in *Bailess* that when allotted land is inherited by a non-Indian "there remains only a ministerial act for the trustee to perform, namely the issuance of a fee patent to the *cestui*." 344 U.S. at 173. In *Chemah*, the Federal district court was bound by the Supreme Court's interpretation of law but expanded on it by

noting that the Secretary of the Interior could issue the required fee patent to a non-Indian heir in one of two ways, thereby addressing that part of the case which pertained to requested partitioning of an allotment. The *Chemah* opinion states:

The plain import of the decision of *Bailess v. Paukune*, supra, is to require the issuance of a patent in fee to the non-Indian plaintiff. The Secretary of the Interior may cause her interest to be partitioned in kind from the remainder of the allotment and issue a patent in fee to her for her aliquot part. It would seem that he could also issue to her a patent in fee for her undivided interest in the whole allotment, but it is suggested that the use of such method would solve nothing and would further confound the existing problems of multiple ownership.

259 F. Supp. at 912-13.

[1] The *Chemah* opinion therefore cannot be cited for the proposition advanced by appellants (that the Secretary may refrain from granting fee patent title to a non-Indian heir). Consequently, it is a logical consequence of the holdings in *Bailess* and *Chemah* that if by administrative oversight the Secretary fails to perform the ministerial act of issuing the required fee patent to a non-Indian heir of Indian land, this breach of duty cannot serve to bestow trust privileges on the non-Indian heir or his successors in interest. Accordingly, the Federal trust responsibility over allotted land or any fractional share thereof is extinguished as to that interest immediately upon its acquisition by a non-Indian. The ministerial issuance of a fee patent serves

only a recordkeeping function and is without legal significance in respect to dissolution of the Department's role as trustee.

This holding comports with long-standing Departmental precedent. In a memorandum opinion dated Sept. 10, 1938, former Interior Solicitor Nathan R. Margold stated:

The interest inherited by Amanda Pratt, she being a white woman passed to her free from restrictions. Departmental jurisdiction then terminated and Mrs. Pratt became invested with unrestricted control, with full power of disposal. *Levindale Lead Co. v. Coleman*, 241 U.S. 432; *Mison v. Littleton*, 265 Fed. 603; *Unkle v. Wills*, 281 Fed. 29, 35. Such restricted control and power of disposal is unaffected by the fact that the legal title may remain in the United States until fee simple patent issues. The unrestricted power of control and disposal depends in no way upon issuance of patent. It may be exercised before patent issues and in such event the patent, when issued, inures to the benefit of the grantee. *Mison v. Littleton*, supra. Nonissuance of the patent, therefore, constitutes no valid ground for reassumption of departmental jurisdiction nor may it be properly used as a basis for a demand that the parties submit to departmental jurisdiction. Any proposal so to do savors strongly of an abortive effort to reimpose by administrative action restrictions which have lawfully terminated.

I Op. Sol. 851-852.

Therefore, in this case, the fact that a fee patent had not been issued to Tony H. Knight, decedent's non-Indian father, before his death in 1956 is not dispositive because the Department's trust responsibilities over the disputed interests in Ponca Allotments 239 and 240 were terminated when those interests

were acquired by a non-Indian. The subsequent inheritance of those interests by the decedent, an Indian, could not operate in itself to reestablish a relationship that had been legally terminated.

Appellants further argue by analogy to common law trust principles that a trust remains active during the winding-up period and the trustee continues to owe fiduciary duties to the beneficiaries in determining how to terminate the trust. Appellants suggest the Supreme Court did not address the question of the Department's responsibilities in winding up a trust when it stated in *Bailess* that the trust as to a non-Indian was "dry and passive." Therefore, they urge that some active trust responsibilities are not precluded by *Bailess*. The statutory trust relationship established between the Department and Indian owners of allotments differs, however, from a trust set up under the common law. See *United States v. Mitchell*, 445 U.S. 535, 542 (1980). It is, therefore, misleading to rely too heavily on the common law of trusts in interpreting that relationship.¹

[2] Appellants, however, misconstrue the Department's duties in winding up the trust because of the acquisition of an interest in allotted lands by a non-Indian. As was pre-

viously discussed, when an interest in trust property is acquired by a non-Indian, the trust is immediately terminated to the extent of that interest. The Department owes no trust duties of any kind to the non-Indian.² Any remaining fiduciary duty to be circumspect in the manner of terminating the trust would be owed only to those Indians who might be affected by the termination.³ Thus, it cannot be found that the trust as to Tony H. Knight's interests in Ponca Allotments 239 and 240 remained active because the Department had not discharged its duties relating to winding up the trust.

Pursuant to the authority delegated to the Board of Indian Appeals by the Secretary of the Interior, 43 CFR 4.1, the order denying the motion to add the interests in Ponca Allotments 239 and 240 inherited by decedent from Tony H. Knight to the inventory of decedent's trust property is affirmed.⁴

² See, e.g., *Administrative Appeal of James P. Bowen v. Superintendent, Northern Cheyenne Agency*, 3 IBIA 224, 82 I.D. 19 (1975). In this case a fee patent was issued before a dispute arose.

³ It is conceivable that in discharging its trust responsibilities to such Indians, the Department might be required to terminate a trust in a manner unfavorable to the best interest of the non-Indian owner, or as opined in *Chemah*, *supra* at 913, in a manner which will not "further confound the existing problems of multiple ownership."

⁴ Sec. 5 of the Indian Reorganization Act, June 18, 1934, 48 Stat. 984, 985, 25 U.S.C. § 465 (1976), permits acquisition of lands in trust for individual Indians by the Secretary. Applications to acquire lands in trust status are treated on a case-by-case basis by the Department. There appears to be no impediment to an application by appellants in this case for acquisition by the United States of their inherited lands to be held in trust status for them. Appellants acknowledge that they have not pursued this administrative remedy to achieve the results sought by this probate appeal. Appellants' Opening Brief at 2.

¹ The problems inherent in such reliance are also seen in appellants' argument that the Indian trust relationship, like a common law trust, can survive the absence of any one of the three elements of a trust: A trustee, a beneficiary, and trust property. Assuming, *arguendo*, that the relationship could survive the absence of a trustee or of trust property, as was just discussed, the Indian trust relationship terminates in the absence of a proper Indian beneficiary.

This decision is final for the Department.

APPEAL OF DAMES & MOORE

IBCA-1308-10-79

Decided *October 27, 1981*

Contract No. MOOC14202869, Bureau of Indian Affairs.

Denied.

1. Contracts: Construction and Operation: Contract Clauses—Contracts: Formation and Validity: Authority to Make

When a contractor expressed a desire to avoid legal action and suggested submitting a dispute to arbitration rather than following the dispute resolution process required by the disputes clause, the contracting officer was without authority to delegate his duties under the disputes clause to an arbitrator and the document entitled "Agreement to Submit to Arbitration" was a nullity which conferred no right on the contractor to claim expenses during the arbitration period.

APPEARANCES: Mr. Oliver Keese, Contracts Manager, Dames & Moore, Los Angeles, California, for the Appellant; Mr. Thomas O'Hare, Department Counsel, Albuquerque, New Mexico, for the Government.

OPINION BY ADMINISTRATIVE JUDGE PACKWOOD

INTERIOR BOARD OF CONTRACT APPEALS

This is a timely appeal from a decision of the contracting officer denying the contractor's claim for \$8,459.35 under the terms of a document entitled "Agreement to Submit to Arbitration." Neither party elected an oral hearing and this appeal is submitted on the record.

On Aug. 9, 1976, the Bureau of Indian Affairs awarded Contract MOOC14202249 in the amount of \$45,000 to the consulting firm, Dames & Moore, for an irrigation plan and report for the utilization of water from the Mancos River on lands of the Ute Mountain Ute Reservation, Colorado. The contract contained the standard disputes clause required by FPR 1-7.102-12.

On Nov. 23, 1977, the contracting officer sent to Dames & Moore his comments concerning their final report under the contract, and pointed out that the report did not contain material requested in his comments on the initial draft report.

At a meeting held on Jan. 24, 1978, to discuss the Government's objections to the final report, a representative of Dames & Moore stated that the contract fee of \$45,000 was too low for the work requested and further stated that his company had lost \$20,000 on the job. He advised that it would be necessary to charge an additional fee of \$9,000 for the requested work which he regarded as being outside the scope of the

contract. Another representative of Dames & Moore expressed a desire to avoid legal action and proposed that the dispute be submitted to arbitration. For reasons which are not a matter of record, the contracting officer agreed to the proposal (Appeal File, Exhibit 2).

Dames & Moore drafted a document entitled "Agreement to Submit to Arbitration," which was signed by the contracting officer, Dames & Moore, and the arbitrator (Appeal File, Exhibit 1).

The arbitrator found for Dames & Moore and the Government paid him \$1,899.50 for his services as arbitrator (Appeal File, Exhibit 8).

Dames & Moore submitted a claim for \$8,459.35 for personnel charges, equipment charges, and services and supplies during the arbitration period from Jan. 31, through June 23, 1978 (Appeal File, Exhibit 9).

The contracting officer declined to pay the amount claimed by Dames & Moore for their services during arbitration. Dames & Moore has taken a timely appeal of the decision to this Board.

Decision

The question presented by this appeal is what rights, if any, were acquired by Dames & Moore as a result of the signing of the document entitled "Agreement to Submit to Arbitration."

The Court of Claims has consistently held that where the contract designates a specific officer or body as the one to render to contractual decision under a disputes clause,

other persons cannot displace the designated decisionmaker. *Fischbach and Moore International Corp. v. United States*, — Ct. Cl. —, 617 F.2d 223 (1980), and cases cited therein at n.7.

In the present case, the disputes clause imposes a duty on the contracting officer to make a personal and independent decision on disputes under the contract, with provisions for appeal to the Board if the contractor is aggrieved. This function can neither be delegated to nor usurped by anyone not authorized by the terms of the contract. *Climatic Rainwear Co., Inc. v. United States*, 115 Ct. Cl. 520, 559 (1950).

The sole reason advanced by Dames & Moore for arbitration was the desire to avoid the appeal procedure it had agreed to use under the disputes clause. The Supreme Court has stated that the purpose of the disputes clause system of avoiding "vexatious litigation" would not be served by substituting the actions of persons acting in derogation of the contract. *S&E Contractors, Inc. v. United States*, 406 U.S. 1, 8 (1972). Dames & Moore may not be relieved of their contractual obligation to pursue their remedies under the disputes clause merely because they perceive such a course to be "legal action" which they prefer to avoid.

The contracting officer stated that the agreement to submit the dispute to arbitration was entered into in accordance with FPR 1-7.102-12 DISPUTES. The contracting officer's reliance on such authority is

mistaken. The cited section of the Federal Procurement Regulations (41 CFR 1-7.102-12) is merely a requirement that the standard disputes clause be included in contracts such as the original contract with Dames & Moore. It does not authorize circumvention of the normal dispute resolution process.

Neither party has cited any authority under which they might be relieved of their contractual duty to resolve disputes in accordance with the disputes clause, and we are aware of none. It follows, therefore, that the attempt to delegate the duties of the contracting officer to an arbitrator was a nullity and conferred no rights upon Dames & Moore.

The claim for expenses incurred during the course of the unauthorized arbitration process is denied in its entirety.

Decided October 28, 1981

Appeal from order by Administrative Law Judge reopening estate and redetermining heirs.

Reversed and remanded.

1. Indian Probate: Wills: Disapproval of Will

Under the Supreme Court's holding in *Tooahnippah v. Hickel*, 397 U.S. 598 (1970), the Department may not revoke or rewrite an otherwise valid will disposing of Indian trust or restricted property that reflects a rational testamentary scheme simply because the disposition does not comport with the deciding official's conception of equity and fairness.

2. Indian Probate: Wills: Failure to Mention Child

The failure of decedent's will to provide for two after-born children is insufficient to render the dispositive scheme irrational.

APPEARANCES: Elizabeth Anne Bird, Esq., for appellants Ronette Saubel, Ronald Richard Saubel, Jr., Antoinette Saubel, and Desmond Saubel; Isabel Uribe for Ronald Richard Saubel, Jr., appellee. Counsel to the Board: Kathryn A. Lynn.

OPINION BY CHIEF
ADMINISTRATIVE JUDGE
HORTON

INTERIOR BOARD OF INDIAN APPEALS

This is an appeal from an order redetermining heirs after reopening entered by Administrative Law Judge William E. Hammett on May 5, 1980. Appellants are Ronette Saubel, Ronald Richard Saubel, Jr., Antoinette Saubel, and Desmond Saubel, the four minor children of Ronald Richard Saubel, deceased Palm Springs Allottee No. 26, and his wife, Sally Del Rio Saubel. Appellant children maintain first, that

it was error to reopen the estate. Second, they contend it was error to limit the hearing to whether the son of Isabel Uribe, also named Ronald Richard Saubel, Jr., is an illegitimate son of the decedent entitled to share in the decedent's trust estate pursuant to the provisions of 25 U.S.C. § 371 (1976). Appellants submit that the decedent left a valid final will and testament upon his death which expressly omits Ronald Richard Saubel, Jr., son of Isabel Uribe, as a beneficiary of his estate, and that this testamentary wish of the decedent must be upheld by the Department in this probate proceeding.

Background

Ronald Richard Saubel was born on Apr. 30, 1943, and died in Banning, California, Apr. 3, 1977. He was a Palm Springs allottee under the jurisdiction of the Palm Springs Agency, Palm Springs, California.

A hearing to determine heirs was held on May 1 and 22, 1978, by Administrative Law Judge S. N. Willett. Testimony at that hearing disclosed that decedent married Sally Del Rio on Mar. 15, 1965, and had four children of that marriage: Ronette Rhonda, born Sept. 15, 1966; Ronald Richard, Jr., born Sept. 13, 1968; Antoinette Flora, born Aug. 29, 1974; and Desmond Damon, born Sept. 21, 1975.

On May 13, 1964, decedent executed a will devising all of his property to certain of his collateral relatives. In 1973 decedent was hospitalized for a serious illness, and

on Jan. 28, 1973, he composed a holographic will leaving all of his property to Ronette and Ronald, Jr., the only two of his children then living. A third will, prepared for decedent by his aunt's attorney, was signed on Feb. 1, 1973. This will expressly revoked all prior wills and again left all decedent's property to his two children. Decedent's wife was expressly omitted from taking under this will.¹ Another provision of the February 1973 will sought to disinherit Ronald Richard Saubel, Jr., allegedly the illegitimate son of decedent and Isabel Uribe. There was evidence that a fourth will had been prepared for decedent subsequent to Feb. 1, 1973, which included all four of his children born to Sally Del Rio Saubel. This purported will was never signed by decedent.²

Following the hearing, Judge Willett issued a memorandum and order on July 6, 1978. The order found that the Feb. 1, 1973, will was technically valid and was decedent's final will. However, it also found that because the will made no provision for decedent's two youngest children and because the evidence indicated that decedent had equal concern and affection for all four of his children borne by Sally Del Rio Saubel, it did not establish a rational testamentary scheme. Therefore, Judge Willett disapproved the will.

¹ The testimony showed that Sally Del Rio was not Indian and had agreed with decedent that his trust property should descend directly to their children so that it would not lose its status as Indian trust land.

² See Transcript of Hearing held May 22, 1978, at 8.

Despite the disapproval of the testamentary provisions of the will, Judge Willett held that the clause revoking all earlier wills and codicils was effective to revoke decedent's 1964 will.³ Thus, she held that decedent had died intestate and ordered distribution of one-fourth of the estate to each child of Sally Del Rio Saubel with a one-third life estate to decedent's spouse.⁴

On July 3, 1979, Isabel Uribe, acting on behalf of her minor son, Ronald Richard Saubel, Jr., petitioned to reopen the estate on the grounds that her child, who was not represented at the hearings before Judge Willett, was the illegitimate son of the decedent and was entitled to share in the estate under 25 U.S.C. § 371 (1976). The petition was assigned to Administrative Law Judge William E. Hammett, who, on Oct. 16, 1979, ordered that the estate be reopened for the sole purpose of determining whether this child was the decedent's son.⁵

Following a Nov. 20, 1979, hearing, Judge Hammett entered an order on May 5, 1980, finding that Isabel Uribe's child was the decedent's son and ordering that the

estate be distributed in five equal shares to decedent's one illegitimate and four legitimate children, subject to Sally De Rio Saubel's one-third life estate. Decedent's legitimate children appealed from this order.

Discussion, Findings, and Conclusions

This case is technically before the Board on an appeal from the order reopening the estate and holding that only the question of the paternity of the child of Isabel Uribe would be considered. However, under 43 CFR 4.320 (1980), appearing in the Board's revised procedural rules at 46 FR 7334, 7336 (Jan. 23, 1981), the Board is not limited in its review of probate decisions by the arguments raised by the parties, but "may exercise the inherent authority of the Secretary to correct a manifest injustice or error where appropriate." Such an error appears on the record in this case.

Under 25 U.S.C. § 373 (1976) an Indian may dispose of trust property by will in accordance with regulations prescribed by the Secretary of the Interior. The regulations promulgated pursuant to sec. 373, found in 43 CFR Part 4, Subpart D, deal almost exclusively with the mechanics of executing and proving a will, the administration of the estate, and the conduct of probate hearings.

[1] The Supreme Court considered the scope of the Secretary's power to disapprove an Indian will under sec. 373 in *Toohnippah v.*

³ Judge Willett's order does not consider the validity of the Jan. 28, 1973, holographic will. Decedent's holographic will, which also failed to provide for two of his children born to Sally Del Rio Saubel, would similarly not reflect a "rational testamentary scheme" under the rationale of the order.

⁴ This distribution was based on California intestacy laws (*see* 25 U.S.C. § 348 (1976)) and a second disclaimer of interest signed by Sally Del Rio Saubel on May 22, 1978.

⁵ Judge Hammett limited the hearing to this one issue on the grounds that a broader hearing would constitute an improper collateral attack on Judge Willett's order.

Hickel, 397 U.S. 598 (1970). Although the Court declined to explore the full extent of the Secretary's power, it held that the Secretary or his representative could not revoke or rewrite an otherwise valid will that reflected a rational testamentary scheme simply because the disposition did not comport with the approving official's conception of equity and fairness. See *Estate of William Mason Cultee*, 9 IBIA 43 (1981); *Estate of Dorothy Sheldon*, 7 IBIA 11, 85 I.D. 31 (1978); *Estate of Anthony Bitseedy*, 5 IBIA 270 (1976); *Estate of Gerald Martinez, Sr.*, 5 IBIA 162, 83 I.D. 306 (1976).

In disapproving the decedent's will in this case the Administrative Law Judge found that the will did not reflect a rational testamentary scheme because it failed to mention decedent's two youngest children. In essence, the Administrative Law Judge's decision is an attempt to fill a gap in Federal Indian probate law. Under 25 U.S.C. § 348 (1976) the Department looks to state intestate succession laws in determining the legal heirs of an Indian who dies without having executed a will. There is no similar statutory or regulatory provision for applying state laws regarding the construction of wills. The only Federal regulations in this area concern lapse (43 CFR 4.261) and the felonious taking of the testator's life (43 CFR 4.262). Thus, when faced with a problem of pretermitted children (or of a pretermitted spouse, advances, or ademption), the Depart-

ment is generally required to approve the will as written. It is difficult to perceive how the disinheritance of a child born after the execution of a will may be considered irrational or contrary to public policy when no policy has been articulated through either statute or regulation.⁶

[2] The evidence in this case does not disclose the testamentary scheme established in decedent's will to be irrational. On the contrary, the plan shows careful consideration and could be considered reasonable in light of decedent's personal circumstances. The fact that two children

⁶ We agree, therefore, with the following dictum expressed by Judge Willett at page 7 of her July 6, 1978, opinion:

"The rights of omitted or pretermitted heirs is one of the many substantive issues in Indian probate for which no express provision has been made. It is incongruous that the Federal government has not yet addressed this problem which has been universally acknowledged and dealt with by the states through the enactment of special statutes. Indian probate proceedings are deprived of the valuable device which permits an overall testamentary scheme to be upheld through the validation of a will as to the beneficiaries and the world at large while at the same time permitting the participation of omitted heirs in the estate to the extent of an intestate share."

To the above dictum we would add that the Supreme Court has suggested that it is within the authority of the Secretary of the Interior to promulgate substantive regulations to govern the devise of Indian trust lands. In *Tooahnippah*, *supra* at 610, Chief Justice Burger observed: "The Secretary's task [in approving or disapproving Indian wills] is not always an easy one and perhaps is rendered more difficult by the absence of regulations giving guidelines." In a concurring opinion, Justice Harlan stated: "I do not mean to suggest that the Secretary might not promulgate a regulation that, like certain state statutes, provides that a testator cannot completely disinherit any of his offspring. A general standard like this would, of course, eliminate the dangers inherent in *ad hoc* determinations of whether the will is in some vague sense fair to an heir." *Id.* at 619 n.10.

were born to decedent after the execution of this will is insufficient to render the dispositive scheme irrational.⁷ Therefore, decedent's Feb. 1, 1973, will should not have been disapproved on the grounds that it evidenced an irrational testamentary scheme.

It is possible, however, that the will dated Feb. 1, 1973, should not be approved for other reasons. Ronald Richard Saubel, Jr., the son of Isabel Uribe, was not present at the hearings before Judge Willett, not having been furnished notice of the proceedings, and was limited by Judge Hammett to establishing that decedent was his father. He has thus not had an opportunity to present any arguments he may have against approval of the will. The case must, therefore, be remanded to the Hearings Division.⁸

Pursuant to the authority vested in the Board of Indian Appeals by 43 CFR 4.1, the Order Disapproving Will and Determining Heirs is reversed. The Order Redetermining

Heirs After Reopening is modified by striking that part of the order distributing decedent's estate but retaining all findings and conclusions establishing Ronald Richard Saubel, Jr., to be decedent's illegitimate son. The case is remanded to the Hearings Division for further action not inconsistent with this decision.

WM. PHILIP HORTON
Chief Administrative Judge

I CONCUR:

FRANKLIN D. ARNESS
Administrative Judge

**ADMINISTRATIVE JUDGE MUSK-
RAT CONCURRING:**

I concur with the majority in overruling the Administrative Law Judge's decision of July 6, 1978, and with the order remanding for a new hearing. To that holding I offer some additional analysis and rationale for I consider this case significant in that it raises for Indian probate the classic problems of subsequent-born children and pretermitted heirs.

At the initial hearings on May 1 and 22, 1978, the Administrative Law Judge faced a dilemma for which there presently exists no satisfactory solution. Because of the absence of Departmental regulations regarding pretermitted heirs, she was forced by the apparent unfairness of the decedent's omission of his two younger children to "destroy the will in order to save it."

⁷ The evidence suggests that a new will had been prepared for decedent that was identical to the February 1973 will except that it provided for equal distribution of all four of decedent's natural children. Decedent failed to execute this document. Despite some evidence that decedent was generally lax in attending to certain business matters, any finding as to his motivation for failing to execute the will would be purely conjectural. It is as possible that he intentionally failed to sign the new document as that he merely procrastinated too long and the omission was inadvertent. See *Estate of William Mason Cultee*, *supra*.

⁸ On remand it is suggested that the two older children and the two younger children of decedent and Sally Del Rio Saubel be represented by separate guardians *ad litem* because their interests are potentially conflicting.

Unfortunately, such an approach creates more problems than it resolves.

In her decision of July 6, 1978, the Administrative Law Judge disapproved an Indian will under the authority of 25 U.S.C. § 373 (1976) for the reason that the testator's failure to provide for two subsequent-born children rendered the will's testamentary scheme irrational.¹ In so exercising the authority of the Secretary of the Interior under sec. 373, the Administrative Law Judge relied upon the decision of the United States Supreme Court in *Tooahnippah v. Hickel*, 397 U.S. 598 (1970), and in particular upon the concurring opinion of Justice Harlan. In *Tooahnippah*, *supra*, the Supreme Court reviewed the Secretary's authority to approve Indian wills under 25 U.S.C. § 373 (1976) and provided the analytical model for subsequent judicial review of Secretarial actions and for Secretarial review of the actions of subordinate officials. Although the Administrative Law Judge was thus correct in relying on *Tooahnippah*, *supra*, she nevertheless erred in her application of its principles.

In her decision of July 6, 1978, she misread and misapplied a point

made by Justice Harlan in footnote 9 of his concurrence.

Moreover, under *Tooahnippah v. Hickel*, disapproval of a will for the benefit of afterborn, minor children appears to be sanction as a reasonable exercise of the discretionary authority contained in 25 U.S.C. § 373. See n.9, *Tooahnippah v. Hickel*, 397 U.S. *supra*, at p. 618.

On the basis of these factors, the February 1, 1973 will of the decedent should and may properly be disapproved to insure the participation of the afterborn, minor children in the testator's estate.

(Opinion of July 6, 1978, at 16).

A closer look at footnote 9 of Justice Harlan's concurrence, however, reveals that it was merely an explanatory note indicating that the opinion of the Regional Solicitor in the case then before the Court cited three unreported decisions in support of his (the Regional Solicitor's) claim of his right, in resolving whether or not to approve an Indian will, to determine whether the will achieves a just and equitable result. The three cases cited involved the disinheritance of minor children whom the decedents were obligated to support at the time of their deaths and two of the cases involved the disinheritance of children born after the execution of a will. The mere recitation of the facts of those cases in footnote 9 does not constitute an endorsement of the proposition that an Indian will can be disapproved and set aside because the reviewing official finds that the will in question, by disinheriting subsequent-born children, is unjust and inequitable.

Rather than relying on footnote 9, the Administrative Law Judge

¹ According to the Administrative Law Judge: "the February 1, 1973 will of the decedent should and may properly be disapproved to insure the participation of the afterborn, minor children in the testator's estate." (See opinion of July 6, 1978, at 16.) In all other respects the will of Feb. 1, 1973, appeared "rational" in that it provided for the wife, existing legitimate children, and the illegitimate son of the testator—i.e., his "natural heirs."

should more properly have relied on the analytical criteria described by Justice Harlan in the text of his concurrence. Accordingly, Justice Harland sets out three standards to be considered in exercising the Secretary's approval authority under sec. 373:

A will that disinherits the natural object of the testator's bounty should be scrutinized closely. If such a will was the result of overreaching by a beneficiary, or fraud; if the will is inconsistent with the decedent's existing legal obligation of support, or in some other way clearly offends a similar public policy; or if the disinheritance can be fairly said to be the product of inadvertence—as might be the case if the testator married or became a parent after the will was executed—the Secretary *might* properly disapprove it. However, I do not think the Secretary can withhold approval simply because he concludes it was unfair of the testator to disinherit a legal heir in circumstances where as here there is a perfectly understandable and rational basis for the testator's decision. [Italics added.]

(*Tooahnippah v. Hickel*, *supra* at 619 (Harlan, J., concurring)).

The case before us thus requires close scrutiny for the will in question does have the effect of disinheriting the natural objects of the testator's bounty—*i.e.*, his subsequent-born children. In so doing, it must be noted initially that there is no evidence in the record of overreaching by a beneficiary or of fraud (opinion of July 6, 1978, at 13). Consequently, this ground for disapproval must be rejected. The other considerations however do afford grounds for possible disapproval. The will in this instance is

inconsistent with the decedent's existing legal obligation of support and the fact that it does not provide for subsequent-born children may offend public policy. Furthermore, the disinheritance may be the product of inadvertence in that the testator became the parent of two subsequent children after the will was executed. Therefore, the Secretary, or as in this case his representative, "might properly disapprove" the will.

An argument can thus be made for properly disapproving the will in question. The Administrative Law Judge then might have been "right for the wrong reason" in disapproving the will and permitting the state intestate laws to apply. However, I do not believe this is a proper case for reaching such a result. There are equally strong countervailing arguments, facts, and policies against disapproval. Both grounds which support the decision of the Administrative Law Judge can be refuted. First, the testator was already a parent when the will was executed and in the will he provided for his two then existing children. To be sure, he subsequently fathered two additional children following execution of his will, however, the record suggests that he likewise subsequently drew another will which provided for these, his subsequent children (May 22, 1978, Tr. 8). For whatever his reasons, the testator did not execute this later will providing for these children. It cannot be said then that their omission from the testator's estate was

necessarily "inadvertent." His failure to execute this later will, which was allegedly the same in all respects as the Feb. 1, 1973, will now before us except for the inclusion of the subsequent-born children, may have been "intentional." He did after all have this later will available for execution for approximately 6 months (May 22, 1978, Tr. 8).

A second ground for disapproving the Indian will before us rests on the finding that the will contravenes public policy—policies such as those regarding provision for persons to whom the testator has a legal obligation of support, inheritance by subsequent-born children, or the problems of pretermission.

At the common law, the birth of a child did not of itself revoke a will previously executed by its parent, and such child did not have any rights in the testator's estate as against the devisee. Also at the common law, a child which the testator had omitted without any intention of excluding it from its share of the testator's estate had no rights in the testator's estate as against devisees or legatees. * * *

* * * * *

In most states the common-law rule that the subsequent birth of a child did not affect the prior will of its parent has been altered or abrogated by statute. While these statutes vary greatly in their details, they may be considered to fall into two general classes: (1) those which provide that the birth of a child revokes the will; and (2) those which provide that an after-born child (and, in many states, also a child omitted from the will, for whom no provision is made, without affirmative provision in the will showing an intention to omit him) shall take

though the testator had died intestate. [Footnotes omitted.]

2 *Page On Wills* § 21:104 at 527.

The American experience with the problems of subsequent-born children and pretermission has been to change the common law rule of disinheritance not by judicial decree but by legislative action. The enactment of pretermission statutes by state legislatures declared the public policy of their respective forums regarding these issues and dictated how these problems were to be resolved. However, because there is no Federal law respecting these matters and because there exists such wide variety of state statutes on the subject, it would be hazardous indeed to generalize as to what the national public policy is or to speculate as to what the Federal policy should be. Thus, I believe it inappropriate for an Administrative Law Judge in an Indian probate case to disapprove an Indian will on the grounds that it violates public policy by failing to provide for subsequent-born children. That "public policy" has not been identified nor defined and is more properly a subject for legislative (*i.e.*, administrative rulemaking) rather than judicial action.²

Moreover, there are serious practical problems associated with up-

² Whether the offense against public policy is omitting subsequent-born children, pretermitted heirs, or persons to whom the testator owes a legal obligation of support—the fact of the matter remains that Federal policy in these areas is undetermined and it is for those charged with making policy rather than those charged with judicial review to resolve the matter.

holding the Administrative Law Judge's decision. The result of the disapproval of the will was that the testator's estate passed according to the State of California's laws of intestate succession. This resulted in not only the subsequent-born children taking their intestate share but also enabled the testator's wife and illegitimate son, both of whom the testator explicitly disinherited under the will in question, to inherit an intestate share as well. This obviously ran counter to the testator's testamentary intent as manifested by his will and subsequent actions. Such a result also runs counter to what Justice Harlan himself recognized in his concurrence in *Toonahnippah*, *supra* at 617:

Without attempting to define with precision the outer limits of the Secretary's authority under the proviso of § 373, I think it clear that it cannot be construed this broadly. First, it must be remembered that the primary purpose of § 373 is to give to the testator, not to the Secretary, the power to dispose of restricted property by a will. In according to the Indian testamentary capacity over restricted property Congress could have only intended to give him the power to dispose of restricted property according to personal preference rather than the predetermined dictates of intestate succession. Such is the essence of the power to make a will. The notion that the Secretary can disapprove a will on the basis of a subjective appraisal—governed by no standards of general applicability—that the disposition is unfair to a person who would otherwise inherit as a legal heir simply cuts too

deeply into the primary objective of the statutory grant. [Footnotes omitted.]

Even if the Board upheld the Administrative Law Judge's decision to disapprove the Indian will, other questions and problems would remain, but because of the Board's disposition of this appeal, these questions and problems need not be addressed and I express no opinion regarding them. Nevertheless, perhaps a brief recitation concerning them is in order so that the seriousness and difficulty posed by the absence of regulations governing this subject may be appreciated.

For example, when the Secretary or his representative disapproves a will, the estate passes under state laws of intestacy and 25 U.S.C. § 371 (1976) regarding inheritance by illegitimate Indian children. The ascertainment of legal heirs under state statutes can create significant problems especially with respect to the inheritance of Indian trust properties. The present case illustrates several potential problems including the inheritance of Indian trust lands by a non-Indian spouse and inheritance by legal heirs contrary to the decedent's wishes. Furthermore, if the disapproval power of the Secretary is interpreted as permitting "partial" versus "total" abrogation of the will, then the decedent may not be considered to have died "intestate." The question then arises as to what law does apply. If under partial abrogation the decedent is deemed

to have died testate, there is no provision for applying state law to fill the void; nor can Federal law apply since there is no Federal law (*i.e.*, Federal regulations) on the subject. Only the common law with its harsh rules of disinheritance remains.

This appeal represents a classic example of problems posed for Indian probate by pretermitted heirs. The absence of Federal regulations in this area leaves the Department of the Interior with no satisfactory means to resolve the problem. As this case indicates, an attempt to

disapprove an Indian will solely on grounds of pretermision in order for state intestate provisions to govern would be difficult to justify. As my colleagues emphasize in their opinion and as the Supreme Court observed in *Tooahnippah, supra* at 610: "The Secretary's task is not always an easy one and perhaps is rendered more difficult by the absence of regulations giving guidelines." I agree and respectfully recommend that such regulations be adopted without delay.

**Coal Leases and Permits: Diligence—
Coal Leases and Permits: Readjustment—Coal Leases and Permits: Royalties—Mineral Leasing Act: Applicability**

Although Congress revised the provision governing readjustment of federal coal leases in 1976, the deletion of the clause "unless otherwise provided by law at the time of expiration of such periods" from sec. 7 of the MLA (30 U.S.C. § 207) did not alter the Secretary's obligation not to establish any lease terms contrary to law in readjusting a coal lease.

**Coal Leases and Permits: Diligence—
Coal Leases and Permits: Readjustment—Coal Leases and Permits: Royalties—Mineral Leasing Act: Applicability—Statutory Construction: Legislative History**

The legislative history of sec. 6 of the Federal Coal Leasing Amendments Act shows that the revision of sec. 7 of the MLA (30 U.S.C. § 207) was not retroactive, but applied to new leases and to "old" leases upon readjustment. The ten-year production period and revised royalty rates of amended sec. 7 must be imposed on "old" coal leases at readjust-

ment. The legislative history to the 1978 coal leasing revisions (Act of Oct. 30, 1978) discloses that Congress understood and acted on the assumption that the amended sec. 7 royalty rates did apply to all "old" leases upon readjustment.

**OPINION BY OFFICE
OF THE SOLICITOR**

TO: ASSISTANT SECRETARY, LAND AND WATER RESOURCES ASSISTANT SECRETARY, ENERGY AND MINERALS

FROM: SOLICITOR

SUBJECT: WHETHER LEASES ISSUED PRIOR TO AUG. 4, 1976, SUBJECT TO READJUSTMENT AFTER THAT DATE MUST BE READJUSTED TO CONFORM TO THE FEDERAL COAL LEASING AMENDMENTS ACT OF 1976.

The question has repeatedly arisen whether coal leases issued prior to Aug. 4, 1976 ("pre-FCLAA leases") are at readjustment subject to the new requirements that the Federal Coal Leasing Amendments Act of 1976, Pub. L. 94-377 (the "FCLAA"), added to the coal provisions of the Mineral Lands Leasing Act of 1920, 30 U.S.C. § 181 *et seq.* (1976) (the "Act"). The Department decided as a matter of policy in 1976 to readjust pre-FCLAA leases to conform to the provisions of the FCLAA, and the question of whether that policy is legally compelled has not been fully analyzed.

Further analysis confirms our

*Not in chronological order.

prior conclusion:¹ when the Secretary readjusts a pre-FCLAA lease, he must do so in conformity with the Act as amended. Accordingly, pre-FCLAA leases must be readjusted to contain the terms which the Act mandates for all leases, including the 12½ percent minimum production royalty for surface mined coal and the ten-year production requirement. Those lessees that find the FCLAA royalty rate requirements onerous may seek relief on a case-by-case basis under sec. 39 of the Act, 30 U.S.C. § 209 (1976).

I. READJUSTMENT UNDER THE 1920 ACT PRIOR TO THE FCLAA.

A. Indeterminate Leases And Twenty-Year Leases Compared.

Sec. 7 of the Act, 30 U.S.C. § 207 (1970), originally read in part:

[Coal] Leases shall be for *indeterminate* periods upon condition . . . that at the end of each twenty-year period succeeding the date of the lease such readjustment of terms and conditions may be made as the Secretary may determine, *unless otherwise provided by law at the time of expiration of such periods.* (Italics added.)

The 1920 Act also provided that phosphate and oil shale would be leased for an indeterminate term

subject to periodic readjustment.² Oil and gas and sodium were to be leased for twenty years, with the lessee having a preferential right to renew for successive periods of ten years.³

Why did Congress choose to lease coal for an indeterminate term subject to readjustment of all terms and conditions at twenty-year intervals instead of for a twenty-year term with a preferential right to renew? In the legislative history of the 1920 Act, lease renewal was frequently equated with lease readjustment. *E.g.* 56 Cong. Rec. 7045, 7046 (May 24, 1918) (Remarks of Rep. Robbin). Nonetheless, Congress employed different language in sec. 7 to describe the term of a coal lease than it did in sec. 17 to describe the term of an oil and gas lease.

The legislative history of the 1920 Act suggests that Congress chose indeterminate coal and phosphate leases and twenty-year oil and gas leases primarily to satisfy what Congress perceived to be a greater need for reliability of investment in coal mines and phosphate plants. *See* 51 Cong. Rec. 14945 (Sept. 10, 1914) (Remarks of Rep. Thomson

¹ Solicitor's Opinion, M-36920, 87 I.D. 69 (1979); Memorandum dated Feb. 16, 1979 to Assistant Secretary, Land and Water Resources from Associate Solicitor, Energy and Resources, "Readjustment of coal lease royalties"; Letter dated Sept. 12, 1978, to Senator Henry Jackson from Frederick N. Ferguson, Deputy Solicitor; Memorandum dated May 2, 1978 to Chris Farrand, Deputy Under Secretary, from the Deputy Solicitor, "Royalty terms upon readjustment of coal leases."

² Sec. 10 of the Act, 30 U.S.C. § 212 (1976) (phosphate); sec. 21 of the Act, 30 U.S.C. § 241 (1976) (oil shale). All the terms and conditions of phosphate leases are subject to readjustment at the end of successive twenty-year periods; however, only the royalties of oil shale leases may be readjusted.

³ Sec. 7 of the Act, 41 Stat. 443 (oil and gas); sec. 24 of the Act, 30 U.S.C. § 262 (1976) (sodium). Competitive oil and gas leases are currently issued for a primary term of five years and noncompetitive leases for a primary term of ten years, and so long thereafter the primary term as oil and gas is produced in paying quantities. 30 U.S.C. § 226 (1976).

ACT OF 1976

September 17, 1981

of Ill.); Letter dated Sept. 12, 1914 from George H. Ashley, Acting Director of the U.S. Geological Survey to Rep. Scott Ferris, Chairman of the House Committee on Public Lands. Both readjustable leases in the 1920 Act allow the lessee to continue operations until the mineral is extracted. The critical difference in the reliability of investment provided by an indeterminate and a determinate lease is in the termination procedures. With an indeterminate lease, if a lessee fails to comply with a condition the lessor must go to court in order to end the lease. Sec. 31(a) of the Act, 30 U.S.C. § 188(a) (1976). But if a lessee fails to comply with the terms and conditions of a twenty-year lease, the lessor can end the lease simply by notifying the lessee at the end of the lease term. This difference provides the added security that Congress sought for coal and phosphate leases by assuring lessees their leases can be terminated only by judicial order.

B. The Scope Of The Secretary's Discretion To Readjust Under The 1920 Act.

The phrase "unless otherwise provided by law" in former sec. 7 gave the Secretary discretion to readjust lease terms as he deemed proper, unless at the expiration of the twenty-year period the law specifically directed that a term be included in the lease. If at the end of the twenty-

year period the law directed that a lease contain a new provision, sec. 7 compelled the Secretary to readjust the lease.

Sec. 7, then as now, required certain provisions be included in all coal leases. Nothing in the 1920 Act or its legislative history suggests that readjustment may be contrary to mandatory lease terms. *See* 56 Cong. Rec. 7047 (May 24, 1918) (Remarks of Rep. Mondell). Thus, under former sec. 7, readjustment could not reduce the royalty to less than five cents per ton, since the Act prevented a royalty of less than five cents per ton. 30 U.S.C. § 207 (1970). Similarly, readjustment could neither eliminate the diligent development and continued operation requirements nor delete those lease provisions required by sec. 30 of the Act, 30 U.S.C. § 187 (Supp. III 1979).

Former sec. 7 provides no guidance as to the Secretary's present readjustment authority since it was repealed by the FCLAA without any preservation, grandfather, or "subject to" clause. The former provision for a minimum five cents per ton royalty no longer exists and can no longer govern pre-FCLAA leases. *See* Sutherland, 1A *Statutes and Statutory Construction*, 236 (4th ed. 1972).⁴ Sec. 7 as amended

⁴ While sec. 6 of the FCLAA eliminated the provision "unless otherwise provided by law at the time of expiration of such periods" from sec. 7 of the Act, the former wording of

by the FCLAA now provides authority for readjustment.

II. READJUSTMENT UNDER THE ACT AS AMENDED BY THE FCLAA.

A. Amended Readjustment Provision.

Sec. 6 of the FCLAA amended sec. 7 of the Act, 30 U.S.C. § 207 (1976), to read in part:

Such rentals and royalties and other terms and conditions of the lease will be *subject to readjustment* at the end of its primary term of twenty years and at the end of each ten-year period thereafter if the lease is extended. (*Italics added.*)

The legislative history of the FCLAA does not specifically address the altered readjustment provision except to note that the readjustment interval is changed from twenty to ten years. The legislative history simply indicates that this change was made so that the Secretary could readjust terms to reflect more closely changing market conditions. *See* H.R. Rept. No. 94-681, 94th Cong., 1st Sess. 18 (1975).⁵

sec. 7 is preserved in the leases issued prior to the FCLAA. *E.g.* Form 4-696 (Dec. 1958). Since the lease readjustment term tracks former sec. 7, the pre-FCLAA lease itself requires that the readjusted terms conform to the law in existence at the end of the 20-year term—in other words, conform to the FCLAA. But since the provision “unless otherwise provided by law” is no longer statutorily required, the United States and the lessee could agree to ignore or revoke it. *See Welner v. Compagnie Generale Transatlantique*, 61 F. 2d 893, 895 (2d Cir. 1932); *Littell v. Morton*, 369 F. Supp. 411, 422 (D. Md. 1974), *aff’d* 519 F. 2d 1399 (4th Cir. 1975).

⁵ H.R. 3265, which was the subject of House hearings, provided for readjustment at the

Nonetheless, as it did prior to the FCLAA, the Act makes certain lease terms mandatory, such as a 12½ percent royalty for surface mined coal. At least for leases issued after Aug. 4, 1976, the Secretary may not later readjust to delete or alter the mandatory lease terms. For example, the Secretary may neither readjust the royalty of a post-FCLAA lease to less than 12½ percent of the value of surface mined coal nor may the Secretary readjust to eliminate the terms and conditions required by sec. 30 of the Act, 30 U.S.C. § 187 (Supp. III 1979).

A comparison of sec. 7 before and after the enactment of the FCLAA shows the change in wording did not change the restraints on the Secretary's discretion to formulate readjusted lease terms. While pre-FCLAA sec. 7 expressly limited the Secretary's readjustment determinations by the phrase “unless otherwise provided by law,” that phrase is implicit in amended sec. 7, since the Secretary cannot act—or readjust—contrary to law. The question remains whether readjustment of pre-FCLAA leases must be in accordance with the requirements the FCLAA added to the Act.

end of a primary lease term of ten years and at five year intervals thereafter. The Department of the Interior commented that such frequent readjustment would disrupt economic planning, discourage production and create an unnecessary administrative burden. Instead, the Department urged that the primary term be increased to twenty years, with readjustment periods each ten years thereafter, which was done. H.R. Rept. No. 94-681, 94th Cong., 1st Sess. 32 (1975).

ACT OF 1976
September 17, 1981

*B. Application of the FCLAA to
Pre-FCLAA Leases.*

*1. Legislative History of the
FCLAA.*

The legislative history of the FCLAA sheds little light on whether pre-FCLAA leases must be readjusted to conform with the FCLAA since Congress generally failed to distinguish between the FCLAA's effect on existing leases that become subject to readjustment from those in the middle of a twenty-year period. Congress intended that the FCLAA not affect pre-FCLAA leases before those leases become subject to readjustment, with one exception—sec. 3 of the FCLAA, 30 U.S.C. § 201(a)(2)(A) (1976). That exception provides that a lessee who holds a non-producing lease, including pre-FCLAA leases, for ten years after the enactment of the FCLAA may not be issued new federal leases. *See* H.R. Rept. No. 94-681, 94th Cong., 1st Sess. 15 (1975).

Rep. Mink, Chairwoman of the House Subcommittee on Mines and Mining, summarized the effect of the FCLAA on pre-FCLAA leases:

The 533 existing Federal leases would be unaffected by the bill *except to the extent its provisions are made applicable upon the periodic ten [sic] year readjustment of the lease terms or upon the inclusion of an existing lease in a logical mining unit.* The only other sanction imposed on existing leases would be a prohibition on leasing any additional Fed-

eral tracts to an entity which holds a nonproductive lease [ten] years after the date of enactment of this bill.

122 Cong. Rec. 489 (1976).⁶ Rep. Mink's use of "except to the extent" in conjunction with readjustment may be read in several ways. First, it could indicate she thought the Secretary has the authority to readjust pre-FCLAA leases but is not compelled to exercise that authority. Second, "to the extent" may also mean that some, but not all, of the provisions of the FCLAA must govern the readjustment of the 533 pre-FCLAA leases. Rep. Mink used the phrase "except to the extent" in a sentence addressing the two events which make at least some of the FCLAA provisions applicable to pre-FCLAA leases: the inclusion of pre-FCLAA leases in logical mining units, and readjustment. Sec. 5 requires that a pre-FCLAA lease included in a logical mining unit become subject to other provisions of the FCLAA. As used in connection with logical mining units, then, Rep. Mink's "except to the extent" did not indicate that the Secretary has discretion to impose FCLAA requirements on pre-FCLAA leases consolidated into a logical mining unit, but rather that only part of the FCLAA requirements were mandatory for such leases. The

⁶ By floor amendment the fifteen year provision was changed to ten years. 122 Cong. Rec. 504 (Jan. 21, 1976). Prior to the enactment of the FCLAA, the leases had twenty-year readjustment periods.

same understanding may explain her use of the phrase in speaking of readjustment as well. Thus, those provisions of the FCLAA affecting issuance of leases could not apply to pre-FCLAA leases at readjustment. But provisions imposing mandatory requirements on all leases govern the readjustment of pre-FCLAA leases.

2. Readjusted pre-FCLAA lease becomes new contracts governed by the FCLAA.

The legislative history confirms that the FCLAA applies only prospectively and does not alter leases issued prior to Aug. 4, 1976 before those leases become subject to readjustment. 122 Cong. Rec. 489 (1976) (Remarks of Rep. Mink). But the FCLAA does affect conduct, events and circumstances which occur after its enactment. Sutherland, 2 *Statutes and Statutory Construction*, 245 (4th ed. 1973). The lessee of a pre-FCLAA lease has no vested rights to the indefinite continuation of existing lease terms, since *all* the terms and conditions were prescribed subject to periodic readjustment. The legislative histories of the 1976 and 1978 Acts, as discussed, indicate that readjustment of a pre-FCLAA lease after Aug. 4, 1976 is, like issuance of a new lease, an event which the FCLAA governs.

Lease readjustment is like a lease renewal accompanied by a revision of lease terms. The exercise of an option to "renew" a contract for a further term is generally held to

produce a new contract.⁷ This is particularly true if the renewal involves the substitution of new terms rather than the retention of the existing terms. One court stated that to renew means to "begin again" or to "continue in force" the old contract. *East Bay Union of Machinists, Local 1304 v. Fibreboard Paper Products Corp.*, 285 F. Supp. 282, 287 (N.D. Cal. 1968), *aff'd*, 435 F.2d 556 (9th Cir. 1970).⁸ In *Wyodak Chemical Co. v. Board of Land Comm'rs*, 51 Wyo. 265, 65 P.2d 1103, 1105 (Wyo. 1937), the Supreme Court of Wyoming held a lease issued for a term of ten years with a preferential right to renew for successive ten-year periods meant that:

The old lessee must meet all reasonable terms and conditions which may be laid down from time to time by the board, and which other persons are willing to meet, thus making the lease *not a continuing one . . . but in fact a new one.* (Italics added.)

Courts have similarly held statutes enacted after the parties have entered into a contract but before the contract is renewed applies to that contract. *See Wright v. Paine*, 289 F.2d 766, 769 (D.C. Cir. 1961) (federal oil and gas lease); *United States v. Ohio Oil Co.*, 163 F.2d 633, 638-41 (10th Cir. 1947)

⁷ *E.g. Hennigan v. Chargers Football Co.*, 431 F.2d 308 (5th Cir. 1970). Renewals have been distinguished from extensions of a contract, which is a mere extension of the original term rather than a new contract, although the two terms can be synonymous. *Haddad v. Tyler Production Credit Ass'n*, 212 S.W. 2d 1006, 1008 (Tex. Civ. App. 1948).

⁸ *Accord, Seymour v. Coughlin*, 609 F.2d 346, 351 (9th Cir. 1979); *cert. den.* 446 U.S. 957 (1980); *Hauben v. Harmon*, 605 F.2d 920, 925 n. 2 (5th Cir. 1979).

cert. den. 333 U.S. 833 (1948) (same).⁹ The implication of the contract renewal cases for coal lease readjustments is that readjustment produces a new contract to which the law existing at the time of readjustment applies.

That the FCLAA applies to pre-FCLAA leases at readjustment is clear. Sec. 6 of the FCLAA amended Sec. 7 of the Act without any grandfather clause or exemptions. Unless the FCLAA applies, pre-FCLAA leases are no longer subject to statutory minimum royalty and rental rates and the Secretary would be free to eliminate royalty and rental obligations from a readjusted lease. The Secretary could even liberate a lease from the conditions of diligent development and continued operation. Given the strong expressions in the legislative history of the FCLAA of Congress's desire to exact a fair return

and ensure that leases are developed and not held for speculative purposes, it is not likely that Congress intended to free the Secretary from any statutory restraints in readjusting pre-FCLAA leases. Since former Sec. 7 no longer exists to govern the exercise of the Secretary's readjustment authority, the only alternative is that the Act as amended by the FCLAA controls.

3. Lease terms made mandatory by the FCLAA.

The FCLAA amended the Act to require new mandatory lease terms, most notably a minimum 12½ percent production royalty rate for surface mined coal and a ten-year production requirement. Sec. 6 of the FCLAA, amending sec. 7 of the Act, 30 U.S.C. § 207 (1976). The 12½ percent minimum royalty rate is by its terms absolute; it does not read "a lease issued after August 4, 1976 shall require", and I conclude that the Secretary must readjust the royalty rate of pre-FCLAA leases to not less than 12½ percent the value of surface mined coal. Statements regarding application of the 12½ percent royalty at readjustment in the legislative history of the Act of Oct. 30, 1978, Pub. L. No. 95-554, 92 Stat. 207 ("1978 Act") discussed below, support this conclusion.

Sec. 6 of the FCLAA also amended sec. 7 of the Act, 30 U.S.C.

⁹ See also *Reinders Brothers, Inc. v. Rain Bird Eastern Sales Corp.*, 627 F.2d 44, 49 (7th Cir. 1980) (statute prohibiting termination of franchise contract without good cause applies to renewal of existing franchise agreements); *Consumers Oil Corp. v. Phillips Petroleum Co.*, 438 F.2d 816, 818 (3rd Cir. 1973) (same); statute expressly applies to renewal or amendment of existing franchises). Cf. *Mimi Corp. v. Hill*, 310 F.2d 467, 470 (10th Cir. 1962) (assignor of federal oil and gas lease retains overriding royalty interest in "new" preference lease issued to assignee under Mineral Leasing Act); *Gibbons v. Pan American Petroleum Corp.*, 262 F.2d 852, 855 (10th Cir. 1958) (distinguishing effect of amendment to Mineral Leasing Act on automatic extension of oil and gas leases by operation of law and their extension upon application, which is "akin to the issuance of new leases.")

§ 207, to provide that "[a]ny lease which is not producing in commercial quantities at the end of ten years shall be terminated." The statute neither specifies when the period begins nor expressly limits the requirement to leases issued after Aug. 4, 1976. Both Senator Metcalf and Rep. Mink stated that the ten-year period runs from lease "issuance". 122 Cong. Rec. 19379 (June 21, 1976);¹⁰ 122 Cong. Rec. 25456 (Aug. 4, 1976)¹¹ Readjustments were not at issue when they spoke, however. The House report states that leases existing at the enactment of the FCLAA would be exempt from the ten-year production requirement "except to the extent it might be made applicable upon readjustment of lease terms." H.R. Rept. No. 94-681 at 15. Immediately before the House voted to override President Ford's veto of the bill, Rep. Baucus stated in support of such a vote that, contrary to the veto message:

S. 391 was carefully drafted to increase coal production from Federal leases by requiring production from leases within 10 years. This requirement is in S. 391 because only 59 of the 534 [sic] existing Federal leases have ever produced coal. Indeed 239 of 467 western leases have no

production plans prior to 1990. Instead, most existing leases are held for speculative purposes—to be developed when the price for coal is right—for the coal companies. Profits from rising coal prices, therefore, go not to the Federal Government which owns the coal, but to the lessee. As trustee of the Federal coal lands, Congress must put an end to this. S. 391 does, and yet so reasonable are its provisions that the 534 [sic] existing leases will not have to produce coal until *10 years after the next scheduled readjustment of lease terms, which in many cases will not be for 15 or 20 years. This can hardly be termed unfair.*

122 Cong. Rec. 25464 (Aug. 4, 1976).

Rep. Mink and Senator Metcalf did not state that the ten-year period runs exclusively from lease issuance; readjustment was not an issue in the immediate context of their statements. The House report is ambiguous. Thus, Rep. Baucus's remark that pre-FCLAA leases would have ten years from readjustment to produce coal in commercial quantities is not inconsistent with the statements that leases must produce within ten years of lease issuance. Further, it is the only unambiguous statement how and whether the ten-year production requirement applies at the readjustment of pre-FCLAA leases. Because of Rep. Baucus' comment, and the express language of the Act that "[a]ny lease" not producing in ten years shall be terminated, I conclude that the ten-year production requirement is also a mandatory term that applies to pre-FCLAA leases at readjustment.

¹⁰ Senator Metcalf submitted a summary of the major differences between the House and Senate bill, which stated that while the Senate bill required development of the lease in seven years the House bill provided that any lease not producing at the end of ten years from the issuance of the lease shall be terminated.

¹¹ In urging the override of President Ford's veto Rep. Mink stated that the bill would "enact Interior's regulatory provisions requiring production from coal leases within 10 years of lease issuance."

ACT OF 1976
September 17, 1981

C. 1978 Act

The legislative history of the 1978 Act supports my conclusions about Congress' understanding of how readjustment works under the FCLAA; an understanding which is entitled to consideration as an expert opinion regarding the proper interpretation of the FCLAA. Sutherland, 2A *Statutes and Statutory Construction*, 966 (4th ed. 1972). See *Bobsee Corp. v. United States*, 411 F.2d 231 (5th Cir. 1969). The 1978 Act, among other things, amended sec. 3 of the Act, 30 U.S.C. § 203 (Supp. III 1979), which authorizes the modification of existing leases to add up to 160 acres of contiguous lands. As amended in 1976, sec. 3 read in part:

The Secretary shall prescribe terms and conditions which shall be consistent with this chapter and applicable to all of the acreage in such modified lease.

Pub. L. 94-377, § 13(b); 90 Stat. 1090. The House report on what became the 1978 Act noted that lessees were reluctant to apply for modifications because "they would be faced with having to accept the more stringent requirements of the 1975 Act [the FCLAA] for the entire lease area." H.R. Rept. No. 95-1635, 95th Cong., 1st Sess. 3 (1978). Consequently, the 1978 Act altered the modification provision by adding after the sentence quoted above:

except that nothing in this section shall require the Secretary to apply the pro-

duction or mining plan requirements of section 202a(2) [40-year mine out] and 207(c) [3-year operations and reclamation plan submittal] of this title. The minimum royalty provisions of section 207(a) [12½ percent] of this title shall not apply to any lands covered by this modified lease prior to a modification *until the term of the original lease or extension thereof which become effective prior to the effective date of this Act has expired.* (Italics added.)

In 1978 the readjustment provision stated that leases "will be subject to readjustment at the end of its primary term of twenty years and at the end of each ten-year period thereafter if the lease is extended." Thus, the 1978 amendment to 30 U.S.C. § 203 means that the 12½ percent minimum royalty "shall not apply to any lands covered by this modified lease prior to a modification until" the lease is readjusted. The Senate report on S. 3189 noted while discussing sec. 3 that:

All leases would of course be subject to the provisions of the 1976 amendments at the expiration of their original lease term. Section 3 does not affect this eventuality in any way. It only addresses changes in a lease which would result from modification. (Italics added.)

S. Rept. No. 95-1169, 95th Cong., 2d Sess. 7 (1978). See also H.R. Rept. No. 95-1635, 95th Cong., 1st Sess. 3 (1978).

Senator Melcher proposed a floor amendment to S. 3189 which would have required that all leases that had become subject to readjustment

prior to the enactment of the 1976 Act be readjusted to conform with the minimum 12½ percent royalty.¹² Cong. Rec. S15613 (daily ed., Sept. 20, 1978). With respect to pre-FCLAA leases that become subject to readjustment *after* Aug. 4, 1976, Senator Melcher stated:

The usual terms of the coal lease, I think in all cases, was that every 20 years they would have to be renewed. The effect of the bill passed in 1976 was that, as those leases became renewable at the end of 20 years, the terms of the lease would be changed to 12.5 percent royalty.

Id. It follows that at readjustment, the lease must be readjusted to comply with the minimum royalty. Since neither 30 U.S.C. § 203 nor any other provision of the Act provides a basis for treating modified pre-FCLAA leases differently from other pre-FCLAA leases *at readjustment*, I conclude that Congress in 1978 understood, and legislated on the understanding, that all pre-FCLAA leases that become subject to readjustment after Aug. 4, 1976 must be readjusted to comply with the minimum production royalty provision of sec. 7(a), 30 U.S.C. § 207(a) (1976).

CONCLUSION

After reassessment of our prior advice that the 12½ percent minimum royalty and other provisions

¹² The amendment was adopted and passed by the Senate. Cong. Rec. S15617 (daily ed., Sept. 20, 1978). The amendment, however, was subsequently dropped without explanation when the Senate substituted the House bill, H. R. 13553, for its bill. H. R. 13553 contained no provision comparable to the Melcher amendment.

of the FCLAA apply to leases issued prior to Aug. 4, 1976 when they are thereafter readjusted, I affirm our original conclusions. Analysis of the legislative history of the Mineral Leasing Lands Act and its amendments in 1976 and 1978, and the import of lease readjustment leads to the conclusion that the Act as amended by the FCLAA governs the terms and conditions that the Secretary may impose when he readjusts pre-FCLAA leases. The only question then is whether Congress intended that particular provisions of the FCLAA apply to all leases, or only to leases issued after Aug. 4, 1976. From the express language of the Act and from the legislative history, I conclude that the minimum 12½ percent royalty and the ten-year production requirement are mandatory terms for all leases, including pre-FCLAA leases at readjustment.

WILLIAM H. COLDIRON
Solicitor

DOMESTIC PETROLEUM CORP.

59 IBLA 370

Decided November 9, 1981

Appeal from decision of New Mexico State Office, Bureau of Land Management, holding oil and gas lease NM 24455-A to have terminated by operation of law.

Affirmed.

1. Oil and Gas Leases: Reinstatement—
Oil and Gas Leases: Termination

November 9, 1981

A lease terminated automatically for untimely payment of annual rental may be reinstated only upon proof that reasonable diligence was exercised, or that the failure to make timely payment was "justifiable." In the absence of such proof, a petition for reinstatement is properly denied.

2. Oil and Gas Leases: Reinstatement— Oil and Gas Leases: Termination

A late rental payment may be justifiable if it is demonstrated that at or near the anniversary date there existed sufficiently extenuating circumstances outside the lessee's control which affected its actions in paying the rental fee. However, where the lessee has entrusted payment to an employee who is hospitalized because of an injury and another employee who assumes the injured employee's responsibilities fails to make timely payment, the injury of the employee is not the proximate cause of the late payment.

APPEARANCES: Debra R. Lappin, Esq., Robert C. Hawley, Esq., Gretchen VanderWerf, Esq., Susan L. Perkins, Esq., Denver, Colorado, for appellant; Robert Uram, Esq., Office of the Solicitor, Department of the Interior, for the Bureau of Land Management.

OPINION BY ADMINISTRATIVE JUDGE HARRIS

INTERIOR BOARD OF LAND APPEALS

Oil and gas lease NM 24455-A was issued on Mar. 1, 1975. The annual rental for the seventh lease year was due on Mar. 2, 1981. The New Mexico State Office, Bureau of Land Management (BLM), received the rental payment on Mar. 20, 1981,

on behalf of Dome Petroleum Corp. (Dome). On Mar. 24, 1981, BLM received a letter from Dome explaining as follows:

Our computer inadvertently omitted one tract under this lease, thereby incorrectly reducing the rental. This error was noted by our Lease Rental Clerk and the check put to the side so that a manual check could be written for the correct amount. Unfortunately, before this could be done, the Lease Rental Clerk broke her leg in two places, as well as her arm. Thus traumatized and hospitalized, she was unable to relay to anyone the action required on the captioned lease.

By letter dated May 7, 1981, BLM's Chief, Oil and Gas Section, notified Dome that its oil and gas lease NM 24455-A had terminated on Mar. 1, 1981, for failure to pay the annual rental on or before Mar. 1, 1981.¹

On June 1, 1981, the New Mexico State Office issued a formal decision holding that the lease terminated on Mar. 1, 1981 (*see n.1*), pursuant to 30 U.S.C. § 188 (1976), because the annual rental which was due on Mar. 1, 1981, was not received until Mar. 20, 1981. The decision stated that under 43 CFR 3108.2-1(c) the lessee was allowed 15 days from receipt of the decision within which to file a petition for reinstatement of the lease and to submit a showing that failure to pay the rental on or before the anniversary date was justifiable or not due to lack of reasonable diligence on the part of the lessee.

¹ The correct due date for the rental payment as subsequently recognized by BLM was Monday, Mar. 2, 1981, as Mar. 1, 1981, was a Sunday.

In its notice of appeal and statement of reasons filed June 8, 1981,² appellant contends, *inter alia*, that BLM's decision to terminate the lease should be reversed because appellant paid the rental within 20 days of the due date³ and appellant's failure to pay timely the rental was not due to a lack of reasonable diligence, but rather to excusable clerical error which reasonably could not have been prevented by Dome.

Appellant explained the events which led to its failure to make a timely rental payment as follows:

During the week ending February 13, 1981, Frances Jones, Dome's Lease Rental Analyst, discovered that the computer check issued to pay the delay rentals on the subject lease was for \$240, rather than the correct amount of \$320. Ms. Jones removed the check from the computerized system and flagged the Lease record so that she could request a new delay rental check in the correct amount. Over the holiday weekend which followed, Ms. Jones was seriously injured in an accident. The following week Ms. Jones underwent surgery and was incapacitated until late March, 1981. Diane Tower, who assumed Ms. Jones' responsibilities, did not discover the flag on the Lease record until mid-March, 1981, because the flag had been accidentally tucked into the record book itself.

² Appellant did not file a petition for reinstatement of the lease. Its notice of appeal was directed to BLM's May 7, 1981, letter. However, its letter received by BLM on Mar. 24, 1981, was clearly couched in terms of a petition for reinstatement. Therefore, the May 7, 1981, letter may be considered the denial of that "petition." Dome filed a timely appeal of that denial.

³ In its letter of May 7, 1981, BLM had mistakenly stated that the rental was not received until Mar. 24, 1981. The rental was actually received by BLM on Mar. 20, 1981.

Appellant submitted affidavits of Frances Jones and Diane Tower in support of its explanation of the facts.

In its answer, BLM states that the lease terminated by operation of law because the rent was not paid on time. BLM contends that the lessee does not qualify for reinstatement because it did not show that the failure to make timely payment was either justifiable or not due to a lack of reasonable diligence. BLM states that the failure to pay annual rental on time is justifiable only if it is caused by circumstances beyond the control of the lessee. BLM asserts that the failure to pay in this case is attributable to events within Dome's control and that the record does not support a finding that the injury to Ms. Jones caused the annual rental to be paid untimely.

[1] An oil and gas lease on which there is no well capable of producing oil and gas in paying quantities automatically terminates if the lessee fails to pay the annual rental on or before the anniversary date of the lease. 30 U.S.C. § 188(b) (1976); 43 CFR 3108.2-1(a). A terminated lease can be reinstated only if, among other requirements, the lessee shows that the failure to not due to lack of reasonable diligence. 30 U.S.C. § 188(c) (1976); 43 CFR 3108.2-1(c).

Appellant has made no allegation that payment of the rental was made on or before the anniversary date of the lease. A check for the rental was hand-delivered to the BLM office on Mar. 20, 1981. De-

livering the payment to BLM after it is due does not constitute reasonable diligence. See 43 CFR 3108.2-1 (a); *Melbourne Concept Profit Sharing Trust*, 46 IBLA 87 (1980); *Gilbert Mark Castillo*, 36 IBLA 32 (1978).

[2] A failure to make timely payment may be justifiable, however, if it is demonstrated that at or near the anniversary date there existed sufficiently extenuating circumstances outside the lessee's control which affected its actions in paying the rental fee. *International Resource Enterprises, Inc.*, 55 IBLA 386 (1981); See *Ramoco, Inc. v. Andrus*, 649 F.2d 814 (10th Cir. 1981); see also *Martin Mattler*, 53 IBLA 323, 88 I.D. 420 (1981); *Bernard W. Crowe*, 40 IBLA 114 (1979). Proximity in time and casualty of the unfavorable occurrence are essential elements. *Earl Chancellor*, 24 IBLA 121 (1976). Accordingly, we are most concerned with circumstances affecting appellant at or near the anniversary date of the lease. Negligence, forgetfulness, or inadvertence do not justify failure to pay timely since they are events within the lessee's control. *Jan R. Christensen*, 15 IBLA 72, 75 (1974).

We do not believe that appellant has provided adequate justification for the late payment. It is true that circumstances adversely affecting an employee entrusted with payment of the annual rental may justify a late payment. See *David Kirkland*, 19 IBLA 305 (1975) (secretary solely responsible for personal accounts in

hospital under sedatives on and before the due date). However, in her affidavit (pages 1-2), Ms. Tower stated that she assumed the responsibilities of Frances Jones on Feb. 17, 1981; that she requested checks in the correct amount for those leases which were flagged and which had not been handled earlier by Frances Jones; that by Feb. 20, 1981, all of the checks which were flagged had been issued in the proper amount and sent for payment of March rentals; that the flag for the lease in question had been accidentally tucked into a book and was not readily visible; and that the check for lease NM 24455-A was not discovered until sometime in March.⁴ It is apparent from Ms.

⁴ There is a certain inconsistency in the affidavits of Ms. Jones and Ms. Tower. Ms. Jones explained her procedures prior to her accident as follows:

"In February, 1981, I was working on paying the delay rentals due on all of Dome's leases for March, 1981. The checks came out of the computer during the first week in February. My analysis of the computerprinted delay rental checks revealed that approximately one dozen checks were incorrect. One of these checks was the delay rental check on Federal Lease No. NM-24455-A. Dome Petroleum Corp.'s Lease No. NM-24455-A covered 640 acres. The lease annual rentals are 50 cents per acre. Dome had assigned operating rights in one quarter section, 160 acres. Because of this, the computer had made the check out for \$240.00; however, the amount should have been \$320.00. On this particular check, as well as the remaining ten or twelve checks, I placed a yellow self-adhesive tab on the rental book page on which this lease was described. This was my reminder system to request a manual check and personally see to proper posting of the delay rental check. The notation that I made to myself on the delay rental check for Federal Lease No. NM-24455-A was made on or about February 13, 1981, which was a Friday. The following weekend was a long weekend due to a holiday on February 16, 1981, which was a Monday. On Friday, February 13,

—Continued

Tower's statement that other checks were issued in the normal course of business, despite Ms. Jones' accident. Therefore, the proximate cause of the failure to make timely payment for the lease in this case was the fact that the flag had been accidentally tucked into the book, rather than the injury to Ms. Jones. Ms. Jones stated in her affidavit at page 3:

In my opinion, the failure of Diane Tower to catch this one payment was completely inadvertent and due entirely to the fact that the flag which I had placed in the book for my reference had been accidentally tucked in and was not obvious to anyone looking at the flagged pages of the books.

The Board has held that mere inadvertence or negligence of the lessee's agent or employee is not sufficient justification for reinstatement. *Phillips Petroleum Co.*, 29 IBLA 114 (1977); *Serio Exploration Co.*, 26 IBLA 106 (1976); *Samuel J. Testagrossa*, 25 IBLA 64 (1976). In addition, the complexities of appellant's business operations do not

I manually requested the checks that I had not been able to mail out during that work-week to insure that proper payment was made of all delay rentals. Under usual procedure, the check requests would be issued and back to me within three days and the mailing of the delay rental checks would occur no later than the 19th or 20th of the month, which is substantial time for those checks to be received by the lessors. (Italics added.)

Therefore, it would appear from her affidavit that she requested new checks for all the incorrect ones on February 13th, prior to her accident. However, Ms. Tower stated in her affidavit: "As first priority, I went through the flags placed on lease delay rentals, the amounts of which were incorrect. I requested checks in the correct amount for those leases which were flagged and which had not been handled earlier by Frances Jones." Apparently, based on Ms. Tower's affidavit, Ms. Jones did not request new checks for all the leases.

make its actions justifiable when they would not be so if committed by an individual lessee. *Fuel Resources Development Co.*, 43 IBLA 19, 23 (1979); see *Serio Exploration Co.*, *supra* at 108; *James Donoghue*, 25 IBLA 280, 281 (1976); *Monturah Co.*, 10 IBLA 347, 348 (1973), *dismissed without prejudice sub nom. Pashayan v. Morton*, No. F-74-5-Civ. (E.D. Cal., Apr. 11, 1974).

Given these facts, we cannot find that the failure to make a timely rental payment was justifiable.

It is not necessary to consider appellant's other arguments presented on appeal, as the above discussion is dispositive of this case.

Therefore, pursuant to the authority delegated to the Board of Land Appeals by the Secretary of the Interior, 43 CFR 4.1, the decision appealed from is affirmed.

APPEAL OF WASHINGTON STATE UNIVERSITY

IBCA-1467-6-81 and 1469-6-81

Decided November 9, 1981

Contract No. 73-042-0036, Contract
No. 74-042-0008, ACTION.

Denied.

**Contracts: Construction and Operation:
Allowable Costs**

Under two cost-no-fee contracts with an educational institution requiring the work to be done in accordance with appellant's proposals and providing for a fixed-dollar amount to be paid for overhead expenses, the Board denies claimed overhead expenses attributable to the terminated portion of the performance time under the contracts and denies recovery as direct expense the salary of the project director because neither proposal contemplated this expense to be a direct cost.

APPEARANCES: Joseph D. Hamel, Assistant Vice President, Washington State University, Pullman, Washington, for Appellant; Randi J. Greenwald, Government Counsel, ACTION, Washington, D.C., for the Government.

*OPINION BY
ADMINISTRATIVE JUDGE
LYNCH*

*INTERIOR BOARD OF
CONTRACT APPEALS*

Background

Appellant was awarded contracts No. 73-042-0036 on June 27, 1973, and No. 74-042-0008 on Jan. 28, 1974, to provide preservice training for a number of Peace Corps volunteers scheduled to serve in Venezuelan schools. Both contracts reference the appellant's proposal to require the courses to be given as proposed. Contract 0036 was scheduled to be completed on Oct. 22, 1975, and contract 0008 was scheduled to be completed on Nov. 30, 1976. Both contracts were termi-

nated for the convenience of the Government on June 12, 1975. After an audit of the contracts, the contracting officer disallowed \$8,478.20 in claimed costs for indirect costs attributable to the terminated portion of the contracts costs accrued after termination, and the direct salary and fringe benefits for the project director. Appellant contests the disallowed costs.

Indirect Expenses

The contracts provided for the payment of a fixed sum for overhead expenses in four equal installments to be paid on specified dates about 6 months apart. Appellant claims the total fixed amount for overhead expenses. After audit, the contracting officer disallowed \$247 of the \$1,481 provided for overhead expenses under contract 0036 and disallowed \$779 of the \$1,558 provided for overhead expenses on contract 0008. Appellant relies on the schedule provision of the contracts, stating that "the fixed amount for all indirect expenses under this contract shall be paid * * *" on certain listed dates. The Government contends that upon termination of the contracts, the indirect costs as well as the direct costs ceased.

Appellant's contention that the fixed dollar amount of overhead expenses should be paid on both contracts is not supported by any evidence that actual overhead expenses were equal to the amounts provided for in the contracts prior to termination. There is no allegation or

proof that actual overhead expenses were incurred at a rate higher than the 8 percent factor used to compute the amounts provided. The Government allowed recoupment of 85.7 percent of the fixed amount on contract 0036 based upon a determination that this amount of the contract work was expended prior to termination. On contract 0008, the Government allowed 50 percent of the fixed amount even though the rate of expenditures for direct labor indicated only 33.38 percent of the contract work was completed.

The claim for actual direct labor expenditures and the total fixed amounts for overhead disregards the basic relationship between direct and indirect costs. Under the cost reimbursement contracts, the Government agreed to pay for the direct costs incurred and a fixed amount for overhead incurred. In most cases the obligation to pay indirect costs is expressed in terms of a percentage of the direct labor costs because indirect expense is accrued and distributed on the basis of the expenditure of direct labor costs. Here, the amount for overhead expenses were determined in accordance with Federal Procurement Regulations 1.15.3, which regulation is also referenced in the clauses of the contracts entitled "Termination for Convenience of the Government" (Clause 20). The fixed amounts for indirect costs were established in accordance with Attachment G to OMB Circular A-21, "Principles for Determining

Cost Applicable to Grants, Contracts, and Other Agreements with Educational Institutions," which is incorporated in the Federal Procurement Regulations at 41 CFR 1-15.303.

Clause 9 of the contracts, entitled "Allowable Cost and Payment" provides in pertinent part: "For performance of this contract, the Government shall pay to the Contractor the cost thereof." Therefore the Government's obligation to pay is limited to the actual costs incurred. The actual direct costs incurred are more readily determined than the indirect costs. However, whether the indirect costs are distributed on the basis of a percentage of direct costs or by means of a fixed-dollar amount, the obligation to pay for indirect expenditures is limited to actual expenditures. Here, the fixed-dollar amounts for indirect costs were allowed for performance prior to termination in proportion to the amounts expended for direct costs. We find that this method of determining the allowable indirect expenses to be proper and equitable to reimburse appellant for indirect expenses incurred prior to termination.

It is noted that the Government's Answer agrees to allow \$44.20 for telephone charges previously disallowed because they were incurred after the termination date of the contract (0036). The appellant's claim for additional indirect expenses in the amount of \$1,026 is therefore denied.

Salary and Benefits for Project Director

A total of \$7,408 claimed for payments of salary and fringe benefits to the project director was disallowed under the contracts. Appellant claims these costs should be allowed as direct costs because the director has supervisory responsibility for the teacher interns, was involved in the proposal and planning of the project, and participated in all negotiations and project decisions. The Government contends that the cost of the project director is properly an overhead expense because the cost proposals for the two contracts did not list the cost of a project director in the direct cost category. The Government does not contest the close involvement of the project director, Dr. Guzman, in the administration of the contracts. However, it is noted that Dr. Guzman signed the contract proposal and negotiated with the Government for the awards. The Government points out that the proposals allocate all of the budgeted direct costs for named instructors and advisors and specified expenses. Both contracts require the work to be done in accordance with appellant's proposal. It is clear from the proposals that Dr. Guzman did not contemplate his services would be charged directly to the contracts.

Appellant contends that the Government's assignment of a project manager to the contracts indicated the need for a counterpart to be as-

signed by the contractor; that travel to Venezuela by Dr. Guzman was approved by the Government; that there is no indication that the Government considered Dr. Guzman's performance to be less than satisfactory; that Dr. Guzman's efforts were necessary to assure the achievement of the contract objectives; and that the Government endorsed and actively utilized Dr. Guzman in the role of project director. None of these criteria are determinative of the question at issue since they do not address whether Dr. Guzman's salary was properly a direct cost under the contracts. The need for a project director, payment for his travel, his performance, and dealings with him, does not determine whether the salary costs should be charged direct or indirect. Instead, it is the contractor's accounting system and the contract agreements that determine whether a given cost is to be charged direct or indirect.

The appeal file does not disclose whether Dr. Guzman's salary was charged to other contracts as a direct cost, so that consistency or past practices of appellant's accounting system cannot be discerned. However, the proposals referenced in the contracts clearly show that all of the direct costs were allocated to instructors, advisors, and other specified costs without mention of a project director. Appellant does not contend that the plan for performance of the contracts was changed after award to give rise to the need for a project director. The cost pro-

posals indicate that neither party to the contracts contemplated that a project director would be a direct cost under the contracts. Therefore, we find that the salary and benefit costs of a project director were not proper direct cost under the contracts, and the appeals are denied.

STATE OF ALASKA v. JUNEAU
AREA ACTING DIRECTOR, BU-
REAU OF INDIAN AFFAIRS, AND
ARCTIC JOHN ETALOOK

9 IBIA 126

Decided November 9, 1981

Appeal from decision by the Juneau Area Acting Director, Bureau of Indian Affairs, denying appellant easements across an Alaska Native allotment.

Affirmed.

1. Indian Lands: Allotments: Alienation

Where the owner of an Alaska Native allotment notified the Bureau of Indian Affairs that an agreement to alienate part of his allotment had been procured from him by fraud and that he revoked his consent to the use of his land for a road and pipeline by the State of Alaska, the Acting Area Director correctly declined to take action to grant an easement across the allotment to the State for a road and pipeline. Departmental regulations deny the agency authority to per-

mit alienation of part of an Alaska Native allotment subject to restrictions against alienation where the allottee refuses to consent to the alienation, and there is no other provision of law requiring or permitting the alienation.

APPEARANCES. E. John Athens, Jr., Esq., Alaska Attorney General's Office, for appellant State; Robert Thompson, Esq., Office of the Solicitor, Department of the Interior, for appellee Bureau of Indian Affairs; Clem H. Stephenson, Esq., for appellee Arctic John Etalook.

OPINION BY
ADMINISTRATIVE
JUDGE ARNESS

INTERIOR BOARD OF
INDIAN APPEALS

Procedural and Factual
Background

Prior to Mar. 27, 1980, the State of Alaska (appellant) sought an administrative concurrence by the Bureau of Indian Affairs (BIA) in a road and pipeline right-of-way easement agreement executed between appellee Alaska Native allottee Arctic John Etalook and Alyeska Pipeline Service Co. (Alyeska), appellant's predecessor in interest to the road and pipeline. On May 27, 1980, the Juneau Area Acting Director rejected appellant's easement request, for the stated reason that BIA was without authority to grant a road and pipeline right-of-way easement across an Alaska Native allotment without the consent of the allottee. The Acting

November 9, 1981

Area Director found that where the allottee had notified BIA his agreement to grant an easement was procured by fraud and the allottee refused to agree to a grant by BIA of a right-of-way predicated upon his prior agreement, sec. 2 of the Act of Feb. 5, 1948, 62 Stat. 17, 18, 25 U.S.C. § 324 (1976) (all references are to 1976 edition), and Departmental regulation at 25 CFR 161.3 (b), deny BIA authority to approve the easement. Appellant seeks review of that decision.

On July 20, 1971, appellee Etalook applied for a Native homestead allotment pursuant to the Native Allotment Act of May 17, 1906, 34 Stat. 197. In 1974, subsequent to approval of appellee Etalook's allotment application by the Bureau of Land Management (BLM) but before survey of the homestead and granting of the allotment, Alyeska commenced construction of a portion of the Trans Alaska Pipeline and haul road crossing appellee Etalook's allotment. The road and pipeline were built before appellee Etalook's interest in part of the land crossed by the construction project was noticed by the builder.

After the allotment interest of appellee Etalook was recognized by Alyeska, the BIA's Fairbanks Realty Officer met with representatives of Alyeska and appellee Etalook. Several meetings resulted in a right-of-way proposal from Alyeska, said to have been interpreted to appellee Etalook in his native lan-

guage, which he accepted on May 27, 1975. BIA's recorded position concerning the negotiation consisted of a "letter of non-objection" also dated May 27, 1975. This document recited that it did not constitute a formal grant of an easement, which could not occur until appellee Etalook received his allotment, and concluded—"We have no objection at this time to the agreements and permits you submitted. However, this non-objection does not imply approval now and is not to be construed as any intent for approval in the future."

On May 21, 1979, prior to agency action upon a request by the State for easement, appellee Etalook withdrew his consent to all previously executed easements across his property and informed BIA he refused to consent to any other road or pipeline right-of-way easements across his allotment, stating:

Because both the State of Alaska and Alyeska Pipeline Service Company have misrepresented certain facts to me and have fraudulently misinformed me about certain matters connected there with, I hereby withdraw all easements that I have heretofore executed and specifically direct you to withdraw and not to approve any such easements.

Following receipt of appellee Etalook's withdrawal of consent, BIA notified the State it was unable to grant an interest to appellant in those lands described in the May 27, 1975, agreement. Notification of the Acting Area Director's decision was provided to appellant on Mar. 27, 1980.

Contentions of the Parties

Appellant contends, first, that the consent of appellee Etalook was in fact obtained and that the agency is now required under the circumstances of the case to execute the necessary documents to grant the desired easement to the State. Secondly, the State asserts that BIA approval is not needed because appellee Etalook transferred the desired easement prior to allotment, and a sufficient conveyance has already occurred. Appellant relies principally upon a decision by the Interior Board of Land Appeals, *State of Alaska*, 45 IBLA 318 (1980), in support of the position taken.

Appellee Etalook contends, first, that the appeal by the State is not timely, arguing that a final adverse decision was conveyed to the State prior to Mar. 27, 1980. This contention is not supported in the record and, as a factual matter, must be rejected. Appellee's second contention, which meets the appellant's arguments directly, focuses on the series of transactions between appellee Etalook and the appellant's agents, in an effort to find overreaching on the part of the State. To give full consideration to the contentions of appellee Etalook and the State an evidentiary hearing into the events surrounding the construction of the road and pipeline and subsequent negotiations would be required. Under the circumstances of this case, however, the factual issues urged on appeal by these parties are not reached.

The BIA contends that inquiry into the circumstances of the negotiations between the State, appellee Etalook, and Alyeska is not now the proper concern of the Department for the reason that Federal statutes and regulations preclude agency action in this case where an allottee refuses to consent to alienation of part of an Indian allotment which is subject to restrictions against alienation. The BIA takes the position that the State has a remedy in eminent domain proceedings where the merits of the factual positions stated by the State and the landowner may be fully aired. The above positions as briefed by the BIA are adopted by the Board for the following reasons.

Discussion and Decision

Pursuant to the Act of Feb. 5, 1948, 62 Stat. 17, 25 U.S.C. § 323 (1976), the Secretary is empowered to grant easements across Indian trust or restricted lands. This broad grant of authority is limited, however, by sec. 2 of the Act, 25 U.S.C. § 324, which requires the consent of the Indian "owners or owner." The relevant proviso codified at 25 U.S.C. § 324 reads:

Rights-of-way over and across lands of individual Indians may be granted without the consent of the individual Indian owners if (1) the land is owned by more than one person, and the owners or owner of a majority of the interests therein consent to the grant; (2) the whereabouts of the owner of the land or an interest therein are unknown, and the owners or owner of any interests therein whose

November 9, 1981

whereabouts are known, or a majority thereof, consent to the grant; (3) the heirs or devisees of a deceased owner of the land or an interest therein have not been determined, and the Secretary of the Interior finds that the grant will cause no substantial injury to the land or any owner thereof; or (4) the owners of interests in the land are so numerous that the Secretary finds it would be impracticable to obtain their consent, and also finds that the grant will cause no substantial injury to the land or any owner thereof.

Thus, by dispensing with the need for consent in specified instances, sec. 2 implicitly forbids rights-of-way over individual Indian lands absent the Indian owner's consent in all nonspecified instances. *Coast Indian Community v. United States*, 550 F.2d 639, 650 n.25 (Ct. Cl. 1977). Therefore, except for the enumerated exceptions, the authority conferred upon the Secretary to grant easements across individual Indian lands by 25 U.S.C. § 323 is dependent upon the consent of the owner. Appellee Etalook has expressed in writing his refusal to permit an easement across his allotment for the State's road and pipeline.

Additionally, Congress has provided (25 U.S.C. § 323 (1976)) that the Secretary may prescribe conditions necessary to regulate the granting of easements over Indian lands. To implement this statute the Department promulgated 25 CFR 161.3(b), which provides that: "[N]o right-of-way shall be granted over and across any individually owned lands * * * without the prior

written consent of the owner or owners of such lands."

Accordingly, were the Acting Area Director to have granted the request by appellant, such a grant would have violated restrictions mandated by statute and regulation. See *Coast Indian Community v. United States*, above at 650. Since both the Act of Feb. 5, 1948, and the implementing regulation require owner consent as a prerequisite to the grant of easements, the Acting Area Director correctly found that he had no authority to grant road and pipeline easements across appellee Etalook's allotment.

Where Secretarial approval is the last act necessary to bring into effect an agreement between a restricted allottee and a purchaser of an interest in the allottee's land, and the allottee refuses to proceed with the previously concluded bargain, the good faith of the purchaser is of no consequence. *Bacher v. Patencio*, 232 F. Supp. 939, 942 (S.D. Cal. 1964), *aff'd*, 368 F. 2d 1010 (9th Cir. 1966). Therefore, even though appellant claims to have paid fair consideration for appellee Etalook's easement, the transaction may not stand without Secretarial approval.

Trying to find a completed grant of the desired easements, appellant seeks to distinguish between allotments in which legal title is retained by the United States ("trust patent") and those instances where legal title is held by the beneficial owner in a restricted status ("restricted fee"). Relying upon *State*

of *Alaska*, cited above, the argument of the State is that the execution of an easement is, in this case, a mere ministerial act for the Secretary since appellee Etalook is the legal title holder of the allotted lands. There is language in *State of Alaska* which appears at first to support appellant's argument. However, the three member panel of the Board which issued the decision each wrote a separate opinion to reach the result of that case, which was to find that an allotment to an Alaska Native under the 1906 Allotment Act which conflicted with State claims to the same land would not be canceled by the Department under the factual circumstances described. The language seized upon by appellant appears in only one of the three opinions. It is quoted out of context: even in the context of the case where it appears it is clearly dicta to the holding. If anything, the decision in *State of Alaska* supports the action taken by the BIA in the case at hand. The Board of Land Appeals, noting the provisions of 43 CFR 2561.3,¹ recognized that the

owner of any Alaska Native allotment may not convey the land without the Secretary's approval. 45 IBLA 318, 320, 322.

In practice, the Department has always regarded the two types of Indian title—"trust patent" and "restricted fee"—to be entitled to the same protections against alienation. The responsibility to prevent alienation of Indian land without consent of the Indian allottee and the United States cannot be avoided by attempts to create technical distinctions between the two types of Indian title. See Cohen, Handbook of Federal Indian Law at 108-10, 221-27. A distinction such as appellant seeks to make is inconsistent with the clear intent of Congress to restrict the power of an Indian to alienate allotted land, however the title may be characterized.

Appellant and appellee Etalook both attempt to define issues arising from the negotiations of the parties in 1975 as the basis for deciding this appeal; each argues that the other was guilty of some form of overreaching which would be dispositive of the controversy between them. Appellee Etalook, however, on May 21, 1979, divested the BIA of power to grant the easements demanded by appellant. As a consequence, the Board can go no further in review of this matter than to reaffirm the action of the agency which refused to provide administrative approval of the easement agreement dated May 27, 1975.

¹ The definitive regulation on the nature of property interest held by the owner of an allotment obtained under the Alaska Native Allotment Act, the provisions of 43 CFR 2561.3 state:

"(a) Land allotted under the Act is the property of the allottee and his heirs in perpetuity, and is inalienable and nontaxable. However, a native of Alaska who received an allotment under the Act, or his heirs, may with the approval of the Secretary of the Interior or his authorized representative, convey the complete title to the allotted land by deed. The allotment shall thereafter be free of any restrictions against alienation and taxation unless the purchaser is a native of Alaska who the Secretary determines is unable to manage the land without the protection of the United States and the conveyance provides for a continuance of such restrictions.

"(b) Application by an allottee or his heirs

for approval to convey title to land allotted under the Allotment Act shall be filed with the appropriate officer of the Bureau of Indian Affairs."

The State has the power to seek a remedy by action taken under the provisions of 25 U.S.C. § 357 (1976) to condemn the property rights it seeks in appellee Etalook's allotment. *Nicodemus v. Washington Water Power Co.*, 264 F.2d 614 (9th Cir. 1959). In this regard, the Board is advised that such an action has been filed by the State in federal district court for this purpose. (Civ. No. F81-40, U.S.D.C. D. Alaska, filed, Sept. 29, 1981.)

Pursuant to the authority delegated to the Board of Indian Appeals by the Secretary of the Interior, 43 CFR 4.1, the decision of the Acting Area Director dated Mar. 27, 1980, is affirmed. In the absence of the consent of the allottee in this matter, no easement across his restricted lands may be approved by the Secretary.

This decision is final for the Department.

Administrative Judge

SAHARA COAL CO.

3 IBSMA 371

Decided *November 30, 1981*

Petition for discretionary review by Sahara Coal Co. of a Dec. 30, 1980, decision by Administrative Law Judge

Frederick A. Miller in Docket No. IN 0-29-P which sustained the validity of Notice of Violation No. 79-III-009-10 and reduced the assessment of the civil penalty.

Affirmed.

1. Surface Mining Control and Reclamation Act of 1977: Civil Penalties: Hearings Procedure—Surface Mining Control and Reclamation Act of 1977: Notices of Violation: Generally

Where OSM fails to serve permittee with copy of a proposed assessment and of the worksheets showing the computation within 30 days of the issuance of the notice of violation, pursuant to regulation, such failure shall not result in administrative relief since the regulation is directory rather than mandatory.

APPEARANCES: Charles R. Jelliffe, Esq., Jelliffe & Ferrell, Harrisburg, Illinois, for Sahara Coal Co.; Myra Spicker, Esq., Office of the Field Solicitor, Indianapolis, Indiana, Susan A. Shands, Esq., Mark Squillace, Esq., and Marcus P. McGraw, Esq., Assistant Solicitor for Enforcement, Division of Surface Mining, Office of the Solicitor, Washington, D.C., for the Office of Surface Mining Reclamation and Enforcement.

*OPINION BY THE INTERIOR
BOARD OF SURFACE MINING
AND RECLAMATION
APPEALS*

The Board granted a petition for discretionary review submitted by Sahara Coal Co. (Sahara) of a Dec. 30, 1980, adverse decision by the Hearings Division upholding the issuance of Notice of Violation (NOV) No. 79-III-009-10 charg-

ing a failure to pass surface drainage from a disturbed area through a sedimentation pond. The review is limited to whether and how the instant case might be distinguished from *Badger Coal Co.*, 2 IBSMA 147, 87 I.D. 319 (1980). The decision is affirmed.

Background

On Nov. 19, 1979, an Office of Surface Mining Reclamation and Enforcement (OSM) inspector issued NOV No. 79-III-009-10 to Sahara for an alleged violation at its underground mine No. 20 located in Saline County, Illinois. The NOV alleged that Sahara failed to pass surface drainage from a disturbed area through a sedimentation pond in violation of 30 CFR 717.17(a). The violation was terminated on Dec. 31, 1979. On Jan. 7, 1980, 49 days after the NOV was issued, OSM issued a notice of proposed civil penalty assessment of \$1,800 to Sahara for that violation. Sahara filed a petition for review of the proposed penalty assessment with the Hearings Division. At the hearing on Oct. 30, 1980, Sahara moved for dismissal of the NOV on the grounds that OSM had not complied with 30 CFR 723.16(b), which requires that a proposed assessment be issued within 30 days of the issuance of NOV. That motion was overruled.

In his Dec. 30, 1980, decision, the Administrative Law Judge upheld the violation and reduced the penalty from \$1,800 to \$700. Sahara

filed a petition for discretionary review on Jan. 12, 1981. The Board granted Sahara's petition on Feb. 13, 1981, subject to the limitation discussed below.

Discussion and Conclusions

[1] The sole question raised in this review is how the issues here might be distinguished from those in *Badger Coal Co.*, *supra*.¹ In *Badger* we held that the provisions of 30 CFR 723.18(b), requiring an assessment conference to be held within a specified period, are directory, not mandatory, and that anyone desiring to interpose the failure to hold the conference as a bar to an assessment must show actual prejudice.² Sahara has not distinguished the circumstances here from those in *Badger* and it has made no showing of actual prejudice.

Nothing in any of the briefs submitted or through any independent determination indicates that a different application should be made here from the one that was made in *Badger*. Further, no Departmental regulatory action since the issuance of the *Badger* decision suggests that the majority views expressed in that decision should be altered.³

¹ By Board order of Feb. 13, 1981, the petition for discretionary review was granted for the express, limited purpose of demonstrating such distinction.

² There is a factual distinction between *Badger* and this case. *Badger* was concerned with the "shall be held" of 30 CFR 723.18(b). We are here addressing the "shall serve" of 30 CFR 723.16(b). For the purposes of this decision, such a distinction does not make a difference.

³ See 30 CFR 723.17(b); 45 FR 58785 (Sept. 4, 1980).

The decision of the Hearings Division is affirmed.

6 ANCAB 152

Decided *November 30, 1981*

Appeal from the approval on May 8, 1981, of the Alaska State Director, Bureau of Land Management, of a "Plan of Action for Meeting the Requirements of Section 22(k), Alaska Native Claims Settlement Act."

Dismissed.

1. Alaska Native Claims Settlement Act: Alaska Native Claims Appeal Board: Appeals: Jurisdiction

The approval of the Alaska State Director of the Bureau of Land Management of a general plan of action for meeting the requirements of sec. 22(k) of the Alaska Native Claims Settlement Act is not a decision "rendered by Departmental officials in matters relating to land selection arising under the Alaska Native Claims Settlement Act" within the context of 43 CFR 4.1(b)(5), and an appeal from the approval of such a plan must be dismissed by this Board for lack of jurisdiction.

APPEARANCES: Durwood J. Zaelke, Esq., Sierra Club Legal Defense Fund, Inc., for appellants.

**OPINION BY ALASKA
NATIVE CLAIMS APPEAL
BOARD**

On Oct. 5, 1981, the appellants jointly filed a Notice of Appeal from the approval on May 8, 1981, of the Alaska State Director, Bureau of Land Management (BLM), of a "Plan of Action for Meeting the Requirements of Section 22(k), Alaska Native Claims Settlement Act," 85 Stat. 688, *as amended*, 43 U.S.C. §§ 1601-1628 (1976 and Supp. I 1977) (ANCSA). The Plan appears to be an unpublished memorandum of understanding signed by representatives of BLM, the Forest Service, and the State of Alaska for implementing § 22(k) of ANCSA, with emphasis on four general areas of concern regarding forestry practices and coordination between Native corporations and the State and Federal governments. Sec. 22(k), as codified at 43 U.S.C. § 1621(k), provides:

Any patents to lands under this chapter which are located within the boundaries of a national forest shall contain such conditions as the Secretary deems necessary to assure that:

(1) the sale of any timber from such lands shall, for a period of five years, be subject to the same restrictions relating to the export of timber from the United States as are applicable to national forest lands in Alaska under rules and regulations of the Secretary of Agriculture; and

(2) such lands are managed under the principle of sustained yield and under

management practices for protection and enhancement of environmental quality no less stringent than such management practices on adjacent national forest lands for a period of twelve years.

On Oct. 21, 1981, this Board ordered the appellants to show cause why the Board should not decline to take jurisdiction over the subject matter of this appeal. Such order was based on the jurisdictional limits of the Board established by Departmental regulation at 43 CFR 4.1(b)(5) and the absence of any reference in this appeal to any BLM decision to convey lands under ANCSA. The appellants on Nov. 4, 1981, filed a response to the Board's order.

The jurisdiction of this Board is defined in 43 CFR 4.1(b)(5):

Alaska Native Claims Appeal Board.
The Board considers and decides finally for the Department appeals to the head of the Department from findings of fact or decisions rendered by Departmental officials in matters relating to land selection arising under the Alaska Native Claims Settlement Act (85 Stat. 688).

Decisions "rendered by Departmental officials in matters relating to land selection arising under the Alaska Native Claims Settlement Act," within the context of 43 CFR 4.1(b)(5), do not include policy formulation decisions regarding a certain class or category of lands unrelated to a particular land selection.

[1] Accordingly, the approval of the Alaska State Director of the BLM of a general plan of action for meeting the requirements of § 22(k) of ANCSA is not a decision "ren-

dered by Departmental officials in matters relating to land selection arising under the Alaska Native Claims Settlement Act" within the context of 43 CFR 4.1(b)(5), and an appeal from the approval of such a plan must be dismissed by this Board for lack of jurisdiction.

Based upon the above findings and conclusions, this Board hereby dismisses the above-designated appeal.

This represents a unanimous decision of the Board.

6 ANCAB 157

Decided November 30, 1981

Appeal from the Decision of the Alaska State Office, Bureau of Land Management F-14844-A.

Partial decision. Appellants have standing to appeal.

1. Alaska Native Claims Settlement Act: Alaska Native Claims Appeal Board: Appeals: Standing

Decisions pursuant to ANCSA affect property interests differently, depending, in part, upon the section of the Act on which each decision is based. Application of the standing tests in 43 CFR 4.902

must take into account the section of the Act relied upon in the decision under appeal.

2. Alaska Native Claims Settlement Act: Easements: Public Easements—Alaska Native Claims Settlement Act: Alaska Native Claims Appeal Board: Appeals: Standing

Since the purpose of a § 17(b)(1) public easement is to provide access across Native lands to lands not selected, such an easement necessarily affects lands other than those to be conveyed. Therefore, in asserting standing to appeal a § 17(b)(1) easement decision, a member of the public who claims a private interest in land other than the land to be conveyed may rely on this private holding as a "property interest affected" within the meaning of 43 CFR 4.902.

3. Alaska Native Claims Settlement Act: Easements: Public Easements—Alaska Native Claims Settlement Act: Alaska Native Claims Appeal Board: Appeals: Standing

Where appellants seek a public access easement under § 17(b)(1) of ANCSA, they may rely on their patented home-site, located outside the conveyance, as a property interest for purposes of meeting the standing requirements of 43 CFR 4.902.

4. Alaska Native Claims Settlement Act: Easements: Public Easements—Alaska Native Claims Settlement Act: Alaska Native Claims Appeal Board: Appeals: Standing

Where appellants claim that their home-site is affected by the Bureau of Land Management's failure to reserve a § 17(b)(1) public access easement, along a road used by appellants and the public, because in the absence of such an easement their present access route to the homesite may be cut off by the proposed conveyance to a Native corporation, this

is a claim that their property interest is affected within the terms of 43 CFR 4.902.

5. Alaska Native Claims Settlement Act: Easements: Access

Sec. 17(b)(2) of ANCSA protects the private right of access, provided for under existing law, to any valid right recognized by ANCSA.

6. Alaska Native Claims Settlement Act: Easements: Access—Alaska Native Claims Settlement Act: Alaska Native Claims Appeal Board: Appeals: Standing

Sec. 17(b)(2) of ANCSA assures that persons who have valid existing uses do not lose access rights because of the public easements provided by § 17(b)(1). The private right of access provided to holders of valid existing rights pursuant to § 17(b)(2) of ANCSA is separate from the right provided by § 17(b)(1) of public access routes. An individual claiming standing to appeal a public easement decision must assert public use of the desired easement to distinguish it from a private access right under § 17(b)(2). However, the possibility of protection under § 17(b)(2) does not preclude the holder of a property interest from asserting that an easement decision affects his interest so as to meet the standing requirements of 43 CFR 4.902.

APPEARANCES: Patricia and William Nordmark, pro se; Dennis J. Hopewell, Esq., Office of the Regional Solicitor, for the Bureau of Land Management.

**OPINION BY ALASKA
NATIVE CLAIMS APPEAL
BOARD**

Summary of Appeal

In response to a motion to dismiss for lack of standing, the appellants

are found to have standing to seek a public access easement. The easement sought would provide access for appellants and the public, from a public highway to the Nenana River. Briefing is suspended pending a decision in a related appeal on whether the Nenana River is navigable, so that reservation of a public easement to the river would be consistent with criteria for easements under ANCSA and regulations.

Jurisdiction

The Alaska Native Claims Appeal Board, pursuant to delegation of authority to administer the Alaska Native Claims Settlement Act, 85 Stat. 688, *as amended*, 43 U.S.C. §§ 1601-1628 (1976 and Supp. I 1977) (ANCSA), and the implementing regulations in 43 CFR Part 2650 and 43 CFR Part 4, Subpart J, hereby makes the following findings, conclusions and decision.

Procedural and Factual Background

Appellants' pleadings state that in the late 1950's William D. Nordmark took steps to establish a Federal homesite in the vicinity of the Native Village of Cantwell located in the SE $\frac{1}{4}$ of Sec. 24, T. 16 S., R. 7 W., Fairbanks meridian. The land in question was at that time part of the Federal public domain. The record shows that in 1959, Mr. Nordmark put in a road from the present Parks Highway to his homesite. It is the eventual legal status of this

road that forms the basis for this appeal. In 1961, Mr. Nordmark filed for the homesite and, after survey in 1968, Mr. Nordmark received patent to the homesite before the enactment of the Alaska Native Claims Settlement Act in 1971.

On Aug. 9 and Oct. 28, 1965, the State of Alaska (State) filed a community grant selection application pursuant to § 6(a) and general grant selections pursuant to § 6(b) of the Alaska Statehood Act of July 7, 1958 (72 Stat. 339, 340; 48 U.S.C. Ch. 2, §§ 6(a) and 6(b) (1976)). The selected lands were near the Native Village of Cantwell and surrounded the Nordmark homesite. Tentative approval was granted on Apr. 12, 1966.

On Dec. 18, 1971, § 11 of the Alaska Native Claims Settlement Act (85 Stat. 688; 43 U.S.C. §§ 1601, 1610 (1976)), withdrew the lands surrounding the Native Village of Cantwell, including lands in the subject State selection application for Native selection. On July 9, 1974, Cantwell Yedatene Na Corp. filed village selection application F-14844-A, *as amended*, for the surface estate of lands located near the Village of Cantwell, including lands within the subject State selections and those surrounding the appellants' homesite.

The Bureau of Land Management (BLM), on Sept. 30, 1980, issued a decision which held that the disputed lands were properly selected by Cantwell Yedatene Na Corp. Accordingly, conflicting State selection applications, includ-

ing those for lands surrounding the appellants' homesite, were rejected, the tentative approval was rescinded and conveyance was proposed to the Cantwell Yedatene Na Corp.

On Oct. 23, 1980, appellants filed their Notice of Appeal with the Board in which their position was summarized as follows:

Please consider this letter to be a formal appeal to include in the conveyance document to Cantwell Yedatene Na Corporation an easement for an existing unimproved road from the Parks Highway to the Nenana River northwesterly along the left (south) bank of Sline Creek (known to the BLM as 'Slime Creek') located in the SE¼ of Sec. 24 T16S R7W Fairbanks Meridian. This is the same easement request that BLM included in their 'Notice' of September 28, 1978 and designated as easement 16a.

Easement 16a was eliminated from the 'decision' of September 30, 1980. This is an appeal to reinstate this easement. It is our means of access to our homesite.

Appellants' statement of reasons advance two arguments. First, William D. Nordmark is entitled to access to his patented homesite, which is an inholding within the village lands:

He has been using this road as access to the homesite for twenty years. He put this road in himself in 1959 following an older trail in the same location. This was in the days when the land was public domain, and the homestead laws were in effect. In 1961 he filed the paperwork to apply for the homesite. BLM surveyed the homesite in 1968, and he received patent in Dec. 1971. The road is currently in use by a tenant who occupies the homesite. We submit that this constitutes a *valid existing right*, and that the right

of access should not be diminished or limited. (*Italics added.*)

Appellants' Statement of Reasons at 1.

Secondly, appellants contend that the general public needs access from the Parks Highway to the public waters of the Nenana River. This would entail classifying the road from the Parks Highway to the appellants' homesite and then extending approximately 550 feet further to the Nenana River as a "public easement" under the provisions of § 17(b) of ANCSA and enabling regulations (43 CFR 2650.4-7).

The BLM has moved to dismiss the appeal. With respect to the appellants' contention that because of prior use they have a valid existing right to use the road for access to their homesite, the BLM states:

[A]ny valid right of access to the appellants' homesite is clearly protected by Section 17(b)(2) of the Alaska Native Claims Settlement Act (hereinafter 'ANCSA'), 43 U.S.C. § 1616(b)(2), and the provision at pages 16 and 17 of the Decision on appeal which both specify that '... any valid existing right recognized by this Act [such as the appellants' patented homesite] shall continue to have whatever right of access as is now provided for under existing law.' Section 17(b)(2) further provides that '... this subsection shall not operate in any way to diminish or limit such right of access.'

BLM's Memorandum in Support of Motion to Dismiss at 1.

Regarding appellants' argument that the existing road from the Parks Highway, through a part of appellants' homesite and up to the

Nenana River, should be classified as a public easement under § 17(b) of ANCSA, BLM contends that appellants lack any standing to bring the appeal. In support of its position, BLM cites 43 CFR 4.902 which provides in pertinent part:

Any party who claims a property interest in land affected by a determination from which an appeal to the Alaska Native Claims Appeal Board is allowed, or an agency of the Federal Government, may appeal as provided in this subpart.

BLM relies on Board decisions which have interpreted the above-cited standing regulation. (*See Appeal of Morpac, Inc.*, 3 ANCAB 89 (1978) [VLS 78-53]; *Appeal of Chickaloon Moose Creek Native Ass'n, Inc.*, 4 ANCAB 134 (1980) [VLS 80-1]; and *Appeal of Kodiak-Aleutian Chapter, Alaska Conservation Society*, 2 ANCAB 363 (1978) [LS 77-11].)

The Board issued an Order for Further Information and Clarification on Aug. 20, 1981. This order asked the appellants to explain and clarify the following three aspects of the case:

1. While appellants contend that the road between the Parks Highway and their homesite is a valid existing right (i.e., a private easement), do the appellants also desire a public easement for this road under § 17(b) (2) of ANCSA?

2. Do appellants desire the BLM to create a public easement under § 17(b) (2) through their property from where the road enters the homesite from the Parks Highway to the Nenana River?

3. Does the road in question run from the entrance of the homesite through the homesite as depicted on one map or does it follow the southern bank of the Sline Creek as depicted on another map?

In their response, the appellants answered the Board's first question in the negative. They say specifically that:

The appeal on behalf of public access was submitted in case there were no other way to get legal access to the homesite. If legal access to the homesite can be assured either by direct interpretation of the land claims act or by a "private" easement, then we request you drop consideration of a public easement.

In reply to the second inquiry from the Board, the appellants again respond in the negative and submit a sketch showing the road as it presently exists and how it could be realigned to bypass the appellants' property entirely. In answering the Board's third question regarding the orientation of Sline Creek to the homestead, appellants affirm that the sketch made by William Nordmark which accompanied his letter of Oct. 20, 1975, to BLM was the correct one. With the submission of the appellants' letter of clarification, the record on appeal was closed.

Decision

BLM's motion to dismiss presents the issue of whether the appellants have standing, within regulatory criteria in 43 CFR 4.902, to seek either (1) a public access easement, pursuant to § 17(b) (1) of ANCSA, from the Parks Highway across

Native lands to their patented homesite and thence across Native lands to the Nenana River, or (2) a private access easement, pursuant to § 17(b)(1) of ANCSA, across Native lands from the Parks Highway to their homesite, coinciding with the road they have constructed and used for this purpose.

Sec. 17(b)(1) of ANCSA provides for the reservation of public easements across lands selected by Native corporations, and at periodic points along major waterways, which are reasonably necessary to guarantee "a full right of public use and access for recreation, hunting, transportation * * * and * * * other public uses."

Sec. 17(b)(2) provides in pertinent part: "[A]ny valid existing right recognized by this Act shall continue to have whatever right of access as is now provided for under existing law and this subsection shall not operate in any way to diminish or limit such right of access."

Sec. 17(b)(2) is implemented by regulations in 43 CFR 2650.4-7(d)(5): "All conveyance documents shall contain a general provision which states that pursuant to section 17(b)(2) of the Act, any valid existing right recognized by the Act shall continue to have whatever right of access as is now provided for under existing law."

Standing is governed by regulations in 43 CFR 4.902, which grant standing to appeal to "[a]ny party who claims a property interest in land affected by a determination

from which an appeal to the Alaska Native Claims Appeal Board is allowed * * *."

The appellants clearly have a property interest in their homesite. Having been patented to them prior to enactment of ANCSA, the homesite is not available for withdrawal, selection, or conveyance under the Act. Title to the homesite cannot be affected by ANCSA, and the appellants' ownership of the homesite does not place them in conflict with the Native corporation regarding the latter's title to land selections under ANCSA. Accordingly, the question arises whether this property interest can be affected, within the meaning of standing requirements in 43 CFR 4.902, by BLM's failure to reserve the public easement designated 16(a).

In cases where an appellant sought to prevent or condition conveyance of land to a Native corporation in favor of its own claim of interest in the same land, the Board has held that, to have standing, the appellant must claim a property interest in the land selected by the Native corporation. *Appeal of State of Alaska*, 3 ANCAB 196, 86 I.D. 225 (1979) [VLS 78-42]; *Appeal of Chickaloon Moose Creek Native Ass'n, Inc.*, 4 ANCAB 134 (1980) [VLS 80-1]; *Appeal of Chickaloon Moose Creek Native Ass'n, Inc.*, 4 ANCAB 250, 87 I.D. 219 (1980) [VLS 80-1].

However, the Board has distinguished from the application of this rule those cases in which an appel-

lant sought to have reserved a public easement:

There are fundamental legal differences between the effect of a decision to convey title and the effect of a decision to reserve a public easement. An easement reservation under § 17(b)(1) does not involve a competing title interest. A potential appellant desiring to appeal a public easement decision cannot claim a property interest in the land underlying the easement, because, pursuant to ANCSA, title to the land underlying the easement goes to the selecting Native corporation. Likewise, a potential appellant cannot claim a private property interest in a § 17(b)(1) easement because these are public easements. The concept of private ownership of a public easement is a contradiction in terms.

The argument that an appellant must have a property interest in the land to be conveyed, regardless of the subject matter of the appeal, ignores the fact that a decision to convey land and a decision to reserve an easement across land affect property differently.

[2] The Board holds that decisions made pursuant to ANCSA affect property interests differently, with the effect depending, in part, upon the section of the Act on which each decision is based. Therefore, application of the standing test in 43 CFR 4.902 must take into account the section of the Act relied upon in the decision under appeal.

* * * * *

[3] Since the purpose of a § 17(b)(1) public easement is to provide access across Native lands to lands not selected, the Board concludes that a § 17(b)(1) easement necessarily affects lands other than those to be conveyed. Therefore, a member of the public who claims a private interest in land other than the land to be conveyed, in asserting standing to appeal a § 17(b)(1) easement decision, may rely on this private holding as his or her 'property interest' affected within the meaning of 43 CFR 4.902.

Joseph C. Manga et al., 5 ANCAR 224, 240-242, 88 I.D. 460, 467-468 (1981) [RLS 80-1].

[1] The Board reaffirms its holding in *Joseph C. Manga, supra*, that decisions pursuant to ANCSA affect property interests differently, depending, in part, upon the section of the Act on which each decision is based. Application of the standing test in 43 CFR 4.902 must take into account the section of the Act relied upon in the decision under appeal.

[2] The Board also reaffirms its holding in *Manga* that, since the purpose of a § 17(b)(1) public easement is to provide access across Native lands to lands not selected, a § 17(b)(1) easement necessarily affects lands other than those to be conveyed. Therefore, a member of the public who claims a private interest in land other than the land to be conveyed, in asserting standing to appeal a § 17(b)(1) easement decision, may rely on this private holding as a "property interest affected" within the meaning of 43 CFR 4.902.

[3] The appellants, like the appellants in *Joseph C. Manga, supra*, seek a public access easement under § 17(b)(1) of ANCSA. Accordingly, the appellants may rely on their homesite, located outside the conveyance, as a property interest, for purposes of meeting the standing requirements of 43 CFR 4.902.

[4] The appellants claim that this property interest is affected by BLM's failure to reserve a § 17(b)(1) public access easement, follow-

November 30, 1981

ing the route of a road constructed and used by the appellants and the public for many years, from the Parks Highway to appellants' homesite and thence to the Nenana River. It is the appellants' position that if such a public access easement is not reserved, following their present access route between the highway and their homesite, then their present access may be cut off by conveyance of the intervening land to the Native corporation. In effect, they fear that without reservation of the public access easement designated 16(a), they will become a "landlocked" inholding. It should be noted that the decision to reserve the public easement sought would affect the Nordmarks in the following manner: this easement would follow the route of access they built while the lands to be conveyed to the Native corporation were in public domain status, thus assuring the Nordmarks, as well as the public, the availability of this route. The Board concludes that, within the criteria set forth in *Joseph C. Manga, supra*, this is a claim that the appellants' property interest is affected, sufficient to confer standing.

As to the appellants' standing to seek a public access easement, it has also been argued that, so long as their existing private right of access to their property is guaranteed by § 17(b) (2), then they cannot claim that their property interest is affected by the lack of a public access easement under § 17(b) (1).

The Board addressed this argument in *Joseph C. Manga, supra*:

It has also been argued that even the holder of a private property interest lacks standing to appeal because such individual is provided a right of access under § 17(b) (2) of ANCSA, and therefore the placement of a public easement can have no effect on his or her property interest.

* * * * *

The Board has already ruled that an individual whose does not have a specific claim of property interest is without standing to bring an appeal. The thrust of the previous argument is that a person who *does* claim a property interest also lacks standing to appeal a public easement decision because such person will continue to have a private right of access, and the property interest is therefore not affected by the decision.

The consequence of this position would be that no member of the general public, regardless of any claim of property interest, would have standing to appeal a decision rendered pursuant to that subsection of ANCSA specifically drafted for the benefit of the general public—§ 17(b).

The Board concludes that neither the Act nor the regulations mandate this result.

* * * * *

[4, 5] The Board finds that the private right of access provided to holders of valid existing rights pursuant to § 17(b) (2) of ANCSA is separate from the right provided in § 17(b) (1) of specifically-identified public access routes. Possible protection under § 17(b) (2) does not preclude the holder of a property interest from asserting that an easement decision affects his interest so as to satisfy the standing test of 43 CFR 4.902. However, an individual claiming standing to appeal an easement decision must assert public use of the desired easement in order to distinguish it from a § 17(b) (2) private access right.

88 I.D. at 468-469.

[5] Sec. 17(b)(2) of ANCSA protects the private right of access, provided for under existing law, to any valid right recognized by ANCSA.

[6] Sec. 17(b)(2) of ANCSA assures that persons who have valid existing uses do not lose access rights because of the public easements provided by § 17(b)(1). The private right of access provided to holders of valid existing rights pursuant to § 17(b)(2) of ANCSA is separate from the right provided by § 17(b)(1) of public access routes. An individual claiming standing to appeal a public easement decision must assert public use of the desired easement to distinguish it from a private access right under § 17(b)(2). However, the possibility of protection under § 17(b)(2) does not preclude the holder of a property interest from asserting that an easement decision affects his interest so as to meet the standing requirements of 43 CFR 4.902.

The appellants' interest in seeking a public easement does more than protect the access which is already guaranteed by § 17(b)(2). Located along the route currently used, the public easement guarantees them continued use of the existing route, without being required to seek resolution of the question of what specific right of access to a private inholding is protected by § 17(b)(2).

The appellants, accordingly, may

not be denied standing on the grounds that any private right of access they now have is in some manner protected under § 17(b)(2) of ANCSA.

The Board finds that Patricia and William Nordmark have standing to appeal BLM's failure to reserve the easement 16(a) in the conveyance document.

Having found appellants have standing to appeal, the Board now considers special circumstances of this appeal. Although the Board does not now rule on the merits, it must be noted that the remedy sought by the appellants, reservation of a public transportation easement, appears from the record to be unavailable at the present time.

While the easement designated 16(a) sought by the appellants connects at one end with a public highway, the other end is at the Nenana River. BLM has determined that the Nenana River at this point is not navigable. Such a finding will result in the conveyance of the submerged bed to the Native corporation and the bed will not be considered "public land." Accordingly, as BLM asserts, the easement would not provide public access across Native lands to public lands or waters, as required by § 17(b)(1) and implementing regulations, but would simply cross Native lands to reach a point within the same Native selection. There is no authority under ANCSA for BLM to reserve such an easement. The record indicates that BLM determined not to reserve easement 16(a) on the basis of its

finding that the Nenana River is nonnavigable through this area.

However, BLM's decision that the Nenana River is not navigable within the conveyance area is disputed in another appeal presently before the Board. (*Appeal of the State of Alaska*, VLS 80-54.) If the Nenana is found to be navigable, reservation of the easement sought by the appellant would no longer be inconsistent with criteria in § 17(b)(1) and the regulations, and could be considered by BLM.

Therefore, the Board will suspend further briefing on the merits of this appeal until *Appeal of the State of Alaska*, VLS 80-54, determining the status of the Nenana River, is decided. If the Nenana River is determined to be navigable, the Board will remand the question of whether easement 16(a) should be reserved to BLM for reconsideration. If the Nenana River is determined to be nonnavigable, the Board will rule on the merits.

The appellants not only seek a public access easement, pursuant to § 17(b)(1), but would prefer some form of private easement reservation, assuring them of access between the Parks Highway and their homesite by means of the road they built and have used since 1959. As they stated in their letter of Aug. 26, 1981,

The appeal on behalf of public access was submitted in case there were no other way to get legal access to the homesite. If legal access to the homesite can be as-

sured either by direct interpretation of the land claims act or by a 'private' easement, then we request you drop consideration of a public easement.

Moving to dismiss the appeal, BLM asserts that any valid right of private access the appellants may have to their homesite is clearly protected by § 17(b)(2) of ANCSA, and that this protection is adequately provided by the general assurance in the decision on appeal that "any valid existing right recognized by this Act shall continue to have whatever right of access as is now provided for under existing law," and "this subsection shall not operate in any way to diminish or limit such right of access."

It should be noted that § 17(b)(2) is not a granting clause conferring a new right of access to an individual's interest constituting a valid existing right under ANCSA. Sec. 17(b)(2) does not enhance or change any such right of private access; it merely offers the assurance that such right will not be diminished or limited by the reservation of access easements for the benefit of the public under § 17(b)(1). The right of access thus protected, if any, does not derive from ANCSA but must exist under other authority. Where such a claimed right of private access has not been formalized by a documented grant from the State or Federal Government, and has not been adjudicated in any forum or platted on official land records, no mechanism exists for BLM to adjudicate or locate such

an easement. Such adjudication would have to be undertaken by the courts.

Accordingly, in ANCSA conveyances, BLM is not required to adjudicate or reserve with specificity any private access rights pursuant to § 17(b)(2), and insofar as appellants seek such an easement reservation in this appeal, it appears that no remedy is available to them.

Finally, the Board notes that the appellants in their pleadings have referred to the road between the Parks Highway and their homesite as a "valid existing right," based on the fact that they built and used it. Sec. 14(g) of ANCSA provides that conveyances shall be subject to "valid existing rights"; where certain interests including rights-of-way or easements have been issued to third parties on lands to be conveyed, the conveyance shall be made subject to such interests and to the right of the holder to all the rights and privileges granted with such interests.¹

While the appellants' characterization of their road as a valid existing right may, on first impression, appear to invoke the provisions of § 14(g), it must be noted that the appellants do not purport to hold an easement or right-of-way granted to them by the United States in any formal manner. Their claim appears to be, rather, that by construction and use of a road across public lands to their homesite, they created in themselves an interest in the road, adverse to the United States, which must be recognized as a valid existing right. It does not appear to the Board that such a claim of right was within the contemplation of § 14(g).

Based on the findings and conclusions herein, BLM's motion to dismiss for lack of standing in the appellants is denied. Further briefing in this matter is suspended pending determination of the navigability of the Nenana River in *Appeal of the State of Alaska*, VLS 80-54.

¹Sec. 14(g) of ANCSA states: "All conveyances made pursuant to this Act shall be subject to valid existing rights. Where, prior to patent of any land or minerals under this Act, a lease, contract, permit, right-of-way, or easement (including a lease issued under section 6(g) of the Alaska Statehood Act) has been issued for the surface or minerals covered under such patent, the patent shall contain provisions making it subject to the lease, contract, permit, right-of-way, or easement, and the right of the lessee, contractee, permittee, or grantee to the complete enjoyment of all rights, privileges, and benefits thereby granted to him. Upon issuance of the patent, the patentee shall succeed and become entitled to any and all interests of the State or the United States as lessor, contractor, permitter, or grantor, in any such leases, contracts, permits, rights-of-way, or easements covering the estate patented, and a lease issued under section 6(g) of the Alaska Statehood Act

shall be treated for all purposes as though the patent had been issued to the State. The administration of such lease, contract, permit, right-of-way, or easement shall continue to be by the State or the United States, unless the agency responsible for administration waives administration. In the event that the patent does not cover all of the land embraced within any such lease, contract, permit, right-of-way, or easement, the patentee shall only be entitled to the proportionate amount of the revenues reserved under such lease, contract, permit, right-of-way, or easement by the State or the United States which results from multiplying the total of such revenues by a fraction in which the numerator is the acreage of such lease, contract, permit, right-of-way, or easement which is included in the patent and the denominator is the total acreage contained in such lease, contract, permit, right-of-way, or easement."

This represents a unanimous decision of the Board.

PATRICK J. BLISS

6 ANCAB 181

Decided *November 30, 1981*

Appeal from the Decision of the Alaska State Office, Bureau of Land Management F-14932-A through F-14932-C and F-21915.

Partial decision. Appellant Patrick J. Bliss has standing to appeal.

1. Alaska Native Claims Settlement Act: Alaska Native Claims Appeal Board: Appeals: Standing

The appropriate test of standing to appeal a decision under ANCSA is not whether a person is an "aggrieved party," but whether a person "claims a property interest in land affected by a determination from which an appeal to the Alaska Native Claims Appeal Board is allowed" as required by 43 CFR 4.902.

2. Alaska Native Claims Settlement Act: Alaska Native Claims Appeal Board: Appeals: Standing

Decisions made pursuant to ANCSA affect property interests differently, with the effect depending, in part, upon the section of the Act on which each decision is based. Therefore, application of the

standing test in 43 CFR 4.902 must take into account the section of the Act relied upon in the decision under appeal.

3. Alaska Native Claims Settlement Act: Easements: Public Easements—Alaska Native Claims Settlement Act: Alaska Native Claims Appeal Board: Appeals: Standing

Since the purpose of a § 17(b)(1) public easement is to provide access across Native lands to lands not selected, such an easement necessarily affects lands other than those to be conveyed. Therefore, in asserting standing to appeal a § 17(b)(1) easement decision, a member of the public who claims a private interest in land other than the land to be conveyed may rely on this private holding as his or her "property interest" affected within the meaning of 43 CFR 4.902.

4. Alaska Native Claims Settlement Act: Conveyances: Valid Existing Rights: Generally—Alaska Native Claims Settlement Act: Easements: Public Easements

Possible protection under § 17(b)(2) does not preclude an individual from asserting that a public easement decision affects his or her property interest so as to meet the standing test of 43 CFR 4.902.

5. Alaska Native Claims Settlement Act: Easements: Public Easements—Alaska Native Claims Settlement Act: Alaska Native Claims Appeal Board: Appeals: Standing

An individual claiming standing to appeal a § 17(b)(1) public easement decision must assert public use of the desired easement in order to distinguish it from a § 17(b)(2) private access right.

APPEARANCES: R. Eldridge Hicks, Esq., Ruskin, Barker & Hicks, for ap-

pellant; G. Kevin Jones, Esq. and M. Francis Neville, Esq., Office of the Regional Solicitor, for the Bureau of Land Management; Richard Atuk, for Bering Straits Native Corp.

*OPINION BY ALASKA
NATIVE CLAIMS APPEAL
BOARD*

Summary of Appeal

In response to the Bureau of Land Management's motion to dismiss for lack of standing, the appellant is found to have standing to appeal the Bureau of Land Management's failure to reserve three (3) proposed public easements under § 17(b)(1) of ANCSA.

Appellant claims that the Bureau of Land Management's failure to reserve an airstrip he constructed on lands selected by the Native corporation, as well as two (2) existing trail easements, not only adversely affected his mining operation, as well as others in the same area, but prevented the public and governmental agencies the use of the airstrip and of access to the adjacent public lands.

The Board concludes that the appellant's ownership of patented mining claims located on public lands outside of the Native-selected lands constitutes property interest in lands affected to have standing under 43 CFR 4.902, to appeal an issue of public easement under § 17 (b)(1) of ANCSA.

Jurisdiction

The Alaska Native Claims Appeal Board, pursuant to delegation

of authority to administer the Alaska Native Claims Settlement Act, 85 Stat. 688, *as amended*, 43 U.S.C. §§ 1601-1628 (1976 and Supp. I 1977) (ANCSA), and the implementing regulations in 43 CFR Part 2650 and 43 CFR Part 4, Subpart J, hereby makes the following findings, conclusions and decision.

Procedural Background

On Apr. 25, 1980, Patrick J. Bliss, appearing *pro se*, filed a Notice of Appeal of the Bureau of Land Management (BLM) Decision dated Mar. 27, 1980 (F-14932-A through F-14932-C; F-21915), approving for conveyance to Native Village Corp. of Shaktoolik lands included in this appeal. Appellant's statement of reasons was included with the Notice of Appeal and asserts BLM erred for the following reason:

1. Failure of the United States Department of the Interior, Bureau of Land Management to recognize those public easement requests identified as EIN 11 C,5,L Airstrip and EIN 11a C,5,L Beach-Airstrip-Public Land, Ungalik River area and shown on Exhibit A attached hereto and made a part hereof.

Appellant asserted BLM failed to comply with procedural requirements and to base its decision on appropriate information. On July 21, 1980, appellant, by and through counsel, filed an amended Statement of Facts Relied Upon for Standing.

On May 29, 1980, G. Kevin Jones, Esq., Office of the Regional Solicitor, on behalf of BLM, filed an Answer and Motion to Dismiss, as-

serting, *inter alia*: "Appellant has not claimed a property interest in land affected by the BLM decision, 43 CFR § 4.902; and he has not filed a statement of facts upon which he relies for standing, 43 CFR § 4.903 (b) (2)."

The Board, on Aug. 7, 1980, ordered segregation of land affected by the appealed easements as identified in appellant's statement of reasons. A stipulation by the appellant and the BLM clarified a question as to whether EIN 8L, L was intended to be included in the EIN 11a C5, L Beach-Airstrip-Public Land, easement. Subsequent to the stipulation, an Amended Order of Segregation was made by the Board on Aug. 22, 1980, in which the appealed easements were described as follows:

- a. (EIN 11 C5, L) a site easement for a bush airstrip, six hundred (600) feet in width and six thousand (6,000) feet in length, located in Secs. 1 and 12, T. 11 S., R. 11 W., Kateel River Meridian.
- b. (EIN 11a C5, L) An easement for a proposed access trail, fifty (50) feet in width, from site EIN 11 C5, L in Sec. 1, T. 11 S., R. 11 W., Kateel River Meridian, easterly to Sec. 6, T. 11 S., R. 10 W., Kateel River Meridian.
- c. (EIN 8L, L) An easement for an existing access trail fifty (50) feet in width from the mean high tide line of Norton Bay in Sec. 32, T. 10 S., R. 11 W., Kateel River Meridian southeasterly through Secs. 1 and 2, T. 11 S., R. 11 W., Kateel River Meridian to bush airstrip EIN 11 C5, L.

Appellant asserts that his property interests have been adversely affected by the BLM's failure to "reserve EIN 11 C5,L and EIN 11a C5,L because this airstrip is

the only runway that will accommodate [sic] large-transport category aircraft"—and by the failure of BLM to "reserve EIN 8L,L, Beach, Airstrip, Public Land, because the Appellant uses this access to haul heavy equipment and large amounts of fuel which cannot economically be shipped by aircraft."

Appellant contends that the standing requirements of 43 CFR 4.902 are met in this appeal with a showing that:

[T]he Appellant claims an ownership interest in land adjacent to the conveyed land, and that adjacent land of the Appellant is severely affected by a BLM determination to exclude the subject easements because the Appellant loses access to adjacent public and private lands.

Statement of Facts Relied Upon for Standing at 2.

Appellant specifically points out that no contention is being made to establish any of the proposed easements as a private right of access under § 17(b) (2) of ANCSA.

Appellant further describes the proposed easements as follows:

EIN 8L, L is an existing access trail which originates at a barge landing site on public lands on the coast of Norton Bay and running easterly on public lands and across Native-selected lands into the mineralized area. This route has been in general public use since 1898 as a haul road to route equipment and supplies. Since construction of the airstrip in question in 1963, the portion of this trail within the selected lands is also used for transporting

equipment to maintain the airstrip as well as to bring barged fuel and equipment too heavy or bulky for air transportation.

EIN 11 C5, L is a site easement for an existing airstrip (600' x 6,000') which is located entirely within the Native-selected lands. Appellant started building the airstrip in 1960 and construction was completed in 1963. Surface releveeing and upkeep of the field is required annually. Appellant states that it is the only airstrip in the area which is capable of accommodating large aircraft and is used by various State and Federal Government agencies as well as the public as needed in addition to serving the mining interests in the area.

EIN 11a C5, L is an existing access trail running from the airstrip easterly to public lands in T. 11 S., R. 10 W., a distance of less than one mile.

Appellant's assertions relating to the airstrip (EIN 11 C5, L) also include the following:

Construction and maintenance of this airstrip by appellant was primarily for the purpose of better serving the transportation needs of his private mining interests which could be accomplished by plane.

Since 1963 the general public has used the airstrip as needed and appellant claims that the placement of cautionary devices installed for the purpose of limiting liability to users was not intended to grant or deny permission for public use.

Appellant also states that the record on appeal reveals the fact that

the airstrip is used by many public and private interests other than the miners in the vicinity. These other uses, detailed in the statement of facts above, include the Bureau of Land Management, Alaska Department of Fish and Game, U.S. Forest Service, Federal Aviation Administration, U.S. Fish and Wildlife Service, a host of charter aircraft companies, various oil companies, guides and bear hunters, and five or six people from Nome.

Appellant vigorously argues that while the proposed easements are shown as three separate easements they are all substantially used in connection with each other by the public; that the uses for the access trails and the airstrip are not alternate access routes but complement each other as access; and that there are no practical alternative accesses to public lands.

The BLM's memorandum, filed May 29, 1980, in support of its motion asserts two reasons for dismissal of appellant's appeal.

First, appellant lacks standing to bring this appeal. He has not asserted a "property interest" in land affected by a determination by the BLM, but has identified himself as an "aggrieved party." An aggrieved party does not have standing, 43 CFR 4.902.

It is BLM's contention that dismissal of appellant's appeal for lack of standing is within previous holdings of this Board and argues that:

The test for determining whether or not a party has standing before this Board is not whether such party is an 'aggrieved party' but whether such party

'claims a property interest in land affected' by a determination appealable to the Board, or is an agency of the Federal Government or in cases, involving land selection is a Regional Corporation, *Appeal of Sam E. McDowell, et al.*, ANCAB VLS 78-2 (March 29, 1978).

BLM's Memorandum in Support of Motion to Dismiss at 2.

Also cited is "the *Appeal of Charles G. and Sara Hornberger*, ANCAB VLS 79-37 (Jan. 9, 1980)."

Second, appellant has not filed a statement of facts upon which he relies for standing as required by 43 CFR 4.903(b)(2).

BLM further asserts that a claim of private right cannot provide standing in this appeal by stating:

Appellant may have a valid existing right to the airstrip and trails incident to his mining claim. It is clear however that public easements may not be reserved under 17(b)(2) to protect private rights of access. * * * Appellant's remedy, to protect such existing rights as he may have, if any, is not to appeal to this Board but to deal directly with the Native corporation and to resort to the courts if necessary. See *Alaska Public Easement Defense Fund v. Andrus*, 435 F. Supp. 664, 678 (D.C. Alaska 1977).

BLM's Memorandum in Support of Motion to Dismiss at 6.

BLM rejects appellant's contention that his ownership of property adjacent to the conveyed lands can establish a sufficient property interest in land affected by a BLM determination. The BLM states:

His property is outside the conveyance area and therefore is not being conveyed by the BLM. Appellant, apparently, seeks standing on the basis of his past use of

State and Federal land to gain access to his private mining claim and such use would not confer standing to bring this appeal. In the *Appeal of Kodiak-Aleutian Chapter, Alaska Conservation Society*, ANCAB LS 77-11 (March 31, 1978) the Board held:

"The Board finds that the mere allegation of ownership and use of State and Federal lands as members of the public, does not constitute a claim of 'property interest' in land, 43 CFR § 4.902, and therefore the appellant lacks standing to bring an appeal before the Board. (*Italics added.*) Id. at 5."

BLM's Response to Brief of Appellant at 2.

Decision

The issue in this partial decision is whether appellant has standing to bring this appeal under the requirements of 43 CFR Part 4, Subpart J, 4.902, which provides:

Any party who claims a property interest in land affected by a determination from which an appeal to the Alaska Native Claims Appeal Board is allowed, or an agency of the Federal Government, may appeal as provided in this subpart. However, a regional corporation shall have the right of appeal in any case involving land selections.

Certain facts relevant to the issue of standing are undisputed in this appeal. Appellant is the owner of certain patented mining claims situated outside of the land area selected by the Native Village Corp. of Shaktoolik. These mining claims are located within T. 11 S., R. 10 W., Kateel River meridian, on public lands adjacent to and in close proximity with the appealed easements.

Appellant asserts that BLM erred in failing to make reservation in the Decision to Issue Conveyance of the three (3) proposed public easements under the provisions of § 17(b)(1) of ANCSA, which provides as follows:

[3] The Planning Commission shall identify public easements across lands selected by Village Corporations and the Regional Corporations and at periodic points along the courses of major waterways which are reasonably necessary to guarantee international treaty obligations, a full right of public use and access for recreation, hunting, transportation, utilities, docks, and such other public uses as the Planning Commission determines to be important.¹

The rationale for § 17(b)(1) is described by the court in *Alaska Public Easement Defense Fund v. Andrus*, 435 F. Supp. 664, 674 (D.C. Alaska 1977):

As previously mentioned the Act grants to the Alaska Natives 40 million acres of land in Alaska. The specific land which comprised the grant to eligible entities was not delineated. Rather the Village and Regional Corporations were to choose their land from the areas designated in conformity with the Act. In such circumstances Congress was justifiably concerned that certain portions of the State which were to remain in the public domain would become inaccessible or land-locked by Native lands. It appears,

¹ It is noted that decisions to reserve or not reserve public easements identified by the Planning Commission are actually made pursuant to § 17(b)(3) of ANCSA, which provides: "Prior to granting any patent under this Act to the Village Corporation and Regional Corporations, the Secretary shall consult with the State and the Planning Commission and shall reserve such public easements as he determines are necessary." To eliminate confusion, however, the Board uniformly refers to public easements as being established pursuant to § 17(b)(1).

therefore, that the public easements were to be reserved to provide access to the lands not selected.

Implementing regulations in 43 CFR 2650.4-7(b)(1) discuss the purposes for which public transportation easements may be reserved:

Public easements for transportation purposes which are reasonably necessary to guarantee the public's ability to reach publicly owned lands or major waterways may be reserved across lands conveyed to Native corporations. Such purposes may also include transportation to and from communities, airports, docks, marine coastline, groups of private holdings sufficient in number to constitute a public use, and government reservations or installations.

In the case of *Joseph C. Manga et al.*, 5 ANCAB 224, 88 I.D. 460 (1981) [RLS 80-1], the Board examined the issue of standing under § 4.902 when applied to the right of a private individual to appeal the reservation of a public easement pursuant to § 17(b) of ANCSA.

The Board concurs with the BLM's assertion that being a party aggrieved by a decision cannot be a basis for standing under § 4.902 to bring an appeal to ANCAB.

The Board in *Joseph C. Manga, supra*, reiterated its finding in this regard as previously set forth in the case of *Appeal of Sam E. McDowell*, 2 ANCAB 350 (1978) [VLS 78-2].

[1] Therefore, as to appellant's claim that he has standing to appeal as party aggrieved, the Board concludes he does not. The Board finds that the appropriate test of standing to appeal a decision under

ANCSA is not whether a person is an "aggrieved party," but whether a person "claims a property interest in land affected by a determination from which an appeal to the Alaska Native Claims Appeal Board is allowed."

BLM asserts its reliance upon previous decisions of the Board to show that before standing under § 4.902 is allowed an appellant must "claim a property interest in land affected by a determination appealable to the Board."² BLM's position is that since appellant's only claim of interest in lands is in his patented mining claims on public lands, they cannot constitute a "sufficient property interest in land affected by a BLM determination to establish standing," because "[h]is property is outside the conveyance area and therefore is not being conveyed by the BLM."

In the case of *Joseph C. Manga, supra*, the Board, without disputing previous holdings that under § 4.902 a claim of property interest affected by the BLM's decision was required for standing,³ stated:

² *Appeal of Sam E. McDowell*, 2 ANCAB 350 (1978) [VLS 78-2]; *Appeal of Charles G. and Sara Hornberger*, 4 ANCAB 112 (1980) [VLS 79-37].

³ In cases where an appellant sought to prevent or condition conveyance of land to a Native corporation in favor of its own claim of interest in the same land, the Board has held that, to have standing, the appellant must claim a property interest in the land selected by the Native corporation. *Appeal of State of Alaska*, 3 ANCAB 196, 86 I.D. 225 (1979) [VLS 78-42]; *Appeal of Chickaloon Moose Creek Native Ass'n, Inc.*, 4 ANCAB 134 (1980) [VLS 80-11]; *Appeal of Chickaloon Moose Creek Native Ass'n, Inc.*, 4 ANCAB 250, 87 I.D. 219 (1980) [VLS 80-11].

In each of the prior appeals, the appellant sought to prevent BLM from conveying title for specific lands to a Native corporation. Neither appellant had previously selected the land.

In the present appeal, appellants do not seek to prevent conveyance to the selecting Native corporation. They are not competing for title to the land proposed for conveyance. Rather, they seek to have a public transportation easement reserved across lands to be conveyed.

There are fundamental legal differences between the effect of a decision to convey title and the effect of a decision to reserve a public easement.

88 I.D. at 466-467.

In this appeal, as in the case of *Joseph C. Manga, supra*, the lands in which the appellant claims to have a property interest are outside of the lands being conveyed by the BLM to the selecting Native corporation and only the reservation of public easements under § 17(b) (1) is being sought on the Native lands.

In *Joseph C. Manga, supra*, the Board recognized that the property interest affected by the reservation of a public easement pursuant to § 17(b) (1) of ANCSA could be distinguished from the property interest required by other provisions of ANCSA to give standing under § 4.902 to bring an appeal. The Board determined that:

The argument that an appellant must have a property interest in the land to be conveyed, regardless of the subject matter of the appeal, ignores the fact that a decision to convey land and a decision to reserve an easement across land affect property differently.

88 I.D. at 467.

The Board affirms this holding in *Joseph C. Manga, supra*, and finds that appellant's patented mining claims outside of the selection area are a property interest within this principle.

[2] The Board holds that decisions made pursuant to ANCSA affect property interests differently, with the effect depending, in part, upon the section of the Act on which each decision is based. Therefore, application of the standing test in 43 CFR 4.902 must take into account the section of the Act relied upon in the decision under appeal.

The Board in *Joseph C. Manga, supra*, noted the findings by the court in *Alaska Public Easement Defense v. Andrus, supra*, in interpreting § 17(b)(1) and based thereon concluded:

The Board notes from the court's interpretation of the language in § 17(b)(1) that the purpose of a public easement is to allow travel 'across' lands selected by Native corporations to 'lands not selected' and not for purpose of access onto Native lands for such activity as hunting, fishing, trapping or recreation.

88 I.D. 467.

An unusual fact may be presented because this appeal involves two (2) access trail easements which appellant claims complement the site easement for use of an airstrip in order to provide access to public lands rather than a request of easement to reserve a single continuous access route. This has no effect on the issue of standing since all three easements relate to providing public access across Native-selected lands to public lands.

[3] Since the purpose of a § 17(b)(1) public easement is to provide access across Native lands to lands not selected, the Board concludes that a § 17(b)(1) easement necessarily affects lands other than those to be conveyed. Therefore, a member of the public who claims a private interest in land other than the land to be conveyed, in asserting standing to appeal a § 17(b)(1) easement decision, may rely on this private holding as his or her 'property interest' affected within the meaning of 43 CFR 4.902.

Appellant specifically notes that the stated basis for allowing standing to appeal BLM's failure to reserve the three (3) easements in question as public easements under § 17(b)(1) of ANCSA, is wholly separate from any private valid existing right which may exist. BLM asserts that all of appellant's claimed usage of the proposed easements reflects his own use of State and Federal lands for access to his mines and cannot be the basis to confer standing to bring this appeal. BLM further states that appellant's remedy to assert such a private right is protected under § 17(b)(2) of ANCSA.

In this case appellant claims that BLM's failure to reserve these three (3) public easements under § 17(b)(1) will not only cause a loss of means of access to his patented mining claims on public land, but will deny (over the same route) use by other property owners on the adjacent public lands, as well as other users including government agen-

cies and private commercial interests, who will have no other reasonable alternate route to access the adjacent public lands.

The file record contains documentation which affirms appellant's contention that the proposed easements have been used by the other private individuals as well as various government agencies and commercial interests to gain access to the adjacent public lands. Whether such use is sufficient to meet the factual requirements necessary to reserve a § 17(b)(1) public easement is not an issue in this partial decision.

The Board rejects BLM's contention that appellant's possible claim of private access has any effect on the issue of standing to appeal these public easements and affirms the findings in *Joseph C. Manga, supra*.

[4, 5] The Board finds that the private right of access provided to holders of valid existing rights pursuant to § 17(b)(2) of ANCSA is separate from the right provided in § 17(b)(1) of specifically-identified public access routes. Possible protection under § 17(b)(2) does not preclude the holder of a property interest from asserting that an easement decision affects his interest so as to satisfy the standing test of 43 CFR 4.902. However, an individual claiming standing to appeal an easement decision must assert public use of the desired easement in order to distinguish it from a § 17(b)(2) private access right.

The Board holds that the Appellant, Patrick J. Bliss, claims an

affected property interest within the meaning of 43 CFR 4.902 to have standing to appeal BLM's failure to reserve a public easement under § 17(b)(1) of ANCSA. Unless objection is filed within fifteen (15) days from the date of this partial decision, appellant has thirty (30) days within which to file any additional brief on the merits of the issues raised in this appeal. Briefs filed thereafter by the respective parties to this appeal will be in accordance with 43 CFR 4.903, *et seq.*

This represents a unanimous decision of the Board.

JOSEPH A. BALDWIN
Administrative Judge

CITY OF HOMER

6 ANCAB 203

Decided November 30, 1981

Appeal from the Decision of the Alaska State Office, Bureau of Land Management AA-41916.

Dismissed.

1. Alaska Native Claims Settlement Act: Alaska Native Claims Appeal Board: Appeals: Standing

When a municipality's "interest" in a particular tract of land is based only on the possibility that some day it may acquire the land under the provisions of the Federal Property and Administrative

Services Act of 1949, *as amended*, the municipality's "interest" is too speculative to constitute a "property interest" under 43 CFR 4.902.

2. Alaska Native Claims Settlement Act: Alaska Native Claims Appeals Board: Appeals: Standing

The appropriate test of standing to appeal a decision under ANCSA is not whether a person is an "aggrieved party" but whether a person "claims a property interest in lands affected by a determination from which an appeal to the Alaska Native Claims Appeal Board is allowed."

3. Alaska Native Claims Settlement Act: Alaska Native Claims Appeal Board: Appeals: Standing

The Act of Jan. 2, 1976, P.L. 94-204, 89 Stat. 1145, *as amended*, was clearly an amendment to ANCSA and the standing requirements of the original Act (43 CFR 4.902) apply to the amendments.

APPEARANCES: A. Robert Hahn, Esq., Hahn, Jewell & Stanfill, for the Appellant, City of Homer; Dennis J. Hopewell, Esq., Office of the Regional Solicitor, for the Bureau of Land Management; Stephen C. Hillard, Esq., Graham & James, for Cook Inlet Region, Inc.

**OPINION BY ALASKA
NATIVE CLAIMS APPEAL
BOARD**

JURISDICTION

The Alaska Native Claims Appeal Board, pursuant to delegation of authority to administer the Alaska Native Claims Settlement Act, 85 Stat. 688, *as amended*, 43 U.S.C. §§ 1601-1628 (1976 and Supp. I 1977) (ANCSA), and the implementing regulations in 43

CFR Part 2650 and 43 CFR Part 4, Subpart J, hereby makes the following findings, conclusions and decision.

Procedural Background

On Feb. 4, 1981, Cook Inlet Region, Inc. (CIRI), filed selection application AA-41916 under the provisions of sec. 12(b)(6) of the Act of Jan. 2, 1976 (89 Stat. 1151), and I.C.(2) of the Terms and Conditions for Land Consolidation and Management in the Cook Inlet Area, as clarified Aug. 31, 1976, for the surface and subsurface estates of certain lands in Homer, Alaska.

Sec. 12(b)(6) of the Act of Jan. 2, 1976, authorizes conveyance of lands to CIRI from a selection pool established by the Secretary of the Interior and the General Services Administrator.

The lands are located inside the boundaries of Cook Inlet Region. By notice dated May 20, 1980, the lands and improvements within selection AA-41916 were placed in the pool of properties for selection by CIRI, subject to valid existing rights.

The Bureau of Land Management (BLM) decision here in question was issued June 23, 1981, and held that the selection application of CIRI had been properly filed and met the requirements of the Act and of the regulations issued pursuant to it.

The lands in question are known as the FAA range site or the Homer H Marker Site within the City of Homer. Specifically, the lands are

the surface and subsurface estates located in Sec. 20, T. 6 S., R. 13 W., Seward meridian, more particularly described as:

From the $\frac{1}{4}$ corner common to Sections 19 and 20, Township 6 South, Range 13 West, Seward Meridian, in village (City) or Homer, Alaska, go East 238.5 feet to a 2 inch iron pipe and the point of beginning; thence North 834 feet to a 2 inch iron pipe; thence East 600 feet thence South 30 feet; thence East 234 feet; thence South 804 feet to a 2 inch iron pipe; thence West 834 feet to the point of beginning.

Containing approximately 15.63 acres. Appellant's Legal Description and Request to Segregate at 1.

On July 22, 1981, the City of Homer filed with the Board its Notice of Appeal from the above-mentioned BLM decision. Further, appellant submitted a statement of Standing and Interest Affected and an Initial Statement of Reasons on that same date.

On Aug. 17, 1981, the BLM filed a Motion to Dismiss and a memorandum in support of that motion. On Aug. 21, 1981, CIRI also filed a Motion to Dismiss for Lack of Standing in which it concurred in BLM's previous motion. The appellant, on Sept. 10, 1981, submitted a Memorandum in Opposition to Motion to Dismiss and CIRI followed on Sept. 28, 1981, with a Reply Memorandum in Support of Motion to Dismiss for Lack of Standing. A further Reply Memorandum was filed by appellant on Nov. 2, 1981, and on Nov. 10, 1981, CIRI submitted its Supplemental Memo-

randum in Support of Motion to Dismiss for Lack of Standing.

Decision

By virtue of the motions to dismiss filed by both BLM and CIRI, the only issue before the Board at this time is whether or not the City of Homer has the necessary property interest to appeal the BLM decision here in question.

As noted previously, the land in question is comprised of slightly over 15.5 acres and is located within the boundaries of the City of Homer. This property was originally held by the Federal Aviation Administration but on Dec. 18, 1979, it was reported excess and offered to other Federal agencies for possible utilization pursuant to the provisions contained in sec. 202 of the Federal Property and Administrative Services Act of 1949, *as amended*, 40 U.S.C. § 483, and in accordance with procedures established by the Federal Property Management Regulations 101-47.

By letter dated Feb. 12, 1980, the General Services Administration advised the State Director of BLM that the property in question had been determined surplus and thus it was appropriate for BLM to make this property available for selection by the Natives pursuant to the terms of the Alaska Native Claims Settlement Act, *as amended*.

After the enactment of ANCSA in 1971, and before the Homer H Marker Site, Nondirectional Beacon, was excessed and surplusd in

1979 and 1980, an agreement was entered into between the Department of the Interior, the State of Alaska and Cook Inlet Region, Inc. This document is entitled the "Terms and Conditions for Land Consolidation and Management in the Cook Inlet Area, December 10, 1975, as Clarified August 31, 1976" (T&C). The T&C was ratified by Congress by the enactment of P.L. 94-204. As this agreement pertains to this appeal, it states in pertinent part:

Section I.C.(2) (a) The Secretary, in conjunction with the General Services Administrator, shall promptly identify and take the necessary steps by January 15, 1978, to create a selection pool which shall consist of all the following lands, within the exterior boundaries of the Cook Inlet Region, now in existence or hereafter coming into existence by January 13, 1978:

* * * * *

(ii) Federal surplus property;

* * * * *

(c) The State shall be advised of all properties located within the exterior boundaries of Cook Inlet Region to be placed in the pool described in subparagraph I.C.(2) (a) and may require Secretarial consultation with the Joint Federal-State Land Use Planning Commission (JFSLUPC) with respect to any specific piece of property so included, except those in subparagraph I.C.(2) (a) (i) hereof, to determine whether private ownership of such property would be incompatible with reasonable land management principles; provided, that the Secretary shall not be bound by any recommendation of the JFSLUPC.

T&C at 28819.

As noted previously the only question before the Board at this

time is whether the appellant has standing to bring this appeal before the Board. To bring an appeal a person must meet the regulatory criteria of 43 CFR 4.902 which provides:

Any party who claims a property interest in land affected by a determination from which an appeal to the Alaska Native Claims Appeal Board is allowed, or an agency of the Federal Government, may appeal as provided in this subpart. However, a regional corporation shall have the right of appeal in any case involving land selections.

The appellant takes the position that it either has "a property interest in land affected" as required by 43 CFR 4.902 or, if it fails to meet those requirements, then administrative review should be allowed under either 43 CFR 4.700 or 43 CFR 4.410.

In claiming a property interest under 43 CFR 4.902, the appellant relies primarily on two factors. First, from 1962 and particularly from 1969 forward, various city managers and city officials consistently and on a regular basis expressed their interest in the property for city needs.

Second, the appellant argues that the State Director of BLM recognized the appellant's interest in the property when he invited the appellant to submit any data desired before a decision was made to place the property in the pool as provided for under Sec. I.C.(a) (ii) of the T&C. The appellant, in this regard, asks the Board to recognize that a property interest includes not only traditional notions of real and per-

sonal property but also extends to those benefits to which individuals or organizations may be deemed to have legitimate claims of entitlement under existing rules of understanding.

In refuting appellant's claimed property interest, BLM argues that appellant only had a hope or an anticipation of some day acquiring the land in question. In support of this argument, BLM cites *Appeal of State of Alaska*, 3 ANCAB 196, 86 I.D. 225 (1979) [VLS 78-42], for the proposition that this type of speculative interest in land was rejected by the Board.

In its reply to the position taken by the appellant, CIRI supports BLM's contention that the interest claimed by appellant is fatally speculative. Also, CIRI argues that appellant cannot rely upon the provisions of the Federal Property and Administrative Services Act of 1949, *as amended*, because nowhere in the 44 sections cited by appellant is a municipality granted a binding option, priority, or other nonspeculative right to acquire the Federal surplus land. In addressing the appellant's argument that in asking the appellant to comment on the possible disposition of the land, the State Director, BLM, somehow waived the regulatory requirement of standing, CIRI contends that such action by the State Director was a mere courtesy and not a waiver.

[1] The Board concludes that the appellant lacks the necessary prop-

erty interest in land affected that is required by 43 CFR 4.902, and therefore does not have standing to bring this appeal. The appellant's claim to the land in question is merely a hope, desire or possibility, and nothing more. This type of speculative interest in land has been rejected by the Board as the bases for meeting the standing requirement of 43 CFR 4.902. In the *Appeal of State of Alaska*, *supra*, at 234, the State of Alaska was found to lack standing because:

[3, 4]. While a 'property interest' sufficient to confer standing under sec. 4.902 need not be a vested interest, it may not be completely speculative. It is the Board's conclusion that where the State's 'interest' in a particular tract of land is based only on the possibility of a decision, at some future time, to select such land in preference to other land under the Statehood Act, the State's 'interest' is too speculative to constitute a 'property interest' under 43 CFR 4.902.

Furthermore, the Board has reviewed the 44 sections of the Federal Property and Administrative Services Act of 1949, *as amended*, cited by the appellant, and concludes that those provisions do not establish in a municipality a binding option, priority, or other nonspeculative right to surplus Federal property. In other words, the Board finds nothing in the above-cited Act that would, as the appellant claims, make the appellant a beneficiary recipient of the property in question because that Act does not mandate a priority to local agencies to acquire lands which are deemed to be

surplus. A careful reading of the Act reveals that the Administrator of the General Services Administration has been given broad discretionary powers in disposing of surplus land.

By contrast, language in the T&C establishing the selection pool, and designating which lands shall comprise the pool, is mandatory. Sec. I.C.(2) (a) provides that:

The Secretary, in conjunction with the General Services Administrator, *shall* promptly identify and take the necessary steps by January 15, 1978, to create a selection pool which *shall* consist of *all* the following lands, within the exterior boundaries of the Cook Inlet Region.

* * * * *

(ii) Federal surplus property:
[Italics added.]

A sectional analysis of P.L. 24-204, contained in H.R. Rep. No. 94-729, 94th Cong., 1st Sess., reprinted in [1976] U.S. Code Cong. & Ad. News 4120-4192, 4143, states with reference to the exchange pool, "The Secretary is directed to maximize a pool of federal properties available to reduce the extent of out-of-region acreage. The Region, after such properties are declared surplus, would be permitted first priority."

Under Sec. I.C.(2)(c) of the T&C, it appears that the State is the only entity which may challenge the Secretary's determination that private ownership of land is incompatible with reasonable land management principles. Although the State may require Secretarial consultation with the Joint Federal-State Land Use Planning Commis-

sion (JFSLUPC) (no longer in existence) on this point, this section of the T&C specifically provides that the Secretary is not bound by any recommendation of the JFSLUPC. Even this degree of participation is not offered to local government entities.

Therefore, the Board finds that when a municipality's "interest" in a particular tract of land is based only on the possibility that some day it may acquire the land under the Federal Property and Administrative Services Act of 1949, *as amended*, the municipality's "interest" is too speculative to constitute a "property interest" under 43 CFR 4.902.

[2] With respect to appellant's second argument that the Board should recognize that a property interest includes not only traditional notions of real and personal property but also extends to those benefits to which individuals or organizations may be deemed to have legitimate claims of entitlement under existing rules of understanding, it should be noted that the Board is bound by a restricted, as opposed to a liberal, standard with respect to the granting of standing. The appellant's contention that the Board should use its discretion and liberalize the standing requirements imposed by 43 CFR 4.902 is, the Board concludes, the equivalent of asking the Board to apply the "party aggrieved" standard:

The language in 43 CFR 4.902 is unique as a test of standing. While there is precedent for the proposition that administrative boards have, and should

have, wider discretion than the courts in determining who may appeal (*see, Gardner v. FCC*, 530 F.2d 1086, 1090 (D.C. Cir. 1976)), it is evident that the standard in 43 CFR 4.902 was intended to be more restrictive than the test under a 'party aggrieved' standard. The Board has found that the two standards require different interpretations and that the standing test in 43 CFR 4.902 is the more restrictive. (*Appeal of Sam E. McDowell*, 2 ANCAB 350 (1978) [VLS 78-2].)

* * * [T]he appropriate test of standing to appeal a decision under ANCSA is not whether a person is an 'aggrieved party,' but whether a person 'claims a property interest in land affected by a determination from which an appeal to the Alaska Native Claims Appeal Board is allowed.'

Joseph C. Manga et al., 5 ANCAB 224, 236-237, 88 I.D. 460, 465-466 (1981) [RLS 80-1]. Also see the concurring opinion of Judge Bazelon in *Koniag, Inc., Village of Uyak v. Andrus*, 580 F.2d 601, 614 (D.C. Cir. 1978).

The Board, therefore, reiterates its finding in *Appeal of Sam E. McDowell, supra*, that the appropriate test of standing to appeal a decision under ANCSA is not whether a person is an "aggrieved party," but whether a person "claims a property interest in lands affected by a determination from which an appeal to the Alaska Native Claims Appeal Board is allowed."

Having concluded that the appellant lacks a "property interest in land affected" as required by 43 CFR 4.902, the Board must next concern itself with appellant's second contention that administrative

review should be allowed either under 43 CFR 4.700 or 43 CFR 4.410.

First, it is the appellant's position that an appropriate regulation conferring standing is 43 CFR 4.700, which only requires that a party be "aggrieved" in order to bring an appeal. This regulation provides, in pertinent part:

Any party aggrieved by an adjudicatory action or decision of a Departmental official relating to rights or privileges based upon law in any cases or proceeding in which Departmental regulations allow a right of appeal to the head of the Department from such action or decision.

[3] The appellant argues that this appeal is not an appeal from ANCSA but rather it is an appeal from a distinct and separate statute.¹ Thus, appellant contends that because CIRI would take land under the T&C and not under the actual selection process of ANCSA, the Board should look to 43 CFR 4.700 and not to 43 CFR 4.902 for its standing requirements. The Board does not agree. The Board finds that the T&C (Act of Jan. 2, 1976, P.L. 94-204, *as amended*) was clearly an amendment to ANCSA and the standing requirements of the original act apply to the amendments. Among other factors, the following seem particularly pertinent: The preamble to P.L. 94-204 provides that the statute is "[to] provide, under or by amendment of the

¹ Act of Jan. 2, 1976, P.L. No. 94-204, § 12, 89 Stat. 1150 *as amended* by Act of Oct. 4, 1976, P.L. No. 94-456, § 3, 90 Stat. 1935, Act of Nov. 15, 1977, P.L. No. 95-178, § 3(a), 91 Stat. 1369; Act of Aug. 14, 1979, P.L. No. 96-55, § 2, 93 Stat. 386.

Alaska Native Claims Settlement Act, for [certain purposes]"; the T&C, as a statute, indisputably modifies the original provisions of ANCSA and therefore amends ANCSA; and finally the T&C and its enabling statute also provide that "the provisions of [ANCSA] are fully applicable to this Act." [P.L. 94-204, § 18 (Jan. 2, 1976).]

Lastly, appellant contends that "[i]f * * * the Board determines that it can only hear appeals based on the provisions of 43 CFR 4.902, then it would seem clear that this Board has no jurisdiction in this appeal and must transfer the case to a more appropriate forum, presumably the Interior Board of Land Appeals under 43 CFR 4.410."² The Board cannot concur in this reasoning. The Board cannot comprehend the reasoning that if it can only hear appeals based on 43 CFR 4.902, then it has no jurisdiction in this appeal and must, therefore, transfer the case to another forum such as Interior Board of Land Appeals.

² 43 CFR 4.410 provides in part: [A]ny party to a case who is adversely affected by a decision of an officer of the Bureau of Land Management or of an administrative [sic] law judge, shall have a right to appeal to the Board."

Because the Board has found in this appeal that it arose under ANCSA or an amendment to ANCSA (Act of Jan. 2, 1976, P.L. 94-204, *as amended*), this Board has jurisdiction. Having jurisdiction, the Board was legally bound to apply 43 CFR 4.902 when the standing question was raised. When an appeal arises from ANCSA and the Board determines that the appellant does not have standing under 43 CFR 4.902 to bring the appeal, there is no legal basis for concluding that this Board lacks jurisdiction of the appeal and therefore must transfer the case to another administrative forum.

Based on the findings and conclusions herein, BLM's and CIRI's motions to dismiss for lack of standing in the appellant is granted and therefore this appeal is dismissed.

This represents a unanimous decision of the Board.

M-36914 (Supp.), 88 I.D. 253 (1981).**

**OPINION BY OFFICE OF
THE SOLICITOR**

To: Secretary
FROM: Solicitor
SUBJECT: Nonreserved Water
Rights—United
States Compliance
with State Law

I. INTRODUCTION

Solicitor's Opinion No. M-36914 of June 25, 1979¹ (hereinafter "Prior Opinion") sets forth a partial analysis of the nature and extent of non-Indian federal water rights for the National Park Service, Fish and Wildlife Service, Bureau of

Reclamation and the Bureau of Land Management. In addition to its major conclusions concerning reserved water rights,² the Prior Opinion announced the existence of what has come to be referred to as "non-reserved federal water rights." As defined by the Prior Opinion, "non-reserved" water rights represented a class of federal appropriative water rights that may possibly be claimed by the United States for congressionally authorized programs.³ The Prior Opinion asserted that these non-reserved federal water rights are automatically appropriated by the mere application of water to a beneficial use and are acquired by the United States without regard for or compliance with state substantive law.⁴ On Jan. 16, 1981, a Supplemental Solicitor's Opinion (hereinafter "Supplemental Opinion") was issued which addressed the inapplicability of the "non-reserved" rights concept under certain federal statutes. This Opinion further analyzes the constitutional and statutory bases for the "non-reserved" water rights doctrine based upon an exhaustive review of the issues related to the so-called "non-reserved" rights theory. To the extent the Prior Opinion and the Supplemental

² This Opinion is not intended to modify or supersede any portion of the Prior Opinion dealing with the reserved water rights of the non-Indian land management agencies in the Department. I may further review those portions of the Prior Opinion at a future date as specific circumstances warrant.

¹ 86 I.D. 553 (1979).

Opinion are inconsistent with the conclusions reached herein, they are rescinded.

II. BACKGROUND

In brief, the proponents of the federal non-reserved rights theory assert that by enactment of various land use statutes "Congress authorized the United States to appropriate unappropriated water available on the public domain" implicitly, without regard to the substantive provisions of state water law,⁵ and that such "federal non-reserved water rights are not dependent upon the substantive contours of state water law."⁶ The Prior Opinion asserts that, since the Federal government has never granted away its right to make use of unappropriated water on federal lands, "* * * the United States has retained its power to vest in itself water rights in unappropriated waters and may exercise such power independent of substantive state law."⁷ Such water rights were asserted to be available to fulfill authorized congressional purposes on the public domain, reserved and acquired lands, could be consumptive and could be used for "fish and wildlife, scenic values, and areas of critical environmental concern."⁸ The priority date was said to be the date of initial use, and the quantity of the right determined by the requirements necessary to carry out "congressionally authorized

management objectives on federal lands."⁹

The Supplemental Opinion amended and modified the prior Opinion by concluding that neither the Federal Land Policy and Management Act of 1976 (FLPMA)¹⁰ nor the Taylor Grazing Act of 1934¹¹ authorized the Bureau of Land Management (BLM) to claim water rights under the expansive "non-reserved" rights theory. The Supplemental Opinion did not, however, uniformly deny the existence of a federal "non-reserved" water right.

The concept of the "non-reserved" water rights has been the subject of continuing debate and controversy.¹² State officials have stridently criticized federal control of state water resources. There is great uncertainty concerning the practical application, if any, of the non-reserved rights theory by the federal agencies. In particular, the asserted existence of this right has hampered the ability of the State and Federal governments to quantify federal water rights and to negotiate agreements to determine the procedures and methods to be used in quantifying and adjudicating water rights. The assertion of non-reserved rights has also created a new and unnecessary cloud of ambiguity over private

COMPLIANCE WITH STATE LAW

September 11, 1981

water rights dependent on water sources that are on, under, over or appurtenant to federal lands. For these reasons, the comprehensive review of "non-reserved" water rights was undertaken.

III. GENERAL AUTHORITY OF THE UNITED STATES TO APPROPRIATE WATER APPURTENANT TO FEDERAL LAND

As a starting point for reviewing the legal basis for the existence of "non-reserved" water rights, there are certain premises and conclusions in the Prior Opinion and Supplemental Opinion which are well settled. Specifically, the Prior Opinion reached the following conclusions regarding the United States right to appropriate unappropriated water with which I fully agree and therefore reaffirm:

1. The United States has the power to appropriate water pursuant to state law on federally-owned land, regardless of whether such land is classified as a reservation, acquired land or public domain. Congress also has retained the power to implement the original objective of congressional acts.¹³

2. The priority of an appropriative water right obtained by the United States, whether consumptive or non-consumptive, may not predate actual use, and it may not adversely affect prior rights established pursuant to state substantive and procedural law.¹⁴

3. Congress generally did not intend that the United States would acquire water rights for the ultimate beneficiaries of the disposed public lands or users of the non-

renewable resources thereupon (such as miners, homesteaders, or railroads) unless Congress specifically directed the United States to reserve or otherwise acquire water for such specific public use.¹⁵

4. The United States may apply to the states to secure appropriative water rights needed to meet the multiple-use management objectives set forth by Congress in land management statutes, *e.g.*, FLPMA, *supra*, and the Taylor Grazing Act, *supra*.¹⁶ In so doing, the United States must comply with state substantive and procedural laws.¹⁷

5. In the area of water rights, FLPMA mandates the maintenance of the *status quo ante* in the relationship between the states and the United States. The *status quo* is a recognition of existing laws and practices, and thus allows for (a) the continued appropriation of unappropriated non-navigable waters on the public domain by private persons pursuant to state law, (b) the right of the United States to use water for congressionally-recognized and mandated purposes set forth in legislation providing for the management of the public domain, and (c) application by the United States to secure water rights pursuant to state substantive and procedural law for these purposes.¹⁸

6. Neither FLPMA nor the Taylor Grazing Act give the BLM an independent statutory basis for water uses which are inconsistent with the substantive and procedural requirements of state law.¹⁹

IV. THE INTERRELATIONSHIP OF FEDERAL AND STATE CONTROL OF WATER RIGHTS

In reviewing the interrelationship of federal and state law gov-

erning water rights, the United States Constitution empowers Congress under the Property²⁰ and Commerce Clause²¹ to control the disposition and use of water appurtenant to lands owned by the United States. That power extends to water on, under, over and appurtenant to federally-owned lands in the states.²² The power of the individual states to, at a minimum, promulgate and exercise non-conflicting state regulation.²³ Indeed, the states, as Congress clearly recognized in enacting the McCarran Amendment,²⁴ have a strong interest to regulate the water within their boundaries, including water appurtenant to federal lands. As the Supreme Court has noted "if the appropriation and use were not under the provisions of State law the utmost confusion would prevail. * * * Different water rights in the same state would be governed by different laws and would frequently conflict."²⁵ Despite the practical im-

portance of local control of water, Congress, under the Supremacy Clause²⁶ has the ultimate power to preempt state laws regarding management and disposition of the public lands and the resources thereon, including water.²⁷ As a result, it is unlikely that state law could preclude reasonable water use by a federal agency if Congress specifies a particular federal usage.²⁸ While the Constitution may grant Congress plenary power in an area, Congress may generally defer to state control thereby delegating that authority to the states.²⁹ The Supreme Court has expressly recognized that Congress has delegated broad power to the states in regulating water resources on the public lands.³⁰ Accordingly, the ultimate issue is not the existence of authority but the exercise or delegation of that authority.

The United States' control over unappropriated non-navigable water located upon the public domain arises from retention of federal property, including the streams and lakes thereon at the time of state-

COMPLIANCE WITH STATE LAW

September 11, 1981

hood.³¹ When the various western states were admitted to the Union, the title to the beds and waters of the navigable streams and lakes passed to the new states, with the United States retaining title to the non-navigable waters on the public domain.³²

Yet Congress has been said, as was earlier referenced, to have concurrently granted "exclusive sovereignty" over appurtenant non-navigable water rights when it granted statehood. In addition to the statehood acts, Congress very early on promulgated legislation which deferred to state control of water usage on the public domain. Specifically, Congress passed two statutes which, consistent with state law, recognized the rights of prior appropriators.³³ The statutory provisions in the 1866 and 1870 Acts had the effect of requiring water rights claimants on federal lands to comply with state water laws.

Since the appropriation system grew up partially as a consequence of and in conjunction with western states' mining laws, the statutory acknowledgment had the effect of placing the congressional imprima-

tur upon the water laws of the *individual* western states.³⁴ Thus, rather than exercising a constitutional prerogative of establishing a federal hierarchy of water rights and laws, these two statutes recognized the state substantive and procedural laws for the allocation of water resources on the public domain. This was an early signal to the States and Territories that the Federal government would yield to state water laws and naturally was an incentive to the new states to promulgate and apply their own water laws.

Congress reaffirmed and enlarged this implicit grant of broad control over water sources to the states in passage of the Desert Lands Act of 1877.³⁵ That Act provided homesteaders with a right to water, subject to prior appropriation, for "irrigation and reclamation usages" and further provided that surplus water would be available for later appropriation. As the Supreme Court has noted, the Desert Lands Act severed the water rights from surface rights³⁶ and directed patentees of federal lands to apply under state law to acquire water rights.³⁷

These three statutes, the Desert Lands Act, as well as the 1866 and 1871 Acts, had the effect of severing water from land on the public do-

main,³⁸ requiring state laws to be followed and making all non-navigable waters a part of the "publici juris" and subject to the "plenary control" of the Western States.³⁹ These statutes, which are still in effect, demonstrate the early congressional deference to state water law.

In 1902, Congress again mandated that federal agencies comply with state water laws under sec. 8 of the Reclamation Act of 1902.⁴⁰ Sec. 8 directs the Secretary of the Interior to abide by state law in acquiring unappropriated water for reclamation projects in the various states. This deference to state law is particularly noteworthy because the Reclamation Act was "a massive program to construct and operate dams, reservoirs and canals for the reclamation of the arid lands in 17 western states."⁴¹ Yet despite the provision for substantial federal action and federal expense to develop water resources within the state, Congress nevertheless maintained its commitment to allow state control of water rights.

Congress has continuously encouraged, through federal legislation, the development of state control of water within state boundaries. The four statutes cited above are merely examples of the more important early legislation. Yet, there

are many other statutes which similarly express or implicitly permit the states to control water appurtenant to federally-owned lands. As the Supreme Court has noted recently, Congress has continued its deference to state law in at least 37 statutes.⁴²

Congressional deference to states in water law is well-documented by the above-referenced Court decisions. Only in very limited instances has Congress maintained its power and not deferred to state law. For example, in *United States v. Rio Grande Dam and Irrigation Co.*,⁴³ where the Supreme Court noted that the right of the United States to restrict a state appropriation system is limited. The United States sought to enjoin an irrigation company's appropriation of water under state law because a permit had not been acquired from the Secretary of War to make a diversion from the navigable Rio Grande River. The Supreme Court held that a state in establishing its own system of water law could not, without congressional consent, "destroy the right of the United States, as the owner of lands bordering on a stream to the continued flow of its waters; so far at least as may be necessary for the beneficial uses of the Governmental property."⁴⁴ In so ruling the Court upheld New Mexico's control of state water, except to the limited extent it inter-

ferred with the navigation servitude.⁴⁵

Shortly after the *Rio Grande Dam* decision, the Court applied the "beneficial use of Government property" exception to create the reserved right doctrine in the case of *Winters v. United States*.⁴⁶ *Winters* involved the interpretation of an agreement between the United States and the Fort Belknap Indian Tribe to resolve a dispute over water rights between the tribes and a private appropriator. The Court found Congress' intent in creating the Fort Belknap reservation was to assist in transforming the Indians into a "pastoral and civilized people." The Court acknowledged that irrigation was necessary to fulfill the purpose of the reservation by making the lands productive. Without irrigation, the principal purpose of the reservation would have been frustrated. In holding that Congress had implicitly reserved water for the Indian reservation, the Court relied upon the rule of construction that ambiguities are to be resolved in favor of the Indians.⁴⁷ Only with the assistance of this rule applicable specifically to Indians did the Court ultimately conclude that the "power of the Government to reserve the waters and exempt them from appropriation under the state laws" for use on the Govern-

ment property had been implicitly exercised.⁴⁸ The Court left intact the well-recognized congressional deference to state water laws in all but the most limited circumstances.

For over half a century, the "Winters doctrine" was construed as a limited exception to the congressional deference to state control of water and applicable only to Indian water rights.⁴⁹ In 1963, the Supreme Court broadened the reserved rights doctrine in *Arizona v. California*⁵⁰ holding the "principle underlying the reservation of water rights was equally applicable to other federal establishments," specifically in that case wildlife refuges, national recreation areas, and national forests. Notwithstanding this expansion of *Winters*, the Court viewed this broadening not as a revocation or renunciation of the general deference to state water laws, but rather as an acknowledgment of Congress' power to control water where necessary to fulfill the original purpose of a reservation. In narrowly deciding the issues, the Court specifically declined to address the issue of state control of water which had not been appropriated.⁵¹ That is, could Arizona exert control over all nonappropriated water appurtenant to federal lands or did some inchoate federal right (*i.e.*, non-reserved rights) limit Arizona's power in this

regard? Since the issue was specifically not addressed by the Court, *Arizona v. California* provides no judicial basis for the exercise of federal "non-reserved" water rights.

While never reviewing the issue of federal non-reserved rights, the Courts have continued to maintain a strict requirement for application of the reserved rights doctrine and clearly regard it as an exception, and not the rule, to a general deference to state law regarding appropriation and use of water.⁵² Simply stated, there is neither a congressional nor judicial basis for the exercise of a federal non-reserved water right.

In my opinion, this issue of "non-reserved" federal water rights was definitively and directly addressed on July 3, 1978, by the Supreme Court in two separate opinions regarding the water rights of the United States. In *United States v. New Mexico*,⁵³ and *California v. United States*,⁵⁴ the Court once again acknowledged the congressional deference to state water law concluding that "this congressionally mandated division between federal and state authority worked smoothly."⁵⁵

In *California v. United States*, the United States sought declaratory relief to the effect that it could impound unappropriated water for

reclamation purposes without regard for state substantive law. In connection with the 1902 Reclamation Act, the United States alleged that while it was required under § 8 of the Reclamation Act of 1902 to apply to the state for water rights permits for the federal project, the state could not substantially condition those permits. The United States alleged that to the extent there was unappropriated water in a source, the state must grant the United States the unconditional right to use that water. The Court, however, rejected this claim and held that the state may impose any condition on the control, appropriation, use, or distribution of water in a federal reclamation project that is not inconsistent with a congressional directive respecting the project.⁵⁶ The Court made a comprehensive analysis of the history of federal deference to state water law and in this regard quotes approvingly, the opinion of experts that the states, by Constitution or statute, gained absolute dominion over their non-navigable water upon their admission to the Union. The Court went on to note that:

Congress 'effected a severance of all water upon the public domain not theretofore appropriated from the land itself'. * * * The non-navigable waters thereby severed were reserved for the use of the public under the laws of the states.^[57] (citation omitted)

The Court thus held that the United States water use is limited until it reserves the water or com-

plies with the various state laws to appropriate that water, in the same manner as any other individual.

The Court also cited with approval its earlier opinion that a state has total control of water, limited only by the two exceptions, reserved rights and the navigation servitude:

The Court [in *Rio Grande Dam*] noted that there are two limitations to the states' exclusive control of its streams—reserved rights 'so far at least as may be necessary for the beneficial use of government property' and the navigation servitude.⁶¹

In addition to the legal basis for its opinion, the Court also acknowledged the practical necessity of having federal appropriation comply with local law in order to avoid "confusion" and "conflict."⁶²

The *New Mexico v. United States*⁶³ opinion reaffirms and expands the strong statements made in *California* as to the scope of federal water rights. Specifically, a congressional grant of "exclusive sovereignty" to the State of all non-navigable waters (not formally reserved) is once again acknowledged by the *New Mexico* opinion. The *New Mexico* case analyzed the United States' power to claim reserved water rights in a national forest for other than an "original" purpose of the national forest. The Court initially noted the deference usually provided in the area:

Where Congress has expressly addressed the question of whether federal entities

must abide by state water law, it has almost invariably deferred to the state law.⁶⁴

In reviewing the United States' use and control of water before creation of the reserved rights, the Court noted that prior to the creation of the national forest reservations, Congress was of the opinion that:

the States had exclusive control of the distribution of water on public lands and reservations.⁶⁵

The Court implies throughout the *New Mexico* opinion that the United States, without creating a reservation and thus impliedly reserving the water, had no control or means of preventing the public (or private appropriators) from appropriating all the waters in the National Forests pursuant to state laws. For example, the Court states that before the Forest Service Organic Act was passed the public had free reign to go upon the public domain and use water resources without restriction.⁶⁶ In other words, without the formal reservation of the land from the general public domain, the water resources upon the public domain could not be controlled by the United States without further action by Congress modifying, amending, or repealing the 1866, 1870, and 1877 Acts that gave the states the express right to control the disposition of water resources thereon.

⁶¹ 438 U.S. at 662.

⁶² *Id.* at 667-68.

⁶³ *Supra*, nt. 53.

⁶⁴ 438 U.S. at 702.

⁶⁵ *U.S. v. New Mexico*, *supra*, at 718, nt. 24.

⁶⁶ 438 U.S. at 705-706.

The *New Mexico* Court concluded that unless Congress expressly indicated to the contrary, "federal entities must abide by state water law,"⁶⁴ and "where water is only valuable for a secondary use [on a federal reservation] * * * Congress intended that the United States would acquire water in the same manner as any other public or private appropriator." (italics added)⁶⁵ A clearer statement of the law could not be made.

Certainly *New Mexico*, *supra*, and *California*, *supra*, reaffirm that congressional deference to state control over water arises from the 1866, 1870, and 1877 Acts, as well as the 1902 Reclamation Act and numerous other public land use statutes enacted over the years.⁶⁶ The unavoidable conclusion to be reached from these cases is that Congress gave the states broad power to provide for the administration of water rights which would only be limited where necessary to accomplish the original purpose of a congressionally mandated reservation or to protect the navigation servitude. As a result of this implicit grant of power, the presumption is that state law will control all non-reserved claims unless Congress provides otherwise. If Congress wishes to abandon its historical practice of deference it must explicitly exercise its power. While the Congress has retained the right to amend these laws and reassert legislative control over a portion or all of the remaining un-

appropriated water in a state, it has chosen not to do so. In construing land management statutes, this deference to state law rises to a presumption that the United States and its agencies must acquire water rights in accordance with state substantive and procedural law unless necessary for the original purpose of a reservation.⁶⁷

V. CONCLUSION

A review of the applicable federal constitutional, legislative and judicial authorities demonstrate the power of Congress to control the usage of water appurtenant to the federal lands. The legislative and case law authorities also demonstrate congressional intent to defer control of water to the states, in all but the most limited circumstances. Congress has chosen to displace state control of water appurtenant to federal lands only when necessary to accomplish the original purpose of formal reservations. When not necessary to accomplish such original purpose, Congress has uniformly permitted and the Supreme Court has recognized state control.

Within this framework, there is an insufficient legal basis for the creation of what has been called federal "non-reserved" water rights, especially in the wake of the Supreme Court pronouncements in *United States v. California* and *New Mexico v. United States*. I must conclude therefore that there is no federal "non-reserved" water right. Federal entities, including,

without limitation, the National Park Service, Fish and Wildlife Service, Bureau of Reclamation and the Bureau of Land Management, may not, without congressionally created reserved rights, circumvent state substantive or procedural laws in appropriating water. Rather, consistent with the express language in the *New Mexico* decision, federal entities must acquire water as would any other private claimant within the various states.

Nothing in this Opinion limits federal procurement of water by other legally authorized means, if state water law prohibits the appropriation of water for the federally specified purpose. Specifically, condemnation, purchase or exchange may be used as a basis for acquiring water for use on federal lands.

APPEAL OF MANN CONSTRUCTION CO., INC.

IBCA-1280-7-79

Decided *December 10, 1981*

Contract No. 8-07-DC-70324, Bureau
of Reclamation.

Denied.

1. Contracts: Contract Disputes Act of 1978: Interest—Contracts: Disputes and Remedies: Equitable Adjustments

A construction contractor's claim for interest under the Contract Disputes Act of 1978, is denied where the Board finds that the underlying claims for an equitable adjustment were negotiated to

settlement as evidenced by a written agreement between the parties which contained no provision postponing the finality of the settlement pending the resolution of the claim for interest.

APPEARANCES: Richard Mann, President, Mann Construction Co., Inc., Redmond, Oregon, for Appellant; Gerald D. O'Nan, Department Counsel, Denver, Colorado, for the Government.

OPINION BY CHIEF ADMINISTRATIVE JUDGE McGRAW INTERIOR BOARD OF CONTRACT APPEALS

This appeal is for interest claimed to be due the appellant under the Contract Disputes Act of 1978 (41 U.S.C. §§ 601-613 (Supp. II 1978)). In the amended complaint¹ the appellant claimed interest in the amount of \$13,588.11, computed as follows:

\$100,000 (Jan. 1—April 11, 1979) ×	
10¼ % per annum	\$2,780.14
\$11,157 (Jan. 1—May 14, 1979) ×	
10¼ % per annum	\$413.57
\$171,362 (Jan. 1—August 6, 1979) ×	
10¼ % per annum	\$10,394.40 [2]

¹ The amended complaint is dated Sept. 4, 1979, but was not furnished to the Government until the day of the hearing. By order dated Oct. 17, 1979, the Board confirmed its tentative ruling permitting the amended complaint to be filed and allowing the Government 30 days to meet the evidence adduced by the appellant regarding the issues raised by the amended complaint.

² In the complaint as initially filed, the appellant had claimed interest in the amount of \$8,510.51 computed as follows:

\$100,000 (Mar. 6—Apr. 11,	
1979) × 10¼ % per annum—	\$982.88
\$11,157 (Mar. 6—May 14,	
1979) × 10¼ % per annum—	213.05
\$171,362 (Mar. 6—Aug. 6,	
1979) × 10¼ % per annum—	7,314.58
	<hr/>
	\$8,510.51

without limitation, the National Park Service, Fish and Wildlife Service, Bureau of Reclamation and the Bureau of Land Management, may not, without congressionally created reserved rights, circumvent state substantive or procedural laws in appropriating water. Background

Contract No. 8-07-DC-07324 dated June 27, 1978, called for the construction and completion of McKay Dam Spillway Modification in accordance with the terms of Specifications No. DC-7324 for the esti-

standard form 23A (April 1975 edition), as modified by Supplement to General Provisions dated June 1976. The bidding schedule included the following items of work³ for which the contractor had submitted bid prices as shown below:

Item	Work or material	Quantity and unit	Unit price	Amount
1	Presplitting for excavation.....	14, 500 lin. ft....	\$ 3. 70	\$ 53, 650
1a	Drilling line holes.....	500 lin. ft.....	4. 00	2, 000
*	*	*	*	*
6	Excavation for spillway chute enlargement.....	15, 000 yd.....	10. 00	150, 000

mated price of \$549,490. Prepared on the standard form for construction contracts, the contract included the General Provisions set forth in (Supplemental Notice No. 2).⁴

Some time prior to Sept. 28, 1978, the appellant received an oral directive from the Bureau of Reclamation (BOR) to widen the spillway by removing the rock by using the smooth wall method rather than presplitting prior to removal of the rock as had been originally planned (AX A). The oral directive was supplemented by other changes in the Bureau's letter to the contractor dated Oct. 13, 1978.⁵ In its response

of Oct. 24, 1978, the contractor advised the BOR that its directive had increased the cost and the time required for completion of the project; that a claim for an equitable adjustment would be asserted under Clause 3 of the General Provisions; and that upon being provided with a marked up plan, it would price out the impact of the change and inform the BOR (AX B). A request for an equitable adjustment was made in the contractor's letter to the Bureau dated Nov. 8, 1978. (AX C).

In a letter to the Bureau under date of Dec. 8, 1978, the contractor expressed increasing concern about the unsettled manner of the two changes on the job, noting (i) that it could not accept the argument of the Cle Elum office that the increased costs involved in the

⁴ Appeal File 1. Exhibits submitted as part of the appeal file are identified by the letters AF followed by reference to the particular exhibit number.

⁵ The Chief, Construction Field Division, BOR, concluded the letter by stating: "[A]ccurate and complete records of any work incurred as a result of these changes should be kept to provide data to be used in calculation of an adjustment in the contract value. Payment will be made in a future order for changes" (Govt. Exh. (hereinafter GX) 39, letter (10-13-78), at 1, 2).

³ In an affidavit under date of Dec. 11, 1979, Mr. Mann states: "4. The only items for which Mann Construction Co., Inc., is requesting reimbursement for interest are bid items 1, 1A and 6" (Appellant's Exh. (hereinafter AX) U-1).

changes were at least partially attributable to the manner in which the contractor had chosen to perform the changed work and (ii) that it had completed the first change and was well into the second change without having received any compensation for either of the two changes even though the actual cost for performing them had been sizeable. The letter stated that the contractor was willing to meet with the Chief, Construction Field Division, to negotiate the two changes. It noted, however, that if the office lacked authority to consummate a price agreement, then a meeting with the contracting officer as soon as possible was urgently requested.⁶

On Nov. 27, 1978, representatives of the BOR (Cle Elum office) met with Mr. Mann and others in the contractor's office in Redmond, Oregon. In a letter written a month later, the contractor took exception to positions advanced by the Government representatives at the meeting. Enclosed with the letter were summary sheets in which the contractor undertook to detail the additional expenses to perform the directed change for which an equitable adjustment was being sought. In connection therewith it was noted (i) that no allowance had been made for the impact on other items of work due to prolonging the spillway excavation and (ii) that

the contractor could not determine at that time what impact the change might have on yet to be completed work items (AF 23 and AX E).⁷

By letter dated Dec. 27, 1978, the contractor furnished its estimate of the cost to perform the modifications per revised drawings dated Oct. 18, 1978, and listed in the Bureau's cover letter dated Dec. 4, 1978. The letter noted that the contractor had used the same format to price out the revisions as had been requested in the Bureau's letter dated Dec. 5, 1978.⁸

A revised Construction Progress Chart was transmitted to the Bureau by the contractor's letter dated Jan. 5, 1979. The letter noted that the estimated costs shown on the left side of the chart included the contractor's claims for equitable adjustments previously forwarded to the Bureau's Cle Elum construction office.⁹

In a letter addressed to the attention of the contracting officer under date of Jan. 9, 1979, the contractor protested the action of the Cle Elum office in reducing Pay Estimate No. 5 from the estimate prepared in the

⁷ Concluding this discussion the letter stated: "[T]he only impact that can be determined at this time is that we will require 30 calendar days additional time to complete the contract" (AF 23 and AX E, contractor's letter (12-27-78) at 2).

⁸ Immediately thereafter the letter states: "In addition to the adjustment in the contract amount to perform the listed changes, we will require an additional 60 calendar days to perform the work as shown" (AX S; contractor's letter dated 12-27-78).

⁹ The letter concluded with the statement: "Once we have negotiated the actual amount of said changes, we will revise the left hand side of the progress chart to show the actual dollar amount" (AX F, contractor's letter dated 1-5-79).

⁶ The letter states: "[T]he New Disputes Act of 1978 now provides interest from the time the contractor presents his bill and therefore we will be requesting settlement in accordance with the new Act if an accord cannot be reached in the very immediate future" (AF 24 and AX D).

field of \$92,000 to \$23,518.30.¹⁰ According to the letter the main reason for reducing the pay estimate as submitted from the field was the fact that all excavation had been priced at the original unit price of only \$10. Other explanations offered by the Chief, Construction Field Division, Cle Elum office, included the following: (i) No allowance had been made for the costly toe trenching operation because no work had been done on this (this assessment was disputed by the superintendent) and (ii) the estimate had been reduced \$11,000 because no paid invoice had been supplied for fabricated reinforcing steel stored at the project site and the General Provisions require the contractor to show title to material delivered on the job when requesting payment for them.

As expressed in the letter it was Mr. Mann's view that the contractor's main obstacle to getting an equitable settlement on either of the two charges or reasonable progress payments on them was the mistaken impression of the Chief of Construction that the equitable adjustment for the changed work that had been completed was subject to some sort of test of reasonableness.¹¹ Af-

ter referring to a meeting apparently planned for soon after Feb. 1, the letter concluded by urging the contracting officer to take a hard look at the obvious cost impact the two changes in question had had on the contractor's cost and then prepare a revised estimate in an appropriate amount including \$10,954 for the reinforced steel per the paid invoice attached to the copy of the letter being furnished to the Cle Elum office (AX G).

Some time prior to Feb. 2, 1979, the contractor had requested a meeting on the regional level (AX H). The meeting was originally scheduled to be held on Feb. 7, 1979, in Denver, Colorado. It was rescheduled, however, and held on Mar. 6 and 7, 1979, in Pendleton, Oregon (AF 18-20). In anticipation of the March meeting and with the stated purpose of making the meeting more productive, the contractor wrote a letter to the BOR on Feb. 8, 1979,¹² in which the contractor set forth its position and the Government's position as it understood it. The letter noted the effects that had occurred when the Government directed a constructive change from the spec-

¹⁰ The opening paragraph of the letter reads: "Yesterday we returned Pay Estimate No. 5 in the amount of \$23,518.30 to your Cle Elum office although we do not agree that this payment is fair and equitable. We did so in order to get whatever money we can to help keep our subcontractor afloat until such time that we are able to establish with you the hard dollar figure for each of the two changes" (AX G; contractor's letter (1-9-79) at 2).

¹¹ Thereafter Mr. Mann states: "The test to be used in arriving at an equitable adjustment is *did* the change have an impact on the contractor's cost and, if so, how much" (AX G, contractor's letter (1-9-79) at 3).

¹² The opening paragraph of the letter reads:

"Your resident office would not accept the method we used in pricing the constructive change from the specified presplit to the so-called smooth wall. We are thereafter resubmitting our cost for this work herewith. This is a support for the costs we originally submitted and you will note that we have this time estimated the cost of each of the major impacts the change had on the job. Also, you will note that we have included some of the cost impact on the prime contractor's work which we had reserved on the original proposal." (AF 21, contractor's letter dated 2-8-79).

ified presplit method to a so-called smooth wall operation. Also noted was the Bureau's letter dated Oct. 13, 1978, by which the contractor was directed to proceed with modification work.

Responding to the contractor's Feb. 8¹³ and 13, 1979, letters under date of Feb. 12, 1979,¹⁴ the contracting officer said that the Government's position as outlined by the contractor was essentially correct (AF 19). The same day the contractor addressed a letter to the contracting officer in which he noted (i) that Mr. Duck and Government counsel would be the only representatives from the regional office and (ii) that while Mr. Duck had assured Mr. Mann that he had complete authority to act for the contracting officer, he had made it clear that he had little hope of reaching an equitable settlement at the March meeting and that he anticipated that several meetings might be re-

quired. In this connection, Mr. Mann stressed the importance of having personnel at the meeting who not only would have authority to negotiate a settlement on behalf of the Government but would not be inhibited from doing so by the absence of an adequate quorum of Government representatives.¹⁵

With respect to the scheduled meeting in Pendleton, Oregon, on Mar. 6 and 7, 1979, the contracting officer advised the contractor on or about March 1 that Mr. Duck would have authority to act in his behalf and that he would not be reluctant to do so. In the same communication the contractor was informed that if it were determined that the contractor was entitled to additional payment and the amount of the final adjustment could not be agreed upon, an interim payment could be made under part 1 of a two-part order for changes and that a final determination would then be made in part 2 of the order.¹⁶

In a letter written to the attention of the contracting officer under date of Mar. 5, 1979, the contractor adverted to its request for an equitable adjustment for both the first and

¹³ The contrasting position of the parties with respect to interest was stated in the following terms: "[I]nterest is due the contractor on the ultimate equitable adjustment from the time the contractor first submitted his costs. * * * [I]nterest should not start accruing on the equitable adjustment until such time as the contractor furnishes the backup information the Government has requested and is entitled to" (AF 21, contractor's letter (2-8-79) at 3, 4).

¹⁴ In the course of the letter the contracting officer stated:

"In reviewing your cost proposals, we find most of the costs are based on estimates. * * * [S]ince the majority of the work is completed, the most current and accurate data available is the data on actual cost incurred. Also, you should furnish cost and pricing data to support the claimed indirect costs of you and your subcontractor." (AF 19, BOR letter dated 2-22-79).

¹⁵ In connection with the charge that the project had not been administered in an objective manner, Mr. Mann noted that he had been a Government contractor for some 20 years and that he was not a novice in the Government contracting arena (AF 20, contractor's letter dated 2-22-79 at 2).

¹⁶ The faxogram concluded with the statement: "If agreement cannot be reached and you desire a final decision by the contracting officer in accordance with Clause No. 6 of the General Provisions, a findings of fact will be prepared upon your request. Preparation and issuance of a finding would require about 30 days" (AF 17 and GX 26, Faxogram from contracting officer dated 2-28-79 or 3-1-79).

second change on the job after which it stated that the entire method and manner of performing item 1, Presplitting for Excavation, and item 6, Excavation of Spillway Chute, was changed drastically from that specified in the contract. The letter also noted (i) that the contractor's request for an equitable adjustment was based on an actual cost basis for the majority of the phases of the work where separation of cost was possible and (ii) that in most instances the impact of the change had been computed by deducting what the work should have cost had there been no change from the actual cost of the changed work.¹⁷

The day following the Pendleton meeting on Mar. 6 and 7, 1979, Order for Changes No. 1 (part 1 of a two-part order), was issued. Dated Mar. 8, 1979, the Change Order recited that it was being issued pursuant to Clause No. 3 of the General Provisions of the instant contract and provided in part as follows:¹⁸

¹⁷ After calling attention to the fact that detailed computations with support data for both its subcontractor's costs and its own were attached, the letter stated: "[W]e will stand firm on these figures unless a complete satisfaction and accord cannot [sic] be reached at this coming meeting. We request that interest as provided by the new Disputes Clause of 1978 [sic] be added as appropriate at the time of settlement" (AF 16 and AX I, contractor's letter dated 3-5-79 at 2).

¹⁸ Order For Changes No. 1 (part 1 of a two-part order) also contains the following provisions relating to progress payments:

"Because data available at this time are insufficient to determine the amount of the final equitable adjustment, the following is provided solely for the purpose of making progress payments. The final determination of the contracting officer will be made in part 2 of this order after complete data are available.

"a. As an adjustment for smooth-wall blasting and additional excavation resulting from

[T]he following changes in the drawings and/or specifications are hereby ordered:

1. In lieu of performing blasting work using "pre-splitting" techniques in accordance with specifications paragraph 15-11, perform blasting using "smooth-wall" techniques as directed in the field.

2. In lieu of excavating the spillway to vertical lines as shown on specifications drawings No. 30-D-138 and 30-D-139, excavate to 3/4:1 slope between stations 4+00 and 7+47.89 and transition from 3/4:1 to vertical between stations 4+00 and 3+20.

In a letter to the BOR dated Mar. 12, 1979,¹⁹ the contractor noted that the actual cost for performing the mucking had been arrived at by adding all of the direct charges attributable to the mucking operations²⁰ as shown in the text of the

the change in excavation slopes in accordance with items No. 1 and 2 above, the amount due under the contract is increased by—\$176,656.80.

"Payment in the amount of \$33,906.80 and \$42,750 have been made under specifications schedule items 1 and 6, respectively. Total payment under this order includes those payment amounts. Thus, additional payments under this order amount to \$100,000." (AF 5, Findings of Fact and Decision by the Contracting Officer dated 6-12-79, Exh. A).

¹⁹ The opening paragraph of the letter states:

"[T]he presentation we made relative to the cost impact on the prime contractor's work arising from the change on our subcontractor's drilling and blasting operations was not accepted at our meeting in Pendleton because you were not able to correlate the time loss impact we were claiming to the actual time periods in the various work zones. I pointed out that we had presented it in this manner in an attempt to give you a ballpark breakdown of the impact in the three different areas." (GX 35, contractor's letter (3-12-79) at 1).

²⁰ Concerning the amount of overhead claimed the letter stated:

"The 8625 figure we have shown for overhead was computed at 15% of prime's cost (excluding sub), but I strongly suspect this is far below our actual overhead allocable to this job. However, if we can settle this matter without further haggling, I'll leave it stand, and in addition I'll forego the sizeable interest that has been accumulating." (GX 35, contractor's letter (3-12-79) at 3).

letter and in accordance with support data attachments A through K. Addressing a question raised by a Government representative at the Mar. 6 and 7, 1979, meeting, as to why the contractor's own impact claim had not been presented on the same basis as it had presented that of the subcontractor, Mr. Mann stated that it had not occurred to him until after the meeting that the cost impact on the prime contractor's operations could be more clearly presented by making a separate presentation from the subcontractor but by using the same formula, *i.e.*, actual cost of performing the mucking versus the "should have been cost" doing the mucking.²¹

Supplementing the Mar. 12, 1979, submission, the contractor wrote to the Bureau on Mar. 13, 1979, to say: (i) That the request for equitable adjustment had been restructured as suggested by the BOR;²² (ii) that one sentence considered very germane had been omitted from page 3 of the March 12 letter;²³ (iii) that

²¹ With respect to the cost and pricing data shown in the letter, Mr. Mann stated: "I have personally audited and reaudited the above cost and pricing data and hereby certify these costs to be correct and properly chargeable to the mucking operations as shown, to the very best of my knowledge" (GX 35, contractor's letter (3-12-79) at 3).

²² As to the costs included, the letter states: "These costs cover all changed work which had been computed through Dec. 31, 1978 but does not cover the uncompleted portion of the change or the impact the change may have on unchanged work" (AF 15, contractor's letter (3-13-79) at 1).

²³ The following sentence had been omitted from page 3 of the Mar. 12, 1979 letter: "I would think your auditors could audit this data more readily from their office than from ours, but if they wish to come here, I'll be glad to make all our records available upon 48 hours notice." (AF 15, contractor's letter (3-13-79), supplemental revision to original letter at 3).

including the bond premium in the computations on page 2 had also been overlooked; and (iv) that the formula for computing the entire equitable adjustment was being revised to the actual cost of performing the change work versus what it would have cost had there been no change.²⁴

On Apr. 3, 4, and 5, 1979, a third meeting was held between the parties at the contractor's office in Redmond, Oregon. A representative of the subcontractor, A & W Rock Drilling, Ltd., attended the meeting and actively participated in the discussion (AF 13). By letter dated Apr. 9, 1979, the contractor complained to the contracting officer's representative of the actions or inactions on the part of the Bureau which it was said had caused or contributed to the delays in reaching an equitable settlement on the job (AF 14 and AX L). Responding by letter dated Apr. 24, 1979, the Bureau denied that its actions or inactions were responsible for the delay in reaching an equitable settlement and asserted that a review of the record shows a far different picture than the one the contractor has presented. In the same letter the Bureau set forth a chronology of events beginning on Sept. 28, 1978. It also undertook to offer specific

²⁴ The penultimate paragraph states:

"I believe that the date for accumulating interest was triggered at the very outside when I handed you our cost proposal of Mar. 5. Even if you don't agree with this, I would hope that you would at least agree that upon receipt of this support data (unless proven grossly erroneous) that the interest date has now indeed been triggered." (AF 15, contractor's letter (3-13-79) at 2).

comments on each of the contractor's complaints (AF 12).

Additional cost data requested by the Bureau's negotiating staff was forwarded by the contractor's letter of Apr. 12, 1979, in which it stated that before meeting again, it would be imperative for the parties to agree on two important issues which were stated to be (i) the total cost figure the BOR could accept for the subcontractor, including his overhead and profit as well as the figure the Bureau could accept for the prime contractor's actual cost, exclusive of profit and overhead and (ii) a commitment from the Bureau to negotiate with the contractor in an earnest attempt to discover what its total mucking costs would likely have been had there been no change.²⁵

The principal matters discussed at the meeting in Redmond, Oregon, on Apr. 3, 4, and 5, 1979, were confirmed in a seven page letter from the Bureau to the contractor dated Apr. 12, 1979. The letter noted that the subcontractor's breakdown of actual costs (\$145,971) as presented in the contractor's letter of Mar. 5, 1979, had been reviewed and that the BOR had asked for clarification of cost elements or requested additional data in nine areas which were listed in the letter. Also noted was the fact that the BOR had reviewed the contractor's breakdown of actual cost (\$186,024), as presented in a letter dated Mar. 12, 1979, and that

requests for clarification of cost elements for additional data had been made in 12 areas which were listed in the letter. Items enumerated as having been discussed were the following: (i) "should have been cost" for mucking; (ii) the requirement for cost and pricing data to support the proposed prices totaling \$109,469 for changes related to the 3/4:1 slope layback; (iii) the payments-to-date versus total-costs-to-date for drilling, blasting and excavation; (iv) the necessity for a meeting in Denver with the contracting officer to attempt to resolve issues on which no agreement had been reached, principally the "should have been cost" for mucking and the quantity to be paid under the original bid price; and (v) the need for providing interim payments for the changes related to the 3/4:1 slope layback (estimated total cost of \$109,469), plus an interim adjustment under Order for Changes No. 1.²⁶

Acknowledging the Bureau's Apr. 12, 1979, letter, under date of Apr. 23, 1979, the contractor stated that it concurred with the summary of the discussion at the meeting in Redmond, Oregon, on Apr. 3, 4, and 5, 1979, except for the comments of-

²⁵ Apropos of these items, the letter states: "Based on a credit for deletion of 25 cubic yards of concrete in the right wall at the rate of \$400 per cubic yard, the total net estimated interim adjustment for these items will be \$109,469. Also, an additional lump sum progress payment of \$11,157 will be made for work under items 1 and 2 of Order for Changes No. 1. These interim adjustments are based on information presently available and will be subject to a final determination after complete data are available" (AF 13, BOR letter (4-12-79) at 6, 7).

²⁶ Immediately thereafter the letter stated: "If we can now finally agree on the above two issues, this will leave the 'would have' cost figure, the overhead and the profit as the primary three numbers yet to be negotiated" (GX 28, contractor's letter (4-12-79) at 2).

ferred on particular items.²⁷ The items listed as involving differences of opinion included: (i) the contractor and subcontractor recalled that the consensus of the meeting had been that the subcontractor had supplied adequate information as to his overhead costs to more than verify the 15 percent overhead being claimed, (ii) contractor considered the subcontractor's profit should be allowed at 10 percent, although agreeing that the prime contractor's profit should be negotiable; (iii) some of the reductions in the subcontractor's costs involved trivial matters as to which the subcontractor would accept whatever arbitrary adjustments were deemed appropriate; (iv) while a minor amount of surveying should be treated as incidental to excavation rather than being prorated, a minor adjustment could be made on this item if warranted by the treatment accorded the contract on upward adjustments where applicable; (v) the reason the Bureau considers the bid estimate pertinent should be stated prior to the time it is furnished; and (vi) the use of the average bid price for four low bidders under item 6 excavation was unfair to the contractor for the reason stated in its letter of Apr. 12, 1979. In addition, the letter stated that the contractor did not wish to discuss or entertain the idea of proceeding with the balance of the change un-

til such time as an agreement could be reached on the equitable adjustment due the contractor for the change and work completed to date.²⁸ Assuming agreement could be reached on outstanding matters previously outlined, the contractor proposed that the parties meet on May 7, 1979.

By Findings of Fact dated May 4, 1979, the contracting officer extended the time for performance of the contract work by 136 calendar days. This was the aggregate figure for the time extensions requested by the contractor consisting of 90 days requested for completion of the contract as a result of (i) the changes in the blasting method from "presplit" to "smoothwall" and (ii) the 3/4:1 slope layback and related changes, together with a time extension requested of 46 calendar days as a result of the changes having forced the work into inclement weather.²⁹

Final negotiations between the parties took place in Denver on May 7 and 8, 1979. The results of the negotiations were finalized in a Memorandum of Understanding executed by the parties under date

²⁸ Subsequently, the subcontractor, A & W Rock Drilling, Ltd., furnished the contractor additional data pertaining to equipment insurance (\$714.84) and freight on a D-5 Cat. (\$1,230) (GX 33, subcontractor's letter dated 4-27-79).

²⁹ The contracting officer found that all of the delays for which the contractor had requested time extensions were beyond the control and without the fault or negligence of the contractor and therefore excusable. The concluding paragraph of the findings states that it is a final decision and that it is being made in accordance with the Disputes Clause (GX 27, Findings of Fact by the Contracting Officer dated 5-4-79, at 3).

²⁷ Additional data pertaining to the subcontractor was enclosed with the letter as attachment L. Other additional data had been transmitted with the contractor's letter of Apr. 12, 1979 (GX 29, contractor's letter dated 4-23-79).

of May 9, 1979, the full text of which is quoted below:

(Contract No. 8-07-DC-07324, for McKay Dam Spillway Modification, Specifications No. DC-7324, Umatilla Project)

Mann Construction Company, Inc., agrees to accept and the Bureau of Reclamation agrees to pay \$510,926 for all costs incurred for changes directed under items 1 and 2 of Order for Changes No. 1 (Part 1) dated March 8, 1979, except for items of work described in item 2 of Unilateral Interim Adjustment of Order for Changes No. 1 (Part 1) dated April 16, 1979. This payment is for all costs incurred to date and all future costs, including impact costs on unchanged work, and is in lieu of any payment under items 1, 1a, and 6 of the bidding schedule of the contract and previous progress payments made under Order for Changes No. 1. The parties further agree that the unit prices and lump sum amounts, as described in the Bureau's letter to the contractor dated March 26, 1979, and stated in items b, c, d, e, f, g, and h of Unilateral Interim Adjustment of Order for Changes No. 1 (Part 1) dated April 16, 1979, are now firm fixed prices to be paid for work under item 2 therein, and such payments (presently estimated to be \$109,469) will be for all costs incurred including any impact cost on unchanged work. These adjustments in contract price will be made final under Order for Changes No. 1 (Part 2).

Mann Construction Company, Inc., acknowledges receipt of Findings of Fact in the Matter of Delay in Completion, dated May 4, 1979, on the date of this agreement, May 9, 1979.³⁰

On May 11, 1979, the contractor wrote the Bureau to say that the Memorandum of Understanding reflected a substantial mistake it had made and that the mistake was

not a judgmental error (AF 11). On May 14, 1979, however, the contractor advised the Bureau that after much deliberation and in the interest of settling the matter without the need of further negotiations, it had decided to bite the bullet on the mistake.³¹

Order for Changes No. 1 (Part 2 of a two-part order) is dated May 9, 1979, but was not presented to the contractor for signature until on or about June 6, 1979. The contractor refused to sign the change order at that time, however, on the ground that it contained unfair restrictions. In a telephone conversation between Mr. Mann and Mr. Lyle Carden on June 6, 1979, the latter agreed to the contractor inserting an exclusion in the release covering two pay items which he agreed had been overlooked but he would not agree to making an exception on the release for interest. In its letter to the BOR dated June 8, 1979, the contractor stated that at all times its letters had expressed its entitlement to interest in accordance with the 1978 Disputes Act. More specifically the letter states: "[I]n requesting this exception on the release, I was not

³¹ The letter then stated:

"[I]t is most important to us, however, to receive payment for the changed work promptly, especially for the portion that was completed last year. According to our records, there is still over \$100,000 due for extra work performed through December. Interest should be added at the appropriate rate in accordance with the new law, from the 5th day of March until the date that you would expect us to receive payment. Of course, consideration should be given to the \$100,000 for the changed work received in this office on April 11 and the \$11,157 portion for the change received this morning." (AF 10, contractor's letter dated 5-14-79).

³⁰ AF 5, Findings of Fact and Decision by the Contracting Officer, dated May 9, 1979, Exh. C.

December 10, 1981

demanding interest be included in the change, nor was I asking for an admission that interest was due. I only asked that the door not be closed on my appeal rights by insisting I sign the change order without this reservation."³²

By letter dated June 13, 1979, the contractor transmitted a signed copy of Order for Changes No. 1 (part 2 of a two-part order) which referred to exceptions contained in the cover letter.³³ By Findings of Fact and Decision by the Contracting Officer dated June 22, 1979,³⁴ the contractor's claim for interest

was denied. In especially pertinent part the decision states:

7. It is the Government's position that the agreement on the price adjustment for work under Order for Changes No. 1 reached with the contractor on May 9, 1979, was all encompassing except for the two items discussed in paragraphs 4a and 5 above. Although the contractor had mentioned payment of interest in correspondence, there was no discussion of the subject in the final negotiations meeting of May 7, 8, and 9, 1979. Furthermore, in considering applicability of the Contracts Disputes Act of 1978, to the price adjustment for work under Order for Changes No. 1, section 12 of the act states in part: "Interest on amounts found due contractors shall be paid to the contractor from the date the contracting officer receives the claim pursuant to section 6(a) from the contractor until payment thereof." Section 6(a) states in part: "All claims by a contractor against the government relating to a contract shall be in writing and shall be submitted to the contracting officer for a decision." Section 6(c) (1) states: "A contracting officer shall issue a decision on any submitted claim of \$50,000 or less within sixty days from his receipt of a written request from the contractor that a decision be rendered within that period. For claims of more than \$50,000, the contractor shall certify that the claim is made in good faith, that the supporting data are accurate and complete to the best of his knowledge and belief, and that the amount requested accurately reflects the contract adjustment for which the contractor believes the government is liable. [³⁵]

* * * * *

³⁵ Commenting upon the nature of the substantiation submitted in support of costs claimed by reason of the changes, the contracting officer states:

"Changes in the work were directed under clause No. 3 (Changes) of the General Provisions of the contract and the contractor during the period from November 8, 1978, to

—Continued

³² The contractor also raised a question concerning certification, stating:

"[T]he change order contained a requirement that I certify the complete accuracy of all costs connected with the change. I believe this is an intolerable burden to place upon me. I have no qualms with certifying my own data but I am not in a position to attest to the accuracy of my subcontractor's cost data. * * * I have absolutely no reason to suspect that my sub's costs are not accurate but I don't know this for certain and I am not in a position to so certify." (AF 7 and AX 0, contractor's letter dated 6-8-79 at 2).

³³ The cover letter states:

"[W]e are taking exception to the two items that were left off the change order but which were included in the final negotiations. These two items were the first two items listed on your resident's letter to us of March 26 and our letter to them of March 21. Also, we are taking exception to the accrued interest that had developed from the time of our March 6 statement of costs until the bill would be paid. * * * Even if you don't agree that interest is applicable, I'm sure you would have no objection to my pursuing this matter under the Disputes Clause so that then I would only be paid if in fact it was proven entitlement was due." (AF 6, contractor's letter dated 6-13-79).

³⁴ The contracting officer stated that the amount agreed to in the Memorandum of Understanding dated May 9, 1979, did not include any payments for items 1 and 2 of the Government's letter of Mar. 26, 1979 (*n.33 supra*), and that such items would be the subject of a separate final determination. (AF 5, Findings of Fact and Decision by the Contracting Officer dated 6-12-79 at 2).

8. Based on the above, I find that the price adjustment as agreed in the Memorandum of Understanding dated May 9, 1979 (Exhibit C) and as stated in Order for Changes No. 1 (Part 2) dated May 9, 1979 (Exhibit D), is firm and final except for a separate final determination at a later date on the allowable costs for work described in items 1 and 2 of the Governments' letter to the contractor dated March 26, 1979. By this findings, Order for Changes No. 1 (Part 2) dated May 9, 1979 (Exhibit D), is issued unilaterally. The amounts found due and payable in this findings and under Order for Changes No. 1 (Part 2) will be paid upon receipt of a certificate of current cost or pricing data from the contractor, substantially in compliance with 41 CFR 1-3.807-4, which certifies that cost or pricing data submitted were accurate, complete, and current as of May 9, 1979. It is further found that the contractor's claim for payment of interest on the price adjustment under Order for Changes No. 1 is without merit and is hereby denied.

(AF 5, Findings of Fact and Decision by Contracting Officer dated 6-12-79, at 3, 4.)

The contractor timely appealed the denial of its interest claim by letter dated July 3, 1979 (AF 4). By letter of July 5, 1979, the contractor furnished the contracting officer with a certification of cost

and pricing data from its subcontractor, A & W Rock Drilling, Ltd., together with executed certificate GPO 834-263. The date stamp on the letter indicates that it was received by the BOR on July 9, 1979 (AF 3 and AX P). Receipt of the July 5, 1979, letter was acknowledged by a faxogram dated July 13, 1979,³⁶ in which the Bureau stated: "Preparation and processing of a pay voucher and supporting documents are presently being expedited so that payment can be made to you in the very near future for items of previously performed extra work covered by Order for Changes No. 1 (Part 2) dated 5-9-79" (AF 2). The record shows that the contractor was paid the sum of \$171,362.20 under the instant contract on Aug. 6, 1979 (AX R).

The Hearing

For the most part the testimony adduced at the hearing merely elaborated upon the positions taken by the parties as shown by the written record³⁷ discussed above. The president of the appellant corporation, Mr. Richard Mann, testified that at the meeting in Pendleton, Oregon,

May 9, 1979, submitted numerous cost proposals, some of which were incomplete and erroneous. Also, cost and pricing data in support of claimed increased costs for the changes were not furnished complete until the meeting of May 7, 8, and 9, 1979. At any rate, at no time did the contractor indicate that he considered this matter a dispute or request a final decision of the contracting officer, either in writing or orally. It is the Government's position that direction of the changed work, submittal of cost proposals and cost and pricing data and final negotiations of a price adjustment did not involve a dispute and, therefore, the Contract Disputes Act of 1978 is not applicable in this case." (Findings, n.34, *supra* at 3, 4).

³⁶ The faxogram refers to the certification of current cost or pricing data having been executed by the subcontractor on 6-12-79 (AF 2, BOR faxogram dated 7-13-79).

³⁷ According to Mr. Mann the certification of costs made in the letter of Mar. 12, 1979 (n. 21, *supra*), embraced not only the contractor's own costs but those of its subcontractor as well and that such certification complied with the requirements of the Act (Tr. 77-78, 156-58). If so, a natural question arises as to why almost 2 months later the contractor would say that it was not in a position to attest to the accuracy of the subcontractor's cost data (n.32, *supra*).

on Mar. 6 and 7, 1979,³⁸ he had handed Mr. Duck of the BOR a claim in the amount of \$212,516 and had told him that the contractor would be expecting interest on the claim under the 1978 Disputes Act. Mr. Duck responded by saying that they (BOR) were not sure as to what triggered the interest date and that they had no track record on it. He did agree that the contractor was owed something for the changed work, however, and he stated that upon his return to Denver a progress payment would be made to the contractor for \$100,000. Subsequently, on Apr. 11, 1979, a check in that amount was received by the contractor.

Following the March meeting³⁹ the contractor restructured the claim and sent it to the Bureau by letter dated Mar. 12, 1979, supported by cost and pricing data. Another meeting between the parties took place in Redmond, Oregon, on Apr. 4, 5, and 6, 1979.⁴⁰ Mr. Mann testified to being exasperated by the failure of the Government representatives attending the meeting to have reviewed the cost and pricing data previously submitted to the

BOR and the fact that they were not empowered to negotiate a settlement (Tr. 26-32, 67-68). The Government's witness Morrisette testified however, (i) that the purpose of the BOR representatives coming to Redmond, was to review the cost and pricing data previously submitted by the contractor and its cost records; (ii) that the contractor had been advised of that purpose before they came; and (iii) that they had no authority to negotiate a settlement on behalf of the Government (Tr. 50-51, 98-100).⁴¹

The parties met again in Denver, Colorado, on May 7, 8, and 9, 1979. Concerning this meeting Mr. Mann testified (i) that at the conclusion of the meeting on May 8, 1979, he had agreed on a settlement amount of \$510,926;⁴² (ii) that that figure included the impact that the changed work might have on unchanged work; (iii) that cost and pricing data for overhead was not submitted in the Mar. 12, 1979, letter

⁴¹ Mr. Morrisette had refused to say what figures he would recommend to the contracting officer, as he considered an attempt was being made to pressure him into negotiating an amount for some aspects of the claim which he was not authorized to do, and he could not speak for the contracting officer as to the acceptability of the figures but could only state to him what their findings were from their review (Tr. 117).

⁴² At the May meeting the figure finally agreed to for the changed work totaled \$287,020. Mr. Mann states that the three payments on which the contractor was asking interest only adds up to \$282,000. While he did not know where the other \$5,000 went, Mr. Mann thought it would drift into the contractor by way of progress payments because the progress payments do have \$510,926 written on them (Tr. 75). The amended complaint shows that sum of the three payments in question to be \$282,519.

³⁸ The meeting was initially planned for about Feb. 1, 1979, but the plans for a meeting early in February were abandoned when the contractor requested a delay of 4 or 5 days (Tr. 59-60).

³⁹ Mr. Mann acknowledged that only preliminary figures had been given to the contracting officer of Dec. 27, 1979, and that no cost or pricing data had been provided prior to the March meeting (Tr. 42-43, 65-66).

⁴⁰ The meeting could have been held a week earlier if it had not been for the contractor's spring vacation coming at that time (Tr. 68-69).

and may not have been submitted until the May meeting in Denver; (iv) that on May 9, 1979, Mr. Mann signed a memorandum of understanding which stated that all costs were included in the settlement;⁴³ (v) that interest that had not been claimed as a part of cost and Mr. Mann did not consider that the Contract Disputes Act contemplated treating interest as a cost figure; (vi) that in the May 14, 1979, letter, the contractor had reminded the contracting officer that it was claiming interest; and (vii) that the only release the contractor had signed contained an exception to the failure to provide for interest.

Mr. James Morrisette (a civil engineer and, at the times in question, Head of Division of Procurement and Contracting at the E & R Center in Denver) testified as a BOR witness, as did Mr. Robert Folle, a contract price analyst in the Contract Administration Branch of the Division of Procurement and Contracts, Bureau of Reclamation, E & R Center in Denver. When called as a witness for the appellant, Mr. Morrisette testified (i) that he had attended the meetings in Pendleton and Redmond, Oregon, and Denver, Colorado; (ii) that agreement on the settlement amount was reached at the conclusion of the meeting on May 8; (iii) that the memorandum of agreement was executed by the parties on the following day; and (iv) that nothing was included in the figures for interest.

In the course of his testimony as a BOR witness, Mr. Morrisette stated that at the Pendleton meeting, the Bureau had acknowledged that changes had been made and that the contractor was entitled to an equitable adjustment. He also testified that the contracting officer was desirous of avoiding a complete audit of the claim by the Inspector General if possible and that one of the methods used in the Denver office was to have an accountant on its staff review the contractor's cost records and the cost and pricing data and determine whether or not a full-blown audit was necessary. On direct examination, Mr. Morrisette stated that in reviewing the contractor's claim and cost data the BOR had "short circuited" some of the procedures normally followed in the interest of speeding up the whole process. He also testified (i) that it did not appear to him that the contractor's claims for an equitable adjustment involved a dispute;⁴⁴ (ii) that no request was made by the contractor for a final decision, although it had been advised that if the parties were unable to reach an agreement it could request such a decision; (iii) that at the Redmond meeting, the contractor was told of the additional data required to support the claim; (iv) that thereafter additional data was provided by the contractor in support of its claims including that

⁴³ In his testimony, Mr. Mann described the agreement reached as a "satisfaction and accord" (Tr. 56).

⁴⁴ Mr. Mann considered that a claim had been submitted to the contracting officer on Dec. 27, 1978, and that the claim was in dispute from Dec. 27, 1978, until the May settlement, the Memorandum of Understanding (Tr. 74-75).

furnished at the May meeting; (v) that at that meeting final agreement was reached on the amount of the equitable adjustment for all costs related to the changes the BOR had directed; (vi) that he considered correspondence between the parties was handled in an expeditious manner; and (vii) that a great deal of Morrisette's time had been spent in handling the matter, including a number of hours of his own, working on responses to the contractor's correspondence relating to these matters, reviewing his proposals, and trying to expedite payment under the change order (Tr. 79-110).

Mr. Robert Folle testified that in his capacity of contract price analyst (BOR) he had been involved in review of the contractor's records in Redmond, Oregon, in early April for the purpose of determining whether the cost and pricing data submitted was adequately supported by the cost records. He noted that audits were required for any changes or modifications in excess of \$100,000 except in cases where the contracting officer certifies that he had adequate cost or pricing data and therefore waives audit. Mr. Folle also testified: (i) That based upon his analysis he had concluded that approximately 36 percent of the contractor's costs and approximately 36 percent of the subcontractor's costs had not been totally supported when the BOR personnel left the contractor's office in April of 1979; (ii) that at the meeting in Redmond, the BOR personnel had gone through step by step the addi-

tional data needed to satisfy the cost and pricing requirements such as, for example, the overhead costs, for which the Bureau had been furnished no breakdown; and (iii) that thereafter the supporting data flowed in on an occasional basis but at the last meeting in May, the contractor had furnished the BOR with the additional data required to support the final amounts that were negotiated (Tr. 122-26).

Discussion

Before addressing the issues raised by this appeal we shall first examine the relevant provisions of the Contract Disputes Act of 1978, and a number of the cases which have construed the provisions of the Act as they relate to the payment of interest. The applicable provisions of the Contract Disputes Act as they pertain to interest are:

Sec. 12. Interest on amounts found due contractors on claims shall be paid to the contractor from the date the contracting officer receives the claim pursuant to section 6(a) from the contractor until payment thereof. The interest provided for in this section shall be paid at the rate established by the Secretary of the Treasury pursuant to Public Law 92-41 (85 Stat. 97) for the Renegotiation Board. [41 U.S.C., § 611.]

Sec. 6. (a) All claims by a contractor against the government relating to a contract shall be in writing and shall be submitted to the contracting officer for a decision. [41 U.S.C. § 605.]

In the case of *A.L.M. Contractors, Inc.*, ASBCA 23792 (Aug. 31, 1979), 79-2 BCA par. 14,099, the Armed Services Board had occasion to consider the application of the interest

provisions of the Contract Disputes Act of 1978, in a context where the contractor's complaint was that the Government had delayed in making progress payments to which it was entitled. There the Board stated at page 69,357:

The appellant's claim for interest, based solely upon the Government's delays in making progress payments, runs counter to the established rule that[,] absent a statute or contract provision specifically authorizing such interest, it cannot be allowed. *United States v. Thayer-West Point Hotel Company*, 329 U.S. 585, 91 L.Ed. 521 (1947), *Komatsu Manufacturing Company, Ltd. v. United States*, 132 Ct. Cl. 314 (1955); *Memco*, ASBCA No. 18731, 74-1 BCA ¶ 10,626; *Ramsey v. United States*, 101 F. Supp. 353, 356 (Ct. Cl. 1951); *The Diomed Corporation*, ASBCA No. 20899, 75-2 ¶ 11,491. [45]

Neither the provisions of this contract nor the terms of the Contract Disputes Act of 1978, under which the appellant has elected to proceed, affect the prohibition against the award of the interest for mere delay on part of the Government in making payments. [46]

⁴⁵In *Diomed*, text, *supra*, the Board had held that the contract clause "Payment of Interest on Contractor's Claims" did not afford a basis for an award of interest for delayed payments. The rationale for the decision reached was stated in the following terms:

"[T]he clause makes a clear distinction between a claim arising under the contract which is denied by the contracting officer, and interest on the amount of that claim which is finally determined to be owed by the Government. Here the claim itself is for interest. There is no dispute over appellant's entitlement to recover the invoiced amount of \$90,104.16. Thus, there is no 'claim,' as that term is used in the clause, to which interest can attach. We do not read the clause as providing board authorization for payment of interest notwithstanding the absence of an underlying claim, other than for interest, which has arisen under the contract and has become the subject of an appeal." (75-2 BCA par. 11,491 at 54,822.)

⁴⁶*Of. Dawson Construction Co., Inc.*, GSECA 5777 (Dec. 5, 1980), 80-2 BCA par. 14,817 at 73,134 ("Any determination of

A different aspect of the question of when is interest payable under the provisions of the Contract Disputes Act was considered in the case of *Nab-Lord Associates*, PSBCA 714, 718, and 736 (July 15, 1980), 80-2 BCA par. 14,585. In that case a finding favorable to the contractor on the question of entitlement and a remand to the contracting officer for the purpose of determining the amount due the contractor resulted in a negotiated settlement of the quantum claims. In denying the contractor's claim for interest on the claims settled by negotiation after remand, the Postal Services Board stated at 71,917-18:

The Act does not expressly define the word "claim" as used therein. However, the context makes it clear that "claim" is intended to mean a request or demand for relief disputed by the Government as to entitlement or amount as to which the Contractor has demanded a final decision of the Contracting Officer. The context referred to appears in Section 6 of the Act (41 U.S.C. § 605) which says that "all claims by a contractor against the government relating to a contract shall be in writing and shall be submitted to the Contracting Officer for a decision."

This intention is reflected in the implementation of the Act by OFPP in 45 F.R. No. 92 (*supra*) which defines claims under the Act as involving disputed demands for relief or demands not acted on within a reasonable time as to which a contracting officer's decision is demanded.

* * * * *

The quantum requests filed with the Contracting Officer after remand did not

when a delay in payment becomes unreasonable must be made on an ad hoc basis. * * * That portion of appellant's claim seeking recovery of interest as damages on unreasonably delayed payment of the negotiated settlement is granted * * *.)

December 10, 1981

achieve the status of claims under the Act because they were settled in negotiation without dispute. Consequently, there were not and are not any Disputes Act quantum claims to which these Disputes Act interest claims can attach. That being the case, Appellant cannot have Disputes Act interest.

On reconsideration the Postal Services Board affirmed its holding in *Nab-Lord Associates*, denying the contractor's claim for interest. Addressing two of the questions raised in the motion for reconsideration, the Board stated:

Appellant makes much of the fact that the basic quantum settlement in each case was for less than the amount originally demanded. Appellant says this evidences the fact that the quantum requests were disputed and, therefore, were claims within the meaning of the Act. As we pointed out in our original decision, to constitute a claim under the Act a demand must not have been acted upon within a reasonable time by the Contracting Officer or must have been disputed and submitted to the Contracting Officer for a decision. Although the Contracting Officer obviously did not accept Appellant's original basic quantum demands, nevertheless they were negotiated to settlement. Therefore they did not become claims under the Act. And, as we decided, Appellant may not have interest under the Act, absent underlying quantum claims.

* * * In both the letters confirming the "reconciliation" (settlement) of the demands and the letters transmitting the signed settlement modifications to the Contracting Officer, Appellant was careful to set forth specific reservations from each settlement. Among the reservations was the right of Appellant to claim interest. But there is no proviso in any of the settlement documentation postponing finality or effectiveness of the settlement modifications pending final resolution of

the interest claims which at the time had not been filed. As stated in the *Monaco* dictum, only a specific provision for absence of finality could have kept the basic quantum claims alive. The simple reservation of a claim for some unspecified kind or kinds of interest, a matter only incidental or collateral to the purpose of the modifications, was not sufficient to achieve that result.

(80-2 BCA par. 14,793 at 73,013-014).

We now turn to consideration of the case before us for a decision. At the hearing on the instant appeal Mr. Mann stated that the "whole guts of the case is, was there a dispute or not (Tr. 118). In his closing argument Mr. Mann stated: (i) That the mere fact a contractor submits a claim shows that there was dispute; (ii) that by referring to the Disputes Clause in his decision of May 4, 1979 (n.29, *supra*), the contracting officer had admitted that here was a dispute before the meeting ever occurred in Denver; (iii) that the contractor had requested a final decision; (iv) that the amount provided for in the May 9, 1979, agreement did not include interest; (v) that the contracting officer knew the contractor was expecting interest; (vi) that Mr. Mann could find no correspondence from the Government in which the contractor's right to interest had been contested; and (vii) that nothing in the Act ties the start of interest to the furnishing of cost and pricing data or certification of the accuracy of the costs submitted (Tr. 130-33).

The Government's position as stated at the hearing was (i) that

an accord and satisfaction had been reached at the time the contractor signed the agreement on May 9, 1979, and (ii) that at no time was there a dispute within the meaning of the Contract Disputes Act of 1978, or the Disputes Clause of the General Provisions. In his closing statement Department Counsel stated that the contractor did not qualify for interest in the circumstances of this appeal because the contractor had not complied with the regulations requiring the submission of cost and pricing data, a certificate as to the accuracy of such data, as well as there being no dispute within the meaning of the Disputes Clause. An alternative argument advanced by the Government was that assuming, *arguendo*, that the appellant were to be found to be entitled to some interest, it could not start running until the date that the BOR had received the cost and pricing data from the contractor and the certificate of current cost and pricing data required by the regulations,⁴⁷ it being noted that the latter had not been submitted until July 5, 1979. Also emphasized by the Government was that what was involved was a change and that interest was not allowable on changed work (Tr. 136-56).

With respect to the appellant's arguments as enumerated above, the Board agrees with its assessment

that the principal question to be decided in this case is whether there was a dispute or not. Under the authorities cited and quoted from above it is clear that the mere fact a contractor submits a claim does not show that there was a dispute. Moreover, the language employed by the contractor up to the execution of the Memorandum of Understanding on May 9, 1979, are inconsistent with the position now advanced that the contractor considered that there was a dispute (nn.10, 11, 25, & 33, *supra*).

While it is true that in extending the time for performance of the instant contract by 136 calendar days the contracting officer cited the Disputes Clause as his authority for so doing, it appears that he simply used that as a vehicle for accomplishing the desired result since from the record made in these proceedings, it appears that under the decision of May 4, 1979, the contractor received the entire amount of time it had requested. More importantly, however, is the fact that sec. 12 of the Contract Disputes Act of 1978 specifically conditions the allowance of interest to claims received by the contracting officer pursuant to sec. 6(a) and that sec. 6(a) refers to claims submitted to the contracting officer for a decision. There is no evidence in this record indicating that the contractor had ever requested a final decision on any of the three payments on which interest is now being claimed, even though it had been specifically advised of its right to do so (n. 16, *supra*).

⁴⁷ Cited in support of this position was 41 CFR 1-3.807-4 requiring any modifications of a contract in excess of \$100,000 to be supported by written cost and pricing data, or, if actual submission of the data were impracticable, then a certificate be furnished that the data submitted or identified was accurate, complete, and current (Tr. 146).

December 10, 1981

It is clear that the amount agreed upon in the Memorandum of Understanding executed by the parties on May 9, 1979, did not include any allowance for interest. Neither Government witness who testified at the hearing contended that it did. Whether the contracting officer knew that the contractor was expecting interest is a question not susceptible to an answer from the record before us. It is unquestionably true that both before and after the meeting on May 7 and 8, 1979, which culminated in the execution of the Memorandum of Understanding on the day following, the contractor had made it clear that it was claiming interest.

Also, undisputed, however, is the fact that at the May meeting the contractor did not raise the subject of interest. While not dispositive of the question of whether the contractor was claiming interest on the amount agreed upon, it is at least conceivable that the contractor's silence during the May meetings respecting interest was construed by the contracting officer as indicating an abandonment of the claim for interest. In any event, it is clear that long before the May 9 meeting the contractor knew that the BOR had a different view of when and in what circumstances interest commenced than did the contractor (n.13, *supra*).

As to the contention that the Act does not tie the start of interest to the furnishing of a certificate, we note the decisions which have held (i) that a contracting officer need not consider a claim over \$50,000

until it has been certified⁴⁸ and (ii) that interest is not payable where the contractor has failed to certify a claim in excess of \$50,000 as required by a contract provision implementing sec. 12 of the Contract Disputes Act of 1978.⁴⁹

In support of its interest claim, the appellant calls the Board's attention to the case of *Inland Service Corp. & Weldon Smith, A Joint Venture*, ASBCA 24,043 (Dec. 31, 1979), 80-1 BCA par. 14,247. *Inland* has no precedential value on the principal question involved in this appeal, as it is clear from the opinion that the contractor's quantum claims for discounts taken had been denied. While the *Inland* decision allowed interest on amounts found due for periods antedating the effective date of the Contract Disputes Act of 1978,⁵⁰ it has since been reversed by the Court of Claims,⁵¹ and is a precedent no longer followed by the Armed Services Board of Contract Appeals.⁵²

We have summarized the record in this case and have quoted from the applicable provisions of the

⁴⁸ See *Gentex Corp.*, ASBCA 24040 (July 30, 1979), 79-2 BCA par. 14,007 at 68,779, where the Board stated that the requirement of Sec. 6(c)(1) of the Act that claims over \$50,000 be certified was "a *sine qua non* to the contracting officer's obligation under the Act to issue a decision on these claims."

⁴⁹ *Patock Construction Co.*, ASBCA 25345 (Feb. 19, 1981), 81-1 BCA par. 14,993, *aff'd on reconsideration*, 81-2 BCA par. 15,184.

⁵⁰ In *Brookfield Construction Co., Inc. & Baylor Construction Corp. (A Joint Venture) v. United States*, Ct. Cl. No. 555-79C, the Court of Claims determined that the Act was not to be construed as imposing pre-Act interest liability.

⁵¹ *United States v. Inland Service Corp.*, Court of Claims Order dated Oct. 27, 1981.

⁵² *Swissair Photo & Surveys Ltd.*, ASBCA 24553 (Oct. 26, 1981), 907 FCR B-2.

Contract Disputes Act of 1978, relating to interest as well as from cases construing such provisions of the Act. We now undertake to consider the instant appeal in the light of those provisions and the principles enunciated in the decided cases to which we have referred.

The record clearly shows that the parties were in a negotiating posture from the time the contractor submitted preliminary figures in support of the claimed costs on Dec. 27, 1978, until they negotiated a final amount due the contractor for Government directed changes on May 8, 1979, and confirmed the negotiated settlement so reached on the following day by the execution of the Memorandum of Understanding dated May 9, 1979. The negotiating posture was maintained even though at midpoint in the negotiations the contracting officer informed the contractor of its right to request a final decision from him if an agreement could not be reached on the claimed costs, estimating that the preparation of such a decision would take 30 days.

Perhaps the most perplexing question in this entire record is why an experienced contractor such as the appellant should have so frequently raised the question of the interest to which it considered itself entitled under the Contract Disputes Act of 1978, both before and after the final negotiating conference of May 7 and 8, 1979, and yet have said absolutely nothing about the subject during the 2 days of negotiations or at the time the Memorandum of Understanding was

signed by the parties on May 9, 1979. Although the evidence is insufficient to permit a finding, the record suggests an answer to the question posed. It is clear that going into the final negotiating conference the appellant knew that up until that time it had failed to satisfy the Bureau's request to substantiate the claimed costs (*e.g.*, overhead) and that the BOR's position was that "interest should not start accruing on the equitable adjustment until such time as the contractor furnishes the backup information the Government has requested and is entitled to." (n.13, *supra*)

It is undisputed that the backup information including that pertaining to overhead was not furnished until May 7 or 8, 1979, and that final agreement as to its sufficiency did not occur until May 8, 1979. Giving effect to the Government's view of what "triggered" interest under the Contract Disputes Act of 1978, this would mean that no interest would be payable to the contractor (*i.e.*, final settlement of the underlying claims would have occurred on the same day that the contractor supplied the Bureau with the backup information required to substantiate the final figures agreed upon).

Whatever the case may have been, it is clear that the contractor proceeded to the final settlement of its claims for equitable adjustment without having submitted them to the contracting officer for decision. It is also clear that when the Memorandum of Understanding formalizing the agreement reached the

December 10, 1981

previous day was submitted to the contractor for signature, no request was made that the agreement include a provision postponing finality of the settlement reached pending the resolution of the interest question.

That the contractor wished to stand on the settlement reached as final is borne out by the fact that it abandoned its claim of mistake without any indication in this record that the Government would have refused to seriously consider the mistake claim or would have failed to provide or seek whatever relief it considered to be warranted. The Government was also interested in maintaining the finality of the agreement for it promptly acknowledged that payment for two work items—either inadvertently omitted or left out of Order for Changes No. 1 (Part 2) because they involved work items not yet completed—should be the subject of separate negotiations.

The Government's position of what "triggered" interest had apparently been crystalized by June 6, 1979, for in a telephone conversation with Mr. Mann on or about that date, the contracting officer was adamant in his refusal to acquiesce in the contractor reserving a claim for interest as a condition of signing Order for Changes No. 1 (Part 2). It was the contractor's insistence upon including such a reservation in the copy of the change order it signed that resulted in the issuance of the change order unilaterally and the decision denying the claim for

interest from which the instant appeal was taken.

In a number of important respects this case is closely akin to the situation in *Nab-Lord Associates, supra*. In that case, as in this, quantum claims were negotiated to settlement without any provision having been included in the written agreement postponing finality of the settlement of the underlying quantum claims pending final resolution of the claim for interest.

One of the positions apparently taken by the appellant which may merit further discussion is the view that interest should be payable on claims for equitable adjustment from the time they are submitted, even if they were settled by negotiation as they were in this case. If interest is not allowed in such cases, then, according to the appellant, the contracting officer can demand whatever information he wants as substantiation for the asserted claims without the need for adhering to any standard of reasonableness.

Except for the serious question raised by the BOR directing changes in writing at a time when funds to pay for the changed work were not available,⁵³ there is no evi-

⁵³ Although written changes were directed by the Bureau in mid-October of 1978, it does not appear that funds available for payment of any costs incurred for such changes were available until some time after the meeting on Mar. 6 and 7, 1979. The Contractor has filed no claim for funds not being available at an earlier time; nor has it been shown that the time required to arrive at a negotiated settlement would have been shorter if funds had been available throughout the period of negotiation.

Nevertheless, the funding situation may have placed the Chief, Construction Field Di-

—Continued

dence in this case that the Bureau personnel concerned proceeded in a high-handed manner or that their requests for information were either arbitrary or capricious. It is true, of course, that situations similar to those envisioned by the appellant may be expected to be encountered in Government procurement from time to time. If they are, the answer would appear to lie in the contractor concerned promptly requesting a final decision by the contracting officer on the claims asserted and taking a timely appeal therefrom or, alternatively, initiating an appeal without a finding if the contracting officer fails or refuses to issue a written decision within the time specified in the Act or within a reasonable time if that is the standard the Act prescribes.

Decision

For the reasons stated and under the authorities cited, the appellant's claim for interest is denied.

vision, Cle Elum Office, in the unenviable position of having to conduct negotiations with the contractor at a time when he presumably knew that there were no funds currently available to pay for the changed work and that they would not be, unless as a temporary measure they could be transferred from other sources including perhaps unexpended funds on the instant contract needed for completion of the original work.

DOYON, LIMITED

6 ANCAB 219

Decided *December 14, 1981*

Appeal from the Decision of the Alaska State Office, Bureau of Land Management F-19155-20.

Dismissed.

1. Alaska Native Claims Settlement Act: Administrative Procedure: Generally—Administrative Procedure: Decisions

Where, in a Bureau of Land Management decision to issue conveyance, a water body excluded from the selection application on the basis that it is navigable is expressly "considered" nonnavigable and the underlying submerged lands thus deemed selected by the applicant, the Bureau of Land Management has made a navigability determination with regard to the subject water body.

2. Alaska Native Claims Settlement Act: Alaska Native Claims Appeal Board: Appeals: Generally—Alaska Native Claims Settlement Act: Administrative Procedure: Generally

In the absence of an issue regarding error in the decision itself, allegations of irregularities or deficiencies in the predecision procedure, such as noncompliance with the pertinent section of ANCSA and its implementing regulations, do not provide a basis for appeal to this Board.

3. Alaska Native Claims Settlement Act: Definitions: Public Lands: Generally—Submerged Lands

The Bureau of Land Management under provisions of ANCSA and regulations in 43 CFR has both the authority and responsibility to determine which

lands, including submerged lands, are "public lands" within the definition of § 3(e) of ANCSA and are therefore available for selection by a Native corporation.

4. Alaska Native Claims Settlement Act: Conveyances: Generally—Alaska Native Claims Settlement Act: Navigable Waters

The Bureau of Land Management is not bound to make its navigability determinations in conformity with information provided by the State of Alaska pursuant to 43 CFR 2650.1(b) as to the navigability of water bodies within lands selected under ANCSA, or to accept the State's conclusions as to navigability.

5. Alaska Native Claims Settlement Act: Conveyances: Generally—Alaska Native Claims Settlement Act: Navigable Waters

When the State of Alaska's claim of ownership of submerged lands is based solely upon its own conclusions as to the navigability of water bodies within lands selected under ANCSA, and not upon a final adjudication of navigability, the mere assertion of the State's ownership does not constitute a claim of title in the submerged lands which requires the Bureau of Land Management to exclude such lands from the Decision to Issue Conveyance.

APPEARANCES: James Q. Mery, Esq., for Doyon, Limited; M. Francis Neville, Esq., Office of the Regional Solicitor, for Bureau of Land Management; Shelly J. Higgins, Esq., Department of Law, for State of Alaska (listing limited to persons addressing the issue decided).

**OPINION BY ALASKA
NATIVE CLAIMS APPEAL
BOARD**

Summary of Appeal

The primary issue raised by Doyon, Limited and herein decided is whether the Bureau of Land Management erred in approving for conveyance to Doyon, and charging against the corporation's acreage entitlement under ANCSA, submerged lands to which the State of Alaska claims title. As to this issue, the decision of the Bureau of Land Management is affirmed.

The Board concludes that the Bureau of Land Management acted within its authority and responsibility to determine what lands are "public lands" under § 3(e) of ANCSA and therefore available for selection by a Native corporation when it made a determination of the nonnavigability of a water body.

The Board further finds that when the State of Alaska's claim of ownership of the submerged lands is based solely upon the State's own conclusions as to the navigability of the water body, the Bureau of Land Management is not bound either to accept the State of Alaska's conclusions or to recognize the State's claim as an interest leading to a fee title which requires exclusion of land under ANCSA.

Jurisdiction

The Alaska Native Claims Appeal Board, pursuant to delegation of authority to administer the Alaska Native Claims Settlement Act, 85 Stat. 688, *as amended*, 43 U.S.C. §§ 1601-1628 (1976 and Supp. I

1977) (ANCSA), and the implementing regulations in 43 CFR Part 2650 and 43 CFR Part 4, Subpart J, hereby makes the following findings, conclusions and decision.

Procedural Background

On Apr. 2, 1975, pursuant to § 12 (c) of ANCSA, Doyon, Limited (Doyon) filed selection application F-19155-20 for lands located near the Native Village of Northway. In response, the Bureau of Land Management (BLM) issued, on June 23, and 26, 1978, two decisions to issue conveyance of land to Doyon. Each decision concerned a portion of the lands selected by Doyon.

Doyon appealed the above-designated decisions of the BLM in a single appeal filed on July 27, 1978. In its Statement of Reasons and supporting memorandum, the appellant raised, *inter alia*, several issues relating to the navigability of Lake Nuziamundcho:

- (1) BLM erred in requiring the conveyance of the submerged lands in question to Doyon when BLM had actual knowledge of the State's claim of ownership to said lands. * * * BLM should be required either to adjudicate the State's claim of title prior to the decision for interim conveyance, or else be held to be estopped to deny the State's ownership of the land in question.
- (2) BLM erred in failing to make a determination of navigability as required by ANCSA and its implementing regulations.
- (3) BLM erred in determining, if it has done so, that the water bodies in question are non-navigable. * * * [T]he subject water bodies are navigable as a matter of fact and of law.

Following a Jan. 21, 1980, conference with the other parties and the Board, the BLM on Mar. 28, 1980, filed its Review and Basis for Navigability Determinations. The BLM therein affirmed its earlier determination that Lake Nuziamundcho is nonnavigable.

On Nov. 2, 1981, the Board queried Doyon as to its intentions of pursuing its appeal with regard to the legal and factual navigability of Lake Nuziamundcho. On Nov. 30, 1981, Doyon replied that it has no intention of contesting navigability *per se*.

Decision

The Board finds that Doyon has withdrawn that portion of its appeal regarding the navigability *per se* of Lake Nuziamundcho. Accordingly, the only issues remaining in this appeal are:

(a) whether BLM erred in requiring the conveyance of the submerged lands in question to Doyon when BLM had actual knowledge of the State of Alaska's (State's) claim of ownership to said lands, and whether BLM should be required either to adjudicate the State's claim of title prior to the decision to issue conveyance, or else be held to be estopped to deny the State's ownership of the land in question;

(b) whether BLM erred in failing to make a determination of navigability as required by ANCSA and its implementing regulations.

With regard to issue (b), Doyon declared that BLM had not made a determination as to the navigability

of Lake Nuziamundcho, and that if BLM had made such a determination, it had not complied with the pertinent regulations.

In its application, Doyon excluded from its selection the beds of several water bodies, including Lake Nuziamundcho. In the decision to issue conveyance of the lands in which Lake Nuziamundcho is situated, the BLM noted:

The application excluded several water bodies as being navigable. As these are considered nonnavigable and as section 12(c) (3) and 43 CFR 2652.3(c) require the region to select all available lands within the township, these water bodies are considered selected.

* * * * *

There are no inland water bodies considered to be navigable within the selected area.

[1] Where, in a BLM decision to issue conveyance, a water body excluded from the selection application on the basis that it is navigable is expressly "considered" nonnavigable and the underlying submerged lands thus deemed selected by the applicant, the BLM has made a navigability determination with regard to the subject water body.

[2] Further, in the absence of an issue regarding error in the decision itself, allegations of irregularities or deficiencies in the predecision procedure, such as noncompliance with the pertinent section of ANCSA and its implementing regulations, do not provide a basis for appeal to this Board. Thus, Doyon's failure to maintain and pursue the

issue as to the factual and legal navigability of Lake Nuziamundcho nullifies Doyon's appeal as to BLM's alleged predecision procedural deficiencies.

The remaining issue in this appeal is the same as that raised by Doyon in *Doyon, Limited & State of Alaska*, 5 ANCAB 324, 88 I.D. 636 (1981) [VLS 80-21(C)]. Doyon here asserts, as it did in the cited appeal, that BLM erred in failing to exclude from conveyance the submerged lands of which the State claims ownership and in charging the acreage of such lands against Doyon's entitlement under ANCSA.

Inasmuch as this issue is the same as the sole issue raised by Doyon in *Doyon, Limited & State of Alaska*, *supra*, the Board concludes that the discussion and the following findings made in that appeal are appropriate as the basis for decision in this appeal.

[3] The BLM has both the authority and the responsibility, under ANCSA and regulations in 43 CFR, to determine which lands, including submerged lands, are public lands within the definition of § 3(e) of ANCSA and are therefore available for selection by a Native corporation.

[4] The BLM is not bound to make its navigability determinations in conformity with information provided by the State pursuant to 43 CFR 2650.1(b) as to the navigability of water bodies within lands selected under ANCSA, or to accept the State's conclusions as to navigability.

[5] When the State's claim of ownership of submerged lands is based solely upon its own conclusions as to the navigability of water bodies within lands selected under ANCSA, and not upon a final adjudication of navigability, the mere assertion of the State's ownership does not constitute a claim of title in the submerged lands which requires BLM to exclude such lands from the decision to issue conveyance.

In *Doyon, Limited & State of Alaska, supra*, the Board found the issue raised by Doyon to be without merit, and accordingly dismissed it.

The parties to this appeal have asserted no factual circumstance and cited no authority which would prevent the decision in *Doyon, Limited & State of Alaska, supra*, from governing this decision.

Therefore, the Board adopts as its findings in this decision those listed above from *Doyon, Limited & State of Alaska, supra*, and holds that this portion of this appeal is without merit and is hereby dismissed. Since all other issues in this appeal have been resolved by prior action, this appeal is hereby dismissed in its entirety.

This represents a unanimous decision of the Board.

REFUNDS AND CREDITS UNDER THE OUTER CONTINENTAL SHELF LANDS ACT

M-36942

December 15, 1981

Accounts: Refunds—Outer Continental Shelf Lands Act: Refunds

Sec. 10 of the Outer Continental Shelf Lands Act does not authorize refunds to purchasers of royalty oil.

Sec. 10 of the Outer Continental Shelf Lands Act does not authorize refunds to persons who have paid a civil penalty under sec. 24 of the Act.

Outer Continental Shelf Lands Act: Refunds

Before allowing refunds or credits against future payments, the Secretary must report them to Congress.

The request for a refund or credit must be in writing, must ask for a specific amount, and must explain why the lessee considers the amount to have been excessive. Except under certain circumstances, the lessee must request the refund or credit within two years after making the payment. Those circumstances are when the lessee both has acted to verify his account within two years and has given the Department enough information to estimate the potential amount of the refund or credit.

An excess net profit share payment, to be credited under 10 CFR 390.034(c), must be reported to Congress before crediting.

Generally, when one co-lessee files a request for repayment, his request does not toll the two-year limit for other co-lessees. But if the co-lessee has the authority to make all lease payments for the other co-lessees, then his request protects all of them.

A lessee may receive a refund or credit of an overpayment even though he did not pay the excess under protest.

Upon discovering an overpayment and an underpayment in a lease account the Sec-

SHELF LANDS ACT

December 15, 1981

retary may properly offset the two without regard to sec. 10. But when an excess remains after the offset, the Secretary must comply with sec. 10 in giving a refund or credit.

*OPINION BY OFFICE
OF THE SOLICITOR*

TO: SECRETARY
FROM: SOLICITOR
SUBJECT: REFUNDS AND CREDITS
UNDER THE OUTER CON-
TINENTAL SHELF LANDS
ACT

This office has received several questions in recent months about the application of sec. 10 of the Outer Continental Shelf (OCS) Lands Act. The Department has published only two decisions on sec. 10 in the past twenty-eight years. So, for the guidance of the U.S. Geological Survey, lessees, and the public, I have prepared a review of this statute.

Background

Sec. 10 was a part of the original OCS Lands Act of 1953. It has never been amended. It provides:

(a) Subject to the provisions of subsection (b) of this section, when it appears to the satisfaction of the Secretary that any person has made a payment to the United States in connection with any lease under this subchapter in excess of the amount he was lawfully required to pay, such excess shall be repaid without interest to such person or his legal representative, if a request for repayment of such excess is filed with the Secretary within two years after the making of the payment, or within ninety days after August 7, 1953. The Secretary shall certify the amounts of all such repayments

to the Secretary of the Treasury, who is authorized and directed to make such repayments out of any moneys in the special account established under section 1338 of this title [sec. 9 of this Act] and to issue his warrant in settlement thereof.

(b) No refund or credit for such excess payment shall be made until after the expiration of thirty days from the date upon which a report giving the name of the person to whom the refund or credit is to be made, the amount of such refund or credit, and a summary of the facts upon which the determination of the Secretary was made is submitted to the President of the Senate and the Speaker of the House of Representatives for transmittal to the appropriate legislative committee of each body, respectively: *Provided*, That if the Congress shall not be in session on the date of such submission or shall adjourn prior to the expiration of thirty days from the date of such submission, then such payment or credit shall not be made until thirty days after the opening day of the next succeeding session of Congress. [43 U.S.C.A. § 1339.]

The statute has prompted questions from the Department of Energy, the U.S. Geological Survey, lessees, and small refiners. For example, does it apply when the Director, USGS, remits a civil penalty assessed by a Reviewing Officer? Does it apply to overpayments by small refiners under OCS royalty oil contracts? Does it apply to an overpayment made in a given month under a fixed net profit share lease? What does the statute mean by "request for repayment?" Can the two-year limit on filing the request ever be extended? Does the two-year limit apply to requests for credits, or only to requests for refunds? How does sec. 10 apply to

overpayments and underpayments discovered by the Department's audit of a lessee's account?

The questions raise most of the issues presented by the statute. They defy a brief answer. To put these problems in perspective, I discuss separately the three purposes of sec. 10.

I. *Authority to Draw on the Treasury*

The first purpose of sec. 10 is to solve a problem created by sec. 9. Sec. 9 directs the Secretary to deposit in the Federal Treasury the money paid to him "under any lease on the Outer Continental Shelf." 43 U.S.C. § 1338. Sec. 9, however, is of limited scope. Other statutes govern the deposit of other funds received from OCS activities. For example, the administrative fee charged to small refiners under 10 C.F.R. § 391.110(b) (2) must be deposited in the Treasury, 31 U.S.C. § 483a, as must civil penalties, OCS royalty oil proceeds, and right-of-way rentals.¹ 31 U.S.C. § 484. What these three stat-

utes share is the requirement that the deposits be credited to "miscellaneous receipts," not to the Department's appropriation account.

The problem is that once the money is deposited, the Constitution requires that an agency have authority from Congress to get the money back out. "No money shall be drawn from the Treasury but in consequence of appropriations made by law." U.S. Const. art. I, § 9, cl. 7.² The Department of the Interior has recognized this requirement in many decisions³ and has gone to Congress four times in this century to get the statutory authority it wanted.⁴

The need to find express legislative authority has led to a strict interpretation of repayment statutes. The law watches jealously over the Treasury.⁵ Many decisions of the

² *Knote v. United States*, 94 U.S. 149, 154 (1877) ("Moneys once in the treasury can only be withdrawn by an appropriation by law. However large, therefore, may be the power of pardon possessed by the President, . . . it cannot touch moneys in the treasury of the United States"); *Reeside v. Walker*, 52 U.S. (11 How.) 272, 291 (1850) (court cannot compel Secretary of Treasury to pay a judgment for which no appropriation has been made); 4 Op. Atty. Gen. 227, 229-30 (1843) (no refund of overpayment without Congressional authorization); 1 Op. Atty. Gen. 405 (1820).

³ See, e.g., *Heirs of Isaac W. Talkington*, 5 Pub. Lands Dec. 114, 115 (1886) ("The power of repayment by the Secretary of the Interior is limited and defined by statute"); *Thomas Foster*, 24 Pub. Lands Dec. 159 (1897); *Frank W. Hull*, 9 Pub. Lands Dec. 60 (1889); *Sarah D. Smith*, 7 Pub. Lands Dec. 295 (1888); *Joseph Brown*, 5 Pub. Lands Dec. 316 (1886).

⁴ First in 1908: 35 Stat. 48 (1908); H. R. Rep. No. 679, 60th Cong., 1st Sess. (1908). Next in 1919: 41 Stat. 366-67 (1919); 59 Cong. Rec. 22-23 (1919). Then again in 1930: 46 Stat. 822 (1930); H. R. Rep. No. 1949, 71st Cong., 2d Sess. (1930). Finally in 1960: 74 Stat. 506-07 (1960); [1960] U. S. Code Cong. & Admin. News 3147-54.

⁵ The law is as strict on appropriations as it is on repayments. See 31 U.S.C. §§ 627, 628.

¹ Civil penalties are collected under 30 C.F.R. § 250.80-1(o), royalty oil proceeds under 10 C.F.R. § 391.142, and right-of-way rentals under 43 C.F.R. § 3340.1(a).

31 U.S.C. § 484, a statute over 130 years old, reflects "the general policy of the United States to require that all moneys collected in behalf of the United States . . . be paid into the Treasury." 17 Op. Atty. Gen. 592, 593 (1883). Unless a statute allows an agency to credit the money received to its appropriation account, the money must go to miscellaneous receipts in the general fund of the Treasury. 56 Comp. Gen. 275 (1977); 52 Comp. Gen. 125 (1972); 47 Comp. Gen. 70 (1967). Some exceptions exist. See e.g., 56 Comp. Gen. 275 (1977) (fees collected from other agencies under 31 U.S.C. § 686); 50 Comp. Gen. 545 (1971) (insurance payments to agency funded solely by fees from the regulated industry).

SHELF LANDS ACT

December 15, 1981

Comptroller and the Comptroller General illustrate this point, but let me discuss only a few. Former Revised Statute § 3689 was a permanent annual appropriation allowing agencies to refund "moneys received and covered into the Treasury before the payment of legal and just charges against the same." This section was read restrictively. It applied to overpayments credited to the general fund only, not to special funds. 11 Dec. Comp. 300 (1904). It did not allow the Secretary of the Treasury to remit a fine *after* it had been paid into the Treasury, because at the time the fine was deposited, there was no charge against it. 10 Dec. Comp. 239 (1903). Similarly, this section could not be used to pay informers' fees when the fees were set only after the money had been deposited. 10 Dec. Comp. 47 (1903).

The interpretations of this Department have also been strict. For example, under sec. 2 of the repayment statute of Mar. 26, 1908, the Secretary was authorized to refund overpayments made "under the public land laws." The Department was soon invited to read the phrase "public lands" broadly, but it declined. The Department denied it could refund an overpayment on the purchase of Indian lands sold by the Government as trustee. The lands were not public lands. *Charles C. Van Wormer*, 37 Pub. Lands Dec. 714 (1909). See also *John W. Blee*, 36 Pub. Lands Dec. 265 (1908) (1880 repayment statute limited to canceled entries; no refund of

money paid when entry was never allowed); *Circular of April 2, 1907*, 35 Pub. Lands Dec. 492 (1907).

When the Department once read the 1908 repayment statute liberally, the Comptroller General intervened.⁶ The issue was whether the statute, as amended in 1919, authorized refunds of overpaid royalties under the Mineral Leasing Act. The Department thought it did, but was overruled:

The repayment laws are in such broad terms that they cover all cases of excess payments under the public land laws, including homestead laws, preemption laws, town site laws, timber and stone laws, desert land laws, and even mineral land laws under which there is authorized an alienation of the land by patent or its equivalent. It is not believed, how-

⁶ In light of the legislative history of the 1908 law, the Comptroller General's strict interpretation was the better one. In a letter accompanying the proposed law, Secretary Garfield wrote:

"Heretofore and until recently all moneys deposited with applications and proofs for public lands have been retained temporarily by the receivers of public moneys at the United States land offices and finally covered into the Treasury when the entries were allowed or returned by the receivers to the applicants in case their applications and proofs are rejected.

"The fact that these moneys accumulated in the hands of the receivers largely in excess of their bonded liability called for a change in this practice, and to safeguard these funds all moneys of this kind are now and will hereafter be covered into the Treasury as soon as they are received. Under the existing law there is no means of withdrawing any of these from the Treasury for repayment to the persons whose applications and proofs are finally rejected, and I, therefore, herewith submit a proposed bill authorizing their repayment and recommend that it be enacted into a law."

H.R. Rep. No. 679, 60th Cong., 1st Sess. 1 (1908). Senator Clark explained on the floor of the Senate that "the bill is to cover those cases and only those cases." 42 Cong. Rec. 2307 (1908) (remarks of Sen. Clark).

ever, that it was intended to include a mineral land law such as that of February 25, 1920, under which there is no alienation of the land but merely a lease for a term of years . . . Dec. Comp. Gen. A-28366 (Sept. 5, 1929).

Consequently, the Department went to Congress and had the law amended. See H. R. Rep. No. 1949, 71st Cong., 2d Sess. (1930).

Given this pattern of interpretation of repayment statutes, it is no surprise that the Solicitor's Office has construed sec. 10 of the OCS Lands Act strictly. The issue in Opinion M-36425 was whether the Bureau of Land Management could refund an overpaid rental on an OCS pipeline right-of-way. The Acting Associate Solicitor said it could not.

The provision in section 10 of the act for refunds of excess payments made to the United States "in connection with any lease" obviously could not apply to an excess payment made in connection with a right-of-way by a right-of-way application or grantee who held no lease. I find nothing in section 10 warranting the conclusion that an excess payment made in connection with a right-of-way acquired under section 5(c) of the act may be considered an excess payment "in connection with any lease" and, therefore, within the scope of section 10 also, notwithstanding the fact that the right-of-way holder, or applicant therefor may be a lease holder. Excess payments made in connection with the right-of-way are separate and distinct from those made "in connection with any lease" and not within the scope of section 10. Solicitor's Opinion M-36425 (Mar. 4, 1957).

With this guidance, I may now respond to two of the questions raised: whether sec. 10 applies to repayments of civil penalties and

overpayments under OCS royalty oil contracts.

Under current regulations, one who is fined by a Reviewing Officer must pay the fine within thirty days after the decision. The payment is due even though an appeal is filed. 30 C.F.R. § 250.80-1(o)(3). On appeal, however, the fine may be reduced by the Director or nullified by the Board of Land Appeals. 30 C.F.R. § 250.80-1(m)(2). If it is, the party has made an overpayment into the Treasury. With royalty oil contracts the situation is different, but the problem is the same. The Department takes the public's share of oil royalties in kind, then sells it under contracts with small refiners. 10 C.F.R. Part 391. Small refiners may discover overpayments only after they are in the Treasury.

Sec. 10 is inapplicable here. Neither of these kinds of overpayments is made "in connection with any lease." Civil penalties may be imposed against lessees, right-of-way holders, holders of exploration permits, and even persons with no permits at all, such as diving contractors. The Department's civil penalty authority is independent of the oil and gas lease. The question is more difficult when we turn to overpayments on purchases of royalty oil, but these too fall outside the scope of sec. 10. First, these are not payments "under any lease" within the meaning of sec. 9. This suggests that they are not made in connection with a lease, but are made in connection with a royalty oil contract. In other words, because re-

SHELF LANDS ACT

December 15, 1981

funds under sec. 10 are drawn on the special account created by sec. 9, the two sections must have equal scope. 43 U.S.C. § 1339(a). Second, before amended in 1978, sec. 5(a) (1) of the OCS Lands Act distinguished between leases and sales of royalty oil. 43 U.S.C.A. § 1334(a) (1) (1964 ed.); Assistant Solicitor Elliott's memorandum of Aug. 13, 1975, to Director, USGS. This distinction persists. *Compare* 43 U.S.C. § 1337 with 43 U.S.C. § 1353. Third, although the Department does have authority to refund overpayments for onshore royalty oil, the onshore statute is different. It allows refunds for overpayments "under any statute relating to the . . . lease . . . of public lands," 43 U.S.C. § 1734 (c), a more flexible category than payments "in connection with any lease."

Sec. 10, then, is no broader than sec. 9. It applies only to bonus payments made to get a lease, rental on the lease, minimum royalty, royalty paid in value, any substitute for royalty created by alternative bidding regulations, and similar payments by the lessee. *See, e.g.*, 30 C.F.R. § 250.33(b). *See also* S. Rep. No. 411, 83rd Cong., 1st Sess. 2 (1953) ("all revenues accruing to the Government from mineral operations on the outer shelf are paid into the Federal Treasury Such revenues include royalties . . . and bonuses and rentals").

Although sec. 10 does not apply to civil penalty refunds or royalty oil

refunds, other remedies may be available. For example, two statutes applicable to all agencies may grant the Secretary authority to refund money "erroneously received and covered into the Treasury." 31 U.S.C. §§ 725q and 725q-1. 55 Comp. Gen. 243 (1975). However, if these sections do not apply, the Department lacks authority to draw on the Treasury to repay persons fined and refiners receiving OCS royalty oil. *See Matanuska Valley Lines, Inc.*, 62 I.D. 243, 251-52 (1955).

Royalty oil overpayments may be repaid by crediting the excess against future payments due. The Department has consistently ruled that when the overpayment is outside the scope of a repayment statute, it may credit the excess.⁷ As a practical matter, however, crediting remitted civil penalties may be difficult. Once penalized, the violator should sin no more. But the Department could amend its civil penalty regulations to permit the Director to stay the payment of the fine pending appeal. This will solve the problem in most cases. In no event, however, should the Director credit a lessee's overpaid fine against payments to be deposited under sec. 9. This practice would frustrate the purpose of sec. 10(b), as I will now explain.

⁷ Solicitor's Opinion M-36425 (Mar. 4, 1957); Dec. Comp. Gen. A-28366 (Sept. 5, 1929); *Joseph Adler*, 9 Pub. Lands Dec. 429 (1889); *Elizah M. Dunphy*, 8 Pub. Lands Dec. 102 (1889).

II. Congressional Review of Re-payments

The authority to repay found in § 10(a) is common in the public land and mineral leasing laws, but § 10(b) has a provision which is unique. It requires the Secretary to report to each house of Congress before allowing a refund or credit, and to give the Congress at least thirty days to review the report.

Sec. 10(b) was not part of the bill originally introduced in the Senate. In its early versions S. 1901 contained only what was to become § 10(a). But at the hearings on the bill, three Senators were concerned that the Secretary was receiving too broad a grant of authority, despite assurance from the Solicitor's Office that he had not abused this authority under the onshore laws.

Senator LONG. Does that not seem to be very general in that when it appears to the satisfaction of the Secretary that any person has made overpayments, and so forth, in any amount that he was lawfully required to pay. Should there not be some standards beyond just the satisfaction of the Secretary that the payment was in excess?

Senator CORDON. Is this not the language in the Mineral Leasing Act?

[Assistant Solicitor] EDELSTEIN. It is sections 95 to 98(a) of title 43 of the code, from which section 10 of S. 1901 . . . was taken, and it applies to public lands generally. There is no change of substance between those provisions of title 43 and this. I do not happen to have title 43 with me, but that is a fact.

Senator WATKINS. You will find it in many reclamation contracts.

Senator CORDON. I am not certain it is sound law, but I am certain that there is a provision in the code at the present time.

Senator MILLIKIN. Has there been any controversy over that in other directions?

Mr. EDELSTEIN. We have had no problems on that.

Senator LONG. It seems to me that you have left it wide open for the Secretary to decide almost on whim or caprice that he has been satisfied.

Mr. EDELSTEIN. There are many people dealing with us, and they sometimes pay small amounts of money in excess of what is required, and to require them to go through the red tape that they would otherwise not have to go through, this statute was requested in connection with public lands generally and it has worked out very satisfactorily.

Senator KUCHEL. It is an accounting problem; is it not?

Mr. EDELSTEIN. Yes Sir.

Senator MILLIKIN. It is an amazingly broad grant of power. In our refund procedure in tax matters, we require a filing of the intention to refund with the Joint Committee on Internal Revenue Taxation, where we can take a look, and there is some kind of a check on refunds. But as the gentleman says, there has never been any trouble over this one and I do not feel like messing with a law that has been working all right.

Mr. EDELSTEIN. The amounts involved are nowhere near as large here as they would be in the case of internal revenue.

Senator CORDON. What would you say about granting that power to the Secretary up to a prescribed maximum amount?

Mr. EDELSTEIN. We would have no objection, but there is no limitation in the sections in title 43.

Senator LONG. It does occur to me that you are going to be dealing with amounts far larger than you have had up to this point.

Mr. EDELSTEIN. We have the Mineral Leasing Act in which large amounts are also involved, the oil- and gas-leasing provisions of it. Of course, the General Accounting Office keeps an eagle eye on

SHELF LANDS ACT

December 15, 1981

all of our fiscal operations, and we have had no problem in connection with it.

Senator CORDON. If I were the Secretary of the Interior, or any other officer, clothed with that authority, I think that I would come before the committee and ask for a maximum to be fixed in there. *Hearings Before the Committee on Interior and Insular Affairs, United States Senate, on S. 1901, 83rd Cong., 1st Sess. 638-39 (1953). [1953 Hearings].*

Apparently motivated by this concern, the Congress adapted the review provisions from § 710 of the Revenue Act of 1928. 45 Stat. 882; 26 U.S.C. § 6405(a). The procedure serves two purposes. It provides public scrutiny of and a potential Congressional check on the Secretary's decision to repay. *1953 Hearings*, 638-39. *See also* 69 Cong. Rec. 9073-74 (1928) (remarks of Sen. Smoot). It also alerts Congress to changes in current and future revenue from OCS leasing. *Cf.* 69 Cong. Rec. 8515-16 (1928) (remarks of Sen. Simmons) (criticism of Treasury's estimates of tax revenue).

The review procedure applies to all credits against future payments due. This answers the question presented by Shell Oil Company and the Department of Energy: whether an excess net profit share payment must be reported to the Congress before crediting. *See* 10 C.F.R. § 390.034(c). Worried about the burden reporting places on lessees and the USGS, Shell believes sec. 10 may be avoided by characterizing these credits "as adjustments, not refunds." Sec. 10, however, applies to refunds and credits both.

And as for the burden of reporting, Congress knew from Assistant Solicitor Edelstein that the Department would be handling many requests for small repayments. *1953 Hearings* at 638. Yet Congress did not limit the kind or dollar value of the repayments it was to review. *Cf.* 26 U.S.C. § 6405(a) (only review credits or refunds exceeding \$200,000). The credit described in 10 C.F.R. § 390.034(c) is precisely the sort of repayment Congress has asked to see.

III. Two-Year Limitation on Claims

Congress has limited the Secretary's authority to make repayments. The lessee must file a request for repayment "within two years after the making of the payment." 43 U.S.C. § 1339(a).

The two-year limit was created in 1919 when Congress amended the 1908 repayment statute. The debate in the House revealed the reason for the limitation.

Mr. SINNOTT: . . . At the present time he [the overpayer] has the right under the first part of section 1 of this bill, which is the present law, to put in his application for a return payment, with no time limit. They are putting in applications in the Interior Department today for payments that were made 30 years ago. Attorneys are gleaning over the records of the Interior Department and ascertaining what excess payments were made 30 and 40 years ago, and are presenting applications for repayment and for a refund to the Secretary of the Interior; and all that this bill does is to put a

statute of limitations to require applicants within two years to present their applications, and not let them have 50 or 100 years. It seems to me this is a bill that should be enacted into law for the protection of the Treasury. Otherwise, these men can have 50 years to demand these repayments. . . .

Mr. GARD. I would like to know whether the matter before the department might not be so continuous that the limitation of two years would be too narrow a limitation?

Mr. SINNOTT. No; I think that is an ample limitation. It is the same limitation as is placed upon the Government in issuing a patent. The Government has to issue a patent within two years unless there is some adverse proceeding taken. I certainly can see no objection. It is a protection to the Treasury. [59 Cong. Rec. 22-23 (1919).]

The Department interprets the limitation to be "obviously against the claim and not merely against the remedy." *Instructions*, 49 Pub. Lands Dec. 541, 544 (1923); *Anthony, Legal Representative of Middlebrook (on rehearing)*, 51 Pub. Lands Dec. 333 (1926).

What effect this limitation had on crediting is unclear. Twice before 1919 the Department had claimed an independent authority to credit overpayments (*See note 7, above*), and the 1908 repayment statute was enacted solely to authorize repayments from the Treasury. If, however, the limitation in the 1919 amendment barred the claim as well as the remedy, then the remedy of crediting may have been barred too. No onshore repayment case between 1919 and 1960 offers evidence on this point: that is, in no case did the Department allow a credit when a refund would have been barred. *See, e.g., Carter Oil Co.*, 53 I.D. 474, 475 (1931). The question no longer

arises under the onshore law, the limitation having been repealed in 1960. 74 Stat. 506-07 (1960).

The Congress resolved this issue in sec. 10 of the OCS Lands Act. Both refunds and credits must be requested within two years. We can infer Congress's reasoning from the legislative history. As I explained in Part II, Congress adapted sec. 10 (b) from sec. 710 of the Revenue Act of 1928. Under the revenue laws, the Secretary of the Treasury is limited in repaying refunds and credits, 26 U.S.C. § 6402(a), and must report certain refunds and credits to the Congress. Like the Treasury Department, which estimates tax revenues, the Interior Department estimates OCS royalty revenues for the Office of Management and Budget and the Congress. Credits, like refunds, mean that less money will be available from OCS revenues than the Department predicted. Because Federal budget planners must rely on these predictions in preparing the budget, Congress apparently wished to limit this potential loss of revenue.⁸

Although Congress did not express itself with precision in sec. 10, its intention to place a two-year limit on requests for credits shows through clearly enough. Sec. 10(a) directs the Secretary to repay "excess" payments, "subject to the provisions of subsection (b) of this section." Sec. 10(b) in turn refers to the "refund of or credit for such excess payment." This alone is strong

⁸ See S. Rep. No. 411, 83rd Cong., 1st Sess. 37 (1953) (Asst. Atty. Gen. Rankin concerned about availability of money to make appropriations). Mr. Rankin's letter was written before Congress added § 10(b), clarifying that credits were also to be limited.

SHELF LANDS ACT

December 15, 1981

evidence that both refunds and credits are "repayments" under sec. 10(a). Additionally, the Senate report's discussion of sec. 10 says that sec. 10(b) imposes "the additional requirement of notice to Congress in advance of repayment." S. Rep. No. 411, 83rd Cong., 1st Sess. 26 (1953). If the Senate considered refunds and credits to be repayments under sec. 10(b), they must be repayments under sec. 10(a). Only one point casts doubt on this conclusion: the use of the phrase "such repayments" in the second sentence of sec. 10(a). In its context there the phrase refers solely to refunds drawn on the Treasury. I am satisfied, however, that the two-year limitation on repayments applies to credits as well as refunds.⁹ To say otherwise is to isolate the words "such repayments" and to ignore Congress's purpose in adding sec. 10(b) to the Act. The Act is not a hermitage for a solitary phrase; it is a crowded house in which the sentences must live together.

A. Meaning of "Request for Repayment"

To claim a refund or credit, a lessee must file a request for repayment. The request must be in writing, must ask for a specific amount, and must explain why the lessee considers the amount to have been excessive.

⁹ This is the Comptroller General's reading of § 10. Dec. Comp. Gen. B-156603 (July 8, 1974, supplement). See also Asst. Solicitor Ferguson's memorandum, Oct. 12, 1972, to Director, USGS ("reimbursements . . . can be effected if claimed within the two year period . . . through the use of credits against future royalty payments").

Under the onshore statutes, the Department has always required that requests be written. *Instructions*, 39 Pub. Lands Dec. 146, 148 (1910); 43 C.F.R. § 217.5 (1954). Congress expressly patterned sec. 10 after these statutes. S. Rep. No. 411, 83rd Cong., 1st Sess. 26 (1953). Furthermore, the use of the word "filed" in sec. 10 implies that the request must be in writing. *Reich v. Dow Badische Co.*, 575 F.2d 363, 368-69 (2d Cir. 1978), *cert. denied* 439 U.S. 1006 (1978) ("filed" in ADEA implies writing); *Hays v. Republic Steel Corp.*, 531 F.2d 1307 (5th Cir. 1976); *International Arms & Fuze Co. v. United States*, 69 Ct. Cl. 142, 149 (1930) (oral demands are not claims for tax refunds).

The Department has also required applicants to request specific amounts and explain the basis for the request. 43 C.F.R. § 217.7 (1954). The request must give the Department enough information to rule on it.¹⁰ One lessee has recently provided a good illustration of what is not a proper request. In August 1980, the company filed 144 "re-

¹⁰ Several years ago, the Solicitor conferred with the Solicitor General on this point under § 10. The Solicitor General agreed with the Department's longstanding view. "Requests for refunds under section 10 should state the amount requested and the basis for the request. A *pro forma* request . . . which gives the Secretary no information as to what is requested or why it is claimed, cannot be regarded as adequate compliance with Section 10." Letter from Solicitor General Griswold to Solicitor Barry, Dec. 6, 1967. See also Memorandum of May 30, 1978, from Assistant Solicitor Elliott to Director, USGS, *Accord, Lincoln Cotton Mills Co. v. United States*, 100 Ct. Cl. 507 (1944) (statement on tax return, "paid under protest and refund demanded," is not specific enough to be a claim for a refund).

quests for refunds" for each of its 144 offshore leases. Each letter said:

You are respectfully asked to consider this letter as such a request for any refund, which may be determined to belong rightfully to [the company] and its co-lessees of the subject lease, as to any payment made in excess of the amount required.

The letters do not ask for specific amounts or give reasons why the payments are excessive. They are not requests within the meaning of sec. 10. A more difficult illustration comes from the Comptroller General's decision A-9422. There the attorney had described the land and the amount of overpayment, but added: "I understand the question has been settled so that upon proper application the department will order a refund of the excess. If so, please advise me, so that application may be made for refund." Calling this "a request for information", the Comptroller General ruled it was not a request for repayment under the 1919 repayment statute. 4 Comp. Gen. 1033 (1925).

B. When the Two-Year Period May Be Extended

"[N]o officer of the government has the power to waive the statute of limitations." *United States v. Garbutt Oil Co.*, 302 U.S. 528, 534 (1938). However, sec. 10 does not always require us to apply the two-year limit rigidly. Whenever a court is asked to apply a statute of limitations, "the basic inquiry is whether [the] congressional purpose is effectuated by tolling the statute of limitations in given circumstances."

Burnett v. New York Central R. Co., 380 U.S. 424, 427 (1965). "In order to determine congressional intent, we must examine the purposes and policies underlying the limitation provision, the Act itself, and the remedial scheme developed from the enforcement of the rights given by the Act." *Id.* But only one part of this three-part examination can help us under the OCS Lands Act. Unlike the Federal Employers' Liability Act in *Burnett*, the OCS Lands Act is not a remedial statute. The purposes of the Act itself do not help us either. These are spelled out in 43 U.S.C. § 1802; none bear on the problem of refunds. We are therefore left with the purposes and policies behind the limitation provision.

The Board of Land Appeals has interpreted the policy behind the two-year limitation. *Phillips Petroleum Co.*, 39 IBLA 393 (1979), says its purpose is to require lessees to verify their accounts promptly. This view is analogous to the traditional justification for statutes of limitation: to keep plaintiffs from sleeping on their rights. *Burnett*, 380 U.S. at 428. It is also alert to the main problem about which Congress seems to have been worried: the problem of having funds available to repay the lessees. See S. Rep. No. 411, above, at 37 (letter from Asst. Attorney General Rankin). The Congress added the two-year limitation to limit the government's potential liability under § 10.

Consistent with § 10's purpose, the Department has recognized some situations in which the period

SHELF LANDS ACT

December 15, 1981

is extended beyond two years. The Assistant Solicitor's memorandum of May 30, 1978, ruled that the period was extended by the length of time it took the Geological Survey to rule on a lessee's request for a transportation allowance. An earlier memorandum, dated Nov. 4, 1976, ruled that the period was extended by the time it took the Geological Survey to rule on an appeal of an alleged excessive royalty payment. Part of the rationale behind these two rulings was that "the lessee was not in a position to . . . request a refund until the Geological Survey informed him of its decision that there were excessive payments and specified the exact amount of them." Additionally, in both cases the lessee had acted within two years to challenge the amount he was required to pay. In the first case, the lessee asked for the allowance within two years of making the payment. In the second case, he paid the amount under protest and filed an appeal.¹¹ Both

¹¹ What mattered here was that the lessee pressed his challenge to the payment, not that he paid "under protest." Under sec. 10, paying under protest is an empty formality.

The practice of paying under protest appears to come from some early customs and tax cases and the common law's "voluntary payment" rule. The rule was that, unless a statute gave the overpayer a right of recovery, he could not recover overpayments made voluntarily. *Railroad Co. v. Commissioners*, 98 U.S. 541 (1878). See also *Little v. Bowers*, 134 U.S. 547 (1890); *Ward v. Love County*, 253 U.S. 17, 24 (1920); Note, "Recovery of Taxes Under General Principles of Quasi-contracts", 7 Colum. L. Rev. 601 (1907). The protest was needed to give "notice that the payment is not to be considered as admitting the right to make the demand [against the payer]." *Railroad Co.*, above, at 544.

The Supreme Court has long recognized that the Department's repayment authority is an

lessees acted to verify their accounts within the period allowed by Congress. *Phillips Petroleum Co.*, 39 IBLA 393, 396 (1979).

Here it may be helpful to summarize the workings of the extension rule. The two-year period begins when the Department receives the payment. It is interrupted (or "tolled") when the Department receives a fully documented request for an allowance or a documented challenge to the legality of an order to pay. It resumes when the lessee receives the Department's letter approving the allowance or reversing the order.¹² A special case is pre-

exception to the voluntary payment rule. *United States v. Edmondston*, 181 U.S. 500, 513-14 (1901). Lack of a protest is irrelevant. 55 Comp. Gen. 243, 244 (1975) (protest irrelevant under 31 U.S.C. § 725q-1). When the facts show an overpayment (and the claim is timely), the Department must repay. *United States v. Laughlin*, 249 U.S. 440, 443 (1919) (1908 statute); Solicitor's Opinion M-36839 (Oct. 28, 1971) (interpreting former 43 U.S.C. § 1374, the 1960 onshore repayment law).

Does the voluntary payment rule survive? The Supreme Court pronounced it alive in 1973, but cut its visit short in a footnote. *United States v. Mississippi Tax Comm'n*, 412 U.S. 363, 368 n. 11 (1973). So we cannot be sure whether the rule is well or whether the Court was merely flattering the dowager on her deathbed.

¹² In his July 8, 1974, supplement to B-156603, the Comptroller General approved a credit requested within two years of the approval of a unit agreement. Taken out of context, some remarks in the supplement might seem to conflict with my interpretation of tolling: that is, one could argue that a lessee always has two years from the date of an approval or decision to file the request. This would misinterpret § 10, which sets the date of payment as the starting date. In the instances discussed by the Comptroller General, the statute was tolled on the date of the earliest payment. Thus, no time had yet run when the statute resumed following the decision. So the lessees had two full years from the date of decision, it being the same as the date of payment with the statute tolled.

sented by a retroactive change in the regulated price of oil or gas. Suppose, for example, that a lessee has paid royalty on gas based on an unregulated price. Another petitions the Federal Energy Regulatory Commission challenging this price, and the Commission agrees, ordering the lessee to charge a lower, regulated price and to reimburse its purchasers. The two-year limit still applies from the date of payment; but the lessee can interrupt the period by notifying the Department in writing of the challenge and of the approximate difference in the price should the challenge succeed. Here the statute is tolled when the Department receives the notice, and it resumes when the final agency or judicial decision is issued.

The final question on tolling concerns leases owned by more than one lessee. If one co-lessee files a request for repayment, does this toll the statute for the other co-lessees having similar claims. Decisions of the Comptroller General under the 1919 statute suggest the filing does not toll the statute. In those cases the question was how the limitation applied to the several heirs of a dead overpayer. "Individually", answered the Comptroller General, meaning that one could file for all only if the request were "accompanied by a properly executed power of attorney." 3 Comp. Gen. 810, 811 (1924), *disapproving Ernest F. Stembbridge*, 49 Pub. Lands Dec. 533 (1923) and *Emma R. Hume*, 49 Pub. Lands Dec. 652 (1923). This principle is easily applied to OCS leases. Under 30

C.F.R. § 250.31, co-lessees can name an operator to fulfill their duties. If this operator has the authority to make lease payments for all the co-lessees, then his request protects all of them. If, however, the co-lessees make separate payments to the Department, then the two-year limit applies individually. This ruling is consistent with the policy behind sec. 10. If a co-lessee keeps a separate account with the Department, he needs this incentive to make him verify the account promptly.

I conclude, then, that the two-year period in sec. 10 may be extended in some cases: generally speaking, when the lessee both has acted to verify his account within two years and has given the Department enough information to estimate the potential amount of the refund or credit. So interpreted, the statute still protects the budget planning process and limits the number of old claims to be reviewed. Yet it gives relief to the conscientious lessee.

C. Audits and the Two-Year Limit

When the Department audits a lessee's account over a period of several months, it raises still another question about the application of sec. 10. For if the audit reveals that the lessee has made both overpayments and underpayments in the audit period, must the Department treat each overpayment separately? An example will illustrate the problem. Suppose a lessee overpaid its royalty by \$1,000 in January 1980, and by \$2,000 in February. Then in March it under-

SHELF LANDS ACT

December 15, 1981

paid its royalty by \$2,500. An audit in September 1980, reveals these errors. Must each overpayment be given a separate credit, or should the Department credit and report only the net overpayment of \$500 for the three-month period?

This question was partly answered in *Shell Oil Co.*, 52 IBLA 74 (1981). There the Department's Inspector General audited payments four years after they were made. Shell had overpaid \$11,000 in one month and underpaid \$12,000 the next. The USGS demanded that Shell pay the \$12,000 and ruled that repayment of the \$11,000 was barred by the two-year limit. The Board reversed.

Had Shell initiated a request in 1979 for a refund of its November 1974 overpayment, we believe Survey would have been correct in denying such request as untimely. In *Phillips Petroleum Co.*, 39 IBLA 393 (1979), we so held. Where, however, Survey undertakes to audit a producer some 4 years after the payments at issue have been made, we hold that a sense of fundamental fairness requires Survey to recognize both a producer's underpayments and overpayments of royalty. We believe Survey should have properly offset Shell's underpayment by the amount of its overpayment. We do not believe that the 2-year period of limitations was established to give Survey a procedural advantage in computing royalty payments. [*Id.* at 78.]

When we consider the purposes of sec. 10, we see the Board was correct. The statute permits "offsetting"¹³ within the auditing period,

¹³ "Offsetting" is crediting overpayments against past payments due. "Crediting" in sec. 10 is crediting against future payments due. The distinction is justified in the text below.

whether or not that period is within two years of the date of the audit. To begin with, offsetting has nothing to do with refunds. The excess to be offset will not be withdrawn from the Treasury. Next, although the two-year limit protects the Department from the burden of reviewing old claims, this protection need not apply to offsetting in an audit made beyond the limit, such as the one in *Shell*. When the Department has decided to shoulder the burden of reviewing monthly payments during the audit period, offsetting within that period imposes no extra burden. (Repayments, on the other hand, would impose extra burdens of reporting to Congress and paying or bookkeeping, both outside the scope of the audit. Auditing never waives the two-year limit on filing for repayments.)

Shell is also compatible with the purposes behind the limitation on and duty to report credits. The first purpose is to aid the accuracy of estimates of future revenue. Because offsetting, as I defined it, affects only past payments, it poses no threat to the estimates. The second purpose is to provide an informal Congressional check on the Secretary's authority to allow credits. This purpose, one might argue, could be frustrated by offsetting: the Congress would learn of the offsets only if the audit revealed a net overpayment. On this point, however, I find the practice under the tax laws to be instructive. Overpaid

tax installments may be credited against unpaid installments without reporting the credit to the Joint Committee on Taxation. Only the net overpayment, based on all the installments, is subject to reporting. 26 U.S.C. §§ 6403, 6402, and 6405. (Revenue Act of 1928, §§ 321, 322, and 710). Here again, Congress appears concerned only with credits against future payment due.¹⁴

A few examples will clarify how offsets and credits are affected by sec. 10. First, consider a lessee who overpays \$1,000 in January and underpays \$300 in February. The errors are discovered in June. The lessee should apply for a refund or credit of \$700, and the request must be reported to Congress. Second, consider an audit covering twelve months: July 1979, through June 1980. The audit reveals an overpayment of \$500 in October and an underpayment of \$1,700 in March. The audit is completed on Jan. 2, 1982, more than two years after the October overpayment. Nevertheless, USGS should offset the \$500 against the \$1,700 and demand payment of \$1,200. No report to Congress is required. Third, using the same dates as in the second example, assume the October overpayment was \$1,700 and the March underpayment was \$400. Here USGS should offset the two payments, but must deny the lessee's request for a \$1,300 repay-

ment. The overpayment was made over two years before the lessee files his request.

The fourth example is a more complicated variation on the third. The audit covers July 1979, through June 1980. The audit is completed on Jan. 2, 1982, and the lessee files a request for repayment that day. Thus, the lessee is entitled to repayment only for payments made after Jan. 2, 1980. The audit reveals the following errors:

July 1979—\$1,500 overpayment
September 1979—\$300 underpayment
December 1979—\$200 overpayment
February 1980—\$1,200 underpayment
May 1980—\$400 overpayment

After offsetting, the audit reveals a net overpayment of \$600. The problem is to decide how much of the net the lessee can recover. Here the lessee can recover the \$400 overpaid in May, but no more. The July and December overpayments were made more than two years before repayment was requested. Given sec. 10's purpose to make lessees verify their accounts promptly, it would be improper to attribute all of the net overpayment to May.

Conclusion

Sec. 10 allows the Secretary to refund money deposited in the Treasury under sec. 9 only. It gives no authority to refund civil fines or overpayments under royalty oil contracts. The section creates a single procedure for refunds and credits. Lessees must request them in writing, usually within two years after

¹⁴ Tax accounting and lease accounting are not identical. Under the tax laws, a net overpayment is to be credited against other taxes already owed by the taxpayer. 26 U.S.C. § 6402. OCS lease accounts, however, are kept separately.

making the payment. Before allowing refunds or credits, the Secretary must report them to Congress.

WILLIAM H. COLDIRON
Solicitor

DOYON, LIMITED

6 ANCAB 242

Decided *December 16, 1981*

Appeal from the Decision of the Alaska State Office, Bureau of Land Management F-19155-16.

Partial decision; affirmed in part.

1. Alaska Native Claims Settlement Act: Definitions: Public Lands: Generally—Submerged Lands

The Bureau of Land Management under provisions of ANCSA and regulations in 43 CFR has both the authority and responsibility to determine which lands, including submerged lands, are "public lands" within the definition of § 3(e) of ANCSA and are therefore available for selection by a Native corporation.

2. Alaska Native Claims Settlement Act: Conveyances: Generally—Alaska Native Claims Settlement Act: Navigable Waters

The Bureau of Land Management is not bound to make its navigability determinations in conformity with information provided by the State of Alaska pursuant to 43 CFR 2650.1(b) as to the navigability of water bodies within lands selected under ANCSA, or to accept the State's conclusions as to navigability.

3. Alaska Native Claims Settlement Act: Conveyances: Generally—Alaska

Native Claims Settlement Act: Navigable Waters

When the State of Alaska's claim of ownership of submerged lands is based solely upon its own conclusions as to the navigability of water bodies within lands selected under ANCSA, and not upon a final adjudication of navigability, the mere assertion of the State's ownership does not constitute a claim of title in the submerged lands which requires the Bureau of Land Management to exclude such lands from the Decision to Issue Conveyance.

4. Alaska Native Claims Settlement Act: Administrative Procedure: Generally—Administrative Procedure: Decisions

Where, in a Bureau of Land Management decision to issue conveyance, a water body excluded from the selection application on the basis that it is navigable is expressly "considered" nonnavigable and the underlying submerged lands thus deemed selected by the applicant, the Bureau of Land Management has made a navigability determination with regard to the subject water body.

5. Alaska Native Claims Settlement Act: Alaska Native Claims Appeal Board: Appeals: Generally—Alaska Native Claims Settlement Act: Administrative Procedure: Generally

In the absence of an issue regarding error in the decision itself, allegations of irregularities or deficiencies in the procedure, such as noncompliance with the pertinent section of ANCSA and its implementing regulations, do not provide a basis for appeal to this Board.

APPEARANCES: James Q. Mery, Esq., for appellant; M. Francis Neville, Esq., Office of the Regional Solicitor, for Bureau of Land Management; Shelley

J. Higgins, Esq., Office of the Attorney General, for the State of Alaska.

OPINION BY ALASKA
NATIVE CLAIMS APPEAL
BOARD

Summary of Appeal

One issue raised by Doyon, Limited, in this appeal is whether the Bureau of Land Management erred in approving for conveyance to Doyon, and charging against the corporation's acreage entitlement under ANCSA, submerged lands to which the State of Alaska claims title. As to this issue, the decision of the Bureau of Land Management is affirmed.

The Board concludes that the Bureau of Land Management acted within its authority and responsibility to determine what lands are "public lands" under § 3(e) of ANCSA and therefore available for selection by a Native corporation when it made a determination of the nonnavigability of a water body.

The Board further finds that when the State of Alaska's claim of ownership of the submerged lands is based solely upon the State's own conclusions as to the navigability of the water body, the Bureau of Land Management is not bound either to accept the State of Alaska's conclusions or to recognize the State's claim as an interest leading to a fee title which requires exclusion of land under ANCSA.

Jurisdiction

The Alaska Native Claims Appeal Board, pursuant to delegation

of authority to administer the Alaska Native Claims Settlement Act (ANCSA), 85 Stat. 688, *as amended*, 43 U.S.C. §§ 1601-1628 (1976 and Supp. I 1977), and the implementing regulations in 43 CFR Part 2650 and 43 CFR Part 4, Subpart J, hereby makes the following findings, conclusions and decision.

Procedural Background

On Apr. 2, 1975, pursuant to § 12 (c) of ANCSA, Doyon, Limited (Doyon) filed selection application F-19155-16 for lands in the vicinity of the Native Village of Kaltag. The application excluded Tsurorturna Slough, Yukon Creek, and the South Fork of the Nulato River as being navigable.

On Oct. 3, 1979, the Bureau of Land Management (BLM) issued its above-designated decision to convey the selected lands to Doyon. The decision specified that within the lands approved for conveyance only the Khotol River was considered navigable. The above-specified water bodies excluded from Doyon's selection application were expressly considered nonnavigable and thus selected.

In its Statement of Reasons, filed on Nov. 26, 1979, Doyon declared, *inter alia*, that:

1. BLM erred in its decision to convey, and to charge against Doyon's acreage entitlement, submerged lands to which the State asserts title, which lands "are more particularly described on Exhibit A attached hereto and incorporated herein by reference." The attached

Exhibit A was the above-designated decision of the BLM to convey lands to Doyon.

2. The subject submerged lands should be excluded from the interim conveyance and not charged against Doyon's acreage entitlement, pending an adjudication of the State's title interest in the lands.

3. No determination of navigability or nonnavigability of the South Fork of the Nulato River was made by the BLM, but if such a determination was made, it was arbitrary and capricious, and was made in violation of the law and the regulations.

4. The South Fork of the Nulato River is navigable as a matter of fact and law.

In its Memorandum in Support of Statement of Reasons, Doyon referred exclusively to the submerged lands underlying the South Fork of the Nulato River as the lands under appeal, and stated that the basis for its appeal was that the State claims title to those lands. In support of its appeal, Doyon adopted and incorporated by reference three documents filed in other ANCAB appeals. Copies of the documents were attached as Exhibit D. The referenced documents made clear that the fundamental ground for the appeal was the State's assertion of title to lands approved for conveyance, or inversely, "the attempted conveyance of lands when there is [an unadjudicated] third party claim of title, on record, to those very same lands." Exhibit D-3, page 5. Doyon declared that

"[i]t is, quite simply, irrelevant to Doyon whether these water bodies are navigable or nonnavigable." Exhibit D-2, page 3. Asserting a right to appeal on alternate grounds, Doyon argued that the Secretary had not followed the applicable law or the regulations in making navigability determinations prior to approving conveyance of submerged lands to Doyon, but that resolution of the issues raised by such argument would be unnecessary if the Board orders the exclusion of the submerged lands from conveyance pending an adjudication of the State's claim of title.

BLM answered that Doyon had not addressed the ultimately dispositive substantive issue—whether or not the South Fork of the Nulato River is navigable. BLM argued that it is required to convey submerged lands which have been administratively determined to be in Federal ownership, regardless of the State's conflicting claim to title and the Department's inability to guarantee title. Further, BLM argued that a determination of non-navigability of the South Fork of the Nulato River had been made, and the bureau answered in detail Doyon's arguments regarding procedural deficiencies. Finally, referring to Doyon's statement that navigability is not the "real issue" in this appeal, BLM declared that Doyon must either accept its burden of proof on the substantive issue of navigability or accept conveyance of the disputed submerged lands.

In its Reply, Doyon reasserted

that the basic issue on appeal is not navigability, but rather the BLM's attempt to convey, and to charge against Doyon's entitlement, submerged lands to which the State claims title. Doyon declared that it is irrelevant whether the disputed submerged lands are navigable, and that the real issue in this appeal is certainty of title. Doyon stated that it has no intention of participating in a *de novo* factual determination of navigability before this Board, and that Doyon will not, and should not, bear the burden and expense of proving to BLM that the Federal Government does not own the submerged lands it is attempting to convey. Doyon reiterated its contention that the disputed lands should be excluded from conveyance pending an adjudication of the State's claim of title.

The State, on motion by Doyon, was joined as a necessary party by the Board's order of Dec. 13, 1979. The State has not filed a brief in this appeal.

Decision

The primary issue addressed in this decision is the same as that raised by Doyon in *Doyon, Limited & State of Alaska*, 5 AN CAB 324, 88 I.D. 636 (1981) [VLS 80-21(C)]. Doyon here asserts, as it did in the cited appeal, that BLM erred in failing to exclude from conveyance the submerged lands of which the State claims ownership and in charging the acreage of such lands against Doyon's entitlement under ANCSA.

Inasmuch as this issue is the same as the sole issue raised by Doyon in *Doyon, Limited & State of Alaska, supra*, the Board concludes that the discussion and the following findings made in that appeal are appropriate as the basis for decision in this appeal.

[1] The BLM has both the authority and the responsibility, under ANCSA and regulations in 43 CFR, to determine which lands, including submerged lands, are public lands within the definition of § 3(e) of ANCSA and are therefore available for selection by a Native corporation.

[2] The BLM is not bound to make its navigability determinations in conformity with information provided by the State pursuant to 43 CFR 2650.1(b) as to the navigability of water bodies within lands selected under ANCSA, or to accept the State's conclusions as to navigability.

[3] When the State's claim of ownership of submerged lands is based solely upon its own conclusions as to the navigability of water bodies within lands selected under ANCSA, and not upon a final adjudication of navigability, the mere assertion of the State's ownership does not constitute a claim of title in the submerged lands which requires BLM to exclude such lands from the Decision to Issue Conveyance (DIC).

In *Doyon, Limited, State of Alaska, supra*, the Board found the issue raised by Doyon to be without merit, and accordingly dismissed it.

The parties to this appeal have asserted no factual circumstance and cited no authority which would prevent the decision in *Doyon, Limited, State of Alaska, supra*, from governing this decision.

Therefore, the Board adopts as its findings in this decision those listed above from *Doyon, Limited, State of Alaska, supra*.

Doyon in this appeal also asserted that no determination of the navigability or nonnavigability of the South Fork of the Nulato River was made by the BLM, but if such a determination was made, it was arbitrary and capricious, and was made in violation of the law and the regulations. Further, Doyon asserted that the South Fork of the Nulato River is navigable as a matter of fact and law.

In the DIC here appealed, the BLM noted:

The [Doyon's selection] application excluded the following water bodies as being navigable:

South Fork Nulato River;
Tsurotlurna Slough;
Yukon Creek.

As these are considered nonnavigable and as Sec. 12(c) (3) and 43 CFR 2652.3 (c) require the region to select all available lands within the township, the beds of these water bodies are considered selected.

The DIC went on to specify that, within the lands approved for conveyance, the Khotol River was the only inland water body considered to be navigable.

[4] Where, in a BLM decision to issue conveyance, a water body ex-

cluded from the selection application on the basis that it is navigable is expressly "considered" nonnavigable and the underlying submerged lands thus deemed selected by the applicant, the BLM has made a navigability determination with regard to the subject water body.

Doyon, in its Statement of Reasons, declared that the South Fork of the Nulato River is navigable as a matter of fact and law. However, in its Memorandum in Support of Statement of Reasons, Doyon declared that navigability is not the "real issue" in the appeal, and that it is irrelevant whether the subject water body is navigable or nonnavigable. Further statements in Doyon's Reply manifest Doyon's withdrawal of any issue as to the factual or legal navigability of the disputed water body.

[5] In the absence of an issue regarding error in the decision itself, allegations of irregularities or deficiencies in the predecision procedure, such as noncompliance with the pertinent section of ANCSA and its implementing regulations, do not provide a basis for appeal to this Board. Thus, Doyon's failure to maintain and pursue an issue as to the factual and legal navigability of the South Fork of the Nulato River moots Doyon's allegations regarding the arbitrariness and capriciousness of BLM's navigability determination and predecision procedural deficiencies.

Further, in the absence of an issue as to legal and factual navigability,

the Board rejects Doyon's argument that the DIC should have included a written statement of reasons for any determination of navigability or nonnavigability. In the absence of an issue as to navigability, BLM's failure to include in the DIC a statement of reasons for any determination of navigability or nonnavigability does not provide a basis for appeal to this Board.

Based upon the above findings and conclusions, this Board hereby dismisses that portion of the above-designated appeal relating to navigability.

Those portions of the above-designated appeal relating to unpatented mining claims and public easements will be resolved by future action of this Board.

This represents a unanimous decision of the Board.

SCOTT Q. ADAMS

60 IBLA 288

Decided December 17, 1981

Appeal from decision of Montana State Office, Bureau of Land Management, rejecting simultaneous oil and gas lease application M-50524.

Affirmed.

1. Oil and Gas Leases: Applications: Generally—Oil and Gas Leases: Applications: Filing

An applicant for a simultaneous oil and gas lease who is legally a minor at the time he executes and files the application is not qualified to hold a lease under the regulations, and the application is properly rejected.

APPEARANCES: George K. Stearns, Esq., Stowe, Vermont, for appellant.

OPINION BY ADMINISTRATIVE JUDGE HENRIQUES

INTERIOR BOARD OF LAND APPEALS

Scott Q. Adams has appealed the decision of the Montana State Office, Bureau of Land Management (BLM), dated Sept. 17, 1981, rejecting his simultaneous oil and gas lease application, M-50524, drawn with first priority for parcel MT-108 at the March 1981 simultaneous drawing held Apr. 18, 1981. BLM rejected the application because appellant was a minor under Montana law at the time he submitted the application and therefore unqualified to be an oil and gas lease applicant.

In his statement of reasons, appellant argues that, although he was a minor at the time he submitted the application, he was not unqualified to do so under Montana law which does not void a minor's act or render a minor's contract illegal. He also contends that 43 CFR 3102.1 only prohibits minors from

acquiring or holding leases and that he became 18 on Apr. 12, 1981, before the drawing was held, and therefore before he would have to submit a lease offer as a result of his first priority. He notes that the prohibition against a minor holding a lease is regulatory, not statutory, and thus the regulation must be strictly construed. He suggests that if the Secretary of the Interior had intended to prohibit minors from filing an application, the regulations would have so stated.

[1] The Montana Code Annotated (MCA), sec. 41-1-101 (1979) defines minors as "(a) males under 18 years of age; (b) females under 18 years of age." The fact that Montana permits minors to make contracts, subject to disaffirmance (*see* MCA 41-1-302 (1979)), has no bearing here as appellant was nevertheless considered a minor under Montana law at the time he submitted his application. Departmental regulation 43 CFR 3102.1 reads: "(c) *Minors*. Leases shall not be acquired or held by one considered a minor under the laws of the State in which the lands are located, but leases may be acquired and held by legal guardians or trustees of minors in their behalf."

Appellant seeks to distinguish between a person who files an application and a person who is issued a lease and argues that only the latter need be the requisite age. We disagree. We find that, even if we strictly construe the regulation, the phrase "[l]eases shall not be ac-

quired" must be read to cover the process of obtaining a lease, in contrast to the word "held" which clearly refers to a lease which has been issued. *See Black's Law Dictionary* 23 (5th ed. 1979); *Webster's Third International Dictionary* 18 (1966).

This conclusion is confirmed by examination of certain other regulations. Specifically, 43 CFR 3112.6-1(b) reads: "(b) *Unqualified applicants*. The application of any applicant who is unqualified * * * shall be rejected." The inference is that applicants as such must be qualified to acquire and hold a lease. A minor is not so qualified. Even more significantly, we note that regulation 43 CFR 3102.2-2 requires: "The applicant, offeror, or agent * * * shall *certify as to age*, citizenship and compliance with the acreage limitations * * * *on the lease application* if leasing is in accordance with Subpart 3112 [Simultaneous Filings] of this title." (Italics added.) Thus, the age certification on the simultaneous oil and gas lease application states: "UNDER-SIGNED CERTIFIES AS FOLLOWS: * * * (b) Applicant is not considered a minor under the laws of the State in which the lands covered by this application are located." Appellant's application was signed and dated Mar. 5, 1981. The language of the age certification is in the present tense.

The Board has often held that an applicant certifies to the statements on the application as of the date that

he signs and dates the card. The certification represents that circumstances are as they are stated on the application on the date of the application and that the applicant has met the statutory and regulatory requirements for holding a lease as of that date. *H. L. McCarroll*, 55 IBLA 215 (1981); *C. H. Coster Gerard*, 41 IBLA 74, 75 (1979); *Ray Flamm*, 24 IBLA 10 (1976).¹

We find that an applicant for a simultaneous oil gas lease must be qualified to hold the lease when he submits the application and therefore BLM properly rejected appellant's lease application because he was a minor at the time it was executed and submitted. *Cf. Jean Alling*, 52 I.D. 242 (1927) (application for oil and gas prospecting permit rejected because applicant was a minor).

Accordingly, pursuant to the authority delegated to the Board of Land Appeals by the Secretary of the Interior, 43 CFR 4.1, the decision of the Montana State Office is affirmed.

3 IBSMA 377

Decided December 18, 1981

Appeal by the Office of Surface Mining Reclamation and Enforcement for review of the Nov. 20, 1980, decision of Administrative Law Judge Tom M. Allen, in Docket No. NX 0-160-R, vacating two notices of violation under the holding that the inspectors responsible for the issuance of the notices failed to present their credentials in accordance with 30 CFR 721.12(a).

Reversed.

1. Surface Mining Control and Reclamation Act of 1977: Inspections: Generally

OSM inspectors are not required by sec. 517(b)(3) of the Act and 30 CFR 721.12(a) to present their credentials prior to inspecting an inactive minesite at which no one associated with the mining operation is present.

APPEARANCES: Carol S. Nickle, Attorney, Office of the Field Solicitor, Knoxville, Tennessee, Glenda Hudson, Attorney, and Marcus P. McGraw, Assistant Solicitor for Enforcement, Office of the Solicitor, for the Office of Surface Mining Reclamation and Enforcement; Herman N. Lester, Esq., Combs and Lester, P.S.C., Pikeville, Kentucky, for William M. Johnson.

OPINION BY INTERIOR BOARD OF SURFACE MINING AND RECLAMATION APPEALS

The Office of Surface Mining Reclamation and Enforcement (OSM)

¹ A false statement on an oil and gas lease application is also a proper basis for rejection of the application. 43 CFR 1821.3-1(c).

has appealed a decision of the Hearings Division vacating two notices of violation issued by OSM to William M. and Malvary Johnson pursuant to the Surface Mining Control and Reclamation Act of 1977 (Act).¹ The notices were vacated on the basis of the Administrative Law Judge's determination that the OSM inspectors whose inspection resulted in the issuance of the notices did not present their credentials as required under sec. 517(b) (3) of the Act, 30 U.S.C. § 1267(b) (3) (Supp. II 1978), and the Department's regulation at 30 CFR 721.12(a).

Factual and Procedural Background

On Mar. 6, 1980, two inspectors from OSM inspected property owned by William M. and Malvary Johnson along the Fleming Branch at Dorton, in Pike County, Kentucky.² There was no mining activity at this site on the date of OSM's inspection. The inspectors presented their credentials to Paul Daniels, who was found to be operating a deep mine adjacent to the property, and proceeded to inspect the Johnson property.³ On the basis of this

¹ Act of Aug. 3, 1977, P.L. 95-87, 91 Stat. 445.

² The inspection was initiated on the basis of a citizen complaint and state reports of noncompliance with applicable regulations (Tr. 50, 100-01).

³ There was testimony presented during the review hearing concerning whether Mr. Daniels was in any way associated with mining operations on the Johnson property (Tr. 86-89). It appears that he was not involved with those operations (*id.*); however, this fact is not material to our holding in this case.

inspection a notice of violation and cessation order were issued; these documents were sent to William M. Johnson by certified mail on Mar. 10, 1980.⁴ Johnson sought review of this enforcement action before the Hearings Division and a hearing was conducted on Oct. 21, 1980.

The basic issue presented for hearing was whether OSM has regulatory authority over operations on the Johnson property. During the course of the hearing, however, the Administrative Law Judge raised the issue of OSM's compliance with the provisions of the Act and regulations concerning presentation of credentials by OSM inspectors. The decision below is based only on a ruling that the inspectors did not comply with these regulatory provisions.

Discussion and Conclusion

The provision for presentation of credentials as an element of inspections conducted by OSM is set forth in 30 CFR 721.12:

(a) Authorized representatives of the Secretary, without advance notice and upon presentation of appropriate credentials and without a search warrant, shall have the right of entry to, upon, or through any surface coal mining and reclamation operations or any premises in which any records required to be maintained are located. [⁵]

⁴ Tr. 107; OSM Exhs. 13 and 14. The cessation order issued by OSM was subsequently vacated and a notice of violation was issued in its place (Tr. 4-8; OSM Exhs. 14 and 15).

⁵ Essentially the same language is found in sec. 517(b) (3) of the Act, 30 U.S.C. § 1267(b) (3) (Supp. II 1978).

The Board has previously analyzed this provision in two cases: *Consolidation Coal Co.*, 1 IBSMA 273, 86 I.D. 523 (1979), *on appeal following remand*, 2 IBSMA 21, 87 I.D. 59 (1980); and *Capitol Fuels, Inc.*, 2 IBSMA 261, 87 I.D. 430 (1980).

In the first of its *Consolidation* decisions, above, the Board reasoned that the presentation-of-credentials requirement derives from the interest of mine operators in being aware of the presence of non-employees at a minesite, to facilitate the safe and orderly conduct of mining operations.⁶ 1 IBSMA at 276, 86 I.D. at 525. While recognizing this interest, however, the Board held that OSM may inspect a mine without presenting credentials under extraordinary circumstances, as when such an inspection is deemed necessary, on the basis of objective indications, to preclude concealment of a violation of the Department's regulations. 1 IBSMA at 275-78, 86 I.D. at 524-26; 2 IBSMA 23-24, 87 I.D. at 60-61.

In *Capitol Fuels*, the enforcement action by OSM was challenged on the ground that OSM's inspectors failed to present their credentials until after concluding their initial inspection of a mining operation. Noting that prior to their inspection the OSM inspectors had made a diligent effort to locate a mine employee "with some degree of man-

agement or supervisory responsibility" at the minesite, the Board held the inspectors had complied with the presentation requirement of 30 CFR 721.12(a). 2 IBSMA at 266-67, 81 I.D. at 433.

As is indicated in the preceding discussion, our decisions concerning the presentation-of-credentials requirement in 30 CFR 721.12(a) have struck a balance between a mine operator's interest in the safe and orderly conduct of mining operations, and the Department's interest, on behalf of the public at large, in avoiding operator subterfuge or unwarranted delays in mine inspections. With this balance in mind, we examine the circumstances of the instant case.

[1] Most noteworthy of the facts of this case, as regards the operation of 30 CFR 721.12(a), are that during the time of OSM's inspection there was no mining activity in progress at the Johnson minesite, nor was there anyone associated with previous mining activity present at the site. Accordingly, there was no risk of interference with the safe and orderly conduct of mining operations by the OSM inspectors. Appellant has asserted no other interest protected by the regulation that may have been transgressed by the OSM inspectors; therefore, we conclude that it was an error for the Administrative Law Judge to vacate the notice of violation issued by OSM on the basis that the inspectors violated 30 CFR 721.12(a).

For the foregoing reasons the decision below is reversed and this

⁶ This requirement is a limited restriction on OSM's general authority under 30 U.S.C. § 1267(b)(3) (Supp. II 1978) and 30 CFR 721.12(a) to conduct inspections without advance notice or search warrants. See comment 11 to Part 721, 42 FR 62664 (Dec. 13, 1977).

case is remanded to the Hearings Division for further review.⁷

HAVLAH GROUP

60 IBLA 349

Decided December 22, 1981

Appeal from decision of Cottonwood Resource Area Headquarters, Bureau of Land Management, Cottonwood, Idaho, disapproving plan of operations for mining claim within proposed wilderness study area.

⁷ We decline to rule whether coal removed from the Johnson property affected interstate commerce. OSM has expressed concern over the Administrative Law Judge's statement, made at the conclusion of the review hearing, "I have to find at least at this point that the coal taken by Dr. Johnson and Malvary Johnson from the site in question has not been shown to enter interstate commerce" (Tr. 210-11). There was, however, no ruling related to this statement in the Administrative Law Judge's written decision; therefore, any ruling by the Board in this regard would be premature. We do note, however, for the guidance it may provide in the further course of proceedings to review OSM's enforcement actions against the Johnsons, that the burden of proving an exception from the coverage of the Act, such as that recognized in 30 CFR 700.11 (a) concerning the extraction of coal for non-commercial use, lies with the party claiming the exception and not with OSM. See, e.g., *Hardly Able Coal Co.*, 2 IBSMA 332, 338, 87 I.D. 557, 560 (1980); *Daniel Brothers Coal Co.*, 2 IBSMA 45, 51, 87 I.D. 138, 141 (1980); *James Moore*, 1 IBSMA 216, 223-24, 86 I.D. 369, 373-74 (1979).

Affirmed.

1. Federal Land Policy and Management Act of 1976: Wilderness—Mining Claims: Generally

The Bureau of Land Management is directed by sec. 603(c) of the Federal Land Policy and Management Act of 1976 (FLPMA), 43 U.S.C. § 1782(c) (1976), to manage lands under review for wilderness suitability so as to prevent impairment of wilderness characteristics, except that the continuation of existing mining uses in the same manner and degree in which they were being conducted on the date of enactment of FLPMA (Oct. 21, 1976) is allowed. Such grandfathered use is properly regulated to prevent unnecessary or undue degradation of the land and its resources.

2. Federal Land Policy and Management Act of 1976: Wilderness—Mining Claims: Generally

The existence of mining operations actually being conducted on the land on Oct. 21, 1976, and not mere statutory right to use is required to authorize subsequent mining activities in the same manner and degree.

3. Federal Land Policy and Management Act of 1976: Wilderness—Mining Claims: Generally

A mining claim located prior to the Federal Land Policy and Management Act of 1976 (Oct. 21, 1976) on which a valid discovery has existed from Oct. 21, 1976, to the present constitutes a valid existing right. The owner of such a claim on land under wilderness review will be allowed to continue mining operations to full development even if operations will impair wilderness suitability, subject to regulation to preclude unnecessary or undue degradation of the land and its resources.

APPEARANCES: Claude Marcus, Esq., Boise, Idaho, for Havlah Group; Roger W. Nesbit, Esq., Office of the Field Solicitor, U.S. Department of the Interior, Boise, Idaho, for the Bureau of Land Management.

*OPINION BY
ADMINISTRATIVE JUDGE
GRANT
INTERIOR BOARD OF
LAND APPEALS*

Havlah Group, a limited partnership, brings this appeal from a decision of the Cottonwood Resource Area Headquarters, Bureau of Land Management (BLM), Cottonwood, Idaho, dated Aug. 20, 1980, disapproving the plan of operations of mining claims filed in accordance with Departmental regulations at 43 CFR Subpart 3802,¹ issued pursuant to sec. 603 of the Federal Land Policy and Management Act of 1976 (FLPMA), 43 U.S.C. § 1782 (1976).

The background of the decision is provided by documents in the record on appeal. The record contains a copy of a letter dated July 28, 1980, from the BLM Area Manager to Gerald Kooyers, general partner of Havlah Group. Enclosed with the letter was a notice of noncompliance, also dated July 28, 1980, advising appellant that mining operations being carried out in connection with the claims were in violation of regulations at 43 CFR

Subpart 3802 for failure to obtain prior BLM approval of a plan of operations for mining activities in the proposed Marshall Mountain Wilderness Study Area (WSA).² The notice also warned appellant that conduct of further operations without compliance would be enjoined by court action.

The letter further notified appellant that:

If you feel you have a "valid existing right," meaning a valid discovery on October 21, 1976, and continuing to the present time on any of your claims, please submit data supporting this contention. For BLM to determine whether you have a "valid existing right" as defined by 43 CFR 3802, you will be required to show evidence of such discovery as of the 1976 date (43 CFR 3802.0-5(k)). Supporting data might include assay reports, engineers' reports, or other pertinent data substantiating the discovery on each claim.

Subsequently, pursuant to a complaint filed in the United States District Court³ an injunction was issued on Aug. 20, 1980, enjoining appellant from certain activities related to the mining claims within the proposed WSA, including road building, logging of trees over 2 inches in diameter, and construction of a tailings pond, unless such activities are conducted in accordance with a plan of operations approved by BLM.

Havlah Group's plan of operations filed with BLM outlined certain planned activities in conjunc-

¹ Departmental regulations in 43 CFR Subpart 3802, Exploration and Mining, Wilderness Review Program, were published in the *Federal Register* (45 FR 13968) on Mar. 3, 1980, and were effective Apr. 2, 1980.

² Inventory unit Idaho 62-10, Marshall Mountain, consisting of 6,524 acres, has subsequently been designated a wilderness study area. 45 FR 75587 (Nov. 14, 1980).

³ *United States v. Havlah Group*, Civ. No. 80-2065 (D. Idaho, filed Aug. —, 1980).

tion with its mining claims. The public lands affected by the plan were described as portions of secs. 8, 9, and 17, T. 24 N., R. 5 E., Boise meridian, Idaho. The proposed activities included a waste rock dump, construction of roads, tailings pond, millsite, hydroelectric plant, campsite, and sawmill.

The BLM decision appealed from found that the claims in issue are located within the proposed Marshall Mountain WSA to be reviewed for suitability or nonsuitability for preservation as wilderness. No grandfathered existing uses under sec. 603 of FLPMA, 43 U.S.C. § 1782 (1976), or valid existing rights as defined in 43 CFR 3802.0-5(k) were recognized in this case. Accordingly, BLM held that the public lands under review are subject to interim management to prevent impairment of the area's wilderness suitability.

Regarding Havlah's proposed activities, the BLM decision concluded, based on an environmental assessment, that the anticipated impacts are such that the waste rock dump and construction of roads, tailings pond, and millsite would impair the suitability of the proposed WSA for preservation as wilderness. The Area Manager estimated that it would take about 30 years to properly reclaim the area and, therefore, it would be impossible to reclaim the area to the non-impairment standard by the time the wilderness study is scheduled to be completed and recommendations submitted on the suitability of the

area. The decision held that the hydroelectric plant, campsite, and sawmill are proposed activities which would not impair wilderness suitability with proper mitigating measures, but that it is impossible to separate these activities from the total plan to make them allowable.

On appeal Havlah contends that its claims were located prior to Oct. 21, 1976, that they have been kept in good standing since that time, and that appellant presently has a crew of 9 to 10 men working the claims. Further, appellant contends that the decision is arbitrary, inequitable, without support in law or fact, and an abuse of BLM's discretionary authority. It is alleged that appellant has "grandfather" rights for the mine operation and is not required to submit a plan of operations. Appellant asserts that the decision violates the mining rights of appellant, that the decision misinterprets and violates applicable Federal statutes and regulations concerning restrictions on mining within the WSA, that BLM has no authority under applicable law to require a plan of operations, and, that if BLM does have the authority, it does not have the power to reject a plan which is reasonable and does not violate any laws pertaining to mining or wilderness areas.

In response, the Government states that Havlah purchased certain mining claims adjacent to and within the proposed WSA sometime after Oct. 21, 1976. It is asserted that activities on these claims ter-

minated about February 1942 and they had remained dormant through Oct. 21, 1976, until Havlah commenced operations in the fall of 1979. It is alleged that Havlah does not qualify for "grandfather" rights because the use must be actual and existing on Oct. 21, 1976, and that a mere entitlement to mining use of the land is not sufficient. Finally, a hearing is requested by the Solicitor on the issue of whether appellant has a "valid existing right" which would allow it to develop the claims even if it would impair wilderness characteristics.

The Secretary of the Interior is directed by sec. 603(a) of FLPMA, 43 U.S.C. § 1782(a) (1976), to review those roadless areas of 5,000 acres or more identified during the inventory of the public lands as having wilderness characteristics⁴

⁴ Secs. 103(i) and 603 of FLPMA, 43 U.S.C. §§ 1702(i) and 1782 (1976), incorporate by reference the definition of wilderness characteristics embodied in section 2(c) of the Wilderness Act of 1964, 16 U.S.C. § 1131(c) (1976), set forth as follows:

"A wilderness, in contrast with those areas where man and his own works dominate the landscape, is hereby recognized as an area where the earth and its community of life are untrammelled by man, where man himself is a visitor who does not remain. An area of wilderness is further defined to mean in this chapter an area of undeveloped [sic] Federal land retaining its primeval character and influence, without permanent improvements or human habitation, which is protected and managed so as to preserve its natural conditions and which (1) generally appears to have been affected primarily by the forces of nature, with the imprint of man's work substantially unnoticeable; (2) has outstanding opportunities for solitude or a primitive and unconfined type of recreation; (3) has at least five thousand acres of land or is of sufficient size as to make practicable its preservation and use in an unimpaired condition; and (4) may also contain ecological, geological, or other features of scientific, educational, scenic, or historical value."

and to make a recommendation to the President regarding the suitability or nonsuitability of each such area for preservation as wilderness. Specific guidance with respect to management of those identified lands pending completion of the review and action by Congress in response to the recommendations is provided by sec. 603(c) of FLPMA, 43 U.S.C. § 1782(c) (1976), which states in pertinent part:

During the period of review of such areas and until Congress has determined otherwise, the Secretary shall continue to manage such lands according to his authority under this Act and other applicable law in a manner so as not to impair the suitability of such areas for preservation as wilderness, subject, however, to the continuation of existing mining and grazing uses and mineral leasing in the manner and degree in which the same was being conducted on October 21, 1976: *Provided*, That, in managing the public lands the Secretary shall by regulation or otherwise take any action required to prevent unnecessary or undue degradation of the lands and their resources or to afford environmental protection.

This management mandate for wilderness review lands is further tempered by the provision of sec. 701(h) of FLPMA that all actions of the Secretary under the Act shall be subject to "valid existing rights." 43 U.S.C. § 1701 note (1976).

Regulations implementing this management authority require an approved plan of operations for mining activities on lands under wilderness review prior to conducting operations which might impair wilderness values such as construc-

tion of access roads, cutting of trees over 2 inches in diameter, or use of mechanized earthmoving equipment such as bulldozers. 43 CFR 3802.1-1. An approved plan of operations is not required for operations continued in the same manner and degree as operations existing on Oct. 21, 1976, unless they are causing undue or unnecessary degradation of the land and its resources. 43 CFR 3802.1-3.

Three critical issues are raised by this appeal. The first is whether rejection of appellant's plan of operations on the ground of impairment of wilderness characteristics is contrary to the express exception in sec. 603(c) of FLPMA allowing "continuation of existing mining * * * uses * * * in the manner and degree in which the same was being conducted on the date of approval of this Act." (43 U.S.C. § 1782(c) (1976)). A second issue is whether the BLM decision rejecting the plan of operations on the ground of impairment is reasonable and supported by the record. Finally, this case presents the issue of whether rejection of appellant's plan of operations for mining claims located prior to enactment of FLPMA on the ground of impairment of wilderness characteristics is contrary to sec. 701(h) of FLPMA, 43 U.S.C. § 1701 note (1976), which requires that all actions of the Secretary of the Interior under the statute shall be subject to "valid existing rights."

[1, 2] Sec. 603(c) of FLPMA provides a bifurcated standard for management of tracts of land of

5,000 acres or more identified as having wilderness characteristics. BLM is authorized to manage the lands so as to prevent impairment of wilderness characteristics unless the lands are subject to an existing mining, grazing, or mineral leasing use. Sec. 603(c) authorizes continuation of such existing uses in the same "manner and degree" as they were being conducted on Oct. 21, 1976. In the case of such an existing use conducted in the same manner and degree, BLM is authorized to regulate only so as to prevent unnecessary or undue degradation of the environment. *State of Utah v. Andrus*, 486 F. Supp. 995, 1005 (D. Utah 1979); 43 CFR 3802.1-3. The existence of some operation which is actually being conducted on the land on Oct. 21, 1976, is a prerequisite to authorization of subsequent activities in the same manner and degree. The statute is referring to actual existing uses, as distinguished from statutory rights to use the land, when it authorizes continuation of existing uses in the same manner and degree. *State of Utah v. Andrus*, *supra* at 1006.

The record supports the finding of BLM that the development of appellant's claims detailed in the plan of operations exceeded the manner and degree of any mining use of the claims existing on Oct. 21, 1976, and, accordingly, did not constitute a grandfathered use. Although assessment work as required by law was apparently carried on prior to Oct. 21, 1976, there is no indication of development work in

the nature of the work detailed in the rejected plan of operations.

Further, the record supports the BLM determination that the operations proposed in the rejected plan would impair the suitability of the subject area for wilderness designation contrary to the interim management guidelines provided in sec. 603(c) of FLPMA, 43 U.S.C. § 1782(c) (1976).

"Impairment of suitability for inclusion in the Wilderness System" is defined in 43 CFR 3802.0-5(d) as follows:

(d) "Impairment of suitability for inclusion in the Wilderness System" means taking actions that cause impacts, that cannot be reclaimed to the point of being substantially unnoticeable in the area as a whole by the time the Secretary is scheduled to make a recommendation to the President on the suitability of a wilderness study area for inclusion in the National Wilderness Preservation System or have degraded wilderness values so far, compared with the area's values for other purposes, as to significantly constrain the Secretary's recommendation with respect to the area's suitability for preservation as wilderness.

The environmental assessment prepared by BLM in order to evaluate Havlah's plan of operations sets forth the impact of implementation of such operations in detail. For example, with respect to the ore processing mill it was found that:

An area of about one acre in size would be cleared for the mill, terraced down the mountain. Most of the area cleared would be grand fir, 6-20" in diameter. Access would require the construction of about 400' of new road. The road width is assumed to be 12-14 feet wide, which would accommodate the trucks Havlah plans to use. The area disturbed from road construction could easily exceed 30 feet wide

due to steep topography and the extensive cut and fill required.

(Environmental Assessment at 2). Regarding the mine tailings pond, the assessment found that approximately 11½ acres would have to be cleared for the pond and a 30-foot high dike constructed requiring substantial earthmoving. The assessment found that the waste rock dump would entail dumping approximately 22,000 cubic yards of rock in an area of steep topography resulting in a "long downcast area of several hundred feet" (Environmental Assessment at 5). Accordingly, the record supports the decision of BLM that the activities proposed in the plan of operations would impair the suitability of the area for wilderness designation.

[3] The final issue is whether rejection of appellant's plan of operations for mining claims located prior to FLPMA (Oct. 21, 1976) is consistent with the provision of sec. 701(h) of FLPMA, 43 U.S.C. § 1701 note (1976), to the effect that all actions of the Secretary of the Interior under the Act shall be subject to "valid existing rights." The term "valid existing right" is defined in the regulations as requiring a valid discovery on a mining claim as of Oct. 21, 1976, which discovery continues to be valid at the time of exercise of the right. 43 CFR 3802.0-5(k). The interim management policy developed by BLM for management of lands under wilderness review provides that mining claimants who located claims on or before Oct. 21, 1976, and are able to demonstrate a discovery as of that date under the Mining Law of 1872, as

amended, 30 U.S.C. §§ 22-24, 26-28, 29, 30, 33-35, 37, 39-42 (1976), "will be allowed to continue their mining operations to full development even if the operations are causing or will cause impairment." U.S. Department of the Interior, Bureau of Land Management, *Interim Management Policy and Guidelines For Land Under Wilderness Review*, 44 FR 72013, 72031 (Dec. 12, 1979) (hereinafter cited as *Interim Management Policy*); *Solicitor's Opinion*, M-36910 (Supp.), 88 I.D. 909 (1981).⁵ The interim management policy further provides that the operator will be required to show evidence of such a discovery prior to any BLM grant of approval and that BLM may verify the data through field examination and, if necessary, initiate contest proceedings. *Interim Management Policy*, *supra* at 72031. The interim management policy further notes that reasonable access will also be granted to valid pre-FLPMA claims and that such access will be regulated to prevent or minimize impairment of the area's wilderness suitability to the extent possible consistent with enjoyment of claimant's rights.

⁵ Mining activities in connection with pre-FLPMA claims where "valid existing rights" are established are subject to regulation by the Secretary of the Interior to prevent unnecessary or undue degradation of the lands and their resources. 43 U.S.C. § 1782(c) (1976); *Solicitor's Opinion*, M-36910 (Supp.), 88 I.D. 909 (1981). Since this regulation extends only to activities which are not necessary or which are excessive or unwarranted in mining development, no constitutional issue of a taking is presented. *Solicitor's Opinion*, *supra*. Further, the right to develop locatable mineral resources on the public lands under the Mining Law of 1872 was expressly made subject to "regulations prescribed by law." 30 U.S.C. § 22 (1976).

Interim Management Policy, *supra* at 72031. Accordingly, the regulations and the interim management policy expressly recognize and protect valid existing rights of mining claimants within wilderness study areas.

It is not unreasonable to require a claimant to make a preliminary showing of facts which support a valid existing right. Upon such a showing, BLM may elect either to contest the validity of the claim with notice to claimant and opportunity for a hearing or to permit operations in connection with the claim even though they may impair wilderness characteristics. Although appellant was invited by letter of BLM to make such a showing, the record does not reveal that any supporting evidence has been tendered to BLM at this time. In the absence of tender to BLM of a preliminary showing of factual data supporting the existence of a discovery, the decision is properly affirmed.

Therefore, pursuant to the authority delegated to the Board of Land Appeals by the Secretary of the Interior, 43 CFR 4.1, the decision appealed from is affirmed.

Administrative Judge

WE CONCUR:

GAIL M. FRAZIER

Administrative Judge

DOUGLAS E. HENRIQUES

Administrative Judge

ISLAND CREEK COAL CO.**3 IBSMA 383**

Decided *December 23, 1981*

Petition for discretionary review by Island Creek Coal Co. of that part of a June 27, 1980, decision by Administrative Law Judge Tom M. Allen upholding a violation of 30 CFR 715.17(a) described in Notice of Violation No. 79-I-13-25 (Docket No. CH 0-78-P).

Affirmed.

1. Surface Mining Control and Reclamation Act of 1977: Hydrologic System Protection: Generally—Surface Mining Control and Reclamation Act of 1977: Water Quality Standards and Effluent Limitations: Discharge From Disturbed Areas

Effluent limitations are applicable under 30 CFR 715.17 to discharges of drainage from areas disturbed by surface coal mining and reclamation operations, and not only to discharges of drainage from an "active mine area," as defined in the U.S. Environmental Protection Agency's regulations for effluent limitations under the coal mining point source category, set forth at 40 CFR Part 434.

2. Surface Mining Control and Reclamation Act of 1977: Hydrologic System Protection: Generally—Surface Mining Control and Reclamation Act of 1977: Water Quality Standards and Effluent Limitations: Generally—Surface Mining Control and Reclamation Act of 1977: Variances and Exemptions: Generally

Under the provisions of 30 CFR 715.17, the effluent limitations are not applicable to any discharge or overflow caused by precipitation or snowmelt in accordance with the regulations of the U.S. Environ-

mental Protection Agency in 40 CFR Part 434.

3. Surface Mining Control and Reclamation Act of 1977: Hydrologic System Protection: Generally—Surface Mining Control and Reclamation Act of 1977: Water Quality Standards and Effluent Limitations: Generally—Surface Mining Control and Reclamation Act of 1977: Variances and Exemptions: Generally

Entitlement to an exemption from the application of effluent limitations to discharges from a sedimentation pond resulting from a precipitation event is conditioned on a demonstration that the sedimentation pond was constructed and has been maintained to contain or treat the volume of water which would run off into the pond during a 10-year 24-hour or greater precipitation event.

4. Surface Mining Control and Reclamation Act of 1977: Hydrologic System Protection: Generally—Surface Mining Control and Reclamation Act of 1977: Water Quality Standards and Effluent Limitations: Generally—Surface Mining Control and Reclamation Act of 1977: Variances and Exemptions: Generally

The U.S. Environmental Protection Agency's provisions, at 40 CFR 122.63(g) and (h), for a credit for pollutants in discharges attributable to intake waters, if applicable under 30 CFR 715.17, require that the credit be authorized in a permit for a surface coal mining and reclamation operation on the basis of a demonstration that the intake water is drawn from the same body of water into which discharges are made.

5. Surface Mining Control and Reclamation Act of 1977: Hydrologic System Protection: Generally—Surface Mining Control and Reclamation Act of 1977: Water Quality Standards and Effluent Limitations: Generally

December 23, 1981

Under 30 CFR 715.17, the effluent limitations are to be applied at the point of discharge from a sedimentation pond or the last pond in a series of sedimentation ponds, absent express prior approval to the contrary by the regulatory authority.

APPEARANCES: George S. Brook II, Esq., Lexington, Kentucky, for Island Creek Coal Co.; James M. McElfish and Mark Squillace, Attorneys, Division of Surface Mining, Office of the Solicitor, for the Office of Surface Mining Reclamation and Enforcement.

*OPINION BY INTERIOR
BOARD OF SURFACE
MINING AND RECLAMATION
APPEALS*

Island Creek Coal Co. (Island Creek) has petitioned the Board to review the June 27, 1980, decision by Administrative Law Judge Tom M. Allen upholding a violation of 30 CFR 715.17(a) in Notice of Violation No. 79-I-13-25. The violation concerned an alleged failure to comply with the numerical effluent limitations of 30 CFR 715.17(a) for total suspended solids at five sampling points. For the reasons stated below, the decision is affirmed.

*Factual and Procedural
Background*

On July 26, 1979, pursuant to the Surface Mining Control and Reclamation Act of 1977 (Act),¹ two inspectors from the Office of Surface Mining Reclamation and Enforcement (OSM) visited Island Creek's Rebel No. 2 mine in Logan County, West Virginia. The Rebel No. 2 mine covers approximately 340 acres under West Virginia permit

66-77 (Tr. 13-15). Island Creek is the permittee, Rebel Coal Co. the contract miner (Tr. 15). Drainage from the permit enters Trace Fork from three principal drainage areas: Dave White Hollow (drainage area A); the hollow behind Rhodes Souther's home (drainage area B); and Stone Hollow (drainage area C) (Exhs. R-2, R-3; Tr. 135-36).²

The maximum allowable concentration for total suspended solids is 70 mg/l. 30 CFR 715.17(a). Analyses of samples taken by the OSM inspectors on July 26 showed total suspended solid levels:

Sample 1: 4845 mg/l (Tr. 37)

Sample 2: 2785 mg/l (Tr. 39)

Sample 3: 700 mg/l (Tr. 39)

Sample 4: 940 mg/l (Tr. 39)

Sample 5: 240 mg/l (Tr. 39).

Samples 1 through 4 were taken at the points of discharge from four separate sedimentation structures located on the bench of the Dorothy coal seam (Exh. R-2; Tr. 37-40, 62). These structures (bench ponds) were located in drainage area B. Sample 5 was taken at the point of discharge from pond 1 in drainage area A (Exh. R-3; Tr. 33). While an OSM inspector testified that all five samples were taken at the permit boundary (Tr. 33, 64), a witness for petitioner indicated that the permit boundary actually ranged from approximately 40 to 136 feet away from the locations where sample 1 through 4 were taken (Tr. 159-60). The Administrative Law

² The inspectors had observed a muddy condition in Trace Fork near the OSM field office in Holden, West Virginia. They followed the condition upstream to Island Creek's mine.

¹ 30 U.S.C. §§ 1201-1328 (Supp. II 1978).

Judge found in favor of petitioner in this regard (Decision at 4-5), and OSM has not seriously challenged this finding on appeal (Brief for OSM at 3, 5-6). Rock riprap and vegetation existed between sample sites 1 through 4 and the permit boundary (Tr. 160). Petitioner's witness testified that the riprap and the vegetation would have filtered out some of the suspended solids (Tr. 182).

An OSM inspector stated that on the date of inspection the four bench ponds were all heavily silted and provided little or no detention time (Exh. R-4A-K; Tr. 25, 29-30). During the inspection there was a light drizzle. A heavy rain occurred on July 26 after the inspection (Tr. 59). OSM produced the rainfall records for an area approximately 5 miles northeast of the minesite (Tr. 56-57) which showed the following amounts of rainfall: July 21—.03 inches; July 22—none; July 23—.16 inches; July 24—.46 inches; July 25—none; July 26—.62 inches (Exh. R-10; Tr. 57). Petitioner's Director of Engineering testified that the company recorded more than one-half inch of rain on July 25 and 1.28 inches of rain on July 26 at the minesite (Tr. 165, 168-69). Petitioner's Corporate Director for Environmental Affairs testified that a 10-year, 24-hour precipitation event would be 4 inches in 24 hours (Tr. 215).

Discussion

Petitioner has presented three defenses against the applicability of the Department's effluent limitations to the discharges sampled by the

OSM inspectors; each of these defenses is based on the decision of the U.S. Court of Appeals for the District of Columbia Circuit in *In re Surface Mining Regulation Litigation*, 627 F.2d 1346 (D.C. Cir. 1980). Before addressing petitioner's arguments we summarize the relevant aspects of that decision.

The Circuit Court examined the Department's interim effluent limitations to determine whether they conformed with sec. 702(a) of the Surface Mining Act, 30 U.S.C. § 1292(a) (Supp. II 1978), which provides: "Nothing in this chapter shall be construed as superseding, amending, modifying, or repealing * * * (3) The Federal Water Pollution Control Act (79 Stat. 903), as amended (33 U.S.C. 1151-1175) * * * the State laws enacted pursuant thereto, or other Federal laws relating to preservation of water quality."³ Appellants

³ The Circuit Court explained the basis of its analysis in the following language:

"Congress certainly recognized in the Surface Mining Act that the EPA's existing regulatory authority under the Federal Water Pollution Control Act was deficient with respect to surface coal mining, in that EPA could not directly regulate discharges from abandoned and underground mines or from nonpoint sources (i.e., discharges not emanating from a 'discernible, confined, and discrete conveyance'). Congress also knew that EPA lacked statutory authority to establish standards 'requiring comprehensive preplanning and designing for appropriate mine operating and reclamation procedures to ensure protection of public health and safety and to prevent the variety of other damages to the land, the soil, the wildlife, and the aesthetic and recreational values that can result from coal mining.' H.R. Rep. No. 45, * * * [94th Cong., 1st Sess. 134 (1975)]. The Act gave the Secretary authority to regulate in these areas because the Federal Water Pollution Control Act was silent in regard to them, but where the Secretary's regulation of surface coal mining's hydrologic impact overlaps EPA's, the Act expressly directs that the Federal Water Pollution Control Act

in the litigation had challenged the interim effluent regulations on the grounds that there were omitted from them three "vital" elements of the regulatory framework imposed by the Environmental Protection Agency (EPA) under the Federal Water Pollution Control Act: (1) A provision for modification of the effluent limitations for a particular mining operation upon a showing of good cause; (2) an exemption from effluent limitations for discharges attributable to abnormal levels of drainage; and (3) a provision for a credit in the measurement of suspended solids for the amount of suspended solids in discharges attributable to sources other than the mining operation. 627 F.2d at 1366. The Circuit Court agreed that the identified elements of EPA's regulatory framework must be included in the Department's effluent limitation regulations, in accordance with sec. 702(a)(3) of the Surface Mining Act, and remanded the issue to the District Court for proceedings consistent with its opinion. *Id.* at 1366-69.⁴

and its regulatory framework are to control so as to afford consistent effluent standards nationwide."

627 F.2d at 1367.

⁴ The Circuit Court expressed its holding:

"We hold that the EPA variances and exemptions at issue here are substantive elements of regulation under the Federal Water Pollution Control Act, and not 'gaps' in EPA's statutory authority or administration, and that the Secretary, pursuant to section 702(a)(3), may not alter these variances and exemptions by promulgating more stringent provisions insofar as the variances and exemptions apply to surface coal mining operations. Thus, sections 715.17(a) and 717.17(a) are 'inconsistent with law' if they do, in fact, conflict with EPA practice."

627 F.2d at 1369 (footnote omitted).

The District Court issued its judgment decree on May 13, 1981, which included the following:

ORDERED that 30 C.F.R. §§ 715.17(a) and 717.17(a) are remanded to the Secretary for revision to provide that the Secretary shall accept the variances, exemptions and related practice applied by EPA under the authority of the Federal Water Pollution Control Act with respect to a discharge classified as a Coal Mine Source Category; and it is further

ORDERED that 30 C.F.R. §§ 715.17(a) and 717.17(a) are remanded to the Secretary for revision according to the provisions of 40 C.F.R. §§ 434.22(c), 434.25(c), 434.32(b), 434.35(b), 434.42(b), and 434.45(b), and it is further

ORDERED that pending revision of 30 C.F.R. §§ 715.17(a) and 717.17(a) according to the previous two paragraphs, the Secretary shall apply 30 C.F.R. §§ 715.17(a) and 717.17(a) in a manner which is consistent with the revisions required to be made under the previous two paragraphs.

In re Surface Mining Regulation Litigation, No. 78-0162 (D.D.C. filed May 13, 1981).⁵

[1] Petitioner first argues on the basis of the Circuit Court's decision that the Department's effluent limitations are not applicable to the discharges sampled by OSM because these discharges were not of drainage from "active mining area[s]," as defined by EPA in 40 CFR 434.11, and, under EPA's regulations, 40 CFR 434.32(c), 434.42(c), and 434.45(c), drainage which is not from an "active mine area" is not subject to effluent limitations. We take a different view of the import

⁵ In response to the District Court's judgment decree, the Department proposed certain amendments to sec. 715.17(a). 46 FR 34784-89 (July 2, 1981). Final rules have not been issued.

of the Circuit Court's decision in this regard.

In evaluating the Department's effluent limitation regulations, the Circuit Court did not expressly consider whether their application must be limited to drainage from an active mining area. 627 F. 2d at 1366-69. On remand, the District Court did not refer particularly to the EPA regulatory provisions now invoked by petitioner. Accordingly, we are not constrained by these Federal court pronouncements to accept petitioner's argument. Moreover, we conclude that the Circuit Court's decision supports a contrary view from that of petitioner.

The Circuit Court determined that, consistent with sec. 702(a) (3) of the Act, the Secretary could augment EPA's regulatory framework for surface coal mining in respects in which EPA's authority is deficient.⁶ One such deficiency acknowledged by the Circuit Court was EPA's lack of statutory authority to establish reclamation procedures to ensure protection of public health and safety.⁷ The requirements in sec. 715.17(a) that drainage from disturbed areas, "including disturbed areas that have been graded, seeded, or planted," must be passed through a sedimentation pond and that discharges from such disturbed areas must meet effluent limitations are a part of such reclamation procedures which, under the Circuit Court's reasoning, properly complement EPA's regulatory authority under the Federal Water Pollution

Control Act.⁸ For this reason we reject petitioner's argument that effluent limitations are applicable only to discharges of drainage from an "active mine area" as defined by EPA.⁹

[2, 3] Petitioner also argues that the effluent limitations are not applicable to the discharges sampled by OSM, under the Circuit Court's

⁶ In this regard we note that in the amendments to sec. 715.17(a) proposed by the Department (referenced in n.5, *supra*) the requirement for control of effluents in drainage from disturbed areas through the reclamation phase of a mining operation has been retained. 46 FR 34789 (July 2, 1981).

⁷ We note, further, that if we were to accept petitioner's argument that effluent limitations are only applicable to drainage from an "active mine area" we would hold that drainage sampled by OSM was from active mining areas.

The term "active mining area" is defined by EPA in 40 CFR 434.11(b) as "a place where work or other activity related to the extraction, removal, or recovery of coal is being conducted, except, with respect to surface mines, any area of land on or in which grading has been completed to return the earth to desired contour and reclamation work has begun." The Administrative Law Judge examined this definition in the context of the drainage area for pond 1 and correctly determined that because the area above Island Creek pond 1 was constantly in use as a haul and service road to the mining facilities, it came within the definition of an active mining area (Decision at 5). The evidence discloses that an office, trailers, and equipment were also located above pond 1 (Tr. 155-56). Petitioner argues that since the area is regraded, it falls within the exception in 40 CFR 434.11(b). However, that subsection excepts only those areas on which "grading has been completed to return the earth to desired contour and reclamation work has begun." 30 CFR 715.17(1) requires removal and regrading of all haul and access roads. 30 CFR 715.14 requires restoration to approximate original contour of office and shop sites on the disturbed area. Since such removal and regrading were not completed, nor such restoration begun, the area above pond 1 does not fall within the exception. Thus, it remains an "active mining area."

Petitioner's Director of Engineering testified that there was backfilling activity taking place in the drainage area controlled by the Dorothy bench ponds at the time of OSM's sampling (Tr. 164-68); therefore, it may be concluded in accordance with EPA's definition that these ponds also received drainage from active mining areas.

⁶ Footnote 3, *supra*.

⁷ *Id.*

decision, *supra*, because these discharges were the result of a precipitation event and thus were not subject to effluent limitations under EPA's regulations. We agree with petitioner that EPA's precipitation event exemption must be taken into account in the application of effluent limitations by the Department; however, we hold that petitioner has not shown itself to be entitled to the exemption under the facts of this case.

On Dec. 31, 1979, the Department suspended 30 CFR 715.17(a)(1), which exempted from the coverage of the effluent limitations all discharges resulting "from a precipitation event larger than a 10-year, 24-hours frequency event" (44 FR 77448 (Dec. 31, 1979)), and indicated that it would rely on EPA's exemption regulations published on Dec. 28, 1979, at 44 FR 76791. EPA's exemption regulations provide:

(b) Any overflow, increase in volume of a discharge or discharge from a bypass system caused by precipitation or snowmelt shall not be subject to the limitations set forth in paragraph (a) of this section. This exemption shall be available only if the facility is designed, constructed and maintained to contain or treat the volume of water which would fall on the areas covered by this subpart during a 10-year 24-hour or larger precipitation event (or snowmelt of equivalent volume). *The operator shall have the burden of demonstrating to the appropriate authority that the prerequisites to an exemption set forth in this paragraph have been met.* [Italics added.]

40 CFR 434.32(b), 434.35(b), 434.42(b), and 434.45(b). OSM has described an operator's burden of

demonstrating entitlement to the exemption as follows:

In order to show this the mine operator must show, first, that he or she has designed, constructed, and maintained the facility to contain or treat the volume of water which would run off into the pond during a 10-year 24-hour or greater precipitation event. Second, the mine operator must show that there has been an actual overflow, increase in volume of a discharge, or discharge from a by-pass system caused by a precipitation event. 44 FR 77450 (Dec. 31, 1979).

It is questionable whether the evidence in this case can support the conclusion that there was sufficient rainfall during and immediately preceding July 26 to cause an increase in the volume of discharge from the sedimentation ponds prior to and during OSM's inspection.¹⁰ Even assuming that there was sufficient precipitation to increase the discharges, however, it is clear that neither pond 1 nor the bench ponds were so constructed and maintained as to be eligible for the precipitation event exemption, for although petitioner contends that pond 1 was, if anything, overdesigned (Tr. 220, 229; *see also* Petition for Review at 8-10),¹¹ this contention is based upon the fact that it (and the bench ponds) were designed and constructed to treat the runoff from only the "active mining area" as this term is understood by peti-

¹⁰ Compare 44 FR 77450 (Dec. 31, 1979) wherein OSM admonishes that "conclusory, self-serving statements will not suffice to justify [a rainfall] exemption" with text.

¹¹ Petitioner's Director of Engineering conceded that the Dorothy bench ponds were insufficiently maintained to hold the requisite volume of water on the date of inspection (Tr. 231), and he was uncertain about the design and construction of these (Tr. 220-221, 229).

tioner (e.g., Tr. 221, 227, 229). In contrast, EPA's regulations require that drainage which is not from an active mining area must be considered for purposes of applying effluent limitations when such drainage is commingled with drainage from an active mine area. 40 CFR 434.32(c), 434.35(c), 434.42(c), and 434.45(c). The Department has explained the significance of these regulations for the precipitation event exemption:

It is important to note what this rainfall exemption does not do. * * * [T]he exemption does not relieve the mine operator of either treating water from the undisturbed area above the mining area that mixes with water from the disturbed area or diverting that water from the undisturbed area around and away from the pond. *If an operator does not divert, his or her pond must be designed, constructed and maintained to hold or treat the entire volume of runoff that reaches the pond in the prescribed precipitation event in order to qualify for the exemption.* [Italics added.]

44 FR 77450-51 (Dec. 31, 1979).

Sedimentation pond 1 and the bench ponds all received commingled drainage from active mining areas and undisturbed areas (e.g., Tr. 233-36). None was designed or constructed to contain or treat that volume of water (e.g., Tr. 229). Thus, petitioner is not entitled to claim exemption from the effluent limitations on the basis of a rainfall event.

[4] Petitioner's final argument based on the Circuit Court's decision, *supra*, is that the effluent limitations do not apply to pond 1 or the Dorothy bench ponds because petitioner received no "credit" for pollutants which may have been

present in water entering the mine-site (intake water). The Circuit Court held that 30 CFR 715.17(a) and 717.17(a) should be amended to reflect the EPA intake credit provision if it is determined that such provision was intended to apply to surface mining operations. Without making such a determination, the District Court remanded to the Secretary of the Interior. To our knowledge, the Secretary has not yet determined to what extent the EPA intake credits apply to surface mining operations.

Assuming, *arguendo*, that EPA's intake credit, or offset provision, found at 40 CFR 122.63 (g) and (h) (formerly 40 CFR 125.28), does apply to surface mining operations, petitioner clearly has failed to meet the burden of proof imposed by EPA. 40 CFR 122.63(g) provides: "Except as provided in paragraph (h) of this section, effluent limitations imposed in permits *shall not be adjusted for pollutants in the intake water.*" (Italics added.) Thus, the general rule is that effluent limitations are not adjusted for pollutants in the intake water.

In order to demonstrate its entitlement to the offset, the permittee must demonstrate its compliance with the requirements of paragraph (h). Island Creek failed to do this. For example, 40 CFR 122.63(h) (1) provides.

Upon request of the discharger, effluent limitations or standards imposed in a permit shall be calculated on a "net" basis; that is, adjusted to reflect credit for pollutants in the discharger's intake water, if the discharger demonstrates that its intake water is drawn from the same body of water into which the discharge is made *and if* * * *. [Italics added.]

Subparagraph (2) of 40 CFR 122.63(h) states in part: "Adjustments under this paragraph shall be given only to the extent that pollutants in the intake water which are limited in the permit are not removed by the treatment technology employed by the discharger." No evidence whatsoever was presented by petitioner that it ever requested or received such a credit. Moreover, it is questionable whether any "intake water" entered the sedimentation ponds (Tr. 79). Even if some did, it was certainly not "drawn from the same body of water into which the discharge [was] made." Clearly, appellant is not entitled to any credit or offset for intake water.

[5] Petitioner's remaining defense, separate from those based on the Circuit Court's decision, is that the samples taken of discharges from the bench ponds were not taken at proper locations, and therefore, that OSM failed to establish a violation of the effluent limitations on the basis of these samples. We disagree. Petitioner contends that the sample sites for samples 1 through 4 were proven to be 40 to 136 feet from the permit boundary and that vegetation and rock riprap between the sample sites and the permit boundary would have filtered out "some" of the suspended solids. According to petitioner, 30 CFR 715.17(a) requires drainage to meet the effluent limitations at the edge of the disturbed area which, in the area of the Dorothy bench, is the permit boundary.¹²

With respect to this issue the Administrative Law Judge stated as follows:

It is obvious that the inspector took samples at the easiest point of access and certainly where the suspended solid count would be the highest. Also, sediment drainage control on a haul road, without more, can hardly be expected to remove all excess suspended solids since they are not sedimentation ponds nor designed to provide protections required of sedimentation ponds as envisioned by 30 CFR 715.17(a). This is especially true if there is any measurable amount of rain in the area during mining operations.

One cannot rely on natural vegetation to act as a sediment control device required by the Act where there is no dispute that drainage from such an area is leaving the permit property and is not going through a sedimentation pond or a series of sedimentation ponds as is required by 30 CFR 715.17(a). In the instant case, because of the size of drainage area B, it is apparent that the bench ponds are insufficient to keep the effluent limitations within the maximum allowable amounts prescribed by 30 CFR 715.17(a).

I feel certain that if the inspector had taken his samples at a point where the surface drainage exited the permit property, the effluent limitations would probably still have been exceeded even if traveling 150 feet or more through riprap.

(Decision at 4-5).

Sec. 715.17(a) of the regulations provides that "[a]ll surface drainage from the disturbed area * * * shall be passed through a sedimentation pond or a series of sedimentation ponds before leaving the permit area," that "[s]edimentation ponds * * * shall be constructed * * * in appropriate locations * * * to control sedimentation or otherwise treat water," and that "[d]ischarges

¹² Petitioner has not challenged the sampling location of discharges from pond 1.

from areas disturbed by surface coal mining and reclamation operations must meet all applicable Federal and State laws and regulations and, at a minimum, the * * * numerical effluent limitations [set forth in sec. 715.17(a)]." Under these provisions, unless effluent control measures other than or in addition to sedimentation ponds have been approved by the regulatory authority under other provisions of 30 CFR 715.17, the point of discharge at which numerical effluent limitations are to be applied is the point at which drainage from the disturbed area leaves the last sedimentation pond through which it is passed.¹³ Sedimentation ponds are, as the general rule, the method prescribed to control sedimentation in or otherwise treat drainage from areas disturbed from surface coal mining operations.¹⁴

There is no indication in the record of approval by the West Virginia regulatory authority of pe-

titioner's reliance on effluent control measures below the Dorothy bench ponds to meet the Department's effluent limitations. Accordingly, while the use of riprap and vegetation by petitioner in the ditches which carry discharges from those ponds may manifest compliance with 30 CFR 715.17(f)—which requires that discharges from sedimentation ponds be controlled, where necessary, to reduce erosion, to prevent deepening or enlargement of stream channels, and to minimize, generally, disturbances to the hydrologic balance—this action has not relieved petitioner of the obligation to ensure that the drainage from disturbed areas meets the Department's effluent limitations at the points of discharge from the Dorothy bench ponds.¹⁵ We must, therefore, reject petitioner's contention that OSM's samples were not taken at proper locations.

For the foregoing reasons, the decision below is affirmed.

NEWTON FRISHBERG

Administrative Judge

WILL A. IRWIN

Administrative Judge

MELVIN J. MIRKIN

Administrative Judge

¹³ Where other or additional effluent control methods have been authorized or mandated by the regulatory authority (e.g., pursuant to the provisions of 30 CFR 715.17(e)(22)), the approved deviation from the general prescription should include specification of the locations where discharges are to be tested for compliance with the effluent limitations.

Absent such authorization, were OSM to wait until discharges reached the permit boundary (where the point of discharge from a sedimentation pond does not coincide with that boundary) the operator could be subject to a notice of violation when the discharge from a pond is within prescribed limits but has become contaminated on its way to the boundary by pollution not of the operator's cause or responsibility. When there is no proper sedimentation pond and no approved deviation by the regulatory authority, the boundary may be a proper test point.

¹⁴ See generally 44 FR 30619-32 (May 25, 1979). We note, also, that EPA's effluent limitations for the coal mining point source category are to be applied to discharges from "point sources" (40 CFR 434.32(a), 434.35(a), 434.42(a), and 434.45(a)), which are de-

fined at 40 CFR 401.11(d) to mean "discernible, confined and discrete" conveyances of drainage. OSM's sampling of drainage from disturbed areas at its point of discharge from a sedimentation pond is consistent with this feature of EPA's application of effluent limitations to mine drainage. See generally *United States v. Earth Sciences, Inc.*, 599 F.2d 368 (10th Cir. 1979).

¹⁵ The requirement of 30 CFR 715.17 is for the purpose of precluding significant erosion that might otherwise result from discharges from sedimentation ponds; it is not intended as a prescription of methodology to meet the effluent limitations.

REFUNDS

1. Sec. 10 of the Outer Continental Shelf Lands Act does not authorize refunds to purchasers of royalty oil.-----
2. Sec. 10 of the Outer Continental Shelf Lands Act does not authorize refunds to persons who have paid a civil penalty under sec. 24 of the Act.-----

1090

1090

ACT OF FEBRUARY 8, 1887

1. The effect of the issuance of a patent is to transfer legal title from the United States and to remove the land from jurisdiction of the Department of the Interior. Where BLM's records show lands have been patented, an Indian allotment application filed under the General Allotment Act of Feb. 8, 1887, for such lands is properly rejected.-----

244

ACT OF AUGUST 4, 1892

1. Under provisions of the Act of Aug. 4, 1892, 30 U.S.C. § 161 (1976), known as the Building Stone Act, land chiefly valuable for building stone can only be entered by mining claims in the placer form, regardless of the actual mode of occurrence of the deposit.-----
2. While deposits of limestone chiefly valuable for building stone were subject to location only as placer claims, deposits of limestone valuable for their chemical or metallurgical properties are properly located according to the form of their deposition.-----
3. Land may be considered "chiefly valuable for building stone" where the building stone values of the mineral deposit sought are greater than any other mineral values or nonmineral values for which the land may be appropriated.-----

925

926

926

ACT OF MARCH 3, 1909

1. Patents issued pursuant to the Act of Mar. 3, 1909, or the Act of June 22, 1910, 30 U.S.C. §§ 81, 83-85 (1976) reserved to the United States "all coal" and the right to prospect for, mine and remove the "coal deposits" underlying the patented lands. Congress in the 1909 and 1910 Acts intended to, and did, reserve only the coal and not other minerals found in association with coal. Accordingly, all minerals other than coal, including coalbed gas, passed to the surface owner at the time a patent was issued pursuant to the 1909 or 1910 Acts.-----

538

ACT OF JUNE 22, 1910

Page

1. Patents issued pursuant to the Act of Mar. 3, 1909, or the Act of June 22, 1910, 30 U.S.C. §§ 81, 83-85 (1976) reserved to the United States "all coal" and the right to prospect for, mine and remove the "coal deposits" underlying the patented lands. Congress in the 1909 and 1910 Acts intended to, and did, reserve only the coal and not other minerals found in association with coal. Accordingly, all minerals other than coal, including coalbed gas, passed to the surface owner at the time a patent was issued pursuant to the 1909 or 1910 Acts.----- 538

ACT OF JUNE 25, 1910

1. The President had nonstatutory authority to withdraw public land in addition to authority conferred upon him by the Pickett Act, 43 U.S.C. §§ 141, 142 (1970). Such non-statutory authority was not limited by the terms of 43 U.S.C. § 142 (1970) which provided that withdrawn lands shall remain open to location for metalliferous minerals.----- 31
2. Where BLM filed an application for a protective withdrawal pursuant to Exec. Order No. 10355 which would reserve the subject land from all forms of appropriation including location and entry under the mining laws and the application was duly noted on the official status plats, the lands were segregated from the date of notation to the extent that the withdrawal, if effected, would prevent such forms of appropriation. A protective withdrawal is not a temporary withdrawal under the Pickett Act, 43 U.S.C. § 141 (1970), and is not limited by the terms of 43 U.S.C. § 142 (1970) which provides that temporarily withdrawn lands shall remain open to location for metalliferous minerals.----- 31

ACT OF JULY 17, 1914

1. Should coalbed gas occur in lands in which "oil and gas" were reserved to the United States in agricultural patents issued under the Act of July 17, 1914, 30 U.S.C. § 121 (1976), that coalbed gas is reserved to the United States.----- 538

ACT OF SEPTEMBER 3, 1964

1. Congress, with the passage of the Geothermal Steam Act, 30 U.S.C. § 1001 *et seq.*, intended that geothermal leases be deemed as within the mineral leasing exception of sec. 4(d)(3) of the Wilderness Act of 1964, 16 U.S.C. § 1133(d)(3). Designated wilderness are open to geothermal leasing to the same extent they would have been at the date of their creation. Such leases are subject to the provisions of sec. 4(d)(3) of the Wilderness Act.----- 813

ACT OF DECEMBER 24, 1970

1. "Mineral." Geothermal steam, as defined in sec. 2(c) of the Geothermal Steam Act of 1970, 30 U.S.C. § 1001(c), is not a "mineral" as the term is used in the mineral leasing laws. Congress generally did not intend the Steam Act to be treated as a "mineral leasing law."----- 813

ADMINISTRATIVE AUTHORITY

(See also Delegation of Authority, Federal Employees & Officers, Secretary of the Interior—if included in this Index.)

GENERALLY

1. Department of the Interior, as an agency of the executive branch of Government, is without jurisdiction to consider whether the mining claims recordation provisions of the Federal Land Policy and Management Act of 1976 are constitutional.----- 370, 919

ADMINISTRATIVE AUTHORITY—Continued

Page

ESTOPPEL

1. Exclusion of appellant members of the Metlakatla Community from benefits under provisions of the Alaska Native Claims Settlement Act held not to be precluded by a contrary result reached in a prior Administrative Law Judge's decision in a similar case. The determination by the agency factfinder in the separate but similar situation is not binding upon the Board of Indian Appeals, which renders final decision for the Department in disenrollment appeals referred on appeal to the Board.----- 822
2. Where a party, in the course of various proceedings before the Department, asserts facts that would, if proven, entitle him or her to obtain patent to land owned by the United States, and the litigation proceeds on the assumption that the facts are as stated, appellant will not be heard in a subsequent hearing to deny that those facts existed.----- 926

LACHES

1. The authority of the United States to enforce a public right or protect a public interest is not vitiated or lost through lack of enforcement by some of its officers.----- 915

ADMINISTRATIVE PRACTICE

1. Interpretation of the Alaska Native Claims Settlement Act by the Bureau of Indian Affairs contemporaneous with the enactment of the statute and continued over the succeeding 9 years is relevant to a determination of the application to be given to the statute. The Agency refusal to enroll persons who were not United States citizens on Dec. 18, 1971, the effective date of the Act, is a reasonable application of the Act and of Departmental regulations implementing the Act, and gives the language of the statute (43 U.S.C. § 1604 (1976)) its common and ordinary meaning.----- 262
2. Where, following the contest of a number of mining claims, a decision is rendered by an Administrative Law Judge holding certain claims and portions of claims to be valid and invalidating the remainder for lack of mineral or as embracing excess mineral reserves, and the Government appeals from that decision but the claimant does not, that decision will be set aside and the case remanded for rehearing on the basis of a judicial decision in another case, made while the subject appeal was pending, that there can be no invalidation of mining claims by this Department on a finding that the claimant has acquired claims for far more mineral than the market can absorb within the foreseeable future.----- 772
3. Where a party, in the course of various proceedings before the Department, asserts facts that would, if proven, entitle him or her to obtain patent to land owned by the United States, and the litigation proceeds on the assumption that the facts are as stated, appellant will not be heard in a subsequent hearing to deny that those facts existed.----- 926

ADMINISTRATIVE PROCEDURE

(See also Appeals, Confidential Information, Contests & Protests, Hearings, Judicial Review, Public Records, Regulations, Rules of Practice—if included in this Index.)

GENERALLY

1. "Service." Where BLM sends a copy of its decision to an adversely affected party at his address of record on Sept. 21; where additional information containing the party's more recent address is filed with BLM on Oct. 5;

and where BLM receives the mailed copy back as undeliverable on Oct. 16 but does not mail another copy to the more recent address, BLM has not mailed a copy to the party's last address of record, and there is no "service" under 43 CFR 1810.2. Where BLM has never served a copy of its decision on an adversely affected party, the time for this party to appeal has never commenced, and the decision is not effective *per* 43 CFR 4.21(a)-----

236

ADJUDICATION

1. Although at common law, abandonment of a mining claim can be established only by evidence demonstrating that it was the claimant's intention to abandon it and in fact did so, in enacting the Federal Land Policy and Management Act of 1976 (43 U.S.C. § 1744 (1976)) Congress specifically placed the burden on the claimant to show that the claim has not been abandoned by his compliance with the Act's requirements, and any failure of compliance produces a conclusive presumption of abandonment. Accordingly, extraneous evidence that a claimant intended not to abandon his claim may not be considered in such cases-----
2. Where an appellant disagrees with the decision below and seeks to have his judgment substituted for that of the decisionmaker, his appeal will be carefully considered, with due regard for the public interest. However, where the responsibility for making such judgments has been exercised by an officer duly delegated with the authority to do so, his action will ordinarily be affirmed in the absence of a showing of compelling reasons for modification or reversal-----

ADMINISTRATIVE PROCEDURE--Continued
BURDEN OF PROOF

Page

1. After holding a hearing pursuant to the Administrative Procedure Act, an Administrative Law Judge may properly find that an individual has committed a grazing trespass if that finding is in accordance with, and supported by, reliable, probative and substantial evidence.----- 275
2. Where the evidence as to specific trespass indicates that, of a number of cattle counted, some were located on intermingled private land, but there were no barriers, either natural or artificial, which would have prevented the cattle on private land from going onto the public land, it is proper to find that all cattle counted would tend to consume forage at a rate proportional to the ratio of forage available on private and public lands. The burden then shifts to the grazing licensee to rebut this presumption.----- 276

DECISIONS

1. After holding a hearing pursuant to the Administrative Procedure Act, an Administrative Law Judge may properly find that an individual has committed a grazing trespass if that finding is in accordance with, and supported by, reliable, probative and substantial evidence.----- 275
2. Where the evidence as to specific trespass indicates that, of a number of cattle counted, some were located on intermingled private land, but there were no barriers, either natural or artificial, which would have prevented the cattle on private land from going onto the public land, it is proper to find that all cattle counted would tend to consume forage at a rate proportional to the ratio of forage available on private and public lands. The burden then shifts to the grazing licensee to rebut this presumption.----- 276
3. Where, in a Bureau of Land Management decision to issue conveyance, a water body excluded from the selection application on the basis that it is navigable is expressly "considered" nonnavigable and the underlying submerged lands thus deemed selected by the applicant, the Bureau of Land Management has made a navigability determination with regard to the subject water body.----- 1086, 1105

HEARINGS

1. Due process does not require notice and a prior right to be heard in every case where an individual may be deprived of property so long as the individual is given notice and an opportunity to be heard before the deprivation becomes final.----- 31
2. After holding a hearing pursuant to the Administrative Procedure Act, an Administrative Law Judge may properly find that an individual has committed a grazing trespass if that finding is in accordance with, and supported by, reliable, probative and substantial evidence.----- 275
3. Where the evidence as to specific trespass indicates that, of a number of cattle counted, some were located on intermingled private land, but there were no barriers, either natural or artificial, which would have prevented the cattle on private land from going onto the public land, it is proper to find that all cattle counted would tend to consume forage at a rate proportional to the ratio of forage available on private and public lands. The burden then shifts to the grazing licensee to rebut this presumption.----- 276
4. Settlement agreements compromising prior trespasses may be considered an admission of liability only where, by the terms of a settlement, liability is admitted. Where, however, liability has been initially determined in a Departmental adjudication, such a determination is properly considered in a subsequent hearing. As probative of the issue of "repeated" violations, absent a stipulated settlement which *expressly* vacates the factual determinations made in the prior adjudication.----- 276

ALASKA

Page

NATIVE ALLOTMENTS

1. An Alaskan Native allotment applicant is required to make satisfactory proof of substantially continuous use and occupancy of the land for a minimum period of 5 years. Such use and occupancy contemplates substantial actual possession or use of the land, at least potentially exclusive of others, and not merely intermittent use. While qualifying use must be substantially continuous, there is requirement that the 5-year use be in a consecutive 5-year period..... 373
2. The right to a Native allotment vests only upon the completion of 5 years' use or occupancy of land *and* the filing of an application therefor. Absent the timely filing of an allotment application, where a Native, who has completed the requisite 5 years' use, ceases to use or occupy the land and permits the land to return to an unoccupied state, the right to an allotment of that land also terminates, regardless of the subjective intent of the Native. In a similar fashion, all possessory rights afforded by the Act of May 17, 1884, 23 Stat. 24, 26, and other similar Acts, terminate upon the cessation of actual use or occupancy. Such lands then become open to the initiation of rights by others.... 373
3. The provisions of 25 U.S.C. § 194 (1976) relating to the placing of the burden of proof do not apply where the Government contests the qualifications of an allotment applicant. An allotment applicant in such a situation is the proponent of the rule and must show his or her entitlement to the land sought..... 374
4. In sec. 905(a)(1) of the Alaska National Interest Lands Conservation Act, P.L. 96-487, 94 Stat. 2371, 2435 (1980), Congress provided that all Native allotment applications which were pending before the Department on Dec. 18, 1971, which describe either land that was unreserved on Dec. 13, 1968, or land within the National Petroleum Reserve—Alaska, are approved on the 180th day following the effective date of that Act subject to valid existing rights, unless otherwise provided by other paragraphs or subsections of that section. Although only non-mineral land may be allotted, Congress has defined that term as used in the Native Allotment Act to include land valuable for deposits of sand and gravel..... 663
5. Applications for Alaska Native allotments in "core" townships of Native villages are subject to the statutory approval contained in sec. 905(a)(1) of the Alaska National Interest Lands Conservation Act, notwithstanding a State selection or tentative approval thereof for the same lands prior to Dec. 18, 1971..... 664

NAVIGABLE WATERS

Generally

1. Where the Bureau of Land Management has redetermined that water bodies which are the subject of an appeal are navigable, and where the Board finds that the facts in the record upon which the Bureau of Land Management made its redetermination meet the essential elements of navigability, and where the facts in the record are undisputed so that no issue of fact as to navigability remains before the Board, then the Board will find the water bodies to be navigable..... 712

OIL AND GAS LEASES

1. An offer to lease for oil and gas in the Arctic National Wildlife Refuge is properly rejected where the lands in the refuge have been withdrawn from the operation of the mineral leasing laws by either secs. 1002 or 1003 of the Alaska National Interest Lands Conservation Act. Stand-

ALASKA—Continued

OIL AND GAS LEASES—Continued

- ard offers to lease for oil and gas may not be construed as requests to undertake exploratory activities only. The only exploratory activities permitted in the Arctic National Wildlife Refuge are governed by sec. 1002 of the Act. Any requests to undertake exploratory activities are premature until the Secretary of the Interior has issued guidelines governing exploration in the refuge.----- 601
2. "Leasing." The word "leasing" in the phrase "no leasing * * * leading to production of oil and gas" in sec. 1003 of the Alaska National Interest Lands Conservation Act includes leasing for the purpose of exploratory activities.----- 601

POSSESSORY RIGHTS

1. The right to a Native allotment vests only upon the completion of 5 years' use or occupancy of land *and* the filing of an application therefor. Absent the timely filing of an allotment application, where a Native, who has completed the requisite 5 years' use, ceases to use or occupy the land and permits the land to return to an unoccupied state, the right to an allotment of that land also terminates, regardless of the subjective intent of the Native. In a similar fashion, all possessory rights afforded by the Act of May 17, 1884, 23 Stat. 24, 26, and other similar Acts, terminate upon the cessation of actual use or occupancy. Such lands then become open to the initiation of rights by others.----- 373

ALASKA NATIONAL INTEREST LANDS CONSERVATION ACT

GENERALLY

1. An offer to lease for oil and gas in the Arctic National Wildlife Refuge is properly rejected where the lands in the refuge have been withdrawn from the operation of the mineral leasing laws by either secs. 1002 or 1003 of the Alaska National Interest Lands Conservation Act. Standard offers to lease for oil and gas may not be construed as requests to undertake exploratory activities only. The only exploratory activities permitted in the Arctic National Wildlife Refuge are governed by sec. 1002 of the Act. Any requests to undertake exploratory activities are premature until the Secretary of the Interior has issued guidelines governing exploration in the refuge.----- 601

ALASKA NATIVE CLAIMS SETTLEMENT ACT

ABORIGINAL CLAIMS

1. The provisions of the Alaska Native Claims Settlement Act defining the class of persons entitled to share in benefits under the Act are not ambiguous so as to require reference to the legislative history to determine whether persons becoming United States citizens after Dec. 18, 1971, the effective date of the Act, are entitled to be enrolled.----- 262

ADMINISTRATIVE PROCEDURE

Generally

1. Pursuant to the Departmental Manual 601 DM 2, requirements in Secretary's Order No. 3029, as to adjudication of Federally created interests, do not apply to unpatented mining claims and the Bureau of Land Management is not required to adjudicate mining claims before conveyance. Pursuant to ANCSA and Secretary's Order No. 3029, *as amended*, lands selected by a Native corporation must be conveyed by the Bureau of Land Management notwithstanding the existence of an unpatented mining claim within such lands which has not been adjudicated for validity under the general mining laws.----- 760

| 2. Absent reasons justifying continuance of an appeal as to a particular issue, an appeal will be dismissed when the appellant before the Board withdraws its appeal of that issue..... | 712 |
| 3. An appeal to the Secretary of the Interior will be dismissed when enactment of legislation renders moot the questions raised on appeal..... | 757 |

ALASKA NATIVE CLAIMS SETTLEMENT ACT—Continued**ALASKA NATIVE CLAIMS APPEAL BOARD—Continued****Appeals—Continued****Jurisdiction**

Page

1. Where a decision by the BLM involves the effect of the Alaska Native Claims Settlement Act upon an interest, or pending application for an interest derived under the public land laws, including the general mining law and mineral leasing acts, any appeal from such decision shall be directed to the Alaska Native Claims Appeal Board. Where the decision by the BLM involves the validity of an interest, or pending application for an interest, asserted under the public land laws, including the general mining law and mineral leasing acts, any appeal from such decision shall be directed to the Interior Board of Land Appeals.----- 352
2. The Board has jurisdiction to decide whether the Bureau of Land Management, in issuing a decision to convey land pursuant to ANCSA, erred by failing to identify and adjudicate an alleged third-party interest derived from a source other than the Federal Government or the State of Alaska.----- 442
3. The Board is without jurisdiction to adjudicate the validity of a Native allotment.----- 718
4. The approval of the Alaska State Director of the Bureau of Land Management of a general plan of action for meeting the requirements of sec. 22(k) of the Alaska Native Claims Settlement Act is not a decision "rendered by Departmental officials in matters relating to land selection arising under the Alaska Native Claims Settlement Act" within the context of 43 CFR 4.1(b)(5), and an appeal from the approval of such a plan must be dismissed by this Board for lack of jurisdiction.. 1027

Remand

1. When the record on appeal raises questions which may affect the validity of Federally created third-party interests, and when there is no evidence that a determination of validity has been made pursuant to Secretary's Order No. 3029, the Board will remand to the Bureau of Land Management for such determination.----- 14

Standing

1. The appropriate test of standing to appeal a decision under ANCSA is not whether a person is an "aggrieved party," but whether a person "claims a property interest in land affected by a determination from which an appeal to the Alaska Native Claims Appeal Board is allowed" as required by 43 CFR 4.902.----- 460
2. Decisions made pursuant to ANCSA affect property interests differently, with the effect depending, in part, upon the section of the Act on which each decision is based. Therefore, application of the standing test in 43 CFR 4.902 must take into account the section of the Act relied upon in the decision under appeal.----- 460
3. Since the purpose of a § 17(b)(1) public easement is to provide access across Native lands to lands not selected, such an easement necessarily affects lands other than those to be conveyed. Therefore, in asserting standing to appeal a § 17(b)(1) easement decision, a member of the public who claims a private interest in land other than the land to be conveyed may rely on this private holding as his or her "property interest" affected within the meaning of 43 CFR 4.902.----- 460
4. An individual claiming standing to appeal a § 17(b)(1) public easement decision must assert public use of the desired easement in order to distinguish it from a § 17(b)(2) private access right.----- 461

ALASKA NATIVE CLAIMS SETTLEMENT ACT—Continued**ALASKA NATIVE CLAIMS APPEAL BOARD—Continued****Appeals—Continued****Standing—Continued**

	Page
5. The appropriate test for determining standing to appeal a decision made pursuant to ANCSA is whether a party "claims a property interest in land affected by a determination" appealable to this board.-----	513
6. Where an assertion that a property interest is affected by a decision to convey is based on the effect of a possible future waiver of administration by the agency presently administering a lease, and such waiver is discretionary with the agency under § 14(g) of ANCSA, the alleged effect on the property interest is too speculative to meet the requirement of 43 CFR 4.902.-----	513
7. Decisions pursuant to ANCSA affect property interests differently, depending, in part, upon the section of the Act on which each decision is based. Application of the standing test in 43 CFR 4.902 must take into account the section of the Act relied upon in the decision under appeal.---	1028
8. Since the purpose of a § 17(b)(1) public easement is to provide access across Native lands to lands not selected, such an easement necessarily affects lands other than those to be conveyed. Therefore, in asserting standing to appeal a § 17(b)(1) easement decision, a member of the public who claims a private interest in land other than the land to be conveyed may rely on this private holding as a "property interest affected" within the meaning of 43 CFR 4.902.-----	1029
9. Where appellants seek a public access easement under § 17(b)(1) of ANCSA, they may rely on their patented homesite, located outside the conveyance, as a property interest for purposes of meeting the standing requirements of 43 CFR 4.902.-----	1029
10. Where appellants claim that their homesite is affected by the Bureau of Land Management's failure to reserve a § 17(b)(1) public access easement, along a road used by appellants and the public, because in the absence of such an easement their present access route to the homesite may be cut off by the proposed conveyance to a Native corporation, this is a claim that their property interest is affected within the terms of 43 CFR 4.902.-----	1029
11. Sec. 17(b)(2) of ANCSA assures that persons who have valid existing uses do not lose access rights because of the public easements provided by § 17(b)(1). The private right of access provided to holders of valid existing rights pursuant to § 17(b)(2) of ANCSA is separate from the right provided by § 17(b)(1) of public access routes. An individual claiming standing to appeal a public easement decision must assert public use of the desired easement to distinguish it from a private access right under § 17(b)(2). However, the possibility of protection under § 17(b)(2) does not preclude the holder of a property interest from asserting that an easement decision affects his interest so as to meet the standing requirements of 43 CFR 4.902.-----	1029
12. The appropriate test of standing to appeal a decision under ANCSA is not whether a person is an "aggrieved party," but whether a person "claims a property interest in land affected by a determination from which an appeal to the Alaska Native Claims Appeal Board is allowed" as required by 43 CFR 4.902.-----	1039
13. Decisions made pursuant to ANCSA affect property interests differently, with the effect depending, in part, upon the section of the Act on which each decision is based. Therefore, application of the standing test in 43 CFR 4.902 must take into account the section of the Act relied upon in the decision under appeal.-----	1039

14. Since the purpose of a § 17(b)(1) public easement is to provide access across Native lands to lands not selected, such an easement necessarily affects lands other than those to be conveyed. Therefore, in asserting standing to appeal a § 17(b)(1) easement decision, a member of the public who claims a private interest in land other than the land to be conveyed may rely on this private holding as his or her "property interest" affected within the meaning of 43 CFR 4.902.----- 1039
15. An individual claiming standing to appeal a § 17(b)(1) public easement decision must assert public use of the desired easement in order to distinguish it from a § 17(b)(2) private access right.----- 1039
16. When a municipality's "interest" in a particular tract of land is based only on the possibility that some day it may acquire the land under the provisions of the Federal Property and Administrative Services Act of 1949, *as amended*, the municipality's "interest" is to speculative to constitute a "property interest" under 43 CFR 4.902.----- 1047
17. The appropriate test of standing to appeal a decision under ANCSA is not whether a person is an "aggrieved party" but whether a person "claims a property interest in lands affected by a determination from which an appeal to the Alaska Native Claims Appeal Board is allowed"----- 1048
18. The Act of Jan. 2, 1976, P.L. 94-204, 89 Stat. 1145, *as amended*, was clearly an amendment to ANCSA and the standing requirements of the original Act (43 CFR 4.902) apply to the amendments.----- 1048

CONVEYANCES

Generally

1. The Bureau of Land Management is not bound to make its navigability determinations in conformity with information provided by the State of Alaska pursuant to 43 CFR 2650.1(b) as to navigability of water bodies within lands selected under ANCSA, or to accept the State's conclusions as to navigability.----- 636
2. When the State of Alaska's claim of ownership of submerged lands is based solely upon its own conclusions as to the navigability of water bodies within lands selected under ANCSA, and not upon a final adjudication of navigability, the mere assertion of the State's ownership does not constitute a claim of title in the submerged lands which requires the Bureau of Land Management to exclude such lands from the Decision to Issue Conveyance.----- 636
3. When lands have been selected by a Native corporation and approved by the Bureau of Land Management for conveyance under ANCSA, such lands may be excluded from conveyance only pursuant to provisions of ANCSA or implementing regulations which constitute an exception to the requirements of Secretary's Order No. 3029, *as amended*.----- 760
4. Exclusion of the disputed mining claims from conveyance, pending their adjudication, is not permitted under any provision of ANCSA or implementing regulations.----- 761
5. The Bureau of Land Management is not bound to make its navigability determinations in conformity with information provided by the State of Alaska pursuant to 43 CFR 2650.1(b) as to navigability of water bodies within lands selected under ANCSA, or to accept the State's conclusions as to navigability.----- 1087, 1105

ALASKA NATIVE CLAIMS SETTLEMENT ACT—Continued**Conveyances—Continued****Generally—Continued**

Page

6. When the State of Alaska's claim of ownership of submerged lands is based solely upon its own conclusions as to the navigability of water bodies within lands selected under ANCSA, and not upon a final adjudication of navigability, the mere assertion of the State's ownership does not constitute a claim of title in the submerged lands which requires the Bureau of Land Management to exclude such lands from the Decision to Issue Conveyance----- 1086, 1105

Easements

1. The existence of a Revised Statutes Sec. 2477 right-of-way precludes neither the reservation of an overlapping § 17(b) public easement nor the conveyance of the underlying fee. Such reservation or conveyance does not affect the previously existing right-of-way----- 629
2. The continued existence of a Revised Statutes Sec. 2477 right-of-way following conveyance of the underlying fee interest is entirely independent of any reservation, pursuant to § 17(b), of a public easement.. 629

Valid Existing Rights**Generally**

1. A right-of-way under 43 U.S.C. § 959 (1976), issued before conveyance under ANCSA of the underlying land, would be a valid existing right protected under § 14 (g) of the Act----- 352
2. The private right of access protected by § 17 (b) (2) of ANCSA for holders of valid existing rights is separate from public access routes specifically identified pursuant to § 17 (b) (1). Possible protection under § 17 (b) (2) does not preclude an individual from asserting that a public easement decision affects his or her property interest so as to meet the standing test of 43 CFR 4.902----- 460
3. When a lease is identified in a Decision to Issue Conveyance as a § 14 (g) interest, and the conveyance is made subject to such interest, then all rights the lessee holds under the terms of the lease, if valid, are protected and there remains no issue which the lessee may appeal as to the effect of the conveyance on the lease----- 513
4. Possible protection under § 17 (b) (2) does not preclude an individual from asserting that a public easement decision affects his or her property interest so as to meet the standing test of 43 CFR 4.902----- 1039

Third-Party Interests

1. Sec. 14(g) of ANCSA mandates identification, in conveyance documents issued pursuant to ANCSA, of only those interests issued by the United States or the State of Alaska. Alleged third-party interests derived from sources other than the United States or the State of Alaska are not within the scope of § 14(g) of ANCSA----- 443
2. Departmental policy expressed in Secretary's Order No. 3029 and converted into the Departmental Manual at 601 DM 2.3 and 2.4 does not require the Bureau of Land Management to identify or adjudicate alleged third-party interests derived from sources other than the Federal Government or the State of Alaska----- 443
3. The existence of a Revised Statutes Sec. 2477 right-of-way precludes neither the reservation of an overlapping § 17(b) public easement nor the conveyance of the underlying fee. Such reservation or conveyance does not affect the previously existing right-of-way----- 629

Conveyances—Continued

Valid Existing Rights—Continued

Third-Party Interests—Continued

	Page
4. The continued existence of a Revised Statutes Sec. 2477 right-of-way following conveyance of the underlying fee interest is entirely independent of any reservation, pursuant to § 17(b), of a public easement.....	629
5. Rights-of-way granted by Revised Statutes Sec. 2477 shall be indentified in the decision to issue conveyance and in the conveyance document in the same manner as other third-party interests which the Bureau of Land Management need not adjudicate.....	629
6. The Board will order the exclusion of a disputed Native allotment from the conveyance of lands pursuant to the Alaska Native Claims Settlement Act pending adjudication of the disputed allotment.....	718
7. Pursuant to the Departmental Manual 601 DM 2, requirements in Secretary's order No. 3029, as to adjudication of Federally created interests, do not apply to unpatented mining claims and the Bureau of Land Management is not required to adjudicate mining claims before conveyance. Pursuant to ANCSA and Secretary's Order No. 3029, <i>as amended</i> , lands selected by a Native corporation must be conveyed by the Bureau of Land Management notwithstanding the existence of an unpatented mining claim within such lands which has not been adjudicated for validity under the general mining laws.....	760
8. When an unpatented mining claim is situated within lands selected and approved for conveyance under ANCSA, the possessory interest of the mining claimant is protected under provisions of § 22(c) and 43 CFR 2650.3-2 as a valid existing right notwithstanding that the Bureau of Land Management has not adjudicated such unpatented mining claims prior to conveyance.....	761

DEFINITIONS

Public Lands

Generally

1. The Department of the Interior under provisions of ANCSA and regulations in 43 CFR has both the authority and responsibility to determine which lands, including submerged lands, are "public lands" within the definition of § 3(e) of ANCSA and are therefore available for selection by a Native corporation.....	636
2. "Public lands" as defined by § 3(e) of the Alaska Native Claims Settlement Act do not include lands identified for selection by the State of Alaska prior to Jan. 17, 1969.....	886
3. The Bureau of Land Management under provisions of ANCSA and regulations in 43 CFR has both the authority and responsibility to determine which lands, including submerged lands, are "public lands" within the definition of § 3(e) of ANCSA and are therefore available for selection by a Native corporation.....	1086, 1105

DISENROLLMENT

Metlakatla Natives

1. The provisions of the Alaska Native Claims Settlement Act specifically exclude members of the Metlakatla Tribe of the Annette Islands Reserve from benefits under the Act. Where appellant and her children periodically resided at Metlakatla, accepted benefits from the Metlakatla Tribe as tribal members, were enrolled members since 1968, and did not initiate efforts to terminate tribal membership until 1974,

ALASKA NATIVE CLAIMS SETTLEMENT ACT—Continued**DISENROLLMENT—Continued****Metlakatla Natives—Continued**

appellants were enrolled members of Metlakatla within the meaning of the Alaska Native Claims Settlement Act and were properly excluded from enrollment under the Act.....	Page 57
2. Exclusion of appellant members of the Metlakatla Community from benefits under provisions of the Alaska Native Claims Settlement Act held not to be precluded by a contrary result reached in a prior Administrative Law Judge's decision in a similar case. The determination by the agency factfinder in the separate but similar situation is not binding upon the Board of Indian Appeals, which renders final decision for the Department in disenrollment appeals referred on appeal to the Board.....	822

EASEMENTS**Access**

1. Sec. 17(b)(2) of ANCSA protects the private right of access, provided for under existing law, to any valid right recognized by ANCSA.....	1029
2. Sec. 17(b)(2) of ANCSA assures that persons who have valid existing uses do not lose access rights because of the public easements provided by § 17(b)(1). The private right of access provided to holders of valid existing rights pursuant to § 17(b)(2) of ANCSA is separate from the right provided by § 17(b)(1) of public access routes. An individual claiming standing to appeal a public easement decision must assert public use of the desired easement to distinguish it from a private access right under § 17(b)(2). However, the possibility of protection under § 17(b)(2) does not preclude the holder of a property interest from asserting that an easement decision affects his interest so as to meet the standing requirements of 43 CFR 4.902.....	1029

Public Easements

1. Since the purpose of a § 17(b)(1) public easement is to provide access across Native lands to lands not selected, such an easement necessarily affects lands other than those to be conveyed. Therefore, in asserting standing to appeal a § 17(b)(1) easement decision, a member of the public who claims a private interest in land other than the land to be conveyed may rely on this private holding as his or her "property interest" affected within the meaning of 43 CFR 4.902.....	460
2. The private right of access protected by § 17(b)(2) of ANCSA for holders of valid existing rights is separate from public access routes specifically identified pursuant to § 17(b)(1). Possible protection under § 17(b)(2) does not preclude an individual from asserting that a public easement decision affects his or her property interest so as to meet the standing test of 43 CFR 4.902.....	460
3. An individual claiming standing to appeal a § 17(b)(1) public easement decision must assert public use of the desired easement in order to distinguish it from a § 17(b)(2) private access right.....	461
4. The existence of a Revised Statutes Sec. 2477 right-of-way precludes neither the reservation of an overlapping § 17(b) public easement nor the conveyance of the underlying fee. Such reservation or conveyance does not affect the previously existing right-of-way.....	629

ALASKA NATIVE CLAIMS SETTLEMENT ACT—Continued**EASEMENTS—Continued****Public Easements—Continued**

	Page
5. The continued existence of a Revised Statutes Sec. 2477 right-of-way following conveyance of the underlying fee interest is entirely independent of any reservation, pursuant to § 17(b), of a public easement.....	629
6. Since the purpose of a § 17(b)(1) public easement is to provide access across Native lands to lands not selected, such an easement necessarily affects lands other than those to be conveyed. Therefore, in asserting standing to appeal a § 17(b)(1) easement decision, a member of the public who claims a private interest in land other than the land to be conveyed may rely on this private holding as a "property interest affected" within the meaning of 43 CFR 4.902.....	1029
7. Where appellants seek a public access easement under § 17(b)(1) of ANCSA, they may rely on their patented homesite, located outside the conveyance as a property interest for purposes of meeting the standing requirements of 43 CFR 4.902.....	1029
8. Where appellants claim that their homesite is affected by the Bureau of Land Management's failure to reserve a § 17(b)(1) public access easement, along a road used by appellants and the public, because in the absence of such an easement their present access route to the homesite may be cut off by the proposed conveyance to a Native corporation, this is a claim that their property interest is affected within the terms of 43 CFR 4.902.....	1029
9. Since the purpose of a § 17(b)(1) public easement is to provide access across Native lands to lands not selected, such an easement necessarily affects lands other than those to be conveyed. Therefore, in asserting standing to appeal a § 17(b)(1) easement decision, a member of the public who claims a private interest in land other than the land to be conveyed may rely on this private holding as his or her "property interest" affected within the meaning of 43 CFR 4.902.....	1039
10. Possible protection under § 17(b)(2) does not preclude an individual from asserting that a public easement decision affects his or her property interest so as to meet the standing test of 43 CFR 4.902.....	1039
11. An individual claiming standing to appeal a § 17(b)(1) public easement decision must assert public use of the desired easement in order to distinguish it from a § 17(b)(2) private access right.....	1039

ENROLLMENT

1. The provisions of the Alaska Native Claims Settlement Act defining the class of persons entitled to share in benefits under the Act are not ambiguous so as to require reference to the legislative history to determine whether persons becoming United States citizens after Dec. 18, 1971, the effective date of the Act, are entitled to be enrolled.....	262
2. Interpretation of the Alaska Native Claims Settlement Act by the Bureau of Indian Affairs contemporaneous with the enactment of the statute and continued over the succeeding 9 years is relevant to a determination of the application to be given to the statute. The Agency refusal to enroll persons who were not United States citizens on Dec. 18, 1971, the effective date of the Act, is a reasonable application of the Act and of Departmental regulations implementing the Act, and gives the language of the statute (43 U.S.C. § 1604 (1976)) its common and ordinary meaning...	262

ALASKA NATIVE CLAIMS SETTLEMENT ACT—Continued**NATIVE LAND SELECTIONS****Regional Selections****Generally**

Page

1. Departmental regulations at 43 CFR 2653.5, insofar as they prescribe a specified course of action including publication, referral, investigation, conferring, reporting, etc., by the Department with regard to selections of public lands made pursuant to § 14(h)(1) of the Alaska Native Claims Settlement Act, cannot apply when the selected lands are not public lands and the selection applications must be rejected at the outset.....

886

Allocations

1. Sec. 14(h)(8)(B) of ANCSA, which governs withdrawal and allocation of lands for selection by the Native regional corporation for southeastern Alaska, constitutes an exception to the requirement that lands withdrawn and allocated by the Secretary under § 14(h)(8) must be from unreserved and unappropriated lands outside areas withdrawn by §§ 11 and 16.....

760

Selection Limitations

1. Regulations in 43 CFR 2651.4(e) cannot be applied to permit a selecting Native corporation to exclude lands within unpatented mining claims after the selection period has terminated.....
2. Only unreserved and unappropriated public lands are available for selection under § 14(h)(1) of the Alaska Native Claims Settlement Act.....

761

886

NAVIGABLE WATERS

1. The Bureau of Land Management is not bound to make its navigability determinations in conformity with information provided by the State of Alaska pursuant to 43 CFR 2650.1(b) as to navigability of water bodies within lands selected under ANCSA, or to accept the State's conclusions as to navigability.....
2. When the State of Alaska's claim of ownership of submerged lands is based solely upon its own conclusions as to the navigability of water bodies within lands selected under ANCSA, and not upon a final adjudication of navigability, the mere assertion of the State's ownership does not constitute a claim of title in the submerged lands which requires the Bureau of Land Management to exclude such lands from the Decision to Issue Conveyance.....
3. Where the Bureau of Land Management has redetermined that water bodies which are the subject of an appeal are navigable, and where the Board finds that the facts in the record upon which the Bureau of Land Management made its redetermination meet the essential elements of navigability, and where the facts in the record are undisputed so that no issue of fact as to navigability remains before the Board, then the Board will find the water bodies to be navigable.....
4. The Bureau of Land Management is not bound to make its navigability determinations in conformity with information provided by the State of Alaska pursuant to 43 CFR 2650.1(b) as to navigability of water bodies within lands selected under ANCSA, or to accept the State's conclusions as to navigability.....
5. When the State of Alaska's claim of ownership of submerged lands is based solely upon its own conclusions as to the navigability of water bodies within lands selected under ANCSA, and not upon a final adjudication of navigability, the mere assertion of the State's ownership does not constitute a claim of title in the submerged lands which requires the Bureau of Land Management to exclude such lands from the Decision to Issue Conveyance.....

APPEALS

(See also Administrative Procedure, Contracts, Grazing Permits & Licenses, Indian Probate, Indian Tribes, Rules of Practice, Torts, Uniform Relocation Assistance & Real Property Acquisition Policies Act of 1970—if included in this Index.)

1. "Service." Where BLM sends a copy of its decision to an adversely affected party at his address of record on Sept. 21; where additional information containing the party's more recent address is filed with BLM on Oct. 5; and where BLM receives the mailed copy back as undeliverable on Oct. 16 but does not mail another copy to the more recent address, BLM has not mailed a copy to the party's last address of record, and there is no "service" under 43 CFR 1810.2. Where BLM has never served a copy of its decision on an adversely affected party, the time for this party to appeal has never commenced, and the decision is not effective *per* 43 CFR 4.21(a)-----
2. Where an appellant disagrees with the decision below and seeks to have his judgment substituted for that of the decisionmaker, his appeal will be carefully considered, with due regard for the public interest. However, where the responsibility for making such judgments has been exercised by an officer duly delegated with the authority to do so, his action will ordinarily be affirmed in the absence of a showing of compelling reasons for modification or reversal.-----
3. Where, following the contest of a number of mining claims, a decision is rendered by an Administrative Law Judge holding certain claims and portions of claims to be valid and invalidating the remainder for lack of mineral or as embracing excess mineral reserves, and the Government appeals from that decision but the claimant does not, that decision will be set aside and the case remanded for rehearing on the basis of a judicial decision in another case, made while the subject appeal was pending, that there can be no invalidation of mining Claims by this Department on a finding that the claimant has acquired claims for far more mineral than the market can absorb within the foreseeable future.-----
4. A finding by BLM that some statutory mechanism has been triggered which automatically divests a right does not and cannot mean that the adversely affected party is denied recourse to the appellate process. The Board of Land Appeals is the exclusive arbiter of its jurisdiction, and neither employees of BLM nor attorneys of the Office of the Solicitor may create or deny the right of appeal to the Board.-----

1. Only those group which have received Federal acknowledgement of their Indian tribal status constitute Indian tribes, for purposes of sec. 2 of the Bald Eagle Protection Act..... 338

BUREAU OF INDIAN AFFAIRS

(See also Indian Probate—if included in this Index.)

ADMINISTRATIVE APPEALS

Generally

1. In reviewing action of the Bureau of Indian Affairs in raising grazing rental rates, the Board of Indian Appeals should overturn the action only if it is found to be unreasonable. As long as the Bureau's action is supported in law and by substantial evidence, it would be an inappropriate intrusion into the Bureau's function for the Board to substitute its judgment for the agency's..... 315
2. While it is true that the Klamath Termination Act, Aug. 13, 1954, 68 Stat. 718, 25 U.S.C. §§ 564-564x (1976), rendered inapplicable to Klamath tribal members the Secretary's usual jurisdiction over Indian heirship determinations as set forth in 25 U.S.C. §§ 372-373 (1976) (see 25 U.S.C. § 564h), Congress, by the more recent Act of Oct. 1, 1965, 79 Stat. 897, 25 U.S.C. §§ 565-565g (1976), specifically empowered the Secretary of the Interior to determine the rightful heirs of deceased Klamath enrollees entitled to a share of judgment funds payable from the United States for the limited purpose of seeing that such funds are distributed to the heir or heirs so determined..... 619
3. The Secretary has no statutory authority to pay creditors' claims against estates of deceased Klamath Indians out of judgment funds distributable by the Secretary under the Act of Oct. 1, 1965, 79 Stat. 897..... 620

COAL LEASES AND PERMITS

(See also Mineral Leasing Act—if included in this Index.)

GENERALLY

1. Under the provisions of 30 U.S.C. § 188a (1976) accrued rentals on mineral leases are to be prorated on a monthly basis where the failure to file a timely surrender was not due to a lack of reasonable diligence on the part of the lessee..... 24

CANCELLATION

1. An ambiguous regulation relating to "the proper office" in which to file a relinquishment of a coal lease should not be interpreted to the detriment of a coal lessee who sought to comply with its provisions..... 24
2. The Boards of Appeal of the Department of the Interior have no authority to declare invalid a duly promulgated regulation of this Department. Where, however, the regulation was not properly promulgated, is lacking in statutory basis, and has been consistently ignored in actual practice, that regulation will be accorded no force or effect..... 24
3. Under the provisions of 30 U.S.C. § 188a (1976) accrued rentals on mineral leases are to be prorated on a monthly basis where the failure to file a timely surrender was not due to a lack of reasonable diligence on the part of the lessee..... 24

DILIGENCE

1. Although Congress revised the provision governing readjustment of federal coal leases in 1976, the deletion of the clause "unless otherwise provided by law at the time of expiration of such periods" from sec. 7 of the MIA (30 U.S.C. § 207) did not alter the Secretary's obligation not to establish any lease terms contrary to law in readjusting a coal lease..... 1003

COAL LEASES AND PERMITS—Continued

DILIGENCE—Continued

Page

2. The legislative history of sec. 6 of the Federal Coal Leasing Amendments Act shows that the revision of sec. 7 of the MLA (30 U.S.C. § 207) was not retroactive, but applied to new leases and to "old" leases upon readjustment. The ten-year production period and revised royalty rates of amended sec. 7 must be imposed on "old" coal leases at readjustment. The legislative history to the 1978 coal leasing revisions (Act of Oct. 30, 1978) discloses that Congress understood and acted on the assumption that the amended sec. 7 royalty rates did apply to all "old" leases upon readjustment.----- 1003

LEASES

1. Coalbed gas is not included in a coal lease under the MLA. In the coal leasing provision of the MLA, Congress did not provide for a coal lessee's extraction of minerals related to or associated with coal. 30 U.S.C. § 207 (Supp. II 1978). This provision does not authorize a coal lessee's extraction of coalbed gas, other than the venting of the gas required by mine health and safety laws and regulations.----- 538

PERMITS

Generally

1. Limitation of a coal prospecting permit to "unclaimed, undeveloped" lands restricts it to lands without valid, vested rights, existing at the time of issuance of the permit, which are adverse to the prospecting permit which is sought, and any preference right lease which may be earned pursuant to such a permit.----- 247
2. A prospecting permit may be issued for coal for which there is no valid, adverse claim at the time of issuance, notwithstanding the existence then of nonadverse claims, entries, or leases.----- 247
3. Issuance of a prospecting permit is presumed to be regular if no valid, adverse interest appeared in the land office records at the time of issuance of the permit.----- 247

READJUSTMENT

1. Although Congress revised the provision governing readjustment of federal coal leases in 1976, the deletion of the clause "unless otherwise provided by law at the time of expiration of such periods" from sec. 7 of the MLA (30 U.S.C. § 207) did not alter the Secretary's obligation not to establish any lease terms contrary to law in readjusting a coal lease.----- 1003
2. The legislative history of sec. 6 of the Federal Coal Leasing Amendments Act shows that the revision of sec. 7 of the MLA (30 U.S.C. § 207) was not retroactive, but applied to new leases and to "old" leases upon readjustment. The ten-year production period and revised royalty rates of amended sec. 7 must be imposed on "old" coal leases at readjustment. The legislative history to the 1978 coal leasing revisions (Act of Oct. 30, 1978) discloses that Congress understood and acted on the assumption that the amended sec. 7 royalty rates did apply to all "old" leases upon readjustment.----- 1003

RENTALS

1. An ambiguous regulation relating to "the proper office" in which to file a relinquishment of a coal lease should not be interpreted to the detriment of a coal lessee who sought to comply with its provisions.----- 24

CONSTITUTIONAL LAW

GENERALLY

1. Department of the Interior, as an agency of the executive branch of Government, is without jurisdiction to consider whether the mining claims recordation provisions of the Federal Land Policy and Management Act of 1976 are constitutional..... 370, 919

DUE PROCESS

1. Due process does not require notice and a prior right to be heard in every case where an individual may be deprived of property so long as the individual is given notice and an opportunity to be heard before the deprivation becomes final..... 31

CONTRACTS

(See also Appeals, Claims Against the United States, Delegation of Authority, Labor, Rules of Practice—if included in this Index.)

CONSTRUCTION AND OPERATION

Actions of Parties

1. Where a contractor alleged that differing site conditions were encountered in constructing bored tunnels for the Navajo Indian Irrigation Project and resolution of the question as to what the contract indicated turned on the construction to be placed on the specifications and drawings relating to the nature of the support required to support the tunnels, as well as upon a Government estimate that approximately 80 percent of the tunnels would require support other than rockbolts, the Board found the contract to have indicated that the deterioration and disintegration encountered in driving the tunnels would be primarily of a surficial nature. In so finding the Board noted that in the disputed area the contract appears to be susceptible of more than one reasonable interpretation and that within the zones of reasonableness the Government as the author has to share the major responsibility for communicating its intentions as well as the main risk of failure to carry out that responsibility. Heavily weighted by the Board in reaching its decision was the fact that all four of the lowest bidders appeared to have construed the contract to indicate that the tunnels could be supported virtually entirely with rockbolts and that that construction was apparently known to the project construction engineer at the time of bid opening based upon his analysis of the bids received... 41

CONTRACTS—Continued**CONSTRUCTION AND OPERATION—Continued****Actions of Parties—Continued**

Page

2. Where an appellant acknowledges that it received a purchase order calling for moving Government-owned furniture and furnishings shortly prior to the move and the record shows that without making a protest of any kind the contractor proceeded with the move and that it subsequently billed the Government for the services rendered in accordance with the rate stated in the purchase order, the Board finds the purchase order to constitute the agreement of the parties..... 979

Allowable Costs

1. Where a cost-plus-fixed-fee contract expressly provided for the payment of finally negotiated overhead rates notwithstanding the foregoing provisions which include the limitation of cost provision, the Board finds that a claim for additional overhead costs is not subject to the limitation of the contract estimated costs..... 423
2. Under a cost-plus-fixed-fee contract where indirect costs are disallowed as excessive or not directly related to the performance of the contract, the Board finds the determination of allowable costs to improperly apply the standard for direct costs to indirect costs and on review of the costs in question finds entitlement to a portion of the disallowed costs..... 423
3. Where the invitation for bids instructs potential bidders to submit bids on each of three schedules independent of the other, and the bidder to whom the contract was ultimately awarded incurs additional cost as a result of anticipation of award of one of the schedules not included in the contract awarded, the Board holds that such cost must be borne by the contractor..... 518
4. Under a cost-plus-fixed-fee contract wherein the Government has agreed to reimburse the contractor for its allowable costs not exceeding a ceiling amount for reimbursement, the Board finds the disallowance of costs alleged to have resulted from an unauthorized change to have been improper because the otherwise allowable costs exceeded the contract ceiling amount by more than the disallowance..... 877
5. Under two cost-no-fee contracts with an educational institution requiring the work to be done in accordance with appellant's proposals and providing for a fixed-dollar amount to be paid for overhead expenses, the Board denies claimed overhead expenses attributable to the terminated portion of the performance time under the contracts and denies recovery as direct expense the salary of the project director because neither proposal contemplated this expense to be a direct cost..... 1017

Changed Conditions (Differing Site Conditions)

1. Under a contract for the construction of two concrete lined tunnels for the Navajo Indian Irrigation Project (Tunnel Nos. 3 and 3A) the Board finds a first category differing site conditions claim to have been established with respect to constructing Tunnel No. 3 where the conditions encountered by the contractor in that tunnel were shown to be materially different from those indicated in the contract..... 42
2. In a case involving the assertion of first and second category differing site conditions claims under a contract for the construction of two concrete lined tunnels (Tunnel Nos. 3 and 3A), a first category differing site conditions claim was not established with respect to Tunnel No. 3A where the Board found the contract to have indicated that the deterioration and disintegration to be anticipated in constructing the

CONTRACTS—Continued**CONSTRUCTION AND OPERATION—Continued****Changed Conditions—Continued**

	Page
two tunnels would be primarily surficial in nature but the evidence offered failed to show that the rock failures and fallout encountered in Tunnel No. 3A were due to overstressing and therefore nonsurficial in nature.....	42
3. A second category differing site conditions claim, asserted under a contract for the construction of two concrete lined tunnels for the Navajo Indian Irrigation Project (Tunnel Nos. 3 and 3A), is denied where the basis for the claim is that the rock failures and fallout encountered in constructing Tunnel No. 3A were due to overstressing (shear type failures) but the evidence of record failed to show that overstressing was the cause of such rock failures and fallout as occurred in that tunnel.....	42
4. A claim asserted under a Changed Conditions Clause by reason of alleged withholding of material information (first category) is denied where there is no evidence of record indicating that the Government either withheld material information or otherwise misrepresented the conditions the contractor would encounter in performing a tree thinning contract.....	305
5. A Government motion for summary judgment is granted and a claim for differing site conditions (based upon damages to the jobsite caused by runoff from a severe rainstorm) is denied where the Board finds that if all of appellant's factual allegations are accepted as true neither the differing site conditions clause nor any other clause in the contract provides a basis for granting the appellant relief for the claim asserted..	361
6. Where under a reroofing contract the quantity of roofing required to be used is substantially greater than the quantity of roofing estimated by the Government and it is determined that the quantity of roofing required for performance of the contract could not have been verified by a prebid investigation, the Board finds that the substantially greater amount of roofing required to complete the contract work than the Government had estimated constitutes a first category differing site condition for which the contractor is entitled to an equitable adjustment under the Differing Site Conditions clause.....	722
7. A second category differing site conditions is found to exist where the Government tacitly acknowledged that double roofing encountered under a contract calling for reroofing of a building in Miami, Florida, constituted an unknown condition and the testimony offered in support of the contractor's claim shows that while double roofing is not unusual in some areas of the country, it is unusual in the southern areas where there is a lot of mildew and moisture, humidity, as would be true of the particular locale in which the instant contract was performed.....	723
8. Where under a reroofing contract the quantity of roofing required to be used is substantially greater than the approximate quantities estimated by the Government in the invitation for bids and there was no provision included therein requiring or requesting that the quantities specified be verified by prospective bidders, the Board finds that the substantially greater amount of roofing required to complete the contract work than the Government had estimated constituted a first category differing site condition for which the contractor is entitled to an equitable adjustment in the contract price.....	836

Page

1. A claim predicated upon defective specifications is denied where assuming *arguendo* that the specifications were defective, the appellant failed to show that it incurred any additional costs by reason of the allegedly defective specifications..... 305
2. A claim asserted under the Changes clause for increased costs resulting from actions of the President in decontrolling the price of heavy crude oil is dismissed as being outside the jurisdiction of the Board since the President's action was a sovereign act taken as part of the program to maintain or increase production of heavy crude oil..... 431
3. Where at least four of seven bidders shared the same interpretation of the method of construction required by a contract for the construction of a bridge and none of the bidders were shown to have a different interpretation, the Board finds the contractor's interpretation to be reasonable and further finds that the Government's insistence on a different and more costly method of construction was a constructive change for which the contractor is entitled to an equitable adjustment.. 527

Construction Against Drafter

1. Where a contractor alleged that differing site conditions were encountered in constructing bored tunnels for the Navajo Indian Irrigation Project and resolution of the question as to what the contract indicated turned on the construction to be placed on the specifications and drawings relating to the nature of the support required to support the tunnels, as well as upon a Government estimate that approximately 80 percent of the tunnels would require support other than rockbolts, the Board found the contract to have indicated that the deterioration and disintegration encountered in driving the tunnels would be primarily of a superficial nature. In so finding the Board noted that in the disputed area the contract appears to be susceptible of more than one reasonable interpretation and that within the zones of reasonableness the Government as the author has to share the major responsibility for communicating its intentions as well as the main risk of failure to carry out that responsibility. Heavily weighted by the Board in reaching its decision was the fact that all four of the lowest bidders appeared to have construed the contract to indicate that the tunnels could be supported virtually entirely with rockbolts and that that construction was apparently known to the project construction engineer at the time of bid opening based upon his analysis of the bids received..... 41
2. Where at least four of seven bidders shared the same interpretation of the method of construction required by a contract for the construction of a bridge and none of the bidders were shown to have a different interpretation, the Board finds the contractor's interpretation to be reasonable and further finds that the Government's insistence on a different and more costly method of construction was a constructive change for which the contractor is entitled to an equitable adjustment..... 527

Contract Clauses

1. 836

General Rules of Construction

1. The Board rejected the argument of the contractor that the language of the Work Stoppage Clause, providing that the contractor will not be entitled to additional compensation for stop work orders of reasonable duration, should be interpreted to allow a claim to be compensable where the total duration of a series of stop work orders was over 50 percent of the total performance time of the contract. The Board found that no single stop work order in a series of five issued was of unreasonable duration and held that the subject language was intended to apply to only one stop work order at a time, and since the parties stipulated that each stop work order was reasonably and properly issued, the claim was not compensable.....
2. Where an appellant acknowledges that it received a purchase order calling for moving Government-owned furniture and furnishings shortly prior to the move and the record shows that without making a protest of any kind the contractor proceeded with the move and that it subsequently billed the Government for the services rendered in accordance with the rate stated in the purchase order, the Board finds the purchase order to constitute the agreement of the parties....

895

979

Modification of Contracts**Generally**

1. In a case involving the movement of Government office furniture and furnishings within the State of Colorado, the Board finds (i) that the National Park Service is not required to pay a higher rate for the movement of its property than the rate negotiated with the contractor as reflected in an accepted purchase order and (ii) that it is not required to forego presenting to the contracting officer for decision a claim for damages sustained to Government property during the course of the move, even though at the time the move took place the tariff rates promulgated by the Colorado Public Utilities Commission required payment of a higher rate than that specified in the purchase order and even though the same tariff rates required payment of the full amount billed for services rendered before claims against the carrier for damages to property during the move could be entertained.....

979

Duress

1. Where a termination settlement agreement was reached about 14 months after a decision of the Board in favor of appellant and the facts show that appellant was responsible for almost a year of the delay for refusal to allow Government auditors full access to the contract records, and the agreement was signed by appellant's president in an amount in excess of the amount authorized by appellant's board of directors, the Board finds that appellant failed to show that it entered the agreement because of duress on behalf of the Government.....

CONTRACT DISPUTES ACT OF 1978

Interest

- | | |
|--|------|
| 1. A construction contractor's claim for interest under the Contract Disputes Act of 1978, is denied where the Board finds that the underlying claims for an equitable adjustment were negotiated to settlement as evidenced by a written agreement between the parties which contained no provision postponing the finality of the settlement pending the resolution of the claim for interest..... | 1065 |
|--|------|

Jurisdiction

- | | |
|---|-----|
| 1. A claim of mutual mistake asserted under a tree thinning contract is dismissed for want of jurisdiction where the Board finds (i) that it has no authority under the Disputes clause to reform contracts and (ii) that since appellant did not elect to proceed under the Contract Disputes Act of 1978, the Board derives no reformation authority from the Act in this instance..... | 304 |
| 2. A protest of award by an unsuccessful bidder is dismissed where the Board finds that it has no jurisdiction over bid protests under either the disputes clause or the Contract Disputes Act of 1978..... | 324 |
| 3. A Government motion to dismiss an appeal is granted where no express contract between the parties exists, there is no evidence from which an implied in fact contract could be inferred, and the Board is without jurisdiction over contracts implied in law, assuming appellant is seeking full relief..... | 809 |

CONTRACTS—Continued**DISPUTES AND REMEDIES****Burden of Proof**

Page

1. In a case involving the assertion of a differing site conditions claim under a contract for the construction of concrete lined tunnels for the Navajo Indian Irrigation Project, the Board follows the Court of Claims in holding that it is not necessary for the "indications" in the contract to be explicit or specific, it being sufficient for there to be an indication on the face of the contract documents causing a bidder reasonably to expect that there were no "subsurface or latent" physical conditions at the site differing materially from those indicated in the contract... 41
2. Where the testimony of appellant's only witness testifying with respect to contract performance was found unworthy of belief and not credible, the Board holds that it has the discretion to reject all the testimony of such witness except that which has been corroborated; and the Board concludes, that except for one of the claims for an equitable adjustment conceded by the Government, there was no corroboration of the discredited testimony, and, therefore, the remaining claims of appellant must be denied for failure to sustain the burden of proof. 591
3. Where the Board finds appellant's evidence with respect to two alleged conversations to be little more than conclusory hearsay without reference to literal substance and appellant alleged that certain drawings had been approved by the Government, when the clear language of the responses to the submitted drawings indicated rejection, the Board holds that appellant has failed to sustain its burden of proof, because of failure to prove the allegations of its complaint by any substantial evidence, and denies the claim of appellant for costs incurred to furnish and install insulating fittings required by the specifications in connection with the construction of a pipeline..... 798

Damages**Generally**

1. In a contract which provided for helicopter spraying of herbicide on grass after spring sprouting and the Government, after giving notice to proceed and granting permission to the contractor to mix the herbicide for the entire project, changed its mind about the readiness of the grass for spraying and imposed a noncontractual requirement that the grass be 4 inches high before spraying, the Board found that the Government breached its duty not to interfere with the contractor's performance and that the contractor was entitled to damages in the form of standby costs for its helicopter and for the tank truck in which the herbicide was mixed..... 803

Actual Damages

1. Where in connection with the movement of Government property, a contractor employs workers not provided for by terms of the purchase order covering the move and it appears that the need for such extra workers resulted in part from deficiencies in performance by the contractor and in part from failures of cooperation by the Government, the Board—noting the absence of any precise measurement for determining the relative fault of the parties—resorts to a jury verdict approach in finding the amount to which the contractor is entitled for one of the items included in the claim for equitable adjustment..... 979

1. Where in connection with the movement of Government property, a contractor employs workers not provided for by terms of the purchase order covering the move and it appears that the need for such extra workers resulted in part from deficiencies in performance by the contractor and in part from failures of cooperation by the Government, the Board—noting the absence of any precise measurement for determining the relative fault of the parties—resorts to a jury verdict approach in finding the amount to which the contractor is entitled for one of the items included in the claim for equitable adjustment... 979

Equitable Adjustments

1. Where neither what is described as the "reference reach/claim reach" approach nor the total cost method are found acceptable as a proper basis for an equitable adjustment, the Board resorts to the so-called jury verdict method for determining the amount of the equitable adjustment to which the contractor is entitled by reason of the differing site conditions found to have been encountered by the contractor in construction of Tunnel No. 3, a bored and concrete lined tunnel of the Navajo Indian Irrigation Project..... 43
2. A claim predicated upon defective specifications is denied where assuming *arguendo* that the specifications were defective, the appellant failed to show that it incurred any additional costs by reason of the allegedly defective specifications..... 305
3. Where under a reroofing contract the quantity of roofing required to be used is substantially greater than the approximate quantities estimated by the Government in the invitation for bids and there was no provision included therein requiring or requesting that the quantities specified be verified by prospective bidders, the Board finds that the substantially greater amount of roofing required to complete the contract work than the Government had estimated constituted a first category differing site condition for which the contractor is entitled to an equitable adjustment in the contract price..... 836
4. Where the Government admits liability and the quantum evidence adduced by the parties is not satisfactory, the Board will determine the amount of equitable adjustment by utilizing the jury verdict approach.. 895
5. Where in connection with the movement of Government property, a contractor employs workers not provided for by terms of the purchase order covering the move and it appears that the need for such extra workers resulted in part from deficiencies in performance by the contractor and in part from failures of cooperation by the Government, the Board—noting the absence of any precise measurement for determining the relative fault of the parties—resorts to a jury verdict approach in finding the amount to which the contractor is entitled for one of the items included in the claim for equitable adjustment..... 979
6. A construction contractor's claim for interest under the Contract Disputes Act of 1978, is denied where the Board finds that the underlying claims for an equitable adjustment were negotiated to settlement as evidenced by a written agreement between the parties which contained no provision postponing the finality of the settlement pending the resolution of the claim for interest..... 1065

CONTRACTS—Continued**DISPUTES AND REMEDIES—Continued****Jurisdiction**

- | | Page |
|--|-------------|
| 1. A claim of mutual mistake asserted under a tree thinning contract is dismissed for want of jurisdiction where the Board finds (i) that it has no authority under the Disputes clause to reform contracts and (ii) that since appellant did not elect to proceed under the Contract Disputes Act of 1978, the Board derives no reformation authority from the Act in this instance..... | 304 |
| 2. A claim based primarily upon an overpayment to a contractor is approved where the Board finds the evidence of record substantiates the Government claim and it does not appear that the appellant has ever contested either the fact or the amount of the overpayment or adjustments related to such overpayment which have the effect of reducing the amount of the Government's claim..... | 305 |
| 3. A protest of award by an unsuccessful bidder is dismissed where the Board finds that it has no jurisdiction over bid protests under either the disputes clause or the Contract Disputes Act of 1978..... | 324 |
| 4. The Board held that since its jurisdiction is appellate only, it may not consider claims presented to it without such claims first having been submitted to the contracting officer for consideration and decision... | 689 |
| 5. An appeal may be decided on the basis of a theory not advanced by the parties so long as the theory is consistent with the facts of record or legitimate inferences therefrom..... | 722 |
| 6. Written notice given a week after completion of the contract work is found to satisfy the requirement of the Differing Site Conditions clause for written notice to the contracting officer before the conditions are disturbed where the evidence shows that the Government had actual notice of the operative facts related to double roofing at the time the double roofing was encountered and no showing was made that any prejudice to the Government had resulted from the belated written notice..... | 722 |

Substantial Evidence

- | | |
|---|-----|
| 1. In a case involving the assertion of a differing site conditions claim under a contract for the construction of concrete lined tunnels for the Navajo Indian Irrigation Project, the Board follows the Court of Claims in holding that it is not necessary for the "indications" in the contract to be explicit or specific, it being sufficient for there to be an indication on the face of the contract documents causing a bidder reasonably to expect that there were no "subsurface or latent" physical conditions at the site differing materially from those indicated in the contract..... | 41 |
| 2. Where the Board finds appellant's evidence with respect to two alleged conversations to be little more than conclusory hearsay without reference to literal substance and appellant alleged that certain drawings had been approved by the Government, when the clear language of the responses to the submitted drawings indicated rejection, the Board holds that appellant has failed to sustain its burden of proof, because of failure to prove the allegations of its complaint by any substantial evidence, and denies the claim of appellant for costs incurred to furnish and install insulating fittings required by the specifications in connection with the construction of a pipeline..... | 798 |

CONTRACTS—Continued

DISPUTES AND REMEDIES—Continued

Termination for Default

Generally

Page

1. Where the contractor delivered contract items which failed to substantially conform with the contract specifications, and where the contracting officer terminated the contractor's right to proceed with performance of the contract work because of the contractor's nonconforming delivery, the Government's termination for default was proper..... 326
2. Where the contractor established that a critical diesel fuel shortage prevented timely completion of the contract, and that such shortage was unforeseeable, beyond the control, and without the fault or negligence of the contractor or its subcontractors or suppliers, the Board held that the contractor proved excusable cause for delay..... 689

FORMATION AND VALIDITY

Authority to Make

1. When a contractor expressed a desire to avoid legal action and suggested submitting a dispute to arbitration rather than following the dispute resolution process required by the disputes clause, the contracting officer was without authority to delegate his duties under the disputes clause to an arbitrator and the document entitled "Agreement to Submit to Arbitration" was a nullity which conferred no right on the contractor to claim expenses during the arbitration period..... 991

Fixed-price Contracts

1. Where an appellant acknowledges that it received a purchase order calling for moving Government-owned furniture and furnishings shortly prior to the move and the record shows that without making a protest of any kind the contractor proceeded with the move and that it subsequently billed the Government for the services rendered in accordance with the rate stated in the purchase order, the Board finds the purchase order to constitute the agreement of the parties... 979
2. In a case involving the movement of Government office furniture and furnishings within the State of Colorado, the Board finds (i) that the National Park Service is not required to pay a higher rate for the movement of its property than the rate negotiated with the contractor as reflected in an accepted purchase order and (ii) that it is not required to forego presenting to the contracting officer for decision a claim for damages sustained to Government property during the course of the move, even though at the time the move took place the tariff rates promulgated by the Colorado Public Utilities Commission required payment of a higher rate than that specified in the purchase order and even though the same tariff rates required payment of the full amount billed for services rendered before claims against the carrier for damages to property during the move could be entertained... 979

Formalities

1. In a case involving the movement of Government office furniture and furnishings within the State of Colorado, the Board finds (i) that the National Park Service is not required to pay a higher rate for the movement of its property than the rate negotiated with the contractor as reflected in an accepted purchase order and (ii) that it is not required to forego presenting to the contracting officer for decision a claim for damages sustained to Government property during the

course of the move, even though at the time the move took place the tariff rates promulgated by the Colorado Public Utilities Commission required payment of a higher rate than that specified in the purchase order and even though the same tariff rates required payment of the full amount billed for services rendered before claims against the carrier for damages to property during the move could be entertained.

979

Governing Law

1. In a case involving the movement of Government office furniture and furnishings within the State of Colorado, the Board finds (i) that the National Park Service is not required to pay a higher rate for the movement of its property than the rate negotiated with the contractor as reflected in an accepted purchase order and (ii) that it is not required to forego presenting to the contracting officer for decision a claim for damages sustained to Government property during the course of the move, even though at the time the move took place the tariff rates promulgated by the Colorado Public Utilities Commission required payment of a higher rate than that specified in the purchase order and even though the same tariff rates required payment of the full amount billed for services rendered before claims against the carrier for damages to property during the move could be entertained.

979

Implied and Constructive Contracts

1. A Government motion to dismiss an appeal is granted where no express contract between the parties exists, there is no evidence from which an implied in fact contract could be inferred, and the Board is without jurisdiction over contracts implied in law, assuming appellant is seeking full relief.

809

PERFORMANCE OR DEFAULT**Breach**

1. In a contract which provided for helicopter spraying of herbicide on grass after spring sprouting and the Government, after giving notice to proceed and granting permission to the contractor to mix the herbicide for the entire project, changed its mind about the readiness of the grass for spraying and imposed a noncontractual requirement that the grass be 4 inches high before spraying, the Board found that the Government breached its duty not to interfere with the contractor's performance and that the contractor was entitled to damages in the form of standby costs for its helicopter and for the tank truck in which the herbicide was mixed.

803

Excusable Delays

1. Where a prime contractor's delayed performance of its contractual obligations was caused by its sole source subcontractor's failure to perform, the prime contractor assumed the risk of such nonperformance by its subcontractor, and the prime contractor's delayed performance was not an excusable cause of delay cognizable under the default clause.
2. Where the contractor established that a critical diesel fuel shortage prevented timely completion of the contract, and that such shortage was unforeseeable, beyond the control, and without the fault or negligence of the contractor or its subcontractors or suppliers, the Board held that the contractor proved excusable cause for delay.

ENDANGERED SPECIES ACT OF 1973

SECTION 7

Consultation

1. The July 19, 1978, Solicitor's Opinion 85 I.D. 275 (1978) relating to analysis of cumulative effects during consultation pursuant to sec. 7 of the Endangered Species Act, and the July 24, 1978, memorandum, which was a supplement to that opinion, are withdrawn. Any further legal advice on the matter will be provided by the Associate Solicitor for Conservation and Wildlife.....
2. Earlier Solicitor's Opinions on cumulative impact analysis have been withdrawn. Solicitor's Opinion M-36905 (Supp.), 88 I.D. 903 (1981). Sec. 7 consultation under the Endangered Species Act must consider past and present impacts of all projects and human activities, whether private, state or federal. Consultation must also consider the cumulative impacts of other proposed future federal projects in the vicinity which have undergone sec. 7 consultation and received favorable biological opinions. Finally, consideration should also be given to the impacts of proposed state or private actions whose completion prior to the completion of the federal project subject to consultation is reasonably certain.....

915

EVIDENCE**GENERALLY****Page**

1. Settlement agreements compromising prior trespasses may be considered an admission of liability only where, by the terms of a settlement, liability is admitted. Where, however, liability has been initially determined in a Departmental adjudication, such a determination is properly considered in a subsequent hearing. As probative of the issue of "repeated" violations, absent a stipulated settlement which *expressly* vacates the factual determinations made in the prior adjudication..... 276
2. Although at common law, abandonment of a mining claim can be established only by evidence demonstrating that it was the claimant's intention to abandon it and in fact did so, in enacting the Federal Land Policy and Management Act of 1976 (43 U.S.C. § 1744 (1976)) Congress specifically placed the burden on the claimant to show that the claim has not been abandoned by his compliance with the Act's requirements, and any failure of compliance produces a conclusive presumption of abandonment. Accordingly, extraneous evidence that a claimant intended not to abandon his claim may not be considered in such cases..... 370

BURDEN OF PROOF

1. After holding a hearing pursuant to the Administrative Procedure Act, an Administrative Law Judge may properly find that an individual has committed a grazing trespass if that finding is in accordance with, and supported by, reliable, probative and substantial evidence..... 275
2. Where the evidence as to specific trespass indicates that, of a number of cattle counted, some were located on intermingled private land, but there were no barriers, either natural or artificial, which would have prevented the cattle on private land from going onto the public land, it is proper to find that all cattle counted would tend to consume forage at a rate proportional to the ratio of forage available on private and public lands. The burden then shifts to the grazing licensee to rebut this presumption..... 276

CREDIBILITY

1. Where the testimony of appellant's only witness testifying with respect to contract performance was found unworthy of belief and not credible, the Board holds that it has the discretion to reject all the testimony of such witness except that which has been corroborated; and the Board concludes, that except for one of the claims for an equitable adjustment conceded by the Government, there was no corroboration of the discredited testimony, and, therefore, the remaining claims of appellant must be denied for failure to sustain the burden of proof... 591

PRESUMPTIONS

1. Although at common law, abandonment of a mining claim can be established only by evidence demonstrating that it was the claimant's intention to abandon it and in fact did so, in enacting the Federal Land Policy and Management Act of 1976 (43 U.S.C. § 1744 (1976)) Congress specifically placed the burden on the claimant to show that the claim has not been abandoned by his compliance with the Act's requirements, and any failure of compliance produces a conclusive presumption of abandonment. Accordingly, extraneous evidence that a claimant intended not to abandon his claim may not be considered in such cases..... 370

FEDERAL GRANT AND COOPERATIVE AGREEMENT ACT OF 1977**DISTINCTION BETWEEN COOPERATIVE AGREEMENTS AND GRANTS**

Page

1. If substantial involvement is anticipated between the agency and the state a cooperative agreement is to be used to accomplish the public purpose of support. If no substantial involvement is anticipated a grant agreement should be executed to accomplish the public purpose of support or stimulation authorized by Federal statute. Because substantial involvement is anticipated in the instant matter, a grant agreement would be the proper vehicle for accomplishing the public purpose of support.-----

229

SELECTION OF INSTRUMENT

1. Secs. 5 and 6 of the Federal Grant and Cooperative Agreement Act of 1977 require an agency to use a grant or cooperative agreement and not a contract whenever, as in the instant matter, the principal purpose of the relationship between the agency and the state is the transfer of money, property or services or anything of value to a state or local government or other recipient to accomplish a public purpose of support or stimulation authorized by a Federal statute, rather than acquisition by purchase, lease, or barter, of property or services for direct benefit or use of the Federal Government.-----

228

USE OF A CONTRACT

1. Under sec. 4 of the Federal Grant and Cooperative Agreement Act of 1977, 41 U.S.C. § 501 (1976), a contract would not be used to transfer funds from a bureau to a state for the purpose of constructing recreational facilities on Government owned land when the transaction is accompanied by a long term lease of the land to the state because the principal purpose of the relationship is for the benefit of the state and not "for the direct benefit or use of the Federal Government."-----

228

FEDERAL LAND POLICY AND MANAGEMENT ACT OF 1976

(See also Hearings—if included in this Index.)

GENERALLY

1. Neither FLPMA nor the Taylor Grazing Act authorizes appropriation of water or provide an independent statutory basis for claims for water uses inconsistent in any way with the substantive requirements of state law.-----
2. The standard of review in the case of a right-of-way application for a water diversion project is whether the decision demonstrated a reasoned analysis of the factors involved, with due regard for the public interest. A decision to reject such an application will not be affirmed where the record lacks sufficient reasons to support it.-----

253

258

ASSESSMENT WORK

1. The failure of a holder of a millsite claim which has been properly recorded under 43 U.S.C. § 1744 (b) (1976) to file an annual notice of intention to hold the millsite is a curable defect and the millsite may not be deemed to have been abandoned absent a failure to comply with a notice of deficiency.-----

644

EXCHANGES

1. State exchange applications pending on Oct. 21, 1976, may be processed under sec. 8(c) of the Taylor Grazing Act, 43 U.S.C. § 315g(c) (1970), only if the state had complied with all the requirements necessary to vest rights to the exchange in the state; all other applications must be processed under sec. 206 of the Federal Land Policy and Management Act of 1976.-----

232

FEDERAL LAND POLICY AND MANAGEMENT ACT OF 1976—Continued

EXCHANGES—Continued

Page

2. A protest against approval of a state exchange application is properly dismissed where the exchange is shown to be in the public interest under sec. 206 of the Federal Land Policy and Management Act of 1976, and it is immaterial that the protestants may be permittees or licensees of the selected lands whose grazing privileges would have been lost upon completion of the exchange, in that neither a licensee nor a permittee has a vested right in the land covered by the license or permit and such land is available for selection by a state.-----

232

RECORDATION OF AFFIDAVIT OF ASSESSMENT WORK OR NOTICE OF INTENTION TO HOLD MINING CLAIM

1. Under sec. 314 of the Federal Land Policy and Management Act of 1976, 43 U.S.C. § 1744 (1976), the owner of a mining claim located before Oct. 21, 1976, must file a notice of intention to hold or evidence of performance of annual assessment work on the claim on or before Oct. 22, 1979, and prior to Dec. 31 of each year thereafter. This requirement is mandatory and failure to comply is deemed conclusively to constitute an abandonment of the claim by the owner and renders the claim void.-----
2. Although at common law, abandonment of a mining claim can be established only by evidence demonstrating that it was the claimant's intention to abandon it and in fact did so, in enacting the Federal Land Policy and Management Act of 1976 (43 U.S.C. § 1744 (1976)) Congress specifically placed the burden on the claimant to show that the claim has not been abandoned by his compliance with the Act's requirements, and any failure of compliance produces a conclusive presumption of abandonment. Accordingly, extraneous evidence that a claimant intended not to abandon his claim may not be considered in such cases.-----
3. Department of the Interior, as an agency of the executive branch of Government, is without jurisdiction to consider whether the mining claims recordation provisions of the Federal Land Policy and Management Act of 1976 are constitutional.-----
4. Deficiencies under the regulations in the content of an affidavit of assessment work or notice of intention to hold filed with the Bureau of Land Management with respect to an unpatented mining claim may be considered curable and do not result in a conclusive presumption of abandonment of the claim where the filing meets the requirements of sec. 314 of the Federal Land Policy and Management Act of 1976, 43 U.S.C. § 1744 (1976).-----
5. With respect to unpatented mining claims located after Oct. 21, 1976, the fact that the requirement for performing assessment work under the mining law has not yet accrued does not obviate the necessity of filing either notice of intention to hold the claim or evidence of assessment work with the local recording office where the notice of location is recorded and a copy thereof with the Bureau of Land Management prior to Dec. 31 of the year following the calendar year in which the claim was located under sec. 314 of the Federal Land Policy and Management Act of 1976, 43 U.S.C. § 1744 (1976).-----
6. Under sec. 314 of the Federal Land Policy and Management Act of 1976, 43 U.S.C. § 1744 (1976), the owner of a mining claim located on or before Oct. 21, 1976, must file a notice of intention to hold or evidence of performance of annual assessment work on the claim on or before

Oct. 22, 1979, and prior to Dec. 31 of each year thereafter. This requirement is mandatory and failure to comply is deemed conclusively to constitute an abandonment of the claim by the owner and renders the claim void.....

918

7. Department of the Interior, as an agency of the executive branch of Government, is without jurisdiction to consider whether the mining claims recordation provisions of the Federal Land Policy and Management Act of 1976 are constitutional.....

919

RECORDATION OF MINING CLAIMS AND ABANDONMENT

1. The conclusive presumption of abandonment which attends the failure to file an instrument required by 43 U.S.C. § 1744 (1976) is imposed by the statute itself. A matter of law, it is self-operative and does not depend upon any act or decision of an administrative official. In enacting the statute, Congress did not invest the Secretary with authority to waive or excuse noncompliance with the statute, or to afford claimants any relief from the statutory consequences..... 370
2. Under sec. 314 of the Federal Land Policy and Management Act of 1976, 43 U.S.C. § 1744 (1976), and 43 CFR 3833.1-2(a), the owner of an unpatented mining claim located before Oct. 21, 1976, must file on or before Oct. 22, 1979, in the proper BLM office, a copy of the notice of location or the claim will be conclusively deemed to have been abandoned and declared void..... 557
3. Where an unpatented mining claim is located in Alaska near the dividing line separating the Anchorage and Fairbanks districts, indicated on the map in 43 CFR 1821.2-1, such that it is virtually impossible from the map to determine with substantial accuracy in which district the mining claim lies, the timely filing of the location notice by the owner of the claim in either the Alaska State Office or the Fairbanks District Office will be considered as satisfying the requirement of 43 CFR 3833.1-2(a) of filing in the proper BLM office..... 557
4. The failure to file the instruments required by sec. 314 of the Federal Land Policy and Management Act of 1976, 43 U.S.C. § 1744 (1976), and 43 CFR 3833.1 and 3833.2 in the proper Bureau of Land Management office within the time periods prescribed therein conclusively constitutes an abandonment of the mining claim by the owner..... 874
5. Oil placer mining claims located pursuant to the Petroleum and Mineral Oils Act of Feb. 11, 1897, c. 216, 29 Stat. 526, and preserved by sec. 37 of the Mineral Leasing Act of 1920, 30 U.S.C. § 193 (Supp. II 1978), are subject to the recordation requirements of sec. 314 if the Federal Land Policy and Management Act of 1976, 43 U.S.C. § 1744 (1976)..... 918
6. The conclusive presumption of abandonment which attends the failure to file an instrument required by 43 U.S.C. § 1744 (1976) is imposed by the statute itself. A matter of law, it is self-operative and does not depend upon any act or decision of an administrative official. In enacting the statute, Congress did not invest the Secretary with authority to waive or excuse noncompliance with the statute, or to afford claimants any relief from the statutory consequences..... 918
7. The recordation provisions of sec. 314 of the Federal Land Policy and Management Act of 1976, 43 U.S.C. § 1744 (1976), applies to claims which rely on the provision of 30 U.S.C. § 38 (1976) to prove location and posting. Where such claims have not been duly recorded, they are a nullity..... 925

FEDERAL LAND POLICY AND MANAGEMENT ACT OF 1976—Continued**RIGHTS-OF-WAY**

Page

1. The standard of review in the case of a right-of-way application for a water diversion project is whether the decision demonstrated a reasoned analysis of the factors involved, with due regard for the public interest. A decision to reject such an application will not be affirmed where the record lacks sufficient reasons to support it----- 258
2. Rejection of a right-of-way application for a water diversion project will not be affirmed where the record does not support a finding that approval would be incompatible with BLM's timber management plan; that it would adversely affect wildlife; or that it would result in a cumulative adverse impact contrary to the public interest----- 258

WILDERNESS

1. Where an appellant disagrees with the decision below and seeks to have his judgment substituted for that of the decisionmaker, his appeal will be carefully considered, with due regard for the public interest. However, where the responsibility for making such judgments has been exercised by an officer duly delegated with the authority to do so, his action will ordinarily be affirmed in the absence of a showing of compelling reasons for modification or reversal----- 490
2. Valid existing rights are limitations upon the Secretary's authority to manage activities occurring within wilderness study area under the nonimpairment standard. In general, the nonimpairment standard remains the management norm unless it would preclude enjoyment of the rights. When it is determined that the rights can be enjoyed only through activities that will permanently impair an area's suitability, the Secretary must manage the lands to prevent unnecessary and undue degradation and to afford environmental protection----- 909
3. The Bureau of Land Management is directed by sec. 603(c) of the Federal Land Policy and Management Act of 1976 (FLPMA), 43 U.S.C. § 1782 (c) (1976), to manage lands under review for wilderness suitability so as to prevent impairment of wilderness characteristics, except that the continuation of existing mining uses in the same manner and degree in which they were being conducted on the date of enactment of FLPMA (Oct. 21, 1976) is allowed. Such grandfathered use is properly regulated to prevent unnecessary or undue degradation of the land and its resources----- 1115
4. The existence of mining operations actually being conducted on the land on Oct. 21, 1976, and not mere statutory right to use is required to authorize subsequent mining activities in the same manner and degree. 1115
5. A mining claim located prior to the Federal Land Policy and Management Act of 1976 (Oct. 21, 1976) on which a valid discovery has existed from Oct. 21, 1976, to the present constitutes a valid existing right. The owner of such a claim on land under wilderness review will be allowed to continue mining operations to full development even if operations will impair wilderness suitability, subject to regulation to preclude unnecessary or undue degradation of the land and its resources----- 1115

FREEDOM OF INFORMATION ACT (ACT OF JUNE 5, 1967)

1. FOIA's exemptions do not prevent USGS from publishing its finding that a well is producible or from releasing well logs----- 699
2. USGS finding that a well is producible is a central event in the operation of the Outer Continental Shelf Lands Act, *as amended*. Therefore, FOIA requires USGS to release this finding to the public----- 699

FREEDOM OF INFORMATION ACT—Continued

Page

3. Well logs and findings of producibility are not "trade secrets" within the meaning of 18 U.S.C. § 1905 (1976)----- 699
4. Sec. 1905 allows disclosures authorized by law. 30 CFR 650.3, promulgated pursuant to 43 U.S.C. § 1352(c) (Supp. II 1978) and the Administrative Procedure Act, is adequate authority for disclosure of a lessee's well log after a two-year period of confidentiality----- 699

GEOTHERMAL LEASES

(See also Hearings, Mineral Leasing Act—if included in this Index.)

DISCRETION TO LEASE

1. Decisions by BLM to require acceptance of special stipulations prior to leasing certain lands for geothermal resources will be upheld when the record shows that the decisions reflect a reasoned analysis of the factors involved based upon considerations of public interest, and no sufficient reason to disturb the decisions is shown. Where Geological Survey has reported that lands sought are valuable for geothermal resources and Congress recently passed legislation in support of the development of geothermal resources, decisions requiring no surface occupancy stipulations will be set aside and the cases remanded for consideration of the feasibility of the leases issuing with less onerous stipulations.----- 609

LANDS SUBJECT TO

1. Congress, with the passage of the Geothermal Steam Act, 30 U.S.C. § 1001 *et seq.*, intended that geothermal leases be deemed as within the mineral leasing exception of sec. 4(d)(3) of the Wilderness Act of 1964, 16 U.S.C. § 1133(d)(3). Designated wilderness are open to geothermal leasing to the same extent they would have been at the date of their creation. Such leases are subject to the provisions of sec. 4(d)(3) of the Wilderness Act.----- 813

STIPULATIONS

1. Decisions by BLM to require acceptance of special stipulations prior to leasing certain lands for geothermal resources will be upheld when the record shows that the decisions reflect a reasoned analysis of the factors involved based upon considerations of public interest, and no sufficient reason to disturb the decisions is shown. Where Geological Survey has reported that lands sought are valuable for geothermal resources and Congress recently passed legislation in support of the development of geothermal resources, decisions requiring no surface occupancy stipulations will be set aside and the cases remanded for consideration of the feasibility of the leases issuing with less onerous stipulations.----- 609

GEOTHERMAL RESOURCES

1. "Mineral." Geothermal steam, as defined in sec. 2(c) of the Geothermal Steam Act of 1970, 30 U.S.C. § 1001(c), is not a "mineral" as the term is used in the mineral leasing laws. Congress generally did not intend the Steam Act to be treated as a "mineral leasing law."----- 813

GRAZING PERMITS AND LICENSES

(See also Appeals, Hearings, Taylor Grazing Act—
if included in this Index.)

GENERALLY

Page

1. In ascertaining the reasonableness of a rental rate increase for grazing lands permitted under authority of 25 CFR Part 151, it was error for the Administrative Law Judge to conclude that "fair annual return" to which Indian landowners are entitled under the regulations is "something different and less than fair market value."----- 315
2. The independent market survey utilized by the Bureau of Indian Affairs in justifying an increase in grazing rental rates on the Fort Berthold Reservation cannot be regarded as invalid on grounds that off-reservation transactions were included in the survey----- 315
3. In reviewing action of the Bureau of Indian Affairs in raising grazing rental rates, the Board of Indian Appeals should overturn the action only if it is found to be unreasonable. As long as the Bureau's action is supported in law and by substantial evidence, it would be an inappropriate intrusion into the Bureau's function for the Board to substitute its judgment for the agency's----- 315

CANCELLATION OR REDUCTION

1. BLM may temporarily suspend portions of maximum allowable active grazing preferences under 43 CFR 4110.3-2(a) authorizing suspensions in cases of "drought, fire, or other natural causes," in order to provide forage for excess wild horses----- 665

HEARINGS

1. Settlement agreements compromising prior trespasses may be considered an admission of liability only where, by the terms of a settlement, liability is admitted. Where, however, liability has been initially determined in a Departmental adjudication, such a determination is properly considered in a subsequent hearing. As probative of the issue of "repeated" violations, absent a stipulated settlement which expressly vacates the factual determinations made in the prior adjudication----- 276

TRESPASS

1. In determining whether grazing trespasses are "willful," intent sufficient to establish willfulness may be shown by proof of facts which objectively show that the circumstances do not comport with the notion that the trespasser acted in good faith or innocent mistake, or that his or her conduct was so lacking in reasonableness or responsibility that it became reckless or negligent----- 276

HEARINGS

(See also Administrative Procedure, Federal Land Policy & Management Act of 1976, Geothermal Leases, Grazing Permits & Licenses, Indian Probate, Mining Claims, Multiple Mineral Development Act, Rules of Practice, Surface Resources Act, Water Pollution Control—if included in this Index.)

1. Settlement agreements compromising prior trespasses may be considered an admission of liability only where, by the terms of a settlement, liability is admitted. Where, however, liability has been initially determined in a Departmental adjudication, such a determination is properly considered in a subsequent hearing. As probative of the issue of "repeated" violations, absent a stipulated settlement which expressly vacates the factual determinations made in the prior adjudication----- 276

INDIAN ALLOTMENTS ON PUBLIC DOMAIN**LANDS SUBJECT TO**

Page

1. The effect of the issuance of a patent is to transfer legal title from United States and to remove the land from jurisdiction of the Department of the Interior. Where BLM's records show lands have been patented, an Indian allotment application filed under the General Allotment Act of Feb. 8, 1887, for such lands is properly rejected... 244

INDIAN LANDS

(See also Exchanges of Land, Indian Probate, Rights-of-Way—if included in this Index.)

ALLOTMENTS**Alienation**

1. Where the owner of an Alaska Native allotment notified the Bureau of Indian Affairs that an agreement to alienate part of his allotment had been procured from him by fraud and that he revoked his consent to the use of his land for a road and pipeline by the State of Alaska, the Acting Area Director correctly declined to take action to grant an easement across the allotment to the State for a road and pipeline. Departmental regulations deny the agency authority to permit alienation of part of an Alaska Native allotment subject to restrictions against alienation where the allottee refuses to consent to the alienation, and there is no other provision of law requiring or permitting the alienation. 1020

GRAZING**Rental Rates**

1. In ascertaining the reasonableness of a rental rate increase for grazing lands permitted under authority of 25 CFR Part 151, it was error for the Administrative Law Judge to conclude that "fair annual return" to which Indian landowners are entitled under the regulations is "something different and less than fair market value."----- 315
2. The independent market survey utilized by the Bureau of Indian Affairs in justifying an increase in grazing rental rates on the Fort Berthold Reservation cannot be regarded as invalid on grounds that off-reservation transactions were included in the survey----- 315
3. In reviewing action of the Bureau of Indian Affairs in raising grazing rental rates, the Board of Indian Appeals should overturn the action only if it is found to be unreasonable. As long as the Bureau's action is supported in law and by substantial evidence, it would be an inappropriate intrusion into the Bureau's function for the Board to substitute its judgment for the agency's----- 315

PATENT IN FEE**Jurisdiction**

1. The Federal trust responsibility over allotted land or any fractional share thereof is extinguished as to that interest immediately upon its acquisition by a non-Indian. The ministerial issuance of a fee patent serves only a recordkeeping function and is without legal significance in respect to dissolution of the Department's role as trustee----- 987
2. The Department of the Interior owes no fiduciary duties of any kind to a non-Indian who has acquired an interest in allotted trust land.... 987

INDIAN PROBATE

(See also Appeals, Bureau of Indian Affairs, Hearings, Indian Lands, Indian Tribes, Rules of Practice—if included in this Index.)

ADOPTION (See also **CHILDREN, ADOPTED**—if included in this Index.)

Generally

Page

1. The Act of July 8, 1940, 54 Stat. 746 (25 U.S.C. § 372a (1976)) gave limited authority to agency superintendents over the adoption of Indian children. Evaluated in light of its legislative history, the Act must be read as allowing superintendents to validate adoptions agreed to in writing by Indian parties as well as Indian custom adoptions... 410
2. The Act of Mar. 3, 1931, 46 Stat. 1494, relating to the adoption of Indian children on the Crow Reservation in Montana, vested the superintendent of the Crow Agency with adoption authority which served as a model in the draftsmanship of the Act of July 8, 1940..... 410

Crow Tribe

1. The Act of Mar. 3, 1931, 46 Stat. 1494, relating to the adoption of Indian children on the Crow Reservation in Montana, vested the superintendent of the Crow Agency with adoption authority which served as a model in the draftsmanship of the Act of July 8, 1940..... 410

DIVORCE (See also **CLAIM AGAINST ESTATE**—if included in this Index.)

Indian Custom

1. Where no evidence was received at probate hearing to show the customs of any Indian tribe concerning regulation of the domestic relations of members of the tribe, a ruling by an Indian probate Administrative Law Judge that he could officially notice the existence of divorce by Yakima tribal custom was error. Since no evidence was offered to show that decedent, who was of Nez Perce and Yakima ancestry, and appellee, of Alaskan Native descent, lived in tribal relations under the jurisdiction of the Yakima Tribe, it was error to conclude they were nonetheless married in accordance with Yakima customary law..... 676

INDIAN REORGANIZATION ACT OF JUNE 18, 1934
(**WHEELER-HOWARD ACT**)(25 U.S.C. §§ 464-486)

Construction of Section 4

1. Jurisdiction of Indian tribe over Quinault Reservation where estate trust property was located being material to a decision concerning the eligibility of a devisee to take property under an Indian will, it was error to hold that the General Allotment Act conferred jurisdiction over the reservation upon the tribes of persons allotted on the reservation without regard to the historical development of the reservation and the actual implementation of the treaty rights of the tribes concerned. The record demonstrates that since acceptance of the Indian Reorganization Act of 1934 (IRA) the Quinault Tribe exercised exclusive jurisdiction over the Quinault Reservation, and that the Quileute Tribe (one of the tribes whose hereditary members accepted Quinault allotments) had earlier elected to forego any treaty rights it may have claimed in the Quinault Reservation in order to retain its ancestral village at LaPush. The record establishes jurisdiction over the Quinault Reservation to be in the Quinault Tribe, an IRA tribe..... 561

INDIAN PROBATE—Continued**INDIAN REORGANIZATION ACT OF JUNE 18, 1934—Continued****Construction of Section 4—Continued**

Page

2. Sec. 4 of the Indian Reorganization Act of 1934 prior to amendment in 1980 did not permit devises of trust property found on reservations subject to the Act to persons who were neither heirs of the decedent allottee nor members of the tribe having jurisdiction over the reservation where the trust land is located. Thus, since appellee was neither a member of the Quinault tribe nor an heir of decedent, he was barred from taking trust property on the Quinault Reservation under the decedent's will.....

561

KLAMATH TRIBE

1. While it is true that the Klamath Termination Act, Aug. 13, 1954, 68 Stat. 718, 25 U.S.C. §§ 564-564x (1976), rendered inapplicable to Klamath tribal members the Secretary's usual jurisdiction over Indian heirship determinations as set forth in 25 U.S.C. §§ 372-373 (1976) (see 25 U.S.C. § 564h), Congress, by the more recent Act of Oct. 1, 1965, 79 Stat. 897, 25 U.S.C. §§ 565-565g (1976), specifically empowered the Secretary of the Interior to determine the rightful heirs of deceased Klamath enrollees entitled to a share of judgment funds payable from the United States for the limited purpose of seeing that such funds are distributed to the heir or heirs so determined.....
2. The Secretary has no statutory authority to pay creditors' claims against estates of deceased Klamath Indians out of judgment funds distributable by the Secretary under the Act of Oct. 1, 1965, 79 Stat. 897....

619

620

MARRIAGE**Common Law and Indian Custom Distinguished**

1. A holding that decedent and appellee were married by operation of tribal custom based upon a conclusion that the birth of nine children to the couple required a finding they were married was erroneous where the record affirmatively showed decedent was married to another woman at the time of his cohabitation with appellee.....

676

WILLS (See also CONTRACT TO MAKE WILL, INHERITING—if included in this index.)**Construction of**

1. Jurisdiction of Indian tribe over Quinault Reservation where estate trust property was located being material to a decision concerning the eligibility of a devisee to take property under an Indian will, it was error to hold that the General Allotment Act conferred jurisdiction over the reservation upon the tribes of persons allotted on the reservation without regard to the historical development of the reservation and the actual implementation of the treaty rights of the tribes concerned. The record demonstrates that since acceptance of the Indian Reorganization Act of 1934 (IRA) the Quinault Tribe exercised exclusive jurisdiction over the Quinault Reservation, and that the Quilleute Tribe (one of the tribes whose hereditary members accepted Quinault allotments) had earlier elected to forego any treaty rights it may have claimed in the Quinault Reservation in order to retain its ancestral village at LaPush. The record establishes jurisdiction over the Quinault Reservation to be in the Quinault Tribe, an IRA tribe.....

Construction of—Continued

Page

2. Sec. 4 of the Indian Reorganization Act of 1934 prior to amendment in 1980 did not permit devises of trust property found on reservations subject to the Act to persons who were neither heirs of the decedent allottee nor members of the tribe having jurisdiction over the reservation where the trust land is located. Thus, since appellee was neither a member of the Quinault tribe nor an heir of decedent, he was barred from taking trust property on the Quinault Reservation under the decedent's will.....

561

Disapproval of Will

1. Under the Supreme Court's holding in *Tooahnippah v. Hickel*, 397 U.S. 598 (1970), the Department may not revoke or rewrite an otherwise valid will disposing of Indian trust or restricted property that reflects a rational testamentary scheme simply because the disposition does not comport with the deciding official's conception of equity and fairness.....

993

Failure to Mention Child

1. The failure of decedent's will to provide for two after-born children is insufficient to render the dispositive scheme irrational.....

993

INDIAN TRIBES

(See also Appeals, Indian Probate—if included in this Index.)

ALASKAN GROUPS

1. The provisions of the Alaska Native Claims Settlement Act defining the class of persons entitled to share in benefits under the Act are not ambiguous so as to require reference to the legislative history to determine whether persons becoming United States citizens after Dec. 18, 1971, the effective date of the Act, are entitled to be enrolled.....
2. The provisions of the Alaska Native Claims Settlement Act specifically exclude members of the Metlakatla Tribe of the Annette Islands Reserve from benefits under the Act. Where appellant and her children periodically resided at Metlakatla, accepted benefits from the Metlakatla Tribe as tribal members, were enrolled members since 1968, and did not initiate efforts to terminate tribal membership until 1974, appellants were enrolled members of Matlakatla within the meaning of the Alaska Native Claims Settlement Act and were properly excluded from enrollment under the Act.....
3. Exclusion of appellant members of the Metlakatla Community from benefits under provisions of the Alaska Native Claims Settlement Act held not to be precluded by a contrary result reached in a prior Administrative Law Judge's decision in a similar case. The determination by the agency factfinder in the separate but similar situation is not binding upon the Board of Indian Appeals, which renders final decision for the Department in disenrollment appeals referred on appeal to the Board.....

262

575

822

FEDERAL RECOGNITION

1. Only those groups which have received Federal acknowledgement of their Indian tribal status constitute Indian tribes, for purposes of sec. 2 of the Bald Eagle Protection Act.....

338

INDIAN TRIBES—Continued**HUNTING AND FISHING****Generally**

1. The prohibitions of the Bald and Golden Eagle Protection Act and Migratory Bird Treaty Act are nondiscriminatory, reasonable and necessary conservation measures to which reserved Indian hunting rights are subject.-----

586

JUDGMENT FUNDS

1. While it is true that the Klamath Termination Act, Aug. 13, 1954, 68 Stat. 718, 25 U.S.C. §§ 564-564x (1976), rendered inapplicable to Klamath tribal members the Secretary's usual jurisdiction over Indian heirship determinations as set forth in 25 U.S.C. §§ 372-373 (1976) (see 25 U.S.C. § 564h), Congress, by the more recent Act of Oct. 1, 1965, 79 Stat. 897, 25 U.S.C. §§ 565-565g (1976), specifically empowered the Secretary of the Interior to determine the rightful heirs of deceased Klamath enrollees entitled to a share of judgment funds payable from the United States for the limited purpose of seeing that such funds are distributed to the heir or heirs so determined.-----

619

INDIANS**CRIMINAL JURISDICTION**

1. Six parcels of Bureau of Indian Affairs school land adjoining land held in trust for the Mississippi Band of Choctaw Indians are Indian country within the meaning of 18 U.S.C. § 1151(b) (1976)-----

333

LACHES

1. The authority of the United States to enforce a public right or protect a public interest is not vitiated or lost through lack of enforcement by some of its officers.-----

915

MINERAL LANDS**PROSPECTING PERMITS**

1. Where, pursuant to 43 CFR Part 3510, BLM grants a 2-year permit for hardrock mineral prospecting on certain acquired national forest lands with the concurrence of the Forest Service and Geological Survey, and thereafter fails to approve the permittee's operating plan during the term of the permit and a 2-year extension, the permit will be considered to have been suspended during that period and the permittee granted a 2-year term for prospecting with the right to apply for an extension as provided by the regulations.-----

646

MINERAL LEASING ACT

(See also Bureau of Land Management, Coal Leases & Permits, Geothermal Leases, Oil & Gas Leases, Phosphate Leases & Permits, Potassium Leases & Permits, Sodium Leases & Permits—if included in this Index.)

APPLICABILITY

1. Although Congress revised the provision governing readjustment of federal coal leases in 1976, the deletion of the clause "unless otherwise provided by law at the time of expiration of such periods" from sec. 7 of the MLA (30 U.S.C. § 207) did not alter the Secretary's obligation not to establish any lease terms contrary to law in readjusting a coal lease.-----
2. The legislative history of sec. 6 of the Federal Coal Leasing Amendments Act shows that the revision of sec. 7 of the MLA (30 U.S.C. § 207) was

1003

MINERAL LEASING ACT—Continued**APPLICABILITY—Continued**

Page

not retroactive; but applied to new leases and to "old" leases upon readjustment. The ten-year production period and revised royalty rates of amended sec. 7 must be imposed on "old" coal leases at readjustment. The legislative history to the 1978 coal leasing revisions (Act of Oct. 30, 1978) discloses that Congress understood and acted on the assumption that the amended sec. 7 royalty rates did apply to all "old" leases upon readjustment.-----

1003

METHODS OF DEVELOPMENT

1. The MLA refers only to "gas" or "natural gas" without any qualifying adjectives; thus supporting a nonrestrictive reading of those terms to include coalbed gas. Coalbed gas is leasable under the oil and gas leasing provision of the MLA, 30 U.S.C. § 226 (1976)-----
2. Coalbed gas is not included in a coal lease under the MLA. In the coal leasing provision on the MLA, Congress did not provide for a coal lessee's extraction of minerals related to or associated with coal. 30 U.S.C. § 201 (Supp. II 1978). This provision does not authorize a coal lessee's extraction of coalbed gas, other than the venting of the gas required by mine health and safety laws and regulations-----

538

538

MINING CLAIMS

(See also Hearings, Millsites, Multiple Mineral Development Act, Surface Resources Act—of included in this Index.)

GENERALLY

1. The Bureau of Land Management is directed by sec. 603(c) of the Federal Land Policy and Management Act of 1976 (FLPMA), 43 U.S.C. § 1782(c) (1976), to manage lands under review for wilderness suitability so as to prevent impairment of wilderness characteristics, except that the continuation of existing mining uses in the same manner and degree in which they were being conducted on the date of enactment of FLPMA (Oct. 21, 1976) is allowed. Such grandfathered use is properly regulated to prevent unnecessary or undue degradation of the land and its resources.-----
2. The existence of mining operations actually being conducted on the land on Oct. 21, 1976, and not mere statutory right to use is required to authorize subsequent mining activities in the same manner and degree.-----
3. A mining claim located prior to the Federal Land Policy and Management Act of 1976 (Oct. 21, 1976) on which a valid discovery has existed from Oct. 21, 1976, to the present constitutes a valid existing right. The owner of such a claim on land under wilderness review will be allowed to continue mining operations to full development even if operations will impair wilderness suitability, subject to regulation to preclude unnecessary or undue degradation of the land and its resources.-----

1115

1115

1115

ABANDONMENT

1. The conclusive presumption of abandonment which attends the failure to file an instrument required by 43 U.S.C. § 1744 (1976) is imposed by the statute itself. A matter of law, it is self-operative and does not depend upon any act or decision of an administrative official. In enacting the statute, Congress did not invest the Secretary with authority to waive or excuse noncompliance with the statute, or to afford claimants any relief from the statutory consequences.-----

370

MINING CLAIMS—Continued

ABANDONMENT—Continued

	Page
2. Although at common law, abandonment of a mining claim can be established only by evidence demonstrating that it was the claimant's intention to abandon it and in fact did so, in enacting the Federal Land Policy and Management Act of 1976 (43 U.S.C. § 1744 (1976)) Congress specifically placed the burden on the claimant to show that the claim has not been abandoned by his compliance with the Act's requirements, and any failure of compliance produces a conclusive presumption of abandonment. Accordingly, extraneous evidence that a claimant intended not to abandon his claim may not be considered in such cases.....	370
3. Under sec. 314 of the Federal Land Policy and Management Act of 1976, 43 U.S.C. § 1744 (1976), and 43 CFR 3833.1-2(a), the owner of an unpatented mining claim located before Oct. 21, 1976, must file on or before Oct. 22, 1979, in the proper BLM office, a copy of the notice of location or the claim will be conclusively deemed to have been abandoned and declared void.....	557
4. Where an unpatented mining claim is located in Alaska near the dividing line separating the Anchorage and Fairbanks districts, indicated on the map in 43 CFR 1821.2-1, such that it is virtually impossible from the map to determine with substantial accuracy in which district the mining claim lies, the timely filing of the location notice by the owner of the claim in either the Alaska State Office or the Fairbanks District Office will be considered as satisfying the requirement of 43 CFR 3833.1-2(a) of filing in the proper BLM office.....	557
5. Deficiencies under the regulations in the content of an affidavit of assessment work or notice of intention to hold filed with the Bureau of Land Management with respect to an unpatented mining claim may be considered curable and do not result in a conclusive presumption of abandonment of the claim where the filing meets the requirements of sec. 314 of the Federal Land Policy and Management Act of 1976, 43 U.S.C. § 1744 (1976).....	682
6. With respect to unpatented mining claims located after Oct. 21, 1976, the fact that the requirement for performing assessment work under the mining law has not yet accrued does not obviate the necessity of filing either notice of intention to hold the claim or evidence of assessment work with the local recording office where the notice of location is recorded and a copy thereof with the Bureau of Land Management prior to Dec. 31 of the year following the calendar year in which the claim was located under sec. 314 of the Federal Land Policy and Management Act of 1976, 43 U.S.C. § 1744 (1976).....	682
7. 8. Oil placer mining claims located pursuant to the Petroleum and Mineral Oils Act of Feb. 11, 1897, c. 216, 29 Stat. 526, and preserved by sec. 37 of the Mineral Leasing Act of 1920, 30 U.S.C. § 193 (Supp. II 1978), are subject to the recordation requirements of sec. 314 of the Federal Land Policy and Management Act of 1976, 43 U.S.C. § 1744 (1976)---	918

MINING CLAIMS—Continued**ABANDONMENT—Continued**

Page

9. The conclusive presumption of abandonment which attends the failure to file an instrument required by 43 U.S.C. § 1744 (1976) is imposed by the statute itself. A matter of law, it is self-operative and does not depend upon any act or decision of an administrative official. In enacting the statute, Congress did not invest the Secretary with authority to waive or excuse noncompliance with the statute, or to afford claimants any relief from the statutory consequences.----- 918
10. The recordation provisions of sec. 314 of the Federal Land Policy and Management Act of 1976, 43 U.S.C. § 1744 (1976), applies to claims which rely on the provision of 30 U.S.C. § 38 (1976) to prove location and posting. Where such claims have not been duly recorded, they are a nullity----- 965

ASSESSMENT WORK

1. The legal presumption that administrative officials have properly discharged their duties and not lost or misplaced legally significant documents filed with them is rebuttable by probative evidence to the contrary. However, an affidavit that evidence of assessment work was timely filed with the proper BLM office must ordinarily be corroborated by other evidence to establish filing where there is no evidence of receipt of the documents in the file----- 874
2. Oil placer mining claims located pursuant to the Petroleum and Mineral Oils Act of Feb. 11, 1897, c. 216, 29 Stat. 526, and preserved by sec. 37 of the Mineral Leasing Act of 1920, 30 U.S.C. § 193 (Supp. II 1978), are subject to the recordation requirements of sec. 314 of the Federal Land Policy and Management Act of 1976, 43 U.S.C. § 1744 (1976)----- 918
3. Failure to substantially comply with the requirements to annually perform assessment work on a claim which is located on withdrawn land results in a forfeiture of that claim to the United States----- 926

CONTESTS

1. Where, following the contest of a number of mining claims, a decision is rendered by an Administrative Law Judge holding certain claims and portions of claims to be valid and invalidating the remainder for lack of mineral or as embracing excess mineral reserves, and the Government appeals from that decision but the claimant does not, that decision will be set aside and the case remanded for rehearing on the basis of a judicial decision in another case, made while the subject appeal was pending, that there can be no invalidation of mining claims by this Department on a finding that the claimant has acquired claims for far more mineral than the market can absorb within the foreseeable future----- 772

DETERMINATION OF VALIDITY

1. Pursuant to the Department Manual 601 DM 2, requirements in Secretary's Order No. 3029, as to adjudication of Federally created interests, do not apply to unpatented mining claims and the Bureau of Land Management is not required to adjudicate mining claims before conveyance. Pursuant to ANCSA and Secretary's Order No. 3029, *as amended*, lands selected by a Native corporation must be conveyed by the Bureau of Land Management notwithstanding the existence of an unpatented mining claim within such lands which has not been adjudicated for validity under the general mining laws----- 760

MINING CLAIMS—Continued**DISCOVERY****Marketability**

1. Land may be considered "chiefly valuable for building stone" where the building stone values of the mineral deposit sought are greater than any other mineral values or nonmineral values for which the land may be appropriated.....

Page

926

EXCESS RESERVES

1. Where, following the contest of a number of mining claims, a decision is rendered by an Administrative Law Judge holding certain claims and portions of claims to be valid and invalidating the remainder for lack of mineral or as embracing excess mineral reserves, and the Government appeals from that decision but the claimant does not, that decision will be set aside and the case remanded for rehearing on the basis of a judicial decision in another case, made while the subject appeal was pending, that there can be no invalidation of mining claims by this Department on a finding that the claimant has acquired claims for far more mineral than the market can absorb within the foreseeable future.....

772

LANDS SUBJECT TO

1. The President had nonstatutory authority to withdraw public land in addition to authority conferred upon him by the Pickett Act, 43 U.S.C. §§ 141, 142 (1970). Such nonstatutory authority was not limited by the terms of 43 U.S.C. § 142 (1970) which provided that withdrawn lands shall remain open to location for metalliferous minerals.....
2. Where BLM filed an application for a protective withdrawal pursuant to Exec. Order No. 10355 which would reserve the subject land from all forms of appropriation including location and entry under the mining laws and the application was duly noted on the official status plats, the lands were segregated from the date of notation to the extent that the withdrawal, if effected, would prevent such forms of appropriation. A protective withdrawal is not a temporary withdrawal under the Pickett Act, 43 U.S.C. § 141 (1970), and is not limited by the terms of 43 U.S.C. § 142 (1970) which provides that temporarily withdrawn lands shall remain open to location for metalliferous minerals.....
3. A mining claim located on land which was segregated and closed to mineral entry is properly declared null and void ab initio.....

31

31

31

LOCATION

1. While deposits of limestone chiefly valuable for building stone were subject to location only as placer claims, deposits of limestone valuable for their chemical or metallurgical properties are properly located according to the form of their deposition.....
2. All placer claims must conform "as near as practicable" with the system of rectangular public land surveys. Where a claim does not so conform and it is not possible to amend the claim so that it does, the entry must be canceled.....

926

926

LODE CLAIMS

1. To constitute discovery upon a lode mining claim, there must be exposed within the claim a vein or lode of quartz or other rock in place, bearing gold or some other mineral deposit in such quality and quantity which would warrant a prudent man in the expenditure of his time and money with a reasonable prospect of success in developing a valuable mine.....
2. While deposits of limestone chiefly valuable for building stone were subject to location only as placer claims, deposits of limestone valuable for their chemical or metallurgical properties are properly located according to the form of their deposition.....

925

926

MINING CLAIMS—Continued

MILLSITES

Page

1. The failure of a holder of a millsite claim which has been properly recorded under 43 U.S.C. § 1744(b) (1976) to file an annual notice of intention to hold the millsite is a curable defect and the millsite may not be deemed to have been abandoned absent a failure to comply with a notice of deficiency..... 644
2. Since millsites may only be located on nonmineral land, a millsite claim is necessarily adverse to a mining claim. Thus, land embraced by a millsite claim is not open to the initiation of rights under 30 U.S.C. § 38 (1976)..... 925

PLACER CLAIMS

1. Oil placer mining claims located pursuant to the Petroleum and Mineral Oils Act of Feb. 11, 1897, c. 216, 29 Stat. 526, and preserved by sec. 37 of the Mineral Leasing Act of 1920, 30 U.S.C. § 193 (Supp. II 1978), are subject to the recordation requirements of sec. 314 of the Federal Land Policy and Management Act of 1976, 43 U.S.C. § 1744 (1976)... 918
2. A placer mining claim has been defined as ground that includes valuable deposits not in place, that is, not fixed in rock, but which are in a loose state..... 925
3. Under provisions of the Act of Aug. 4, 1892, 30 U.S.C. § 161 (1976), known as the Building Stone Act, land chiefly valuable for building stone can only be entered by mining claims in the placer form, regardless of the actual mode of occurrence of the deposit..... 925
4. While deposits of limestone chiefly valuable for building stone were subject to location only as placer claims, deposits of limestone valuable for their chemical or metallurgical properties are properly located according to the form of their deposition..... 926
5. Nothing in 30 U.S.C. § 38 (1976) alters the requirement limiting each individual claimant to 20 acres per location. Thus, for a single possessory claim of 85 acres to be sustained, it must be shown that five individuals held and worked the claim for the requisite period of time.. 926
6. All placer claims must conform "as near as practicable" with the system of rectangular public land surveys. Where a claim does not so conform and it is not possible to amend the claim so that it does, the entry must be canceled..... 926

POSSESSORY RIGHT

1. When an unpatented mining claim is situated within lands selected and approved for conveyance under ANCSA, the possessory interest of the mining claimant is protected under provisions of § 22(c) and 43 CFR 2650.3-2 as a valid existing right notwithstanding that the Bureau of Land Management has not adjudicated such unpatented mining claims prior to conveyance..... 761
2. Under the provisions of 30 U.S.C. § 38 (1976), the holding and working of a claim for the period of time equal to the State's statute of limitations is the legal equivalent of proofs of acts of location, recording, and transfer. This provision does not, however, alter other requirements of the mining laws, such as the necessity of a discovery or limitations on acreage which may be taken up in a claim..... 926
3. The requirements of 30 U.S.C. § 38 (1976), relating to "holding" and "working" a claim may be met where the assessment work requirements have been met and where there is actual possession or occupancy of the claim..... 926

MINING CLAIMS—Continued**POSSESSORY RIGHTS—Continued**

Page

4. Nothing in 30 U.S.C. § 38 (1976) alters the requirement limiting each individual claimant to 20 acres per location. Thus, for a single possessory claim of 85 acres to be sustained, it must be shown that five individuals held and worked the claim for the requisite period of time..... 926
5. Since millsites may only be located on nonmineral land, a millsite claim is necessarily adverse to a mining claim. Thus, land embraced by a millsite claim is not open to the initiation of rights under 30 U.S.C. § 38 (1976)..... 926
6. The recordation provisions of sec. 314 of the Federal Land Policy and Management Act of 1976, 43 U.S.C. § 1744 (1976), applies to claims which rely on the provision of 30 U.S.C. § 38 (1976) to prove location and posting. Where such claims have not been duly recorded, they are a nullity..... 926

POWERSITE LANDS

1. Under the Mining Claims Rights Restoration Act of 1955, it is proper to prohibit all placer mining operations on a mining claim on land withdrawn for power development or powersites, where unrestricted placer mining on such land would result in substantial interference with the use of the land for recreational purposes..... 453
2. The Mining Claims Rights Restoration Act of 1955 gives the Secretary of the Interior no discretion to permit limited or restricted placer mining on land withdrawn or reserved for power development or powersites. The Secretary may permit either unrestricted placer mining or none at all. The only condition which he may impose on permission to mine is that the locator must restore the surface of the claim to its condition immediately prior to mining operations..... 453

RECORDATION

1. Under sec. 314 of the Federal Land Policy and Management Act of 1976, 43 U.S.C. § 1744 (1976), the owner of a mining claim located before Oct. 21, 1976, must file a notice of intention to hold or evidence of performance of annual assessment work on the claim on or before Oct. 22, 1979, and prior to Dec. 31 of each year thereafter. This requirement is mandatory and failure to comply is deemed conclusively to constitute an abandonment of the claim by the owner and renders the claim void..... 369
2. Department of the Interior, as an agency of the executive branch of Government, is without jurisdiction to consider whether the mining claims recordation provisions of the Federal Land Policy and Management Act of 1976 are constitutional..... 370
3. Under sec. 314 of the Federal Land Policy and Management Act of 1976, 43 U.S.C. § 1744 (1976), and 43 CFR 3833.1-2(a), the owner of an unpatented mining claim located before Oct. 21, 1976, must file on or before Oct. 22, 1979, in the proper BLM office, a copy of the notice of location or the claim will be conclusively deemed to have been abandoned and declared void..... 557
4. Where an unpatented mining claim is located in Alaska near the dividing line separating the Anchorage and Fairbanks districts, indicated on the map in 43 CFR 1821.2-1, such that it is virtually impossible from the map to determine with substantial accuracy in which district the mining claim lies, the timely filing of the location notice by the owner of the

RECORDATION—Continued

	Page
claim in either the Alaska State Office or the Fairbanks District Office will be considered as satisfying the requirement of 43 CFR 3833.1-2(a) of filing in the proper BLM office.....	557
5. Oil placer mining claims located pursuant to the Petroleum and Mineral Oils Act of Feb. 11, 1897, c. 216, 29 Stat. 526, and preserved by sec. 37 of the Mineral Leasing Act of 1920, 30 U.S.C. § 193 (Supp. II 1978), are subject to the recordation requirements of sec. 314 of the Federal Land Policy and Management Act of 1976, 43 U.S.C. § 1744 (1976).....	918
6. Under sec. 314 of the Federal Land Policy and Management Act of 1976, 43 U.S.C. § 1744 (1976), the owner of a mining claim located on or before Oct. 21, 1976, must file a notice of intention to hold or evidence of performance of annual assessment work on the claim on or before Oct. 22, 1979, and prior to Dec. 31 of each year thereafter. This requirement is mandatory and failure to comply is deemed conclusively to constitute an abandonment of the claim by the owner and renders the claim void.....	918
7. Department of the Interior, as an agency of the executive branch of Government, is without jurisdiction to consider whether the mining claims recordation provisions of the Federal Land Policy and Management Act of 1976 are constitutional.....	919

SURFACE USES

1. Under the Mining Claims Rights Restoration Act of 1955, it is proper to prohibit all placer mining operations on a mining claim on land withdrawn for power development or powersites, where unrestricted placer mining on such land would result in substantial interference with the use of the land for recreational purposes.....	453
2. The Mining Claims Rights Restoration Act of 1955 gives the Secretary of the Interior no discretion to permit limited or restricted placer mining on land withdrawn or reserved for power development or powersites. The Secretary may permit either unrestricted placer mining or none at all. The only condition which he may impose on permission to mine is that the locator must restore the surface of the claim to its condition immediately prior to mining operations.....	453

WITHDRAWN LAND

1. The President had nonstatutory authority to withdraw public land in addition to authority conferred upon him by the Pickett Act, 43 U.S.C. §§ 141, 142 (1970). Such nonstatutory authority was not limited by the terms of 43 U.S.C. § 142 (1970) which provided that withdrawn lands shall remain open to location for metalliferous minerals.....	31
2. Where BLM filed an application for a protective withdrawal pursuant to Exec. Order No. 10355 which would reserve the subject land from all forms of appropriation including location and entry under the mining laws and the application was duly noted on the official status plats, the lands were segregated from the date of notation to the extent that the withdrawal, if effected, would prevent such forms of appropriation. A protective withdrawal is not a temporary withdrawal under the Pickett Act, 43 U.S.C. § 141 (1970), and is not limited by the terms of 43 U.S.C. § 142 (1970) which provides that temporarily withdrawn lands shall remain open to location for metalliferous minerals.....	31

|--|-----|

OIL AND GAS LEASES

(See also Mineral Leasing Act, Outer Continental Shelf Lands Act—if included in this Index.)

GENERALLY

- | | |
|---|-----|
| 1. The MLA refers only to "gas" or "natural gas" without any qualifying adjectives, thus supporting a nonrestrictive reading of those terms to include coalbed gas. Coalbed gas is leasable under the oil and gas leasing provision of the MLA, 30 U.S.C. § 226 (1976)..... | 538 |
| 2. A determination by the Geological Survey of the known geologic structure of a producing oil and gas field will not be disturbed in the absence of a clear and definite showing that the determination was improperly made..... | 550 |

APPLICATIONS**Generally**

- | | |
|---|--|
| 1. When an individual files an oil and gas lease offer through a leasing service under an agreement where the leasing service is authorized to act as the sole and exclusive agent to negotiate for sublease, assignment or sale of any rights obtained by the offeror; where the offeror | |
|---|--|

OIL AND GAS LEASES—Continued

APPLICATIONS—Continued

Generally—Continued

is required to pay the leasing service according to a set schedule, even if the offeror negotiates the sale; and where such agency to negotiate is to be valid for 5 years, the leasing service has an enforceable right to share in the proceeds of any sale of the lease or any interest therein, and any payments of overriding royalties retained. Such an agreement creates for the leasing service an "interest" in the lease as that term is defined in 43 CFR 3100.0-5(b), and the offeror is required to disclose this interest at the time of filing under 43 CFR 3102.7-----	236
2. The Department has authority to cancel leases administratively where the lease was granted pursuant to an underlying offer which violated the Departmental regulation requiring an offeror to disclose, at the time of filing, the existence of all parties holding interests in the offer.---	236
3. Where no application for BLM's approval of a transfer of any interest in an offer and lease (if issued) has ever been filed, BLM should issue the lease, if appropriate, to the offeror only-----	236
4. The regulations controlling transfer of oil and gas interests were amended on June 16, 1980, and the amended regulations govern where the interest holder has not sought approval of a transfer of his interest prior to this date. Under these amended regulations, BLM cannot consider any application for approval of a transfer of a lease interest until after the lease is issued.-----	237
5. When an individual files an oil and gas lease offer through a leasing service under an agreement whereby the leasing service is authorized to act as the sole and exclusive agent to negotiate for sublease, assignment, or sale of any rights obtained by the offeror; where the offeror is required to pay the leasing service according to a set schedule, even if the offeror negotiates the sale; and where such agency to negotiate is to be valid for 5 years, the leasing service has an enforceable right to share in the proceeds of any sale of the lease or any interest therein, and in any payments of overriding royalties retained. Such an agreement creates for the leasing service an "interest" in the lease as that term is defined in 43 CFR 3100.0-5(b)-----	479
6. Where an individual files an oil and gas lease offer through a leasing service under an agreement with the service which has been determined to create an interest in the lease for the service, and the service files a "waiver" of that interest with the BLM prior to a simultaneous drawing, without communicating such "waiver" to the client, and without any contractual consideration running from the client to the leasing service, the "waiver" is without effect as a matter of law and both the successful drawee and the leasing service are required to make a showing as to their respective interests under 43 CFR 3102.7-----	479
7. The Department is not estopped from rejecting an oil and gas lease offer because the offeror allegedly relied on the acceptance by employees in a BLM state office of a plan designed by the offeror to remove a fatal defect in the offer, where the offeror had both constructive and actual knowledge that the BLM state office employees are subordinate personnel and that their decisions are subject to reversal on review at the Secretarial level.-----	480

OIL AND GAS LEASES—Continued**APPLICATIONS—Continued****Generally—Continued**

- | | |
|---|-----|
| 8. An oil and gas lease application, Form 3112-1 (June 1980), is not completed in accordance with regulation 43 CFR 3112.2-1 or the instructions on the application itself where questions (d) through (f) are not answered by checking appropriate boxes in the application as the instructions require..... | 915 |
| 9. An applicant for a simultaneous oil and gas lease who is legally a minor at the time he executes and files the application is not qualified to hold a lease under the regulations, and the application is properly rejected.. | 111 |

Attorneys-in-Fact or Agents

- | | |
|---|-----|
| 1. 43 CFR 3102.6-1 sets forth the statements and evidence required when an attorney-in-fact or agent signs a simultaneous oil and gas lease drawing entry card on behalf of the applicant. Where an offer is signed and completed by a father acting as agent for his son, and where the father advises the son as to the selection of the parcel, the applicant cannot be considered "qualified" and the offer to lease drawn with first priority accepted, unless the statements required by 43 CFR 3102.6-1 have been filed with the drawing entry card..... | 341 |
| 2. Under 43 CFR 3102.2-1, a simultaneous oil and gas lease applicant may file for reference the statement of qualifications of his agent required by 43 CFR 3102.2-6 in any Bureau of Land Management office. Upon acceptance of the filing by BLM and assignment of a serial number, the applicant may properly reference the serial number on future oil and gas applications filed with any BLM office in lieu of resubmitting the statement..... | 870 |
| 3. Pursuant to 43 CFR 3112.2-1(b), a simultaneous oil and gas lease application must be manually signed in ink either by the applicant or someone authorized to sign on behalf of the applicant. Where applicant's agent has typed the applicant's name and manually signed as agent, the application conforms to the regulations..... | 871 |
| 4. An oil and gas lease application, Form 3112-1 (June 1980), is not completed in accordance with regulation 43 CFR 3112.2-1 or the instructions on the application itself where questions (d) through (f) are not answered by checking appropriate boxes in the application as the instructions require..... | 915 |

Drawings

- | | |
|---|-----|
| 1. 43 CFR 3102.6-1 sets forth the statements and evidence required when an attorney-in-fact or agent signs a simultaneous oil and gas lease drawing entry card on behalf of the applicant. Where an offer is signed and completed by a father acting as agent for his son, and where the father advises the son as to the selection of the parcel, the applicant cannot be considered "qualified" and the offer to lease drawn with first priority accepted, unless the statements required by 43 CFR 3102.6-1 have been filed with the drawing entry card..... | 341 |
| 2. A party which purchases a first-drawn simultaneous noncompetitive DEC lease offer is a bona fide purchaser of this interest where, at the time it agreed to purchase the offer, BLM's case records contained nothing to indicate that the DEC was defective or that a protest against the offer was ongoing; and where, at the time it consummated the agree- | |

4. Where an individual files an oil and gas lease offer through a leasing service under an agreement with the service which has been determined to create an interest in the lease for the service, and the service files a "waiver" of that interest with the BLM prior to a simultaneous drawing, without communicating such "waiver" to the client, and without any contractual consideration running from the client to the leasing service, the "waiver" is without effect as a matter of law and both the successful drawee and the leasing service are required to make a showing as to their respective interests under 43 CFR 3102.7... 479

ASSIGNMENTS OR TRANSFERS

1. Where no application for BLM's approval of a transfer of any interest in an offer and lease (if issued) has ever been filed, BLM should issue the lease, if appropriate, to the offeror only..... 236
2. The regulations controlling transfer of oil and gas interests were amended on June 16, 1980, and the amended regulations govern where the interest holder has not sought approval of a transfer of his interest prior to this date. Under these amended regulations, BLM cannot consider any application for approval of a transfer of a lease interest until after the lease is issued..... 237
3. A noncompetitive oil and gas lease may only be issued to the first-qualified applicant therefor. An extension of time may be granted to supply necessary evidence of joinder in a unit agreement prior to lease issuance and a lease offer will not be rejected in favor of a junior offeror where an extension is timely requested and the requested evidence is provided in good faith and without unreasonable delay thereafter... 347
4. A party which purchases a first-drawn simultaneous noncompetitive DEC lease offer is a bona fide purchaser of this interest where, at the time it agreed to purchase the offer, BLM's case records contained nothing to indicate that the DEC was defective or that a protest against the offer was ongoing; and where, at the time it consummated the agreement by payment of consideration for the offer, these records showed that BLM had proceeded to issue the lease, thus indicating that there was no defect in the DEC, provided that the purchaser had no actual knowledge of any defect in the DEC..... 480
5. A "remote purchaser," that is, one who purchases an oil and gas lease interest from a bona fide purchaser, is protected just as is the latter, even where it is chargeable with knowledge that there may have been a legal discrepancy when the lease was initially issued..... 480

BONA FIDE PURCHASER

1. A party which purchases a first-drawn simultaneous noncompetitive DEC lease offer is a bona fide purchaser of this interest where, at the time it agreed to purchase the offer, BLM's case records contained nothing to indicate that the DEC was defective or that a protest against the offer was ongoing; and where, at the time it consummated the agreement by payment of consideration for the offer, these records showed that BLM had proceeded to issue the lease, thus indicating that there was no defect in the DEC, provided that the purchaser had no actual knowledge of any defect in the DEC..... 480
2. An overriding royalty interest retained by a lessee after he has assigned the lease to a bona fide purchaser is voidable and properly canceled where it

OIL AND GAS LEASES—Continued**BONA FIDE PURCHASER—Continued**

Page

is revealed that the lessee's original lease offer failed to disclose the existence of another party in interest in the offer. Any overriding royalties which the lessee assigned to the other party in interest are also properly canceled, as this party is not a bona fide purchaser thereof, having had actual knowledge of the defect in the lease. BLM should, on remand, sell these canceled overriding royalty interests as provided in 30 U.S.C. § 184(h) (1976) and 43 CFR 3102.1-2(b)-----

480

3. A "remote purchaser," that is, one who purchases an oil and gas lease interest from a bona fide purchaser, is protected just as is the latter, even where it is chargeable with knowledge that there may have been a legal discrepancy when the lease was initially issued-----

480

CANCELLATION

1. The Department has authority to cancel leases administratively where the lease was granted pursuant to an underlying offer which violated the Departmental regulation requiring an offeror to disclose, at the time of filing, the existence of all parties holding interests in the offer--
2. An overriding royalty interest retained by a lessee after he has assigned the lease to a bona fide purchaser is voidable and properly canceled where it is revealed that the lessee's original lease offer failed to disclose the existence of another party in interest in the offer. Any overriding royalties which the lessee assigned to the other party in interest are also properly canceled, as this party is not a bona fide purchaser thereof, having had actual knowledge of the defect in the lease. BLM should, on remand, sell these canceled overriding royalty interests as provided in 30 U.S.C. § 184(h) (1976) and 43 CFR 3102.1-2(b)-----

236

480

COMPETITIVE LEASES

1. Where a competitive, fractional interest, oil and gas lease is issued with conflicting and confusing rental provisions recited in the lease terms and in an attachment to the lease, a deficient rental payment by the lessee in reasonable reliance on the section providing for rental based upon the pro rata fractional interest of the United States will be considered justified so as to qualify the terminated lease for reinstatement--

879

CONSENT OF AGENCY

1. Where public domain land is withdrawn or reserved for administration by another agency for a particular purpose, BLM should properly consider the recommendations of the surface management agency regarding lease issuance and any required stipulations, but this does not relieve BLM of the need to make an independent determination supported by the record of whether and under what conditions a lease may issue in the public interest consistent with multiple use values--

438

DISCOVERY

1. A determination by the Geological Survey of the known geologic structure of a producing oil and gas field will not be disturbed in the absence of a clear and definite showing that the determination was improperly made-----

550

DISCRETION TO LEASE

1. A decision of BLM refusing to issue an oil and gas lease in the exercise of the discretionary authority of the Secretary of the Interior over oil and gas leasing will be affirmed where it sets forth the reasons therefore and the facts of record support the conclusion that refusal to lease is in the public interest-----

437

OIL AND GAS LEASES—Continued**DISCRETION TO LEASE—Continued**

- | | |
|---|------|
| | Page |
| 2. Rejection of an oil and gas lease offer is a more severe measure than the most stringent stipulations and the record supporting a decision rejecting a lease offer in the public interest should ordinarily reflect consideration of whether leasing subject to clear and reasonable stipulations would adequately protect the public interest concerns of the surface management agency..... | 438 |
| 3. Where public domain land is withdrawn or reserved for administration by another agency for a particular purpose, BLM should properly consider the recommendations of the surface management agency regarding lease issuance and any required stipulations, but this does not relieve BLM of the need to make an independent determination supported by the record of whether and under what conditions a lease may issue in the public interest consistent with multiple use values..... | 438 |

FIRST-QUALIFIED APPLICANT

- | | |
|---|-----|
| 1. When an individual files an oil and gas lease offer through a leasing service under an agreement where the leasing service is authorized to act as the sole and exclusive agent to negotiate for sublease, assignment or sale of any rights obtained by the offeror; where the offeror is required to pay the leasing service according to a set schedule, even if the offeror negotiates the sale; and where such agency to negotiate is to be valid for 5 years, the leasing service has an enforceable right to share in the proceeds of any sale of the lease or any interest therein, and any payments of overriding royalties retained. Such an agreement creates for the leasing service an "interest" in the lease as that term is defined in 43 CFR 3100.0-5(b), and the offeror is required to disclose this interest at the time of filing under 43 CFR 3102.7..... | 236 |
| 2. A noncompetitive oil and gas lease may only be issued to the first-qualified applicant therefor. An extension of time may be granted to supply necessary evidence of joinder in a unit agreement prior to lease issuance and a lease offer will not be rejected in favor of a junior offeror where an extension is timely requested and the requested evidence is provided in good faith and without unreasonable delay thereafter..... | 347 |
| 3. When an individual files an oil and gas lease offer through a leasing service under an agreement whereby the leasing service is authorized to act as the sole and exclusive agent to negotiate for sublease, assignment, or sale of any rights obtained by the offeror; where the offeror is required to pay the leasing service according to a set schedule, even if the offeror negotiates the sale; and where such agency to negotiate is to be valid for 5 years, the leasing service has an enforceable right to share in the proceeds of any sale of the lease or any interest therein, and in any payments of overriding royalties retained. Such an agreement creates for the leasing service an "interest" in the lease as that term is defined in 43 CFR 3100.0-5(b)..... | 479 |
| 4. Where an individual files an oil and gas lease offer through a leasing service under an agreement with the service which has been determined to create an interest in the lease for the service, and the service files a "waiver" of that interest with the BLM prior to a simultaneous drawing, without communicating such "waiver" to the client, and without any contractual consideration running from the client to the leasing service, the "waiver" is without effect as a matter of law and both the successful drawee and the leasing service are required to make a showing as to their respective interests under 43 CFR 3102.7..... | 479 |

1. Where a competitive, fractional interest, oil and gas lease is issued with conflicting and confusing rental provisions recited in the lease terms and in an attachment to the lease, a deficient rental payment by the lessee in reasonable reliance on the section providing for rental based upon the pro rata fractional interest of the United States will be considered justified so as to qualify the terminated lease for reinstatement. 879

KNOWN GEOLOGIC STRUCTURE

1. A determination by the Geological Survey of the known geologic structure of a producing oil and gas field will not be disturbed in the absence of a clear and definite showing that the determination was improperly made.----- 550

LANDS SUBJECT TO

1. Public domain land withdrawn or reserved is presumed to be available for oil and gas leasing unless the withdrawal or reservation specifically provides otherwise.----- 437
2. An offer to lease for oil and gas in the Arctic National Wildlife Refuge is properly rejected where the lands in the refuge have been withdrawn from the operation of the mineral leasing laws by either secs. 1002 or 1003 of the Alaska National Interest Lands Conservation Act. Standard offers to lease for oil and gas may not be construed as requests to undertake exploratory activities only. The only exploratory activities permitted in the Arctic National Wildlife Refuge are governed by sec. 1002 of the Act. Any requests to undertake exploratory activities are premature until Secretary of the Interior has issued guidelines governing exploration in the refuge.----- 601

NONCOMPETITIVE LEASES

1. A noncompetitive oil and gas lease may only be issued to the first-qualified applicant therefor. An extension of time may be granted to supply necessary evidence of joinder in a unit agreement prior to lease issuance and a lease offer will not be rejected in favor of a junior offeror where an extension is timely requested and the requested evidence is provided in good faith and without unreasonable delay thereafter.----- 347

OVERRIDING ROYALTIES

1. An overriding royalty interest retained by a lessee after he has assigned the lease to a bona fide purchaser is voidable and properly canceled where it is revealed that the lessee's original lease offer failed to disclose the existence of another party in interest in the offer. Any overriding royalties which the lessee assigned to the other party in interest are also properly canceled, as this party is not a bona fide purchaser thereof, having had actual knowledge of the defect in the lease. BLM should, on remand, sell these canceled overriding royalty interests as provided in 30 U.S.C. § 184(h) (1976) and 43 CFR 3102.1-2(b).----- 480

REINSTATEMENT

1. Failure to pay the annual rental for an oil and gas lease on or before the anniversary date results in the automatic termination of the lease by operation of law. The date of receipt of the rental and not the date of mailing is controlling in determining whether rental on an oil and gas lease was timely paid. A lease may be reinstated if the failure to pay the rental was either justifiable or not due to a lack of reasonable diligence on the part of the lessee. 30 U.S.C. § 188(c) (1976).----- 38
2. Reasonable diligence normally requires sending the payment sufficiently in advance of the due date to account for normal delays in the collection, transmittal, and delivery of the payment. Mailing rental payments the afternoon of the day due does not constitute reasonable diligence.----- 38

OIL AND GAS LEASES—Continued

REINSTATEMENT—Continued

Page

3. In order for the failure to pay oil and gas lease rental timely to be considered justifiable, generally it must be caused by factors outside the lessee's control, which were the proximate cause of the failure. A lessee's ignorance of the law and regulations and reliance on the business practices of other Governmental agencies accepting a postmark as the date of delivery is not a justifiable excuse.----- 38
4. A lessee may be entitled to reinstatement of the lease if it is shown, among other things, that reasonable diligence was exercised in mailing the payment, or that the delay in remitting the rental is justifiable. Where a lessee is unable to make the requisite showing, a petition for reinstatement is properly denied.----- 420
5. Reasonable diligence generally requires mailing the rental payment sufficiently in advance of the anniversary or due date to account for normal delays in collection, transmittal, and delivery of the mail. Mailing the rental payment 1 day before or on the anniversary date of the lease does not constitute reasonable diligence.----- 420
6. A late rental payment or an insufficient tender of rental may be justifiable if it is demonstrated that at or near the anniversary date there existed sufficiently extenuating circumstances outside the lessee's control which affected his or her actions in paying the rental fee. Instances of simple forgetfulness, inadvertence, ignorance of the regulations, reliance on BLM courtesy notices, and similar occurrences do not excuse a failure to exercise due diligence.----- 420
7. Where a competitive, fractional interest, oil and gas lease is issued with conflicting and confusing rental provisions recited in the lease terms and in an attachment to the lease, a deficient rental payment by the lessee in reasonable reliance on the section providing for rental based upon the pro rata fractional interest of the United States will be considered justified so as to qualify the terminated lease for reinstatement.----- 879
8. A lease terminated automatically for untimely payment of annual rental may be reinstated only upon proof that reasonable diligence was exercised, or that the failure to make timely payment was "justifiable." In the absence of such proof, a petition for reinstatement is properly denied.----- 1012
9. A late rental payment may be justifiable if it is demonstrated that at or near the anniversary date there existed sufficiently extenuating circumstances outside the lessee's control which affected its actions in paying the rental fee. However, where the lessee has entrusted payment to an employee who is hospitalized because of an injury, and another employee who assumes the injured employee's responsibilities fails to make timely payment, the injury of the employee is not the proximate cause of the late payment.----- 1013

RENTALS

1. Failure to pay the annual rental for an oil and gas lease on or before the anniversary date results in the automatic termination of the lease by operation of law. The date of receipt of the rental and not the date of mailing is controlling in determining whether rental on an oil and gas lease was timely paid. A lease may be reinstated if the failure to pay the rental was either justifiable or not due to a lack of reasonable diligence on the part of the lessee. 30 U.S.C. § 188(c) (1976).----- 38

OIL AND GAS LEASES—Continued

RENTALS—Continued

Page

2. Reasonable diligence normally requires sending the payment sufficiently in advance of the due date to account for normal delays in the collection, transmittal, and delivery of the payment. Mailing rental payments the afternoon of the day due does not constitute reasonable diligence..... 38
3. In order for the failure to pay oil and gas lease rental timely to be considered justifiable, generally it must be caused by factors outside the lessee's control, which were the proximate cause of the failure. A lessee's ignorance of the law and regulations and reliance on the business practices of other Governmental agencies accepting a postmark as the date of delivery is not a justifiable excuse..... 38
4. Where a competitive, fractional interest, oil and gas lease is issued with conflicting and confusing rental provisions recited in the lease terms and in an attachment to the lease, a deficient rental payment by the lessee in reasonable reliance on the section providing for rental based upon the pro rata fractional interest of the United States will be considered justified so as to qualify the terminated lease for reinstatement..... 879

ROYALTIES

1. The Secretary of the Interior has discretionary authority to determine the factors to be considered in computing transportation allowances for royalty valuation purposes. Where the Geological Survey applies a formula developed after appropriate research and consultation with affected oil companies and where the appellant does not provide convincing evidence that the 6 percent rate of return used in the formula is unreasonable as applied to appellant's production from 1968 to 1973, the transportation allowance will be upheld..... 1
2. In determining the amount of royalty due to the United States from an oil and gas lease, it is proper for the Geological Survey to use a base value which includes both the purchase price paid for the natural gas and the amount of severance taxes paid by the purchaser directly to the State where, under Oklahoma law, the purchaser is authorized to deduct the amount of taxes paid from the amount paid to the producer. Decision in *Wheless Drilling Co.*, 13 IBLA 21, 80 I.D. 599 (1973), cited and applied..... 7

STIPULATIONS

1. Rejection of an oil and gas lease offer is a more severe measure than the most stringent stipulations and the record supporting a decision rejecting a lease offer in the public interest should ordinarily reflect consideration of whether leasing subject to clear and reasonable stipulations would adequately protect the public interest concerns of the surface management agency..... 438

TERMINATION

1. Failure to pay the annual rental for an oil and gas lease on or before the anniversary date results in the automatic termination of the lease by operation of law. The date of receipt of the rental and not the date of mailing is controlling in determining whether rental on an oil and gas lease was timely paid. A lease may be reinstated if the failure to pay the rental was either justifiable or not due to a lack of reasonable diligence on the part of the lessee. 30 U.S.C. § 188(c) (1976)..... 38

OUTER CONTINENTAL SHELF LANDS ACT*(See also Oil & Gas Leases—if included in this Index.)***GENERALLY**

Page

1. Use of consultation procedures of sec. 18 of the Outer Continental Shelf Lands Act, 43 U.S.C. § 1344 (Supp. II 1978), are not required for annual review of an approved 5-year OCS leasing program under sec. 18(e) of the Act..... 20
2. Under sec. 18 of the Outer Continental Shelf Lands Act, 43 U.S.C. § 1344 (Supp. II 1978), a reapproval must include a schedule of proposed lease sales for the full 5-year period following reapproval but may not include sales beyond the 5-year period. A revision permits changes within an existing approved schedule without requiring an extension of that schedule to include a full 5 years after revision..... 21
3. Under sec. 18 of the Outer Continental Shelf Lands Act, 43 U.S.C. § 1344 (Supp. II 1978), a revision may add, delete, delay or advance sales and planning milestones within an approved 5-year program. A revision cannot be used to tack additional sales or milestones onto the end of an approved 5-year program. Only a reapproval can add sales beyond an existing approved program..... 21
4. Sec. 18(e) of the Outer Continental Shelf Lands Act, 43 U.S.C. § 1344(e) (Supp. II 1978), states in discussing revisions and reapprovals that only a revision which is not significant may escape the requirement of sec. 18 consultation procedures. A fortiori, all reapprovals require use of these procedures. Therefore, the procedures must be followed to schedule any sales or milestones beyond the existing 5-year program.... 21
5. Under sec. 18 of the Outer Continental Shelf Lands Act, 43 U.S.C. § 1344 (Supp. II 1978), the Secretary has considerable discretion to determine whether or not the deletion, delay or advancement of sales or milestones within an approved 5-year program is a significant revision..... 21
6. Planning milestones and sale dates beyond the 5-year horizon can be made available as a matter of information, but final approval of a schedule containing such sales cannot occur until the procedures of sec. 18 have been followed. Those milestones occurring within the 5-year period that apply to sales expected beyond 5 years may be included in a reapproved schedule..... 21

OIL AND GAS INFORMATION PROGRAM**Generally**

1. 30 CFR 250.3, requiring the U.S. Geological Survey to release a lessee's well logs two years after they are submitted, is a reasonable exercise of the Secretary's discretion. It does not apply to the Survey's findings of producibility under OCS Order No. 4; such findings may consequently be released immediately..... 699
2. The history and text of the 1978 Amendments show that "privileged or proprietary information" is a term to be defined by the Secretary after balancing competing interests of disclosure and confidentiality..... 699

OIL AND GAS LEASES

1. The Secretary of the Interior has discretionary authority to determine the factors to be considered in computing transportation allowances for royalty valuation purposes. Where the Geological Survey applies a formula developed after appropriate research and consultation with affect-

OUTER CONTINENTAL SHELF LANDS ACT—Continued**OIL AND GASES LEASES—Continued**

ed oil companies and where the appellant does not provide convincing evidence that the 6 percent rate return used in the formula is unreasonable as applied to appellant's production from 1968 to 1973, the transportation allowance will be upheld-----

1

REFUNDS

1. Sec. 10 of the Outer Continental Shelf Lands Act does not authorize refunds to purchasers of royalty oil----- 1090
2. Sec. 10 of the Outer Continental Shelf Lands Act does not authorize refunds to persons who have paid a civil penalty under sec. 24 of the Act.----- 1090
3. Before allowing refunds or credits against future payments, the Secretary must report them to Congress----- 1090
4. The request for a refund or credit must be in writing, must ask for a specific amount, and must explain why the lessee considers the amount to have been excessive. Except under certain circumstances, the lessee must request the refund or credit within two years after making the payment. Those circumstances are when the lessee both has acted to verify his account within two years and has given the Department enough information to estimate the potential amount of the refund or credit----- 1090
5. An excess net profit share payment, to be credited under 10 CFR 390.034(c), must be reported to Congress before crediting----- 1090
6. Generally, when one co-lessee files a request for repayment, his request does not toll the two-year limit for other co-lessees. But if the co-lessee has the authority to make all lease payments for the other co-lessees, then his request protects all of them----- 1090
7. A lessee may receive a refund or credit of an overpayment even though he did not pay the excess under protest----- 1099
8. Upon discovering an overpayment and an underpayment in a lease account, the Secretary may properly offset the two without regard to sec. 10. But when an excess remains after the offset, the Secretary must comply with sec. 10 in giving a refund or credit----- 1090

PATENTS OF PUBLIC LANDS**EFFECT**

1. The effect of the issuance of a patent is to transfer legal title from the United States and to remove the land from jurisdiction of the Department of the Interior. Where BLM's records show lands have been patented, an Indian allotment application filed under the General Allotment Act of Feb. 8, 1887, for such lands is properly rejected.----- 244

RESERVATIONS

1. Patents issued pursuant to the Act of Mar. 3, 1909, or the Act of June 22, 1910, 30 U.S.C. §§ 81, 83-85 (1976) reserved to the United States "all coal" and the right to prospect for, mine and remove the "coal deposits" underlying the patented lands. Congress in the 1909 and 1910 Acts intended to, and did, reserve only the coal and not other minerals found in association with coal. Accordingly, all minerals other than coal, including coalbed gas, passed to the surface owner at the time a patent was issued pursuant to the 1909 or 1910 Acts----- 538
2. Should coalbed gas occur in lands in which "oil and gas" were reserved to the United States in agricultural patents issued under the Act of July 17, 1914, 30 U.S.C. § 121 (1976), that coalbed gas is reserved to the United States----- 538

PHOSPHATE LEASES AND PERMITS

(See also Mineral Leasing Act—if included in this Index.)

PERMITS

Page

1. Limitation of a phosphate prospecting permit to "unclaimed, undeveloped" lands restricts it to lands without valid, vested right, existing at the time of issuance of the permit, which are adverse to the prospecting permit which is sought, and any preference right lease which may be earned pursuant to such a permit..... 247
2. A prospecting permit may be issued for phosphate for which there is no valid, adverse claim at the time of issuance, notwithstanding the existence then of nonadverse claims, entries, or leases..... 247
3. Issuance of a prospecting permit is presumed to be regular if no valid, adverse interest appeared in the land office records at the time of issuance of the permit..... 247

PRACTICE BEFORE THE DEPARTMENT

(See also Rules of Practice—if included in this Index.)

PERSONS QUALIFIED TO PRACTICE

1. Qualifications to practice before the Department of the Interior are prescribed by regulations. Where an appeal is brought by a corporation that does not appear to fall within any of the categories of persons authorized to practice, the appeal is subject to dismissal..... 345

PUBLIC LANDS

(See also Accretion, Avulsion, Boundaries, Reliction, Surveys of Public Lands—if included in this Index.)

LEASES AND PERMITS

1. Public domain land withdrawn or reserved is presumed to be available for oil and gas leasing unless the withdrawal or reservation specifically provides otherwise..... 437
2. Where public domain land is withdrawn or reserved for administration by another agency for a particular purpose, BLM should properly consider the recommendations of the surface management agency regarding lease issuance and any required stipulations, but this does not relieve BLM of the need to make an independent determination supported by the record of whether and under what conditions a lease may issue in the public interest consistent with multiple use values.... 438

REGULATIONS

(See also Administrative Procedure—if included in this Index.)

GENERALLY

1. The Boards of Appeal of the Department of the Interior have no authority to declare invalid a duly promulgated regulation of this Department. Where, however, the regulation was not properly promulgated, is lacking in statutory basis, and has been consistently ignored in actual practice, that regulation will be accorded no force or effect..... 24
2. All persons dealing with the Government are presumed to have knowledge of duly promulgated rules and regulations regardless of their actual knowledge of what is contained in such regulations..... 38
3. The regulations controlling transfer of oil and gas interests were amended on June 16, 1980, and the amended regulations govern where the interest holder has not sought approval of a transfer of his interest prior to this date. Under these amended regulations, BLM cannot consider any application for approval of a transfer of a lease interest until after the lease is issued..... 237

REGULATIONS—Continued**GENERALLY—Continued**

- | | |
|--|-----|
| 4. All persons dealing with the Government are presumed to have knowledge of relevant statutes and duly promulgated regulations..... | 341 |
| 5. The Board is bound by duly promulgated Departmental regulations as well as by Departmental policy expressed in Secretarial Orders published in the <i>Federal Register</i> or set forth in the Departmental Manual... | 760 |

APPLICABILITY

- | | |
|--|----|
| 1. An ambiguous regulation relating to "the proper office" in which to file a relinquishment of a coal lease should not be interpreted to the detriment of a coal lessee who sought to comply with its provisions..... | 24 |
|--|----|

INTERPRETATION

- | | |
|--|-----|
| 1. An ambiguous regulation relating to "the proper office" in which to file a relinquishment of a coal lease should not be interpreted to the detriment of a coal lessee who sought to comply with its provisions..... | 24 |
| 2. A regulation should be sufficiently clear that there is no reasonable basis for an oil and gas lease applicant's noncompliance with the regulation before it is interpreted to deprive an applicant of a preference right to a lease. A regulation specifying a bank money order as an acceptable form of remittance requires the acceptance of a personal money order issued by a bank..... | 625 |
| 3. Departmental regulations at 43 CFR 2653.5, insofar as they prescribe a specified course of action including publication, referral, investigation, conferring, reporting, etc., by the Department with regard to selections of public lands made pursuant to § 14(h)(1) of the Alaska Native Claims Settlement Act, cannot apply when the selected lands are not public lands and the selection applications must be rejected at the outset..... | 886 |

VALIDITY

- | | |
|---|----|
| 1. The Boards of Appeal of the Department of the Interior have no authority to declare invalid a duly promulgated regulation of this Department. Where, however, the regulation was not properly promulgated, is lacking in statutory basis, and has been consistently ignored in actual practice, that regulation will be accorded no force or effect..... | 24 |
|---|----|

RIGHTS-OF-WAY

(See also Indian Lands, Reclamation Lands—if included in this Index.)

NATURE OF INTEREST GRANTED

- | | |
|--|-----|
| 1. A right-of-way granted by Revised Statutes Sec. 2477 is a less-than-fee interest in the nature of an easement. Following the acceptance of a Revised Statutes Sec. 2477 grant of right-of-way, the Federal Government retains its fee interest in the land, subject to the right-of-way, and may dispose of it pursuant to law..... | 629 |
|--|-----|

REVISED STATUTES SEC. 2477

RULES OF PRACTICE

Page

(See also Administrative Procedure, Appeals, Contests & Protests, Contracts, Hearings, Indian Probate, Practice Before the Department—if included in this Index.)

GENERALLY

1. "Service." Where BLM sends a copy of its decision to an adversely affected party at his address of record on Sept. 21; where additional information containing the party's more recent address is filed with BLM on Oct. 5; and where BLM receives the mailed copy back as undeliverable on Oct. 16 but does not mail another copy to the more recent address, BLM has not mailed a copy to the party's last address of record, and there is no "service" under 43 CFR 1810.2. Where BLM has never served a copy of its decision on an adversely affected party, the time for this party to appeal has never commenced, and the decision is not effective *per* 43 CFR 4.21(a) ----- 236
2. Where a party, in the course of various proceedings before the Department, asserts facts that would, if proven, entitle him or her to obtain patent to land owned by the United States, and the litigation proceeds on the assumption that the facts are as stated, appellant will not be heard in a subsequent hearing to deny that those facts existed----- 926

APPEALS

Generally

1. Outlining the treatment to be accorded voluminous exhibits, the Board states that in the event counsel for either side considers that information contained in a voluminous exhibit either proves or may be of material assistance in proving a particular point, it is incumbent upon counsel to specifically cite the portions of the voluminous exhibit relied upon by page number, by date, or by other appropriate reference. Absent specific citations to a voluminous exhibit or to an appropriate summary thereof in evidence, the Board will not undertake to determine the content of this type of exhibit in particular areas before reaching its decision.----- 42
2. The Board seriously questions the wisdom of the Government in not arranging for the audit of multimillion dollar claims apparently advanced in good faith by reputable contractors, noting that securing audits will not only facilitate the examination of witnesses with respect to quantum but are also likely to prove to be useful in establishing a basis for agreeing upon stipulations narrowing the issues in quantum areas or affording a basis for arriving at a settlement prior to the hearing, while it is in progress or after it has been concluded.----- 42
3. "Service." Where BLM sends a copy of its decision to an adversely affected party at his address of record on Sept. 21; where additional information containing the party's more recent address is filed with BLM on Oct. 5; and where BLM receives the mailed copy back as undeliverable on Oct. 16 but does not mail another copy to the more recent address, BLM has not mailed a copy to the party's last address of record, and there is no "service" under 43 CFR 1810 2. Where BLM has never served a copy of its decision on an adversely affected party, the time for this party to appeal has never commenced, and the decision is not effective *per* 43 CFR 4.21(a) ----- 236

RULES OF PRACTICE—Continued**APPEALS—Continued****Generally—Continued**

- | | |
|--|-----|
| 4. An appeal may be decided on the basis of a theory not advanced by the parties so long as the theory is consistent with the facts of record or legitimate inferences therefrom..... | 722 |
| 5. Where following the contest of a number of mining claims, a decision is rendered by an Administrative Law Judge holding certain claims and portions of claims to be valid and invalidating the remainder for lack of mineral or as embracing excess mineral reserves, and the Government appeals from that decision but the claimant does not, that decision will be set aside and the case remanded for rehearing on the basis of a judicial decision in another case, made while the subject appeal was pending, that there can be no invalidation of mining claims by this Department on a finding that the claimant has acquired claims for far more mineral than the market can absorb within the foreseeable future.. | 772 |
| 6. A finding by BLM that some statutory mechanism has been triggered which automatically divests a right does not and cannot mean that the adversely affected party is denied recourse to the appellate process. The Board of Land Appeals is the exclusive arbiter of its jurisdiction, and neither employees of BLM nor attorneys of the Office of the Solicitor may create or deny the right of appeal to the Board..... | 879 |

Burden of Proof

- | | |
|---|----|
| 1. In a case involving the assertion of a differing site conditions claim under a contract for the construction of concrete lined tunnels for the Navajo Indian Irrigation Project, the Board follows the Court of Claims in holding that it is not necessary for the "indications" in the contract to be explicit or specific, it being sufficient for there to be an indication on the face of the contract documents causing a bidder reasonably to expect that there were no "subsurface or latent" physical conditions at the site differing materially from those indicated in the contract.. | 41 |
|---|----|

Dismissal

- | | |
|---|-----|
| 1. A claim asserted under the Changes clause for increased costs resulting from actions of the President in decontrolling the price of heavy crude oil is dismissed as being outside the jurisdiction of the Board since the President's action was a sovereign act taken as part of the program to maintain or increase production of heavy crude oil..... | 431 |
| 2. A Government motion to dismiss an appeal is granted where no express contract between the parties exists, there is no evidence from which an implied in fact contract could be inferred, and the Board is without jurisdiction over contracts implied in law, assuming appellant is seeking full relief..... | 809 |

Effect of

- | | |
|---|----|
| 1. Due process does not require notice and a prior right to be heard in every case where an individual may be deprived of property so long as the individual is given notice and an opportunity to be heard before the deprivation becomes final..... | 31 |
|---|----|

Hearings

- | | |
|---|----|
| 1. Due process does not require notice and a prior right to be heard in every case where an individual may be deprived of property so long as the individual is given notice and an opportunity to be heard before the deprivation becomes final..... | 31 |
|---|----|

RULES OF PRACTICE—Continued

APPEALS—Continued

Hearings—Continued

Page

2. The Board refuses to draw inferences adverse to the Government by reason of its failure to have its project engineer testify in important areas and by reason of its failure to call as witnesses two of its employees who attended the hearing where the Board finds that the action of the Government is consistent with the principal defenses made to the differing site conditions claims asserted and where under long-established Board practice, the appellant could have called any or all of the Government's employees concerned as witnesses without making them appellant's witnesses for the purposes of impeachment..... 41
3. The Board sustains the action of the hearing member in refusing to receive in evidence documents not identified by a witness through whose testimony their admission is being sought..... 42
4. A Government motion for summary judgment is granted and an appellant's request for a hearing is denied in a case where if all of appellant's factual allegations are accepted as true, there would still be no basis for granting the appellant relief for the claim asserted. The Board finds that to hold a hearing in such circumstances would not secure the just and inexpensive determination of the appeal without unnecessary delay..... 361

Motions

1. A Government motion for summary judgment is granted and an appellant's request for a hearing is denied in a case where if all of appellant's factual allegations are accepted as true, there would still be no basis for granting the appellant relief for the claim asserted. The Board finds that to hold a hearing in such circumstances would not secure the just and inexpensive determination of the appeal without unnecessary delay..... 361
2. A claim asserted under the Changes clause for increased costs resulting from actions of the President in decontrolling the price of heavy crude oil is dismissed as being outside the jurisdiction of the Board since the President's action was a sovereign act taken as part of the program to maintain or increase production of heavy crude oil..... 431
3. A Government motion to dismiss an appeal is granted where no express contract between the parties exists, there is no evidence from which an implied in fact contract could be inferred, and the Board is without jurisdiction over contracts implied in law, assuming appellant is seeking full relief..... 809

Reconsideration

1. Upon a motion for reconsideration, the Board finds that the contentions of appellant challenging the principal decision are based on misstatements or misinterpretations of the principal decision or ask that the Board consider the merits of a claim deemed to have been properly dismissed for lack of proof of coercion or duress..... 521

Standing to Appeal

1. A Government motion to dismiss an appeal is granted where no express contract between the parties exists, there is no evidence from which an implied in fact contract could be inferred, and the Board is without jurisdiction over contracts implied in law, assuming appellant is seeking full relief..... 809

RULES OF PRACTICE—Continued**EVIDENCE**

The Board refuses to draw inferences adverse to the Government by reason of its failure to have its project engineer testify in important areas and by reason of its failure to call as witnesses two of its employees who attended the hearing where the Board finds that the action of the Government is consistent with the principal defenses made to the differing site conditions claims asserted and where under long-established Board practice, the appellant could have called any or all of the Government's employees concerned as witnesses without making them appellant's witnesses for the purposes of impeachment.----- 41
2. In a case involving the assertion of a differing site conditions claim under a contract for the construction of concrete lined tunnels for the Navajo Indian Irrigation Project, the Board follows the Court of Claims in holding that it is not necessary for the "indications" in the contract to be explicit or specific, it being sufficient for there to be an indication on the face of the contract documents causing a bidder reasonably to expect that there were no "subsurface or latent" physical conditions at the site differing materially from those indicated in the contract.----- 41
3. Outlining the treatment to be accorded voluminous exhibits, the Board states that in the event counsel for either side considers that information contained in a voluminous exhibit either proves or may be of material assistance in proving a particular point, it is incumbent upon counsel to specifically cite the portions of the voluminous exhibit relied upon by page number, by date, or by other appropriate reference. Absent specific citations to a voluminous exhibit or to an appropriate summary thereof in evidence, the Board will not undertake to determine the content of this type of exhibit in particular areas before reaching its decision.----- 42
4. The Board sustains the action of the hearing member in refusing to receive in evidence documents not identified by a witness through whose testimony their admission is being sought.----- 42
5. The Board seriously questions the wisdom of the Government in not arranging for the audit of multimillion dollar claims apparently advanced in good faith by reputable contractors, noting that securing audits will not only facilitate the examination of witnesses with respect to quantum but are also likely to prove to be useful in establishing a basis for agreeing upon stipulations narrowing the issues in quantum areas or affording a basis for arriving at a settlement prior to the hearing, while it is in progress or after it has been concluded.----- 42

GOVERNMENT CONTESTS

1. The provisions of 25 U.S.C. § 194 (1976) relating to the placing of the burden of proof do not apply where the Government contests the qualifications of an allotment applicant. An allotment applicant in such a situation is the proponent of the rule and must show his or her entitlement to the land sought.----- 374

HEARINGS

1. The Board seriously questions the wisdom of the Government in not arranging for the audit of multimillion dollar claims apparently advanced in good faith by reputable contractors, noting that securing audits will not only facilitate the examination of witnesses with respect to quantum but are also likely to prove to be useful in establishing a basis for agreeing upon stipulations narrowing the issues in quantum areas or affording a basis for arriving at a settlement prior to the hearing, while it is in progress or after it has been concluded.----- 42

RULES OF PRACTICE—Continued

WITNESSES

Page

1. The Board refuses to draw inferences adverse to the Government by reason of its failure to have its project engineer testify in important areas and by reason of its failure to call as witnesses two of its employees who attended the hearing where the Board finds that the action of the Government is consistent with the principal defenses made to the differing site conditions claims asserted and where under long-established Board practice, the appellant could have called any or all of the Government's employees concerned as witnesses without making them appellant's witnesses for the purposes of impeachment. 41
2. The Board sustains the action of the hearing member in refusing to receive in evidence documents not identified by a witness through whose testimony their admission is being sought. 42
3. The Board seriously questions the wisdom of the Government in not arranging for the audit of multimillion dollar claims apparently advanced in good faith by reputable contractors, noting that securing audits will not only facilitate the examination of witnesses with respect to quantum but are also likely to prove to be useful in establishing a basis for agreeing upon stipulations narrowing the issues in quantum areas or affording a basis for arriving at a settlement prior to the hearing, while it is in progress or after it has been concluded. 42

SEGREGATION

1. Where BLM filed an application for a protective withdrawal pursuant to Exec. Order No. 10355 which would reserve the subject land from all forms of appropriation including location and entry under the mining laws and the application was duly noted on the official status plats, the lands were segregated from the date of notation to the extent that the withdrawal, if effected, would prevent such forms of appropriation. A protective withdrawal is not a temporary withdrawal under the Pickett Act, 43 U.S.C. § 141 (1970), and is not limited by the terms of 43 U.S.C. § 142 (1970) which provides that temporarily withdrawn lands shall remain open to location for metalliferous minerals. 31

STATE EXCHANGES

(See also Exchanges of Land—if included in this Index.)

GENERALLY

1. A protest against approval of a state exchange application is properly dismissed where the exchange is shown to be in the public interest under sec. 206 of the Federal Land Policy and Management Act of 1976, and it is immaterial that the protestants may be permittees or licensees of the selected lands whose grazing privileges would have been lost upon completion of the exchange, in that neither a licensee nor a permittee has a vested right in the land covered by the license or permit and such land is available for selection by a state. 232

EFFECT OF APPLICATION

1. State exchange applications pending on Oct. 21, 1976, may be processed under sec. 8(c) of the Taylor Grazing Act, 43 U.S.C. § 315g(c) (1970), only if the state had complied with all the requirements necessary to vest rights to the exchange in the state; all other applications must be processed under sec. 206 of the Federal Land Policy and Management Act of 1976. 232

STATE SELECTIONS

Page

(See also School Lands, Swamplands—if included in this Index.)

1. Applications for Alaska Native allotments in "core" townships of Native villages are subject to the statutory approval contained in sec. 905(a)(1) of the Alaska National Interest Lands Conservation Act, notwithstanding a State selection or tentative approval thereof for the same lands prior to Dec. 18, 1971.----- 664

STATUTES

1. All persons dealing with the Government are presumed to have knowledge of relevant statutes and duly promulgated regulations----- 341

STATUTORY CONSTRUCTION**ADMINISTRATIVE CONSTRUCTION**

1. Interpretation of the Alaska Native Claims Settlement Act by the Bureau of Indian Affairs contemporaneous with the enactment of the statute and continued over the succeeding 9 years is relevant to a determination of the application to be given to the statute. The Agency refusal to enroll persons who were not United States citizens on Dec. 18, 1971, the effective date of the Act, is a reasonable application of the Act and of Departmental regulations implementing the Act, and gives the language of the statute (43 U.S.C. §1604 (1976)) its common and ordinary meaning.----- 262

LEGISLATIVE HISTORY

1. The legislative history of sec. 6 of the Federal Coal Leasing Amendments Act show that the revision of sec. 7 of the MLA (30 U.S.C. § 207) was not retroactive, but applied to new leases and to "old" leases upon readjustment. The ten-year production period and revised royalty rates of amended sec. 7 must be imposed on "old" coal leases at readjustment. The legislative history to the 1978 coal leasing revisions (Act of Oct. 30, 1978) discloses that Congress understood and acted on the assumption that the amended sec. 7 royalty rates did apply to all "old" leases upon readjustment.----- 1003

SUBMERGED LANDS

1. The Department of the Interior under provisions of ANCSA and regulations in 43 CFR has both the authority and responsibility to determine which lands, including submerged lands, are "public lands" within the definition of § 3(e) of ANCSA and are therefore available for selection by a Native corporation.----- 636
2. The Bureau of Land Management under provisions of ANCSA and regulations in 43 CFR has both the authority and responsibility to determine which lands, including submerged lands, are "public lands" within the definition of § 3(e) of ANCSA and are therefore available for selection by a Native corporation.----- 1086, 1105

SURFACE MINING CONTROL AND RECLAMATION ACT OF 1977**ABATEMENT****Generally**

1. A permittee's noncompliance with an order by OSM to abate an alleged violation of the backfilling and grading requirements of 30 CFR 715.14 cannot serve to excuse the permittee's noncompliance with an order by OSM to abate an alleged violation of the revegetation requirements of 30 CFR 715.20.----- 737

SURFACE MINING CONTROL AND RECLAMATION ACT OF 1977—Continued**ABATEMENT—Continued****Remedial Actions**

- | | Page |
|---|------|
| 1. A notice of violation requiring a permittee to submit a drainage design for regulatory authority approval is proper even when such a design might include disturbance of an area within 100 feet of an intermittent or perennial stream because the regulatory authority could grant an exemption for that area under either 30 CFR 717.17(a) or 715.17(d) (3) . | 503 |
| 2. Under the circumstances of this case, the Board declines to uphold a cessation order that forces a permittee to take an illegal action. | 503 |
| 3. The Board declines to hold that the permit boundary, as identified in a state permit, protects a permittee in all cases from being required to abate the off-site detrimental consequences of its operations. | 660 |
| 4. The Board will not uphold a cessation order issued for a failure to abate a violation charged where that failure is premised on noncompliance with a remedial measure which has no rational relationship to the violation charged. | 831 |

ADMINISTRATIVE PROCEDURE**Generally**

- | | |
|--|-----|
| 1. Under 43 CFR 4.1153 OSM has an absolute right to submit an answer to a petition within 30 days of its receipt of a copy of the petition. After that time, an Administrative Law Judge has discretion to regulate the scope of OSM's answer in a manner reasonably related to any prejudice suffered by the opposing party as a result of OSM's delay. | 266 |
| 2. When an answer is filed by OSM after the time prescribed in 43 CFR 4.1153 but before any claim of prejudice from the delay is raised by the petitioner, it is an abuse of discretion for an Administrative Law Judge to issue, sua sponte, a summary decision in favor of the petitioner on the basis of presumed prejudice to the petitioner. | 267 |
| 3. Although an Administrative Law Judge has discretion to take appropriate action to correct the late filing of an answer in a proceeding to review a notice of violation or a cessation order, except in extreme circumstances it is not appropriate to vacate the notice or order. | 269 |
| 4. A determination by an Administrative Law Judge, sua sponte, that an application for review is not in compliance with 43 CFR 4.1164 relieves OSM of its obligation to answer the application, and, unless otherwise ordered, OSM is entitled to the full 20 days prescribed in 43 CFR 4.1165(a) to answer an amended application. | 273 |
| 5. An Administrative Law Judge has discretion to determine appropriate action to correct the late filing of an answer in a proceeding to review a notice of violation; however, vacation of the notice of violation is not appropriate action when the applicant has shown no prejudice resulting from a late answer. | 344 |
| 6. An applicant for review of a notice of violation who voluntarily failed to appear at the scheduled review hearing was properly deemed to have waived its right to a hearing, and the Administrative Law Judge could accept as true the allegations of fact contained in the notice of violation under review. | 406 |

Burden of Proof

- | | |
|--|-----|
| 1. In a civil penalty proceeding when OSM's prima facie case as to the fact of violation is effectively controverted by the person charged with the violation, the violation must be vacated because OSM has the ultimate burden of persuasion in accordance with 43 CFR 4.1155. | 449 |
|--|-----|

SURFACE MINING CONTROL AND RECLAMATION ACT OF 1977—Continued

APPEALS

Generally

Page

1. Once a right to appeal a decision of an OSM official has been granted, that right cannot be revoked without some express statement of and explanation for the revocation..... 571
2. Under 43 CFR 4.1282(b), an appeal of a decision of an OSM official must be filed within 30 days of the date of the decision, if the person filing the appeal did not receive a copy of the decision..... 571

APPLICABILITY

Generally

1. "Extraction of coal as an incidental part." For the purposes of 30 U.S.C. § 1278(3) (Supp. II 1978) and 30 CFR 700.11(d), which exclude the "extraction of coal as an incidental part of Federal, State or local government-financed highway or other construction" from the coverage of Federal performance standards otherwise applicable to surface coal mining operations, the phrase "extraction of coal as an incidental part" means, in accordance with 30 CFR 707.5, the extraction of coal which is necessary, from an engineering standpoint, to enable the construction to be accomplished and does not mean the extraction of coal for the purpose of financing the construction..... 456
2. "Roads maintained with public funds." Under an agreement with the West Virginia Department of Highways whereby the right-of-way for a secondary road has been reopened and maintained by a coal company for its use and that of the general public, the resulting road is not one "maintained with public funds" that is excluded from the definition of "roads" in 30 CFR 710.5 and, thus, the road is subject to the construction standards in 30 CFR 715.17(1)(2)..... 492
3. Proof of the intention to mine coal and of a disturbance is sufficient to establish OSM's authority to regulate a site..... 498
4. Release of a portion of a permittee's performance bond by a state does not reduce OSM's authority to regulate that permittee..... 613
5. Where an operator removes coal in the process of rehabilitating a State road but there is no proof that the State expended funds to finance the project comprising at least 50 percent of the cost of the project, the project does not fall within the definition of "Government-financed construction" in 30 CFR 707.5, and the operator therefore cannot claim the exemption from applicability of the Act appearing in sec. 528(3)..... 831

Initial Regulatory Program

1. The initial program regulations are applicable to a surface coal mining operation immediately when a State permit for the operation is issued on or after Feb. 3, 1978..... 657
2. Compliance with State mining permit conditions does not excuse non-compliance with the initial Federal performance standards..... 847

APPROXIMATE ORIGINAL CONTOUR

Generally

1. "Appropriate contour." "Appropriate contour," as used in 30 CFR 715.14 (e), is not synonymous with "approximate original contour."..... 652

ATTORNEYS' FEES/COSTS AND EXPENSES

Bad Faith/Harassment

1. The fact that a permittee prevailed before the Hearings Division does not establish that OSM's enforcement action was undertaken in bad faith and for the purpose of harassing or embarrassing the permittee..... 743

SURFACE MINING CONTROL AND RECLAMATION ACT OF 1977—Continued**ATTORNEYS' FEES/COSTS AND EXPENSES—Continued****Final Order**

Page

1. A qualitative analysis of any order asserted to be a final order of the Office of Hearings and Appeals which is a prerequisite to an award of costs and expenses under the Act must be done before such an award may be considered further; the regulations contemplate that such a qualifying final order will have been issued by OHA setting forth a judgment on the merits of the resolution of the administrative proceeding. Here no such order has been issued and an award would thus be inappropriate.----- 394

Standards for Award

1. The Office of Hearings and Appeals will follow the standards for award of costs and expenses including attorneys' fees set out by the D.C. Circuit Court of Appeals in *Copeland v. Marshall*, ___ F. 2d ___ (1980)----- 394

Substantial Compliance

1. Where, largely due to what may have earlier appeared to have been a Board indication that it had resolved the compensation issue in petitioner's favor, petitioner made a substantial contribution to the determination of the standards to be used in cases for award of costs and expenses, it would be grossly unfair not to compensate petitioner for that contribution.----- 394

BACKFILLING AND GRADING REQUIREMENTS**Generally**

1. Backfilling and grading requirements of 30 CFR 715.14 are to be satisfied as contemporaneously as possible with surface coal mining operations to accomplish timely reclamation of disturbed areas----- 737
2. Whether particular backfilling and grading activity is timely must be determined taking into account the overall circumstances of a surface coal mining and reclamation operation.----- 737

Highwall Elimination

1. Elimination of that portion of a highwall created before May 3, 1978, will not be required when OSM, after negotiations with the permittee, agrees that pre-May 3 highwalls need not be eliminated and does not dispute that part of the highwall was created before that date, and when there is no evidence that post-May 3 operations had any adverse physical impact on the pre-May 3 highwall----- 477
2. Even where approval has been granted to construct a cut-and-fill terrace, 30 CFR 715.14(b)(2)(iii) requires that no highwalls be left.----- 613

Previously Mined Lands

1. The backfilling and grading requirements of 30 CFR 715.14 apply to previously mined lands where surface coal mining operations result in an adverse physical impact to the preexisting highwall which is reaffected by such operations.----- 861

BONDS**Release of**

1. Release of a portion of a permittee's performance bond by a state does not reduce OSM's authority to regulate that permittee.----- 613

CESSATION ORDERS**Generally**

1. OSM has established a prima facie case that a cessation order was properly issued when it shows a violation, practice, or condition that is causally connected to significant, imminent environmental harm or a reasonable expectation of such harm.----- 582

SURFACE MINING CONTROL AND RECLAMATION ACT OF 1977—Continued CESSATION ORDERS—Continued

Generally—Continued

- | | |
|---|------|
| | Page |
| 2. Cessation orders are extreme sanctions and should not be issued indiscriminately, but where the prerequisites for a cessation order are found, there need be no hesitation in closing the operation or its relevant portion..... | 582 |
| 3. Under the circumstances of this case, a cessation order requiring that all underground pumping of slurry be stopped was not overly broad.... | 582 |
| 4. The Board will not uphold a cessation order issued for a failure to abate a violation charged where that failure is premised on noncompliance with a remedial measure which has no rational relationship to the violation charged..... | 831 |

CIVIL PENALTIES

Generally

- | | |
|--|-----|
| 1. A civil penalty will not be disturbed when the person assessed does not seek review of the penalty amount, and the underlying violation is not vacated..... | 503 |
| 2. Although the Hearings Division is not bound to accept the OSM Assessment Branch's evaluation of the evidence in terms of assigning civil penalty points, where an Administrative Law Judge finds a violation occurred, he is required to adhere to the point system in 30 CFR 723.13 unless he determines that a waiver would further abatement of violations of the Act..... | 827 |

Amount

- | | |
|---|-----|
| 1. A civil penalty assessment based on a part of a cessation order that is vacated after administrative review cannot be upheld whether or not review was sought of the penalty amount..... | 503 |
|---|-----|

Hearings Procedure

- | | |
|--|-----|
| 1. Under 43 CFR 4.1153 OSM has an absolute right to submit an answer to a petition within 30 days of its receipt of a copy of the petition. After that time, an Administrative Law Judge has discretion to regulate the scope of OSM's answer in a manner reasonably related to any prejudice suffered by the opposing party as a result of OSM's delay..... | 266 |
| 2. When an answer is filed by OSM after the time prescribed in 43 CFR 4.1153 but before any claim of prejudice from the delay is raised by the petitioner, it is an abuse of discretion for an Administrative Law Judge to issue, sua sponte, a summary decision in favor of the petitioner on the basis of presumed prejudice to the petitioner..... | 267 |
| 3. In a civil penalty proceeding when OSM's prima facie case as to the fact of violation is effectively controverted by the person charged with the violation, the violation must be vacated because OSM has the ultimate burden of persuasion in accordance with 43 CFR 4.1155..... | 449 |
| 4. Even where the petitioner, in a civil penalty proceeding, admits the validity of the issuance of a notice of violation and the hearing proceeds on the penalty amount issues only, the Administrative Law Judge is not bound to accept the admission when the penalty amount evidence raises a question in his mind whether the violation in fact occurred..... | 826 |
| 5. Where the parties have agreed to the existence of a violation and a penalty hearing is conducted on the basis of that agreement, if the Administrative Law Judge determines, either during or after the hearing, that the evidence may not support a violation, he shall make that determination known to the parties and, if necessary, reopen the hearing to allow OSM an opportunity to prove its case and the operator to counter that proof..... | 827 |

SURFACE MINING CONTROL AND RECLAMATION ACT OF 1977—Continued**CIVIL PENALTIES—Continued****Hearings Procedure—Continued**

- | | |
|---|-------------|
| | Page |
| 6. Where OSM fails to serve permittee with copy of a proposed assessment and of the worksheets showing the computation within 30 days of the issuance of the notice of violation, pursuant to regulation, such failure shall not result in administrative relief since the regulation is directory rather than mandatory..... | 1025 |

ENFORCEMENT PROCEDURES**Generally**

- | | |
|---|-----|
| 1. Because elapsed time is not a reason for failure to cite a violation of the Act and regulations discovered during an inspection, the fact that a permittee manages to complete an illegal action between inspections does not of itself protect it against a citation for the violation..... | 652 |
| 2. Filing an application for review of a notice of violation does not stay that notice..... | 824 |

ENVIRONMENTAL HARM**Generally**

- | | |
|---|-----|
| 1. OSM has established a prima facie case that a cessation order was properly issued when it shows a violation, practice, or condition that is causally connected to significant, imminent environmental harm or a reasonable expectation of such harm..... | 582 |
|---|-----|

EVIDENCE**Generally**

- | | |
|---|-----|
| 1. In a civil penalty proceeding when OSM's prima facie case as to the fact of violation is effectively controverted by the person charged with the violation, the violation must be vacated because OSM has the ultimate burden of persuasion in accordance with 43 CFR 4.1155..... | 449 |
| 2. Competent evidence that the person listed in state records as permittee over an area had no legal right under state law to mine or reclaim that area and that the person was not conducting mining or reclamation operations there as contemplated in 30 CFR 700.5 (1978) is sufficient to rebut a prima facie showing that the person is the permittee..... | 500 |
| 3. OSM is entitled to determine, on the basis of the evidence available to it, that a violation could not be proven, even if one had occurred..... | 653 |
| 4. A negative determination on the existence of prime farmlands issued by a state after the permittee has been cited by OSM for violating the prime farmlands regulations may be submitted as evidence of whether or not prime farmlands exist on the site, but it is not necessarily entitled to retroactive effect..... | 657 |

HEARINGS**Procedure**

- | | |
|---|-----|
| 1. Although an Administrative Law Judge has discretion to take appropriate action to correct the late filing of an answer in a proceeding to review a notice of violation or a cessation order, except in extreme circumstances it is not appropriate to vacate the notice or order..... | 269 |
| 2. A determination by an Administrative Law Judge, sua sponte, that an application for review is not in compliance with 43 CFR 4.1164 relieves OSM of its obligation to answer the application, and, unless otherwise ordered, OSM is entitled to the full 20 days prescribed in 43 CFR 4.1165(a) to answer an amended application..... | 274 |
| 3. An Administrative Law Judge has discretion to determine appropriate action to correct the late filing of an answer in a proceeding to review a notice of violation; however, vacation of the notice of violation is not appropriate action when the applicant has shown no prejudice resulting from a late answer..... | 344 |

SURFACE MINING CONTROL AND RECLAMATION ACT OF 1977—Continued

HEARINGS—Continued

Procedure—Continued

- | | Page |
|--|------|
| 4. An applicant for review of a notice of violation who voluntarily failed to appear at the scheduled review hearing was properly deemed to have waived its right to a hearing, and the Administrative Law Judge could accept as true the allegations of fact contained in the notice of violation under review..... | 406 |
| 5. Even where the petitioner, in a civil penalty proceeding, admits the validity of the issuance of a notice of violation and the hearing proceeds on the penalty amount issues only, the Administrative Law Judge is not bound to accept the admission when the penalty amount evidence raises a question in his mind whether the violation in fact occurred..... | 826 |
| 6. Where the parties have agreed to the existence of a violation and a penalty hearing is conducted on the basis of that agreement, if the Administrative Law Judge determines, either during or after the hearing, that the evidence may not support a violation, he shall make that determination known to the parties and, if necessary, reopen the hearing to allow OSM an opportunity to prove its case and the operator to counter that proof..... | 827 |

HYDROLOGIC SYSTEM PROTECTION

Generally

- | | |
|--|------|
| 1. "Underground operations." Because of the definition of "underground operations" in 30 CFR 717.11(a)(1), the ground water monitoring requirements of sec. 717.17(h)(1) and (h)(2) of 30 CFR do not apply to an inactive mine where the only underground activity is the mechanical removal of accumulated water..... | 685 |
| 2. Effluent limitations are applicable under 30 CFR 715.17 to discharges of drainage from areas disturbed by surface coal mining and reclamation operations, and not only to discharges of drainage from an "active mine area," as defined in the U.S. Environmental Protection Agency's regulations for effluent limitations under the coal mining point source category, set forth at 40 CFR Part 434..... | 1122 |
| 3. Under the provisions of 30 CFR 715.17, the effluent limitations are not applicable to any discharge or overflow caused by precipitation or snow-melt in accordance with the regulations of the U.S. Environmental Protection Agency in 40 CFR Part 434..... | 1122 |
| 4. Entitlement to an exemption from the application of effluent limitations to discharges from a sedimentation pond resulting from a precipitation event is conditioned on a demonstration that the sedimentation pond was constructed and has been maintained to contain or treat the volume of water which would run off into the pond during a 10-year 24-hour or greater precipitation event..... | 1122 |
| 5. The U.S. Environmental Protection Agency's provisions, at 40 CFR 122.63 (g) and (h), for a credit for pollutants in discharges attributable to intake waters, if applicable under 30 CFR 715.17, require that the credit be authorized in a permit for a surface coal mining and reclamation operation on the basis of a demonstration that the intake water is drawn from the same body of water into which discharges are made..... | 1122 |
| 6. Under 30 CFR 715.17, the effluent limitations are to be applied at the point of discharge from a sedimentation pond or the last pond in a series of sedimentation ponds, absent express prior approval to the contrary by the regulatory authority..... | 1122 |

SURFACE MINING CONTROL AND RECLAMATION ACT OF 1977—Continued**IMPOUNDMENTS****Generally**

- | | |
|---|------|
| | Page |
| 1. "Appropriate contour." "Appropriate contour," as used in 30 CFR 715.14(e), is not synonymous with "approximate original contour."----- | 652 |
| 2. Although, in general, a permanent impoundment should be contoured before it is filled with water, on the evidence available in this case, we decline to hold that the reclamation techniques used were illegal.--- | 652 |

INITIAL REGULATORY PROGRAM**Generally**

- | | |
|---|-----|
| 1. Because compliance with state mining permit conditions does not excuse noncompliance with the initial Federal performance requirements, a decision by a state regulatory authority not to include a haul road within the area under state permit does not preclude application of the Federal requirements to the road.----- | 492 |
| 2. During the initial regulatory program, OSM may defer to the state for an initial determination on valid existing rights, but when that determination is properly questioned, OSM has an independent responsibility to review it to ensure that it was made in compliance with the initial program regulations.----- | 495 |
| 3. Compliance with state mining permit conditions does not excuse non-compliance with the initial Federal performance standards.----- | 861 |

INSPECTIONS**Generally**

- | | |
|--|------|
| 1. Prior presentation of credentials by an OSM inspector is not required when no employee of the operator is present on the minesite.----- | 613 |
| 2. OSM has a duty to investigate thoroughly a citizen's accusation that a state has failed to meet its obligations.----- | 652 |
| 3. OSM inspectors are not required by sec. 517(b)(3) of the Act and 30 CFR 721.12(a) to present their credentials prior to inspecting an inactive minesite at which no one associated with the mining operation is present.----- | 1112 |

NOTICES OF VIOLATION**Generally**

- | | |
|--|------|
| 1. A modification of a notice of violation can change obligations in any way necessary to ensure compliance with the Act and regulations so long as the specificity requirements of sec. 521(a)(5) of the Act are met.--- | 672 |
| 2. OSM does not have authority to extend the abatement period in a notice of violation beyond 90 days.----- | 672 |
| 3. Where OSM fails to serve permittee with copy of a proposed assessment and of the worksheets showing the computation within 30 days of the issuance of the notice of violation, pursuant to regulation, such failure shall not result in administrative relief since the regulation is directory rather than mandatory.----- | 1025 |

Permittees

- | | |
|--|-----|
| 1. OSM may rely on state records to determine the permittee of an area.----- | 500 |
| 2. Competent evidence that the person listed in state records as permittee over an area had no legal right under state law to mine or reclaim that area and that the person was not conducting mining or reclamation operations there as contemplated in 30 CFR 700.5 (1978) is sufficient to rebut a prima facie showing that the person is the permittee.----- | 500 |
| 3. During the initial regulatory program the person named in the state permit for a surface coal mining operation is the permittee with respect to that operation and, as such a proper person to be issued a notice of violation concerning the operation.----- | 867 |

SURFACE MINING CONTROL AND RECLAMATION ACT OF 1977—Continued**NOTICES OF VIOLATION—Continued****Remedial Actions**

Page

1. The remedial action required in a notice of violation may be modified in the document terminating the notice if the termination clearly shows in writing the remedial action accepted by OSM as an alternative abatement.....

474

PRIME FARMLANDS**Negative Determination**

1. When a state does not issue a negative determination on the existence of prime farmlands at the time the permit is issued and OSM alleges a violation of the prime farmland regulations, the permittee must demonstrate that prime farmlands do not exist on the site.....
2. A negative determination on the existence of prime farmlands issued by a state after the permittee has been cited by OSM for violating the prime farmlands regulations may be submitted as evidence of whether or not prime farmlands exist on the site, but it is not necessarily entitled to retroactive effect.....

657

657

PUBLIC HEALTH AND SAFETY**Imminent Danger**

1. 30 CFR 710.11(a)(2)(ii) prohibits operations that "result in" imminent danger to the public.....
2. "Imminent danger." A condition constitutes an imminent danger to the health or safety of the public when it creates the possibility of substantial injury that a rational person, cognizant of the danger involved, would choose to avoid.....

660

660

ROADS**Maintenance**

1. "Road." A "road" that leads from a coal stockpile of an underground mining operation to a state road and over which coal trucks travel in moving between the stockpile and the state road is a road within the meaning of 30 CFR 710.5 and is subject to the maintenance requirements of 30 CFR 717.17(j)(3)(i).....
2. The road maintenance requirement of 30 CFR 717.17(j)(3)(i) is a preventive measure and proof of the existence of the harm it is intended to prevent is not necessary to establish a violation of that requirement; proof of the road's condition and maintenance practices of the road is required.....

448

449

SIGNS AND MARKERS**Generally**

1. Where a mine identification sign is located on one side of a highway and is clearly visible from the other side from which there is access to the mine's nearby processing facility, the Board is unwilling to say that that is insufficient to comply with the requirement of 30 CFR 715.12(b).....

826

SPOIL AND MINE WASTES**Generally**

1. "Excess." When evidence does not support a finding that material removed from an underground mine is in excess of that which will be necessary to achieve approximate original contour, a violation of 30 CFR 717.15 cannot be upheld.....
2. "Excess spoil." When the evidence does not support a finding that spoil is being used to achieve the approximate original contour of the mined area, temporary relief will not be granted from an alleged violation of the requirements for the handling of excess spoil set forth in 30 CFR 715.15 (a).....

892

SURFACE MINING CONTROL AND RECLAMATION ACT OF 1977—Continued
SPOIL AND MINE WASTES—Continued

Downslope	Page
1. "Dropslope." The dropslope in a multiple seam mining operation is the portion of the permit area below the actual and projected outcrop of the lowest seam being mined.....	368
STATE REGULATION	
Generally	
1. Because compliance with state mining permit conditions does not excuse noncompliance with the initial Federal performance requirements a decision by a state regulatory authority not to include a haul road within the area under state permit does not preclude application of the Federal requirements to the road.....	492
2. During the initial regulatory program, OSM may defer to the state for an initial determination on valid existing rights, but when that determination is properly questioned, OSM has an independent responsibility to review it to ensure that it was made in compliance with the initial program regulations.....	495
3. OSM has a duty to investigate thoroughly a citizen's accusation that a state has failed to meet its obligations.....	652
4. Compliance with state mining permit conditions does not excuse non-compliance with the initial Federal performance standards.....	847, 862
TEMPORARY RELIEF	
Generally	
1. Where OSM provides the maximum time allowable under 30 CFR 722.12(d) for the abatement of a violation, an Administrative Law Judge may not effectively extend this time by granting temporary relief from the abatement requirement.....	737
Applications	
1. Because temporary relief is an extraordinary remedy that may be requested in a pending case, an application for temporary relief not preceded or accompanied by an application for review of a notice, order, or civil penalty should be dismissed.....	672
TIPPLES AND PROCESSING PLANTS	
At or Near a Minesite	
1. "Surface coal mining operations." Mere evidence that a coal processing facility receives some undisclosed percentage of the coal production of two mines operated in connection with the facility, and located distances of 8 and 11 miles from the facility, is not sufficient to establish that the facility is "at or near" either of the mines, within the meaning of the definition of "surface coal mining operations" at 30 CFR 700.5.....	745
2. "Surface coal mining operations." Under the facts of this case a processing plant located 22 miles from the minesite that supplies coal to it is not "at or near" the minesite within the meaning of the definition of "surface coal mining operations" in 30 CFR 700.5.....	852
TOPSOIL	
Generally	
1. Because neither the Act nor the regulations make only "irreplaceable" topsoil subject to 30 CFR 715.16, all topsoil is covered by that regulation...	474
2. "Contaminant." Where OSM shows that spoil materials have been mixed with topsoil it has made a prima facie case of a violation of 30 CFR 715.16 for failure to protect the topsoil from contaminants.....	826

SURFACE MINING CONTROL AND RECLAMATION ACT OF 1977—Continued**TOPSOIL—Continued****Redistribution**

Page

1. "Topsoil." For purposes of the redistribution requirements of 30 CFR 715.16(b), topsoil means at least the same material as was required under 30 CFR 715.16(a) to be removed from areas to be disturbed by surface coal mining operations..... 474
2. There is a violation of 30 CFR 715.16(b) when topsoil is redistributed in a way that does not protect it from erosion and no other protective measures are taken..... 474

UNDERGROUND OPERATIONS**Generally**

1. "Underground operations." Because of the definition of "underground operations" in 30 CFR 717.11(a)(1), the ground water monitoring requirements of sec. 717.17(h)(1) and (h)(2) of 30 CFR do not apply to an inactive mine where the only underground activity is the mechanical removal of accumulated water..... 685

VARIANCES AND EXEMPTIONS**Generally**

1. Under the provisions of 30 CFR 715.17, the effluent limitations are not applicable to any discharge or overflow caused by precipitation or snowmelt in accordance with the regulations of the U.S. Environmental Protection Agency in 40 CFR Part 434..... 1122
2. Entitlement to an exemption from the application of effluent limitations to discharges from a sedimentation pond resulting from a precipitation event is conditioned on a demonstration that the sedimentation pond was constructed and has been maintained to contain or treat the volume of water which would run off into the pond during a 10-year 24-hour or greater precipitation event..... 1122
3. The U.S. Environmental Protection Agency's provisions, at 40 CFR 122.63(g) and (h), for a credit for pollutants in discharges attributable to intake waters, if applicable under 30 CFR 715.17, require that the credit be authorized in a permit for a surface coal mining and reclamation operation on the basis of a demonstration that the intake water is drawn from the same body of water into which discharges are made.. 1122

WATER QUALITY STANDARDS AND EFFLUENT LIMITATIONS**Generally**

1. Under the provisions of 30 CFR 715.17, the effluent limitations are not applicable to any discharge or overflow caused by precipitation or snowmelt in accordance with the regulations of the U.S. Environmental Protection Agency in 40 CFR Part 434..... 1122
2. Entitlement to an exemption from the application of effluent limitations to discharges from a sedimentation pond resulting from a precipitation event is conditioned on a demonstration that the sedimentation pond was constructed and has been maintained to contain or treat the volume of water which would run off into the pond during a 10-year 24-hour or greater precipitation event..... 1122
3. The U.S. Environmental Protection Agency's provisions, at 40 CFR 122.63 (g) and (h), for a credit for pollutants in discharges attributable to intake waters, if applicable under 30 CFR 715.17, require that the credit be authorized in a permit for a surface coal mining and reclamation operation on the basis of a demonstration that the intake water is drawn from the same body of water into which discharges are made..... 1122

SURFACE MINING CONTROL AND RECLAMATION ACT OF 1977—Continued
WATER QUALITY STANDARDS AND EFFLUENT LIMITATIONS—Continued
Generally—Continued

Page

4. Under 30 CFR 715.17, the effluent limitations are to be applied at the point of discharge from a sedimentation pond or the last pond in a series of sedimentation ponds, absent express prior approval to the contrary by the regulatory authority..... 1122
- Discharges from Disturbed Areas**
1. Effluent limitations are applicable under 30 CFR 715.17 to discharges of drainage from areas disturbed by surface coal mining and reclamation operations, and not only to discharges of drainage from an "active mine area," as defined in the U.S. Environmental Protection Agency's regulations for effluent limitations under the coal mining point source category, set forth at 40 CFR Part 434..... 1122

WORDS AND PHRASES

1. "Appropriate contour." "Appropriate contour," as used in 30 CFR 715.14(e), is not synonymous with "approximate original contour."----- 652
2. "Contaminant." Where OSM shows that spoil materials have been mixed with topsoil it has made a prima facie case of a violation of 30 CFR 715.16 for failure to protect the topsoil from contaminants..... 826
3. "Downslope." The downslope in a multiple seam mining operation is the portion of the permit area below the actual and projected outcrop of the lowest seam being mined..... 368
4. "Excess." When evidence does not support a finding that material removed from an underground mine is in excess of that which will be necessary to achieve approximate original contour, a violation of 30 CFR 717.15 cannot be upheld..... 508
5. "Excess spoil." When the evidence does not support a finding that spoil is being used to achieve the approximate original contour of the mined area, temporary relief will not be granted from an alleged violation of the requirements for the handling of excess spoil set forth in 30 CFR 715.15(a)..... 892
6. "Extraction of coal as an incidental part." For the purposes of 30 U.S.C. § 1278(3) (Supp. II 1978) and 30 CFR 700.11(d), which exclude the "extraction of coal as an incidental part of Federal, State or local government-financed highway or other construction" from the coverage of Federal performance standards otherwise applicable to surface coal mining operations, the phrase "extraction of coal as an incidental part" means, in accordance with 30 CFR 707.5, the extraction of coal which is necessary, from an engineering standpoint, to enable the construction to be accomplished and does not mean the extraction of coal for the purpose of financing the construction..... 456
7. "Imminent danger." A condition constitutes an imminent danger to the health or safety of the public when it creates the possibility of substantial injury that a rational person, cognizant of the danger involved, would choose to avoid..... 660
8. "Road." A "road" that leads from a coal stockpile of an underground mining operation to a state road and over which coal trucks travel in moving between the stockpile and the state road is a road within the meaning of 30 CFR 710.5 and is subject to the maintenance requirements of 30 CFR 717.17(j) (3) (i)..... 448

SURFACE MINING CONTROL AND RECLAMATION ACT OF 1977—Continued

WORDS AND PHRASES—Continued

Page

9. "Roads maintained with public funds." Under an agreement with the West Virginia Department of Highways whereby the right-of-way for a secondary road has been reopened and maintained by a coal company for its use and that of the general public, the resulting road is not one "maintained with public funds" that is excluded from the definition of "roads" in 30 CFR 710.5 and, thus, the road is subject to the construction standards in 30 CFR 715.17(l)(2)----- 492
10. "Surface coal mining operations." Extraction of coal from a coal refuse pile is an activity which falls within the definition of "surface coal mining operations," as contained in revised Part 700, and OSM has authority to regulate such an operation during the initial regulatory program----- 617
11. "Surface coal mining operations." Mere evidence that a coal processing facility receives some undisclosed percentage of the coal production of two mines operated in connection with the facility, and located distances of 8 and 11 miles from the facility, is not sufficient to establish that the facility is "at or near" either of the mines, within the meaning of the definition of "surface coal mining operations" at 30 CFR 700.5-- 745
12. "Surface coal mining operations." Under the facts of this case a processing plant located 22 miles from the minesite that supplies coal to it is not "at or near" the minesite within the meaning of the definition of "surface coal mining operations" in 30 CFR 700.5----- 852
13. "Topsoil." For purposes of the redistribution requirements of 30 CFR 715.16(b), topsoil means at least the same material as was required under 30 CFR 715.16(a) to be removed from areas to be disturbed by surface coal mining operations----- 474
14. "Underground operations." Because of the definition of "underground operations" in 30 CFR 717.11(a)(1), the ground water monitoring requirements of sec. 717.17 (h)(1) and (h)(2) of 30 CFR do not apply to an inactive mine where the only underground activity is the mechanical removal of accumulated water----- 685

TAYLOR GRAZING ACT

(See also Grazing Leases, Grazing Permits & Licenses—if included in this Index.)

GENERALLY

1. Neither FLPMA nor the Taylor Grazing Act authorizes appropriation of water or provide an independent statutory basis for claims for water uses inconsistent in any way with the substantive requirements of state law----- 253

TRESPASS

GENERALLY

1. In determining whether grazing trespasses are "willful," intent sufficient to establish willfulness may be shown by proof of facts which objectively show that the circumstances do not comport with the notion that the trespasser acted in good faith or innocent mistake, or that his or her conduct was so lacking in reasonableness or responsibility that it became reckless or negligent----- 276

WATER AND WATER RIGHTS**FEDERAL APPROPRIATION**

Page

1. Neither FLPMA nor the Taylor Grazing Act authorizes appropriation of water or provide an independent statutory basis for claims for water uses inconsistent in any way with the substantive requirements of state law..... 253
2. The United States should comply with the substantive and procedural provisions of state law when acquiring and appropriating water except (1) where Congress or the Executive has reserved land or water for particular Federal purposes; (2) where Congress has clearly mandated that unappropriated water on the public lands is reasonably required for a Federal program or purpose and that water cannot be acquired in a manner conforming to all substantive requirements of state law; (3) the United States is entitled to a priority date as of its historic date of first use where water has been used historically for consumptive beneficial uses recognized by state law but without having conformed to procedural requirements prescribed by state law..... 253
3. The National Park Service, Fish and Wildlife Service, Bureau of Land Management and Bureau of Reclamation must follow state substantive and procedural law when appropriating water except in the limited instances where water is necessary to accomplish the original purpose(s) of a Federal reservation or protect the navigation servitude..... 1055

STATE LAWS

1. The United States should comply with the substantive and procedural provisions of state law when acquiring and appropriating water except (1) where Congress or the Executive has reserved land or water for particular Federal purposes; (2) where Congress has clearly mandated that unappropriated water on the public lands is reasonably required for a Federal program or purpose and that water cannot be acquired in a manner conforming to all substantive requirements of state law; (3) the United States is entitled to a priority date as of its historic date of first use where water has been used historically for consumptive beneficial uses recognized by state law but without having conformed to procedural requirements prescribed by state law..... 253
2. The National Park Service, Fish and Wildlife Service, Bureau of Land Management and Bureau of Reclamation must follow state substantive and procedural law when appropriating water except in the limited instances where water is necessary to accomplish the original purpose(s) of a Federal reservation or protect the navigation servitude..... 1055

WILDERNESS ACT

1. Where an appellant disagrees with the decision below and seeks to have his judgment substituted for that of the decisionmaker, his appeal will be carefully considered, with due regard for the public interest. However, where the responsibility for making such judgments has been exercised by an officer duly delegated with the authority to do so, his action will ordinarily be affirmed in the absence of a showing of compelling reasons for modification or reversal..... 490

WILDLIFE REFUGES AND PROJECTS

(See also Exchanges of Land, Migratory Bird Conservation Act—if included in this Index.)

LEASES AND PERMITS

Page

1. An offer to lease for oil and gas in the Arctic National Wildlife Refuge is properly rejected where the lands in the refuge have been withdrawn from the operation of the mineral leasing laws by either secs. 1002 or 1003 of the Alaska National Interest Lands Conservation Act. Standard offers to lease for oil and gas may not be construed as requests to undertake exploratory activities only. The only exploratory activities permitted in the Arctic National Wildlife Refuge are governed by sec. 1002 of the Act. Any requests to undertake exploratory activities are premature until the Secretary of the Interior has issued guidelines governing exploration in the refuge.-----

601

WITHDRAWALS AND RESERVATIONS**GENERALLY**

1. Where BLM filed an application for a protective withdrawal pursuant to Exec. Order No. 10355 which would reserve the subject land from all forms of appropriation including location and entry under the mining laws and the application was duly noted on the official status plats, the lands were segregated from the date of notation to the extent that the withdrawal, if effected, would prevent such forms of appropriation. A protective withdrawal is not a temporary withdrawal under the Pickett Act, 43 U.S.C. § 141 (1970), and is not limited by the terms of 43 U.S.C. § 142 (1970) which provides that temporarily withdrawn lands shall remain open to location for metalliferous minerals.-----

31

AUTHORITY TO MAKE

1. The President had nonstatutory authority to withdraw public land in addition to authority conferred upon him by the Pickett Act, 43 U.S.C. §§ 141, 142 (1970). Such nonstatutory authority was not limited by the terms of 43 U.S.C. § 142 (1970) which provided that withdrawn lands shall remain open to location for metalliferous minerals.-----

31

EFFECT OF

1. The President had nonstatutory authority to withdraw public land in addition to authority conferred upon him by the Pickett Act, 43 U.S.C. §§ 141, 142 (1970). Such nonstatutory authority was not limited by the terms of 43 U.S.C. § 142 (1970) which provided that withdrawn lands shall remain open to location for metalliferous minerals.-----
2. A mining claim located on land which was segregated and closed to mineral entry is properly declared null and void ab initio.-----
3. Public domain land withdrawn or reserved is presumed to be available for oil and gas leasing unless the withdrawal or reservation specifically provides otherwise.-----
4. An offer to lease for oil and gas in the Arctic National Wildlife Refuge is properly rejected where the lands in the refuge have been withdrawn from the operation of the mineral leasing laws by either secs. 1002 or 1003 of the Alaska National Interest Lands Conservation Act. Standard offers to lease for oil and gas may not be construed as requests to undertake exploratory activities only. The only exploratory activities permitted in the Arctic National Wildlife Refuge are governed by sec. 1002 of the Act. Any requests to undertake exploratory activities are premature until the Secretary of the Interior has issued guidelines governing exploration in the refuge.-----

WITHDRAWALS AND RESERVATIONS—Continued

TEMPORARY WITHDRAWALS

Page

1. Where BLM filed an application for a protective withdrawal pursuant to Exec. Order No. 10355 which would reserve the subject land from all forms of appropriation including location and entry under the mining laws and the application was duly noted on the official status plats, the lands were segregated from the date of notation to the extent that the withdrawal, if effected, would prevent such forms of appropriation. A protective withdrawal is not a temporary withdrawal under the Pickett Act, 43 U.S.C. § 141 (1970), and is not limited by the terms of 43 U.S.C. § 142 (1970) which provides that temporarily withdrawn lands shall remain open to location for metalliferous minerals-----

31

WORDS AND PHRASES

1. "*Leasing.*" The word "leasing" in the phrase "no leasing * * * leading to production of oil and gas" in sec. 1003 of the Alaska National Interest Lands Conservation Act includes leasing for the purpose of exploratory activities-----
2. "*Mineral.*" Geothermal steam, as defined in sec. 2(c) of the Geothermal Steam Act of 1970, 30 U.S.C. § 1001(c), is not a "mineral" as the term is used in the mineral leasing laws. Congress generally did not intend the Steam Act to be treated as a "mineral leasing law."-----
3. "*Service.*" Where BLM sends a copy of its decision to an adversely affected party at his address of record on Sept. 21; where additional information containing the party's more recent address is filed with BLM on Oct. 5; and where BLM receives the mailed copy back as undeliverable on Oct. 16 but does not mail another copy to the more recent address, BLM has not mailed a copy to the party's last address of record, and there is no "service" under 43 CFR 1810.2. Where BLM has never served a copy of its decision on an adversely affected party, the time for this party to appeal has never commenced, and the decision is not effective *per* 43 CFR 4.21(a)-----
